[fol. 509] A. I don't think that could be answered in a definite way. Some mills of course produce what we term a "family type of flour," preponderantly. Others produce preponderantly a baker type of flour, both of which require fundamentally different qualities or grades of wheat, depending upon the type of flour that is produced by the mill would be an important factor in the territory in which those mills might originate their wheat.

Q. Well, without attempting to be very specific about it, wouldn't it be your estimate that probably 90 per cent of the wheat that is processed at these mills comes from the Kansas and adjacent wheat producing areas?

A. No, I wouldn't say that, Mr. Collins.

Q. What would be your estimation?

A. That would be difficult to estimate.

Q. Then why would the mills have located there, do you know why they located in the wheat area, largely?

A. Well of course those mills that have been located in Kansas have been located there for many, many years.

Q. Before the wheat was produced there?

A. No, of course not that.

Q. No?

A. But what I was about to say is, since the founding of these mills there has developed a more scientific and technical aspect in both milling and baking.

Q. I appreciate that.

[fol. 510] A. There has been revolutionary changes in the grades and qualities of the wheat.

Q. Yes.

A. And I would say that originally the mills were located in Kansas primarily for the reason of being close to a source of production of the raw material which they manufacture.

Q. And that now the new patterns in processing have developed to the extent that it would not make much difference where a processing mill is located, is that it?

A. I wouldn't go that strong. As you undoubtedly are aware, the largest milling center in the United States today is located at Buffalo, New York, far away from the actual source of material.

Q. Actually, yes, but do you know why that is?

A. Transportation factors are a very vital factor in the location of a mill, and particularly with respect to the relation of the application of the rates in transit.

Q. At Buffalo, of course, it is because the wheat comes down by lake boats, isn't it?

A. I believe so.

Q. And there are elevators there?

A. I believe so.

Q. Due further to the fact that the consuming markets are so close by Buffalo, isn't that an additional factor?

A. Yes, that is an additional factor. Of course, Buffalo mills an awful lot of wheat that is milled and bonded in [fol. 511] Canada and exported also.

Q. Most of that that is now milled at Buffalo used to be milled at the Twin Cities, didn't it?

A. I can't answer that, Mr. Collins.

Q. I'm sorry. You're too young to remember that.

A. Thank you for the compliment.

Q. I'll withdraw the question.

Could you tell us about what portion of the wheat that is processed by the members for whom you have intervened comes from Idaho or the Northwest area that is involved in this complaint?

A. I have another witness that I would like to present who is in direct charge of purchasing our wheat, and I think perhaps he would be more competent to answer that, Mr. Collins, than myself.

Q. Well, will you tell us about what portion of Idaho wheat is necessary to be mixed or blended with the other wheat which is used in making the flour that is turned out by these mills that you have intervened for?

A. This other witness I think is better qualified to answer that. I could say this, that that would be dependent upon the type of flour that you would be considering for milling.

Q. Well, you don't know approximately how many carloads would come out of the Northwest and you don't know [fol. 512] what approximate percentage of Idaho wheat is necessary to blend with this other wheat, either one of those?

A. The Kansas Milling Company originates approximately 200 to 250 carloads of wheat in the Pacific Northwest annually. Out of that I would say perhaps 90 to 95 per cent must originate on lines other than the Union Pacific in order to overcome the freight disadvantage which we encounter on the Union Pacific.

Q. On what line does it originate?

A. The Great Northern, Northern Pacific.

Q. And in that way——

A. Of course the Great Northern and Northern Pacific does not serve the Great wheat producing area of southern Idaho which we would like to have opened up to us.

Q. You have got all the area opened up to you that is served by the Great Northern, and Northern Pacific, in a route around by way of Bieber, California, Western Pacific, D&RGW, at equal rates?

A. We haven't moved any over that route. Our movement has generally been through the Billings gateway.

Q. Then you do that, and get equal rates, or you avoid what you call the rate penalty by doing that.

A. Correct.

Q. Yes.

A. However, that wheat must originate in Oregon and Washington, and occasionally the demand for the wheat by Pacific Coast mills has a tendency to pull that wheat west-[fol. 513] ward, making it difficult, and at times impossible for us to buy that wheat.

Q. It's too much of a demand for it at times, is that it?

A. Yes.

Q. Well, then, is this a fair statement of the situation, that you do have access to practically all the wheat producing areas in this Northwest section, except this portion in southern Idaho and at equal rates?

A. I would say Northwest wheat producing section, adjacent to the Great Northern and Northern Pacific.

Q. And of course you would be able to tell us what you mean by "adjacent."

A. I mean wheat that may be moved from the farm to country elevators located at stations on those lines.

Q. As far away from the railroad as there is an actual flow of wheat from farms to those railroads?

A. That is right.

Q. If I understand your situation, Mr. Kohlwes, the establishment of route and rates that would enable the people for whom you are intervening to get into this area there—rather to get wheat from this territory, Idaho and eastern Oregon, or wherever it is produced up there, at rates equal to those by way of the Union Pacific, would be your entire interest in this case. That is your interest in this case, just that?

A. Our interest is to obtain an equality of rates.

[fol. 514] Q. But on the wheat from this area that I mentioned.

A. Yes. Off the Union Pacific.

Q. That is correct.

A. Yes.

Q. And your purpose, of course, is purely financial, isn't it?

A. Well, I wouldn't confine it to that.

Q. You wouldn't?

A. No.

As I explained the necessity for the wheat has been established through research developments. And if we are to be successful millers, I think it is necessary for us to obtain the wheat where it is grown to produce the product which we hope to merchandise.

Q. Yes, but you can get the wheat now. There are railroad tracks, and engines that can haul it to you.

A. Right, but you can't merchandise the products competitively with others who have lower transportation costs.

Q. So it does become a matter of the difference in rates and your profit, or the profit of your clients?

A. It has a bearing on the margin of profit, and also the ability to conduct the business, yes.

Q. By the way, maybe I better ask you, perhaps you stated this, but do they refrain from buying wheat now in that Northwest—or in Idaho and eastern Oregon?

A. No, we have to have a certain amount of it, but as I [fol. 515] explained, we try to get by with as a little as we can, whereas if we coudl equalize our transportation costs we could do better job of milling, do a better job of merchandising, and buy more wheat in this area.

Q. Yes, you could buy more wheat and have it transported at low rates and make more money, couldn't you?

A. That would be the obvious result, surely.

Q. Yes.

A. Our objective is the same as yours, Mr. Collins, we're in business to make money, not to lose it.

Q. And you want this last restriction removed from your operations so that you can expand and make money, that is about a fair statement.

A. Sure.

Q. Is it fair to say that you want the railroad to disregard any lawful restriction even though it reduces its financial situation?

A. Mr. Collins, I wouldn't ask the railroads to undertake an unlawful action.

Q. I put it within the law. I said any lawful.

A. It would have to necessarily be that, Mr. Collins, certainly.

Q. I think you understood. You want us to eliminate a lawful restriction. You think we should eliminate a lawful restriction in order to expand your business.

Mr. Quirk: I object to the question. It is irrelevant. [fol. 516] He expects this witness to deal with a legal matter.

Mr. Collins: No, I'm not asking the witness about a legal matter.

Mr. Quirk: Read the question.

Exam. Mullen: Read the question.

(Question read.)

Mr. Quirk: This complaint alleges it is an unlawful restriction.

Exam. Mullen: The objection is sustained. You needn't answer that question.

Mr. Collins: That is all.

Exam. Mullen: All right, sir.

(Witness excused.)

Exam. Mullen: We will take a ten-minute recess.

(Short recess.)

Exam. Mullen: We are ready to resume.

Mr. Kohlwes: I would like to call Mr. L. R. Ginn.

L. R. Ginn was sworn and testified as follows:

Direct examination.

By Mr. Kohlwes:

Q. Please state your name, address, and business association.

A. My name is L. R. Ginn, address, 715 East 13th Street, Wichita, Kansas. I'm a grain buyer for the Kansas Milling Company.

Q. How long have you been working in this capacity? [fol. 517] A. Five years.

Q. What was your duties prior to that time?

A. I was Elevator Superintendent for 19 years, for the Kansas Milling Company.

Q. Will you relate briefly, please, your operations as grain buyer?

A. Well, it's my job to buy the wheat according to a program set up by the Sales Department as to what they sell, and if they sell a wheat mix—some wheat mixes they sell will require from 12 to 25 per cent of what we call soft white wheat, that is wheat that originates up in this country.

Mr. Collins: In this country?

The Witness: In Washington, Oregon, Idaho, and some small amount of its originating in Colorado.

Mr. Collins: All right. Thank you.

By Mr. Kohlwes:

Q. In your work as wheat buyer, do you conduct your operations on the trading floor of the Wichita Board of Trade, along with other buyers and sellers of wheat?

A. That is right.

Q. Do you have an occasion to contact these other buyers and sellers and have a general knowledge of their operations also?

A. Well, to a certain extent. Of course you don't have a knowledge of all of their operations.

Q. In your duties as elevator superintendent, will you please relate what your work was in that capacity?

[fol. 518] A. Well, as elevator superintendent, I had charge of all of the unloading and loading out, making of mill mixes, and keeping wheat, all stocks of wheat in a general good condition.

Q. Will you please explain in more detail what you mean by the term "mill mixes"?

A. Well, a mill mix is a mixture of different types of wheat as required for certain specification flour. You take wheat from various territories, on your bakers' mix, we ordinarily have to use some wheat out of the spring wheat territory, along with our Kansas wheat and Oklahoma-Texas wheat. In our family mixes we use white wheat, or Missouri red, as a mixture, of both, to make a family mix, as required by specifications.

Q. How are these wheat mixes determined? Are they determined by you as the grain buyer?

A. No, your wheat mixes are determined by your laboratory. That is, as to color, and the grain of your bread, protein, volume, and there are many things that enter into that. It's more or less of a science. In other words, you could take a wheat mix and make it up, and probably it won't work at all, according to their specifications.

Does that answer your question?

Q. Yes.

Do you as grain buyer, and perhaps in your capacity as elevator superintendent have occasion to consult and collaborate with the laboratory concerning the qualities of [fol. 519] wheat and the flours produced by those wheats, in establishing wheat mixes?

A. Oh, yes, that is the must. You have to work very close with the laboratory on that.

Q. Can you explain from your collaboration with the laboratory the requirements on having to originate wheat in Idaho or Oregon, and Washington?

A. Can I state that just in my own way?

Q. Yes, please.

A. It seems like the last few years our Kansas wheat lacked some certain characteristics that are required for making a white close textured flour for domestic baking, so to correct that most of the mills, or we have, I'll speak for our mill there, have been adding from 12½ to 25 per cent of soft white wheat, that is the wheat we are talking about that comes from the Colorado, Utah, Idaho, Oregon territory, and some out of Washington.

By adding that we can get by and make a flour that will pass the specifications. If we don't put it in we just can't do it.

Q. Have you had occasion to purchase wheat in the Pacific Northwest?

A. Yes, most of our purchases are made from terminal grain companies or terminal elevators. We purchase a big end of the wheat out here from Spokane and Ogden.

[fol. 520] Q. What has been your experience in regard to purchasing wheat in Ogden as contrasted with your pur-

chasing wheat in Spokane, so far as volume is concerned, I should say?

A. Well, we purchase more in Spokane, because they have billing that will work. In other words, when the flour department gives me an order they also give me a price that I got to buy it at. Well, in turn, I will call a terminal elevator, we'll say I will call Ogden, on an offer of 25,000 bushels of wheat, and the last few times I have called him, he has told me, "Well, I can offer you 5, I have plenty of wheat, but I haven't any transit that will work without going to Kansas City and coming back." So that limits me to the 5 that I can buy instead of 25, or whatever it is I want to buy.

Q. Do you have anything further that you would like to add to your statement, Mr. Ginn?

A. Well, I don't know what the deal is on that. It would be much easier in the part of my business, if the people up here did have the transit so that they could offer you 25, or 50 thousand bushel of wheat at a time, rather than 5 or 10. It works that way out of Denver. We try to buy some wheat out of Denver, and if it originates up here on certain lines, then it won't work down there, without moving over Kansas City rates.

Q. You mean by that, you can't move it through your milling point?

[fol. 521] A. That is right.

Q. And then on to Kansas City.

A. No, we have to take it to Kansas City and then move it back west to Wichita.

Mr. Kohlwes: I believe that is all.

Mr. Collins: I thought, Mr. Kohlwes, this witness was going to give us some idea about the amount of wheat from this Northwest country that he has to have to blend with his Kansas wheat.

Mr. Kohlwes: He related, I believe, from 12½ to 25 per cent. If you care to follow it up further you are perfectly welcome to do so.

The Witness: I can give it to you in terms of carloads.

Cross-examination.

By Mr. Collins:

Q. Approximately.

A. Approximate.

Q. This is for his Kansas Milling Company alone.

A. This has no connection with the other mills, this is for the Kansas Milling Company alone.

Q. All right.

A. In the last year we have unloaded there and used approximately 385,000 bushels of this white wheat.

Q. From the Northwest?

A. From the Pacific, inter-mountain and Pacific Northwest. And ofcourse this is a relative figure, because you [fol. 522] can't tell for sure what you are going to do in the next year.

Q. All right.

A. But if they would get offers on the same amount of business, we could have easily used 150,000 bushels more if we could have originated it this year. That is in the past year.

Q. Could you tell us about how much of this 385,000 bushels originated on the Union Pacific?

A. About 60,000 bushels.

Q. About 60,000 bushels.

And as to the rest?

A. The rest of it originated on the Great Northern and Northern Pacific.

Q. And moved through——

A. Through Pueblo, mostly via the Missouri Pacific, we moved some in by Santa Fe.

Q. At rates——

A. That would carry on through Kansas City.

Q. Yes.

A. And beyond.

Q. You buy on the Kansas City price?

A. All our wheat is based on the Kansas City price.

Mr. Collins: That is all.

Exam. Mullen: Anything further?

Mr. Koblwes: That is all.

Exam. Mullen: That is all, Mr. Ginn.

(Witness excused.)

[fol. 523] Mr. Blaine: Mr. Charles Redd.

CHARLES REDD was sworn and testified as follows:

Direct examination.

By Mr. Blaine:

Q. Please state your name and address.

A. Charles Redd, La Sal, Utah.

Q. In what business are you engaged?

A. Ranching and livestock.

Q. How long have you been thus engaged?

A. Well, all my life. I have been devoted 35 years to it entirely.

Q. What companies or company are you an official of?

A. Well, I am the Manager of a family partnership, known as Redd Ranches, and I operate individually then in connection with two or three of my cousins, on a partnership basis also.

Q. Where, generally, are your livestock operations conducted?

A. We have ranches and cattle and sheep breeding operations in Utah and Colorado. We pasture and fatten lambs in western Kansas, in the Moscow area. We fed some lambs for a number of years at Scotts Bluff, Nebraska. Most of the operations, however, are in Utah and Colorado, and western Kansas.

Q. Does your company, or do you personally, operate or conduct livestock operations in any other locality?

A. Well, we are pasturing or fattening some lambs in Yuma, Arizona.

[fol. 524] Q. Mr. Redd, will you please state for the benefit of the record in your own language why your company is interested in this proceeding?

A. We have purchased and want to purchase in the future lambs and ewes in the Northwest, in Oregon, Idaho, and western Montana.

Mr. Collins: That place is on the Union Pacific Railroad?

The Witness: Well, practically all the livestock purchased in those areas come into Ogden on the Union Pacific.

Mr. Collins: I mean, you want to purchase from origin points that are located on the Union Pacific Railroad, is that correct?

The Witness: Yes. One of our operations is to purchase breeding stock, both ewe lambs, and yearlings, and some older ewes in the Northwest and bring them into our range properties in Utah and Colorado on a transit basis, and then move them on in the fall either to the markets in Kansas City, St. Joe, or to our pasture areas in western Kansas. Our pasture areas in Kansas are largely on the Santa Fe. I believe our—well, our transit privilege is lost on livestock that comes out of the Northwest that is shipped into our range area over the Rio Grande. That is about a 19-cent or 20-cent penalty, as I recall.

Mr. Collins: Higher rates?

The Witness: Higher rates, yes.

[fol. 525] Exam. Mullen: The word "penalty" should be avoided, because it really isn't penalty, is it, it is just a higher rate?

The Witness: I guess that is the proper term.

By Mr. Blaine:

Q. Proceed, Mr. Redd.

A. Well, that's the principal reason why we are interested in a through rate in connection with the UP and Rio Grande. On a large number of sheep, with a 19-cent or 20-cent advantage, that is a factor. It appears to me that the fellow who sells the livestock from the Northwest area, as well as the buyer, which is where I stand, is affected by the higher rate.

Q. On that point, when you say the producer or seller in the Northwest is affected, how is he affected?

Mr. Collins: Well, now, Mr. Examiner, if the Northwest people are affected, they can come in here and testify.

Mr. Blaine: Your Honor, this gentleman is a member of the American National Livestock Association. They have members in the Northwest, and if you want us to call members from every state, we can do it, but this is an experienced livestock man with 40 years' experience, and we are trying

to cooperate with the Commission and the parties by calling the least number of witnesses possible.

Exam. Mullen: What is the extent of this witness' knowledge of the Northwest producers?

By Mr. Blaine:

Q. Have you any knowledge of the Northwest producers, [fol. 526] Mr. Redd, of sheep?

A. Yes, I am acquainted with their operations, both by reason of being on their places, and in talking about problems that are mutual to both of us.

Mr. Collins: I object to his going into these features, unless he can show he is authorized to testify for those producers and shippers from the Northwest. It is not necessary for him to talk about it. He knows he wants to buy cattle up there, and as I understand the situaiton, he wants transit privileges at points in Colorado and Utah at the same rates, that is feeding and fattening in transit, at the same rates he could have them by the Union Pacific Railroad.

Is that a fair statement of your position?

The Witness: That is essentially true.

Mr. Collins: Then why don't we just end it there.

Exam. Mullen: As I understood it, it was a general question. I think he can answer that. Let's see how far he knows. Suppose you answer the question.

The Witness: Well, I know that ranchers, stockmen in Oregon, western Idaho, and western Montana, are engaged in producing replacement livestock. In my case, I produce lambs and yearling ewes, that are regularly offered to our territory, to buyers such as myself, who market their lambs, a good part of them as fat lambs, and don't retain their own ewe lambs or yearling ewes for replacements.

[fol. 527] Of course each fall, each summer, and each spring, too, we have these sheep men, cattlemen who call us and write us about stuff they have to sell, and the factor of transit privileges is an item in the cost operation.

Exam. Mullen: Is that responsive to your question, Mr. Blaine?

Mr. Blaine: I think it will suffice.

By Mr. Blaine:

Q. Mr. Redd, just briefly, how many animals are you running at the present time?

A. Well, I would have to do a little computation. In western Kansas we had last month about 26,000 sheep, which is made up of ewe lambs which will be put in our breeding herds, and lambs fattened, and some yearling ewes, and older ewes which will be used for breeding also.

Mr. Collins: Now, Mr. Examiner, these gentlemen have been talking to me about saving time. Would it help if we could agree that he handled a substantial number of whatever these are, sheep, or cattle, or both, at all these points?

Mr. Blaine: I prefer, your Honor, just to have the record show the definite numbers. It won't be very long.

Exam. Mullen: You're giving us the total number. Is that sufficient?

Mr. Blaine: Yes. That is in Kansas.

By Mr. Blaine:

Q. Now the rest of your operation.

A. In the Utah and Colorado area, where it is essentially [fol. 528] a breeding operation, myself and partners have about 27 or 28 thousand breeding ewes and lambs—that is ewe lambs, lambs, for replacement purposes, and about 2500 cattle. In the Yuma section we have 12,000 lambs.

Q. Have you anything further, Mr. Redd?

A. I don't think so.

Mr. Blaine: You may cross examine.

Cross-examination.

By Mr. Collins:

Q. Do you know whether these Northwest producers have experienced any particular difficulty in any past times in disposing of their production?

A. I don't——

Q. You can say you don't know.

A. I don't know that they have had any unusual difficulty, no.

Q. As I understand you, their animals are more or less

sought after by people in the line of business that you are in, is that correct?

A. Well, they depend upon people such as myself for their——

Q. Don't you depend on them, to some extent?

A. We would like to depend upon them more than we do now. We are seeking other areas. We are buying sheep in the South Dakota and in the eastern Montana and in the Nevada areas.

Q. Are these the only sources from which you are buying now?

A. We buy some feeder lambs in New Mexico, and we buy some in some parts of Colorado, too.

[fol. 529] Q. Is there any particular reason you want to buy from the Northwest?

A. Well, yes. In the first place the raising of these replacement sheep seems to be more of a business for many of the breeders. That is especially true in eastern Oregon and western Montana.

Q. Do you have need, particular need—do those animals up there in the Northwest have any special talents or qualities that benefit you in your business?

A. I think this can be said without exaggeration, that some of the best bred sheep in the country, for range purposes come from eastern Oregon and from the Deer Lodge, Dillon, and western section of Montana.

Q. Would that be so for fattening purposes, too?

A. No.

Q. No.

A. For fattening lambs, the best sheep come from Idaho. We bought this year 15,000 lambs.

Q. Aren't any sheep raised anywhere within the areas where you operate within the local areas of these places you mentioned where your operations are?

A. Will you ask that again, please?

Q. Are any sheep raised in any of the locations of your different operations, or nearby, where they are?

A. Most of them, or a great many of them——

[fol. 530] Q. Are they?

A. I would say no. A great many of the breeders and sheep men in Colorado are in the same category as I am for replacements.

Q. Do you mean there are no sheep raised in Colorado or Utah?

A. There are a great many raised.

Q. What?

A. A great many. But it is a mutton area, more than a replacement or breeding type sheep.

Q. You don't fatten sheep for mutton, then, do you?

A. Now let's see, fatten them for mutton?

Q. Yes.

A. Oh, yes, you fatten them before you make mutton out of them.

Q. Well, that's good. That straightens that out. Do you fatten them before they are made into mutton, or do you just grow them for lamb chops?

A. We do both.

Q. And wool?

A. We do both.

Q. Both?

A. In both cases.

Q. What I'm getting at, can you operate your business at all, can you make any use of the sheep that are grown in Utah, Idaho, western Kansas, or near Scotts Bluff in your business. Can you make any use of the local sheep at all?

A. Well, there is—if you mean for breeding purposes. [fol. 531] When I speak of replacements, I mean the ewes are going to have lambs, are going to be the mother sheep.

Q. Yes.

A. And the sheep in the areas I speak of, eastern Oregon and western Montana, have been breed specially for high wool production.

Q. Yes.

A. And for doing well on the range. The black-face sheep is a mutton sheep, a low wool producer, and the black-face is the one that is used for lambs, and the white-face, or the Rambouille and Columbia are used for mother sheep.

Q. Now, in your purchases, in the Northwest, do you purchase livestock, cattle, or sheep, at points on the Milwaukee, Northern Pacific, or Great Northern Railroads?

A. We buy some sheep at Deer Lodge, Montana.

Q. I don't know what railroad that is on.

A. That is on the Milwaukee and Northern Pacific, but they come to Butte, and go over the UP there.

Q. You buy them on the Great Northern?

A. Not regularly. We have some at eastern Montana.

Q. Do you buy any on the Milwaukee Railroad?

A. As I say, we buy these in the Deer Lodge area, and they are shipped a short distance on the Milwaukee.

Q. I see.

And from those points, don't you have rates that are [fol. 532] equal to those that you would have by the Union Pacific?

A. There is no way to get, no convenient way to get sheep off the Milwaunkee or Great Northern into our area, unless they are delivered by the Milwaukee to the UP, say, at Butte.

Q. Well, will you tell me about the rate situation from those points—freight rate charges?

A. Well, I can't tell you.

Q. You don't know about that?

A. We haven't used the ——

Q. Now listen, Mr. Redd, do you know about it or don't you?

A. I don't know.

Mr. Blaine: How can the witness answer the question?

Mr. Collins: He said he didn't know.

That is all. Thank you, Mr. Redd.

Redirect examination.

By Mr. Blaine:

Q. Mr. Redd, the purchases you make on the Milwaukee, the Great Northern, and Northern Pacific, do they move to your Colorado operations on the D&RGW?

A. No, except as I said the sheep we received at Deer Lodge in that area, they are brought down to Butte and delivered to the UP. We have bought a few sheep on the Milwaukee that have gone east into the cornfields or eastern Kansas, but that isn't of any great consequence, because it is quite unusual.

Q. On any of the sheep which you purchased in western Montana, they've had to come into this box canyon, on the

[fol. 533] Denver and Rio Grande, by way of the Union Pacific at Ogden, did they not?

A. That is true.

Mr. Blaine: That is all.

Mr. Collins: That is all.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

J. A. HAYLEY was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Mr. Hayley, what is your full name?

A. J. A. Hayley.

Q. What is your business address?

A. Littleton, Colorado.

Q. Is that near Denver?

A. That is about eight miles south of Denver.

Q. Are you Manager of the Monarch Lumber Company?

A. Yes, sir.

Q. Does that company have a plant at Military Junction, Colorado, on the Denver and Rio Grande?

A. That is right.

Q. Just describe the business of that plant. What does it do?

A. Remanufacturing and sales of lumber, wholesale and retail.

Mr. Collins: Remanufacturing, did you say?

The Witness: Yes, sir.

[fol. 534] Mr. Collins: You don't saw any lumber out of logs?

The Witness: Not out of logs, no.

By Mr. Quirk:

Q. Perhaps you better describe briefly what you mean by "remanufacturing."

Mr. Collins: That is satisfactory for my purposes, Mr. Quirk.

Exam. Mullen: Mr. Quirk would like to have an answer.

Mr. Collins: All right.

The Witness: We bring lumber in in rough timbers, for instance 8 by 8's, and remanufacture them into a smaller dimension of board, surface them, and usually ship them on south or east.

By Mr. Quirk:

Q. Where is your principal markets for your product?

A. We have a great number of markets, both south, east, and some as far north as Chicago and Detroit.

Q. Do you include southwest in what you call south?

A. Not southwest of Denver, no.

Q. Well, do you have a market in Texas?

A. Yes, very definitely.

Q. From what points do you now purchase lumber, rough lumber?

A. Mostly California area and Oregon, a small amount out of Washington.

Q. Do you purchase any lumber in Idaho?

A. A very small amount.

[fol. 535] Q. Now, is your lumber subject to the transit arrangement at Military Junction? That is, do you have the transit privilege there, and do you indulge in it?

A. Yes.

Q. Would your company purchase rough lumber in the States of Idaho, Oregon, and other points northwest of Ogden, if you had a competitive system of rates to which the transit would be subject?

A. Yes, particularly out of Washington.

Q. You don't have rates out of the State of Washington now via any route?

A. Not transit rate I don't believe.

Q. Well if you had the rates that this complaint seeks, would you purchase the kinds of lumber you use at Military Junction at points served by the Union Pacific, or points beyond on other railroads that would move via the Union Pacific to Ogden?

A. Yes, several million feet annually.

Q. Describe briefly the respects in which such a transit arrangement would be beneficial to your company?

A. At the present time we are at a disadvantage of buy-

ing Douglas fir lumber. They don't grow a good specie of Douglas fir in California. We would like to bring it out of the Columbia River area into our Colorado plant and put it in transit from there, on south and east.

[fol. 536] Q. Did you express the volume of business in and out of your plant at Military Junction in carloads for a representative year, say, 1948?

A. You mean, in or out of military junction?

Q. In and out.

A. Probably in '48, approximately 350 cars in and 150 cars out.

Q. What would you say, if asked the same question about 1949?

A. 1949 there will be approximately 500 cars in, and approximately 50 per cent of that out.

Q. In other words, as I understand your situation at Military Junction, Mr. Hayley, you can't transit at the competitive joint rates anything which originates on the Union Pacific and is handled by you at Military Junction, Colorado?

A. That is right.

Mr. Quirk: That is all.

You may cross examine.

Cross-examination.

By Mr. Collins:

Q. You do have rates from as far up as Seattle, Tacoma, Portland, and on down the lumber producing area there that are equal to the rates by way of the Union Pacific, do you not?

A. Into Colorado.

Q. Yes.

Now, then, what is the difficulty with your using those rates?

[fol. 537] A. Because we don't have the through rate on the Union Pacific out. Some of those mills we would like to buy from originate on the Union Pacific.

Q. Oh.

You want rates from origin points in addition to those that you have from other points?

A. That is true.

Q. Origin points on other railroads?

A. That is right.

Q. Is Douglas fir lumber produced on any of the other roads up there?

A. Douglas fir of course is produced in several states, but it isn't always convenient to buy it from just any mill you would like to buy from.

Q. Why not?

A. Sometimes the species quality is not up as good as some of the rest of the mills. Your business connections aren't the same.

Q. On what railroads is most of the Douglas fir produced that you seek to buy?

A. I'm not in a position to answer that. A lot of them would be on the Union Pacific.

Q. Well, tell me some more about it. Are those the only Douglas fir lumber producing mills you know about located on the Union Pacific?

[fol. 538] A. No.

Q. Where are the others located then?

A. Some on the Great Northern.

Q. Yes, at what place, what town, or near what town?

A. I'm not in position to say. I have not been buying lumber out of there recently.

Q. I see.

Any located on any other railroads than the Great Northern?

A. I have not been buying any out of that country right now, so I would not know what to anticipate if we bought lumber out of there.

Q. Do you know actually where the mills are located that produce Douglas fir in that Northwest country?

A. Other than on the Union Pacific.

Q. You just know about that and nothing else?

A. We have not bought a great deal of lumber off of the Union Pacific, mills originating there, so I am not too familiar with them, no.

Q. You have not bought a great deal from mills located on the Union Pacific?

A. That is right.

Q. Have you bought a great deal from mills located on other roads?

A. Yes.

Q. What other roads?

[fol. 539] A. Western Pacific is one.

Q. Yes.

A. Southern Pacific.

Q. You said the Great Northern. As a matter of fact, isn't most of the Douglas fir lumber produced at mills located on those roads you named, the last three?

A. Including the Union Pacific.

Q. No. Isn't most of the Douglas fir lumber in that territory produced at mills located on the Great Northern, Northern Pacific and Southern Pacific?

A. I wouldn't say no, because I don't know.

Q. That is a good reason.

From what points on the Union Pacific do you want to buy and ship Douglas fir lumber?

A. Seneca, Oregon, would be one point.

Mr. Quirk: How about Grangeville, Idaho?

The Witness: Yes.

By Mr. Collins:

Q. Grangeville, Idaho, and Seneca, Oregon.

A. Yes.

Mr. Collins: That is all. Thank you.

Redirect examination.

By Mr. Quirk:

Q. Mr. Hayley, is it your position as a businessman that you ought to be able to buy lumber off the Union Pacific at equal rates over available routes?

A. It certainly is.

[fol. 540] Mr. Quirk: All right.

Recross-examination.

By Mr. Collins:

Q. You are not satisfied, then, with any limitations at all on your activities, are you?

A. We think we should be able to compete with competitors within 10 miles of us, who are on a through rate on the Union Pacific.

Q. But they are located on the Union Pacific.

A. They are in Denver, yes.

Q. What railroad are you located on?

A. The D&RGW.

Q. I see.

Is what you just said your interest? You want to include purchases from these other two little points, although you have all the other Northwest part available for purchases of Douglas fir?

A. Those two other little points that you refer to ship millions of feet of lumber a year.

Q. And don't the points on the Great Northern and Southern Pacific?

A. The total output is around 180 million feet a month in the two states.

Mr. Quirk: Are you finished?

By Mr. Collins:

Q. Do you consider that a disability or disadvantage?

A. I consider it a definite disadvantage.

[fol. 541] Q. When did you discover this?

A. Since we have been in operation in Colorado.

Q. Have you filed any complaint with the Interstate Commerce Commission about it?

A. I have not from my office, no.

Q. And have you made any complaint about it to the Union Pacific Railroad?

A. I have not personally, no.

Mr. Collins: That is all.

Further redirect-examination.

By Mr. Quirk:

Q. Tell us where your competition is. You said one competitor was in Denver. Where else?

A. Kansas City would be the other point.

Further recross-examination.

By Mr. Collins:

Q. What road would he be located on?

A. There are several roads in there. I am not speaking about any competitor individually.

Q. You don't know what railroad he is located on. Oh, you don't know who the fellow is down there.

A. I think you will find there are several lumber businesses in Kansas and Nebraska that operate transit yards just as we do.

Q. I see.

You think that? You're not sure of it?

A. No; I know that.

[fol. 542] Q. You know that?

A. Yes.

Q. Then, who are they?

A. How many do you want to know?

Exam. Mullen: Who are the principal ones?

By Mr. Collins:

Q. You are naming your competition.

A. Well the Johnston Lumber Company for one.

Q. Where?

A. Kansas City.

Q. Kansas City?

A. Yes, sir.

Q. Is that all you care to name?

A. Yes, sir.

Q. Then you can't name any more?

A. I would rather not try.

Mr. Collins: All right, that is all, if Mr. Quirk doesn't want to ask any more questions.

Exam. Mullen: Is that sufficient?

Mr. Quirk: Yes. I can't ask another question without Mr. Collins going ahead.

Exam. Mullen: You are excused.

(Witness excused.)

LORENZO J. BOTT, was sworn and testified as follows:

Direct examination.

[fol. 543] By Mr. Quirk:

Q. What is your name?

A. Lorenzo J. Bott.

Q. Where are you located?

A. Brigham City, Utah.

Q. Are you mayor of that city?

A. Yes, sir, at the present time.

Q. Are you engaged in any other business?

A. In the monumental wholesale and retail business, granite and marble.

Q. Now what facilities do you have at Brigham City to cut and size marble or stone that you handle?

A. We have regular wholesale equipment there, sawing equipment, polishing, carving and lettering, finishing the product from the rough material.

Q. How many employees do you have?

A. Well, there was a time we had, before the war, we had around 15 to 20, but conditions came up during the war and since the war, and with competition as keen as it is now, we have got down to about 7 men.

Mr. Collins: How many?

The Witness: Seven.

Mr. Collins: Seven.

By Mr. Quirk:

Q. What do you purchase in your business, describe that?

A. We purchase granite from the State of Georgia, [fol. 544] marble from Georgia, granite from Wisconsin, Vermont and Minnesota. Some from Colorado, very little.

Q. Where do you sell your product?

A. We sell through the State of Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington.

Q. Would you be benefited by some transit or stop arrangement, if possible, on the Denver and Rio Grande?

A. Very definitely so.

Q. Explain that in your own way.

A. Under the present set up I have dealers in Colorado, and to get a carload through to accommodate the dealers in Colorado, with a stop over on the car, I am penalized in getting that car into northern Utah, Idaho, or into Montana, and portions or Oregon, due to no through rates over the Denver and Rio Grande through Utah, and then out over the Union Pacific.

Q. Brigham is on the Union Pacific, is it not?

A. It is on the main line through to Pocatello.

Q. Can you give some specific examples of how the absence of the joint competitive through rate, via the Denver and Rio Grande, Ogden, and your city, has affected you adversely?

A. Yes. I lose my business in Colorado due to the fact that I can't accommodate him by getting the car through on up into northern Utah and the Northwest. It doesn't seem that that connection, whatever you call it, applies that way. I can get it through to my dealers in the Northwest [fol. 545] by coming through Rock Springs over the Union Pacific into Ogden. I have a dealer there, but I would like to accommodate both of them. I can interchange those cars, give one a break one time and the one the next.

But the break through Grand Junction and through Price does not give the fellows up in the Northwest a break on that car. It compels my dealers in Colorado to buy the whole carload, which is, of course, a handicap to him, and which he can't do. Then he buys from my competitors under other conditions that causes me to lose my business, and the same if I route it Union Pacific through Rock Springs, then I lose his business.

Q. Now where is your dealer in Colorado located?

A. Grand Junction, Colorado.

Q. Do you have competition from companies or persons engaged in the same line of business that you are in, that are located at Salt Lake?

A. I do, and plenty of it, and plenty keen, too.

Q. Do they ship their outbound product by rail or truck?

A. Well they ship in here by rail, but I'll say this, for the railroad, that our business is fast going to trucks, due to just such things as that, that we don't get the service that the truck people give us. Other cases, I'm finding out that a lot of my dealers that I sell to are buying their own trucks, and they are going for their own material, which is throwing the major material they are using now [fol. 546] from the West Coast.

People are being deprived of the material they would like to have from the east, due to conditions developing in our line of business. If there isn't something done here in some way to help the situation along for us fellows, and which is beneficial to the railroads, you are going to lose 90 per cent of the business into this inter-mountain country, because they will truck their own material.

They will buy it from the West Coast. They do bring it from Wisconsin, and the State of Minnesota, they bring it in here by these duplex trucks. They will bring a carload of those into my dealers, who are in direct competition with me. I am setting up there with a manufacturing client and I can't compete with those conditions.

Mr. Collins: Is that because you don't have transit privileges on the D&RG?

The Witness: Yes.

Mr. Collins: All this you said in the last minute and a half.

Mr. Quirk: Will you let me finish.

Exam. Mullen: We will wait for cross examination.

The Witness: At the present time since the UIC.

By Mr Quirk:

Q. You mean the Utah, Idaho Central Railroad.

A. Yes. Since they have pulled out of the northern part of the state, now I can't get a car of rough stock in over [fol. 547] the D&RG because it just doesn't come to Brigham City over the D&RG.

Q. When the Utah, Idaho, Central, before it was abandoned, you could accomplish these things, is that true?

A. We did. We could, because as I understand it, my understanding of rights, they were in connection with the Denver and Rio Grande Railroad.

Q. How does the service now of the Union Pacific compare with the service you had at the time with the two railroads there?

A. I would naturally say, in all fairness, I have no ax to grind with the Union Pacific. I have had a lot of service out of them, and I have given them thousands of dollars. In all fairness to myself and our customers, I think if our service has dropped off considerably up in Brigham City since the UIC left us, both in the standpoint of rail service, and the standpoint of courtesy that I think railroad people should consider, whether they have competition or not. That is naturally of course competition——

Exam. Mullen: I think we are going into too great length on that phase of it, it seems to me, Mr. Quirk.

By Mr. Quirk:

Q. Mr. Bott, please name some of the points in Idaho, Montana, and Utah, where you have customers.

A. Well, I'll start at Logan in the State of Utah, and Pocatello, Idaho Falls, Butte, and of course practically all the major towns in Montana, Great Falls, I mentioned Butte, Helena, Missoula, and Livingston, Montana, and [fol. 548] Kalispell, Montana, and my major efforts on the West Coast have been at Spokane, Washington, and a little around Eugene and Portland. Boise, Idaho, of course, and Twin Falls, going down through there, also out at a place just over the line out in Oregon there, Walla Walla.

Mr. Quirk: I have no further questions.

By Mr. Quirk:

Q. Have you said all you care to say on this subject, Mr. Bott?

A. Well, I'll say this, as I said before, I want to be friendly with both railroads, but I can see where it would be a great advantage to me if we could have the Ogden gateway. I could handle my business along with competi-

tion, and I am sure I could bring some of my business back. I am certainly in favor of the Ogden gateway.

Mr. Quirk: All right. You may cross-examine.

Cross-examination.

By Mr. Collins:

Q. Do you have now, by way of the Union Pacific, the privileges that you want on the D&RGW?

A. What was that?

Q. Do you now have by way of the Union Pacific the privileges that you want, you think you want, by the D&RGW?

A. As I understand it, we don't have those privileges, without being penalized by a higher rate, there is no through rate.

Q. Well, do you have on the Union Pacific the privileges that you think would benefit you if they were applicable on the D&RGW?

[fol. 549] A. Yes, when I ship Union Pacific out of Omaha, then of course I have all those privileges through to the Northwest.

Q. Do you ship a substantial quantity of this business by the Union Pacific?

A. Well, I do, yes. In the past, of course, I had to, to keep down to the cheapest rate that applied.

Q. I see.

And if the rate weren't cheaper, would you ship by some other road, is that it?

A. Well, I would—if the rates were equal on both railroads, I would try to ship my business up, and give them as near as I could an even break on it.

Q. What portion of your business do you suppose is at points on the D&RG in Colorado and Utah?

A. Well, on my particular stuff from Georgia, that should be practically every car; I could have come out into the Northwest; it should come through Grand Junction.

Q. Should come through Grand Junction?

A. Give this man a breakdown there.

Q. About how many cars do you think that would be a year, Mr. Bott?

A. Well, I'll say this: we don't talk in terms of hundreds of cars like these cattle and sheep people do.

Q. No, I appreciate that.

A. It would not exceed over four cars a year. A carload [fol. 550] of granite or marble is a lot of material.

Q. Yes.

Am I correct in understanding that at Brigham City you take these granite blocks, or marble or what not, and finish them into what some of us call tombstones, or monuments?

A. That is right.

Q. For cemeteries and those places, that it your business, is it?

A. That is right, we bring them in in blocks weighing anywhere from 5 to 20 tons, in what we call a saw block, then we saw them down into different thicknesses, sizes, and shapes.

Q. Are there any other firms or companies near you engaged in such a business?

A. There is nothing between Denver and Los Angeles and San Francisco, except ourselves here. There was a temporary plant here in Salt Lake City a year or two ago, when they were building a monument here, but that is breaking up now.

Q. There is one at Denver though?

A. Yes, there are a couple at Denver, wholesale and manufacturing at Denver.

Q. How about to the Northwest of you, are there any up there that you know of?

A. Not to my knowledge. Of course there are retail monument dealers, but there is no manufacturers.

Q. Manufacturers is what I am talking about all the [fol. 551] time. That is what I mean.

A. No.

Q. None at Portland or Seattle?

A. No, there is nothing up there of any size. Occasionally you will find a dealer that has a small polisher, just to correct some mistakes or some damage.

Q. How is this business conducted, do you get orders from people up in that country, or do you have sales agents up there?

A. I have salesmen out, and then mail orders of course.

Q. I didn't catch the name of your company.

A. John H. Bott and Sons Company. We have been there ever since they built the city. It is the third generation right now.

Q. Your essential interest would be, say, on the granite or marble from Georgia, would be to unload some of the blocks at Grand Junction?

A. No. What would be unloaded there would be finished monuments.

Q. These blocks would come direct to your plant——

A. What comes in is a pool car to be finished up by the dealers throughout the West all along the line. Those are stop-overs for partly unloading.

Q. All of that would be stuff outbound from your plant, wouldn't it?

A. No, it would be coming through. A lot of the ma- [fol. 552] terial I sell to these dealers isn't manufactured in our plant, it is just to make up a pool car so they get the carload rate. It stops off at Grand Junction, and on through, as many stop offs as we can have on it.

Q. Then you are really in two lines of business, finishing the rough blocks, that is what you really do at Brigham City.

A. The reason I can't serve back, they have the freight to Brigham, and they have it back, and the local freight back is just too high for them. I can't serve these fellows back with any amount. Occasionally they get some in emergency, but you can't serve them to any advantage by shipping to Brigham and shipping back to Grand Junction.

Q. Then your interest, as I take it, is in having the through rates with the stop to part unload privileges?

A. Yes.

Mr. Collins: That is all, Mr. Bott, thank you.

Mr. Torinus: Just a minute, Mr. Quirk. Might I ask Mr. Bott one question?

Cross-examination.

By Mr. Torinus:

Q. You mentioned Kalispell, Montana, as a destination to which some of the granite from the East was shipped?

A. I have sold granite as far north in Montana as Kalispell.

Q. Do you know over what railroads that granite moves to Kalispell—has moved?

[fol. 553] A. Well, as I recall that, they trucked that out of Butte. It went to Butte, the car, and it came back and went to Spokane. They trucked it out of Butte.

Q. The granite originated at Butte.

A. No, it originated in the East, and went as far as Butte, and they had to truck it from there with their own trucks, or occasionally they would ship it in locally. I don't know whether that is the Great Northern or the Northern Pacific that runs in through there, the Great Northern I think up there.

Q. But Butte was the ultimate rail destination of this particular granite, is that right?

A. I think if my memory serves me right, that is as far as I can get it on the Union Pacific Railroad.

Mr. Torinus: I have no further questions.

Redirect examination.

By Mr. Quirk:

Q. Mr. Bott, Mr. Collins mentioned the fact that the Union Pacific had transit privileges. Does that help you in trying to serve a customer at Grand Junction, Colorado?

A. I don't know as I get what you mean by the Union Pacific.

Q. The fact that the Union Pacific, if you used the Union Pacific, could afford transit at some point enroute, I am asking you if that in any way helps you serving a customer at Grand Junction, Colorado, which is on the Denver and Rio Grande?

A. No, to my knowledge that is not possible. I could not ship back to them over the Union Pacific.

[fol. 554] Q. That is right.

Now, of course, if you could sell a whole carload to this customer at Grand Junction, you would pay the rate applying to Grand Junction.

A. Which would be the same as Ogden to Salt Lake.

Q. Yes. What are the facts about that?

A. Well, if I could sell him a whole carload there, naturally there would be no necessity of coming on, but in our line of business today, 30 or 40 years ago a dealer handled two materials, that was sufficient. Now you have gotten down where to hold your own against competition, you have to handle about 10 different materials, and there is no retailer in this section of the country that I have any knowledge of that can afford to buy 10 or 12 cars of granite a year, or different materials, in order to have some of each kind.

He has to pool it. He has to pool his cars so he can have a little of each different material. We can't afford to put in 10 or 12 cars in there in order to get a carload of each kind of granite. We just have to pool it.

Q. I take it being a businessman you naturally want to sell to this man at Grand Junction.

A. Absolutely, if I lose him, and ke[illegible] losing a few more, I[illegible]out of business.

Mr. Quirk: That is all.

Recross-examination.

[fol. 555] By Mr. Collins:

Q. Well, Mr. Bott, were you really ever located actually adjacent to railroad trackage in your operation at Brigham City?

A. Close to a spur, do you mean?

Q. Yes.

A. No, we have had to truck our material about a mile from the depot up to our plant.

Q. That has always been so, even when UIC was there?

A. Well, when the UIC was there we had an advantage of maybe a quarter of a mile.

Q. You said a while ago, in your direct testimony, that dealers were going into the use of trucks for this type business?

A. Yes.

Q. As I understood you, you said they get better service by truck than by rail.

A. Well, you do get it delivered right to you in carload quantities. Now those fellows have the equivalent of a car-

load in those big trailers. That way they deliver it right to your plant, which is a big saving to me to have to go down and draw that up a grade there of a mile, especially in the winter months.

Q. Are the rates charged by the trucks of some advantage to you, too?

A. I think—I understand they are handled by interstate commerce, the rates are approximately the same, if not the same.

[fol. 556] Q. You don't know actually, though, do you?

A. No, because I have never had them bring me in a truckload.

Q. Some of them you say are going into the use of privately owned trucks for this material.

A. Yes, some of these dealers tell me they can go down to California and have their own truck and they can go down there and truck it up and they make themselves $15 a day by sitting there and driving that truck, saving against the freight rate being charged today. Our boys went down last winter and got a load, I know that, and they claimed it was a saving to them. They didn't know how they could make $15 any easier.

Exam. Mullen: Is that all of this witness?

Mr. Collins: Thank you.

Mr. Quirk: That is all.

Exam. Mullen: OK, thank you.

Mr. Quirk: That is all, Mr. Bott.

(Witness excused.)

Exam. Mullen: We will recess until 1:45.

Just a minute, gentlemen, I have an announcement to make. It appears we will have to have a night session tonight, and that will be at 7:30 in the Junior Ballroom on the mezzanine floor.

(Whereupon at 12:22 p.m. the hearing recessed to reconvene at 1:45 p.m. the same day.)

[fol. 557] Afternoon Session, 1:50 p.m.

Exam. Mullen: We are ready to proceed, gentlemen.

The next witness is W. H. Snyder.

W. H. SNYDER was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name?
A. W. H. Snyder.
Q. Mr. Snyder, where do you live?
A. Grand Junction, Colorado.
Q. In what business are you engaged?
A. The monument business.
Q. Are you a retail dealer?
A. Yes, I am a retail dealer in eastern Utah, western Colorado, and northwestern New Mexico.
Q. Will you tell in your own way how the absence of joint competitive rates over the Rio Grande to points on the Union Pacific in the states involved has affected you?
A. Well, in the first place, all of our salesmen—apparently the companies draw the line on the Continental Divide, so that includes Grand Junction—then they go west to Utah, Idaho, Oregon and all the Northwest and California. In order not to run my inventory up, it would be very beneficial to me to be able to get pool cars, which, at the present time, I am not able to do.
[fol. 558] I have to buy full carloads which overstocks me considerably on certain items, and certain items we figure will run us for a year or a year and a half go out, like at the present time I am overstocked on some items, and some items I am entirely out of. I received a car from Tate, Georgia, on October 7.
Q. Is that a carload?
A. That is a carload, which considerably overstocks me.
Q. Now, is the invoice on this heavy per car?
A. Yes, the invoice on a full carload will run you any-

where from six to eight thousand dollars, where, if we were able to buy and have a pool car stock, which we are unable to do at the present time on account of what you call the Ogden gateway, why, we could have an investment of from possibly $1500 to $2000, and we would be able to sell more merchandise because we could go out and push these certain products, where, at the present time, when we sell what we have in stock, we just quit pushing them.

Q. Have you received carload lots of monuments?

A. Yes.

Q. What happens when you receive a carload with respect to any outbound shipments?

A. I don't get that.

Q. Well, when you get a carload, and you sell the part of the carload and ship it in less than carload lots, do you have some examples of that sort?

[fol. 559] A. Yes. When we are forced to sell, or our customers want something, and we have to ship it in L.C.L., we have to charge our customer more money. Now, as an example, from Tate, Georgia, a monument I had to sell last year, weighed 2150 pounds, the L.C.L. rate on it is $4.66 a hundred, and if we were able to get it in a carload we could have got 895 pounds of it at $1.67, and 1255 pounds at $1.98 a hundred, carload lots.

Q. I think if you had the joint rates sought in this complaint, you would have the privilege of having the car stocked at that point to take smaller car lots out, is that right?

A. That is right.

Q. Would that allow you to expand your market?

A. Yes, I think it would considerably.

Q. In what manner?

A. I could go out, if I knew I could have a pool car, with a stop-over privilege in Grand Junction, I would go out and push these certain materials that I am unable to get in pool cars at the present time, which are very good sellers, but you are unable to tell just exactly what you are going to sell the next year or year and a half.

Exam. Mullen: Who would be the pool car operator in that case?

The Witness: I didn't catch you.

Exam. Mullen: Who would be the pool car operator in such a case?

[fol. 560] The Witness: I would buy it—Mr. J. H. Bott of Brigham City is my salesman on this particular material I am talking about.

Exam. Mullen: Who would ship the pool car?

The Witness: Georgia Marble Company, Tate, Georgia.

Exam. Mullen: Where would it be from?

The Witness: It would probably end up in Pocatello, Twin Falls or up there some place. These dealers up in that territory sell quite a lot of Georgia marble, and that is why in the past I have wanted marble, and Mr. Bott told me he could not ship it over into Pocatello and that territory after stopping at Grand Junction.

By Mr. Quirk:

Q. Have you lost sales because you could not use this stop in transit arrangement that would otherwise be applicable if we had the joint through rates?

A. Yes, in one particular case I can remember right now, from Price, Utah, a very large memorial that I could not deliver when the lady wanted it, on account of the pool car, and I could not get the extra charge that I would have to get by shipping it L.C.L.

Another disadvantage of shipping it L.C.L., if you realize marble and granite weigh from 170 to 200 pounds a cubic foot; whenever you crate it and ship it L.C.L., it has to be handled a lot of times, and nine out of ten times the merchandise arrives in a broken or bad condition.

Q. Have you anything further to say, Mr. Snyder, with [fol. 561] respect to that matter?

A. Well, in regard to the marble, it would probably mean there would be from three to four cars a year come through Grand Junction where I would be able to buy merchandise, and on granite possibly six to eight cars, where they would stop in Grand Junction instead of having to buy full cars and overload.

I would be able to buy in pool cars, and that way keep my stock up one hundred per cent at all times instead of having a full stock today and then 30 or 60 days from now being out of some merchandise.

Q. You have to carry a fairly comprehensive line of these commodities these days?

A. Yes, you do. It is not only carrying one item, but you have to carry various colors which are put out by various companies, which is in one way what runs your inventory up if we have to buy a full carload all the time.

Mr. Quirk: You may question the witness.

Cross-examination.

By Mr. Collins:

Q. Just what is the relation between you and Mr. L. J. Bott?

A. Mr. L. J. Bott is a salesman, who lives in Brigham City, Utah, who sells Georgia marble to me and the dealers in Pocatello and in the Northwest.

Q. You say he is a salesman?

[fol. 562] A. He is—I guess you call him a salesman, or the manufacturer's representative, or whatever you want to call him.

Q. When this material reaches you at Grand Junction, is it ready then to set up as a tombstone, or do you do something to it?

A. No, it is ready in one way. What we do is to carve the design, and the name, and the dates, in our place of business. It is all shaped and it is all polished.

Q. I see. Is it your understanding the material that comes to Mr. Bott is also finished except for carving the name?

A. No, Mr. Bott is a wholesaler also.

Q. Oh, I see.

Q. And he does ship in the rough saw blocks in a lot of his material, not in Georgia marble, but in a lot of the granites, and finishes it, polishes it, shapes it, and finishes it in his own plants, which I don't do. I am strictly a retailer.

Q. Yes. If you want a certain quantity of these monuments, do you notify Mr. Bott and he sends in the order for you; is that the way it is done?

A. That is right.

Q. You don't send any orders direct to Tate, Georgia, in your own name?

A. Well, once in a while we do, but Mr. Bott always gets a copy of the invoice and everything goes through Mr. Bott of Brigham City, Utah.

[fol. 563] Q. And to whom would a car of this material, leaving Tate, Georgia, be consigned?

A. It might be consigned to Pocatello; it might be consigned to Twin Falls, it might be consigned to any place up in that territory.

Q. Well, would there be any receiver or consignees' name at any one of these places shown on the billing, do you know?

A. Oh, yes, yes.

Q. Who would that be?

A. That depends on where it was stopped—what company's place it was stopped at.

Q. Let's take a carload purchased by Mr. Bott: The Georgia Marble Company would ship it from Tate?

A. Tate, yes.

Q. Would it ship it to itself?

A. No.

Q. Would it ship it to Mr. Bott?

A. No. For instance, this car went to Ogden, Utah, which was O.K., but this car was consigned to the Intermountain Monument Company from Rock of Ages Company, Berry, Vermont. This is all consigned to a dealer at some definite point, and they pay the entire freight and then we pay our share of the freight to them, see.

Q. I see. Are any of the cars ever consigned to you?

A. Not unless I buy a full carload.

[fol. 564] Q. I see.

A. The pool cars are never consigned to me unless I buy a full carload, if they are going west, no.

Q. And it is only when a full carload is assigned to you that you pay any freight charges?

A. I pay freight charges.

Q. I mean you pay your proportion?

A. I pay my proportion, yes.

Q. If the whole carload is consigned to you, you pay all of it?

A. I pay all of it, yes.

Q. I understood you to say that you had one car from Tate, Georgia, which overstocked you.

A. Yes, on October 7, I believe was the date.

Q. Of this year?

A. Yes, I believe it was October 7 the car arrived—yes, October 7.

Q. You mentioned one sale of one monument that you lost the last year, you said, because you couldn't ship it at a carload rate?

A. Yes, but I could not get my extra. Now, here are two here, one on March 24, one on March 26. The people wanted them up for Decoration Day. I finally got them up after so much talking, and well, you might say, rubbing their back a little bit, and one thing and another. I finally got them up October 7; and they wanted them by Decoration Day.

[fol. 565] Q. Is this your situation, Mr. Snyder, that you can't do business at any profit unless you can haul at a carload rate?

A. I absolutely cannot meet competition if I have got to ship in L.C.L. If I had to ship everything L.C.L., I would close the business down tomorrow.

Q. And yet the volume of your business is not sufficient in itself to enable you to handle your own sales in carload lots, is it?

A. Not all these different granites that you have to handle. Now, you have got Georgia marble, you have got Rock of Ages.

Q. You have what?

A. Rock of Ages granite from Barre, Vermont. You have a Cold Springs dealer from Cold Springs, Minnesota, who would buy some out of St. Cloud and some out of Minnesota, and to stock full carloads of all that, I am not financially in that position to handle full carloads, because it does overstock me considerably.

Q. How long have you been in this business?

A. Since 1929.

Q. When did you become aware of this situation you have been discussing here in respect to freight rates?

A. What I say is a guess, but I have an idea it is approximately back in about 1932 or 1933. Now, I wouldn't

want to absolutely make that statement as being absolutely correct.

Q. That is close enough. Have you filed any complaint [fol. 566] with the Interstate Commerce Commission about this situation?

A. No, but here about four years ago I did have a half a car ordered from Mr. Bott from the Liberty Granite Company of St. Cloud, Minnesota, and he couldn't get a pool car to stop. Came Decoration Day where everybody wants their monument up for Decoration Day, I had so many customers that got mad, I got made and cancelled it out, which is human.

Q. I don't want mine up on Decoration Day.

A. If we could have had a pool car stopping—he did have granite going up into Idaho, and up in there, and we could have had a pool car stopped and I would have been able to get it in plenty of time.

Q. Have you take- the matter up with the Union Pacific Railroad?

A. No, the only one I have every taken it up with is Mr. Bott.

Q. I see.

A. That has been numerous times. How many, I couldn't say.

Q. How do you happen to appear in this case?

A. The D&RG asked me to appear here. They found out—I don't know who it was through, but they found out what troubles I was having and they asked me to appear and present my side of it.

Mr. Quirk: To satisfy his complaint.

By Mr. Collins:

Q. I suppose you expect them to reciprocate some time by giving you some business?

A. I think probably the D&RGW and Grand Junction [fol. 567] probably give me maybe 20 per cent of what business I have, yes.

Q. And you expect to expand?

A. Yes.

Q. Mr. Snyder, about what volume of business would

you say you have been doing annually for the last three or four years?

A. It is from $25,000 to $50,000. It will probably run pretty close to $50,000 this year.

Mr. Collins: All right. That is all.

Exam. Mullen: That is all, sir. Thank you.

(Witness excused.)

FRED SIMPSON, JR., was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name?

A. Fred Simpson, Jr.

Q. You are located at Colorado Springs, Colorado?

A. Yes sir.

Q. What is your address?

A. 201 West Colorado Avenue.

Q. In what business are you engaged?

A. Shipper of dried beans, also in the grain, seed and feed business.

Q. Are you in the warehouse business, too?

A. We warehouse beans, just our own commodities we warehouse.

Q. Do you package these commodities?

A. We pack beans in one hundred pound bags, and also [fol. 568] we pack beans in cellophane bags, one and two pound consumer size packages.

Q. What types of beans do you handle?

A. We handle black-eye pea beans, large lima beans, baby lima beans, cranberry beans, and small white beans, which originate in California. We handle pinto beans, which originate in Wyoming, Idaho, Colorado, and New Mexico. We handle Great Northern beans that originate in Nebraska, Wyoming and Idaho.

Q. Where is your principal market?

A. Our principal market on dried beans is in the southeastern section of the United States.

Q. Do you ship beans in carload lots or in mixed carloads, or less than carloads; just describe what you do.

A. Our Bean business is a carload business. We bring the California variety of beans into Colorado Springs, northern beans from Wyoming, pinto beans from the western slope of Colorado, and ship these in assorted cars to consuming markets, both in one hundred pound bags and retail consumer packages and cases.

Q. How many cars did your company ship in 1948?

A. I do not have it broken down into a calendar year. From September, 1948 to September 1, 1949, we shipped a total of 390 cars of 800 bags each—rather, 80,000 pounds, each.

Q. How about 1949; did you give that?

Mr. Collins: You gave it up to September, 1949.

[fol. 569] Mr. Quirk: All right. That is enough.

By Mr. Quirk:

Q. Now, do you obtain any beans from Idaho?

A. Yes, we buy beans in Idaho, and ship them to the southeastern section of the United States.

Q. Is the transit arrangements existing at Colorado Springs available to that movement of beans?

A. We can transit Idaho beans through Colorado Springs, provided the eventual destination of these Idaho beans isn't east of the Missouri River.

Q. Does the destination also have to be south of the Union Pacific, as well as east of the Missouri River?

A. I presume so. However, that is no problem to us, because most of our beans move south anyway.

Q. Well, tell us what you could do if you had the rates which this complainant seeks.

A. We are interested in transiting Idaho beans at Colorado Springs because most of our bean business is east of the Missouri River. The way the situation is today, we never bring Idaho beans through Colorado Springs because we do not know what the eventual destination is going to be on the beans, and in all probability it would be east of the Missouri River.

Also, in our assorted car business we need to transit Idaho red beans through Colorado Springs to forward in

our assorted cars. We cannot obtain Idaho red beans any places except in Idaho. This is a difficult situation, as it [fol. 570] does not give us a complete line of beans to offer the trade.

We have many instances where we have lost the business because we had the varieties already mentioned, but could not furnish Idaho reds. Also, it would be of great advantage to us to be able to transit Idaho Great Northern beans through Colorado Springs, because of the fact that some of our beans are going to destinations taking transcontinental rate territory.

With government support prices in Wyoming at 15 cents a hundredweight over prices in Idaho, if we transit Wyoming beans through Colorado Springs and apply the transcontinental rate against such beans, the ultimate result is we have paid 15 cents more per hundredweight for our beans, taking the same rate to the Atlantic Seaboard, as would Idaho beans, which have a 15 cents per hundred lower freight differential and price support differential—correction, it isn't a lower rate differential, it is a lower price suppor

Mr. Collins: May I ask a question for information?

The Witness: Yes sir.

Mr. Collins: Each time you use the word "transiting" in your statement, does that refer to a mixing or different varieties of beans for the purposes of these packages?

The Witness: By "transiting," we mean for packaging, cleaning, or storing.

Mr. Collins: I see.

[fol. 571] By Mr. Quirk:

Q. Is this a correct statement of your last statement, that if you had the rates which this complaint seeks, you could expand your market? If you had the rates this complaint seeks, to have established, your market would be expanded?

A. Yes, it would put us competitive on the long rate territory on the sort of cars of beans on which we are not competitive at the present time.

Q. I believe your company name is Simpson and Company?

A. That is correct.

Q. Do you have another warehousing plant somewhere?

A. We are affiliated with the Robinson Grain Company, from which we lease warehouse space, and also we lease space from the City of Colorado Springs at Peterson Field.

Q. Have you any further statement to make?

A. The only further statement I have to make is that if we purchased Idaho red beans or Great Northern beans in Idaho, and brought them through Colorado Springs via the Ogden gateway, we would be penalized 39 cents per hundred pounds—I rather should say, we would pay a 39 cents higher rate.

Q. Are the red Idaho beans grown in any other state?

A. There are maybe four or five cars grown at Riverton, Wyoming, on the C&NW.

Mr. Quirk: You may cross examine the witness.

Mr. Collins: No cross examination.

[fol. 572] Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Mr. Gibson: Mr. Osborn.

MAX OSBORN was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name?

A. Max Osborn.

Q. Where are you located, Mr. Osborn?

A. Fruita, Colorado.

Q. That is a point on the Denver and Rio Grande Railroad, is it not?

A. Yes sir.

Q. How far east——

Exam. Mullen: Just a moment. I think I interrupted the witness and we didn't hear just where he is located. Do you mind repeating that?

The Witness: Fruita, Colorado.

Mr. Collins: I didn't get your line of business.
Mr. Quirk: I have not come to that.
Mr. Collins: Excuse me. I am sorry.

By Mr. Quirk:

Q. Where is Fruita, Colorado located in relation to Grand Junction, Colorado?

A. About ten miles west of Grand Junction.

Q. What is the nature of your business at Fruita?

[fol. 573] A. We are commonly known as a country shipper. That is, the bean business; our business is direct origination of the beans from the grower.

Mr. Collins: Beans?
The Witness: Dried beans.

By Mr. Quirk:

Q. Under what name do you operate?

A. The Osborn Bean and Elevator Company.

Q. Will you state in your own way, if it is a fact, you favor the joint rates which this complaint seeks to have established?

A. Would you repeat that?

Mr. Quirk: Read it.

(Question read.)

The Witness: We market our beans on our own account, and we have run into the difficulty since the close of the war on the requirements of our trade for mixed cars of beans on the unavailability, or on account of the combination rate existing at Ogden, to use the variety of Idaho beans throughout our territory.

By Mr. Quirk:

Q. What type of beans do you handle?

A. Pinto beans.

Q. Do you ever get any of these Great Northern beans?

A. By truck only.

Q. Do you handle these Idaho red beans?

A. Yes.

Q. Do you handle peas, also?

[fol. 574] A. No. We have not to date handled any peas because the same condition exists with them as does with the Great Northerns. We are not able to be competitive with the existing rates to make pool cars of beans, which is necessary to get into the direct sale of beans.

Q. Where are your principal competitors located?

A. Our principal competitors are mostly local buyers in our town of doing business, at Fruita, Colorado. From a selling standpoint, anybody in the bean business is a competitor.

Q. Well, do you mix these read Idaho beans with other beans that you handle?

A. We do locally only, for local consumption. We don't mix them, we bring them in for packaging in cellophane for local trade only. At the present time, our operation is confined to a local packaging operation on the Idaho varieties, I would say.

Q. You would have to pay combination rates on any of those beans that came into Fruita and went east, wouldn't you?

A. That is right.

Q. Is that prohibitive.

A. That is prohibitive.

Q. If you had the joint rates which we seek here, you could get transit on those beans at Fruita, could you not?

A. That is correct.

And mix them with other beans, and ship them east?

[fol. 575] A. That is correct.

Q. Is that what you want to do?

A. That is right.

Q. Where is your principal market?

A. In the southeast part of the United States.

Q. Do you have a customer at Gary, Nebraska?

A. That is right.

Q. That is a town on the Union Pacific, is it not?

A. That is right.

Q. What does he do with these beans after they reach him?

A. They are all broken down primarily into cellophane packages, which is—and, of course, some one hundred pound bags for mixed car shipments; together with the northern

beans which originate in the Nebraska territory, for mixed car business.

Q. In other words, this dealer at Gary, Nebraska, being on the Union Pacific, gets the benefit of the transit, and you do not; is that true?

A. That is correct.

Mr. Collins: What was the Nebraska dealer's name again, please?

The Witness: It wasn't named. The name is—it was at Gary, Nebraska.

By Mr. Quirk:

Q. How do you spell it?

A. G-e-r-i-n-g.

Mr. Quirk: You may cross examine the witness.

[fol. 576] Cross-examination.

By Mr. Collins:

Q. Did you hear Mr. Simpson's testimony just now?

A. Yes, sir.

Q. Your situation is substantially similar to his, is it not?

A. Comparable, yes. We are what is known, as I said before, as a country shipper.

Q. Yes.

A. Our principal problem is the marketing of the one variety, namely, pinto beans, that is grown in our territory.

Q. Is Mr. Simpson's operation in competition with yours?

A. Not necessarily.

Q. Not necessarily?

A. We, of course, sell Mr. Simpson beans, that is, at times. He buys beans for his packaging operations with the other brokers.

Q. Could you tell us about what quantity, volume in carloads, or whatever unit you indicate you handle a year?

A. We normally handle around 60, perhaps, 70 to 80,000 pound cars of pinto beans from the Fruita territory.

Q. What kind of beans?

A. Pinto. Our local trade consumes Idaho varieties, approximately 12 to 14 hundred bags, which constitutes a major part of our bean operation.

Mr. Collins: That is all. Thank you.

Exam. Mullen: Is that all?

[fol. 577] Mr. Quirk: That is all.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

HERBERT P. HEIDEL was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Mr. Heidel, will you give your full name?

A. Herbert P. Heidel.

Q. In what business are you engaged, Mr. Heidel?

A. I am engaged in packing house operation and a cold storage operation, along with a feed lot operation for both lambs and beef.

Q. What company are you with?

A. The Lincoln Packing Division of the American Stores.

Q. American Stores Company, or just American Stores?

A. American Stores Company, Inc.

Q. Is that a large company that has storage plants and stores at other points in the United States?

A. This is the only storage plant they have in the Rocky Mountain territory.

Q. I see. That is enough.

Now, will you give the storage capacity at Pueblo?

A. Our storage warehouse has a capacity of between 200 and 250 carloads.

Mr. Collins: Mr. Examiner, I would like to ask a question [fol. 578] or two before this witness goes on, very important questions. You are not appearing here to speak the position or attitude of American Stores, are you?

Mr. Quirk: I object.

Exam. Mullen: Just a minute; have you finished the question?

Mr. Quirk: I object being interrupted at this point.

Mr. Collins: This is quite important.

Mr. Quirk: Why don't you let me ask the question.

Exam. Mullen: Why not reserve it for cross examination?

Mr. Collins: It doesn't have anything to do with cross examination. Don't you think we ought to know what capacity this man is appearing here? He gets all these other things in there first, and a completely erroneous impression will be in this record.

Exam. Mullen: You can cross examine him on it.

By Mr. Quirk:

Q. Is your plant at Pueblo served by the Denver and Rio Grande?

A. Yes sir.

Q. Do you do a slaughtering business there, too?

A. Yes sir.

Q. What commodities do you store at Pueblo?

A. All perishable commodities.

Q. Did you describe what commodities can be moved to Pueblo, and where they can be moved at the going rate, originating in Idaho and other places?

[fol. 579] A. You mean on a through rate?

Q. Yes.

A. The commodities that we can move from Idaho, Washington and Oregon, primarily Oregon, are apples and pears on a through rate.

Q. Are there other commodities from points on the Union Pacific that you have the capacity to store, and you would store, if you had competitive rates?

A. Yes sir.

Q. What are those commodities?

A. Turkeys, primarily. Also Idaho potatoes and onions, and butter.

Q. Did you hear the testimony with respect to the rate situation as given by Mr. Belcher of Pueblo yesterday?

A. Yes sir.

Q. Did he properly describe the rate situation?

A. He did.

Q. That applies to you as well as to his company?

A. That is right.

Q. Do you handle frozen foods?

A. Yes sir.

Q. Now, do you receive any livestock from points on the

Union Pacific which are slaughtered and packed at your plant in Pueblo?

A. Yes sir.

[fol. 580] Q. What are they, cattle or lambs?

A. It is lambs.

Q. From what points are those lambs shipped?

A. I can think of a few offhand, such as Robinette, Oregon, Gerome, Idaho, Aberdeen, Idaho, Hansen and Buhl, Idaho, Mountain Home, Bellview, Hill City, Macon, Ketchum, Hailey, Idaho.

Q. Are those points located on the Union Pacific?

A. I believe they are.

Q. Are they in Idaho?

A. Yes sir.

Q. They must be there.

A. There is also Silver Springs; I failed to mention that.

Q. There is a joint through rate published by the Union Pacific, and applicable by the Union Pacific, to Denver, or through Denver, and thence via any one of the three railroads that operate from Denver to Pueblo, is it not?

A. That is right.

Q. Then there are combination rates on Ogden, Utah, if the lambs move Union Pacific to Ogden, and then Denver and Rio Grande to Pueblo?

A. That is right.

Q. Which of those routes have you been using in the past year?

A. In the past year, we used the *rate* from Ogden direct to Pueblo.

[fol. 581] Q. By the Denver and Rio Grande?

A. Yes sir.

Q. Does that make a higher per car change than if you used the Union Pacific through Denver to Pueblo?

A. It does.

Q. Do you have any rough idea how much that would average per car?

A. It averages about $70.00 to $80.00, I would say roughly, depending on the tonnage of the car handled.

Q. Why do you use the Rio Grande route in view of that extra charge?

A. Our experience in the past years indicated that we

would be abale to get delivery of the lambs more rapidly, and thus suffer less shrink, by using the D&RG from Ogden to Pueblo direct.

Q. Is that because of the necessity of stopping the cars oftener when they move via Union Pacific for feed, than when they move via Ogden and the Rio Grande?

A. If we move Ogden and the Rio Grande, we do not have to stop to feed between Ogden and Pueblo, that is right.

Q. What happens if you move via the Union Pacific?

A. With very few exceptions, we at least have to feed at Denver.

Q. Do you buy these lambs on the Ogden market?

A. A good portion of them, yes sir.

[fol. 582] Q. Does that difference in the stop-off offset the difference in the charge between the joint rate of the Union Pacific and the combination rate on Ogden, keeping in mind shrinkage and everything?

A. We don't think that it does.

Q. Well then, do you think the Ogden gateway because the service is more adequate?

A. That is the primary reason, yes sir.

Q. Are you testifying here today in response to a subpoena which I requested the Interstate Commerce Commission to issue?

A. Yes sir.

Mr. Quirk: You may cross examine.

Cross-examination.

By Mr. Collins:

Q. You do not purport to state the position of the American Stores Company as favoring the complainant's side of this case, do you?

A. Well, I might answer by saying——.

Q. You can answer this yes or no.

Mr. Quirk: I think that is an improper question anyway.

Mr. Collins: It is not.

Mr. Quirk: Unless Mr. Collins wants us to go into this in a really big way, and you will be sorry you brought it up if you do.

Exam. Mullen: Just a minute, gentlemen. We have a simple question here.

[fol. 583] Mr. Quirk: You better talk to some of your own people over there.

Exam. Mullen: Lincoln Packing Company, subsidiary of the American Stores Company?

The Witness: Yes sir.

Exam. Mullen: I think Mr. Collins may inquire into his capacity here, how he is appearing, and for whom. Go ahead, sir.

By Mr. Collins:

Q. For whom are you appearing here?

A. I am appearing in the interests of the Pueblo Division of the American Stores, Lincoln Packing Company.

Q. Do you know what the position of the American Stores Company, as a corporation or company, is in this case?

A. They were hesitant to take sides in the matter, and expressed a desire to be neutral.

Q. I see. You would not be here except for the fact that you had this subpoena served on you?

A. That is right.

Mr. Collins: That is all. Thank you.

Exam. Mullen: Anything further?

Mr. Quirk: Just a minute.

That is all.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Exam. Mullen: We will have a ten-minute recess.

(Recess taken.)

[fol. 584] Exam. Mullen: Let us proceed, gentlemen.

ROBERT C. JOHNSON was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name?

A. Robert C. Johnson.

Q. Where do you reside?

A. Denver, Colorado.

Q. What is the address?

A. 635 Eudora Street, Denver, Colorado.

Q. With what company are you connected, that is, in what capacity?

A. Koppers Company, Inc. I am district manager, Wood Preserving Division.

Q. How long have you been with the Koppers Company?

A. Thirty years next April.

Q. How much of that time has been devoted to the wood preserving aspects of the business?

A. All of it.

Q. Does the Koppers Company have a wood treating or wood preserving plant in Colorado?

A. In Salida, Colorado, yes sir.

Q. That plant is served by the Denver and Rio Grande?

A. That is correct.

Q. Where is the source of the lumber that is treated at [fol. 585] the Salida plant?

A. Well, there is a portion of it that comes out of the States of Colorado and New Mexico, some in Utah, and a greater portion, however, comes out of the States of Washington and Oregon.

Q. What rail route do you use to bring that lumber into Salida?

A. Well, we bring it in Southern Pacific, Western Pacific, the Rio Grande, under the present tariffs.

Q. Do you obtain any lumber from points on the Union Pacific, or any lumber that would move via the Union Pacific and the Rio Grande through Ogden?

A. No sir.

Q. Why don't you use such lumber?

A. The rates are not advantageous.

Q. Is there lumber in the territory served by the Union Pacific which you could use and would use if the competitive rates were in effect?

A. I am sure that is true.

Q. First, from what points on the Union Pacific or reached by the Union Pacific would you obtain lumber if you had competitive rates?

A. There would be various points. To name a few would be Baker, Oregon and Burns, Oregon, and there are two or three other points which at the moment I don't recall.

Q. You would be interested in pine lumber, I suppose?

A. We are. We do buy pine, pine cross-ties, and some lumber.

[fol. 586] Q. And fir?

A. And fir lumber, yes.

Q. Poles?

A. Yes sir, poles and piling.

Q. When was the plant at Salida built?

A. 1925.

Q. What is the investment in that plant?

A. Well, an estimate would be about half a million dollars.

Q. Do you favor the establishment of the rates which this complaint seeks?

A. We do.

Q. Why do you favor it?

A. Well, first we like large range and flexibility in procuring our forest products. We feel through that we would gain in production and often in price as well as delivery, and quality also being considered.

Q. After this lumber is treated at Salida, some of it moves outside of the state, does it not?

A. Yes, I would estimate 60 per cent of the materials that go through the Salida plant move out beyond the State of Colorado, both east, south and southeast.

Q. If any lumber came in to be treated from points on the Union Pacific, and moved outside the state, such lumber would have to pay the combination rates on Ogden, Utah, would they not?

A. That is my understanding.

[fol. 587] Q. That would be substantially higher than the going or competitive rates?

A. That is true.

Q. You want to be in position to buy out wherever lumber is to be bought?

A. That is correct.

Q. That is the reason you are here?

A. That is correct, yes sir.

Mr. Quirk: I have no further questions.

Cross-examination.

By Mr. Collins:

Q. Your company has a wood preserving plant at Utah Junction, near Denver?

A. That is right out of Denver, that is right, yes sir.

Q. It is within the switching limits of Denver?

A. It is; it is within the switching limits of Denver.

Q. Do you carry on at that Denver plant about the same kind of operation you do at Salida?

A. Well, pretty much the same. There is some variation in the operations of the two plants.

Q. I don't mean with particularity. You don't, for instance, at either one of the plants, just treat cross-ties or one particular item, do you?

A. No, they are both quite diversified.

Q. Your company has a contract for treating cross-ties for the D&RGW, does it not?

[fol. 588] A. That is correct.

Q. Where is that work done?

A. At Salida, at the Salida plant.

Q. That is located on the Rio Grande route?

A. That is correct.

Q. And the interests of your company here is merely to obtain, if it can, the same rates by the Rio Grande that you have available by the Union Pacific to—you do have those rates available to the Denver plant?

A. That is quite true.

Q. And you want the same rates by the D&RG?

A. Yes.

Q. And for the purpose of being able to treat this lumber and moving on out such portions beyond the state line as your trade requires, that is our interest here?

A. Our position in that is it is the policy of my company

that each plant, each operation stands on its own foundation, meaning that while we have a definite interest in the Denver plant, we have the same interest in the Salida plant, and we expect each plant to bear its own burden. As a matter of fact, we have 22 other treating plants scattered through the country, in addition to those two.

Q. So I understand.

Mr. Collins: That is all I wanted to ask.

Redirect-examination.

[fol. 589] By Mr. Quirk:

Q. Mr. Johnson, in addition to this treating process that you have in Salida, do you do some commercial business in lumber there?

A. At Salida?

Q. Yes.

A. Oh, yes.

Mr. Quirk: That is all.

Mr. Collins: That is all.

(Witness excused.)

P. G. Batt, was sworn and testified as follows:

Direct-examination.

By Mr. Quirk:

Q. What is your full name, Mr. Batt?

A. P. G. Batt.

Q. Mr. Batt, where do you reside?

A. I reside at Caldwell, Idaho.

Q. Have you lived in Idaho a long time?

A. I have lived in Idaho since 1910.

Q. In what business are you engaged in Caldwell?

A. I am engaged in the business of farming; also a shipper of fresh fruits and vegetables.

Q. What are included in that category, what kind of fruits and vegetables?

A. We ship green pease in the pod, lettuce, potatoes, onions, prunes, peaches, and at one time, carrots. In addi- [fol. 590] tion to that, we raise various othe commodities which are not shipped in carload lots.

Q. You say that you were also a farmer?

A. Yes sir.

Q. Do you operate a large farm?

A. I own and operate a number of farms the total acreage of which perhaps would exceed one thousand acres.

Q. In your shipping business, are you engaged in that as an individual or as a company?

A. We are engaged in that as a company, which bears the name of P. G. Batt Produce Company, Inc., of which I am president and manager.

Q. Now, to shorten this up, I am going to ask you to state in your own way why you favor the joint rates and through routing arrangements which this complaint seeks.

A. I do favor the joint rates which this complaint seeks. I live and operate in an area which produces large quantities of agricultural products far in excess of the amount that can be consumed in that area. To dispose of those products advantageously, it is necessary to ship them to other points of consumption.

It is my firm conviction that any obstacle, natural or artificial, which interrupts the free flow of those agricultural products does not serve the best interest of the community or the area in which I operate.

[fol. 591] Q. Is much of the commodities which you have described shipped on sort of consignment, subject to diversion in transit?

A. The very nature of the perishable industry is such that it is absolutely necessary to bill many cars previous to the time they are sold. It then becomes necessary to sell those cars while rolling or in transit. That is a practice which is generally followed by most shippers of fresh fruits and vegetables.

Q. Just where are your principal eastern markets?

A. Well, perhaps our most important market is Chicago. Then following in the order of importance would be Kansas City, St. Louis, and then a multitude of smaller cities interminged in the mid-west, with perhaps a very substantial

portion of our shipments going to New York, and even farther.

Q. Do you have a market in Kansas and states south of Kansas?

A. Yes sir. We seel quite a few cars in Kansas, Nebraska, Oklahoma, and the Southwest.

Q. Have you had any experience with what are called "distressed" cars?

A. I have had many, and I have one specific example which I would like to give which illustrates perfectly what I previously termed an artificial barrier to the free flow of our agricultural products.

Q. Give that example.

A. On October 29, 1949, we shipped from Allendale, [fol. 592] Idaho, P. F. E. 42431. containing 300 crates of lettuce.

Mr. Collins: What was the date, Mr. Batt, please?

The Witness: October 29, 1949.

Mr. Collins: Thank you.

By Mr. Quirk:

Q. How was the car consigned?

A. This car was sold the day previous to loading to Grant Billingsly Company at Wichita, Kansas, through a broker at that point, with the understanding at the time of sale we would agree upon the price upon the day the car was loaded. On the same day the sale was made, and previous to loading, in conversation with another shipper, I learned that he had encountered what he thought was an unfair rejection in Wichita, which put me on my guard, and I instructed the billing agent to pick the best of the four cars which we loaded on that day to go to Wichita.

The three other cars which we loaded on that day were delivered without complaint, or without allowance. The four cars which we loaded on the day previous to that delivered and according to my records, which I have just reviewed, showed no complaint or allowance. The two cars on the day following that also delivered without complaint or allowance. When the car in question arrived at Wichita, I received a wire from the broker which proceeded to com-

plain about the car, and said that it had many of the defects common to lettuce, and that the receiver desired an allowance of 75 cents per crate.

[fol. 593] I immediately called the broker on the telephone to ascertain more particulars with respect to the rejection, and the conversation soon departed from one of quality to one in which the broker called attention to the fact that there was a great deal of other cheaper lettuce in town, and that my receiver was unable to distribute this lettuce at a profit to himself.

We haggled for some time over the telephone, and I finally made an allowance of 50 cents per crate, and asked him to pay the draft, and mailed him a check on that day, our check number 1949, for $159.00, which was 50 cents per crate on that car of lettuce.

On the same day, I had a call from a receiver in St. Louis, Missouri, who had been handling for me on a jobbing basis approximately three cars per week. He wanted a car of lettuce which was rolling and close in. I had no other car of lettuce which was rolling and close in. I did have this car which I would have been very happy to take away from this receiver, who wanted what I thought was an unjust allowance, and give it to the gentleman in St. Louis.

I made a determination through my local agent as to what the differential or the increased freight rate would be if I were to divert this car from Wichita into St. Louis, and I received the following information: the freight from point of destination, Caldwell, Idaho——

[fol. 594] Q. Point of origin.

A. —was to Wichita, $1.11 per hundred. Had I billed the car direct by way of Kansas City to St. Louis, the rate would have been $1.29 per hundred, but by diverting the car out of Wichita, and thence to St. Louis, I would have been subject to a combination rate which would have been $1.75 per hundredweight. That leaves a difference, if I check it here correctly in my head, of 46 cents per hundredweight that I would have been penalized. With this knowledge, I, of course, made the allowance on the car of 50 cents per crate.

Q. Do you understand, Mr. Batt, that if the competitive rates which the Denver and Rio Grande seeks in this case

were in effect, you could have reconsigned that shipment from Wichita to St. Louis at the going rate?

A. That is my understanding, and that is what I desire.

Q. When these cars of fruits and vegetables are rolling, and they get into a spot where the through rate does not apply, if you have to divert them, does that tend to put the owner of the car at the mercy of the local dealer or broker?

A. It is very definite that it does. Such markets are known in the produce trade as pocket markets. We sell in those markets with considerable reluctance. It is my experience, and I think the generally accepted theory of produce shippers generally, that the hazard of rejection in such markets is greatly increased.

[fol. 595] Q. If you have any further statement to make, proceed to make it.

A. I have this further statement to make, that those markets which we term "pocket" markets adapt themselves to rejections. When an unscrupulous receiver rejects a car, and gets an unjust allowance, he is in the position to undersell his competitor, thereby forcing his competitor to resort to the same unethical practice of asking for unjust allowances.

Q. You mean by that, Mr. Batt, that the effect of one or more of these cars that are distressed, breaks down the general market, or tends to break down the general market in that area?

A. I do. I mean that another shipper who has a carload of lettuce in Wichita at the same time that I had a car, upon which I had made an allowance of 50 cents, stood a very great probability of receiving a demand for an allowance from his receiver in order to meet the competition on the car on which I had reduced the price: and I, in turn, was forced to reduce the price because someone previous to me had been compelled to reduce his price. It is an iniquitous cycle.

Exam. Mullen: I think you have established the point.

By Mr. Quirk:

Q. Mr. Batt, while you ventured this experience at Wichita, that isn't the only place, under the existing system of rates from Idaho, where the shippers could be in the predicament this car was?

A. That is correct.

[fol. 596] Mr. Quirk: That is all.

Cross-examination.

By Mr. Collins:

Q. In the case of these two cars, you gave us instances of two cars, didn't you, Mr. Batt?

A. Just one, sir.

Q. I thought you mentioned a second one. You mentioned P. F. E. 42431.

A. Right.

Q. You didn't mention any other car?

A. No sir.

Q. How did that car move, over what railroads did it move to Wichita?

A. It moved as per the request of the receiver—U. P., Ellsworth, Frisco.

Q. Didn't you know that car could have gone on to St. Louis at the through rate?

A. I did not.

Q. You did not?

A. That is right.

Q. Do you have a traffic manager available to you, a so-called traffic expert, or do you have knowledge yourself of the tariff situation?

A. We usually seek those tariff rates or answer to our tariff problems from the local agent.

Q. Are you a member of the Potato and Onion Shippers' Association?

[fol. 597] A. Yes sir.

Q. Do they have a traffic advisor, so-called?

A. They have a traffic manager. I don't call him an expert. Usually I don't consult him in matters pertaining to rates.

Q. You made no effort after this car was distressed at Wichita to extend it on to St. Louis?

A. No sir.

Q. Could you tell us, Mr. Batt, how many of such distressed cars you have had in the last two or three, or six months, whatever time you can mention?

A. No sir, I could not tell you exactly. It would be comparatively few in number, perhaps ten, because we seek to avoid those situations.

Q. Ten within what period, would you say?

A. Perhaps during the shipping season of 1949.

Q. That would be since July 1?

A. Perhaps June 1.

Q. You may have stated your customary or usual volume, number of carloads you ship annually, but I didn't catch it. Will you state it now?

A. Yes sir. We ship annually between four hunderd and six hundred cars.

Q. Are most of those marketed, say, at points east of the Missouri River?

A. I am guessing. I believe a majority of them would be. [fol. 598] Q. If you can approximate it, would they be marketed in the upper part of the country, in the Chicago area, toward the northern part of the country, east of the Missouri River?

A. I think a majority of them are so marketed.

Q. Is your shipping season completed this year, this year's harvest of these different commodities?

A. The harvest is completed.

Q. But the shipping is not?

A. The shipping will continue, though in a smaller degree.

Q. You made payment to this man that you mentioned, this dealer you mentioned in Wichita, $150.00. Is that in the nature of a refund for what he had already paid you?

A. Yes sir, $159.00.

Q. $159.00; that is what I have. He had already paid you for the shipment?

A. I had drawn a draft on him.

Q. I see.

A. And our mutual arrangement was he would pay the draft in full as originally drawn. I mailed him a check, which I did.

Q. You referred to the results of effects of the activities of what you termed unscrupulous dealers.

A. Yes.

Q. Was not this such a dealer, or was he?

A. I would say he was not.

Q. You think he was entitled to the $159.00?

[fol. 599] A. No sir, I do not think he was entitled to it.

Q. Well, some other unscrupulous dealer then started the cycle that finally caught your dealer, is that it?

A. That is my theory.

Q. I see. But you think the sought joint rates and routes by the D&RGW would stop the activities of these unscrupulous dealers?

A. I think it would reduce them, and if I didn't think so, I certainly would not be here today.

Q. Is it your thought that these routes should be—these routes and rates should be established in order to protect the growers and shippers like yourself from the activities of these unscrupulous dealers?

A. Partially, only. I believe that such a barrier as now exists is detrimental to the free flow of agricultural products.

Exam. Mullen: Isn't your point, Mr. Witness, that you would get fewer so-called pocket markets?

The Witness: Right, sir.

By Mr. Collins:

Q. Well then, is this your position, realizing, do you not, that to establish the routes and rates desired by the D&RGW here would, to the extent that it obtained traffic now being hauled by the Union Pacific, reduce the Union Pacific's revenues? Do you realize that first?

A. I do.

Q. Now then, do you think that should be done as a means of aiding or rather protecting you from so-called unscrupu-

[fol. 600] lous dealers, and to relieve you of the so-called pocket markets which was not the case at Wichita?

A. Well, to begin with, I do not think it would reduce the tonnage of the Union Pacific. I think that the opening of these pocket markets would increase the consumption of Idaho products as much as would be diverted away from the Union Pacific, and I sincerely believe that the tonnage enjoyed by the Union Pacific would not be decreased.

Q. How would we make up for whatever the D&RG might solicit away from us in Idaho?

A. We would sell additional cars into other areas, and the more we can sell advantageously, the more we produce.

Q. Don't you sell all you produce now?

A. Yes sir, but I could produce more.

Q. You could produce more?

A. Yes sir.

Q. What would stop you? Why don't you produce more now?

A. One of the limitations in producing, sir, is the inability to market profitably.

Q. Isn't that the limitation?

A. Largely so.

Q. That, of course, eventually is market price, and your net, isn't it?

A. Yes.

Q. These products you raise, Mr. Batt, I understood them [fol. 601] to be peas, lettuce, potatoes, onions, beans, and peaches.

A. Yes. Did you say "beans"?

Q. Beans.

A. No, prunes.

Q. Prunes. Do any of those commodities have government support prices?

A. Yes sir.

Q. Which ones?

A. Potatoes.

Q. Onions?

A. No sir.

Q. Prunes?

A. No sir.

Q. Are potatoes the only one?

A. It seems to be the *one* one I can think of.

Q. You don't have any on lettuce?

A. No sir.

Q. Or peas?

A. No sir; not peaches.

Q. Yes?

A. Nor carrots.

Q. I understood you to say that you felt it was injurious, generally, for any natural or artificial barrier to exist against what you call the free flow of commerce. Do you

regard this government support price to your potatoes as an [fol. 602] artificial protection to you, or a natural protection?

Exam. Mullen: I don't think we need to go into that, Mr. Collins. It doesn't seem to me to be pertinent here.

Mr. Collins: What this case is about, so far as these shippers are concerned, Mr. Examiner, is to match their economic situation against that of the railroad. Now, he calls our gateway an artificial or some kind of a barrier. At least it is an artificial something or other that apparently the management of the railroad considers as a protection and a financial benefit to it.

Now, I would like to contrast or compare situations with him. I won't argue against your ruling, though.

Exam. Mullen: My ruling is, the policy of the government, in price support of potatoes, is not pertinent in this proceeding.

By Mr. Collins:

Q. Mr. Batt, could you tell us what finally became of the contents of this car, P.F.E. 42431, sold to this dealer in Wichita?

A. I presume it was unloaded in Wichita. He paid the draft and I sent him the check, and I know nothing more about it.

Q. It is your position here, as I understand it, that you would like the route and rates sought by the Rio Grande Railroad in this case?

A. That is correct.

Q. Is it your thought that would add competition, competi- [fol. 603] tive routes, inject competition where there isn't any; is that your thought?

A. No sir.

Q. Do you think you would derive any benefit other than this so-called relief from the pocket market and from the unscrupulous dealer; is that the extent of the relief you would hope to receive?

A. That is the principal reason that I am here, sir.

Q. I understand that you have stated in serious discussion of this situation that you realize that while competition can be beneficial, it can also be destructive?

A. Yes sir, I made that statement in defense of the Union Pacific.

Q. That is your thought, that competition can reach the point of destruction. You are not taking the position here in order to necessarily produce additional competition of routes, are you?

A. No sir.

Mr. Collins: That is all. Thank you.

Redirect examination.

By Mr. Quirk:

Q. Mr. Batt, do you know that the large volume of commodities that you are interested in move from Idaho to Wichita and other points south of the line of the Union Pacific in Kansas and elsewhere, via Denver and Pueblo, in connection with the Santa Fe and other railroads, the Mis-
[fol. 604] souri Pacific?

A. Yes sir, I know that.

Q. Do you know whether or not it is a fact that most of the traffic you handle moves that way rather than through Ellsworth, Kansas, and other more eastern junctions?

A. I would not say which way a majority of it goes. We usually yield to the wishes of the receiver and route it by the method which he asks, giving the diversion point he chooses.

Q. Well, in all events, if it — shown here in this record that if this car had moved to Wichita through the Pueblo gateway, and the Missouri Pacific, the joint through rate from your shipping point in Idaho to St. Louis, after the car is reconsigned, would not apply, and presumably when you had this rate checked, if the Union Pacific intimation is correct, the man did not have the route. He assumed it was moving to Denver, is that correct——

Mr. Collins: Mr. Examiner, I object to all these ifs and presumptions and so forth.

Exam. Mullen: It seems to me that objection is sound, Mr. Quirk.

Mr. Quirk: Well, all right, I think perhaps it is.

By Mr. Quirk:

Q. This much you can express an opinion on, inasmuch as the counsel for the Union Pacific introduced the subject: He asked you whether, if the Rio Grande competitive rates sought were established, the extent that the Rio Grande [fol. 605] could cause traffic to move to Ogden, instead of along the route of the Union Pacific, the Union Pacific would presumably get less revenue than otherwise on that traffic. You heard that statement, did you not?

A. Yes sir.

Q. Now, the car that you happened to use as an example moved through Ellsworth, Kansas. Now, doesn't it follow also that since the Union Pacific joins in short hauling itself through Denver, that they presumably get less revenue when the traffic moves through Denver?

Mr. Collins: I object to that. The witness is not qualified to presume about the revenues of the railroads.

Mr. Quirk: You asked him to presume on the other question.

Mr. Collins: No.

Exam. Mullen: I don't think we need to indulge in these presumptions. I shall ask the witness, are you informed about the various amounts of revenue the different carriers are getting?

The Witness: No sir, I don't feel qualified to answer that question.

Mr. Quirk: I thought Mr. Collins made him qualified.

Mr. Collins: I said nothing to him about revenue via different routes.

Mr. Quirk: That is all.

Exam. Mullen: That is all. Thank you.

[fol. 606] (Witness excused.)

J. F. WATSON was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name?

A. J. F. Watson.

Q. Where are you located, Mr. Watson?

A. Parma, Idaho.

Q. Are you engaged in business at Parma?

A. Yes sir.

Q. In what name?

A. I am vice president and general manager of the J. C. Watson Company of that city.

Q. J. C. Watson Produce Company?

A. J. C. Watson Company.

Q. J. C. Watson Company. Describe the nature of the business in which that company is engaged.

A. It is engaged in the production and packing, distribution of fresh fruits and vegetables, namely, peas, lettuce, prunes, apples, potatoes, and onions.

Q. Where are those commodities principally marketed?

A. They are marketed throughout the United States and portions of Canada.

Q. Well, are they marketed in all the states of the United States, or are they principally marketed in Central States or [fol. 607] Southwestern States?

A. Our commodities are marketed in all states. There are certain commodities that have a wider distribution in particular areas.

Q. How many carloads do you handle a year?

A. Our volume runs from 1500 to 2000 cars annually.

Q. Will you state what your position in this case is?

A. I am in favor of seeing the Ogden gateway opened, primarily so that we may have a free flow of goods into all markets. Our major problem in the area of Idaho, and all of our Western States, is a problem of over-production. We are constantly seeking other markets to find better distribution for our products.

Whenever we run into sections of the country where we have this free flow impeded by closed gateways, our distribu-

tion suffers in those areas, and for that reason I feel that anything that would develop new markets for us, and open up wider distribution, would be helpful, more particularly in opening the Ogden gateway, it would give us wider distribution into the southwestern territory, which, by nature of its location, is our logical market area. By that, I mean Kansas, Oklahoma, and such states in that area.

Q. Have you had experience with so-called distressed cars in certain marketing areas?

A. Yes. Anyone who is in the shipping business runs into that constantly. We have certain market areas where, if we [fol. 608] leave the Union Pacific Railroad, we are not able to proceed east of the Kansas City on the through rate.

Q. Will you describe where you consider that area to be?

A. That area primarily is the southwest territory, or all points this side of the Missouri River.

Q. South of the Union Pacific in that territory?

A. That is right; more particularly, the part we are more concerned with is through Kansas, Oklahoma and Texas, but primarily in through the Kansas area, because that is on a direct line with our eastern markets. It is very convenient at times to be able to stop a car off at the town of Wichita, or Hutchinson, and attempt to make a sale on the car at those points.

If the sale is not effected, we would like to be able to continue the car enroute to eastern markets. At the present time, if we leave the Union Pacific at Denver to get into Wichita or Hutchinson, we are not able to proceed east of Kansas City.

I have one or two specific cases along that line, if I may present them.

Q. Yes. I don't know that you need to give the car numbers. Give the examples by description. I think that will be sufficient.

Exam. Mullen: I think just a general description will be sufficient to illustrate your point.

[fol. 609] The Witness: All right. The point on this car was a car of potatoes shipped from Notus, Idaho, August 5, 1949. This car was sold to the Grant Billingsley Fruit Company, at Wichita, Kansas, who requested routing of U.P.-

Santa Fe at Denver. The original invoice on this car was $506.00.

The car later arrived in Wichita and was rejected for no other reason than that the potatoes were too large. Because we were off the Union Pacific, we knew we would be penalized on rates if we attempted to move the car east of Kansas City. Consequently, for two days we attempted to re-sell the car in the territory which we might move, protecting our through rate.

We solic-ted business from Oklahoma City, and other points in that area, and we were unsuccessful to do so, and on the second day, the buyer in Wichita called us back and stated that they noticed the car was still sitting on the track and had not moved. We told them that was the case, and we had been unable to move it because the through rate would not apply east of Kansas City where there was a ready market for the larger potatoes.

On hearing this, he made an offer of $2.25 delivered, or an invoice of $317.00. Because we had no other order in that area, because we could not move east on the through rate, it was necessary for us to accept this offer made, or we showed a loss on this particular car of $134.90.

[fol. 610] Mr. Collins: You say you did have that loss?

The Witness: That was the loss, that was the difference between the original invoice price and the final settlement. That was a car of potatoes. We had the same thing on a car of lettuce, which was again requested U.P.-Santa Fe at Denver, into Wichita, and on arrival at Wichita the car was rejected for no other reason than that the price apparently was too high to compete on that market.

We again tried to seek an additional outlet in the limited area where we might move on the through rate, namely, in and around Oklahoma City, Texas, and primarily Kansas City. Because of the glutted condition of the markets, we were not able to receive an order for the rejected car. Balancing in our own mind the difference between an allowance and paying the combination rate east of Kansas City, we accepted an allowance of 70 cents a crate, or showing a difference from the original invoice of $218.40, merely because we had the mental hazard that we could not move east of Kansas City.

We have another case——

Exam. Mullen: Is it of the same type as the two previous ones?

The Witness: This involves rates into Liberal, Kansas, in which it is necessary to leave the Union Pacific to enjoy the lower rate.

Exam. Mullen: Go ahead. You can give that also, if you wish.

[fol. 611] The Witness: To get into Liberal, Kansas, it is necessary, to be competitive, to enjoy the minimum rate of 66 cents, which requires a specified routing of U. P. to Denver, Santa Fe to Dodge City, and Rock Island to Liberal.

Exam. Mullen: What is the route again?

The Witness: U. P. to Denver, Santa Fe to Dodge City, and Rock Island to Liberal. In other words, to enjoy the cheapest rate, it is necessary for us to leave the Union Pacific at Denver, and as soon as we leave the Union Pacific at Denver, we are in a pocket market at Liberal.

Mr. Collins: Liberal, Kansas?

The Witness: Liberal, Kansas. I am mentioning that only to show that we are reluctant to sell in these pocket markets because of the fact we always have the danger that the car might not deliver, and we then have no alternative in the way of moving to another market.

By Mr. Quirk:

Q. You forward a substantial amount of your products via the U. P. through Denver, and thence Pueblo to this territory that you have been describing?

A. Yes. We do that whenever it is requested by the consignee.

Q. In other words, you follow the instructions of the consignee?

A. That is right.

Mr. Quirk: That is all.

Cross-examination.

By Mr. Collins:

Q. How many of these so-called distressed cars did you [fol. 612] have last year, 1948?

A. I don't have that figure. It would run an estimated 15 to 20.

Q. 15 or 20? For the last four or five years, you have not been having any of them, have you, to amount to anything?

A. Oh, yes, we have always had them.

Q. You always had them?

A. Yes.

Q. One of these gentlemen here, I believe Mr. Holden, said he was pretty much in the same business and had not had them until the last few months.

A. We have always had them, off and on.

Q. Isn't that matter of rejection of cars common throughout the transactions, so far as you might know, in these products that are shipped as yours are, subject to rejection?

A. It is common, yes.

Q. Might you not have the same thing develop if you shipped a car to Chicago over any route at all?

A. No, because we always have the alternative of being able to move on to another market.

Q. You mean you have the rejection; you don't mind that?

A. We have the rejection, yes.

Q. You don't mind that?

A. No.

Q. Provided the railroad will keep on hauling the stuff, [fol. 613] and letting you hunt a market?

A. That is correct.

Q. At no additional rate?

A. Oh, yes.

Mr. Quirk: I object to that question on cross examination of the witness.

Exam. Mullen: The objection is overruled.

Mr. Quirk: Counsel is saying no additional revenue.

Mr. Collins: No, I didn't; I said "rate."

Exam. Mullen: He said "rate." Do you want to clarify

that? They do ask for an additional charge to move it beyond, don't they?

Mr. Collins: Of course, as the car moved on to some more distant destination, the amount of total revenue would be larger.

By Mr. Collins:

Q. You would be working on a rate that would be set as a through rate to enable you to keep diverting from one destination to another until you found ultimately a market?

A. That is correct.

Q. Did you state what route this car moved over on which you lost $134.00?

A. U. P.-Santa Fe, at Denver.

Q. And that one was rejected at Wichita?

A. Yes sir.

Q. Would you tell us what new markets you would expect to open up or to be able to reach if you had the routes and [fol. 614] rates sought by the D&RGW?

A. We have open gateways on fruit, namely, prunes.

Q. Let me change my question; I think it will be shorter. When you say you could reach new markets, do you have in mind any other markets than these so-called pocket markets that are now troublesome?

A. No. We can reach any market.

Q. Isn't the so-called pocket market the only one that you feel you do not reach freely and without some difficulties and disadvantage?

A. That is correct.

Q. To reach those would cost you something higher than the through rate at which you can reach other markets, for instance, if they confine you on where the Union Pacific through rates are applicable?

A. Yes. A pocket market is one which you cannot divert out of on a through rate.

Mr. Collins: That is all, sir.

Mr. Quirk: That is all.

(Witness excused.)

WAYNE NEWCOMB was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name?

A. Wayne Newcomb.

Q. Where are you located, Mr. Newcomb?

[fol. 615] A. My business headquarters is at Burley, Idaho; my residence is at Declo, Idaho.

Q. What is the nature of your business?

A. We are growers of potatoes and shippers of potatoes.

Q. Are you one of the large growers and large shippers of potatoes in that area?

A. We have been there in the business—my father established it 37 years ago, and we ship quite heavily and grow quite heavily.

Q. Do you mind stating what your volume is in carloads?

A. We handle around 1600 to 2000 cars a year, and grow approximately 300 cars a year.

Q. How much of that moves to the eastern markets?

A. Eastern markets, east of Idaho?

Q. Yes.

A. About 95 per cent of them.

Q. Where are your principal markets east of Idaho?

A. We ship into all states, except the New England states; principally into Ohio and the Southeast markets.

Q. Are you a member of the Idaho Onion and Potato Shippers' Association?

A. Yes sir.

Q. Are you an officer or director of it?

A. No sir.

Q. Has that association recently made a report dealing [fol. 616] with the volume of potato shipments into Southern Kansas and Northern Oklahoma?

A. Each year they publish a report of the unloads in the principal cities all over the United States. I was checking our unloads into Oklahoma and Southern Kansas for the past five years, and I found a decline of 90 per cent in that territory, as far as we were concerned, so I was interested in following through, and I checked the unloads as reported by

our association annually, and according to their report that was the only territory in the United States where the unloads of Idaho potatoes were decreasing.

They were less in the last five years than they were in the preceding five years.

Q. What reason is there for that decline in those two areas?

A. We are all human, and our problem is distribution, and we avoid territories where we have trouble, and as the preceding gentlemen have stated, they had trouble in that territory, and we had trouble in that territory due to the fact that it was not intermediate with our eastern markets. We had a seller's market for the past good many years, during the war years, and we could more or less pick our customers and our territory to work in, and we naturally avoided that territory which caused us grief.

Q. Mr. Newcomb, except for the rate restrictions that have been mentioned quite a few times today, and yesterday, [fol. 617] with respect to that territory, would you regard it otherwise as a good consuming territory of your commodity?

A. Fifteen years ago that was the best market we had for Idaho potatoes. The reason we have to get that freight back, from a potato viewpoint, it is fundementally necessary to the potato industry. Extreme advances in rate are changing the situation from a seller's market to a buyer's market, and we are feeling the squeeze in far eastern territories.

Q. You sell potatoes in competition with potatoes grown in the San Luis Valley?

A. Yes sir.

Q. There are potatoes shipped from other areas into this Oklahoma-Kansas area?

A. That is correct.

Q. Do you know whether or not those potatoes move in there without this restriction on the right of diversion?

A. According to the Department of Agriculture report, most of them are moving in there by trucks.

Q. Unless you have a further statement, I have no more questions to ask.

A. I have no other statement to make.

Cross-examination.

By Mr. Collins:

Q. What is the squeeze you spoke of you are beginning to feel in the far eastern territory?

A. There is a differential between our potatoes and the [fol. 618] eastern potatoes, which is increasing.

Q. A differential?

A. The price differential in those markets, which have made our potatoes almost a luxury in certain eastern markets. Our freight rates are so high after these last increases, Maine is at an advantage, and they are squeezing us back further this way, and in an effort to hold my business together, I am seeking to regain markets I have lost closer to home.

Q. You have been shipping Idaho potatoes as far as New York, haven't you, or some of the Idaho people have, haven't they?

A. Very few are going into that territory this year. There is a certain outlet there that puts them in boxes, during the past few years.

Q. But there has been a market to some extent back in that territory within seven or eight hundred miles of the Aristook, Maine potato growers, hasn't there?

A. There always has been a market for Idaho's in all markets, to some extent.

Q. Don't Idaho potatoes sell at a higher price than potatoes generally, say, for instance, in the Chicago markets where they compete?

A. Yes, we figure that Idaho's will bring safely $1.25 differential. When the differential is higher than that, we have difficulty in moving them.

Q. I see. That is because of what the consumer or buyer [fol. 619] must consider the more desirable qualities of the Idaho potato, isn't it?

A. That is a kind of difference they will take them for. When they get above that difference, they back away.

Q. They will pay that much more to get the Idaho potato?

A. That is right.

Q. Now, as I understand your situation, and the position.

of your operation, which apparently is just in your name, is that right—it is not a company or incorporated?

A. It is W. W. and W. T. Newcomb, Inc.

Q. As I understand your situation or position here, you are supporting the complaint because if the complaint should prevail, you would simply have a joint through rate and privileges that might enable you to further expand your business, is that correct?

A. It would make Northern Oklahoma and Kansas intermediate with our regular eastern markets, and wherever those markets are intermediate, we can increase our business.

Q. That would be your——

A. We can move some of the potatoes that are now going for cattle feeding.

Q. That would be your hope, then?

A. That is right.

Q. Ultimately to expand your business?

A. Yes sir.

[fol. 620] Mr. Collins: That is all, Mr. Newcomb.

Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Mr. Blaine: Mr. Examiner, at this time I offer petition for leave to intervene in behalf of the Utah Cattle and Horse Raisers' Association.

Exam. Mullen: Is there any objection to this petition?

Mr. Collins: Well, no, except it is a little too warm. Its date is the 14th of December.

Exam. Mullen: The petition will be received, and leave to intervene is granted. Are you appearing for them as counsel?

Mr. Blaine: As counsel, yes sir.

Mr. Blaine: I call Mr. L. C. Montgomery.

L. C. MONTGOMERY was sworn and testified as follows:

Direct examination.

By Mr. Blaine:

Q. Please state your name and address for the record.

A. L. C. Montgomery, Heber City, Utah.

Q. Are you, among other things, engaged in the cattle business?

A. Yes.

Q. How long have you been thus engaged?

A. Thirty years.

Q. Where is your headquarters and the operations of your industry?

[fol. 621] A. Heber City, Utah.

Q. Are you secretary, also, of the Heber City Cattle Company?

A. I am.

Q. Where is that operation located?

A. It is located at Heber City, Utah; that is about 50 miles southeasterly of Salt Lake.

Q. Combined, about how many cattle do the two operations embrace?

A. About five thousand.

Q. Yesterday, Mr. Montgomery, Don Clyde testified here. How far are your operations from those of Mr. Clyde at Heber City?

A. We graze the same range with Mr. Clyde. Our cattle and his sheep graze in common on the same range.

Q. Other than you operating cattle, and he operating sheep, are your operations substantially similar?

A. Yes.

Q. The question came up yesterday as to why you gentlemen operating in that territory don't move your livestock to and from Keetley on the Union Pacific instead of taking them to Heber City. Will you tell us why?

A. Keetley is a Union Pacific Railroad station, primarily for the purpose of shipping ore from the Park City mines. We can't ship from there for many reasons. If we ship to the West Coast, we have got to go around by Ogden and back to Provo, a circuitous route of about two hundred [fol. 622] miles, and then they haven't the loading facili-

ties there to accommodate cutting of cattle into the necessary groups that we have to cut them in order to ship. They have a crude shipping yard there, but it can't accommodate the cattle industry as the yards do at Heber City on the D&RG.

Q. Mr. Montgomery, do you produce your own cattle that you condition for slaughter?

A. Some of them, perhaps most of them, although we ship cattle in for feeding and for ranging purposes.

Q. Where do you purchase those?

A. We get cattle from Nevada and Southern Utah, shipping them into Northern Utah, and we get quite a few cattle out of Montana.

Q. On the cattle that originate in Montana, what is the destination of those?

A. Well, it is, of course, to any part in Utah where the purchaser cares to take them.

Q. I was going to ask you as to your own operations.

A. As to our own, it would be Heber City, or possibly Keetley.

Q. Do you buy any cattle in Idaho, eastern Oregon, and Washington?

A. Very few.

Q. Why?

A. Well, I don't know, we just have never gone there. We just figured it was not a favorable market, and the ex-
[fol. 623] pense of handling them was not as economical as to get them from other places.

Q. Take your own operations first; where is the general market that you dispose of your cattle?

A. We ship both to Denver and to the West Coast. Some years the bulk of our cattle will go east, the market may be a little better, some years west. We happen to be exactly half-way between Denver and the West Coast, and we watch the markets, the freight rates, and other advantages we may figure, and then ship accordingly.

Q. Now, are you an official of the Utah Cattle and Horse Raisers' Association?

A. Yes.

Q. Are you the president of that association?

A. Yes, I am.

Q. How long have you held that position?

A. Fifteen years.

Q. Prior to that time, were you a member of the association?

A. Yes, I helped to organize it in 1915.

Q. What is the Utah Cattle and Horse Growers' Association?

A. Well, it is a voluntary organization, organized to protect and further the interest of the members of the organization.

Q. Take an average year, how many cattle would the members of that association market?

A. We have about 225,000 head of cattle that we feel are [fol. 624] owned by the members of our association. Approximately one-third of them are marketed each year as beef cattle.

Q. About how many, then, do you bring in each year in the form of replacements and for other requirements?

A. Well, that would just be an estimate. I don't know.

Q. Mr. Montgomery, has the Utah Cattle and Horse Growers' Association given grave consideration to the matter here in controversy?

A. We have considered it at the meeting of the officers of our organization, which meeting was held in October, I think it was.

Q. What was the conclusions and what were you instructed to do?

A. Well, a resolution was passed at a meeting of the vice presidents and executive committee of our organization in favor of supporting the side of the complainant, the Denver and Rio Grande Western Railroad Company, in this matter, and I think the resolution was forwarded on that, and I was authorized to follow it up.

Q. Does your association believe that the opening of the Ogden gateway would be beneficial to the livestock producers in the Northwest as well as to the producers in the State of Utah?

A. Yes; they feel that it would.

Q. Do you and your organization feel that with the burden, or with the increased freight rates which they are now forced to pay in the movement of livestock from the Northwest via Ogden and the D&RG, when moving to the

[fol. 625] eastern markets, handicaps the growers and feeders on the Denver and Rio Grande?

A. Oh, yes, naturally it does.

Q. Have you anything further, Mr. Montgomery, that would be helpful in the disposition of this proceeding?

A. I have no voluntary statement to make.

Mr. Blaine: You may cross examine.

Cross-examination.

By Mr. Collins:

Q. To what extent would this handicap exist that you just referred to in the answer to Mr. Blaine's last question?

A. I could not give you dollars and cents, nor specific instances.

Q. I don't mean dollars and cents, nor specific instances; but could you measure it in some way?

A. Well, it would have the effect of——

Q. Maybe I didn't make myself understood. You recall his question, the last one you answered?

A. I think so.

Q. Well then, what would be the handicap that you said these people were under?

A. Well, if a car of cattle was shipped in from——

Q. I am afraid I still didn't make myself clear, Mr. Montgomery, so I will ask it this way: What do you have in mind, what you call a handicap, would be the difference between the combination rates now by the D&RGW and the through [fol. 626] rates that exist via the Union Pacific, is that right?

A. That is right.

Q. That is what I meant, and nothing more.

A. I think that is all. I would say that in the consideration of this by our committee, perhaps they based it on somewhat of a broader ground than that. They felt that it was perhaps unfair to give any advantage to any particular railroad.

Q. To give any advantage?

A. Yes. No railroad company should have a particular advantage, an exclusive right of use of any particular part of the country.

Q. Did they consider whether it would be wrong for the D&RGW to have its long haul in any instance?

A. They felt that the country should——

Q. Did that subject come up at all?

A. It was discussed, of course. The angles, as we understood it, it was discussed generally, yes, all phases of it, as we understood it, which is more or less limited; bear in mind. We are not experts on freight rates or anything of that kind.

Q. Neither am I.

A. But we felt there should be competition just the same as if we had a sales ring, and they only allowed one purchaser to come in and bid at a sales ring.

Q. Would you mind waiting until I finish asking you questions, and then you get on your own time and make whatever talk you like?

A. Ask them again.

[fol. 627] Exam. Mullen: What is the question on the record?

Mr. Collins: There wasn't a question on the record, when he started out on this.

Exam. Mullen: All right.

Mr. Blaine: I thought he was still answering.

By Mr. Collins:

Q. Do you know approximately how many cattle the Union Pacific yards at Keetley would hold?

A. No, I know they have got two or three small cor-als there.

Q. They will hold ten or twelve carloads, though, won't they, for loading onto cars promptly?

A. I wouldn't think so.

Q. How many would you think they would hold?

A. I would think it was closer to three or four carloads.

Q. How many carloads do you ship from your operation to that area at once?

A. Well, they group their cattle and usually ship a trainload at once.

Q. I am speaking of you. I thought you had an individual operation out there.

A. My individual operation is not very much.

Q. Do all of the people have to ship all of the cattle at one time, or do they ship some of them today and some tomorrow and some the next day?

A. They usually ship, or group their holdings into herds, and ship them certain days of the week.

[fol. 628] Q. About how many carloads would they load that way on one day, do you suppose?

A. Maybe from 10 to 15 or 20 carloads.

Q. I see.

A. In a day.

Q. Yes. Just a little bit more than the stockpens there would hold?

A. There is accommodations nearby where you could hold stock there and keep filling your corrals; it would not be prohibitive at all. We appreciate what they have got there, I want you to know that.

Q. Are the cattle that you sell from this operation of yours—I understood you were speaking here in one capacity as an individual stock grower?

A. That is right.

Q. And seller. Do you sell in about the same way that Mr. Clyde, Don Clyde—do you know him?

A. Yes.

Q. Is your operation similar to his, do you know?

A. As an individual, he is what we call a rather large livestock operator.

Q. I really mean your acquisition and bringing in cattle and maybe breeding some or fattening some, and then selling on out.

A. Yes sir.

[fol. 629] Q. Mr. Clyde told us that his interest in this controversy was to be sure that he would save the amount of his inbound freight expense, that is, freight expense he incurred inbound to his ranch operations. Is that your situation here as an individual grower?

A. Yes, in a way, yes. Mr. Clyde, I believe, buys most of his sheep, however, in Montana, and I couldn't say that we buy most of our cattle there.

Q. Well, you don't buy them any farther away than that, do you?

A. No.

Q. You said, I believe, that the officers of the Utah Cattle

and Horse Growers' Association considered the question of this case that is now on trial during October some time?

A. Yes, it was at the time of the County Fair. I remember, here last September, first of October.

Q. Your petition says there are two thousand members of that association. Now, did those members—are those members shippers of cattle or livestock?

A. Yes, they are all producers of cattle, and either sell to speculators and local buyers, or ship their cattle.

Q. The association has a broader interest than just in the transportation of this livestock?

A. Oh, yes, certainly.

Q. Did those members consider the question of whether they wanted to intervene here on the side of the Rio Grande?

[fol. 630] A. Yes, through their officers.

Q. Did the members themselves, individually and personally voice their views?

A. Oh, no, certainly not.

Mr. Collins: Just a second, please.

The Witness: I think you have heard a number of our people, possibly, testify here. Charlie Redd told me he testified today. He is a member of our association.

By Mr. Collins:

Q. Do you know of any other members of your association who have testified here, other than Mr. Redd?

A. No, but I have noticed one or two of the larger producers in this audience here today who are here hearing me testify now.

Q. I see.

Mr. Collins: That is all.

Redirect examination.

By Mr. Blaine:

Q. In that respect, following the action taken in October, did I understand you to say that you were designated by the other officers of the Association to appear here and testify in behalf of the association?

A. I don't think they said to appear here, in this room. They said, "You go ahead and follow this up—carry into effect our desires."

Mr. Blaine: Thank you.

Exam. Mullen: That is all. Thank you.

[fol. 631] (Witness excused.)

Mr. Blaine: Mr. Examiner, at this time I offer petition in behalf of the Idaho Wool Growers Association in support of the complainant.

Exam. Mullen: This is similar to your other petition?

Mr. Blaine: Exactly. It does not broaden the issues.

Exam. Mullen: Any objection?

Mr. Collins: No.

Exam. Mullen. The petition will be received and the petition to intervene will be granted. Are you appearing as counsel for the association also?

Mr. Blaine: Yes sir. I will have no witness. Mr. Roscoe Rich, who was supposed to arrive here yesterday to testify, has serious illness in his family, and I have been informed he will be unable to arrive before I leave for home tonight. So we will have no witness at this time. I thank you.

Exam. Mullen: All right.

Mr. Quasey: Mr. Examiner, I call Mr. Hilbert.

W. H. Hilbert was sworn and testified as follows:

Direct examination.

By Mr. Quasey:

Q. Will you give the reporter your full name and where you reside?

A. W. H. Hilbert, 1084 South Cook, Denver, Colorado.

Q. Where and by whom are you employed?

[fol. 632] A. I am employed by the Producers' Livestock Marketing Association at Denver, Colorado, as head of the sheep department.

Q. Is that organization one of those named by Mr. Jacob in his testimony yesterday?

A. That is right.

Q. How long have you held your present position?

A. I have been in this position since their acquiring of the firm on the Denver market, which is about two years.

Q. What experience have you had in the livestock business prior to that time?

A. Thirty-one years on the Denver market.

Q. Was that in connection with the selling and buying of sheep and lambs, chiefly?

A. That is right.

Q. What experience have you had in the feeding and raising of sheep and lambs?

A. I have been feeding since starting in the sheep business, which is 34 years ago, and have fed every year. As to the raising, that has been intermittent. Some years I have some breeding ewes and raise lambs; other years I do not.

Q. But you have been in the business to some degree as a raiser or feeder during the past 34 years, is that correct?

A. That is correct.

Q. Where do you conduct these operations?

A. Mostly in Colorado, but of late years we have quite [fol. 633] a little in Kansas.

Q. What do you do in your present position?

A. You mean the producers?

Q. Yes.

A. I am head of the sheep department, and buy and sell both fat and feeder sheep and lambs.

Q. Is a majority of your work confined to activities on the Denver market?

A. No, I also do some buying in the country, of both kind of sheep; also breeding ewes.

Q. Are you familiar with other livestock markets?

A. Well, in my position, I have to be familiar with all of the large markets, namely, Chicago, St. Louis, Sioux City, Omaha, Kansas City, St. Joseph, and to some extent the western markets like Ogden, Salt Lake, and Los Angeles.

Q. Are you generally familiar with the livestock producing and feeding areas of the country?

A. Yes, I have to be.

Q. From what territory does livestock come to Denver?

A. Livestock to the Denver market comes from all states west, north, south, of Denver; also some from Kansas and Nebraska, and it also arrives by all railroads entering Denver.

Q. Generally, where is livestock shipped to from Denver?

A. In every direction out of Denver. We have fat lambs that go as far as the eastern seaboard, New York City, [fol. 634] and some shipments to the west, California, but not extensive at all, and most all intermediate points east of Denver, killing centers. As to feeders, they are also shipped quite extensively all through the east of Denver, north, and south, and some little west.

Q. How, in a general way, are lives-ock prices determined from day to day on the Denver market?

A. Well, I believe I could best answer that by telling you about how we go about our business, starting with the morning.

Q. If you will do so briefly.

A. Our Denver market opens at nine o'clock in the morning for trading. We sort our sheep and lambs ahead of this time, and look around the barn to see what other commission firms have, and as to the quality of fat or feeders, whichever it may be, and as I say, our trading will start at nine o'clock. We have to be prepared to know about what the packer-buyers have bought the day before, what we feel their needs will be that day, the total receipts on the market.

Mr. Collins: Mr. Examiner, I am sorry to interrupt, but it seems to me that misses the issues in this case.

Exam. Mullen: The same thought occurred to me. The sole question involved here is how the price is determined.

Mr. Quasey: That is right.

Exam. Mullen: Isn't it a wide open bidding market?

Mr. Quasey: Plenty goes on besides the sole bidding, Mr. [fol. 635] Examiner.

Exam. Mullen: The sole question is how the price is determined.

Mr. Quasey: That is right.

Exam. Mullen: We don't need all this detail, it seems to me.

Mr. Quasey: Very well.

The Witness: The prices are determined a good deal through our knowledge of the previous day's market, and if receipts are short, we will ask additional prices over the day before. That is especially true if other markets are short sheep, and in doing this, the buyer, who is equally as capable as we are in most cases, has information from other points and is——

Exam. Mullen: Well, how does it start. Someone opens a bid, or does some one make an offer of some sheep, or how?

The Witness: We price the sheep to them.

Exam. Mullen: In other words, you have an offering price, is that it?

The Witness: No, we price them.

Exam. Mullen: What do you mean by "price them"?

The Witness: It is by our knowledge of the day before and other days.

Exam. Mullen: Do you announce the price?

The Witness: We announce it to our own buyer only.

Exam. Mullen: Then what happens?

The Witness: If we do not sell to him, we will take the [fol. 636] next buyer, and so on down the line.

Exam. Mullen: Do you offer them at a given price, or do you wait until he makes you an offer?

The Witness: He will make me an offer.

Exam. Mullen: And then if that offer is not acceptable, you will wait for another buyer for a higher offier, is that right?

The Witness: That is right.

Exam. Mullen: Then if you finally get a price that is satisfactory, you sell it?

The Witness: That is right.

Exam. Mullen: That is the same on any other market, isn't it?

The Witness: That is right.

Exam. Mullen: All right.

By Mr. Quasey:

Q. Does the freight billing have any effect in the net return the producer receives from the sale of livestock at a public market?

A. Yes, it does.

Q. Will you state what that effect is?

A. Well, this effect is not always the same. It depends a lot on the value of this billing. This especially is true in case we have two shippers with comparable sheep. If one billing is of more advantage to the buyer than the other, we so state, and adjust our prices, or try to accordingly. [fol. 637] Q. Does the freight billing have the same general effect in connection with transactions at country points?

A. Yes, that is true where they have the feed in transit billings.

Q. Is more than one route, to and from livestock market, of any value to livestock producers?

A. Yes. I would think it would have been of great value if it can be used on a competitive basis.

Q. Will you state why you say that?

A. Well, it would assure better service for one thing, and would afford an alternate route in the event of emergency or possibly interruption of service for some other reason of either route.

Q. Based on your long experience in livestock business, what effect would the opening of the Ogden gateway have upon the interests of the producers?

A. Well, it would give livestock producers another important route without a rate discrimination, or rather a rate disadvantage, I will put it that way.

Mr. Collins: A rate difference, maybe.

The Witness: A rate disadvantage, and would place them on a parity in the sale of their livestock as far as freight rates are concerned.

Mr. Quasey: That is all, Mr. Examiner.

Exam. Mullen: Any cross examination?

[fol. 638] Cross-examination,

By Mr. Collins:

Q. Would you expand your idea a little, where you said another route would assure a better service? Just what did you mean by that?

A. Well, any time you have competition, whether it is in railroads or selling of sheep, you have to give better service.

Q. That is what you are counting on; each one will sort of spruce up when he sees the other fellow come in?

A. Sure.

Q. In what area or what service do you have in mind when you say that now? Do you mean they run the trains faster, or just what do you mean?

A. I have seen that in my time, also.

Q. You just tell us what you mean now. You used the term "service."

A. Well, before the war, we used to run trains from Denver to Chicago without stop.

Q. Yes.

A. Today they do not.

Q. All right. That is speed; that is one thing. You think the Denver and Rio Grande would haul your cattle any faster than the Union Pacific would haul them if it had a chance?

A. I don't believe that would be true, but if they were in direct competition, I think it would help service.

Q. We got speed out of the way as a part of service. [fol. 639] What next? What else is included besides speed in the term "service," within your conception?

A. Well, there could be several things. There could be even price adjustments, if it was on the same basis.

Q. Price adjustment?

A. Yes.

Q. By the railroads?

A. No.

Q. That isn't something they could do.

A. By the producers or consumers.

Q. We are talking about what the one railroad would do, if it was in competition with another, and you said he might run his trains faster, that is, within the term "service."

What else would you expect him to do under competition that he would not do otherwise?

A. By doing that, he would get them through without feed and water.

Q. Yes, that is speed.

A. Sometimes that is necessary.

Q. Anything else you have in mind coming within the

term "service" that might be applied in connection with cattle shipments?

A. Not especially.

Q. The shorter the transit time, or the time the cattle are on the train, the better it is for the owner of the cattle, is it not, Mr. Hilbert?

A. Surely. It saves shrinkage.

[fol. 640] Q. Do you understand your cattle would be on the train any shorter period if they were on the route by the D&RGW instead of a route by the Union Pacific?

A. I don't believe there is much difference in that.

Q. Don't you think, as a matter of fact, if there is any difference, it is they would be on the train longer on the D&RGW than they would on the Union Pacific?

A. I think their routes are not too far different in mileage. I think the Rio Grande is somewhat shorter, but it is not quite as straight a road.

Q. You think the Rio Grande is shorter, but not as straight?

A. That is right.

Q. Would you be surprised to know it is longer in every instance over every route between the territory in Idaho and Montana from which they are talking of purchasing cattle here?

A. The only difference that there could be would be from Ogden to Salt Lake.

Q. Mr. Hilbert, in what capacity are you testifying here, that is, are you testifying as an officer of this Producers' Livestock Marketers Association, which has not intervened?

Mr. Collins: Maybe you can tell us that, Mr. Quasey.

Mr. Quasey: He can explain that.

Mr. Collins: Is he testifying in support of the association?

Mr. Quasey: Yes.

By Mr. Collins:

Q. You are a dealer in sheep, is that right?

[fol. 641] A. That is right. I feed some cattle.

Q. And some cattle?

A. But I do not sell cattle.

Q. You are not a producer, then? You do not produce them on ranches, you just train them?

A. I have a few.

Q. But it is not in connection with that part of your operation that you are appearing here, is it?

A. Mine as well as all of my customers.

Q. Well, is your growing or producing activity a part of the business of the Producers' Livestock Marketing Association?

A. No, it is my own.

Q. I see. Mr. Hilbert, isn't it a fact that about the only real reason that you favor this route and rates by the Rio Grande is that it would give you a chance to, if one day you didn't think you had a satisfactory service from the other, you would turn your traffic over to the other route the next day, if you felt like it; isn't that about the size of your position?

A. I would not say that. I think I have been very favorable to the Union Pacific in the past 34 years.

Q. I am just asking you as to your desire after this route might have been established, if the Rio Grande prevails here. What do you want it for?

A. If I felt they didn't do right, yes.

[fol. 642] Q. As Mr. Stanger said yesterday, he called it retaliation.

A. Mr. who?

Q. Mr. Stanger. You didn't hear him, I guess.

A. No.

Q. He was one of the gentlemen who favored the D&RG, because he said it would enable him to indulge in some retaliation. You said also there would be another route open in case of emergency. You understand, of course, there is published and outstanding and applicable, I believe, on all railroads, what is called an emergency routing clause, which give you the service by the other routes without any increase in rates under this emergency routing clause?

A. I understand that, yes. I have had it many times.

Mr. Collins: That is all. Thank you.

Redirect examination.

By Mr. Quasey:

Q. Does the matter of supply of cars enter into the matter of service by railroads, Mr. Hilbert?

A. Naturally it does.

Q. And the kind of cars that are supplied, the condition of the cars?

A. Yes, but I think all railroads are pretty good on that point, keeping them clean.

Q. How about loading and unloading facilities at local points?

A. Well, I think that is comparable on all railroads.

Q. But that is something that might be induced to be [fol. 643] maintained to a better degree if there was competition?

A. Certainly it would do that.

Mr. Quasey: I believe that is all.

Mr. Quirk: I have no questions. I have changed my mind.

Exam. Mullen: Is that all?

Mr. Quasey: That is all.

Mr. Collins: That is all.

Exam. Mullen: Thank you.

(Witness excused.)

Exam. Mullen: I don't think we have time for another witness, so we will recess until 7:30 this evening, and it will be in the Junior Ballroom on the mezzanine floor.

(Whereupon, at 4:55 o'clock p. m., the hearing was recessed, to reconvene at 7:30 o'clock p. m., the same day.)

[fol. 644] Night Session, 7:35 p. m.

Exam. Mullen: We're ready to resume the hearing, gentlemen. The hearing will be in order.

KENNETH G. SELF was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name, Mr. Self?

A. Kenneth G. Self.

Q. Mr. Self, where is your place of business?

A. Salt Lake City.

Q. What is your business address?

A. 703 West Second, South.

Q. Are you with some company or your own company?

A. I am majority stockholder in our corporation, which is called Inter-Mountain Tractor Sales Corporation.

Q. How long have you been in business here?

A. We started on July 1, 1947.

Q. Is your company located on the tracks of the Denver and Rio Grande in Salt Lake City?

A. Yes, sir.

Q. Describe the nature of the business of that company.

A. We are—you mean of our company; or the D&RG?

Q. No, your company.

A. We are the distributors for Ford tractors and Dearborn farm equipment for Utah, southeastern Idaho, the eastern half of Nevada, and three counties, I think it is, in [fol. 645] Wyoming.

Q. Do these tractors move to Salt Lake City, consigned to your company, in carload lots, or in part lots, or just how do they move?

A. They move in carload lots from Detroit.

Q. By railroad?

A. Yes, sir.

Q. In general, what routes are used to get to Salt Lake City?

A. We have three different routes we have used, which are the Wabash to St. Louis, Missouri Pacific to Pueblo, D&RG to Salt Lake.

Q. What are the origin points?

A. Where the machinery is picked up at; do you mean?

Q. Where do they start from?

A. Well, it's in Detroit, the Highland Park plant of the

Ford Motor Company. The machinery is manufactured in, I think about 24 different states, mostly in the East.

Q. Are these carloads consigned to your company, to Salt Lake City?

A. Yes, sir.

Q. And they reach Salt Lake City via the Union Pacific generally, is that true?

A. No.

Q. You use the Denver and Rio Grande?

A. Yes, sir.

[fol. 646] Q. Now, are these transit arrangements partly unloading, and partly load, and things of that kind, of interest to your company?

A. Just a minute, I don't quite follow you there. Explain it again once more.

Q. Where is your principal market?

A. It's approximately 50-50, I mean 50 per cent of our business is done in Utah, and the other 50 per cent is done in Idaho. In fact, if I had the sales records, I could prove it out. During the days of allocation, that was just about the breaking point.

Q. Well now, when you ship into Idaho, how do you ship from Salt Lake City?

A. By our own trucks.

Q. Do you have any customers in Colorado?

A. No, we're not able to ship there. We start at the Utah line. We have a dealer at Moab, Farmsville, Springville, American Fork, Utah.

Q. And how are your shipments moved from your plant in Salt Lake City to these customers in Utah?

A. Well, we bring the machinery all into Salt Lake and then parcel it out by truck. If you want me to tell you why we do that——

Q. I want you to tell me. Why do you use truck instead of railroad?

[fol. 647] A. When we originally came down to Salt Lake, it was during the days of machinery allocation. What that means is, of course, you all know, they ration the machinery out on a past sales basis, so we started out to bring the cars in here, take out what belonged to Utah, and then reshipped to Idaho. Well, after the first car was shipped to Idaho.

Falls we rudely found out, we had a rude awakening, I should have said, the rate change to a carload basis from an LCL basis, when it left Salt Lake going into Idaho.

Well, to be right honest with you, that is the first time I ever knew there was a gateway. We attempted to figure out a way to ship the tractors via the Union Pacific into Idaho, but the unfortunate part of it is during allocation no one dealer could get a whole carload or a part of a carload, so they had to purchase this transport and ration it out ourselves—ration the equipment out ourselves.

Rather than try to handle it haphazardly by stop cargo, under the days of allocation, we went ahead and bought a motor truck and carried one of these automobile transports, and we have been shipping them into Idaho and Utah since then with that truck.

Q. In other words, when you bring the tractors and machinery into Salt Lake in carload lots, you unload them and then you move them out either to Utah or to points in Idaho by your own trucks?

[fol. 648] A. Yes, sir.

Q. If you had a joint rate, from Detroit and the other eastern points of origin, to these destinations in both Utah and Idaho, what would happen?

A. Well, it would have to be so we could partially unload in both states, otherwise we would have to start dropping off. If we are not going to handle them at all, we disband our trucks, if we weren't going to handle them at all. We would start like, for instance, combines, we can drop off one alone the line, in both states, and back-haul, instead of getting away from the back-haul.

Now we bring everything into Utah, in Salt Lake City, and while we only handle it once, we are only going to ship it by our own trucks.

Q. If you had the joint rate and if you had the transit privilege of partially unloading at Salt Lake, what would you do then, would you use the railroads or would you continue to use the trucks?

A. I'm quite sure we would do away with the trucks, because I don't want to be in the trucking business. In fact, it is a big headache. I would just ship over the rails.

Q. Is it proper to say the principal reason why you

bought trucks is because you didn't have a competitive joint rate from the eastern points to points in Idaho and to points in Utah?

[fol. 649] A. Yes, sir.

Q. Where are these points in Utah located, are any of them served by the Union Pacific?

A. Well, Ogden, and Salt Lake City. I think—don't they go down to American Fork?

Q. I'm asking you where your customers——

A. I thought you were asking me, I couldn't tell where their railroad went in here.

Q. I thought you probably knew whether the points where your customers are located——

A. We serve Logan, Preston, Idaho, that is a borderline point, and Free Mountain.

Q. Do you wish to elaborate any on how you would be benefited if you had joint rates from these eastern points via the Rio Grande through Ogden to the Idaho points?

A. Well, it would make it very convenient to be able to route it to our own discretion where we wanted to route it, and in case we had a car under the existing situation, we had a car rolling that was going into, we'll just pick a point, Burley, Idaho, if that dealer was plugged up with tractors, we'd be in a position, if we were bringing them through here, we could just automatically take out what we wanted, and then continue on, and don whatever we want to over there.

Today, we have to definitely know—just supposing we bring it over into Idaho, over the Union Pacific Railroad, we [fol. 650] have to definitely know what is going to be done, because we can't move it after we get it rolling.

Q. Would such a joint business aid your business?

A. Yes, sir, all the way through to Boise and Nampa, Idaho.

Mr. Quirk: That is all I have.

Cross-examination.

By Mr. Collins:

Q. Why do your shipments now move by way of the Rio Grande into Salt Lake City?

A. Why do they?

Q. Yes.

A. Because I chose to put them over that way.

Q. Have you any particular reason for that?

A. Yes, they give me good service.

Q. I see.

And you realize, of course, that if you had a carload sent by way of the Union Pacific to Salt Lake City you could partly unload here and then go on up into Idaho with the balance.

A. That is right. I know that. In fact, I think your company wrote a letter saying they would absorb the switching charges. I think that is right. But what are we going to do about the other end of the state, Utah?

Q. I hope we'll find some solution to that, but do you make any deliveries in Utah from the car by stopping at points on the Rio Grande?

A. No, not now, because you see, if we're going to touch them at all we've got to touch them—if you are going to [fol. 651] break into the car at all, we break into it once. I mean, if I'm going to do it, that is what I do. Otherwise, for instance, just to give you an example, we'll say Springville down there, these cars roll so many every month, as you know.

Q. Springville, Utah?

A. Yes, I'm using this as an example.

Q. OK.

A. We will say he can take two this time, and the American Fork can take four, and then the next car we might have to work out so that the next stop would be we'll say Preston, Idaho, just an example, or McKammon—I don't care, I'm just using a hypothetical illustration.

Q. That is all right.

A. Today, if we are going to touch it at all, we would have to unload it in Salt Lake, after we make drop shipments, we have the investment in the truck anyway, we drop it in Salt Lake City and back-haul.

Q. You bought your truck in the war period?

A. No, we bought it on October, 1947.

Q. Oh. Your implement purchases were then subject to government allocations, were they?

A. Not government allocations, it was production, they couldn't get enough production.

Q. Then manufacturers' allocation.

[fol. 652] A. Yes, and our own allocation. We had to set it up on the past records of the various dealers.

Q. Yes.

A. Otherwise there were not enough tractors to go around.

Q. Was that the main reason you bought your truck?

A. No. No. No, we bought the truck because we couldn't get the tractors into Idaho without shipping them right straight into Idaho through, right on your rails.

Q. Yes.

A. We realize we could have brought into Salt Lake, and then shipped the rest of the car on. We realized that.

Q. But you couldn't get a full carload, is that what you said?

A. Well, I can't allocate one dealer a full carload you understand, or even a large portion of a carload without slighting the Utah people.

Q. I understood you to say a while ago, at the time you bought this truck, you didn't have a dealer in Idaho—wait a minute, you either didn't have a dealer in Idaho who could take a full carload, or else you couldn't get a full carload.

A. I couldn't allocate him a full carload.

Q. You couldn't allocate him?

A. That is right.

Q. And you prefer to ship by way of the D&RG and forego this top to partly unload privilege that you now have over the Union Pacific at Salt Lake City?

[fol. 653] A. Yes.

Q. As a matter of fact, Mr. Self, don't you perform some kind of work or servicing or something of that nature on these implements at Salt Lake City, before you distribute them around?

A. No, sir.

Q. You don't know?

A. No. Just haul them out of the box car and kiss them good bye.

Q. How are those implements shipped to you out of Detroit, is it shipped FOB cars in Detroit?

A. You mean money-wise?

Q. Yes, freight charges.

A. No, we pay the freight right here.

Q. You pay the freight charges after they get here?

A. Yes, sir.

Q. How about the freight charges from Salt Lake City on to the—well, the cost of transportation to the people to whom you deliver.

A. You mean from us to the dealer?

Q. Yes.

A. We pay that.

Q. I understood you to say that your customers were partly in Utah and partly in Idaho.

A. About 50-50. I'm talking about business-wise.

Mr. Collins: That is all, Mr. Self, thank you.

[fol. 654] Redirect examination.

By Mr. Quirk:

Q. Did you say you had customers at Price?

A. Not at Price, it's about, I don't know, 18 or 20 miles down to Orangeville. I don't think it is on any railroad. You unload at Price, if that is what you are getting at.

Q. Yes.

A. You unload at Price, stoploads there.

Q. I see. You partly unload?

A. Yes. They did that quite a bit before the war.

Q. Do you do that now from your own truck?

A. We haul—we back-haul, we bring everything right into Salt Lake.

Q. Do you have any customers in Idaho now that would take a carload?

A. Well, of course we don't have allocations today.

Q. I understand, but you are in business.

A. I'm in business, and so are they, and they are not looking for carloads today—just partial carloads.

Q. Then the answer is no.

A. That is right. We have some who will take them.

Mr. Quirk: All right. That is all.

Mr. Collins: That is all.

(Witness excused.)

JOHN W. GERBER was sworn and testified as follows:

[fol. 655] Direct examination.

By Mr. Quirk:

Q. What is your name?

A. John W. Gerber.

Q. Where are you located?

A. Our office is located at American Fork, Utah.

Q. In what business are you engaged?

A. I am the Executive Secretary and General Manager of the Utah Grower's Cooperative, operating throughout the State of Utah in the production and shipping of vegetables, including potatoes and onions.

Q. Well, will you describe in your way the benefits that would accrue to you if the joint rates sought in this complaint should be established?

A. Well, one benefit would be being able to move shook, or box crate material, crating material, from the Panhandle of Idaho into Rio Grande points. We operate two branches on the Union Pacific and three on the Rio Grande. As it happens, our rates are so much higher than the California rates from the Northwest, which is our competitive territory, that we could be benefited considerably competitively by buying in Payette and Lewiston, Idaho. Under the present set up we have a transcontinental tariff that enables us to come through on a through rate, but the Union Pacific also maintains on their line a rate considerably cheaper.

To be exact, I think it is five and one-half cents under [fol. 656] the old base rate. It is a good deal higher now with the increases—to transfer this tonnage onto the Rio Grande. We either must pay the penalty or haul it across town where we have the sheds on the Denver and Rio Grande Railroad.

Q. Which part are you talking about now?

A. I'm talking about American Fork, Springville. At Midvale we have a shipping or a switching at additional cost there. We are able to ship across to our shed at Midvale at additional cost. For the past two years we have been able to obtain this shook at a somewhat lesser

price, but due to the increased rates the only places we have been able to use it is on our sheds operating off of the Union Pacific Railroad. We not only are a shipping organization for our growers, but we obtain their supplies, and in the purchase of fertilizer from Pocatello and Anaconda.

Q. Montana.

A. Anaconda, Montana. It necessitates a combination of rates at Ogden or Salt Lake, or the trucking of this fertilizer across town at the two main operations, American Fork and Springville. We buy considerable amount of seed potatoes on the eastern side of Idaho, from Twin Falls North(and up into Montana at Dillon. This we have been forced to obtain by truck shipments as the rate does not apply on a through basis.

Mr. Collins: To where?

The Witness: To American Fork and Springville.

[fol. 657] Mr. Collins: Utah?

The Witness: Utah. Only at Midvale by an additional cost, on the switch charge, which is not absorbed, I grant you that. We have another problem in bringing red potatoes in from the Red River Valley and distributing them to our grower members north of Ogden. In many cases it necessitates part carload shipments. We wish to unload at either Springvale, American Fork, Midvale, and go on into north of Ogden. This under the present status we are unable to do and have the through rate. That pretty well covers our incoming supplies.

Now since the tremendous increase in rates on some of our commodities, or all of them, coupled with increased weights on namely celery and carrots, it has greatly limited our markets east of the Mississippi River. Celery and carrots are grown to a great extent in those eastern areas, namely, New York, Michigan, Ohio, Pennsylvania, but our western produce has long since been recognized at a higher quality, but with the tremendous rate differential that we obtain through the increase of rates, and one year ago 22 per cent approximately increase in weights on carrots, and this year 20 per cent increase of weight on celery, it limited our marketing in the East.

People went to home-grown far more than ever, so it

necessitated us looking to smaller markets and we have for the past two years gone into Idaho, and Montana, also [fol. 658] Wyoming and Nebraska which is not a part of this case, but have moved more tonnage by truck into those areas than even the great state of New York has absorbed. We are unable, under the present status to move from our shipping points, namely American Fork, Springville, or Midvale, without a penalty in eastern Idaho and Montana with these commodities to our market that we are seeking for stop-over.

We have run into the same problem in going into the Southwest with our north of Ogden operations to such an extent that this year we saw fit to close the Corinne operation, and move by truck to Midvale our celery, so that we would not get into the so-called pocket markets of the Southwest that we would be bound to reach moving via UP to Denver, and transferring onto other lines.

By Mr. Quirk:

Q. What state is Corinne?

A. Utah.

All of our operations are in Utah. Up to the present time we do not have facilities north of Ogden to operate during the cold weather, and yet we have numberous members there, I would say upwards of 100 in that district, that we would like to be able to load their onions and potatoes, ungraded, and move them to packing sheds, namely, American Fork and Springville; and process it in transit and go on.

Under the present status of the closed gateway we are unable to do that. That I think pretty well covers our situation.

[fol. 659] Mr. Collins: What facilities, just for clarification. You said you did not have facilities north of Ogden to take care of something.

The Witness: Under winter weather, Mr. Collins. We have to close them when the frosts set in.

Mr. Collins: You have no facilities for housing or taking care of it.

The Witness: That is right. For storage, and processing in cold weather.

By Mr. Quirk:

Q. Is American Fork and Springville served by both the Union Pacific and the D&RG?

A. Yes, sir.

Q. Is there any interchange between the Union Pacific and the Rio Grande at either of those points?

A. No, sir.

Q. How many members are in your organization?

A. Approximately 450.

Q. Does the Utah Grower's Cooperative favor this complaint?

A. Yes, sir.

Q. Can you state in carload lots, or by some other unit, the volume of your inbound business, first, and your outbound business, second?

A. Our inbound business of course depends on the amount of outbound. We have been up as high as 500,000 crates; 1946 was our highest, and that is what our purchases were. [fol. 660] They would range from 8 to 10,000 crates of carload.

Q. Crates of all sorts?

A. Knock-down crates. We assemble them and ship our commodities. This year was a great deal less than that. It would range, I would say, anywhere from 15 cars to 50.

Q. How about your outbound business?

A. Outbound business is ranging from 600 to 1100, which is our top season.

Mr. Collins: Cars?

The Witness: Cars.

By Mr. Quirk:

Q. Do you have icing facilities on the Rio Grande at American Fork?

A. Yes, sir.

Q. And at Springville?

A. Yes, sir.

Q. Do you have any icing facilities on the Union Pacific at those points?

A. No, sir.

Q. How does that affect the commerce in which you engage?

A. In order to ship mixed carloads, or carloads of any type of our produce into eastern Idaho and Montana we did not do that. It is impossible to do that. You might say we could haul it across town and load it on the Union Pacific, but without icing facilities, these commodities cannot be shipped, so we have had to resort to truck shipments through those areas entirely.

[fol. 661] Q. In this cross-town movement, in cold weather of the winter, might there be some risk of freezing, too?

A. Bringing in of seed potatoes, which we often do, and would like to do, when the markets are possibly cheaper than we feel they would be in the spring, we are unable to come in during the winter because the haul across town subjects us to chance of frost on these potatoes.

Mr. Quirk: You may ask the witness.

Cross-examination.

By Mr. Collins:

Q. Do you have a trackage service at either of these plants? I mean a spur track, a side track, adjacent to your plant at either of these towns or locations?

A. We have them at all, Mr. Collins.

Q. What railroad?

A. On the Rio Grande at Springville, American Fork, and Midvale.

Q. I understood you to say that you had closed out a plant, or closed up a plant at Corinne?

A. Through the celery shipping of this year. We hauled it to Midvale by truck.

Q. About how much do you truck to Midvale, do you know?

A. Approximately 30 carloads this year.

Q. 30 what?

A. 30 carloads.

Q. You mean rail carloads.

[fol. 662] A. Comparable. We are speaking in terms of rail carload.

Q. Is that from the Corinne area?

A. That is right, Boxelder County. We go up beyond Tremonton and up to the Idaho line.

Q. You spoke of Red River Valley. Where is that particular Red River Valley?

A. North Dakota.

Q. I didn't understand quite what you meant when you said you couldn't move out of these places, I guess American Fork, Springville and Midvale, without a penalty. Is that what you said? Maybe I misunderstood you.

A. Where I brought that in was loading onions and potatoes north of Ogden, and processing in transit at Midvale, Springville and American Fork, where we would be penalized. We are unable to do that. At the present time under our facilities it is much of a need.

Q. What is the penalty?

A. The combination haul. We would have a short haul to the Rio Grande.

Q. It is the difference between the combination of rates and what?

A. And a through rate.

Q. I see.

A. Elimination of the Ogden gateway, we could load at Brigham City, for instance, or Cache Valley.

[fol. 663] Q. What is the through rate?

A. Potatoes and onions, and move into American Fork, or Springville, whichever we elected, proces- them, and go on without a penalty.

Q. What is the through rate that you speak of?

A. Well there is no through rate at the present time. That is what we desire to have.

Q. Oh, I see. The penalty then is the difference between the present combination rate over the UP and Rio Grande, and whatever rate it is you hope might be established as a joint through rate.

A. Or a comparable rate if we were to have a processing shed and went UP all the way. That is what we desire.

Q. Oh.

A. To be able to route either way.

Q. You are using as a measure then the through rate on the Union Pacific?

A. That is right.

Q. And you don't use that rate, though?

A. We are unable to.

Q. Do you use it for any purpose at all?

A. We ship a lot of stuff out of up there.

Q. You have shipments that move so that you can use this lower through rate on the UP.

A. That is right. A movement of potatoes and onions, [fol. 664] before the heavy frost period all go that way, from the north of Ogden.

Mr. Collins: That is all, Mr. Berger, thank you.

Exam. Mullen: You spoke of a heavier weight of carrots. You are speaking of an estimate weight?

The Witness: That is right.

Exam. Mullen: You had increased estimated rates, didn't you?

The Witness: We stood an increased freight rate, and increased estimated weight on the carrots amounted to 22 per cent. Our increased estimated weights on celery amounted to exactly 20 per cent. We got 10 pounds on 50.

By Mr. Collins:

Q. That increase in estimated weights was the result of an Interstate Commerce Commission proceeding.

A. It shut us out of eastern markets. That is why I stated we have to branch out into these smaller markets.

Q. It was the result of an Interstate Commerce Commission proceeding.

A. That is right. There is no argument there.

Mr. Collins: All right. That is all.

Exam. Mullen: That is all, thank you.

Mr. Quirk: Do you have anything else to say?

The Witness: No.

Mr. Quirk: That is all.

(Witness excused.)

[fol. 665] Mr. Quirk: Mr. Vanderford.

T.S. VANDERFORD was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your name?

A. T. S. Vanderford.

Q. Where are you located, Mr. Vanderford?

A. Aberdeen, Idaho.

Q. In what business are you engaged?

A. Farming and shipping potatoes.

Q. Do you do business under your own name, or are you the owner or connected with a company?

A. In my own name.

Q. In your own name.

A. In the name of T. S. Vanderford.

Q. How many carloads of potatoes would you ship in a year?

A. We ship from 2,000 to 2,200, annually.

Q. Where is your principal market?

A. Over most of the United States with the exception of New England.

Q. Are you a director or an officer of the Idaho Potato and Onion Shippers Association?

A. I am a director of the Shippers Association.

Q. Have you considered the issues involved in this complaint on hearing here now?

[fol. 666] A. I have.

Q. Do you favor the joint rates which the complaint seeks to have established?

A. I do. I am in favor of having the Ogden gateway opened.

Q. In what respect would the competitive rates sought in this complaint, if established, help you in your business?

A. We think it would help create some additional outlets for our potatoes. I do not care to repeat over and over what you have heard several of the potato shippers testify, but there is one point which I would like to bring out which I don't believe has been mentioned, and that is the privilege which we are denied today of billing our potatoes to Ogden and diverting East, on a through rate.

We think that would be an advantage in many cases to be able to do that. If we could bill our potatoes to Ogden as we also sell a lot in the state of California, some in Nevada and some in Utah, and in the event we didn't get the orders we were expecting and looking for, in California or these other points that I have mentioned, we would still have the privilege of diverting East on a through rate. We think that would be quite an advantage to us.

Q. You would like to have the privilege, I take it, of diverting a car from Ogden over the Rio Grande on East?

A. That is right.

Q. Through Pueblo.

[fol. 667] A. If the Ogden gateway is opened, I take it, we would have that privilege, and I dare say that Union Pacific would give us that privilege if the Ogden gateway was opened.

Q. Well, without asking any further questions, I take it you subscribe generally to the testimony that has been given here by several Idaho potato shippers?

A. Generally, I do.

Mr. Quirk: That is all.

Exam. Mullen: Cross-examination.

Cross-examination.

By Mr. Collins:

Q. Mr. Vanderford, I understood you to say that you could not now ship potatoes from—would Aberdeen, Idaho be your point of loading?

A. Either Aberdeen or other loading points on the branch line between Black Foot and Aberdeen, that is where we operate.

Q. I understood you to say that you could not now load potatoes at these points and bring them down to Ogden and then divert east on the Union Pacific.

A. That is right, sir.

Q. I wonder if you—are you sure about that, because our information is, from the tariff experts on the Union Pacific, is that you do have that privilege.

A. They better inform their agents then, because I have tried to bill that way and our agent has refused the billing.

Q. Your interests in having the routes and rates by the [fol. 668] way of the Rio Grande, as sought by this complaint, would be about the same as those of Messrs. Stanger and Holden, and other potato shippers?

A. I did not hear Mr. Stanger or Mr. Holden testify. I heard Wayne Newcomb today, which is substantially the same as I would testify on that line.

Q. Your main purpose would be to have available an additional route, is that part of your purpose?

A. That is part of it. We are in favor, though, of having the Ogden gateway opened as sought in this complaint.

Q. Well, what I was getting at was just what additional benefits you thought it would afford to you.

A. Well, we think it will give us some additional outlets for our potatoes to have this gateway opened.

Mr. Collins: That is all. Thank you.

Mr. Quirk: That is all, Mr. Vanderford.

(Witness excused.)

Mr. Quirk: Mr. Adams.

JACK ADAMS was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your full name?

A. Jack Adams.

Q. Where are you located, Mr. Adams?

A. Idaho Falls, Idaho.

[fol. 669] Q. In what business are you engaged?

A. Several lines of business. My principal occupation is a buying agent for jobbers throughout the country, principally to the South, especially Texas, Alabama.

Q. What commodities do you buy?

A. Potatoes, largely.

Q. Do you buy potatoes in Idaho?

A. Yes, sir.

Q. You are not the shipper of the potatoes, I take it?

A. Yes, I am. I supply as a buying agent a buying

service and a shipping service as well as a personal inspection service.

Q. Where do most of the potatoes—where do they go that you act in that capacity in, starting from movement?

A. The largest operator that I represent is in Texas, advertises as the largest jobber in the South.

Q. How long have you been connected with the business in Idaho Falls, or at Idaho?

A. I first came to Idaho in 1906, and until just after World War I I was only engaged or in Idaho a portion of the time from 1906 until World War I, and the winter of 1920. Since then I have permanently operated in the capacity I have told you of as a buying agent with the exceptions after World War I up to 1923 I was general representative for the Ennis Brown Company of Sacramento, California, and the Dunbar Harson Company of California.

[fol. 670] Q. Are you familiar with the objectives sought by the complaint here under investigation?

A. Yes, sir, if you speak of opening the Ogden gateway, I am.

Q. Are you in favor of the opening of the Ogden gateway and the joint competitive rates which the complaint seeks to have established?

A. Definitely so.

Q. Why are you in favor of it?

A. I am interested to bring about a competitive effort that I think the opening of the Ogden gateway would bring about.

Q. Do you think that additional route at competitive rates would be beneficial to the producers and to those that you represent?

A. Yes, I think it would be, and in addition to that I think it would definitely create a point of diversion and a point in assembling products that I think the West has needed in the past—when I speak of the West, I mean west of the Rocky Mountains—and I think the future will demand a condition of that kind more than the past has due to the fact that we are told of a great development, and of the situation that has been made in the last few years, for the additional population of the Pacific Coast.

They naturally depend on Idaho after they depend on

themselves, or any of California first. That holds good with Oregon and Washington. They then think of Idaho as their bread basket, speaking practically and economically.

[fol. 671] Q. Have you any further statement to make, Mr. Adams?

A. Yes. I think the opening of the Ogden gateway would eliminate considerable discrimination, especially in times of car shortages that we have experienced in the past, from the fact that it would be used as a competitive weapon or a weapon in competition.

I have found it necessary during the war especially, and even since, to identify myself with men that operate in Idaho that are transcontinental shippers, and I found that transcontinental shippers could get cars in Idaho when cars were short and we have experienced car shortages galore. I found with that weapon of transcontinental shippers they were given cars in a very discriminating manner, and I had to identify myself in order to supply my jobbers as a buying agent, at least I did, to render a better service.

Mr. Quirk: That is all. You may ask the witness.

Mr. Collins: No cross examination.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Mr. Quirk: Mr. Examiner, could we have about a ten-minute recess?

Exam. Mullen: Yes, we will have a 10-minute recess.

(Short recess.)

Exam. Mullen: We are ready to resume, gentlemen? Are you ready with the next witness?

[fol. 672] Mr. Quirk: Yes.

Exam. Mullen: Go ahead.

W. B. Long, was sworn and testified as follows:

Direct-examination

By Mr. Quirk:

Q. What is your full name, Mr. Long?
A. W. B. Long.
Q. Where are you located?
A. Twin Falls, Idaho.
Q. Twin Falls, Idaho?
A. Yes.
Q. And you are engaged in shipping potatoes from Twin Falls?
A. Potatoes, apples, onions, peaches, prunes.
Q. Do you do business under your own name, or are you connected with some company?
A. Under the firm name Long Produce.
Q. Long Produce Company?
A. No company.
Q. Just Long Produce.
A. Right.
Q. I suppose you are in favor of the joint competitive rates via the Ogden gateway and the D&RG and the route east of the D&RG?
A. I am.
Q. Now in addition to the reasons that have been given [fol. 673] by quite a few other potato growers and shippers from Idaho, have you some reasons that have not been mentioned for favoring this complaint?
A. Last winter we had quite a snowstorm in Idaho, throughout the inter-mountain country. There was a period —I might stand a little correction on this, but I believe 26 days— when no freight, with the exception I think of one day and one-half moved through Wyoming by Union Pacific. At that time there must have been—I know there were several hundred carloads of Idaho potatoes, onions, apples, blocked in by snow in the State of Wyoming, Idaho.

There were potatoes setting in Pocatello. All the branch lines in Idaho—that could not be moved. Had the Ogden gateway been open those perishables could have moved via Ogden to the eastern terminal markets, or to the South, or East. It so happened there were four pullman cars of

Idaho potato and onion shippers headed for Chicago to the United Fresh Fruit and Vegetable Convention during this period. I was in Chicago for a period of four days. I think there was one car of Idaho potatoes arrived.

During this period of over three weeks all of our employes in Idaho were sitting around their desks playing pinocle. We couldn't load out the potatoes. The Union Pacific was blocked. The Rio Grande—almost every day.

It certainly would have been a big advantage to all ship-
[fol. 674] pers in Idaho to have had the privilege of coming through Ogden with our produce.

Q. Did you have any produce in that jam yourself?

A. Yes, I did.

Q. Do you recall how many cars?

A. I don't know exactly, but I would say between 15 and 20 cars.

Q. Do you know how long they were in the blockade?

A. We had no way of knowing. We couldn't find out where they were, whether they were being heated, whether they were where they could be cared for or not. Many of those cars, most of them; we suffered quite heavy losses, due to freezing injury.

Q. What finally happened to those cars?

A. They were finally released when they opened the tracks. The last few days the Union Pacific did haul, I understand, some of them by the Rio Grande, they brought them down through Ogden to relieve the track at Pocatello, and loading points in Idaho. Of course we realize that many of the trains were blocked in in Wyoming and could not get forward or backward. It was a tough deal and there is no doubt the Union Pacific did all they could.

I know they spent an enormous amount of money fighting the snow, and there is no doubt in my mind they did all they could, but that didn't save the potatoes from freezing, and that situation could very easily happen any winter.

Q. Is it your point that this snow blockade, the significance of the snow blockade is that all rail routes should be
[fol. 675] made available to shippers at equal rates, so they could be used under any and all circumstances and conditions?

A. I am not just here in the belief they should open the Ogden gateway. I think all gateways should be opened,

so that perishables may move when and where you want to move them.

Mr. Quirk: That is all. Do you have anything further to say?

You may cross examine.

Mr. Collins: No cross examination.

Exam. Mullen: Thank you, Mr. Long.

(Witness excused.)

L. D. Robbins was sworn and testified as follows:

Direct examination

By Mr. Quirk:

Q. Will you give your name and address to the Reporter, Mr. Robbins?

A. L. D. Robbins, Twin Falls, Idaho.

Q. And in what business are you engaged?

A. Carlot distribution of potatoes and onions, and in years past I have handled lettuce, peas, carrots, that is all.

Q. Roughly, how many carloads of these various commodities would you normally ship in a year?

A. I have had a high year of 700. Last year I dropped down to about 300.

Q. Where is your principal markets?

[fol. 676] A. Chicago and Kansas City, and immediate territory.

Q. You heard the testimony of other potato shippers, and I assume you would be for the opening of the gateway and competitive rates for substantially the same reasons that the other witnesses have testified to?

A. Very difinitely I am, and in addition to that I believe that we need the combined efforts of both of these great roads toward the development of the produce industry in the state. We need the efforts and the help of the Rio Grande, not only toward the moving of our produce to markets, but the supplying of cars and other facilities which at times the Union Pacific have been unable to supply us.

Q. What about this question of diversion, and the brokerage that you mentioned to me this evening?

A. At the present time shipping on the main line to Kansas City, there are numbers of cars stopped at Manhattan, Kansas, at Topeka, Kansas, and other points along that route for inspection.

Q. You mean the main line of the Union Pacific?

A. The main line of the Union Pacific. If the customer likes them he takes them, if he doesn't they can proceed on into Kansas City and go anywhere in the United States east of there. As has been brought out by several witnesses, such is not the case in southern Kansas, or in Oklahoma. I firmly believe if the Ogden and Denver gateways [fol. 677] were thrown open so that we could bill potatoes and onions and other commodities across the State of Oklahoma for inspection, and then have the privilege of moving them on through St. Louis into Cincinnati, Chicago, or the east or the southeast, that we could drum up a lot of business.

The Idaho Advertising Commission has spent thousands and thousands of dollars in advertising Idaho potatoes and onions, and as a result we now enjoy a wider distribution and a greater movement than at any other time in the history of Idaho, except in the territory of southern Kansas and Oklahoma, and in my mind it is due, one reason, because we can't go in there and still move on through because of these pocket markets, and because we can't do that we are forced in a way to sell our potatoes either to Kansas City operators or to bill them to them for sale on arrival.

As I see it, this creates another problem. I talked to one of the largest operators in Joplin, Missouri, and he said, "I won't buy potatoes from Idaho. I wait and watch the track holdings in Kansas City, and when they get glutted I go in there and buy cars at less than the market price," and every shipper in Idaho has had the experience of losing money on that basis.

In my opinion, if it were thrown open, that we could route these cars south of the Union Pacific road, across Oklahoma, across southern Kansas, that they would not [fol. 678] arrive in Kansas City to where the tracks were glutted. There is another thing that enters into it there, and that is this: Because the Oklahoma markets are so close

to Kansas City at the present time we cannot sell in Oklahoma because it takes us about six days to get there, and your Oklahoma and souther- Missouri buyers will go into Kansas City and buy them off of the track where they can get two-day arrival.

I just put in three weeks, about six weeks ago, going across the country, and in no less than six of the contacts that I made people told me definitely that they represented in that market one of the three large Kansas City operators. If I send my potatoes into Kansas City for arrival, or on consignment because I have no place to put them, I pay a brokerage to the Kansas City operator, I also pay a brokerage to the Oklahoma City operator, where my potatoes are eventually sold.

Mr. Collins: Were you just quoting the other fellow, or are you speaking in your own behalf now?

The Witness: I am speaking in my own behalf.

Mr. Collins: I see.

The Witness: It seems to me if that were opened up, we could go through there, we could put potatoes in Oklahoma City for inspection, if they saw them they could buy more, if they didn't like them we could move them out. I think it was Mr. Vanderford who touched on one point I would like to enlarge on a little bit, and that is this: I understand that [fol. 679] a very heavy percentage of the potatoes from southern Idaho at this time: Burley, Twin Falls, Kimberly, Hanson, Buell, that go into Los Angeles, are going in there by trucks, because they can get them in there in 36 to 48 hours. Our present schedule is about four days by rail to Los Angeles. It is my contention that if that gateway were opened that we could use Salt Lake City as a diversion point, place cars of potatoes here in Salt Lake.

If we were unable to sell them in Los Angeles we could then move into Oklahoma territory, and if the gateway were opened, move them out of Oklahoma on into St. Louis and east. On a basis of that kind we could give Los Angeles second-morning arrival where at the present time we are restricted to four days, and consequently our business is all being lost to trucks.

I believe that covers what I had.

Mr. Quirk: You may question the witness.

Cross-examination.

By Mr. Collins:

Q. Do I understand you are adopting the testimony of these other gentlemen from Idaho who have testified as Idaho potato producers and shippers, and what you have said is in addition to theirs?

A. Supplementing it, Mr. Collins.

Q. I understood you to say, Mr. Robbins, that your principal markets were at Chicago and Kansas City?

A. That is right.

[fol. 680] Q. About what per cent of your shipments or volume—you said 700 carloads in a high year and about 300 in 1948—

A. Yes, sir.

Q. About what percentage of those carloads would you say were sold in Chicago and Kansas City?

A. There were two different grades of potatoes. The number 1 potatoes went principally into Chicago, and I would say 90 per cent of my number 2 potatoes went into Kansas City. Just what percentage those shipments would be, I won't know. It varies greatly, Mr. Collins, by weeks or by months.

Q. You said maybe 90 per cent of the number 2's went to Kansas City, and most of those that went to Chicago were number 1's. Would you be able to estimate what per cent of the number 1's went to Chicago?

A. I would say 75 per cent.

Q. Could you tell us about how many carloads of potatoes you had caught up in what has been called this "pocket" that you were talking about down there?

A. I was connected with the Atlantic Commission Company for 11 years. Four years ago I left my position there and went into business for myself, and because of the experiences of other people, and because of no known acquaintances in that territory where the markets existed, I have not been doing business in there.

Q. I see.

[fol. 681] A. Just recently this fall I covered 6,000 miles through that territory, making contacts in the hopes that I could get some business from them. But so far I have never been caught in one of those pocket markets myself.

Q. You have not lost anything yet by being caught in them?

A. No, sir. I have profited by the other fellow's experience.

Q. Isn't it a fact, Mr. Robbins, that there is a considerable movement of potatoes from Idaho to California points by truck where the truck owner—the trucker is the private owner of his truck, and he buys his potatoes in Idaho, and owns them and hauls them say to the Los Angeles area?

A. I couldn't verify that, because I don't pack potatoes, therefore, I don't sell to truckers. I buy carloads after they are packed, and all of my business is rail shipments.

Q. You are not a producer of potatoes?

A. Not to any great extent, no, sir.

Q. You are a buyer and seller, is that right?

A. That is right. I buy on brokerage for some accounts, but principally I buy these potatoes and handle them on a merchandising basis.

Q. Do you buy them on a track around Twin Falls for some principal located say in Kansas City?

A. I would say that 15 per cent of my tonnage is bought on that basis, not only at Twin Falls. I have bought potatoes all the way from St. Anthony and Newdale in the [fol. 682] Northeast, to Weiser in the Southwest and also in eastern Oregon.

Q. Does your principal pay the freight charges on these potatoes when they reach him?

A. In all cases. I don't prepay any freight. Some of them are sold on an FOB basis in which I draw a draft for the net amount. Others of them are sold, and most of them are sold on a delivered basis, in which I draw a draft for the gross amount less the freight charges and he pays the freight charges and submits the freight bill as part payment on the merchandise.

Mr. Collins: That is all.

Mr. Quirk: That is all.

Exam. Mullen: That is all, thank you.

(Witness excused.)

Mr. Quirk: Mr. Examiner, we thought we might have some other witnesses, but we haven't. While we are here, and the hearing is in session, I would like to ask Mr. Col-

lins if he has come to any conclusion about cross examining Mr. Earley.

Mr. Collins: Well, I hadn't actually yet, Mr. Examiner. I thought I would make a statement about it when all of the complainant's witnesses at this hearing had testified. I want to talk with my officers of the company who are here with me briefly about the matter again, that is the matter of possible cross examination of Mr. Earley, but I will say this, I am quite sure that if I have anything to ask Mr. Earley it will be very brief, and it is possible that I will [fol. 683] have no questions to ask him at all.

If I ask him anything, it would not take more than 20 to 30 minutes, I'm sure, from my standpoint, at the outside. I would like to defer final declaration on it until the other witnesses are in. I'm quite certain it won't cause anybody to miss a train if the hearing can be closed otherwise. That is, my dealings with Mr. Earley's situation won't add enough time to cause anybody any inconvenience.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: The hearing will be resumed then tomorrow in this room at 9:30 a.m.

(Whereupon at 9:25 p.m. the hearing recessed to reconvene on Friday, December 16, 1949, at 9:30 a.m.)

[fols. 684-685] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant

UNION PACIFIC RAILROAD COMPANY, ET AL., Defendants

Transcript of Testimony—Salt Lake City, Utah, Friday, December 16, 1949

Met, pursuant to adjournment, at 9:30 o'clock a.m.

Before: Frank E. Mullen, Examiner.

[fol. 686] Proceedings

Exam. Mullen: We are ready to resume the hearing. Please come to order, gentlemen.

Mr. Quirk: Mr. Fuller.

JOE FULLER was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Your name is Joe Fuller, is it not?

A. Yes.

Mr. Collins: Fuller.

Mr. Quirk: Fuller.

By Mr. Quirk:

Q. And you reside in Pocatello, Idaho?

A. That is right.

Q. Now I understand you have a short statement here that you will read and that will constitute your testimony, so proceed with your statement.

A. Well, I'm engaged as a partner with Mr. Goldstein in buying and selling livestock, principally sheep. We buy Idaho, Oregon, Washington, Montana, that is, we contract during the summer normal deliveries as a rule in different

localities, and we would like to do a little more business in Colorado and Utah.

Mr. Collins: Would you read that last sentence, Mr. Reporter.

(Answer read.)

The Witness: But the feed in transit freight rate is a lit-
[fol. 687] tle too high, and we have lost a lot of deals on that account, because we can't compete with the Union Pacific.

By Mr. Quirk:

Q. Mr. Fuller, would you talk into the microphone there. Just hold yourself back a little bit.

Mr. Collins: Off the record a minute. Are you reading this statement, Mr. Fuller?

The Witness: I started to, but I have a little trouble with my eyes.

Mr. Collins: I'm sorry.

The Witness: We cannot sell to Utah or Colorado sheep men on the same basis as we do to stockmen who live where they can ship on the Union Pacific. There is considerable demand for sheep of all classes in Utah, Colorado and Kansas. At different times during the past several years some of our fat lambs have gone to the Lincoln factory, Pueblo, Colorado, and other meat packers in California are periodic customers of ours. If competitive through rates to Denver and Missouri River points from Idaho, Oregon and Montana points, on the Union Pacific were established via the D&RGS through Ogden, we could enlarge our operations by moving our entire purchase of sheep as received at the railhead in Idaho, Oregon or Montana by the UP to Salt Lake or Ogden for sorting and grading, some of them going to Colorado and Utah, and some of them to California points.

Such privileges are permitted at both Ogden and Salt
[fol. 688] Lake City and ample facilities for such work are provided there. After sorting, shaping and grading, the sheep could be forwarded on to destination via whichever railroad we wanted, that is, whoever we sold to, they could do whatever they wanted with them.

Mr. Collins: What was the last thing you said?

(Answer read.)

The Witness: We are not big buyers, but this year we handled a little over 100 carloads. Last year I think we handled about 200 carloads, and the year before I think about 300 carloads altogether. It makes quite a little difference if we had these through billings by way of the D&RG.

Mr. Quirk: You may cross examine.

Mr. Collins: No cross examination.

Mr. Quirk: You are excused.

Exam. Mullen: That is all, Mr. Fuller. Thank you.

The Witness: Thank you.

(Witness excused.)

Mr. Quirk: Mr. Wagner.

ELMER J. WAGNER was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Your name is Elmer J. Wagner?

A. Right.

Q. And you are located where?

[fol. 689] A. Lamar, Colorado.

Q. What is your business?

A. I am President of the Arkansas Valley Stock Feeders Association.

Q. You have a statement. Will you proceed to give your testimony in this statement form?

A. I will.

I am President of the Arkansas Valley Stock Feeders Association. This association is located and carries on its livestock feeding operations in Southeastern Colorado, East of Pueblo, and in Southwestern Kansas. It is generally located in the farming country, in the valley of the Arkansas River, contiguous to the Santa Fe and Missouri Pacific Railroads.

The membership of our association is interested in having competitive through rates on livestock from points in the Northwest, via Ogden and The Denver and Rio Grande

Western Railroad. We are interested in having such rates because we wish to be able to purchase feeder livestock in Idaho, Oregon, Washington and Montana on a competitive basis with feeders of livestock in other localities; for instance, northern Colorado and Nebraska.

I have been feeding lambs ever since 1900 or nearly 50 years, and some years have fed between 80,000 and 100,000 lambs in Colorado, Kansas and Nebraska. In 1928, 50,000 lambs were purchased in Oregon and Idaho. At the present time I am feeding 9,000 lambs, 5,000 ewes and 225 head of cattle.

[fol. 690] The Arkansas Valley Stock Feeders are not on a competitive basis with stock feeders in other localities, such as northern Colorado, Nebraska and northern Kansas. We do not raise livestock; we fatten them by utilizing the best pulp, beet tops, grain, hay, forage and other miscellaneous agricultural crops suitable for fattening livestock, raised on the farms and ranches. This feeding process generally takes place during the early fall, winter and spring months.

These livestock almost entirely go to slaughter at the Missouri River or other eastern livestock markets—Kansas City, St. Joseph, Omaha, Sioux City, St. Louis, Chicago, and others. Transportation costs are a factor in the overall operation. Through freight rates from the localities where cattle and sheep are raised to these slaughter points with feeding, grazing and fattening in transit privileges are a consideration. There was a time when we could, and did, buy feeding lambs in large numbers in Oregon. The through freight rates from Oregon points on the OWR&N Railroad where we bought lambs was the same via the D&RGW at Ogden and AT&SF at Pueblo to Kansas City as it was via the Union Pacific.

In the years before 1932, it was a regular custom for Colorado range men, in the spring to buy old ewes and lambs in Idaho, Oregon, Montana and Washington, ship them into Colorado to points along the D&RGW, summer them, in the fall sell both ewes and lambs. We Arkansas Valley men were always in the market for such of the sheep as were [fol. 691] suitable for further fattening. The cost of the animals, as well as the freight benefit, made them attractive to us.

It cost us no more generally to deliver them at Kansas City when they were fat than it cost any livestock feeder on the Union Pacific in Colorado, Nebraska and Kansas. I am now told it was in 1932 that the rate relationship was changed. Stockmen in these Colorado, Nebraska and Kansas points on the UP were given lower freight rates on livestock from the Northwest points to the Missouri River markets than we Arkansas Valley fellows.

We slowly learned that there was no through freight rate from these Northwest points via the D&RGW-AT&SF and that even if shipments moved UP to Denver and then down through the Arkansas Valley on the AT&SF that the rate to the Missouri River was higher. We learned by repeated efforts that feeders located on the UP to the north of us were able to overbid us in Oregon and the other states. We like the Northwest lambs and would like to buy them if we had the same freight rate advantage.

Q. By the way, Mr. Wagner, where are you located?

A. I am located at Lamar, Colorado, on the Santa Fe.

Q. As President of the Arkansas Valley Stock Feeders Association, where are you located?

Mr. John L. Anderson of Los ——.

A. Our office is located at Los ——. Our secretary is

Has decreased less than for instance in Oregon and Mon-

[fol. 692] Mr. Quirk: All right. You may cross examine.

Cross-examination.

By Mr. Collins:

Q. Mr. Wagner, who wrote this statement for you?

A. This statement was prepared by our secretary, Mr. Anderson, and myself, after we had a meeting of the Board of our Executive Committee.

Q. Do you know what happened in 1932 that caused you to make the statement here that you did?

A. Well, I understand that the Ogden and Denver gateway was closed about that time.

Q. Did anyone tell you that the Interstate Commerce Commission had had a proceeding involving the cattle rates at that time?

A. No, I don't think so, not that I remember.

Q. Did your 215 members take action on this intervention of the Arkansas Valley Feeders Association?

A. Those things at our annual meeting that is held in February every year is always left to our Executive Committee, and our Executive Committee passed a resolution authorizing the president and secretary of the association to proceed.

Q. Your Executive Committee can do anything it wants to so far as the membership is concerned, is that it?

A. The membership at every annual meeting give them that privilege, because our members are scattered up and down the valley so it would be impossible to get them to-
[fol. 693] gether on occasions of this kind.

Q. They are the actual producers and shippers, are they not, your members?

A. The feeders, yes, sir.

Q. The feeders, yes, sir, excuse me.

A. Yes, sir.

Q. Last February—do you mean 1949?

A. Yes, sir.

Q. Mr. Wagner, as I understand the petition for leave to intervene, all the Arkansas Valley Stock Feeders Association wants is a choice of alternate routes at equal rates as indicated in Paragraph 3 of the petition, is that correct?

A. That is correct.

Mr. Collins: That is all. Thank you.

The Witness: Could I add a little bit to this statement?

Exam. Mullen: Go ahead.

The Witness: I would just like to say in 1928 we purchased a great many lambs up in the Oregon and Idaho territory. At that time we could compete with the northern Colorado and Nebraska feeders. At the present time our freight rate on lambs from Baker, Oregon, to Missouri River points over the UP is $1.37 per hundred. If we come down through the Ogden gateway over the D&RG Western, and Santa Fe into the Arkansas Valley, our freight rate is $1.86 a hundred. That is 49 cents over the Colorado and
[fol. 694] Nebraska feeders rate, or with tax and all, over $100 per car.

That makes it impossible for us to compete with north-

ern Colorado and Nebraska feeders in that locality for feeding lambs. We have always liked those Oregon and Idaho lambs especially, and we can get them in early in the fall to turn into the cornfields, and we could use a good many of them every year; but this high freight rate is prohibitive for us and we are not able to buy them.

I would like to say that in previous years, in 1928, I think our association fed something over 400,000 lambs in the Arkansas Valley. That did not include the western part of Kansas. At the present time we are feeding approximately 100,000 lambs.

By Mr. Collins:

Q. How many did you feed in 1928?
A. Over 400,000.

Mr. Quirk: That is all.
Mr. Collins: No, just a minute.

By Mr. Collins:

Q. When did you become conscious of this competitive situation between the members of your association and the feeder operators in Nebraska, for instance?

A. I couldn't state exactly the time that we did, but our secretary, Mr. Anderson, is a good rate man. He handles the freight bills for our association and audits them for the members as the lambs come in in the fall, and Mr. Anderson discovered this, but I couldn't state just when he did discover it. However, I know for several years we have been trying to see if we could get some information [fol. 695] or way that it could be corrected.

Q. Let me ask you this, Mr. Wagner. Where does your association members sell their lambs?

A. Most of them go to either Kansas City or St. Joseph, Missouri.

Q. I understood you to say that it had become impossible for you to compete—your association to compete with the Nebraska feeders?

A. We could not compete with Nebraska——

Q. Is that what you said, it is impossible for you to compete with them?

A. On Idaho and Oregon lambs.

Q. That is, they can make more money at their rates than you can make at the rates on the D&RG, is that what you mean?

A. We would have $100 extra per car of freight to pay, and that is really prohibitive, which runs up the cost of the lambs to start with, and it is prohibitive so that we cannot compete with them.

Q. If they had the same rate that you have, the prohibition would be removed, wouldn't it?

A. I think that would be probably prohibitive.

Q. For both?

A. For both of us.

Q. I see.

A. Another thing, it would encourage the transportation by trucks a great deal, which I think that all railroads [fol. 696] should recognize. Down in our valley at the present time a good many lambs are coming in from Texas and New Mexico, all by truck.

Q. Why do you think that is? What causes that?

A. These last three or four, whichever it is, increases in freight rates, have discouraged a good deal of feeding everywhere, for that matter. These freight rates are getting so high that it's almost impossible, and a good many feeders feel that they cannot afford to pay these excessive freight rates and stay in business.

Q. The freight rates are increasing as well for the Nebraska feeders as they are for the Arkansas Valley feeders, are they not?

A. I imagine they are, although this differential from Baker, Oregon seems for some reason to us to be out of line with some other rates.

Q. You haven't tried to figure out whether or not the increase is proportionately the same.

A. No, I have not.

Q. Isn't this a fact, Mr. Wagner, that these people ship by truck, the members of your association ship by truck when they see it is to their financial advantage?

A. Well, they do in some cases where it's not too long a haul, but they couldn't ship by truck from points up in Oregon and Idaho. That would be impossible.

[fol. 697] Q. Would they ship by truck at all if it was not to their financial advantage?

A. I think that is right.

Mr. Collins: All right, sir. That is all. Thank you.

Redirect-examination.

By Mr. Quirk:

Q. Did you say how many members there are in the Arkansas Valley Stock Feeders Association?

A. 215 at the present time.

Mr. Quirk: That is all. Thank you.

(Witness excused.)

Mr. Quirk: Mr. McIntosh.

Angus McIntosh was sworn and testified as follows:

Dedirect-examination.

By Mr. Quirk:

Q. Your name in Angus McIntosh.

A. That is right.

Q. Where are you located?

A. Las Animas, Colorado.

Q. Are you connected with the Colorado Wool Growers Association?

A. I am President of the Colorado Wool Growers Association.

Q. You were Vice President?

A. Yes.

Q. How many members are there of that organization?

A. 832.

Q. In general where are they located?

[fol. 698] A. I would say 90 per cent of the sheep produced in Colorado are produced in the D&RG territory.

Q. Now you have prepared your testimony in statement form.

A. Right.

Q. Will you proceed to read your statement.

A. Since I have prepared this statement I have been elected President of the association instead of Vice President.

I represent the Colorado Wool Growers Association which is composed of 832 members and I am President of that organization. The Colorado Wool Growers Association is interested in being placed upon an equal basis with other sheep producing and feeding areas.

Colorado is an important state in the sheep industry. The high mountain country provides excellent forage feeds for summer pasturing flocks of sheep. Ewes with new born lambs are put on such high country ranges or pastures as soon as possible in the spring. The lambs "ripen" with the forage in the fall.

Most of the lambs (about 85%), both ewes and wethers, are fat enough for slaughter and are either purchased at the rail loading point or at adjacent livestock markets (Denver, Kansas City, etc.) by meat packing company representatives for slaughter at those points or in many cases, for shipment on to other slaughter houses. The trend of fat sheep movement from Colorado is eastbound as a preponderance of lamb and mutton is consumed in the [fol. 699] east.

Some of these lambs are shipped by rail as far as New York City for slaughter. The small per cent of lambs, both ewes and wethers, not fat enough for slaughter, are eagerly sought after by Colorado lamb feeders for further finishing in the fattening pens in the Arkansas Valley of Colorado and Kansas, in northern Colorado and now, to a great extent, by Kansas wheat pasture lamb feeders.

The Kansas wheat pasture market for such lambs has recently grown to large proportions since wheat raising in that section became popular. Thus the ewe lambs are too valuable as "killers or feeders" in the fall for the Colorado sheep men to hold over for herd replacements. He must and does look to other localities for such replacements where sheep raising does not produce fat lambs for immediate slaughter.

In the years prior to 1932, many such ewe lambs for herd replacements were bought in the Northwest in localities

from which there were through rates to Denver, Missouri River and Eastern points by way of Ogden and the D&RGW Railroad to other railroads at Pueblo, and Denver, AT&SF, MP, CB&Q and CRI&P. A large part of our membership have their sheep raising operations contiguous to the D&RGW.

The grazing-in-transit privileges generally permitted by all railroads enabled these Colorado men on the D&RGW to use the through freight billing, after summer grazing, on [fol. 700] the sheep that moved east. The saving by such use was, in some years, about all the profit the grower received. In any event, the saving is a valuable consideration.

Some time early in 1932, restrictions were placed on routing sheep, originating at Northwest points, on or by way of the UP at Ogden with the D&RGW. Our members were no longer able to compete in the purchase of sheep in those localities with the sheepmen in Wyoming, or at other points east in Colorado, Nebraska, Kansas, etc. on the UP, who have a much lesser through freight rate on their product.

Prior to 1932 there were annually large movements of "pairs"—old ewes whose breeding expectancy was not great and young lambs from the Northwest to Colorado points on the D&RGW—for summer grazing. Both ewes and lambs were shipped on to eastern markets in the fall. They enjoyed the benefit of competitive through rates from origin to eastern destination with grazing-in transit privileges enroute.

Increased freight charges now assessed on such shipments have almost entirely discontinued purchases in the Northwest. Certainly absence of potential Colorado demand for herd replacements or old ewes and lambs has resulted in proportionately lower values on these sheep in the Northwest by eliminating the Colorado sheepmen in D&RGW territory from competition with the sheep purchasers from other localities who enjoy the lesser freight charges.

[fol. 701] As to my personal activity in the sheep industry, I have been so engaged for about 25 years. My ranch holdings in Bent, Otero and Kiowa Counties in Colorado aggregate approximately 55,000 acres, where I raise lambs from about 7,000 ewes. I also fatten lambs in the fall, winter

and spring, and annually purchase 5,000 or more lambs in addition to those I raise, for that purpose.

At the present time I have about 10,000 lambs on feed in Colorado and Kansas. This fattening process is conducted at Las Animas, or adjacent Arkansas Valley points, and on wheat pasture in Kansas.

Prior to 1932 I purchase large numbers of sheep, mostly in Oregon, which I shipped by way of Ogden and the Rio Grande, and Pueblo and the Santa Fe. At that time the same through rate was charged, whether the sheep moved over the Rio Grande or by way of the UP. Shipments made over the Rio Grande better suit my purpose for these reasons: When sheep are loaded at Oregon points I prefer to have them stop, first at Caldwell, Idaho for feed, water and rest, and next at Salt Lake City, from which point the Rio Grande invariably arranged through service home to Las Animas, in connection with the Santa Fe to Pueblo.

Some of my lamb shipments from Oregon, routed UP, Denver and Santa Fe, have been fed at Caldwell the first time, at Pocatello, Soda Springs or Green River the second [fol. 702] time, and Laramie or Denver the third time, and some shipments were fed at Laramie the third time and at Denver the fourth time.

Mr. Quirk: You may cross examine the witness.

Cross-examination.

By Mr. Collins:

Q. Mr. McIntosh, did you write this statement?

A. Yes, sir.

Q. You know the facts that are stated in there of your own personal knowledge?

A. Yes, sir.

Q. You do?

A. Yes, sir.

Q. Are you speaking for the 832 members of the Colorado Wool Growers Association?

A. This action was taken by the Executive Committee of the Colorado Wool Growers and was approved by the Transportation Committee and approved by the members at their state convention last week in Denver.

Q. The majority of the 832 members.

A. There was a quorum present.

Q. A majority of the 832 emmbers.

A. I can't say how many members were there.

Q. You don't know.

A. No.

Q. Now do all members of the association engage in the same business that you indicate in the last part of your [fol. 703] statement that you are engaged in?

A. No.

Q. Their activities vary from yours, they are not all the same.

A. No.

Q. They are not all in the same situation at all, are they?

A. No.

Q. Where are the markets, if you will name some of the cities where you indicate on the first page about six or seven lines from the bottom of the first paragraph of your statement that your lamp and mutton is consumed, can you indicate by naming some cities? You say in the East.

A. A great majority of lamb is consumed in the New England district.

Q. What portion or percentage, if you could estimate it, Mr. McIntosh, of the sheep or lambs or whichever it is that you purchase come out of this Northwest country, north of Ogden?

A. You mean I personally purchase, or the wool growers?

Q. You can take it on your own operation. Yes, let's have it on your own operation.

A. Well, since 1932 a small per cent of the lambs have come out of there. I would not say just what per cent, but it is much smaller than it was prior to that.

Q. I noticed this sentence beginning five lines from the bottom of your statement, the first page, "The small per cent of lambs, both ewes and wethers, not fat enough for [fol. 704] slaughter, are eagerly sought after by Colorado lamb feeders," and so forth. Now, does that refer to these ewes and wethers from any particular part of the country?

A. I believe I am talking about the Colorado lambs there.

Q. I see.

Well, would Colorado lambs serve the purpose of your own fattening operation?

A. As I have said in this statement, 85 per cent of the Colorado lambs are fat enough to go to the slaughter when they come off the mountain ranges, and there is just a small per cent of the lambs that go into the feed lots.

Q. I am wondering, I hope you will tell us, just what real importance it is to you in your fattening operation of these lambs to have those from the Northwest, north of Ogden?

A. I have never bought lambs that I like as well as I do the Northwest lambs: The eastern Oregon, southern Montana, Idaho lambs seem to do better. They are younger lambs when we get them. They put on better gains, and I like them better than any lambs I have ever purchased.

Q. Why?

A. For that reason.

Q. Well, finally, is it because you can make more money out of them?

A. That is what I am in business for, yes, sir.

Q. You know, do you not, Mr. McIntosh, that there has [fol. 703] been a gradual reduction in the number of sheep and lambs produced or grown in the western country in recent years?

A. Yes, sir.

Q. Is that particularly true in your Colorado area?

A. Colorado has decreased less than most of the other states.

Q. I see.

Has decreased less than for instance in Oregon and Montana, perhaps, or Idaho?

A. Yes.

Q. Now, Mr. McIntosh, on the bottom of page 2 of your statement you say: "Our members were no longer able to compete in the purchase of sheep in those localities with the sheepmen in Wyoming, or at other points east in Colorado, Nebraska, Kansas, etc. on the UP, who have a much lesser through freight rate on their product."

Would your situation be changed at all if there were no, I would suppose you would call it fattening operators, in these states that you mentioned?

A. I don't just quite understand.

Mr. Quirk: If you were the only lamb feeder in the world, would you be better off?

Mr. Collins: No, you took in entirely too much territory, Mr. Quirk.

By Mr. Collins:

Q. If the people in these states you mentioned were not in business, wouldn't your problem be just the same?

[fol. 706] A. No, sir, I don't believe so.

Q. Well, does that situation, the fact that there are feeders in Nebraska and Kansas, does that have anything to do with the marketing of your lambs?

A. We have to compete with them in the market, yes, sir.

Q. And don't you have to compete with them from every place lambs are produced all over the country?

A. Yes, yes, I do.

Q. So that these operators in Kansas and Nebraska probably are an unrecognizable part of your competition, are they not?

A. No, no, the Colorado-Nebraska feeds the majority of the lambs feed in the United States.

Q. I see.

Does the buyer make any distinction between the lambs you fatten and those that are fattened in Wyoming?

A. I don't believe that can be answered. There are several different ways of fattening lambs, and lambs are sold on their own merits.

Q. Yes, but the buyers don't really refuse to buy your lambs because they are fattened in Colorado, adjacent to the Rio Grande Railroad, do they?

A. No, sir.

Q. No.

The petition for leave to intervene is filed by the Colorado Wool Growers Association. Are you intervening, with [fol. 707] respect to wool, as well as meet?

A. We're in the business for both the wool and meet, and we have found we like the replacements out of the Northwest better than any replacements we can buy.

Q. And for the reasons you indicated that you can make more money out of the lambs?

A. Yes.

Mr. Collins: That is all, sir. Thank you.

Mr. Quirk: That is all.

(Witness excused.)

Mr. Quirk: We have three witnesses we thought would be here. Unfortunately one of them is on the Union Pacific train which is three hours late. I don't know what is the matter with the others. Could we have about a 15-minute recess, and perhaps we can have some understanding with counsel?

Exam. Mullen: Yes, we will recess for 15 minutes.

(Short recess.)

Exam. Mullen: The hearing will be resumed, gentlemen.

ANTON POITEVIN was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Mr. Poitevin, your name is Anton Poitevin, and you are from Idaho Falls, Idaho.

A. Yes, sir.

Q. Are you prepared to testify here in the form of a statement?

[fol. 708] A. Yes, sir.

Q. Will you proceed to read your statement?

A. My name is Anton Poitevin. I live at Idaho Falls, Idaho, and have been engaged in various enterprises in this state since 1910. I am President of the Idaho Potato Growers, Inc., and am a member of the Idaho Falls Chamber of Commerce. Both of these organizations have passed resolutions favoring the establishment of competitive rates through the Ogden gateway via the Union Pacific and the Denver and Rio Grande Western Railroad.

The Idaho Potato Growers, Inc., has 1200 members and last year shipped about 5,000 cars of potatoes from Idaho. This organization has been active in this capacity for the past 25 years, and from 11 points in Idaho now ships about 10% of the Idaho crop. In 1910 the potato produc-

tion was about 2500 carloads; in 1948 about 50,000 carloads.

I have personally been engaged in growing potatoes for many years and have in former years grown and shipped as many as 200 cars of potatoes per year.

The potato grown in Idaho, known as the Idaho Russet, is a premium potato and is in demand in all states. It is adapted to the volcanic ash soil prevalent in Idaho and to the high altitude and also to irrigation. It is not grown successfully elsewhere in any quantity except for a portion of the State of Washington.

[fol. 709] This potato has some peculiar characteristics. It needs moisture all of the time it is growing and its growth must be continuous. It does not develop properly when dry farming methods are used. Because of these factors, it develops to a high degree in Idaho and a potato is produced that is in demand throughout the United States.

Despite this quality, the Idaho Russet is grown in a state that is not close to the larger markets and consequently must be sold at a freight rate premium in the competitive markets. For this reason we feel that the Idaho Potato Growers should have every advantage in the way of available rail routes to all markets and should not be handicapped by higher rates through any gateway.

Q. Have you anything to add to that statement?

A. Not at this time, thank you.

Mr. Quirk: All right. You may cross examine.

Mr. Collins: We have no cross examination.

Mr. Quirk: All right.

Exam. Mullen: Thank you.

(Witness excused.)

COLLOQUY BETWEEN EXAMINER AND COUNSEL

Mr. Quirk: Mr. Examiner, I hoped to have the privilege of putting on one or two, or perhaps three witnesses at the adjourned hearing before the defendants put on their case. We have no additional evidence to offer at this hearing.

Exam. Mullen: Mr. Collins.

[fol. 710] Mr. Collins: Mr. Examiner, sometime ago, at the suggestion of the Chief Examiner, or the ex-Chief

Examiner now, Mr. Butler, who suggested that although an adjourned hearing in this case would be arranged, he thought that we should endeavor to put on such testimony as we could. We prepared some testimony somewhat in the dark, not knowing exactly what we would have to meet, and even approximately what we would have to meet, and I find practically all of that that was prepared now has to be revised and cannot be introduced without such revision in the light of what has been introduced here, so that it leaves us with nothing of substance ready to go into the record at this hearing, and I would like to state, particularly in view of the fact Mr. Quirk for the complainant may have some other witnesses at the adjourned hearing, to begin with, I would like to submit no testimony for the defendant, the Union Pacific Railroad at this hearing, instead follow immediately with our testimony after he determines what further witnesses, if any, he wants to put on at the adjourned hearing.

Exam. Mullen: Could you tell me, Mr. Quirk, about the approximate number of witnesses and the time of testimony you will have?

Mr. Quirk: As far as I can now determine I would assume we would not consume more than one hour and a half or two hours. We might have one or two men who were supposed to be here this morning, who will deal from the [fol. 711] shipper or businessmen's standpoint. I might put Mr. Earley on to make clear certain things which I am not sure until I read the record are clear in the record about tariffs, and especially—well it is not necessary to mention them—it will not be very much.

Exam. Mullen: How about that question of cross examination of Mr. Earley?

Mr. Collins: I am not sure I caught what Mr. Quirk just said. You say you want to put him back on?

Mr. Quirk: Well, only for the purpose, Mr. Collins, of making clear certain tariff situations which some of the businessmen witnesses I fear, if you read their testimony without reference to the other testimony, that it is not clear. I am sure there will nothing for you to rebut in that, because it will be merely a tariff exposition of what the tariff situation is.

Mr. Collins: Well, of course I will have to decide

whether there will be something to rebut after your clarifying statements.

Mr. Quirk: All right. But you can certainly determine now whether you want to cross examine him on what he put in.

Mr. Collins: Up to now.

Exam. Mullen: Yes, up to now.

Mr. Collins: Well, I'm ready to announce that we have examined this rather large compendium here of 274 pages of Mr. Earley's exhibit, and 60 pages of testimony, and we have decided to waive cross examination of Mr. Earley [fol. 712] with respect to the testimony he has put in so far. By our waiver, I would like this record to show, however, we have no intention of not controverting what he said. We want an opportunity, and will insist upon an opportunity to do the work necessary to prepare the testimony that will answer and rebut and explain all of the circumstances set forth in Mr. Earley's testimony just to illustrate there are reasons why the Union Pacific, to use his words, "permits itself" to be short-hauled. We know that is not the case.

We will have an explanation for all such matters such as that. So rather than to wrangle with Mr. Earley on cross examination, we will prepare the answers and submit them as our own testimony at the adjourned hearing.

Exam. Mullen: Is there any objection to the receipt in evidence of Complainant's Exhibit No. 3?

Mr. Collins: No, sir, no objection.

Exam. Mullen: It will be received in evidence at this time.

(Complainant's Exhibit No. 3, Witness Earley, received in evidence.)

Exam. Mullen: That is apparently all we can get in at this hearing then.

Mr. Quirk: Yes.

Exam. Mullen: I would like to take up the matter of a further hearing in this proceeding which we discussed last night. In addition to the grounds presented by the de- [fol. 713] fendants at the general discussion off the record last night for a hearing at Boise, Idaho, consideration has been given to the intervening petitions filed by interested

State Regulatory Commissions. It is noted that the Public Utility Commission of Idaho has taken no position in this proceeding, either for or against the complaint, which is the same position taken by the Public Utility Commission of Colorado and the Public Service Commission of Utah.

The petitions of the State Commissions of Wyoming, Montana, Washington, and Oregon state that those agencies are in opposition to the complaint. I assume they will want to be heard, and will offer evidence. If so, they probably will want a hearing at some point in their states.

Boise may be an appropriate place.

At this time, then, I will announce an adjournment of 60 days until February 15, 1950. The place of hearing tentatively will be Salt Lake City subject to a change to Boise in the event good cause is shown for a hearing at that point. In the meantime, the Examiner expects the defendants and the State Commissions who are appearing in opposition to present their reasons in some detail for a hearing at Boise, as requested here. Notice will be given to the parties by the Commission of any changes made as to date or place of hearing.

Mr. Collins: Very good, sir.

[fol. 714] Exam. Mullen: That concludes this proceeding, gentlemen, until further hearing.

Thank you very much, gentlemen.

(Whereupon at 11:20 a.m. the hearing was adjourned to reconvene at further notice.)

[fols. 715-716] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant

vs.

UNION PACIFIC RAILROAD COMPANY, ET AL., Defendants

Transcript of Testimony—Boise, Idaho, Monday, April 3, 1950

Met, pursuant to adjournment, at 9:30 o'clock a.m.

Before: Frank E. Mullen, Examiner

ADDITIONAL APPEARANCES:

H. L. Mulliner, 817 Continental Bank Building, Salt Lake City, Utah, appearing on behalf of Denver and Rio Grande Western Railroad Company.

James M. Souby, Jr., 114 Sansome Street, San Francisco, California, appearing for Atchison, Topeka and Santa Fe Railway Company, et al.

[fol. 717] PROCEEDINGS

Exam. Mullen: The Commission has set for further hearing at this time and place, Docket No. 30297, the Denver and Rio Grande Western Railroad Company versus Union Pacific Railroad Company, et al.

Will those who are appearing here please announce their appearances, but we need to know only the appearances of those who have not appeared before, that is, at the Salt Lake City hearing.

Are there any additional appearances?

Mr. Souby: J. M. Souby, Jr., 114 Sansome Street, San Francisco, California, appearing for the Atchison, Topeka and Santa Fe Railroad; Gulf, Colorado and Santa Fe Railway Company, and Panhandle & Santa Fe Railway Company, defendants.

Exam. Mullen: Any others?

Mr. Collins: Mr. Examiner, at the Salt Lake City hearing, I announced appearances for attorneys for the Union Pacific Railroad, and included the name of Mr. W. R. Rouse, who was not then a practitioner, but since that time he has been admitted to practice before the Commission.

I would also add as an appearance for the Union Pacific, Mr. L. W. Hobbs, who is a practitioner.

Exam. Mullen: Are they here?

Mr. Collins: They are here.

Exam. Mullen: Are there any additional intervenors?

Mr. Quirk: Mr. Gibson and I have been asked to file a [fol. 718] petition of intervention for the executive committee of the Utah State Farm Bureau Federation. It is a petition for leave to intervene and doesn't broaden the issue.

Exam. Mullen: Do you have a copy of that, Mr. Collins?

Mr. Collins: Yes sir.

Exam. Mullen: Is there any objection to this intervention?

Mr. Collins: I would like to inquire, do they have a representative present here?

Mr. Quirk: Not at this time, they do not, so I understand.

Mr. Collins: Do they expect to have a witness?

Mr. Quirk: I don't know. I am not sure. We have been asked merely to file this for them.

Mr. Collins: I think it could well wait until they have a representative here, Mr. Examiner.

Mr. Quirk: For the time being I could be considered as acting for them.

Exam. Mullen: Well, you say, Mr. Quirk, there will be a representative here during this hearing?

Mr. Quirk: Well, I just can't answer that definitely, Mr. Examiner. There probably will be, but I don't know for certain.

Exam. Mullen: Well, I think we will receive this petition, and admit it subject to objections later. It is now received and filed.

Mr. Quirk: I have also been asked to intervene for the Idaho State Farm Bureau. This does not broaden the [fol. 719] issue, and in this instance there will be present

the president of the Idaho State Farm Bureau, who will also be a witness.

Exam. Mullen: Is there any particular objection to this petition?

Mr. Collins: Will Mr. Lau be the witness, do you know?

Mr. Quirk: Yes.

Mr. Collins: It may be received.

Exam. Mullen: It will be received.

Are there any further preliminary matters to be disposed of at this time?

(No response)

Mr. Quirk, I understand you have some witnesses you desire to put on now.

Mr. Quirk: Yes, we do.

Exam. Mullen: All right, you may proceed.

Mr. Quirk: Mr. Rich.

Roscoe C. Rich was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. State your name, Mr. Rich.

A. Roscoe C. Rich.

Q. Where do you reside?

A. At Burley, Idaho.

Q. And what business are you engaged in, Mr. Rich?

A. In the live stock and ranching business; principally at [fol. 720] this time in the production of lamb wool, or commonly called the sheep business.

Q. How long have you been engaged in that business?

A. Since the summer of 1914.

Q. Are you a member of the Idaho Wool Growers Association?

A. I am, sir.

Q. And how long have you been a member of that Association?

A. I could not say definitely, but since before 1920.

Q. Have you been an officer of that Association at any time?

A. I have been, sir.

Q. And what offices have you held?

A. I was first a director or member of the executive committee, and later president of the Association, and served on the executive committee for a great many years.

Q. Are you a member of the executive committee of that Association now?

A. The past presidents are all members of the executive committee under our organization program, yes sir.

Q. Now, are you familiar with the issues raised by the complaint in this proceeding filed by the Denver and Rio Grande Western Railroad?

A. At least some of the issues.

Q. I don't mean in a technical sense, but you understand the broad purposes of the complaint?

A. I think so.

[fol. 721] Q. Now, has your organization authorized you to testify in this proceeding in favor of the complaint?

A. It has, sir. The president of our Association invited me personally to make this appearance.

Q. Are you also a member of the National Wool Growers Association?

A. Yes sir, that is right.

Q. And have you held any executive office in that Association at any time?

A. I have. I was a member of the executive committee and served as president of the National Wool Growers Association commencing in 1936, and served four years in that capacity. I have sat on their executive committee both previous to my election as president and past presidents there also have served on their executive committee with a voting privilege until the last convention, and they now serve in an advisory capacity.

Q. Have you ever held office in the American Wool Council?

A. I have, sir. I served as president of the American Wool Council when it was formed and I think for about six years thereafter.

Q. Where are your ranches, or principal places of business located?

A. At Burley, Idaho, Black Foot, Idaho, and at Soda Springs, Idaho.

Q. Would you describe the number of sheep or other [fol. 722] live stock that you raised in the course of a year?

A. Well, I can best describe that by saying that we sheared about eight thousand sheep this last year, and our numbers have varied over a period of years. That happens to be about as few sheep as we sheared in any year in thirty years. When I refer to "we," I refer to the R. C. Rich Company, of which I am the principal owner.

We do some farming. Some years we feed cattle for market. We run range cattle for many years. Our range cattle numbers are very low at this time.

Q. Is the R. C. Rich Company, Mr. Rich, engaged in the raising of livestock, or does it have any other business?

A. Yes. We are engaged principally in the live stock and farming business. In fact, that is about our only business. Any other business would be a pretty minor part of our business.

Q. Now, in your ranch and sheep business, I suppose you fat lambs and feeder lambs and old ewes?

A. That is right, sir. We raise a percentage of fat lambs. Sometimes we feed our own lambs, some years we sell our feeder lambs. We market our old ewes in any one of several various ways. We attempt in a feeble way to get the best price we can for them, and to sell them on the best market when we dispose of them.

Q. Well, in selling these lambs and live stock, are the freight rates and the freight costs a factor in their marketing?

[fol. 723] A. We think definitely they are, sir.

Q. What are your principal markets?

A. Well, our markets, sir, have changed over a period of time. If you speak of our own particular operation, at one time we pretty largely sent our fat lambs to Chicago, and sold our feeder lambs in Omaha and Kansas City.

That same thing would be somewhat generally true with most Idaho lamb producers. Some of our lambs go to California, at certain seasons of the year; some of them are bought by the big packers or by the chain stores who have packing plants, and they are distributed over various parts of the country. Some years we sell them at home; some years we ship them on the open market. In late years,

a big part of the lambs north and west of Pocatello go to the Ogden market when the Growers ship them.

Our own lambs, I think the last two or three times we have shipped to a central market; we have shipped to the Ogden market. That situation depends on where the demand is, where the best market appears to be, and where it would appear that the lambs can be sold to the best advantage at the time.

Q. Is the demand for lambs influenced by the availability of rail transportation at competitive rates?

A. We think it is. In fact, we are certain that it is.

Q. Is there a demand for the lambs in Colorado from time to time?

A. Yes, some of our Idaho lambs go to Colorado; some [fol. 724] of them go to the Kansas wheat fields. They go to a number of wide and varied points.

Q. Are they sent to these places for the purposes of fattening them?

A. The ordinary thing that happens with a feeder lamb is that either the proudcer of the lamb fattens the lamb or sells it to an order buyer, or sells it directly to a feeder, and that would include either a man who is going to feed in the feed lot in northern Colorado, Nebraska, Iowa, or a man who is going to pasture in the Kansas wheat fields, and that again depends on the year and the situation as to who might feed that lamb.

In many cases, the grower might elect to feed him; he might elect to pasture him in Kansas; he might feed him in Colorado; he might feed him in any one of a great number of places, but these lambs, excepting the ones which are kept for breeding stock, a very great percentage of them, practically all of them are fattened in the hands of growers, feeders, and producers, and then by direct purchase are going to the central markets, go to the packers for slaughter, and ultimately for consumption.

Q. Do breeder lambs go to Colorado?

A. Yes, we have had a demand in Idaho for a good many years. I might say, it is a varying demand for ewe lambs, yearling ewes, breeding stock, on the part of the Colorado producers, to fill in their herds, and to build up their numbers for breeding purposes.

[fol. 725] Q. Now, I take it that what you said, you are

talking about other ranchers that raise lambs and market them, that are members of this Association?

A. That is right. I myself——

Mr. Collins: Mr. Examiner, may I have a moment before he testifies with respect to other ranchers? I think the witness would have to establish the fact, if it is a fact, that he has knowledge of their individual methods of shipment and disposition of their lambs, and what he says seems to be a varying and diverse kind of an operation.

What I mean is, the fact he disposes of his one way one year and another way the next year wouldn't necessarily mean at all that that would be illustrative of the method all other ranchers would pursue.

Exam. Mullen: Do you desire to develop that, Mr. Quirk?

By Mr. Quirk:

Q. Mr. Rich, you have testified you have been in this business a long time. You have been an officer of the Idaho Wool Growers Association.

Now, are you familiar, do you know from your direct contact with the business, from the knowledge that you acquired in the regular course of your business, whether or not there are other growers of lambs who operate in substantially the same way that you do, or are affected by the same factors?

A. Yes, I think I know that. I have spent the time from 1914 until the present time engaged principally and wholly [fol. 726] in this business, and spend the big part of my time in Southern Idaho. If I did not know something about it, I certainly would have lost a grand opportunity.

Q. Mr. Rich, would a transit arrangement for Colorado feeding or breeding purposes of lambs at competitive through rates be a benefit to the growers of lambs in Idaho?

A. It would, in my opinion, yes sir.

Q. Why?

A. It would create additional demand, put the producers here of the particular kind of live stock that your Colorado producers wanted to buy in a better position to compete, and to supply that trade. It would give more competition here, and we labor under the impression that competition is what makes the price and gives people in the producing

business an opportunity to make better sales, create better markets.

Q. In other words, do you think that there should be flexibility in the use of transportation facilities? That is, in order to bring about the best results for producers of live stock?

A. That is rather a broad term, "flexibility," sir, but we think that if, and I think, maybe I should state it that way, that all markets should be available to producers at competitive rates and shipping costs, making them available, and we think, of course, that that improves our marketing situation, and permits us to get nearer the market for our live stock when we sell it.

[fol. 727] Q. By the way, is there a market for lambs at Pueblo, Colorado?

A. There has been certain times of the year. I have known of sales, both at the Ogden market, and in the country where lambs were bought for the account of a killer at Pueblo.

Mr. Quirk: I believe that is all.

By Mr. Quirk:

Q. Do you have anything to add yourself, Mr. Rich?

A. Only that we believe in the broad principle that the freer movement, and the greater possibility that I may have and that the growers in Idaho may have to the use of any market which might be available at any time, now or in the future, is in the direct interest of the Idaho wool growers, and in my direct interests, and I think that what is in the interest of your wool grower-shipper and the other shipper is in the interest of the people generally in the State of Idaho, and by reason of the fact that Idaho is primarily an agricultural state, and that our economy is very largely based on agriculture.

I think that is all I have to say, sir.

Q. Mr. Rich, I have one more question. Based on your broad experience, and intimate knowledge of the raising and marketing of lambs and other live stock, keeping in mind the matters you have covered in your testimony, do you think that if the railroads would cooperate with each other in making competitive rates available to shippers,

that that would make rail transportation, as against other [fol. 728] kinds of transportation, more attractive to shippers?

Mr. Collins: Mr. Examiner, I hardly know how to characterize it, but I object to the question, and unless he shows that this gentleman is a student of railroad transportation and gives this witness some idea of about what the railroads might accomplish if they cooperate in this competitive situation.

Exam. Mullen: The question was rather broad, Mr. Quirk. Did you intend to limit it to the products or the cattle and lambs?

By Mr. Quirk:

Q. All right, Mr. Rich, do you know whether or not lambs and other live stock produced in Idaho, or raised in Idaho, do move to some markets by truck?

A. Yes. That is coming a little into the picture in the last few years.

Q. Well then, do you think as a business man, to the extent railroads connect with each other, restrict competitive conditions, that that makes the rail, as railroads, less attractive to a shipper than it otherwise would be?

A. Of course, every shipment of live stock is different; it is from a different point of origin to a different point of termination, but in a general way I would say yes.

Mr. Quirk: That is all.

Cross-examination.

By Mr. Collins:

Q. Did I understand you to say that you do some feeding of lambs for marketing purposes?

[fol. 729] A. That is right.

Q. And where do you feed those?

A. At the present time, this last year, we fed at Blackfoot, Idaho.

Q. Where?

A. At Blackfoot, Idaho.

Q. And how long have you been feeding them there?

A. Well, we have had a ranch there since about 1918, and we feed a good many of the years since then there, sir.

Q. Is this feeding grazing, or is it a feeding or fattening in the feeder lots, or some such method?

A. It is usually a combination of both, sir. We ordinarily put lambs on the pasture in the early fall, and the percentage of those lambs that become fat on the pastures are marketed and the ones that do not become fat we either sell them to an agent or an order buyer or a feeder, or we feed them ourselves. We might, and sometimes do, follow either one of those courses.

Q. Now, are you the shipper or consignor of shipments of lambs as they leave the location, Blackfoot, if that is it, of your operation?

A. Ordinarily we are not, sir. We might be at any time. We have been at some times. For your information, in answer to your question, I might say that if we can make what we deem a satisfactory sale, we sell them there. If in the future, or during the past, we could not make what [fol. 730] we deem a satisfactory sale, we might ship them to any one of several different markets.

Q. Your lambs that are fattened at Blackfoot, where are they marketed?

A. If we can make a satisfactory sale, they are marketed at home; we sell them right there.

Q. Right there on the spot, but suppose you can't make a satisfactory sale there?

A. We would then ship them to the market where, in our judgment, they will make the best sale and bring the most money.

Q. You said you would ship some to Ogden?

A. That is right.

Q. Is that a place where lambs are slaughtered?

A. There are some lambs slaughtered there. The American Packing Company was in buisness there for years, and Swift and Company have acquired that property.

Q. Do you know—go ahead.

A. A good many of the lambs that go to Ogden go to various destinations. Some of them go east, some go to San Francisco, some go to Los Angeles; they go wherever killers pay the best price and where they want to ship them to.

Q. You don't know what happened to the lambs that you shipped to Ogden, then, do you?

A. Yes, I know what happened to some of them.

Q. Well, did someone else own them as they arrived at Ogden, someone other than yourself?

[fol. 731] A. As they arrived at Ogden?

Q. Yes.

A. Not when I shipped them there. When I shipped them there they belonged to the R. C. Rich Sheep Company, when they arrived at Ogden.

Q. Is this a fair statement of your reason for appearing in this case, Mr. Rich, that you would like to have equal rates and no routing restrictions anywhere, so far as your desire is concerned?

A. That is a very broad statement, and it is your statement and not mine.

Q. I am asking you if that is your position in this case?

A. What do you mean by the word "anywhere"?

Q. Well, anywhere that might—to any part of the country that might be involved in your business. You said you shipped to California, you shipped to the east, and so forth.

A. Yes, I would like to be able to ship any place where there is a logical market for my lambs, and I would like to be able to ship at a competitive rate, and at a competitive cost.

Q. And by "competitive rate" you mean——

A. Equal costs.

Q. You would want a rate anywhere which would be no higher than the lowest rate you had anywhere else, is that right?

A. Generally so, yes sir.

Mr. Collins: I think that is all.

[fol. 732] Exam. Mullen: You spoke of desirability of having additional points at which to feed in transit; did I understand you to testify to that?

The Witness: If I did not, I would do so, yes sir.

Exam. Mullen: What particular points do you desire to have feeding in transit that you do not have now?

The Witness: Well, in selling breeding stock "in transit," in selling breeding stock, we have in mind, we would

put the buyer in a competition position if he could enjoy transit rate to breeding stock going into Colorado west of the mountains; as I understand the situation that obtains now, his billing is valueless when he gets there. If he had the transit privilege, he could use that billing going on east. That puts him in a frame of mind where he is more interested and more inclined to buy his yearling ewes, ewe lambs, or breeding stock in Idaho than he would be under the conditions that exist today.

As far as we are concerned, Mr. Examiner, we never know from one year to the next what situation might obtain in marketing our lambs. We might market our lambs and do practically the same thing for several years, and the next year we might be almost forced to do something entirely different.

If transit privileges are open to us, that enlarges our possibility of marketing our lambs, of getting them fattened and getting them ultimately into the hands of the packer.

Exam. Mullen: Well, are there feeding in transit privi-
[fol. 733] leges open to you on the D&RGW?

The Witness: It is my understanding there is not, going from Burley into Blackfoot through Ogden.

Exam. Mullen: You don't know that?

The Witness: I am of the opinion, when you get there, the freight bill is dead.

Exam. Mullen: That is all.

Redirect examination.

By Mr. Quirk:

Q. Mr. Rich, if you should stop lambs at points in Colorado for grazing or any other purpose, and then should attempt to forward those lambs to Pueblo, or any points east of the so-called Colorado common points, you couldn't do it at the competitive rates, you would have to pay a higher rate, a combination rate?

Mr. Collins: I object to it, Mr. Examiner. The witness already answered that question and said he didn't know.

Mr. Quirk: All right. The record shows exactly what he said.

The Witness. Does the record say I did not know? I don't recall so testifying.

Mr. Quirk: I didn't think so either.

Mr. Collins: We will let the record show what the witness said, but not what Mr. Quirk said as to the fact.

Mr. Quirk. All right.

By Mr. Quirk:

Q. Do you know that, Mr. Rich, from your business experience?

[fol. 734] A. I already stated I am of that opinion. I have not had that actual business experience myself, sir.

Q. You have to keep informed, don't you, as to where you can market and the conditions under which you can market?

A. We attempt to.

Mr. Quirk: That is all.

Exam. Mullen: Any further cross-examination?

Mr. Collins: No.

(Witness excused.)

Floyde H. Hughes was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Mr. Hughes, will you state your name?

A. Floyde H. Hughes.

Q. Where is your place of business, and business address?

A. The Independent Lumber Company, Grand Junction, Colorado.

Q. How long have you been connected with that company?

A. Sixteen years.

Q. Please describe the character of that business and the scope of the operation of the Independent Lumber Company.

A. I might first add that I am the purchasing agent for the Independent Lumber Company. In addition to operating 14 retail lumber yards in Western Colorado, we also operate at the Grand Junction, Colorado, point a wholesale

distribution yard, a box factory, a remanufacturing plant, [fol. 735] and a storing and drying yard constituting about 13 acres.

The same interests which own the Independent Lumber Company and its various yards are also financially interested in the Crissey and Fowler Company at Colorado Spring, Colorado. In connection with this remanufacturing plant, I thought I might mention some of the possibilities and also some of the exact operations that we do with this remanufacturing plant.

It is completely equipped to handle a transit operation at Grand Junction. It has as part of its equipment a large American No. 20 planer, which has the capacity of surfacing a carload of lumber in an eight-hour shift. It also has a 44-inch circular saw, with a saw mill carriage capable of handling large timbers up to and including 40 feet in length.

We also have a large McDonough R. A. 59 resaw, with a seven-inch blade. Also, we have various other equipment such as a Ross lift and a Ross carrier.

I just wanted to point this out, we are completely equipped at Grand Junction to handle a transit operation.

Q. What is the source of the lumber used in your operation at Grand Junction, Colorado.

A. Some of the lumber comes from local points in Western Colorado, such as New Castle, Kremmling and Eagle. However, most of our lumber comes from the States of Oregon, Idaho, Washington and California.

Q. Now, on the lumber that you buy in the Northwest, [fol. 736] what routing is generally used into your plant at Grand Junction?

A. Well, if the mill is located on the Union Pacific, naturally we use Union Pacific-D&RGW routing. When it is at all possible, we try to get S.P. routing to Ogden, then D&RG or GNWP routing to Salt Lake, and then D&RG.

Q. Why do you prefer to purchase lumber on railroads other than the Union Pacific, and to route via railroads other than the Union Pacific?

A. Well, when the inbound routing is by these lines, we enjoy through point competitive rates to Colorado common points and beyond.

Q. You mean when it is by lines other than the Union Pacific?

A. That is correct.

Q. It wasn't quite clear.

A. It was via lines other than the Union Pacific we enjoy these joint rates to Colorado common points and beyond.

Q. And what happens when you do buy and route via the Union Pacific from points in Idaho or other points served by that railroad?

A. We can do some transit business with those cars. We can do a transit business into a point such as Ogden, but not into a common point, such as Colorado Springs, without any penalty as far as rate is concerned where rates, of course, apply into those points in connection with the origin on the U. P. and delivery to the D&RG point.

[fol. 737] Q. Can you name some points on the Union Pacific from which your company has procured lumber?

A. Yes, there is Cascade, Idaho, Winchester, Idaho, Burns, Oregon, and Metaline Falls, Washington; they are some of them.

Q. What is the annual volume of your lumber that is purchased in the Northwestern states?

A. I am sorry. May I go back just one moment? I think that I put in one mill there that is not correct, or one locality.

Q. Yes, you can do that.

A. I would question the Metaline, Washington, because I believe the question was some points on the Union Pacific, is that correct?

Q. That is correct.

A. Mateline, Washington is not on the Union Pacific, I am sorry.

Q. All right, I will ask you what the annual volume of your lumber purchases is from the northwestern states?

A. I would say approximately 300 cars per year.

Exam. Mullen: What percentage of that is the total?

The Witness: The percentage of our entire business, or percentage of the lumber business?

Exam. Mullen: The lumber business. What do you purchase in the Northwest, lumber?

The Witness: Lumber, yes sir.

Exam. Mullen: Dressed lumber?

The Witness: Dressed lumber, rough lumber, plywood, and doors.

[fol. 738] Exam. Mullen: You said you buy 300 cars a year, that is, the annual average in the Northwest?

The Witness: I said I believed or guessed it would be about 300 cars a year.

Exam. Mullen: What proportion is that of your total purchase, approximately? You don't need to give it exactly.

The Witness: Well, our operation is so diversified, I cannot say.

By Mr. Quirk:

Q. Where else do you purchase lumber, Mr. Hughes?

A. Oh, out in McCloud, California is one place.

Q. Do you purchase some in Western Colorado?

A. Oh, yes, but that is not the same type lumber, nor is it in most cases used for the same purposes.

Q. All the Examiner wanted you to say, if you knew, is what relation does this 300 cars that you get from the Northwestern States bear to the number that you buy from the California points or Western Colorado, if you know.

A. I would guess about 75 per cent.

Mr. Collins: Excuse me, Mr. Quirk. In other words, you buy about 400 carloads of lumber per year, is that it?

The Witness: That will completely close, yes.

By Mr. Quirk:

Q. What is the present capacity of your transit operation at Grand Junction that you use?

A. Well, the remanufacturing plant can easily handle a carload a day. The box factory, when going to capacity, can also remanufacture about a carload of lumber a day.

[fol. 739] Q. Now, what is your position with respect to the existing restrictions on your transit arrangement at Grand Junction?

A. Well, we feel that our operation cannot stand still, and if we are to increase and expand our operation we must have additional markets and additional outlets for our ma-

terials. The present market naturally in Western Colorado on D&RG local points is limited on account of the population.

We are hampered in securing these additional markets and outlets unless we can enjoy the same liberty in the choice of routes and rates as our competitors, and we feel that the absence of through joint competitive rates in connection with materials originating on the Union Pacific to competitive areas is a distinct hardship.

Exam. Mullen: Can you specify those competitive areas, and competitive points?

The Witness: Oh, yes.

Exam. Mullen: I mean where you desire to have these rates.

The Witness: Colorado Springs, Pueblo, and the territory [fol. 740] beyond in that same general direction.

Exam. Mullen: Over what junction and what routes?

The Witness: Well, of course, it would be the D&RG to either Colorado Springs or Pueblo, and from there we have sold lumber for Santa Fe delivery down into Boise City, Oklahoma. That is one point. And in Eastern Colorado beyond the Colorado common points.

Exam. Mullen: You say those markets are closed to you now?

The Witness: They are on anything that has a U.P. origination through our operation at Grand Junction, unless we want to pay, of course, the full rate that exists from Grand Junction to that point.

Exam. Mullen: How would it get to those points, over what routes?

The Witness: The D&RG.

Exam. Mullen: I mean at the present time.

The Witness: From, I presume, principally the Union Pacific into Denver. I have not thought of it in those terms.

Exam. Mullen: What do you have to pay, a combination rate, in order to get the shipments down to those points?

The Witness: That is correct If a carload of material comes into our yard from a U.P. point of origin, we cannot go to a point either to or beyond these Colorado common

points with our transit operation without having to pay the full rate from Grand Junction on.

Exam. Mullen: What would be the effect of this other route if it were opened to you?

The Witness: We would enjoy the same privilege as we do shipping from Great Northern, or Southern Pacific originating points. It comes into Grand Junction and we merely pay the transit charge and it delivers them to these points such as Colorado Springs at the same rate as it would had [fol. 741] it traveled on a through rate from the point of origin to Colorado Spring. The transit charge is not very great in most cases; I think it runs about $19 or $20 a car, which is very small in comparison to a full freight rate from Grand Junction.

Exam. Mullen: That is all I have.

By Mr. Quirk:

Q. Now, if you had the same joint through rates from origins on the Union Pacific for lumber, that you now apply to origins on the other railroads that you mentioned, your company buy more lumber from points on the Union Pacific?

A. Yes. As it is now, when we buy a carload of rough material into Grand Junction, we buy that to have or in order to take care of future orders, and we don't know at what point the final destination of that car of material might be. Therefore, we want to make sure that as much material coming into our yard is subject to a transit rate as is possible.

Q. Well, Mr. Hughes, when you do buy lumber, rough material, from points on the Union Pacific, is it a fact that there are special circumstances that require you to have that particular grade or kind of lumber at any particular time? Let me put it this way: Do you——

A. Yes, we buy—in order to conduct an operation such as ours, you have to buy at the very lowest price consistent with quality, and, therefore, we might purchase—I believe if I have your question correctly—we might purchase mer- [fol. 742] chandise and take it into Grand Junction simply because we could not buy that at some other point at what we felt was a competitive price.

Q. Now, does your company handle products from the Northwest for distribution to your plants and customers for which the transit arrangements for partial unloading is used?

A. Oh, yes.

Q. Is that a benefit to a company of your kind of operation and location?

A. Yes, because naturally you can't always outguess the demand, and you are not only buying straight carloads for stock, but every once in a while it is necessary to buy a quantity to balance the stock that you have on hand, and possibly your storage facilities are not quite adequate, and, therefore, it is desirable to find a customer who in turn can also use about half a carload of those items.

I am speaking now of doors, as a specific example. We buy straight carloads of doors for ourselves, and then very often we look for a customer to whom we can sell another half a car to buy just the amount we need to balance our own stock.

Q. Can you give a specific example of what you have been describing?

A. Yes. For instance, at Colorado Springs, the need developed for about 300 doors. We regularly buy doors and plywood from the Northwest Door and Plywood Sales Com-
[fol. 743] pany at Tacoma, Washington. When this need arose, I contacted the mill and told them that I wanted to change the destination of the car we had on order so that the car could go to Colorado Springs, with stop over in Grand Junction for partial unloading. I cautioned them in order to do that, so we would not have to pay the full rate on whatever we shipped from Grand Junction on, that the shipment would have to travel by Great Northern and Western Pacific, and to make sure that it did not travel by Union Pacific.

I found that the car had already been billed U.P., but that the car had not actually been pulled out of the plant. They succeeded in rebilling this car and it travelled in the manner that we requested, with a stop-over at Grand Junction and final unloading at Colorado Springs. But when we received the invoice for this car, we were billed for $25.19, which the shipper said was the penalty they sus-

tained by using inbound U.P. transit on Great Northern routing, and this was the amount, then, that the shipper lost in using this inbound tonnage in the manufacture of doors which travelled by Great Northern.

Had the rate then applied to Colorado Springs, through Denver, with stop-over—I mean to Colorado Springs, with stop-over at Grand Junction, we would not have been subjected to this penalty in the amount of $25.19.

Q. That is a good illustration of inter-railroad relationship and the ramifications of what we call "transit," is it [fol. 744] not?

A. That is my interpretation.

Q. In other words, you tried to move this car over a route you thought was available, but because of the inbound-outbound transit arrangement, you found you had to pay a penalty anyway, is that correct?

A. That is right.

Q. Do you have any other example?

A. Yes, I can cite another one at the moment. We have need at Colorado Springs for approximately 300 screen doors. We had an order with the Acme Door Company at Hoquiam, Washington, an order for a straight car.

Now, I immediately contacted the Acme Door Company and requested the same thing, that the car travel Great Northern, Western Pacific and D&RG, with a stop-over at Grand Junction, and final destination Colorado Springs, in order that we could get these 300 screen doors to final destination without a freight penalty.

I found that this particular plant is on the Union Pacific only, and we have no other choice now than to take these doors into Grand Junction. We will have to do some figuring to see what is now the easiest way out for us. We have the doors, but we can't get them to Colorado Springs on a transit basis. We will have to crate these doors, and ship them by common carrier, or else the customer at Colorado Springs will have to buy from some Denver or east- [fols. 745-746] ern slope competitor.

Q. Now, if the joint rates which the complaint here seeks to have established with respect to lumber and other commodities are established, do you expect any beneficial results in the way of reductions from your existing rates?

A. We do, definitely.

Q. Would you describe what you have in mind?

A. Well, there are some mills in the Spokane area that the rate to Grand Junction applies through Denver. I other words, the shipments would travel by Great Northern to Laurel, Montana. Then there is a choice of routing there, either CB&Q to Denver, or CB&Q to Wendover, Wyoming, and then C&S to Denver, and in either case back to Grand Junction by D&RG.

Now, these rates by this route to Grand Junction is are 80 cents; the rates on that same car, from the same point of origination, the same routing to Denver, for the same car is 71 cents.

Q. You mean per hundredweight?

A. That is right, sir. Now, there is also an established rate in routing over which that car could travel Great Northern to Butte, and then U.P. to Denver. That rate is 71 cents. Likewise, that 71 cents would be the Grand Junction rate then if the routing applied Great Northern to Butte, Butte to Ogden by the U.P., and then Ogden to Grand Junction, because an intermediate point then would have [fol. 747] no more than the same rate as the final destination, which is 71 cents.

Q. Mr. Hughes, can you cite other examples where the establishment of a joint competitive rate sought would be beneficial to your company, the Independent Lumber Company?

A. Did I understand you to say—would you repeat the question?

Mr. Quirk: Read it.

(Question read)

The Witness: Yes, because as I stated a while ago, an operation such as ours, you have to buy at the lowest price consistent with the quality, and we can't always be served—rather we can't always buy to advantage exclusively in the territory serviced by the Southern Pacific or the Great Northern.

Occasionally we will have to go to mills served exclusively by the Union Pacific. Now, when that happens, we take that merchandise into Grand Junction. There is a very definite limit as to what we can do with that mer-

chandise, because the through rate in connection with U.P. origin, by way of the D&RG, does not apply to these Colorado common points. Therefore, when we get that merchandise into Grand Junction, we can't do anything with it except to sell it at either retail or to a small wholesale outlet in the nearby community, or re-ship to a D&RG common point, or D&RG local point east of our transit operation, but west of the common points.

[fol. 748] I have got an example that possibly might clear up what I mean. Last fall, I found with one supplier who had quite a production—I found what I thought was an advantage of from two to four dollars a thousand per board feet on lumber, and I purchased a number of cars. This mill is located on the Union Pacific.

Mr. Collins: At what point?

The Witness: Cascade, Idaho, and also Winchester, because it was the same shipper. Now, I took all these cars into Grand Junction, because, as I say, I felt I had an advantage there in the buying. We put the lumber on bunks, we stripped them, we banded them, we covered them, to protect them from the elements.

Shortly after that, the whole lumber producing area was stricken with a very severe winter. A great many of the mills closed entirely, or closed for a varying degree of times.

Mr. Collins: Do you mean in the Idaho areas?

The Witness: Yes, because the Cascade operation ceased entirely, and at the same time the area around Colorado Springs was enjoying a very mild winter, and construction continued to go at a very good pace. Therefore, the Crissey-Fowler Company found themselves all at once completely out of stock. We had stacked up there in one bunch there about ten carloads of this stock that all moved U.P.

Mr. Collins: From Cascade or Winchester?

[fol. 749] The Witness: From the two of them, because it is the same shipper. I had all these cars stacked up, but we could not reship them under the privileges accorded us by the tariff which allows billing in transit and storage in transit, and so forth, we could not reship those cars to Colorado Springs where the demand was without paying the full rate, which I cite from memory is about 46 cents per hun-

dred. That would run roughly $11.50 a thousand board feet. Therefore, at Colorado Springs they had to buy to disadvantage from a competitor.

By Mr. Quirk:

Q. That is just another example of the bottling up effect of the existing rate situation, isn't it?

Mr. Collins: I move that be stricken. That is not a question.

Mr. Quirk: I like that.

Exam. Mullen: I didn't catch a word. Will you read it, please, Mr. Reporter?

(Qestion read.)

Exam. Mullen: Do you insist on your question, Mr. Quirk?

Mr. Quirk: I think the question is all right. Of course, the answer is quite obvious.

Exam. Mullen: What is your answer, Mr. Witness?

Mr. Collins: I object to the witness answering when he has not asked him a question. He just made a statement.

Exam. Mullen: The witness may answer. I think we understand the question.

[fol. 750] The Witness: In my opinion, I think the statement is correct.

Mr. Quirk: That is all.

Exam. Mullen: But the question is, Mr. Witness, we want your testimony, not that you believe Mr. Quirk's statement is correct. What is the fact?

The Witness: I believe I brought it out we do not enjoy through competitive rates to these Colorado points.

Exam. Mullen: And you believe those examples you have given illustrate that, is that it?

The Witness: I believe so.

Exam. Mullen: All right. We will let the testimony stand.

Mr. Quirk: That is all.

Cross-examination.

By Mr. Collins:

Q. From what trees is the lumber produced that you buy in the Northwest; can you name them?

A. Oh, yes. We tried to buy a very high quality of old growth Douglas Firs.

Q. Of what kind of Douglas?

A. Old growth.

Q. Was that what you bought at Cascade?

A. No. That is called an inland fir, sometimes billed as fir and larch. We also buy, when you ask for species, Bonderoza Pine.

Q. Where do you buy that?

[fol. 751] A. That we also get from Burns, Oregon; that is on the Union Pacific, and it is the Central Oregon Lumber Company at Burns. Also they have Bonderoza Pine at Cascade and Winchester.

Q. Now, what lumber, by species of trees, do you buy when you have it shipped by way of the Great Northern or the Southern Pacific, and D&RG, to Grand Junction?

A. Douglas Fir.

Q. Douglas Fir?

A. That is right.

Q. Any other?

A. Yes, we have had some pine shipments that have travelled Great Northern-Western Pacific.

Q. What would be the origin or location of the mill at which you bought this pine?

A. I just had some from Burns, Oregon.

Q. Wasn't that shipped by S. P. or G. N.?

A. I am sorry, I was thinking about the origin. I would have to refer to my files. We also get pine from McCloud, California.

Q. You do ship lumber by way of the Great Northern or the Southern Pacific, and the route there by the Great Northern, Western Pacific, and D&RG. Is that a considerable portion of your operation?

A. Yes, because we are forced, you might say, to exclude many of the other mills because we know when we get that stock that does travel by U. P. that we can't do anything with it.

[fol. 752] Q. What kind of lumber constitutes the principal part of your operation, or do you use in your principal part, fir, pine, or what?

A. As far as volume, fir, but, of course, as far as importance in home construction and so forth, you have to

have pine in order to meet the demand. If you don't supply the pine, the contractors or carpenters who have that figured into their job will go to your competitor. You can't furnish fir finish if the man insists on pine finish.

As far as volume, then, that would be the answer, fir would have the largest volume, but pine is equally important in your construction.

Q. Do you ship any pine via the Great Northern, Western Pacific and D&RG?

A. Yes. I think I answered that.

Q. That car you spoke of, could you give us that, was that from Tacoma?

A. I said there were mills in the Tacoma area.

Q. Yes, but you spoke about a particular car that moved, that had some original movement by the Union Pacific and then went to some other line, and came around and you spoke of having to pay $21.00 more for that.

A. That was a car of plywood and doors.

Mr. Quirk: That is right.

By Mr. Collins:

Q. Plywood and doors?

[fol. 753] A. That is right.

Q. Could you give us that car number and date of shipment?

A. Yes. It was consigned in car U. P. 173132.

Q. The date?

A. I think it was February 15. If that is not the exact date, it is close enough, I believe, for the record.

Q. What year?

A. This year.

Q. Now, you spoke of a carload of screen doors from this Hoquiam locality. Do you have that?

A. Hoquiam, Washington; I said we had on order a carload of screen doors at Hoquiam, Washington.

Q. That has not been shipped?

A. That has not been shipped. It was supposed to be shipped April 15.

Q. What did you say the capacity of your equipment was at Grand Junction for transit?

A. It is an easy matter to handle a carload at Grand Junction a day through the major plant. The box shook factory naturally operates only in the season when there is the greatest demand for box shipments. We do have a token crew that manufactures such things as survey stakes, and so forth.

Q. What part of your inbound movement consists of rough lumber for further manufacture?

A. Offhand, I would say probably 30 per cent.

[fol. 754] Q. And the balance of it has been dressed at the mill of original manufacture?

A. That is right.

Q. Or rather original milling?

A. Of course, under the tariff we are allowed to assort and ship on, and store and ship on, without changing the physical characteristics.

Mr. Collins: That is all.

Exam. Mullen: We will recess for ten minutes, gentlemen.

(Short recess taken.)

Exam. Mullen: Come to order, please. We are ready to resume.

(Witness excused.)

Exam. Mullen: Are there any other appearances?

Mr. Mulliner: H. L. Mulliner, Mr. Examiner. I appear for Denver and Rio Grande Western.

Mr. Collins: I didn't get it.

Mr. Mulliner: H. L. Mulliner, for Denver and Rio Grande Western.

Exam. Mullen: Mr. H. L. Mulliner, for the D&RGW.

Mr. Quirk: Mr. Miller.

W. S. Miller was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. What is your business, Mr. Miller?

A. I am manager of the Umitilla Canning Company, in Milton, Oregon.

[fol. 755] Exam. Mullen: What was that? I didn't hear it.

The Witness: The Umitilla Canning Company.

Exam. Mullen: Canning?

The Witness: Canning, yes.

By Mr. Quirk:

Q. Where are you located, where is that plant located?

A. Milton, Oregon is nine miles from Walla Walla, in the northeast corner of the State of Oregon.

Q. Now, you are general manager of that company?

A. Yes sir.

Q. Briefly state your functions with that company. Do you buy and sell, or do you do things of that kind?

A. Yes, our firm is a farmers' cooperative, and my job is to coordinate the various activities of the farmers as related to processing, to arrange the necessary acreage, to arrange for the processing, and everything a manager is supposed to do.

Q. What commodities do you buy and what commodities do you sell?

A. Actually, we don't buy the commodities; we handle the commodities of our members. There are various commodities; peas, that is our main pack. We handle asparagus freezing, strawberries, peas for freezing, and canning, both, purpose plums, Italian prunes for canning, apples, sometimes tomato products, pork and beans for canning.

Q. Where did you say the plant was located?

A. Milton, Oregon.

[fol. 756] Q. Do you ship canned goods from Milton, Oregon?

A. Yes sir.

Q. Where is your principal market?

A. Well, our markets are fairly well distributed. I think probably our principal market would be in the Texas area, in the southern states. This change has taken place in the last two or three years due to the fact that we have been excluded from some of the eastern markets because of our freight rate problems.

Q. You have been describing your marketing of canned goods, I take it, up to now?

A. Yes sir. I might explain a little on the freezing end. Last year, it was our first experience in freezing. We operated in a leased plant. This spring we purchased the plant, and this spring approximately half our volume will be freezing, where last year it was more or less an experimental basis, approximately 20 per cent of our output was frozen.

Q. What railroad is Milton, Oregon, located on?

A. We are served there both by the Northern Pacific and the Union Pacific.

Q. That is one or the other of them actually have switch or spur tracks into the plant?

A. Yes, the Walla Walla Valley Railroad, which is a part of the Northern Pacific, has tracks into our plant, to our canning plant. The Union Pacific and Northern Pacific have [fol. 757] a joint track to our freezing plant.

Q. And I think you said you ship out canned goods, and you also ship out frozen fruits?

A. Yes sir.

Q. Now, can you state the approximate volume, first of your canned goods, to these eastern markets, and second, the frozen fruits, in carloads?

A. We will have this year approximately 150 carloads of canned goods, and 150 carloads of frozen goods. That will be shipped to various markets in the United States. We don't know yet which way they are going, but we know they will be well distributed over the United States.

Q. I think I failed to ask you to describe the members in the cooperative organization you referred to.

A. Most of our members are large farmers in eastern Oregon. Their primary business is wheat. That area has been adapted particularly well for the production of peas on the summer fallow land. To explain that, farmers can raise wheat only every other year in our section, and under ordi-

nary conditions the land in the off-year would be cultivated clean or fall load. That is why the term "summer fallow," so with the introduction of the canning pea industry in 1935, the farmers found that their large acreages were very well adapted to the production of English peas for processing, and in a very few years that industry developed it to the point where between 20 and 25 per cent [fol. 758] of all of the canned peas in the United States were produced in that section where we are located.

Q. Now, when you ship your products from Milton, Oregon, to the eastern part, will you describe briefly what factors determine the routes that you use?

A. Well, one of the factors that—there are two factors we consider: One is time, and the other one is the temperature.

Q. You consider freight rates, too, don't you?

A. And freight rates. Of course. Naturally we have to be competitive, as far as freight rates are concerned, and we have to avoid being bottled up. One of the important things that we have recognized for a long time is the effect of extreme temperatures on canned goods, and I believe that most shippers are trying to route their merchandise in such a manner that they can avoid certain storm areas. Does that answer your question?

Q. Yes. If you had a competitive system of rates on your commodities to the Ogden gateway, via the Denver and Rio Grande, would that be beneficial to your company, with the varying changes in the weather from time to time?

A. Well, I think that anything that would facilitate the shipment of your products to market would be beneficial, especially if certain storm areas can be avoided.

I know that two years ago, when the Union Pacific tracks were blocked, we had a storm area there, some of our mer- [fol. 759] chandise from the Northwest was routed over the D&RG. Of course, this was done voluntarily by the Union Pacific, and it was appreciated by the shippers in the Northwest.

Q. Well, in that case, it being the disability of the Union Pacific, of course, the going rates or competitive rates had to be protected?

A. That is right.

Q. Are there other times where it would be beneficial to you in the absence of some such emergency situation as

caused the cars in question to be diverted? In other words, don't you have storm conditions on the Northern Pacific, and on the Union Pacific that you don't have on the Denver and Rio Grande, and so forth?

A. Yes, we get weather maps which tell us where certain storm areas are, and if we see there are storm conditions developing in the Dakotas, we will route via the Union Pacific, and the same thing, if we see storm areas developing down in Wyoming, we may route via the Northern Pacific. I think that is also an advantage.

To explain that a little further, some of the things that develop, a sudden rise of 30 degrees in temperature will cause a condensation to take place on the sides of the cans. It may result in spots of rust developing, or a stain in the label. We carry insurance against that, and in extreme cases we have never had claims, but we understand there [fol. 760] have been some, but the factor is it doesn't do your product any good, and our brokers, particularly in the south, around the Gulf States, have warned us many times about shipping through cold areas and subjecting the products to extreme temperatures.

Mr. Collins: Extreme cold or extreme heat?

The Witness: Well, you see, if you go through an extreme cold area, then when you go down into a warm area, the difference in temperature is so great that condensation is increased.

By Mr. Quirk:

Q. Are you connected with any other company or corporation, Mr. Miller?

A. Yes sir, I am also manager of the Key Equipment Company.

Q. In what business is that firm engaged?

A. In the manufacture of specialized canning machinery.

Q. Where is the market for the canning machinery produced by that company?

A. We are building machines for many processors, many of the national brand members, and most of those machines go to the Midwest areas, and to the East Coast.

Q. In the sale of your other canned goods, fruits and

vegetables, do you sell much of those products to some of the nationally-known stores?

A. Oh, yes. We sell a substantial quantity of our goods through people who maintain their own brands. In fact, I would say 90 per cent of our sales are made to people that maintain their own labels.

[fol. 761] Q. Is the Safeway one of your customers, Safeway Stores?

A. We don't sell to Safeway Stores direct. We have an account on canned goods and we ship them, supply them, as most of our packers in our area do.

Q. Is transit any advantage to your company in the marketing of these products?

A. You mean storage in transit?

Q. Or partly unloading, or any of the kinds, reconsignment, any of the kinds of transit that are commonly known in the railroad transportation field?

A. We have very little need for storage in transit outside of our own plant. At our own plant we accept certain commodities for storage in transit. We operate a cold storage plant there, and we, of course, get apples from Hood River and from Yakima, and store them there.

For our canned goods or frozen foods, I don't believe we would have any occasion to use very much storage in transit. We do ship in many areas where part unload. Many of the markets are not of a size they can take a full carload quantity, and so we ship to partially unload. I think in most of the areas we are allowed three stops, and we usually use them.

Q. How long has the Umitilla Canning Company been in business?

A. We started in business in 1943. We are one of the three newest plants in the area. It has been a little difficult in the processing business. As many of you know, there [fol. 762] have been changes that have taken place in marketing methods during the adjustment period of the war. Many of the older companies that had their markets firmly established didn't encounter the troubles that the new plants encountered. One of the differences in our operation, one of the reasons why we had to seek markets in the south was the fact that we were not as firmly entrenched in the eastern market as some of our competitors,

so we had to seek markets that were generally not considered too desirable.

The southern areas were one thing, and they have been known for a long time as sort of a dumping ground, but since the war that condition has changed and the conditions in the south have bettered materially, and they are using a much higher grade of processed goods than they did before the war, so we have concentrated our efforts in those areas of the Southwest.

Mr. Collins: Would you make that a little more definite; where in the Southwest?

The Witness: In Texas; Houston, San Antonio, Dallas, New Orleans, on into Florida, New Mexico, Colorado.

Mr. Collins: All right.

By Mr. Quirk:

Q. Because you were a newcomer, did your competitors ever indicate that they thought you were invading their markets?

A. That has always been a story. Of course, the first fellow to pioneer a field claims a priority to it, and we know the customers over 30 years develop certain loyalty [fol. 763] to the people who start first. But it has been our feeling in this country that any individual or group of individuals should have the right to enter into business and compete on a free market. We have fought this considerably.

I think this is one of the reasons why they have developed a feeling on this gateway situation.

Mr. Collins: May I interrupt? Would you read what he said?

(Answer read)

The Witness: One of the other reasons why we have developed a feeling on this gateway is the fact that this past winter our storage, our apple storage was used only to one half capacity because we could not get access to the fruit out of Wenatchee. We know that there was a storage shortage in Wenatchee and we know that there were hundreds of cars shipped, storage in transit to Minneapolis and eastern points, and we could not get access to

this commodity because we could not get through the Spokane gateway.

In other words, this revenue went to people in the Midwest where we felt we should have a chance at that business out home.

Exam. Mullen: You mentioned the Spokane gateway. What do you mean?

The Witness: Well, according to the tariffs, the Great Northern originates the fruit that we were concerned about. [fol. 764] They can transfer and ship on the Union Pacific, providing those cars are terminated on the Union Pacific, or this side of Omaha, but we could not get storage in transit privileges on the Union Pacific for these apples out of Wenatchee beyond Omaha, so consequently the shippers would not consider routing their merchandise, even though we had some friends in Wenatchee who tried very hard to develop some business for us.

By Mr. Quirk:

Q. You are familiar, I take it, Mr. Miller, with the issues and the objectives of the complaint of the Denver and Rio Grande?

A. Yes sir.

Mr. Collins: Well now, May I interrupt a moment? Let's have the witness state what his conception of the objectives of the complaint are.

Mr. Quirk: Could I ask the questions for the time being?

Mr. Collins: I make an objection then.

Exam. Mullen: Just a minute, gentlemen.

Mr. Collins: I make an objection to the form of the question.

Exam. Mullen: He merely asked whether he was familiar with the issues in the complaint. Mr. Miller, what are your answers to that?

The Witness: Yes sir. I should qualify that. I believe I am——

Mr. Collins: I object to both the question and the answer, unless the witness can state what his understanding of the [fol. 765] objectives of the complaint are.

Exam. Mullen: We will wait until the next question. That objection is overruled. Go ahead, Mr. Quirk.

By Mr. Quirk:

Q. As you understand this complaint, do you and your corporation favor the granting of the relief sought by the complainant?

A. We do.

Q. In other words, do you favor joint competitive rates over all reasonably available routes?

A. We do.

Q. Well now, will you sum up in your own way why you favor this complaint?

Exam. Mullen: Well, suppose you state at this point in answer to Mr. Collins, just what is your understanding of this complaint.

The Witness: My understanding of this complaint is that the gateway known as the Ogden gateway—I will state it another way: If the Ogden gateway were permitted to be opened, it would enable us to use this route at our own discretion at times when we feel in our own minds that a need for this route is there, and we would be permitted to secure the same through rates without any penalty as we now enjoy by routing by way of the Union Pacific. This would apply—I am kind of beating around the bush here—in other words, I don't believe this man's question is [fol. 766] fair because he expects me to memorize the brief here.

Mr. Quirk: You have answered the question.

Exam. Mullen: Mr. Miller, I would like to ask you one question: What market is closed to you now by the fact that you lack a route by way of Ogden and the D&RGW, with joint rates, of course?

The Witness: Yes. Well, the only routes that are closed to us now are those points in Colorado such as Grand Junction, and in there, that we would like to have access, particularly on frozen foods. Now, with canned goods it is not so important to us, because they have canneries in Utah, and they have canneries in Colorado, but we sell a good quantity of merchandise, frozen products, in Arizona and New Mexico, and we would like to have access to that area in Colorado, particularly for partial unloading.

It would be much more important to us from the angle of frozen foods than it would canned goods. We have

also some customers that have stores, that have houses located in that area, that we could accommodate. We could get that additional business where now we are not getting it.

Exam. Mullen: It isn't quite clear to me just what marketing area you are now seeking. Can you clarify that point?

The Witness: It is that area. In other words, there is no point in this Colorado area, in our opinion, that can take straight carloads of merchandise, so we now cannot [fol. 767] ship into Colorado, say, at Grand Junction, partially unload, and then ship on to other points in Colorado to Denver, and then down to Colorado Springs. Those markets are small, and they represent a small percentage of our business, but each market in itself is small and it is only these markets collectively that ever give you the sales program. No one marketing area is going to make or break you, but it is having good markets well distributed which does develop a stronger organization.

I believe the strongest argument we would have in favor of that would be that it would give us another route in the event storm areas would develop along the Union Pacific. It would give us a route by which we could get our merchandise to our Texas and Southern markets in a much more direct manner, and in much better shape than we could by subjecting them to storm areas.

I believe we should have the privilege of doing it. It is true that we hear a lot at home about patronizing home industry, and we recognize a lot of the claims of the Union Pacific here, that they have done a lot toward developing that area. We are friendly to them, and we recognize responsibilities to our home industry. We are not going to, and I don't believe any shipper is going to, intenti-ally route his merchandise all around the country in order to patronize every railroad. We are interested in getting our merchandise to the market in as direct a route as possible, [fol. 768] as quickly as possible, and have it arrive in as good a shape as possible.

In the event that the Union Pacific can serve us just as well, we wouldn't consider diverting it around. We recognize they have problems, and I believe our loyalty to them— I believe the shippers would exercise that prerogative and

go along with their home shippers. We have always done that in the past, I believe.

The only time we would have use for that gateway is when in our own minds we felt that we could get better service or we could get our products to market quicker and in better condition than we could by using the other route. It is just matter of "should we have the right to determine which road would best meet our needs, or should we be told which road?"

We look upon these railroads as a sort of public utility, and believe they should be maintained as such, and we resent the discriminatory practices that make us ship over certain routes and through certain points even though they may prove detrimental to our products or may provide service that would penalize us.

Mr. Quirk: That is all.

Cross-examination.

By Mr. Collins:

Q. How many times have you known the Union Pacific, through Wyoming or elsewhere, in routes you use in your shipping, to be blocked, which you referred to a while ago?

A. The only time I would say would be last winter. Of [fol. 769] course, you never know when they are blocked, but we do know when these storm areas occur, and we do know the area occurs along Wyoming and the Idaho line and we would like to get across that country as quickly as possible.

Q. Do you know whether the D&RGW is subject to blocking?

A. They have a better reputation, it seems to me, than the Union Pacific.

Q. Are you aware of the fact they were blocked by a landslide within the last two or three weeks?

A. No, I wasn't, but I know on a recent trip back east, we waited several—I believe it was a day and a half—on the Union Pacific, when they were blocked by a landslide down in the Columbia River Gorge.

Q. So far as you know, isn't it a fact all railroads are subject to the results of acts of God at times?

A. That is right.

Q. You wouldn't expect any one of them to be free of it, would you?

A. No, but we would expect the railroads to be freer of that trouble if they were out of a particular storm area.

Q. What you want, as I understand you, is that if one railroad gets blocked, you will have another with equal rates?

A. That is right.

Q. And you had that last winter when the Union Pacific was blocked?

[fol. 770] A. No, you did that yourself; we didn't have the right to do that.

Q. You got it, though, didn't you?

A. That is right. But I believe there were about 18 or 20 trains stuck in the snowbank there.

Q. Yes, there were plenty of them stuck, but you got your stuff.

A. We would like to have the privilege of selecting our own routes.

Q. I see. When did you become aware of this need, or this desire, as you have expressed it, for routes and rates by the D&RG, equal to those by way of the U. P.?

A. I think when a storm condition developed.

Q. When what?

A. When we had that trouble two years ago.

Q. That was the first time you became aware of it?

A. Yes. We tried even to get some routings through, down the Pacific Coast, where we could ship down—we even considered, to avoid this area, paying a penalty freight to get down on a southern route by way of Southern Pacific.

Q. What route would that be from your point of origin?

A. We would have to ship by Union Pacific to Portland and down from there, Southern Pacific and then Santa Fe.

Q. You are aware of the fact, are you not, that you can ship to Texas by the Union Pacific through Denver and down that way?

A. Oh, yes, we use that route a lot, and will continue to use it.

[fol. 771] Q. Didn't you ship last year to Kansas, Colorado, Texas, and New Mexico?

A. Yes, sir.

Q. At the same rates you would have if the D&RGW were successful in this case?

A. Yes. We would have no desire to change the program under the normal circumstances. We have had very good service.

Mr. Collins: That is all.

Exam. Mullen: That is all.

(Witness excused.)

Mr. Quirk: Mr. Adams.

D. G. ADAMS, was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Your name is D. E. Adams?

A. D. G. Adams.

Q. What does "D" stand for?

A. That stands for Doug.

Q. You are branch manager of the J. I. Case Company, Salt Lake City, Utah?

A. That is right.

Q. How long has that company had a plant in Salt Lake City?

A. I believe they first established a branch house in Salt Lake City about 1902.

Q. How long have you been connected with that plant?

[fol. 772] A. I have been with the Case Company for 33 years. I have been with the branch there, I have been manager of the branch in Salt Lake City since 1938.

Q. Now, is the plant at Salt Lake City served by the rails of the Denver and Rio Grande Western?

A. Yes sir, we are on the D&RG tracks.

Q. Will you describe the business of the J. I. Case Company?

A. The J. I. Case Company manufactures all types of farm machinery. We have everything from walking plows up to tractors and combines, everything the farmer needs. This

machinery is distributed through dealers located in all of the farm communities of the territory.

Q. You receive these implements from eastern point-, do you not?

A. Yes, we have eight factories. The principal factories are located at Racine, Wisconsin, where we have two factories. We have a factory at Rockford, Illinois; another factory at Burlington, Iowa; another factory at Bettendorf, Iowa; another at Rock Island, Illinois; another at Anniston, Alabama; and the last one at Stockton, California.

Q. Are these implements consigned to your company at Salt Lake City that are shipped from the east?

A. We are the distribution point for the inter-mountain area. Most of our shipments—I would say probably two-thirds of the shipments—are consigned to us at Salt Lake City, or at our distribution points in Idaho. Falls, Twin Falls, and Ontario.

[fol. 773] Q. Could you state approximately the volume of your inbound tonnage in a year?

A. Last year, I looked it up before I came up here, we had 369 cars shipped into the Salt Lake City territory.

Q. Where is the principal marketing of these commodities after they get to Salt Lake?

A. About 70 per cent of them are sold north of Salt Lake City and the other 30 would be in Utah and five counties in Westgrn Colorado.

Q. When you say "north of Salt Lake," do you mean about 70 per cent are distributed or sold to points served by the Union Pacific Railroad?

A. Yes, I would say that is about right.

Q. Now, how are these commodities generally routed inbound to Salt Lake City, what railroad?

A. Well, we don't have any choice as far as the branch is concerned, except in specific instances to how it is to be routed. That is handled by our traffic department at Racine, and they try to split the business as much as possible between the U. P. and the D&RG, both of which serve our territory. Naturally, being that we are on the D&RG line at Salt Lake City, we prefer to have it come in, anything that is distributed out of Salt Lake, come in by D&RG. However, we are not permitted to do this too often because

we have to very frequently divert cars enroute or stop them [fol. 774] in transit, partially unload, and also to take advantage of storage in transit facilities.

Q. What happens in cases where you send a carload from Racine, for example, to a plant at Salt Lake City, via same railroad, and the Denver and Rio Grande, if that shipment has to move on to destinations on the Union Pacific northwest of Ogden?

A. We can't do anything about it. It has to be unloaded at Salt Lake City. Further, we can't move it on by virtue of the storage in transit privilege either. If it goes north, we have to pay local freight or send it by common carrier.

Q. Well, do you frequently have experiences of that kind?

A. Well, I won't say "frequently." Every once in a while we get caught with something. You see, I might explain a little bit further about how we handle this. We have to place our orders for the machinery well in advance of shipping dates, anywhere from 60 to 90 days ahead of the act.

In addition to actual shipping dates, we have to give the factory shipping orders for the goods to be shipped out. We try to anticipate as much as possible about where they are going to go, so we will get the machinery where we need it. If we can—if we make a mistake and get it routed the wrong way, then we are faced with the possibility of shipping out local, which costs the delaers more money, or we have to pay the freight ourselves in cases of carload movement.

Q. Is the various kinds of transit important to your plant at Salt Lake City?

[fol. 775] A. It certainly is. As I say, having to move the goods well ahead of the season, we do not know at that time just where they are going, and by virtue of the storage in transit privilege, when the need develops, and the goods are sold, we can pay the additional slight charge, whatever the through rate might be.

Q. Well, would the opening up of this gateway, so that you could transit and still come in on the D&RG, and go out up to Idaho or Oregon on the U.P. be a benefit to your company?

A. I would say it certainly would. It would certainly take a lot of worry off of me.

Q. Could you give some examples in which this restriction on your ability to subject this traffic at Salt Lake City to transit at the going through rate to destination on the Union Pacific northwest of Ogden have hindered your operations, or injured you adversely?

A. I can think of one instance last year where we had a carload of plows weighing about 40,000 pounds that was shipped to Salt Lake by the D&RG. It so happened we needed those plows at Idaho Falls. They had a rush on them, and we would like to have diverted the car up to Idaho Falls, but we couldn't do it, so we brought them into Salt Lake, re-billed it, and paid the local freight on the entire car from Salt Lake to Idaho Falls, and it cost us in the neighborhood of about three hundred dollars.

[fol. 776] Q. Have you had a more recent example of that?

A. Yes; we had one this week. Our dealer at Ontario, Oregon, which is the limit of our territory, has need for tractors of a particular type. He phoned us about a week ago and wanted direct shipment to him if possible. We told him we had a car we thought was enroute, that we thought could be diverted up there by stopping at Salt Lake. When we checked at the factory we found it had just been shipped by the D&RG; therefore, we could not move it.

The car is on the tracks at Salt Lake City now, and we will have to ship these two tractors by local freight, which will cust us about $50 apiece.

Q. What do you mean by "local freight"?

A. Common carrier truck.

Q. You mean truck?

A. Truck, yes, that is right.

Q. Then the Union Pacific loses the business?

A. They don't get any of that load stuff.

Q. Is there much of that?

A. We do a lot of distributing out of Salt Lake by truck in small shipments.

Q. Would there be less tendency to use trucks if the railroads had their routes and joint rates more flexible?

A. I would say if we had the privilege of routing any shipment into Idaho that was shipped regardless of the

[fol. 777] lines, that we would have a lot less distributing to do from Salt Lake.

Exam. Mullen: What was that question? I don't understand it.

Mr. Quirk: What is that?

Exam. Mullen: Read the question and answer. I don't understand it.

(Question and answer read.)

Exam. Mullen: You mean you would not ship through Salt Lake?

The Witness: No, I mean we would have less local shipments.

Exam. Mullen: You still would distribute at Salt Lake?

The Witness: We would stop the car in transit and let it go on.

By Mr. Quirk:

Q. By "local shipments" you have already said you mean truck?

The Witness: Truck, that is right, truck shipments.

Q. Then what you finally said, then, would be less use of trucks?

A. That is right. We don't ship anything by local freight, that is, by the U.P. or the D&RG; it is all done by truck.

Q. The Union Pacific would get some of the business that you now ship by truck if this gateway was opened?

A. I would say that would be true.

Q. Does the fact that you are restricted in the manner that you have described influence the selection of the Union Pacific or the D&RG on your inbound commodities to Salt Lake?

A. Yes, very definitely. Whenever there is any question [fol. 778] in our mind about the ultimate destination of these goods, we specify Union Pacific in order to protect ourselves. Quite often the cars come in and we unload them at Salt Lake and don't have occasion to use them, but very often a car is routed Union Pacific, as a matter of protection, and then the lat-er is diverted enroute, or even after it comes into Salt Lake, where it is stopped for partial unloading.

Q. Can you say roughly how that routing is divided now?

A. Well, of the cars that come into Salt Lake, there is about 50 per cent U.P. and 50 per cent D&RG.

Q. If it wasn't for this restriction, what would you do in face of the fact that you are local to the Denver and Rio Grande tracks?

A. I wouldn't be in position to say, because that would be done then entirely by the traffic department at Racine, but my guess would be they would get most all of it, because they would divide all the traffic coming into the territory fairly equal between the two lines. That is their practice.

Mr. Collins: Who do you mean would get nearly all of it?

The Witness: The D&RG.

Mr. Collins: That is what I thought.

By Mr. Quirk:

Q. Mr. Adams, you are testifying here today in response to a subpoena?

A. That is right.

Mr. Quirk: That is all.

[fol. 779] Cross-examination.

By Mr. Collins:

Q. Why was a subpoena necessary, Mr. Adams?

A. Well, we do an awful lot of shipping over the Union Pacific as well as the D&RG, and we felt that we didn't want to be taking sides on the thing.

Q. Do the views that you have expressed here—are they those of your general traffic manager?

A. No sir, they are the views of myself only.

Q. You don't really know what your traffic manager would do?

A. I have no idea what their ideas are on it at all. I am just testifying as to how it affects our particular branch.

Q. As I understood you, some 70 per cent of your inbound implements have destinations or are ultimately sold to points that are north of Salt Lake City?

A. That is right.

Q. How about Ogden, would that be north of Ogden?

A. Well, I presume you would call it north of Ogden, yes sir. There is very little between Salt Lake and Ogden.

Q. None of that territory could be served by the Denver and Rio Grande, could it?

A. That is right. The point I was mentioning there was the fact that we could use the storage in transit privileges for distribution out of Salt Lake.

Q. That is, you could use the storage in transit privilege at Salt Lake City?

A. To any point.

[fol. 780] Q. On carloads that came in by the D&RG?

A. No, not unless it came in by the U.P. but if it was open we could.

Q. Yes, I see. And do you do a lot of storing in Salt Lake City?

A. Quite a lot, yes sir.

Q. How do you deliver into the local area around in Utah where you dispose of a part of your remaining 30 per cent?

A. Well, it is done in two ways. Most of our dealers have their own trucks, and come in and pick it up because the railroad facilities in southern Utah are not too good, there is not too much of it.

Q. As a matter of fact, are all of your dealers located on railroad tracks?

A. No.

Q. How do you make delivery to the counties in Colorado to which you distribute some portion of this remaining 30 per cent?

A. We have to ship most of it in direct, and the rest of it is trucked out of Salt Lake.

Q. You mean shipped direct from your factories?

A. Yes.

Q. Those counties, I take it——

A. Are on the D&RG.

Q. So that the benefit that you think would be derived largely would be to enable you to route by the D&RG instead [fol. 781] of the Union Pacific, and to stop and partly unload on the D&RG?

A. Stop in transit privileges and storage in transit privileges are the only things that would interest us.

Q. What portion of this 30 per cent that is for Utah and

Colorado distribution would you say is distributed in Colorado?

A. Oh, I would imagine probably five per cent.

Q. How much?

A. About five per cent.

Q. About five per cent?

A. I might add that we just recently have taken over the Colorado territory. I don't know too much what the potentialities will be down there.

Q. The Colorado what?

A. I said we have just recently taken over the Colorado territory.

Q. Mr. Adams, this shipment you mentioned, and all other shipments that you route west-bound over the Union Pacific, including this one to Ontario, may now and for some time could have been stopped to partly unload, or stopped for storage at Salt Lake City, and then go up into Idaho via Union Pacific, could it not?

A. Providing it was shipped via Union Pacific into Salt Lake City.

Q. That is what I mean.

A. Yes.

[fol. 782] Q. You have all the privileges in Salt Lake City on the Union Pacific that you require, do you?

A. But there are no storage in transit privileges on the D&RG, because you only have the one line.

Q. Yes, but you do have them on the Union Pacific?

A. Oh, yes, if we ship it Union Pacific into Salt Lake, we can use it, that is right.

Mr. Collins: That is all.

Redirect examination.

By Mr. Quirk:

Q. Just one or two questions, Mr. Adams.

Do you stop cars from the east at Price, Utah, or Grand Junction?

A. Not at Grand Junction. We have stopped two or three cars at Thompson.

Q. Are the rates on your commodities from Racine and the other eastern points via available routes, the same

whether they move via Union Pacific or D&RG to Salt Lake City?

A. That is right.

Q. They are competitive rates up to that point?

A. That is right.

Q. Would the opening of the Ogden gateway, as you have described it here, be to the interest of the Salt Lake branch of the J. I. Case Company?

A. I would say very definitely so.

Mr. Quirk: That is all.

[fol. 783] Recross-examination.

By Mr. Collins:

Q. In what respect would it now? We are starting all over again.

It would give us the advantage of storage in transit regardless of how the goods were shipped in. The idea is this: In order to absolutely save on this, we should ship everything Union Pacific that stops at Salt Lake. Obviously, that would be very unfair. Our company would not permit it. In a number of cases we have been overruled on our own recommendations because they just simply can't ship everything over one line, but whenever we don't have that happen, whenever we ship some goods in by D&RG, we are always faced with the possibility of being stuck with it and having to ship it out by common carrier.

Q. How often are you stuck with it?

A. Any type of implements or machinery that might be shipped in there on the D&RG.

Q. In your own experience, how often are you stuck with shipments?

A. Quite often.

Q. How many cars, what percentage of your D&RG shipments?

A. That would be very difficult to tell, because it would depend entirely on the movement, and just how much of the goods we have to move out of Salt Lake City.

Q. Well now, do you want to leave on this record the [fol. 784] impression this happens most of the time on shipments on the D&RG?

A. I wouldn't say that.

Q. Wouldn't you venture some kind of a guess?

A. It would be just a guess; about 20 per cent.

Q. Do you know whether it happens or not?

A. Definitely. I have given you examples of that.

Q. You don't have any idea how often it happens?

A. No, because the goods are placed in storage, and it would mean, it would depend entirely on where the goods were wanted, and so forth.

Q. But as to a shipment moving to Salt Lake City, provided there isn't some change in shipping plans by your traffic manager, what difference would it make to you or your company whether it moved to Salt Lake City by the Union Pacific or by the D&RGW?

A. None whatever.

Mr. Collins: All right. Thank you.

Further redirect examination.

By Mr. Quirk:

Q. Is it customary when a railroad serves a plant directly with its own tracks to favor that railroad as much as possible?

A. I wouldn't know whether that is customary or not.

Mr. Quirk: That is all.

(Witness excused.)

Mr. Quirk: Mr. Lowe.

[fol. 785] J. CYRIL LAU was sworn and testified as follows:

Direct examination.

By Mr. Quirk:

Q. Will you state your name and spell it for the reporter, please?

A. J. C-y-r-i-l L-a-u.

Q. Where do you reside, Mr. Lau?

A. Soda Springs, Idaho.

Q. Are you a farmer or business man? What is your business?

A. I am a farmer and stock man.

Q. Are you president of the Idaho Farm Bureau?

A. Yes sir.

Q. Will you describe the make-up of that Bureau?

A. The Idaho Farm Bureau is an organization of agricultural producers.

Q. How many members are there of that?

A. We have approximately 11,000. We don't call them members, we call them families. We have approximately 11,000 farm families that belong to the organization at the present time.

Q. And the farm families are engaged in ranching and professional farming?

A. Yes. The Farm Bureau covers all producers of agriculture.

Q. Well, does one of the products against another predominate? Which is the principal one in which this group of farm families are interested in, or produce?

A. I think livestock leads in the state.

[fol. 786] Q. Then wheat, I suppose?

A. Well, I wouldn't say, but of the four leading commodities, it would be live stock, wheat, dairying, and potatoes I think those are the four largest items.

Q. Now, do these farmers generally sell their products to commission men?

A. Well, I wouldn't say always. I think there are several of them, especially the live stock producers probably sell most of them to your commission men. They sell them right on the market. They go right on to the market. Other commodities—well, I would say most of them sold, especially wheat, potatoes, barley, are probably sold to elevators and warehouses.

Q. Did the Idaho Farm Bureau take any action with respect to the intervention in this proceeding?

Mr. Collins: Excuse me, Mr. Quirk. Is this the same named organization as that which intervened, Idaho State Farm Bureau? You say "Idaho Farm Bureau." The intervenor is the Idaho State Farm Bureau. I wondered if there were two organizations or what.

By Mr. Quirk:

Q. The Idaho State Farm Bureau, isn't it?

A. Yes.

Q. My error in omitting one word; it is Idaho State Farm Bureau.

A. It is the Idaho Farm Bureau Federation. That is what the real name of it is. I think some call it the Idaho State, but the regular name is the Idaho Farm Bureau Federation.

[fol. 787] Exam. Mullen: Let us clarify this on the record. We have a petition for leave to intervene filed by the Idaho State Farm Bureau.

The Witness: That is right.

Exam. Mullen: What is the correct name of the intervenor, the Idaho State Farm—what is the correct name?

The Witness: The correct name is the Idaho Farm Bureau Federation.

Exam. Mullen: Omitting the word "State."

The Witness: That is right.

By Mr. Quirk:

Q. You signed this document, you remember?

A. That is right.

Q. That says "Idaho State Farm Bureau."

A. I think it was just a misprint there. That is all it was.

Exam. Mullen: Let the record show, then, the correct name of the intervenor is the Idaho Farm Bureau Federation.

Mr. Collins: Do you want to make that correction in the petition for intervention?

Mr. Quirk: It is made in the record now. We could file another one, I suppose. That is satisfactory, isn't it, as long as it is understood?

Mr. Collins: If the witness is testifying for that one, and that is the one that intervened, that is all right.

Exam. Mullen: I understand that is the correct name of the intervenor.

[fol. 788] The Witness: Yes sir, that is the correct name.

By Mr. Quirk:

Q. Did the Idaho Farm Bureau Federation take action with respect to the intervention in this case, and, if so, in what manner?

A. Yes, they took action in this case. I think it was, if I remember correctly, some time in August last year, the first part of August. Our board recommended that we go on record as favoring the opening of the Ogden gateway. At the next meeting it was moved that they lay that on the table for the time being and get recommendations from our people out in the counties.

I can't tell you which meeting it was, but I think it was in the October meeting that the question was taken up again, and they went on record the second time as favoring the opening of the Ogden gateway.

Q. Well, why do you, as president of that organization, favor the opening of the Ogden gateway?

A. Well, I don't like that question too well. I am sent up here by our state board to represent them. Personally, it doesn't make any difference to me, but our board—I can't take action myself in this matter—I am sent by our board of directors who are authorized by the people of the state in our organization.

I have been directed by our board as to what testimony to give. Now, our board takes the stand, along with our people, that by opening this gateway it will create competi-
[fol. 789] tion which our people have always thought develops good business. They feel that if there is competition created, it is going to bring about better service, and they also feel that they should have the satisfaction themselves in where they ship their products, over what roads, without being penalized. That is the position they took last fall.

Q. This group that you speak for think opening this gateway will make competitive rates available and thereby result in competition and result in better service?

A. That is right.

Q. And also might result in better rates?

A. They feel that way.

Q. And in a wider range of markets?

A. That is right.

Q. And a better car supply?

A. Yes, they feel that if this gateway is opened that the Denver and Rio Grande might be able at the time of the year when we have a shortage of cars, they might be able to furnish some cars up in that part of the territory. We have been faced with it in the southeast part, and it was brought to my attention very forcibly a year ago last fall when we were stuck for cars.

The Union Pacific at that time could not furnish cars, and they tried to figure out how we might get cars probably [fol. 790] from the Denver and Rio Grande, but owing to this closed gateway, it was impossible to do it.

Mr. Collins: What kind of cars were those?

The Witness: Grain cars mostly.

Mr. Collins: What?

The Witness: Grain cars.

Mr. Quirk: You may take the witness.

Cross-examination.

By Mr. Collins:

Q. You said you were a shipper. Do you ship stuff, Mr. Law?

A. No.

Q. You don't?

A. Not at the present time, I don't.

Q. I don't catch just what business you are in.

A. At the present time I am just a farmer. I have been a farmer and live stock man all my life. Up until two years ago, I was in the sheep and cattle business, up until two years ago this last fall.

Q. At that time, were you a shipper?

A. That is right.

Q. Or did you sell your sheep and lambs at your ranch or at your feeding place?

A. No sir, they were all shipped to market.

Q. They were shipped from the source——

A. They went to the market 95 per cent of the time.

[fol. 791] Q. They were shipped from around Soda Springs to the east?

A. Both east and west.

Q. West—do you mean California?

A. Ogden and California.

Q. I see. Your operation is southeast, is it not, of the point where the railroad line of the Union Pacific diverges eastward to Soda Springs and on through Wyoming, and the other prong southward toward Ogden?

A. That is right.

Q. In your farming operation, do you make any use at all of railroad service?

A. Oh, yes.

Q. In what way?

A. If we don't have railroad service, we can't do very much with our grain when it comes into town on trucks.

Q. Oh, you do ship grain, then, do you?

A. Yes.

Q. Where do you ship that ordinarily?

A. The grain goes east to Omaha, Kansas City; it goes to Ogden.

Q. I see.

A. You can't tell; it goes all over.

Q. Eventually, it would almost necessarily go to one or the other of those places, is that right?

A. Oh, yes, you can't tell where it goes to. It is shipped to Portland, Los Angeles, San Francisco, Ogden. You can't [fol. 792] tell where you are shipping to until probably the day before you load it.

Q. When did this Idaho Farm Bureau Federation first take action in connection with this complaint of the D&RGW in this case?

A. I think it was in the August meeting. It was brought to our attention the first part of August. Our regular meetings are held the last Saturday of every month, and at that August meeting they took action for the first time.

Q. I have been informed, and I wish you would state whether or not this might also be an action in addition to your August action, that on July 2 of 1949, your Bureau Federation voted in favor of the D&RGW proposal in this case; would that be so?

A. Well now, I wouldn't say for sure. I would have to examine our minutes of our meetings to make sure of that.

Q. That was almost a month before the complaint was filed?

A. I wouldn't say because I could be wrong.

Q. When would you say this matter of the D&RGW complaint in this case, or the purpose to file a complaint, first came to your attention, Mr. Lau?

A. I stated a few minutes ago I thought it was the first part of August.

Q. Was that when it first came to your attention?

A. When it first came to my attention.

Q. Was that the first time the opening of the Ogden gateway, so-called, came to the attention of the members of your [fol. 793] organization?

A. No, I don't think so, because this was brought to my attention, as I stated, I am sure, a year ago last fall, during the grain season. We couldn't get cars up in our district, and they tried to get some from down south, and they said they couldn't do it on account of that gateway. I never even had thought of it up until that time.

Q. D&RG said that they couldn't turn over any cars to you, is that right?

A. Well, the party that told me about it and asked us to take action on it, he didn't say who done it or anything, he just said "we can't get cars from the south there," and he said, "I wish that gateway were open," and "you people should take action." That was the conversation.

Q. Have you ever seen any D&RG cars spotted for loading in the area where you live?

A. Oh, yes.

Q. You have?

A. Yes.

Q. Very often?

A. Not too often, no.

Q. Is the Idaho Farm Bureau Federation composed of local federations, farm groups, around over the state?

A. No.

Q. Is it composed of individual persons?

[fol. 794] A. That's right.

Q. Who are farmers?

A. That is right.

Q. As I understood you to say, your board, is that board of directors; is that what you mean?

A. Yes.

Q. Your board adopted some, or proposed some resolution in favor of the D&RG in this case?

A. No; they didn't pass the resolution. It was brought to our attention, as I stated, and was taken up in our meeting.

Q. Yes.

A. We went in favor of it, and the next meeting, we thought it probably would be better if we would take it up with the people in the counties.

Q. You mean your entire membership?

A. That is right, the membership in the counties, so it was laid on the table, and after it was taken up with the locals in the counties, that is, our people in the counties, we received their recommendations; then we acted on it at the state level.

Q. I understood you to tell me just now that you had no sort of subordinate organization under this State Bureau?

A. Let me explain the workings of the Farm Bureau. In the different localities like Soda Springs we have a local. Caribou County ties in from the local to the county to the state.

Q. Yes.

[fol. 795] A. Just the same as our national government. We get our instructions, they start down at the local level, they go to the county and then to the State Board.

Q. Well, were you a director at the time of this action, or were you president at the time of this action last August?

A. I was vice president at the time.

Q. Were you a director also?

A. Yes sir.

Q. How did you vote?

A. I think that is an unfair question.

Q. Well, your vote wasn't unanimous, was it?

A. No sir.

Q. What percentage of it was it, a majority; do you recall?

A. It was a majority vote.

Q. I might say, Mr. Lau, I don't intend to pry into irrelevant things. We have asked those questions in this case before and have been permitted. I think it is entirely appropriate. What was the answer last?

Mr. Quirk: You have been talking quite a bit over there. What was your last comment?

Mr. Collins: I told him I thought it was appropriate for me to ask questions, and I didn't want him to feel I was prying into things that I shouldn't.

Mr. Quirk: I don't think how this gentleman voted in an action that has already been taken——

[fol. 796] Exam. Mullen: That question was not pressed.

The Witness: I will answer the question.

Mr. Quirk: I object to the question.

Exam. Mullen: The objection is sustained. You don't have to answer if you don't wish to.

Mr. Collins: What did you state, Mr. Examiner?

Exam. Mullen: The objection to how this man voted on this question. He doesn't have to answer if he doesn't desire to.

Mr. Collins: I see. All right.

The Witness: I might add, to straighten you out on that, our board wasn't unanimous. We have a majority vote.

By Mr. Collins:

Q. Mr. Lau, what is your personal view as a shipper as to the opening of the Ogden gateway? Do you feel it would benefit you in any way?

A. Indirectly, yes.

Q. Do you feel it might indirectly be detrimental to you in any way if a lot of traffic or a considerable amount of traffic is diverted to the D&RG?

A. Well, I wouldn't say it would hurt me. I think it would help.

Q. Would the curtailment of frequency of train service be of any detriment to you as a shipper?

A. That is true, it would.

Q. If the diversion of traffic to the D&RG as a result of the opening of the Ogden gateway resulted in eventually an [fol. 797] increase in rates, would that be detrimental to you?

A. Sure.

Q. If the opening of the Ogden gateway resulted in a less frequent switching and spotting of cars, would that be detrimental to you?

A. Certainly.

Q. Would it be detrimental to you and your organization if

the opening of the Ogden gateway resulted in the payment of less taxes to the state and counties of Idaho?

A. If that were possible, I would say yes.

Mr. Collins: That is all. Thank you, sir.

Redirect examination.

By Mr. Quirk:

Q. Mr. Lau, do you think competition usually improves transportation service?

A. I do.

Q. Have you noticed any difference in the services of the Union Pacific in the last year and a half?

A. Yes, I have.

Q. What is the difference now compared with a year and a half ago?

A. Well, we are getting better service. Last fall in our one community alone, they have always had quite a bit of trouble about getting cars switched. Last year, we have had a switch engine that sat there all the time, ready to switch those cars.

[fol. 798] Mr. Collins: What place?

The Witness: Soda Springs.

By Mr. Quirk:

Q. You mean that since this complaint was filed, the service has been improved?

A. Well, I wouldn't say it was only since this complaint was filed. That might have some bearing on it. However, our service was better last year. The reason I couldn't tell you——

Q. Has there been any change in the attitude of the Union Pacific with respect to their stopping their streamliners at Soda Springs? Have you had any experience on that?

A. Yes sir.

Q. Will you state it?

A. Two years ago, or a year ago last December, we went to Atlantic City to a convention. We tried to get the streamliner to stop at Soda Springs. It took five days to get an answer on that. There were six of us leaving Soda

Springs, and there were 54 on the streamliner going to New York, of our organization. Last year—in fact, I might say we never got an answer on it until five o'clock of the night before we were to board the train the next morning.

Last year, last December, leaving for Chicago, the secretary said, "We will want the streamliner to stop at Soda Springs to pick up the president." "Yes, sir, it will be done." And that was before we had ever asked for reservation. Whether that had anything to do with it or not, I wouldn't say.

[fol. 799] Mr. Quirk: That is all.

Recross-examination.

By Mr. Collins:

Q. Do you think you would derive a benefit of the streamliner stopping if the Ogden gateway is opened and the D&RGW can solicit freight in your territory?

A. I don't know about that.

Q. You have no idea on that?

A. This is my personal opinion. I don't think the Union Pacific is going to have to take off any trains as long as they give service. I think the people that are using the Union Pacific today are not going to change to the Denver and Rio Grande as long as they get the service.

Q. I thought I understood you to say, Mr. Lau, a while ago, that you had difficulty obtaining grain cars last fall.

A. A year ago last fall, not last fall. We had plenty of cars last fall.

Q. How about 1947?

A. 1947 was a bad year, too.

Q. 1946?

A. That is right, that was a bad year.

Q. Bad?

A. Yes, I might state that the last two years there has been an improvement. Last year we couldn't complain.

Q. The last two years have been an improvement over previous years?

[fol. 800] A. That is right. Last year we couldn't complain a bit about the cars coming in. In fact, we didn't have any complaints.

Q. The previous year, 1948, was an improvement over 1947?

A. That is right.

Mr. Collins: That is all. Thank you.

Mr. Quirk: One more question: Are these 11,000 farm families located in all the counties in the State of Idaho?

The Witness: No, they are in, I think, 31 counties. In other words, we are not organized in the panhandle of the state yet.

Mr. Quirk: Thirty-one counties out of how many counties?

The Witness: I think there are 44 counties in the state, if I am not mistaken.

Mr. Quirk: All right. Thank you.

Exam. Mullen: If there are no further questions, the witness is excused.

(Witness excused.)

Exam. Mullen: We will recess until two o'clock this afternoon.

(Whereupon, at 12:27 o'clock p.m., the hearing was recessed, to reconvene at 2:00 o'clock p.m., the same day.)

[fol. 801] Afternoon Session, 2:00 p.m.

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Gibson: Mr. Examiner, at the Salt Lake hearing, we agreed to introduce into the record that portion of our agreement with the American Refrigerated Transit Company regarding car supply. This is a copy of that paragraph from that contract.

Mr. Collins: Do you want it as an exhibit?

Exam. Mullen: Exhibit No. 11.

(Complainant's Exhibit No. 11, Counsel Gibson, marked for identification.)

Exam. Mullen: I assume there is no objection to it?

Mr. Collins: No.

Exam. Mullen: It will be received in evidence.

(Complainant's Exhibit No. 11, Counsel Gibson, received in evidence.)

Exam. Mullen: Do you have another witness, Mr. Quirk?

Mr. Quirk: No, the complainant rests.

Exam. Mullen: The complainant rests.

Are you ready to proceed, Mr. Collins?

Mr. Collins: It may take a minute or so. I can't keep up with my opponent. I thought he had another witness, so we are not ready until we get the stuff in for distribution.

Exam. Mullen: All right. Will it take five minutes?

Mr. Collins: It won't take more than a couple of minutes, I think.

[fol. 802] Mr. Collins: Do I understand now, for the purpose of the record, that the Rio Grande's direct case is closed?

Mr. Quirk: Yes.

Mr. Collins: All right.

Mr. Pease: Mr. Examiner, J. E. Pease, United States Department of Agriculture. The Department has one exhibit and one witness which we desire to put on Friday, if we may. Our attorney is not due here until Friday morning. He has an argument before your Commission on the sixth and he will be here Friday morning.

If it suits the convenience of the defendants, we would like to have 20 minutes some time Friday.

Mr. Collins: How long do you think you will take?

Mr. Pease: About 20 minutes, Mr. Collins.

Mr. Collins: Is your testimony in support of the complaint?

Mr. Pease: I suspect it will be so construed, yes sir.

Mr. Collins: Well then, will the Department of Agriculture change its position from the neutral one it stated in its intervention to a support of the complaint?

Mr. Pease: Yes sir.

Mr. Collins: Then I think they should put their testimony in now, Mr. Examiner.

Exam. Mullen: I understand from Mr. Pease his attorney is not here, and he has the privilege of putting it in Friday if there is no objection. As I understand it, it will [fol. 803] consist of a statement.

Mr. Pease: It is an exhibit and a very short statement.

Exam. Mullen: Do you have the statement with you?

Mr. Pease: No sir.

Mr. Collins: I don't think it is quite proper for someone

who is supporting the complaint to come in in the middle of our case for the defense and put in testimony.

Exam. Mullen: Is it testimony, Mr. Pease, or a general statement of the position taken by the Department?

Mr. Pease: It is a little of both, Mr. Examiner. I appreciate Mr. Collins' position and I dislike very much to do this, but as I say, our attorney could not leave Washington. If Mr. Collins is insisting, we can wait until he gets through.

Exam. Mullen: Suppose we take it up Friday.

Mr. Collins: All right.

Mr. Lynch, will you take the stand, please?

PERRY J. LYNCH was sworn and testified as follows:

Direct examination.

By Mr. Collins:

Q. Mr. Lynch, you have a statement prepared to submit into this record, have you?

A. I have.

Q. And do you know that the statements therein made are true to the best of your knowledge and belief?

A. Yes sir.

[fol. 804] Q. Will you proceed with your statement?

A. My name is Perry J. Lynch. I am Vice President in charge of Operations, Union Pacific Railroad Company, 1416 Dodge Street, Omaha, Nebraska. I have been employed by the Union Pacific Railroad Company in the Transportation and Operating Departments for over 39 years. In my position as Vice President in charge of Operations, I have direction of the maintenance and operation of the railroad.

The Union Pacific was the pioneer railroad from the Missouri River westward and, connecting at Promontory Point just west of Ogden, Utah, *Utah* with the old Central Pacific, with its western Pacific Coast terminus in California, formed the first trans-continental railroad.

The origin of the Union Pacific is found in the Pacific Railroad Acts, the first of which was the Act of Congress approved July 1, 1862. The circumstances of the Nation

at that time were such as to bestir Congress to see that the railroad was built more for military protection of the Nation than for immediate transportation needs along its lines. It was feared that California might be lost through seizure by some other nation or by secession.

Tying the West Coast to the East through construction of the railroad was a National safety and defense measure. Its vital place in National defense was thus recognized in conceiving the railroad, and our performance in World War [fol. 805] II proved the wisdom and foresight of the original idea. From those early days, the Union Pacific has expanded, through acquisition and construction of other lines, until it now has lines which reach the Pacific Coast at Seattle, Portland and Los Angeles and the Missouri River at Council Bluffs, Iowa and Kansas City, Missouri.

Annual report to the Interstate Commerce Commission for the year 1949 will show average miles of road operated by Union Pacific as 9,724. Current timetable folder shows that the Union Pacific serves more than 1,700 towns, cities and stations.

Page 1 of my Exhibit 12——

Exam. Mullen: That will be Exhibit No. 12.

(Defendants' Exhibit No. 12, Witness Lynch, marked for identification.)

The Witness: —herewith submitted, is a Straight Line Map of the Union Pacific Railroad showing:

Stations, Towns and Cities.
Railroad Operating Divisions.
Distance in units of 100 miles.
Single and Double Track Main Line.
Branches.

Profile showing Ruling Grade percent, Elevations, and Mileage Main Line Seattle, Washington, to Council Bluffs, Iowa; Borie, Wyoming, to Denver, Colorado; and Gibbon, Nebraska to Kansas City, Missouri.

[fol. 806] Legend-Large Red Letters from "A" to "O" inclusive show Terminals, Divergence points and Territory Primarily Involved in These Proceedings.

From this exhibit, it will be noted that the Union Pacific operates in thirteen states, namely, Iowa, Nebraska, Wyoming, Idaho, Oregon, Washington, Missouri, Kansas, Colorado, Montana, Utah, Nevada, and California, the D&RGW operating only in the States of Colorado, Utah and a little mileage in New Mexico.

Union Pacific Railroad Company, through its predecessors, also pioneered railroad building and operation in Idaho and the Pacific Northwest. Beginning with the construction of the Utah and Northern Railway Company in 1878, when the population of the then Idaho Territory was only about 32,000 people, and in 1881 of the Oregon Short Line Railway Company, from Granger, Wyoming to Huntington, Oregon, this pioneering continued, until, with the acquisition of some short lines and of the old Oregon Railway & Navigation Company in 1889, now the Oregon-Washington Railroad & Navigation Company, the Union Pacific finally completed connections between its main line in Utah and Wyoming, and Portland, Oregon, and the Pacific Northwest.

The construction work was done under the name of several separately incorporated railroad companies. This history is set forth in detail in the Interstate Commerce Commission's valuation report covering the Union Pacific [fol. 807] and subsidiary lines, I.C.C. Valuation Report Volume 44, which discloses also that the Union Pacific put more than fourteen million dollars into the original construction and equipment of the Oregon Short Line Railway Company.

The result of all this early activity is that, today, from Ogden, Utah, and Granger, Wyoming, northward through the states of Idaho, Montana, Oregon and Washington, the Union Pacific operates 5,606.7 miles of railroad, and I wish particularly to emphasize the fact that 2,913.19, or over 50 per cent, of this total railroad mileage consists of the large number of branch lines shown on map, Page 1, of my Exhibit.

Attention is directed to Page 1 of my Exhibit showing the location of our double track main lines, particularly that portion between Council Bluffs, Iowa, and Ogden, Utah, a distance of 992.6 miles, which I believe to be the longest

continuous segment of double track on the American Continent.

The Legend shown on Page 1 of my Exhibit, letters B, C, D, E, H, I, K and L, cover trackage between Pocatello, Idaho and North Platte, Nebraska, the latter being point of divergence of traffic flowing via Council Bluffs, Iowa, and Kansas City, Missouri, and is the main portion of the territory principally involved in this proceeding. The standard of track construction in this territory calls for 133 lb. rail, rock ballast, fully tie plated and treated cross ties.

Although the Union Pacific has a billion dollar railroad [fol. 808] plant, more than six-hundred million dollars of which is in the routes more particularly affected in this proceeding, it has been, and is continuously expending large sums to improve the railroad, increase its transportation capacity and the efficiency of its service.

All main line tracks of the Union Pacific are protected by automatic block signals. Automatic continuous cab signals have been or are in the course of being installed on locomotives, including wayside equipment, operating between Summit (Omaha), Nebraska, letter "M" on Page 1 of my Exhibit, and Cheyenne, Wyoming, letter "K"; and between Green River, Wyoming, letter "E," and Laramie, Wyoming, letter "I," a total distance of 755.3 miles, at a total estimated cost of $5,647,220.

The Interstate Commerce Commission has granted our application to replace obsolete automatic train control equipment between The Dallas, Oregon, and Portland, Oregon, a distance of 85.8 miles, with automatic continuous cab signals, at a total estimated cost of $1,258,430.

Attention is also directed to the following territories on the Union Pacific Railroad operated by Centralized Traffic Control:

Territory	Miles
Pocatello, Idaho, to Glenns Ferry, Idaho	159.9
Huntington, Oregon, to Pendleton, Oregon	173.8
Salt Lake City, Utah, to Daggett, California	625.7
Riverside, California, to Los Angeles, California	58.7
Total	1,018.1

[fol. 809] The above installations have been made at a total estimated cost of $16,336,200. Under the Centralized Traffic Control System, the movement of trains is directed by signals and by power switches controlled from a central point, and the capacity of the line is increased 50 per cent to 80 per cent. Trains are expedited, eliminating train orders and handling of switches. Train and locomotive hours are reduced, as well as reduction in train stops and saving in freight car days and man hours.

At Pocatello, Idaho, which is one of the major terminals in the territory principally involved in this case, the Union Pacific has large locomotives and car repair facilities, including extensive shop facilities of the Pacific Fruit Express Company. At this location, we completed late in 1947 a modern Retarder Operated Gravity Switching Yard, at a cost, including miscellaneous yard improvements, of $2,965,833. I submit Page 2 of my Exhibit, which is a Straight Line Map of this retarder yard.

This retarder yard is strategically located. It is the hub for routes diverging in four directions, namely, east via Granger to Denver, Kansas City and Omaha, northward to Butte, northwestward to Spokane, Portland and Seattle, and south to Ogden, Salt Lake City and Los Angeles. In reality, the Pocatello yard is three yards. To the east is the departure yard consisting of nine tracks, each with a capacity of 92 to 124 cars. In the center is the "bowl" of 40 classification tracks each holding 16 to 48 cars. To the west [fol. 810] is the receiving yard consisting of 14 tracks, 7 of which hold from 87 to 125 cars each, 6 holding 39 to 75 cars each, with one track used as a running track.

With construction of the Retarder Yard at Pocatello, the usual problems and difficulties encountered in freight switching yards handling large volumes of traffic were largely overcome.

Eastbound trains are made up at Pocatello and dispatched thence to Green River; the first terminal of importance. Trains are moved between Pocatello and Green River intact, stopping at intermediate terminal at Montpelier, Idaho only for servicing and inspection. Diesel locomotives primarily, and some oil burning steam locomotives, are operated in this territory.

In 1943, in order to improve the operation between Mont-

pelier, Idaho, and Green River, Wyoming we eliminated (daylighted) tunnel at Hodges Pass at a cost of $361,082. This pass is near Moyer Junction, Wyoming, which is 42.3 miles west of Granger, Wyoming.

At Green River, Wyoming, extensive yard and locomotive facilities are located, and in 1949, $117,690 was expended for additional trackage and improved switching facilities. In 1947, $52,438 was expended at Granger, Wyoming, for track improvements and interlock in order to eliminate delays previously encountered in that location. At Green River, [fol. 811] Wyoming, traffic for Colorado and western Kansas is assembled from the two converging lines, Ogden, Utah to Green River, Wyoming and Pocatello, Idaho to Green River, Wyoming, and cars are then blocked for movement to Laramie, Wyoming.

In 1947 and 1948, a line change was made at Thayer Junction, Wyoming, 32.9 miles east of Green River, Wyoming, at a cost of $1,295,375 to obviate restrictions on train speeds by reducing curvature.

In 1948, yard improvements were made at Cheyenne at a cost of $256,264, which further increased the capacity and efficiency of that yard.

At North Platte, Nebraska, is located the second modern Retarder Operated Gravity Switching Yard, a Straight Line Map of which is submitted as Page 3 of my Exhibit, also photograph Page 4 of my Exhibit, the latter showing only the classification tracks in the "bowl." This yard was completed in 1948 at a cost of $3,125,221. There was also completed in 1949 at North Platte, Nebraska, a new Freight House Transfer Station and trackage at a cost of $909,820, in order to provide fast service for solid carload lots to western destinations on the Union Pacific and Southern Pacific Railroads.

The new Retarder Yard at North Platte, Nebraska is similar to the one at Pocatello, Idaho. The North Platte yard is five miles in length overall, and is divided into four major sections; receiving yard, incline, classification yard and [fol. 812] departure yard. The receiving yard, located at the west end of the retarder yard, consists of 12 parallel tracks for incoming freight trains whose cars must be regrouped for further movement to various destinations.

Switch engines push strings of cars from the receiving

yard to the top of the incline or "hump." Here, the cars are uncoupled singly or in small groups and permitted to roll down the incline. By means of electrically controlled retarders and electrically controlled switches, it is possible to control the speed of the free-rolling cars and direct them onto any one of the 42 classification tracks fanning out at the foot of the incline called the bowl.

After cars have been grouped on the classification tracks, they are moved by switch engines to the departure yard preparatory to their moving east or west in newly made up trains. The departure yard consists of 16 tracks.

It is estimated that by the facility the classification work and switching time is reduced one-half.

At each of the retarder yards, as cars move up the incline or "hump," there is an inspection pit which affords full opportunity to carefully inspect the running gear of all cars, and this materially reduces the hazard of accidents on the road.

To illustrate how the retarder yards increase the efficiency so far as destination terminals are concerned, we will use as an example a train moving from the West Coast to [fol. 813] Council Bluffs, Iowa. When the train reaches North Platte, the cars are classified along with cars from other trains, and on departure from North Platte, cars are in trains not only in station order, but are grouped for delivery to connecting carriers. In other words, instead of it being necessary for a switch engine to switch the entire train on arrival in order to deliver the cars to each connecting carrier in one cut, the cars leave North Platte grouped for each connecting carrier, and the switch engine at Council Bluffs or Kansas City need only cut the cars off and deliver them. This insures on-time delivery to connecting carriers who also have definite schedules to meet.

The retarder yards at North Platte, Nebraska, and Pocatello, Idaho, are the most modern that present day equipment and practices afford. They are completely flood lighted, and are equipped with the latest communicating systems, both station to station and loud speakers. The Diesel switching locomotives in use in the two retarder yards are equipped with two-way radio systems.

The advantages, therefore, of retarder yard operations may be summed up as follows:

1. Material reduction in switching at initial, intermediate and destination terminals, resulting in substantial saving in time.

2. Permits maintenance of fast freight schedules, even under adverse conditions, and on time deliveries too.

[fol. 814] 3. Reduction in switching effects a reduction in rough handling.

4. Reduction in hazard of accidents account all cars moving over inspection pits on retarder incline.

5. Substantial reductions in expenses through reductions in switch engine shifts at initial, intermediate and destination terminals.

The capacity of these modern yards and their facilities is several times the volume of traffic they are currently receiving.

During October, 1944, when we had only a flat switching yard at Pocatello, with much less capacity than the new retarder yard, we were handling through that yard, giving each freight car switched one count on arrival, 2,147 cars per day, compared with only 1,367 cars per day in January, 1950, with the new retarder yard in operation.

During October 1944, at North Platte, Nebraska, we were handling with a flat switching yard, 3,753 cars per day compared with 2,239 cars per day in January, 1950. It is quite evident, therefore, that we have a huge unused capacity at the new retarder yards.

At Altamont, Wyoming, which is 86.6 miles west of Green River, Wyoming, and 89 miles east of Ogden, Utah, a new tunnel 6,705 feet in length was placed in service in November, 1949, for westbound traffic. Prior to this time, there was but one tunnel at Aspen, Wyoming, for both eastbound and westbound traffic. The new tunnel, which cost [fol. 815] $8,000,000 and took two and one half years to construct, completed the continuous double track main line between Council Bluffs, Iowa, and Ogden, Utah. This huge bore is more than a major step in progressive railroading, it is an important factor toward a more effective National defense.

I have discussed the costs of and increased efficiency from several of the individual improvements and installations. I wish now to enter Pages 5, 6, 7 and 8 of my Exhibit, showing that the Union Pacific expended between Janu-

ary 1, 1944 and December 31, 1949, in the Maintenance of Way Department approximately $124,300,000, and in the Mechanical Department $149,600,000 for major improvements and equipment. Further, it is proposed to expend in the Maintenance of Way Department during the year 1950 an additional $42,100,000, and in the Mechanical Department $51,000,000 on major improvements and equipment. Grand total expenditures for the period January 1, 1944 to December 31, 1950 will approximate $367,000,000.

I am reading now from page 5 of the exhibit: "Maintenance of Way, which is a consolidated statement of major improvements of the Union Pacific System, period 1944 to 1949, inclusive. Major improvements and the cost: New heavy rail, replacing lighter rail in main line tracks, $46,410,644"——

Exam. Mullen: Is it necessary to read this in, or is it all right to copy it in?

[fol. 816] Mr. Quirk: It is all in the exhibit. I don't see why it should be put in the transcript. We all have to pay for the transcript.

Exam. Mullen: The point is, do you want it in the transcript? It is already in the exhibit. It is just repetitious to read it in the record.

Mr. Collins: Those pages of exhibit, 5, 6, 7, and 8, may just go in as exhibits, Mr. Lynch, and need not be read or copied into the transcript.

The Witness: That is page 8, inclusive?

Mr. Collins: Yes. Now, you were down to the last paragraph on page 10.

The Witness: The purport of my testimony to this point has been that the Union Pacific by the expenditure of huge sums of money now has a direct route and a vast transportation facility that is adequate to move the present or foreseeable volume of traffic expeditiously, safely and economically.

But we are still striving to improve. With advice and counsel of associate officers, I have initiated from time to time many recommendations, which were subsequently approved, providing for improved and enlarged facilities, additional modern motive power, freight cars, etc., having a direct and improved effect upon the territory now under

consideration in this case. Each of these recommendations was predicated on the premise that they were necessary to [fol. 817] handle or to facilitate the handling of the traffic now being offered us, and likely expansion of such business in the future.

Any prospective reduction or diversion of traffic would leave upon the hands of the Union Pacific a giant plant, the expense of which could not be justified by the reduced business, and a progressive program of retirements would necessarily result. This is unthinkable, if for no other reason than the need for this tremendous transportation facility in promoting the interests of National economy and National defense.

The transportation facilities of the Union Pacific are so located and are of such vital necessity to the economic existence of so many thousands of people and hundreds of cities, towns, villages, ranches and farms, and to the National economy and National defense, as to require that it maintain a high degree of performance and efficiency. To so maintain these facilities requires the maximum of traffic that it can originate or terminate at points which it serves.

As a railroad, the Union Pacific is not comparable in any sense, geographically, physically or otherwise with the D&RGW. In this connection, attention is directed to the ruling grade shown at the top of Page 1 of my Exhibit. Because the profile is condensed, rises and falls in elevation are necessarily indicated in abrupt form, but study of the exhibit will show maximum elevation on the Union Pacific route is 8,013 feet at Sherman, Wyoming, which elevation [fol. 818] prevails for approximately one mile, in contrast to elevations up to 9,239 feet on the D&RGW Railroad, and above 8,000 feet for approximately 35 miles, presenting a more difficult operation.

The maximum gradient eastward at any point on the Union Pacific route is 1.52 per cent, and westward 1.55 per cent, contrasted with substantial mileage with gradient of 2 per cent and over on the D&RGW route.

In this connection, the annual report to the Interstate Commerce Commission for the year 1948 shows the D&RGW's total principal locomotive miles in freight service were 27,816,537, and helper locomotive miles for the same

year were 1,145,304, or only 4.11 per cent of the total principal locomotive miles.

I submit Page 9 of my Exhibit setting forth certain physical characteristics of the Rio Grande between Ogden and Denver and the Union Pacific Railroad between Pocatello and Cheyenne. These statistics cover conditions as of 1940 as we do not have such data for the Rio Grande as of this time, but if the Rio Grande cares to submit statistics which will cover changes made subsequent to 1940, we shall be glad to show comparison as of this time.

I am reading now from page 9 of the exhibit, and I would like the privilege of reading it into the record.

Mr. Quirk: I object to that, Mr. Examiner.

Exam. Mullen: I don't think it is necessary. That is just [fol. 819] duplicating it. You can point out some of it, and highlight it if you wish.

The Witness: While this exhibit is self-explanatory, I call particular attention to maximum curvature and degrees of curvature on the two railroads. On the Rio Grande, it is equivalent to 111 complete circles or 225 per cent greater than on the Union Pacific Railroad. In other words, the degress of curvature on the Rio Grande result in a complete circle for every 5.45 miles traveled by train.

The maximum ruling grade and total rise on the Rio Grande greatly exceeds that on the Union Pacific.

It will be noted from the exhibit due to degress of curvature and grades involved the effort produced in moving a train from Ogden, Utah, to Denver, Colorado, over the Rio Grande, a distance of 606.9 miles, is equivalent to what it would be in moving a train a distance of 1,440.76 miles on straight and level track. This is 51 per cent greater than the effort produced in handling a train over the Union Pacific Railroad from Pocatello, Idaho, to Cheyenne, Wyoming, a distance of 551.6 miles.

All of these conditions on the Rio Grande involve slower, more difficult, more expensive and more circuitous operation than via the direct Union Pacific route from Pocatello through Granger to Cheyenne.

During and subsequent to the War years, 1942-1949, the [fol. 820] Union Pacific has not only met the transportation requirements of the territory it serves, but has more

than adequate capacity to do so in the future. As already shown, this has been accomplished through vast expenditures for maintenance, additions and betterments and operating efficiencies. Now, in the face of a lower railroad traffic volume, we are confronted with the threat of losing, according to the forecase by Mr. T. K. Farley, Assistant Freight Traffic Manager of the D&RGW, a potential of 101,476 loads of eastbound traffic and 56,286 loads of westbound traffic, or a total of four trains per day, eastbound and westbound, between Pocatello, Idaho, and Council Bluffs, Iowa, and Kansas City, Missouri.

Another Union Pacific witness is testifying with respect to this loss of traffic, and the formula used in determining the potential loss of four trains per day eastbound and westbound on the Union Pacific.

To indicate the capacity and the adequacy of the Union Pacific Railroad Company to handle all traffic now offered, or that may be offered in the future, I call attention to the following data:

Incidentally, this is in thousands, as reported by the Interstate Commerce Commission:

[fol. 821] Gross ton miles handled by Union Pacific Railroad, freight only:

1944—89,652,529,000
1948—76,243,067,000
1949—71,497,835,000

During the War year of 1944, gross ton miles handled exceeded the handling during 1948 by 17.6 per cent and exceeded the handling during 1949 by 25.4 per cent.

Freight train miles operated:
1944—36,733,020
1948—27,822,880
1949—26,158,252

Freight train miles operated in 1944 were 32 per cent greater than in 1948, and 40.4 per cent greater than in 1949.

Passenger train miles operated:
1944—21,423,697
1948—17,869,236
1949—17,267,180

Passenger train miles operated in 1944 were 20 per cent greater than during 1948, and 24 per cent greater than in 1949.

Freight and Passenger train miles operated reflect the density of traffic, and it will be noted from these figures total train miles both passenger and freight operated in 1944 were 33.9 per cent greater than the total train miles in 1949. This demonstrates the very large unused capacity [fol. 822] of the Union Pacific Railroad at this time compared to the peak war years of 1944.

At a time when the Union Pacific Railroad Company is striving diligently to attract new industries and minimize its traffic losses as a result of the lower level in traffic volume——

Mr. Quirk: Mr. Examiner, I object to the argument.

Mr. Collins: It is not argument. He is pointing out to the Commission——

Exam. Mullen: We will let the witness continue.

Mr. Quirk: All right.

Mr. Collins: Go ahead, Mr. Lynch.

The Witness: —it would be inconceivable to divert traffic from its lines and restrict and curtail service and growth in territories which it alone serves and in which it pioneered in railroad transportation. The D&RGW Railroad has built no trackage into these territories, pays no taxes and has no responsibility to the towns and cities, industries, businesses, farmers and the general public, nor can it perform a transportation service that is equal to or at a lower cost than that afforded by the Union Pacific to the Idaho and the Pacific Northwest territory.

All of the obligations and responsibilities now assumed by the Union Pacific Railroad Company in the named territory would remain with the Union Pacific with a lesser return with which to meet these responsibilities.

[fol. 823] Other witnesses will testify concerning the tremendous adverse affect that the Union Pacific would suffer if the D&RGW should succeed in this case and take away from the Union Pacific the traffic, or any appreciable part of it, indicated in the testimony of Mr. Earley. This adverse effect would also be felt by the Pacific Fruit Express Company, by the Union Pacific Coal Company and by the

employees of all those companies, and the detriment would extend to cities, towns, villages and the countryside all along the lines of the Union Pacific Railroad.

I will not discuss the subject in detail because other witnesses of the Union Pacific and witnesses of intervenors will do so. I do want to emphasize, however, that the intervention in this case on behalf of the defendants by the several State Commissions, the Union Pacific Railroad's employes, the Chambers of Commerce and others is not an idle or strategic gesture.

I previously called attention to map, Page 1 of my Exhibit, and to the fact that of the 5,606.7 miles of Union Pacific Railroad in Idaho, Montana, Oregon and Washington, 2,913.19 miles, or over 50 per cent of the total mileage, consists of numerous branch lines. On these branches, there is originated and terminated about 46 per cent of the total traffic in the area served by them.

The original purpose and the present benefit of this extensive branch line mileage was and is to serve as so-called [fol. 824] feeders for the main lines of the railroad. Few, if any, of these branches would be self-sustaining if operated and treated as individual lines separate and apart from the Union Pacific.

Branch Line operation is generally more expensive than main line operation and affords less opportunity to have increased efficiency. The fate of branch line operation is well known to the Commission through its conduct of abandonment cases since 1920. Unless we have a substantial main line haul on traffic to and from these branches, the operation of many if not most of them would not long be justified.

Attention is directed to our branch line situation in this area because of the fact that The Denver and Rio Grande Western Railroad in this case, to the extent that it may succeed in diverting traffic from the Union Pacific if the Ogden Gateway is opened, is to have our very extensive Northwest branch lines serve as "feeders" for the main line of The Denver and Rio Grande Western Railroad, instead of their owner, the Union Pacific Railroad.

In this connection the Commission's attention is also directed to the fact disclosed in its own reports, that since

1930 the D&RGW has abandoned its own branches to the extent of nearly 17 per cent of its total mileage as of that year, while the Union Pacific's abandonments for the same period are only about six per cent of its total mileage as of 1930.

The D&RGW's policy of abandoning its branches and fa- [fol. 825] voring its main line was recognized by the Commission in Denver & R. G. W. R. R. Co. Trustee Abandonment, 247 I. C. C. 381, 384. On some of our branches in this area, our expensive branch line haul would be about as long as the main line haul we would get if we are compelled to turn over the traffic to the D&RGW at Ogden. The shorter our main line hauls are in proportion to our branch line hauls, the less possibility there is for making a profit on traffic to and from the branches, and the greater likelihood there is of abandonment of the branch lines. If the D&RGW succeeds in this case, our main line haul on much of the traffic would not be much more than 100 miles, while our present main line haul is more than 1,000 miles.

I now wish to comment briefly upon certain statements made by Mr. Bradford at the Salt Lake City hearing.

At Pages 196 and 197 of the record, he mentioned the fact that the traffic his road seeks to take away from the Union Pacific in this case would be interchanged between the Rio Grande and the Union Pacific through the Ogden terminal by the Ogden Union Railway and Depot Company, and that:

"The OUR&D yard is a modern yard and in our opinion is adequately capable of taking care of the additional Northwest business which might move through there."

While another witness will demonstrate in detail that Mr. Bradford is entirely wrong in his statement, I wish also to contradict it most emphatically.

[fol. 826] The yard facilities at Ogden present an insurmountable problem. The lines of the Union Pacific and the Central Pacific, now the Southern Pacific, were joined at the historic Golden Spike ceremony on May 10, 1869, at a point just west of Ogden known as Promontory Point. In the construction of these lines, terminal facilities for interchange of traffic were installed at Ogden, and are owned jointly by the Union Pacific and Southern Pacific. These

facilities, of course, have been enlarged and expanded through the years.

At the same time, the village of Ogden grew and expanded into a large city. Industries were established, and, for the most part, adjacent to the railroad. Today, we find the terminal surrounded by these growing industries, by buildings and other construction, and property suitable for railroad expansion is not available.

Attention is directed to page 10 of my Exhibit, which is an aerial photograph of the Ogden Yard. Terminal facilities at Ogden have been expanded to the limit of available space, but they are inadequate for the volume of business now being handled, with the result that service can only be provided at a greatly increased expense in the way of additional switch engines and related services, and even then trains frequently leave that terminal late and it is necessary to run off the time by reducing tonnage and subordinating other movements to the late trains.

[fol. 827] This condition is so pronounced that the Union Pacific long ago found it necessary to by-pass Ogden to the extent possible. This has been done by making up trains at Pocatello, Salt Lake City and/or Green River that can be moved via outside wye trackage at Ogden and not actually enter the terminal proper. Further, Ogden is an icing point for eastbound and westbound perishable traffic, and the facilities would not lend themselves efficiently to the icing of perishables from the Pacific Northwest and Idaho territory at Ogden prior to delivery to the D&RGW.

While serious delays to trains at the Ogden terminal are frequent throughout the year, during the heavy Fall business they are more pronounced. As an example, during the month of September, 1949, it was necessary to hold out 76 trains from the Southern Pacific, an average of 36 minutes per train, while track room was being made available in this yard. During the same month, Ogden yard received 220 fruit trains from the Southern Pacific, and these trains were in the yard an average of four hours thirty-eight minutes per train.

D&RGW traffic from these trains during the same period averaged six hours nine minutes from the time of arrival until delivery was accomplished. If the Ogden Gateway was

opened for traffic from Pocatello for delivery to the D&RGW, this traffic would have to be received in the Union Pacific Yard, and then move to one of the ice house docks [fol. 828] for servicing, and then handled to ice house tracks for movement to the D&RGW, and with present ice dock facilities at Ogden, it would result in long delays in handling perishable traffic. Another witness will explain the Ogden yard situation in detail.

Mr. Bradford, at Page 203 of the record, stressed the interchange of traffic between the Union Pacific and the D&RGW at Denver and at Utah Junctions. Another witness will show that the greater percentage of the cars handled in the Utah Junction were interchanged at Provo and Salt Lake City rather than any considerable interchange at Ogden. The diversion of war traffic referred to by Mr. Bradford at page 208 of the record was, for the most part, if not entirely, interchanged at Salt Lake City, rather than Ogden, account latter yard being congested.

Our experience in the interchange of traffic with the D&RGW at Denver is not all satisfactory. Serious delays are encountered, because the Rio Grande is either unable to handle the traffic promptly or employs inefficient methods of handling it. As will be shown by another witness, cars we have interchanged to the Rio Grande at Denver have been delayed by that line as long as 117 hours.

Other witnesses will demonstrate Mr. Bradford's error in stating that the Rio Grand has at its "command" a total of approximately 11,500 refrigerator cars under contract with the American Refrigerator Transit Company, and they will also show that the Union Pacific and the Pacific Fruit [fol. 829] Express have regularly come to the aid of the Rio Grande by furnishing it refrigerator cars.

At Pages 210 and 211 of the record, Mr. Bradford explains certain statistics indicating increases in train speeds, tons per train, train hours, etc., between 1944 and 1948, which he said indicate Rio Grande efficiency.

I submit Page 11 of my Exhibit showing statistics of the Union Pacific compared with the D&RGW for the year 1948. These are taken from annual reports to the Interstate Commerce Commission and Statement No. 49,200, dated July, 1949, Bureau of Transport Economics and Statistics, Interstate Commerce Commission.

From this exhibit, you will note the substantially greater efficiency of the Union Pacific versus the D&RGW in freight gross tons per train mile, gross ton miles per train hour, miles per locomotive day, car miles per car day, also lower freight transportation expenses per 1,000 gross ton miles, as well as transportation expenses per passenger car mile.

It will be noted that, regardless of these efficiencies, the Union Pacific, because of the territory it serves and being a transcontinental route, found it necessary to operate 31,768 passenger car miles per mile of road operated in passenger service compared with 11,612 passenger car miles per mile of road operated in passenger service by the D&RGW, as a result of which, our passenger service deficit in 1948 was [fol. 830] $28,462,572; or $4,291.97 per mile of road operated compared with a deficit of only $4,954,967, on the D&RGW or $3,127.41 per mile of road operated.

It is common knowledge that, in normal times, deficits from operating passenger service are the rule rather than the exception among railroads generally. This deficit was incurred from our passenger operations regardless of the fact that we have reduced our passenger service expenses in every way we could. Deficits from passenger service may be expected in future years even though the service be reduced to the bare minimum essentials to meet public requirements. We cannot go out of the passenger business to avoid incurring a deficit from that operation.

Our only hope is to offset that deficit by a full volume of freight traffic and freight revenues, and we are in no position to contribute financial aid to the Rio Grande by giving it a share of our freight traffic.

It will be noted from the exhibit that the Rio Grande is not justified in demanding financial assistance from the Union Pacific. While the net railway operating income per mile of road from freight trains for the Union Pacific was $7,293.13 compared with $7,005.40 for the D&RGW——

Mr. Quirk: Mr. Examiner, I object to these sentences. My company is not demanding financial assistance from the Union Pacific in this proceeding.

[fol. 831] Exam. Mullen: I think the witness is stating what he meant, Mr. Quirk, by giving it a share of the freight traffic. I think we understand what he means. It is not direct financial assistance, of course.

The Witness:—considering both freight and passenger trains, the net railway operating income per mile of road for total transportation service was $4,374.46 for the Union Pacific and $4,976.82 for the D&RGW, in the light of which, there is no justification for the D&RGW's demand to share in Union Pacific's traffic from and to Idaho and the Pacific Northwest, where the Rio Grande has no facilities and can furnish no service. A loss of this traffic can result in only one thing to the Union Pacific, and this is a prohibitive increase in its operating costs, without any offsetting return whatever from the D&RGW or anyone else.

For a further comparison, I submit Page 12 of my Exhibit showing taxes paid, by States as well as United States Government taxes by the Union Pacific and by the D&RGW Railroad for the year 1948, as reported in annual reports to the Interstate Commerce Commission. It will be noted that the D&RGW's taxes for the year 1948 in the States of Colorado and Utah were $2,852,956 compared with Union Pacific's taxes in those two States of $2,949,568 for that year.

It will also be noted that the Union Pacific's taxes in the States of Idaho, Montana, Oregon and Washington, [fol. 832] which is the territory in which the D&RGW Railroad wants traffic for movement over its line via the Ogden Gateway, were $4,991,573. Further, the exhibit shows that taxes per mile of road operated on the Union Pacific were $6,152 compared with $3,294 for the D&RGW.

At Page 201 of the record, Mr. Bradford states that, in the event business moved from Idaho Falls via the Ogden Gateway and D&RGW to Pueblo, there would be ten yard moves of more or less importance involved, and that via the Union Pacific from Idaho Falls to Pueblo, via Denver, there are nine yard moves involved.

This is in error, as the following terminals only would be involved via the Union Pacific, namely, Idaho Falls, Pocatello, Montpelier, Green River, Rawlins, Laramie, Denver and Pueblo, or a total of eight. At Montpelier and Rawlins, all that is involved is relaying engines, servicing and inspection. No importance can, therefore, be attached to those two terminals.

Mr. Bradford erred in indicating Cheyenne as a terminal,

on Denver traffic, overlooking the Borie, Wyoming cutoff, which is 9.5 miles west of Cheyenne and by-passes that terminal. This cutoff line has been in service since 1908. In addition to the fact that the involved traffic would move through two more yards if moved through Ogden over the D&RGW than if moved direct by the Union Pacific, the traffic would have to be handled through the Ogden terminal under complicated, congested and expensive operating conditions, which will be discussed in more detail by another [fol. 833] witness. Too much emphasis cannot be placed on the importance of avoiding the handling of traffic through terminal yards wherever possible, because each terminal yard which can be avoided results in a definite saving of time, protection to lading and reduced expenses.

Mr. Bradford, at Page 209 of the record, calls attention to the fact that during the January and February, 1949 blizzards in our territory, when our line was blocked in Wyoming, the D&RGW handled considerable traffic for the Union Pacific. There is nothing unusual about such diversion of traffic among railroads under emergency conditions. It is the rule and not the exception.

Detour movement of trains and traffic via other lines in the event of interruptions is an accepted principle in American railroading, and hundred of agreements are on file today stipulating the terms and conditions governing such movements. It is the device under which traffic of the Nation is kept fluid regardless of the temporary stoppage or incapacity of one line to function.

We also have special tariff provisions which anticip-te and provide for just such diversions. Certainly it would not be economically sound to use this emergency diversion of traffic from the Union Pacific to the D&RGW as an argument or reason for a permanent diversion of Union Pacific's traffic, nor as a measure of the Rio Grande's capacity or ability to handle such diversion permanently. If Mr. Brad- [fol. 834] ford's contention is sound, then the Union Pacific should have had permanently diverted to it the D&RGW's traffic since 1925, for in August of that year, their line was flooded near Helper, Utah, and at their request, the Union Pacific handled 20 D&RGW passenger trains and 11 of their freight trains between Denver and Ogden. However,

we have not considered that this emergency assistance to the D&RGW was any reason for seeking permanent diversion from them to our line of a large part of or any part of their traffic.

I would like to add there that on March 21, the D&RGW had suffered a——

Mr. Quirk: What date?

The Witness: What is the question?

Mr. Quirk: You said "March 21." What year?

The Witness: 1950.—a line interruption caused by a landslide and had some traffic back up, and on March 22, made inquiry of our officers as to the chances or the prospect of re-routing some traffic via the Union Pacific between Salt Lake City and Denver. It seems they had good fortune and the line blockade was not of the duration expected, but there were 13 cars re-routed from Salt Lake and 29 cars re-routed from Denver, via the Union Pacific.

Mr. Quirk: Did they get through Ogden all right?

The Witness: I think so.

By Mr. Collins:

Q. Did you go to Ogden?

[fol. 835] A. I think so. It was a very small movement, not much movement.

Q. Didn't they go around the Wye, they didn't go through the terminal?

A. They went around the Wye.

Q. They didn't go through the terminal?

A. No. Again, on March 31, the D&RGW suffered a line blockade. I believe that was due to burned off journal. It was necessary to detour their passenger trains 8 and 17 over our line between Pallas and Provo, and in addition to that, it seemed that the wrecking derrick of the D&RGW was inoperative, and we loaned them the Union Pacific derrick to clear their line.

Now, those incidents just go to show what can and does happen on a railroad, and I reiterate what I read there in my testimony, that diversions in emergency situations are nothing unusual. They occur right along, and in a neighborly way, each railroad helps the other railroad in distress.

Witness Earley of the Rio Grande described conditions which he said have caused a very severe decline in traffic originating on the Rio Grande and loss of tonnage to other forms of transportation, and stated that, because of these losses, they were forced to turn their thoughts and efforts to off-setting these losses by taking bridge or through traffic from other connecting lines, and he pointed to the startling success the Rio Grande has enjoyed in this effort during recent years, stating that few, if any, other Class I railroads had experienced such a change from local to [fol. 836] through freight traffic during a similar period.

His discussion of these matters appears at Pages 61 to 64 of the record.

Mr. McCarthy confirmed this policy of the Rio Grande, and stated at Page 35 that they want to continue increasing their volume of traffic they take from the originating and terminating and connecting lines and others, "because generally speaking, there is more money in it."

At Pages 32 and 33 of the record, Mr. McCarthy made it clear that the only purpose of the Rio Grande in filing the complaint in this case was "to improve the financial condition of our railroad."

In connection with the sta-ements of these two Rio Grande officers, I wish to point out that the Union Pacific is not in position to give up any portion of its traffic and revenue to enable the Rio Grande to pursue its policy of improving its financial condition by taking traffic from connecting lines that originate and terminate it, and which lines are now hauling the traffic and in need of it to maintain themselves financially.

While the transportation business of the Union Pacific has produced satisfactory results generally during many of the past 30 years; nevertheless, like the Rio Grande and all other railroads, it has had its lean years, and it is not in a position to be a "big brother" financially to the [fol. 837] Rio Grande or any other railroad.

Conditions that affect financial results of the Rio Grande and other railroads also affect the Union Pacific. For example, out of the past twenty years, there were only six years (principally those in the war period) in which the net railway operating income of the Union Pacific was sufficient

to pay the fixed charges and the dividends that were declared.

During this twenty-year period, the Union Pacific reduced its funded debt by $137,893,000, thus reducing its fixed charges by $9,654,235 annually, and made substantial additional investments in fixed property and new rolling stock in an effort to operate more economically, reduce maintenance charges and safeguard or increase our Net Railway Operating Income. These accomplishments, together with the payment of the dividends, were possible not because of earnings from transportation operations alone, but largely because of income from oil properties and other non-transportation sources which were earned outside of the common carrier plant.

The Union Pacific has no guarantee of a continuous condition of prosperity, and our common carrier business ought to pay its own way. To illustrate further, in 1949, although suffering some losses from January and February blizzards, the Union Pacific had a net railway operating income of $21,707,437. This amount was insufficient by $10,269,865 of the amount necessary to pay the interest on funded debt and the dividends that were declared.

[fol. 838] Contrasted with these facts, in 1948, according to the Annual Report of the D&RGW to the Interstate Commerce Commission, the D&RGW had a net railway operating income of $12,156,284. Out of this amount, the D&RGW was able to provide for all fixed charges and other miscellaneous debit and credit items, pay the dividend that was declared, provide for the sinking fund requirement, and still had left over in Surplus Account for the year an amount of $5,167,148.

As a matter of fact, and as will be shown by another witness, the percentage of increase in gross revenues from 1930 to 1949 reported by the D&RGW is relatively higher than the average percentage of increase of the other carriers operating in the western territory during this period.

Further, with a continuing lower level of traffic volume thus far in 1950, it is not likely that we will show a very substantial profit from our common carrier business during the current year.

By Mr. Collins:

Q. You mean the Union Pacific Railroad. It is a "we." "It is not likely that we will show a very substantial profit," is the way it reads. I just want to make sure you mean the Union Pacific Railroad.

A. We will change that, Mr. Reporter: "It is not likely that the Union Pacific will show a very substantial profit."

Even the oil properties are subject to Acts of God and could possibly vanish as the result of an earthquake. As a [fol. 839] matter of fact, a light earthquake in November, 1949 damaged 101 productive Company wells, of which 43 had stopped producing by the close of the year and several more have stopped since that time.

In closing my testimony, I wish particularly to emphasize the following facts for the Commission's serious consideration in connection with the Rio Grande's demand in this case for a large and vital part of Union Pacific Traffic. It would take substantial traffic from the Union Pacific, most of which it originates and terminates and bears the cost of the expensive part of the service; it would deprive the Union Pacific of revenues from a 1,000-mile haul, in contrast to the haul of little more than 100 miles from Pocatello to Ogden; it would, as other witnesses will show, add from 33 to over 200 miles more transportation, but by adding at least one and probably two more interchanges between carriers and by adding at least two more terminal yard services; it would require moving the traffic through the complicated, expensive and frequently congested Ogden terminal which was constructed for interchanging and handling eastbound and westbound traffic and not for northbound or southbound traffic; it would require at least a full day longer than it does by the Union Pacific for the same traffic to reach the same destinations; it would result in wasteful transportation and in economic waste, for the additional cost of hauling traffic over the additional mileage at the [fol. 840] same rates would necessarily reduce the net return or the possibility of net return at present rates; its effect would be to curtail services to shippers or increase their rates, or both, and to endanger continuing operation of many of Union Pacific's approximately 3,000 miles of branch lines in Idaho and the Northwest; and while it

might help the Rio Grande to accomplish the only purpose, as stated by President McCarthy, that it had in filing the complaint, that is, to improve the Rio Grande's financial condition, it could, and it would if the Rio Grande should succeed, seriously endanger the financial ability of the Union Pacific to maintain its transportation facilities and personnel in the manner and to the standard necessary to furnish essential service to the National Defense and reasonable efficient service to shippers.

By Mr. Collins:

Q. Mr. Lynch, in mentioning the figures on page 14 of your statement, you said, as I noticed it, that they were in thousands, and then you read them as they are shown on that page, that is, actually in billions, but you meant round thousands at the end and not carried out to hundreds?

A. That is right.

Q. You didn't intend to make any change in the way the figures are stated there?

A. No, I wanted to point out they were thousands, the way they were reported in the Commission's report.

[fol. 841] Q. You don't bring it down into the detail of hundreds?

A. No.

Q. All right, that is all. Do you want to say anything further?

A. I have nothing further to enter.

Mr. Collins: That is all.

Mr. Quirk: We will have to ask cross examination be deferred.

Mr. Collins: To when?

Mr. Quirk: I don't know. I am following your pattern on this.

Mr. Collins: You are.

Exam. Mullen: You will let us know, then, a little later?

Mr. Quirk: Yes. This gentleman has given us a great many figures here. I said we wanted a reasonable time on it. Mr. Collins insisted on that in all of our witnesses except one.

Exam. Mullen: All right, call your next witness, Mr. Collins.

Mr. Collins: I want to make the record clear on that. I asked for the privilege of deferring cross examination of Mr. Earley for the reason that I would limit cross examination, if given the privilege, and wound up by not cross examining him at all. It ended at the Salt Lake hearing.

I would like for Mr. Quirk to speed along in his decision as to whether or not and when he may want Mr. Lynch for cross examination, because Mr. Lynch is an operating officer of the railroad and has a lot of duties that shouldn't be [fol. 842] made to wait while opposing counsel is making up his mind, so I insist that he make up his mind as soon as he can as to what he wants to do in the way of cross examination.

Mr. Qurik: We will make up our mind as soon as we can. We have not indicated any desire this proceeding be delayed at any time. It would be over now if we had our way, but there is a lot of detail here and technical stuff that has to be checked.

Exam. Mullen: Will you be here tomorrow, Mr. Lynch?

The Witness: Yes sir, I will be here tomorrow.

Exam. Mullen: You may call your next witness.

(Witness excused.)

Mr. Collins: I offer Exhibit 12 in evidence.

Mr. Quirk: I think that ought to be deferred until we cross examine this witness.

Exam. Mullen: It will be received, subject to objection later.

(Defendants' Exhibit No. 12, Witness Lynch, received in evidence.)

Mr. Quirk: Do you want a recess?

Exam. Mullen: Yes, we will have a ten-minute recess.

(Short recess taken.)

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Collins: Mr. Examiner, at that point in Mr. Lynch's testimony on page 14, where the gross ton miles are shown [fol. 843] for three years, they are stated in billions, and he referred to page 11 of his exhibit at about the middle of the page, where there appears "gross ton miles freight,"

and those figures should have thousands added to them as they are stated there.

Exam. Mullen: What page of the exhibit?

Mr. Collins: Page 11 of the exhibit, "gross ton miles," down about the middle of the page.

Exam. Mullen: Yes.

Mr. Collins: That should have the word "thousands" under it, because the figures should have "one thousand" added to each U.P. and D&RGW. Is that clear?

Exam. Mullen: Just a moment. We will correct the exhibit on the record.

Mr. Collins: Mr. Plummer.

K. V. PLUMMER was sworn and testified as follows:

Direct examination.

By Mr. Collins:

Q. Will you state your name, please?

A. K. V. Plummer.

Q. And what position do you hold?

A. Vice President and General Manager, Pacific Fruit Express Company.

Q. What is your business address?

A. 116 New Montgomery, San Francisco.

Q. You have prepared a statement and some exhibits?

[fol. 844] A. I have.

Q. An exhibit for presentation in this case?

A. I have.

Q. And are the facts and the statements in your prepared statement and exhibits true and correct to the best of your knowledge and belief?

A. They are.

Q. Will you proceed with your statement?

A. The Pacific Fruit Express Company is a wholly owned subsidiary of the Union Pacific Railroad Company and Southern Pacific Company, each holding 50 per cent of the stock. Its obligation to its parent companies is to furnish refrigerator cars, perform protective services, handle diversions, and render passing reports to the trade. It also

has a contract with the Western Pacific Railroad Company under which somewhat similar obligations prevail, the only difference being that Western Pacific provides its own icing independently of PFE.

In its contracts with parent companies and Western Pacific Railroad, Pacific Fruit Express Company receives the exclusive right to supply refrigerator cars and is solely responsible for the direction of movement and distribution of these cars to the end that undue favor or discrimination shall not exist between the respective railroad companies or any shippers served by them.

The magnitude of Pacific Fruit Express Company's facilities and services can best be illustrated by the following [fol. 845] data taken from books and records of the company and which, to the best of my knowledge and belief, are true and correct: The total investment in facilities of the Company as of December 31, 1949, is $179,066,933, of which $158,289,202, is invested in rolling stock; $14,277,425 in ice plants, icing platforms and related facilities; $5,746,063 in car shops; and $754,243 in other miscellaneous facilities such as land, tracks, heaters, storage facilities, etc.

The total fleet of refrigerator cars operated by PFE as of January 1, 1950, is 38,589 cars, of which 37,573 are owned by PFE and 1,016 car- of Western Pacific ownership are operated under lease arrangement. This fleet of 38,589 cars represents about 29.7 per cent of the national supply of refrigerator cars.

PFE also owns 287 express refrigerator cars which are operated in the Railway Express Agency pool.

While the national supply of refrigerator cars, according to data issued by the Association of American Railroads, has shrunk from approximately 143,000 on January 1, 1942, to approximately 130,000 on January 1, 1950, PFE, through purchase of 1,002 cars in 1945, 3,941 in 1947 and 1,059 in 1948, and the construction in its own car shops of 3,000 new cars in 1949, has actually increased its fleet since 1942 from 36,083 cars to 38,589 cars. The total investment made in new cars during the last five years alone exceeds $65,000,000.

For the repair and maintenance of its large fleet of cars,

[fol. 846] PFE owns and operates six car shops located as follows:

On Union Pacific: Nampa, Idaho; Pocatello, Idaho.

On Southern Pacific: Colton, California; Los Angeles, California; Roseville, California; Tucson, Arizona.

As a matter of information, PFE is now constructing at Pocatello, Idaho, a new car shop costing about $1,300,000, which will more than triple the capacity of the existing facility. This should adequately take care of the present and future needs of that area.

In addition, inspection, cleaning and light repair tracks are located at points as shown on page 1 of Exhibit 13.

Exam. Mullen: That will be Exhibit 13.

(Defendant's Exhibit No. 13, Witness Plummer, marked for identification.)

The Witness: At North Platte, Nebraska, PFE has undertaken the initial stage in development of hot water de-icing facilities for removal of ice from empty cars, 2 tracks of 20 carlengths each having been equipped to date. Ultimate plans provide for two 80-carlength tracks. This facility greatly reduces the time formerly required for de-icing cars and leaves them in better condition for the next load.

Substantial economies are anticipated in reduced labor costs to PFE for removing ice and in reducing operating costs to its contract railroads through elimination of this ice haulage from North Platte west to Idaho, Utah and even into California. To the extent that eastbound traffic [fol. 847] and westbound movement of empty cars might be diverted to the D&RGW through the Ogden gateway, benefits from and usefulness of this North Platte installation would be lessened.

To provide lowest possible cost for refrigeration service, PFE owns and operates 17 artificial ice manufacturing plants and 2 natural ice plants together with related car icing and other facilities, locations and capacities of plants being shown on page 2 of Exhibit 13.

PFE also maintains ice transfer platforms at various strategic points on UP and SP rails, the major ones being as shown on page 2 of Exhibit 13.

In the 12 months ended December 31, 1949, PFE issued

from its own ice plants 1,212,025 tons of ice. In addition, it purchased 758,049 tons from contract plants located on UP and SP rails.

The investment of $14,277,425 in ice plants and icing platforms has made ice and car icing services available at a price lower than could be obtained from commercial plants under comparable conditions.

If the opening of the Ogden gateway results in the diversion of any substantial amount of traffic originating in the Northwest and Idaho producing areas, the decreased volume of icing performed at such main line stations as Laramie, Council Bluffs and Kansas City, would naturally be reflected in increased unit operating costs at those points. [fol. 848] The same holds true of all other services performed by PFE, for volume is a most important factor contributing to low unit cost of operation.

In this connection, PFE spent in 1946 more than $360,000 in constructing at Laramie, Wyoming, one of the most modern and efficient car icing platforms in the country. With this facility, which is a double deck island-type 85-length carlength platform, bunker icing and icing in the car body can be performed simultaneously at the low train average of about one minute per car serviced.

In 1949, at Council Bluffs, Iowa, some $50,000 was spent for improved ice delivery facilities to speed up the handling of trains. Such expenditures were made with a view to more efficient handling of present traffic and an increased volume of traffic in the future. Obviously, they were not made with the idea or for the purpose of handling a reduced volume of traffic which witness Earley's testimony indicates may result to Union Pacific if the D&RGW succeeds in this case.

By Mr. Collins:

Q. Mr. Plummer, may I interrupt to ask you to state what you mean by "island-type of platform"?

A. A platform that is built in the center of two tracks, so you can service trains on either side.

Q. Very well. Go ahead, sir.

A. In addition to icing service, PFE also furnishes heater service on lines of its parent companies. For the per-

[fol. 849] formance of this service it has 8,484 charcoal heaters, 978 manually operated alcohol heaters, and 3,184 thermostatically controlled alcohol heaters. The latter have proven more efficient than either the charcoal or manually controlled alcohol heater and a gradual changeover is being made to the thermostatically controlled alcohol heater. This has required installation of new alcohol and heater storage facilities, costing so far about $15,000, to accommodate existing and potential traffic.

In the handling of the heater service, inspection forces are established at strategic points along the existing routes of travel. The number of men required at each inspection station is controlled more or less by the time allowed for servicing trains. It is conceivale that forces might vary to some extent depending upon the amount of traffic handled, but here again a smaller volume of traffic would increase the unit cost of service for it would require about as many men on a shift to service on- train as it would three or four trains, the number of men being regulated by the time allowed for servicing trains. This situation might prevail at some seven or eight inspection stations on the main line of the UP east of Pocatello and it is unlikely the increased unit costs at these points would be offset by any reduction in unit cost at Ogden resulting from heavier volume of traffic through that gateway.

As previously stated, the national supply of refrigerator [fol. 850] cars has shrunk since 1942 from approximately 143,000 to about 130,000 in 1950. This gradual shrinkage has made it necessary for all carlines to cooperate closely with each other to get the maximum use of available equipment. It is not uncommon, therefore, for one carline to call upon another to assist in meeting peak requirements and in this regard PFE is no exception.

For example, every year PFE makes rather extensive use of cars owned by the Merchants Despatch, Inc., Northern Refrigerator Lines, Fruit Growers Express, Western Fruit Express, American Refrigerator Transit (ART), Santa Fe, and others. Likewise, these carlines often use PFE cars to assist in protecting peak requirements or flush movements that occur from time to time.

In this connection, I should like to point out that all ne-

gotiations having to do with the exchange of c. s between one carline and another are handled directly between the car owners and not with any contracing railroad served by those car owners.

To be specific, if PFE needed ART cars, it would deal directly with the ART and not with the D&RGW. True, physical delivery of some cars might be made to our contract lines by the D&RGW, but in each instance the car owner itself—the ART rather than the D&RGW Railroad—would be the one to direct the movement to PFE service. This applies with equal force to the PFE and its contract lines; PFE exercising full control over the handling of its equipment.

[fol. 851] As a matter of information, the number of foreign cars, including ART, delivered to PFE contract lines by the D&RGW is relatively small when compared to the total loads handled on PFE lines in foreign cars which, during the five-year period 1944 to 1948, inclusive, averaged 146,975 annually—this during the "car pooling period" when cars were at times allocated without regard to car ownership.

Two of the shippers called from Idaho by the D&RGW spoke of refrigerator car shortages in their locality. (Stephens, Record 337; Stranger, Record 341-353).

I wish to say that for 12 years prior to the war year 1942, no refrigerator car shortage of any consequence prevailed in Idaho or in any loading territory served by PFE and its contract railroads.

It is true, however, that despite its aggressive new car program, PFE, like other carlines and railroads in the country, experienced refrigerator car shortages of varying duration, beginning in the war year 1942 and intermittently to 1948, that not only inconvenienced its shipping friends, but also cut into the revenues of PFE and its contract railroads.

To make the record clear as to shortages that occurred on PFE contract lines, including the Union Pacific in Idaho from 1942 to 1949, I wish now to explain or describe the circumstances surrounding the handling and movement of refrigerator cars during that period.

[fol. 852] It will be recalled that our entry into World

War II came with the Japanese attack on Pearl Harbor, December 7, 1941. Numerous "war controls" followed. In September, 1942, at request of the Office of Defense Transportation, voluntary agreement was reached by all the carlines to "pool" the refrigerator car equipment of the Nation.

This was considered necessary to meet the anticipated growth of war-time perishable traffic by rail and to provide all producing areas with a fair share of the Nation's available equipment. In furtherance of this purpose, a manager was appointed to direct the supply and movement of refrigerator cars without regard to ownership and in a manner that would promote greatest possible national efficiency in car handling.

This action was made mandatory by issuance of I.C.C. Order 95 on November 9, 1942. This pooling arrangement remained in effect after hostilities ceased and in fact, to some degree until original Order 95 was cancelled at the end of June, 1949. It is my considered opinion that the Commission acted wisely and in the interests of the public welfare for, had such an order not been issued, it is quite conceivable that at times a surplus supply of cars might have been available on certain railroads and in certain producing areas while others might have suffered through lack of cars.

There were times when PFE and its patrons were inconvenienced to a greater extent than some of the competing [fol. 853] areas, but at other times the reverse was equally true. In a country as large as the United States, and with the uncertainties attending the fruit and vegetable industry, it is not possible to regulate the flow of cars in a manner that will produce the exact number that should reach the many and widespread loading territories each and every day. Where maladjustments did occur they were quickly corrected.

During the period in which refrigerator cars were pooled, a record for aggressiveness in seeking a fair share of cars for our patrons was probably established not only by PFE but also by our contract lines—the Union Pacific, Southern Pacific and Western Pacific. In fact, from personal experience, I know at times we tested the patience of the Pool Manager and his principals in the Office of Defense Trans-

portation and the Interstate Commerce Commission in our efforts to obtain from the pool sufficient refrigerator cars to satisfy the wants of our patrons in Idaho and in other areas which we serve.

It is proper to relate, however, that by and large, I.C.C. Pool Manager Taylor, who was responsible for the general distribution of refrigerator car equipment, did an outstanding job and I know of no one who could have done better.

Failure of Idaho shippers to receive cars in January and February, 1949, was due entirely to unprecedented storm conditions prevailing in the Rocky Mountain Area and not in any sense to lack of equipment. There were plenty of [fol. 854] cars available on both sides of the storm area and they were moved to loading territory in record time following the resumption of rail operations.

By Mr. Collins:

Q. Do you want to say anything more, Mr. Plummer?
A. No sir.

Mr. Collins: That is all.

Cross-examination.

By Mr. Quirk:

Q. Mr. Plummer, on page 4 of your narrative, you say: "If the opening of the Ogden gateway results in the diversion of any substantial amount of traffic originating in the Northwest and Idaho producing areas, the deceased volume of icing performed at such main line stations as Laramie, Council Bluffs and Kansas City, would naturally be reflected in increased unit operating costs"——

I don't know whether you realize it or not, if this gateway was opened, the traffic would move to Ogden, and back again to the Union Pacific at Denver; in that case it would not affect Council Bluffs, would it?

Mr. Collins: I object. This record does not show any traffic which would come back from the D&RGW to the Union Pacific at Denver. There is that possibility, but there is not and cannot be any such showing in this record.

Mr. Quirk: Will you read my question before you rule on it?

(Question read.)

[fol. 855] Mr. Quirk: Just before you rule on that, I want to make this statement: The witness here has made an "if" statement, and I have asked him an "if" question. The answer is quite obvious, but you may answer it, please.

Exam. Mullen: Does your question, Mr. Quirk, mean all of the traffic moving there?

Mr. Quirk: If the traffic moved through Ogden, was given back to the Union Pacific at Denver, which it would be, under the plan that is involved here, the complaint, and everything else. They can do that on the Los Angeles line now.

Exam. Mullen: You said "if it did."

Mr. Quirk: He said "if," too.

Exam. Mullen: It wasn't in your original question.

Mr. Quirk: I beg your pardon, it was in my original question.

Mr. Collins: I will withdraw my objection if Mr. Quirk's question means that if the traffic were given to the D&RGW at Ogden, and if it were turned back to the Union Pacific at Denver, then it would not affect Council Bluffs.

Mr. Quirk: All right, then.

Exam. Mullen: That is the question anyhow.

By Mr. Quirk:

Q. What is the answer?

A. Do you want a further answer, Mr. Examiner, than what Mr. Collins gave?

Exam. Mullen: You are the witness, not Mr. Collins.

The Witness: All right. Well, if the traffic moved through [fol. 856] Ogden and if it came back through Denver, which is extremely unlikely; and if it made schedule through that circuitous routing, the difference would not be great at Council Bluffs and Kansas City.

By Mr. Quirk:

Q. Now then, if the statement that you made here, which is that "if there was a diversion of a substantial amount of traffic," didn't turn out to be so, then your statement, of course, is wrong, isn't it?

A. To the extent that any traffic moved through the Ogden gateway, it has some effect upon our operating conditions at main line icing stations. The volume would dictate the effect it might have.

Q. Now, on page 7 of your narrative, of your prepared statement, you say, "the ART rather than the D&RGW Railroad would be the one to direct the movement to PFE service."

Are you familiar with the contract between the Denver and Rio Grande Western and the ART?

A. I am not.

Q. You don't know whether that is true in that case or not, do you?

A. I have been connected with the Pacific Fruit Express Company since 1922, and in each and every instance they called upon the ART for cars. We have dealt with them and not any contract railroad of the ART Company.

Q. But you are not familiar with the contract that now exists?

[fol. 857] A. I have never seen the contract.

Mr. Quirk: That is all.

Mr. Collins: Just a moment.

By Mr. Quirk:

Q. Will you look at page 4 of the prepared statement, that passage, "The investment of $14,277,425 in ice plants and icing platforms has made ice and car icing services available at a price lower than could be obtained from commercial plants under comparable conditions."

This doesn't affect the rates or the charges to the shippers, does it?

A. All refrigeration rates are based upon the cost of service.

Q. If that investment at all would affect the charges to the shipper?

A. The investment makes it possible to produce a lower cost service than would be the case if we attempted to contract some of these stations I mentioned.

Q. Do you reduce the charges to the shipper every time there is some change in the cost?

A. The rates are handled by rate experts, not by me, sir,

but they are based upon the costs presented by our company and others.

Mr. Quirk: That is all.

By Mr. Plummer:

Q. In connection with Mr. Quirk's question as to your familiarity with the contract between the D&RGW and the ART, I show you Exhibit No. 11, which was introduced by Counsel Gibson without a witness, and ask you to read the [fol. 858] quoted portion there. You don't need to read it aloud, but I request Mr. Plummer be allowed to read that and then I want to ask him a question about it.

Mr. Quirk: Mr. Examiner, it seems to me that Mr. Collins is asking a layman to interpret a contract. I object to the question.

Mr. Collins: He is not——

Mr. Quirk: He said he was not familiar with it.

Exam. Mullen: The question has not been asked yet. We will let the witness study this for a moment.

By Mr. Collins:

Q. Have you read it?

A. I am ready for the question, Mr. Collins.

Q. I ask you if you see anything in that language there that affects any of the statement you made in your direct testimony?

A. I think not. In the first place, I should like to again point out that we have the exclusive right to furnish refrigerator cars on the lines of the Southern Pacific and the Union Pacific, also the Western Pacific. Therefore, any carriers served by us would not make a request upon the D&RG for cars; that would be the obligation of the PFE, and as I have stated previously, since 1922, when I have been intimately connected with car handling, all of our dealings are with the car owner and not with any contract railroad.

Q. If the Union Pacific, Southern Pacific or Western Pacific wanted cars in the first place, they would call upon you for them?

[fol. 859] A. That is correct.

Q. In what way would they ever obtain a ART car for use on these three lines I have mentioned?

A. Only with our consent.

Q. That is with the PFE's consent?

A. And the PFE would make the arrangements, not the Union Pacific.

Mr. Collins: Thank you.

By Mr. Quirk:

Q. Ordinarily you don't want the help of the ART, do you?

A. I think I made it clear in my report, Mr. Quirk, it is necessary today, with the limited number of cars in service in the country, that all car lines cooperate with each other and exchange cars when necessary to meet peak loads. That we are doing constantly. We have called on the ART this year; we have called on the other car lines. In turn, they have called upon us, and without that spirit of cooperation the perishable loads in this country wouldn't be handled.

Mr. Quirk: That is all.

(Witness excused.)

Exam. Mullen: Do you offer the exhibit?

Mr. Collins: Yes, I offer Exhibit 13 in evidence.

Exam. Mullen: Any objection?

Mr. Quirk: No.

Exam. Mullen: The exhibit will be received in evidence.

[fol. 860] (Defendants' Exhibit No. 13, Witness Plummer, received in evidence.)

Exam. Mullen: Do you have another witness?

Mr. Collins: Mr. Edens. I might say, Mr. Examiner, Mr. Edens has an exhibit which consists of a large map, and a correction or addition had to be made on it this morning, and I don't have all the hundred or so copies ready to distribute yet. We have 13 copies of that map, and plenty of copies of the testimony, and other copies of the map will be available, but I would like to put him on the stand and let him go ahead if we can do that. We will have other copies of the map to distribute a little later.

Exam. Mullen: Distribute what copies you have to opposing counsel.

Mr. Collins: All right.

R. E. EDENS was sworn and testified as follows:

Direct examination.

By Mr. Collins:

Q. Mr. Edens, you have prepared a statement for submission in this case, and an exhibit?

A. Yes sir.

Q. And that identifies you by name and position and so forth?

A. Yes sir.

Q. Are the statements in the testimony you will give, and the information disclosed in the exhibit, true and correct [fol. 861] to the best of your knowledge and belief?

A. It is.

Q. Will you proceed with your statement, please?

A. My name is R. E. Edens. I am Superintendent of the Ogden Union Railway & Depot Company with offices in Ogden, Utah, located within the terminal facilities maintained and operated by The Ogden Union Railway and Depot Company. I have held this position since October, 1936, and I am the officer of that company having direct responsibility for the maintenance and operation of the terminal facilities at Ogden, Utah.

My purpose in testifying here is to comment briefly on the testimony given by Mr. R. K. Bradford, a witness for the D&RGW, and to explain in some detail the operations within the Ogden terminal facilities and the difficulties which the Depot Company encounters in making interchanges between the Union Pacific and the D&RGW.

Mr. Bradford stated that the interchange of traffic at Ogden as between the Union Pacific and the D&RGW:

"would, of course, be handled by the Ogden Union Railway & Depot Company, which is an equally owned subsidiary of the Union Pacific and Southern Pacific." (R. 196).

He stated further:

"Our yard at that point is adjacent to the OUR&D yard."

He stated further that:

"We are spending approximately $200,000 this year in-
[fol. 862] creasing our yard to improve our facilities and bring about a faster and better interchange of business at that point." (R. 196)

And then he stated that:

"The OUR&D yard is a modern yard and in our opinion is adequately capable of taking care of the additional Northwest business which might move through there;" (R. 197)

And that:

"we do not at the present time, nor do our plants contemplate a classification by us of business received at Ogden." (R. 197)

Because of Mr. Bradford's discussion about the terminal facilities of the Ogden Union Railway and Depot Company, of which the D&RGW is a user only for certain of its passenger business, it will be my purpose to explain in my testimony, and by an exhibit, the reason for the existence of the Ogden terminal facilities, its purpose and capacity.

The Ogden Union Railway & Depot Company was incorporated during the year 1888 for the purpose of constructing and operating a railway terminal in the City of Ogden, Utah. On January 7, 1889, an agreement was made between the Depot Company, the Union Pacific Railway Company (now Union Pacific Railroad Company) and the Central Pacific Railroad Company (now Central Pacific Railway Company), setting forth the basis on which the facilities for the new Ogden terminal would be acquired, financed, maintained and operated.

[fol. 863] A new contract was entered into on September 1, 1920 (hereinafter called "Original Agreement") for a term of 99 years from September 1, 1920, between the Union Pacific Railroad Company, Oregon Short Line Railroad Company, Southern Pacific Company, Central Pacific Railway Company, and the Depot Company, for the purpose of enlarging the terminal facilities and to set forth the basis

for the enlargement and of the maintenance and operation of the facilities as so enlarged.

Full explanation of the contract, as supplemented, between the Depot Company, the Union Pacific and the Southern Pacific is set forth in the record before this Commission in Finance Docket No. 16507 (unpublished report dated July 13, 1949.)

The Union Pacific and the Central Pacific Railway Company each own 50 per cent of the capital stock of the OUR&D Company, and each company contributes funds in the way of advances to the Depot Company for enlargements and improvements. The Union Pacific since January 1, 1936 is the lessee of the Oregon Short Line. The Southern Pacific is the lessee of the Central Pacific Railway Company. The Union Pacific and the Southern Pacific use the terminal facilities at Ogden for interchanging their eastbound and westbound transcontinental and other traffic and for handling of their business at that point.

Under the terms of the contract, the Depot Company maintains and operates the terminal facilities for the benefit of the parties, and the parties agreeing that the Oregon [fol. 864] Short Line should have the right to use the terminal facilities and that such use should be considered as use by the Union Pacific.

For the purpose of operation and opportionment of fixed charges and expenses of maintenance and operation, the terminal facilities were divided into a Passenger Terminal Zone and a Freight Terminal Zone and the latter was divided into a Freight Station Zone and a Freight Yard Zone, all as defined in the Original Agreement. My discussion of the Ogden terminal facilities and the contract relating to them will deal only with the freight facilities embraced within the freight yard zone of the terminal.

The expenses of maintenance and operation, repair and renewal of the terminal facilities (Freight Yard Zone), including taxes not chargeable to capital account, are apportioned to the Union Pacific and the Southern Pacific on a per car count basis. Two car counts are assessed against the Union Pacific or the Southern Pacific for each car interchanged for either of those roads from and to the D&RGW.

The two-car count now assessed does not reflect cost to the OUR&D Company, but reflects only the amount which is assessed for accounting purposes against the company (Union Pacific or Southern Pacific) involved in the interchange with D&RGW.

The D&RGW is not a party to the contract covering the ownership, maintenance and operation of the Ogden termi- [fol. 865] nal facilities (although it does not under separate contract make use of the terminal facilities for certain of its passenger trains, but not freight trains), and does not bear in any manner any part of the expense of operating the freight yard zone which it is necessary to use in the interchange of business with the D&RGW.

A map to which I now refer——

Exam. Mullen: Exhibit 14.

(Defendants' Exhibit No. 14, Witness Edens, marked for identification.)

The Witness: ——Exhibit 14, has been prepared to show the trackage and other facilities of the Ogden terminal. On my Exhibit, I have shown:

By the letter "O" the route of the Union Pacific entering or departing from the Ogden terminal to Pocatello, Idaho, which is the route that traffic moves to and from Ogden, Utah, and points in Idaho, Montana, Oregon and Washington;

By the letter "S" the route to and from the Ogden terminal by the Southern Pacific;

By the letter "P" the route to and from the terminal of trains entering or departing the terminal to and from Salt Lake City; and

By the letter "U" the route eastwardly from the terminal to and from Green River and points east on the Union Pacific.

There is also shown on my exhibit at location marked "X" outside the boundaires of the Ogden terminal facilities, [fol. 866] a track owned by the OUR&D Company, used in delivering cars to the D&RGW and at point marked "Z" the track owned by the QUR&D Co., used in receiving cars from the D&RGW. The Union Pacific does not have a direct

connection with these tracks and I will hereafter explain the movements necessary by the OUR&D in handling traffic originating on the Union Pacific and interchanged to the D&RGW at Ogden.

It will be observed from my exhibit that the location of the OUR&D Company tracks, which have been provi-ed to make interchange with the D&RGW, makes it necessary to move switch engines of the OUR&D Company from one-third to one-half mile beyond the terminal facilities.

There are five divisions of the freight yard facilities in the Ogden terminal, namely, Ice House Yard: The Ice House Yard, designated on my Exhibit consists of 21 tracks which are used to handle Union Pacific eastbound business, including perishable raffic, received from the Southern Pacific, assembling cars for Union Pacific Stores Department and Roundhouse and bad order cars for Union Pacific shops, cars to be set at ice docks for icing and heater service, cars held for diversion, the storage of empty Union Pacific and Southern Pacific stock cars and two of the tracks (No. 6 and No. 9) are used to classify for delivery of cars to be interchanged to the D&RGW.

Union Pacific Yard: The Union Pacific Yard, designated on my exhibit, which consists of 13 tracks, is used to classify [fol. 867] traffic from hold tracks, to receive trains from the North (Pocatello) and Southern Pacific cars interchanged to the Union Pacific, for classification of cars for movement to Pocatello, the assembly of bad order cars for Union Pacific and Southern Pacific shops, the assembly of traffic for Salt Lake City, the assembly of cars for local industries delivered into the terminal by the Union Pacific and Southern Pacific, the handling of cars to be interchanged to the Southern Pacific for westbound movement, cars for Utah Quartermaster's Depot and making up outbound trains.

Southern Pacific Yard: The Southern Pacific Yard, designated on my exhibit, which consists of 14 tracks, is used to handle westbound traffic received from the Union Pacific's Eastern District and the D&RGW, the assembly of bad orders loads for Southern Pacific shops, the storage of Southern Pacific cabooses, cars for Utah Quartermaster's Depot and the making up of outbound Southern Pacific trains.

Hold Yard: The Hold Yard, designated on my exhibit, consi-ts of short tracks holding from 20 to 40 cars and is used for the holding of loaded traffic that is being held in Oregon for billing, disposition, etc., as well as empty equipment being held for loading. In about four months of the year, during the wheat movement, these tracks are filled with carloads of wheat which is required to be held for Federal inspection. Normally no trains are received or forwarded from the Hold Yard because of the short lengths [fol. 868] of the tracks.

East Yard: The East Yard, designated on my exhibit, consists of ten tracks which hold approximately 135 cars each. The facilities in this yard were constructed and put into operations during the War years 1942-1945, at a cost of $864,000. Construction of these facilities was required because the limited facilities of the terminal freight yards had become so congested with abnormal war traffic that operations were practically paralyzed.

This yard is used in the movement of Union Pacific manifest trains from Green River to Salt Lake City and through trains from Salt Lake to Green River which move between those points via what is known as the "Wye Route" shown by the letter "Y" on my exhibit. These trains do not otherwise make use of the freight terminal facilities of the OUR&D Company.

This yard is used also for cleaning and conditioning empty refrigerator cars, where a large force is maintained by the PFE Company for this purpose, and for overflow traffic from the Union Pacific, Southern Pacific and Ice House Yards during periods of heavy traffic when those yards will not accommodate the normal flow of business. The property for this yard and the trackage therein was provided during World War II for the handling of overflow traffic from the main freight yards.

Its relation to the other four yards makes operation therein expensive, but it was constructed in this location [fol. 869] because it was found that, due to the industrial development around the Ogden terminal facilities, there was no room for expansion in a location adjoining the main freight yards. When trains are moved to the East Yard because of the overcrowded conditions of the other yards,

they are switched in the East Yard and then returned to one of the other three freight yards already described for classification with other traffic.

Each of the above yards is within the freight yard zone, and I have indicated by notation on my exhibit the ice docks within the Ice House Yard.

D&RGW facilities: That D&RG train yard is located just west of the north end of OUR&D yard and the main line tracks of the Southern Pacific, and their roundhouse, car shops, freight house, tracks for interchange with the Bamberger Electric Railroad, and a number of industries served by the D&RGW are located east of the OUR&D yard. Connecting its train yard on the West with its facilities to the East of the OUR&D yard, the D&RGW has a track which crosses at right angles at point marked "A" on my exhibit, four combination switching and freight yard lead tracks at the north end of the OUR&D yard, which are used by Union Pacific and Southern Pacific freight trains for entrance and exits, also two main line tracks used by the Southern Pacific for all of its eastbound and westbound passenger trains.

The crossing at Point "A" is protected by interlocker with signals normally set clear for OUR&D movements. [fol. 870] The D&RGW controls this interlocker and when its crews want to cross OUR&D tracks, they unlock the control box and set the signals at stop against all OUR&D switching and Union Pacific freight trains from and to the North, and all Southern Pacific freight and passenger trains arriving and departing.

Switching in Interchange with D&RGW: Union Pacific's southbound traffic from Idaho, Montana, Oregon and Washington for delivery to the D&RGW at Ogden is received in trains from Pocatello normally in the Union Pacific yard. Since there is no direct track connection between the lines of the Union Pacific and the D&RGW at Ogden, it is necessary that cars interchanged to the D&RGW at Ogden be delivered by the OUR&D Company.

Under normal conditions, all Union Pacific freight trains arriving in the Ogden terminal from Pocatello and the Northwest are switched and classified in the Union Pacific yard, and all traffic for the D&RGW and other Ice House

yard traffic is assembled in the Union Pacific yard, and when conditions permit, this assembled traffic is moved from the Union Pacific yard to the Ice House yard where it is reswitched and cars for delivery to the D&RGW are reassembled with other cars in the Ice House Yard where it is reswitched and cars for delivery to the D&RGW are reassembled with other cars in the Ice Yard for movement to the D&RGW's interchange track indicated by the letter "X" on my exhibit.

[fol. 871] This, of course, is more than double the handling required in normal interchange at this terminal between the Union Pacific and Southern Pacific. There are many times, particularly during heavy volume of traffic that we are unable to receive trains in either Ice House, the Union Pacific or the Southern Pacific yards, and it is necessary to move the trains on to the East Yard about two miles from the Main Yards and there switch the train and later return the traffic to the main yard for proper classification and assembly.

These movements of trains to the East Yard and return are extra movements and must be followed by the movements I have already described to effect interchange of cars in such trains to the D&RGW. I estimate that this handling increases our costs by four times the cost of handling direct from the Union Pacific yard to D&RGW and five times the cost of handling to the D&RGW direct from the Ice House Yard.

Traffic received from the D&RGW for interchange to the Union Pacific is set on the OUR&D receiving tracks indicated by the letter "Z" on my Exhibit, and moved northward a distance of approximately one-half mile beyond Cecil Junction and then moved south through the interlocker where tracks of the D&RGW cross our yard lead tracks and main line tracks on the way to Union Pacific yard for classification and assembling into northbound trains.

Delay in handling traffic through the Ogden Terminal [fol. 872] facilities and incapacity of yard for additional business:

The present facilities of the OUR&D Company are insufficient to handle efficiently any volume of traffic over

that presently handled without incurring long periods of delay. Even with the present volume of traffic, during the month of September, 1949, it was necessary to hold outside the Ogden terminal 76 trains from the Southern Pacific an average of 36 minutes per train while track room in the terminal was being made available to accommodate them; also numberous Union Pacific trains were held beyond Cecil Junction for the same reason.

During the month of September, 1949, there were received 220 fruit trains from the Southern Pacific. The average time these trains were held in the Ice House Yard was 4 hours and 38 minutes per train, and D&RGW perishable traffic from these trains averaged 6 hours and 9 minutes from time of arrival until delivery to the D&RGW was accomplished.

During the month of December, 1949, there were received 94 fruit trains from the Southern Pacific. The average time these trains were held in the Ice House Yard was 3 hours and 51 minutes per train, and D&RGW perishable traffic from these trains averaged 4 hours and 46 minutes from time of arrival until delivery to the D&RGW was accomplished.

There is insufficient room in either the Ice House Yard or the Southern Pacific Yard to handle overflow traffic from the Union Pacific Yard, and if the Union Pacific was forced [fol. 873] to handle into the Ogden terminal facilities the volume of traffic which the D&RGW has described in its testimony as traffic potential, during heavy periods of traffic there would be insufficient room in the Union Pacific, Southern Pacific and Ice House Yards in the Ogden terminal to accommodate such additional traffic.

In such event, it would be necessary to move the trains, including traffic to be interchanged, to the D&RGW, to the East Yard at the south end of the terminal, a distance of something over two miles, and after trains are switched, return them to the proper yard for further classification, thence D&RGW traffic to either Track 6 or 9 in the Ice House Yard for subsequent delivery to the D&RGW.

I have heretofore described the various purposes for which the tracks in the various yards are used, and I have described the movement required to deliver southbound cars interchanged by the Union Pacific to the D&RGW.

Northbound traffic interchanged by the D&RGW to the Union Pacific would likewise require handling in the Union Pacific Yard, and, as heretofore indicated, this yard contains only four tracks, one which holds 95 cars, one which holds 76 cars, one which holds 60 cars, and another which holds 55 cars, to receive and make up trains in this yard.

It requires approximately one hour's time for OUR&D Co. yard engines to get from 21st Street to the D&RGW interchange tracks, pull the interchange and get cut back [fol. 874] into the yard proper for segregation. Frequently Depot Company yard engines are delayed at interchange by inbound movement of Southern Pacific freight trains.

Bad order cars for the North interchanged by the D&RGW to the Union Pacific are moved to Union Pacific shops located in the Southwest portion of the terminal facilities at point marked "R" on my Exhibit, which is reached by leads from the Ice House Yard. The shops are located approximately one mile from D&RGW interchange tracks. It requires considerable handling to get bad order cars from the D&RGW interchange to Union Pacific shops, and when repairs are completed, the cars are then moved from Union Pacific shops to Union Pacific yard to be lined up for movement.

The Southern Pacific Yard is used to receive westbound traffic from the Union Pacific and the D&RGW interchanged to the Southern Pacific. However, during heavy movements, there is insufficient room in the Southern Pacific Yard to accommodate the westbound traffic, and it is necessary to handle empty refrigerator drags into East Yard to make necessary cut outs and build up refrigerator drags for Southern Pacific. After trains are made up, they are then handled from East Yard into Southern Pacific Yard for subsequent movement via the Southern Pacific.

Ogden is a large livestock market, as well as a transit feeding point. There were handled through the Ogden terminal facilities during the year 1948, 17,183 inbound cars [fol. 875] and 17,526 outbound cars, or a total of 34,709 cars, at Union Stockyards. In this handling it is necessary to reload stock handled by the Southern Pacific in Southern Pacific equipment and reload livestock destined to Southern California points to Union Pacific high-speed equipment. Livestock unloaded by the D&RGW must be re-

loaded into either Southern Pacific or Union Pacific equipment as the case may be. This necessitates the maintenance of a large supply of both Union Pacific and Southern Pacific empty stock car equipment which takes up yard track room.

As heretofore stated, D&RGW trackage crosses over OUR&D Co. trackage at the North end of the terminal facilities and this crossing is protected by an interlocking plant at 20th Street. The movement of D&RGW engines and trains over this interlocking plant causes delay to Southern Pacific trains arriving and departing, as well as delay to Union Pacific Utah Division freight trains arriving and departing. These movements presently average 17 per day with average time at interlocking plant being 7 minutes. D&RGW freight trains arriving block interlocker; also, all D&RGW road engines move through the inter-locking plant to Roundhouse to be turned and after having been turned move through interlocker to train.

While the freight terminal yards at Ogden constitute a "bottleneck" at times of heavy movement which we frequently have, the operation of the D&RGW of its engines across OUR&D Co. tracks and Southern Pacific's main line [fol. 876] tracks through the interlocker at point marked "A" on my Exhibit, proves to be a "bottleneck within a bottleneck. D&RGW's operation of this interlocker results in serious delays to OUR&D Company's almost continuous switching at the north end of the yard as well as to both inbound and outbound freight trains of the Southern Pacific and Union Pacific, and in delays at infrequent times to main line transcontinental passenger trains. Three of the OUR&D tracks at the point of the crossing are in continuous use by our switch crews, and delays and loss of time by these switch crews is very heavy due to D&RGW's use of the trackage which crosses our tracks at the interlocker. In many instances, D&RGW freight trains arriving at its freight train yard with an excess number of cars have to be pulled onto the crossing, blocking it for our use until part of the train can be separated and moved to another track in its train yard. All D&RGW road engines move over this crossing enroute to their roundhouse and to return to their freight train yard. As stated, all D&RGW facilities other than its train yard are located east of the

OUR&D Company's trackage, making it necessary for their yard engines to cross over this crossing frequently to serve their industries, freight house, car shops, etc.

The north or west end of OUR&D Company's freight yard tracks converge at 21st Street and a series of four lead tracks extend from 21st Street to Cecil Junction, approximately 1,500 feet, and all freight train movements to [fol. 877] and from the Union Pacific north, also all Southern Pacific freight trains arriving and departing, as well as all switching movements at the north end of the yard, are handled on these lead tracks, two of which serve the Ice House Yard and two serve the Southern Pacific and the Union Pacific yards. At Cecil Junction, these four leads converge into the Southern Pacific's double-track main line and a Union Pacific single-track main line for trains to and from Pocatello and the Northwest. All traffic received from the D&RGW for both the Southern Pacific and Union Pacific is handled from interchange track marked "Z" on my Exhibit. Such received traffic must be handled over the lead track serving the Southern Pacific and Union Pacific yards for ultimate segregation and classification.

I have personally observed delays of more than one hour in getting a cut of cars from the D&RGW interchange back into our main yard proper because of interference by the D&RGW's switching back and forth through the interlocker. These delays occur not only to our switching operations, but also to both westbound and eastbound Southern Pacific passenger trains. I have personally seen yard engines stand with cuts of cars at this crossing many times in excess of 30 minutes while the D&RGW was using the crossing for their movements and switching. I have also personally seen 100-car freight trains from both the Southern Pacific and Union Pacific stand for 30 minutes or more at this crossing waiting for the D&RGW to finish their [fol. 878] switching and set the signals at clear for our operation. I have seen D&RGW employes throw the signal controls and set signals at stop position immediately in front of a moving Southern Pacific freight train of 100 cars, causing the train to stop in emergency, resulting not only in delay to that train but to other train and yard movements that were standing by until the stopped main line train cleared into a receiving track. Any increase in volume of

traffic which increases train and switch engine movements by the D&RGW or by the Union Pacific or the OUR&D Company yard switching through this "bottleneck" would only tend to aggravate the very bad situation that now exists at that point.

As an illustration of congestion and delays experienced at periods of peak traffic, I call attention to the fact that when we were handling the War traffic in 1945, our Ogden terminal facilities were terribly congested and we were unable to accept inbound cars from the D&RGW yard at Ogden which overflowed that yard and necessitated the D&RGW holding inbound loads outside its Ogden yard. My reclaim records show that on July 7th of that year, the D&RGW, because of congested conditions I have described, held outside of their Ogden facilities 73 cars at Roy, Utah, 74 cars at Roy and 42 at Farmington on July 8th, 32 cars at Roy on July 19th, and 25 cars at Roy on July 22nd.

Another illustration of delays in handling interchanges with the D&RGW may be given. On February 22, 1949, the [fol. 879] OUR&D received two Southern Pacific trains in the East Yard, one with 85 cars, 14 of which were for interchange to the D&RGW. This train was received at 11:20 a.m. The other train was received at 10:20 p.m. with 78 cars, 26 of which were for delivery to the D&RGW. These two trains were switched in East Yard. Cars for interchange to the D&RGW moved back into yard proper on the morning of February 23rd, and finally delivered to the D&RGW at 11:00 p.m., February 24th, cars from the first train being delayed about 60 hours in interchange and cars from the second train being delayed about 48 hours. While this was during the period in February, 1949, that the D&RGW could not accept all business offered them, the best delivery we could have made would have been approximately 20 hours after arrival of the first train.

To further demonstrate the lack of capacity of either the Ogden terminal or the D&RGW yards at Ogden to accommodate and handle efficiently and expeditiously excess or peak loads of traffic, I call attention to the fact that, because of the blizzards which temporarily blocked the Union Pacific in Wyoming several days in February, 1949, we diverted considerable traffic to the D&RGW at Ogden and experienced tremendous delays because the D&RGW was unable to re-

ceive the traffic offered it. On February 17, 1949, we delivered to the D&RGW. 232 cars and had left over 151 cars they were unable to receive. February 18th, we delivered to them 172 cars and had left over 390 cars that they were unable to receive. February 19th, we delivered 243 cars and had left over 636 cars they were unable to receive. [fol. 880] February 24th, we delivered 369 cars and had left over 444 cars they were unable to receive. February 25th, we delivered 267 cars and had left over 216 cars they were unable to receive. February 26th, we delivered 337 cars and had left over 143 cars they were unable to receive. During the period just mentioned the maximum number of cars the D&RGW was able to receive from us in its Ogden yard in any one day was 369. Although I understand the D&RGW has plans to expand its Ogden freight yard facilities, it has been my observation that their train yard facilities, including interchange tracks, are inadequate to handle expeditiously their present volume of business.

Ogden Freight Terminal Yard Inadequate to Handle Expeditiously any Substantial Increase in Traffic.

In 1949, 2,359 trains, or an average of 76 trains daily, were handled through our Ogden facilities. This handling required an average of about 50 shifts with engines and crews daily. We handled a total of 1,955,219 cars through these facilities in 1949, and as I have already stated, we incurred serious delays at periods of peak or high volume of traffic.

While our all-time peak of traffic handled through the Ogden facilities was in 1945, the handling of this number of cars incurred tremendous congestion and serious delays, at times almost paralyzing the operations in the yard, and I do not believe it would have been possible at all to handle that volume if we had not spent over $800,000 in construct- [fol. 881] ing the facilities at the East Yard, some two miles from the main yard. But even with this additional East Yard, our operations during that all-time peak were slow and expensive, and even the addition of the East Yard did not permit efficient and expeditious operations because of its distance from the main yard. At times, even after the East Yard was in operation, westbound cars were held out at Evanston and other points east of Ogden awaiting avail-

able trackage to come in. One important fact that kept us from being completely blocked during this wartime peak volume was that a great many, if not the majority, of the trains handled carried Government War material, troops and their equipment and these trains arrived in and departed from the Ogden terminal as solid trains and required no classification, assembling or use of the yard trackage for switching.

Mr. T. K. Earley testified for the D&RGW that the traffic "potential" it seeks in this case is 157,762 carloads annually and Mr. A. D. Hanson will testify that the handling of this number of carloads would necessitate handling about 50,000 empty cars annually, making a total of 207,762 additional cars to be handled through the Ogden terminal in interchange between the D&RGW and the D&RGW and the Union Pacific if the D&RGW realizes its desired "potential". This means that about 550 additional cars per day would have to be handled through the Ogden terminal yard, none of which now passes through the yard, but moves over the Union Pacific east or west via Granger. This additional [fol. 882] 550 cars per day or any substantial portion of that number would add greatly to the already congested condition of the Ogden terminal during the frequent periods when we have a heavy volume of traffic passing through these yards. Also, as I have already shown, since the maximum number of cars the D&RGW was able to receive from us on any day at its Ogden freight yards in February, 1949, was 369 cars, its own yard would not be able to handle the traffic "potential" the D&RGW seeks.

As I have already stated, when congestion made it necessary during World War II to increase the capacity of the Ogden terminal yards, it was found that the only location where this could be accomplished was where the East Yard was constructed. There is no space available for expansion by constructing additional tracks adjacent to the existing OUR&D tracks and there is no space available to expand in the vicinity of the D&RGW interchange yard. Nor would it be feasible or practical to construct a direct track connection between the D&RGW and Union Pacific for interchange purposes. Even if it were possible to expand the facilities of the OUR&D Company and the D&RGW to accommodate any substantial increase of traffic to be interchanged be-

tween them, such expansion would not solve but would only aggravate the present awkward, cumbersome and excessively expensive interchange between the two roads which results from the fact that the D&RGW interchange yard lies at right angles to the facilities of the OUR&D.

[fol. 883] Average Cost Per Car of All Cars Handled in Ogden Freight Terminal.

The Accounting Department of the Union Pacific has made a study and analysis of the expense to the OUR&D Co. during the year 1949 of operating the freight yard zone of the Ogden Terminal facilities used in the handling of freight and has determined that average expense per car of all cars handled by the OUR&D in the freight terminal is $4.63 per car. As I hav already said, the total expense of the terminal operation is apportioned to the UP and Southern Pacific on a cars-handled basis. No part of this expense is borne by the D&RGW.

Mr. Quirk: Just what do you mean by that statement? Don't you get paid for the services performed?

The Witness: The D&RGW doesn't pay for the services performed.

Mr. Quirk: All right. We will come to that later.

The Witness: Excessive Cost of Interchanging with the D&RGW Contrasted with the Average Cost.

As indicated earlier in my testimony, the Ogden terminal was originally constructed and its present main purpose is to interchange eastbound and westbound traffic between the Union Pacific and Southern Pacific. The arrangement of the yards and layout of the trackage was to accommodate that transcontinental traffic and to interchange it between the two companies expeditiously and with a [fol. 884] minimum of switching to accomplish the interchange.

The arrangement of the trackage in this terminal was not planned for the purpose of interchanging southbound traffic from Idaho and the Northwest to Salt Lake City or northbound traffic between the same areas, although track connections have been made by means of which such interchange of north and southbound traffic is physically possible through the facilities of the OUR&D.

It will be noted from my exhibit that the traffic which the D&RGW seeks in this case to divert to its line would have

to be interchanged by the OUR&D by movements that would necessitate working the cars destined either to the north or to the south, all the way across the numerous tracks arranged and laid out more or less parallel for handling eastbound and westbound transcontinental traffic. I have already endeavored to describe some of the switch movements necessary in interchanging through the Ogden facilities with the D&RGW. The cost of interchanging traffic between the D&RGW and the Union Pacific and the Southern Pacific is at least twice the average per car cost of handling all cars in this terminal. The simplest explanation of the reason why the expense of average per car interchange is so much less than expense of interchange between the Union Pacific and the D&RGW is that in interchanging between the Southern Pacific and UP it requires only one move of a switch engine to take care from the inbound train [fol. 885] and place them on a nearby track on which the outbound train is being assembled. This may be called the very minimum of interchange switching and the average of $4.63 per car for all cars handled is as low as it is because about 75 per cent of cars interchanged at Ogden is between the Union Pacific and Southern Pacific, requiring only such minimum switching. But every interchange between the Union Pacific and the D&RGW requires at least two and often more separate switch movements. I believe the description which I have given earlier of switching between the D&RGW and the Union Pacific demonstrates the fact I have just stated.

In other words, interchanging between these two lines requires at least twice the handling required for ordinary interchange between the Union Pacific and Southern Pacific, and when necessary to handle cars in trains to the East Yard, it requires, as previously stated, four or five times the handling required for interchange to the D&RGW from the Union Pacific or Ice House Yards. This would necessarily make the cost of interchanging with the D&RGW at least twice as much as the average cost of $4.63 per car for all cars handled in the terminal, as determined by the Union Pacific's accounting department or $9.26 per car.

Multiplying the total additional cars, 207,762, that would be handled if the D&RGW realizes the "Potential" [fol. 886] it seeks by the cost figure of $9.26 per car just

mentioned, would result in a new and additional expense to the Union Pacific of $1,919,820 annually which the Union Pacific would have to bear in addition to the amount of the expense it already bears in connection with operation of the Ogden Terminal.

Mr. Quirk: As I understand it, you yourself did not determine that cost, did you?

Mr. Collins: No, sir. Somebody else determined it, Mr. Quirk. If you want to ask how that figure was arrived at I have the gentleman here who made the determination.

Mr. Quirk: I wanted to know if he did it.

Mr. Collins: No, he didn't do it.

Mr. Quirk: You don't know whether that is accurate or not, do you?

The Witness: It was given to me by the accounting department.

All of that additional expense would accrue to the Union Pacific because all of the traffic the D&RGW seeks in this case would have to be interchanged between the Union Pacific and D&RGW and under the terms of the contract, as already shown, all of the car counts on the interchanged cars would be assessed against the Union Pacific. As the D&RGW is not a party to the contract for operations, maintenance and allocation of expenses of the OUR&D Co. opera- [fol 887] tion, the D&RGW would bear no part whatever of this additional burden placed on the Union Pacific. Instead, it would have free interchange service on this traffic, and, in addition would have little or no switching to perform in its own train yard in order to effect the interchange.

While the D&RGW enjoys the benefit of free interchange to and from the Union Pacific and Southern Pacific on a considerable volume of traffic and especially the volume interchanged between the D&RGW and the Southern Pacific which amounted to about 119,000 cars in 1949, the additional cost to the Union Pacific of interchanging the traffic "Potential" which the D&RGW seeks in this case would be an entirely new and tremendous burden on the Union Pacific because none of that traffic presently goes through the Ogden terminal.

In concluding my testimony, I wish to emphasize that based on my daily work as Superintendent of the OUR&D Co. since 1936 and my continuous observation of the dif-

ficulties at that terminal and efforts to solve the difficulties of handling traffic with reasonable expedition through those facilities, the Ogden terminal facilities are inadequate to handle with reasonable efficiency, expedition and expense such traffic "potential" as the D&RGW seeks in this case or any substantial portion of it without incurring greater and more serious delays particularly during peak load [fol. 888] seasons and aggravating and increasing the difficulties that we continually face in operating these facilities.

By Mr. Collins:

Q. Mr. Edens, Mr. Quirk asked you what was meant by the statement on page 20 of your statement that "No part of the OUR&D expenses are borne by the D&RGW." I want to ask you if in the allocation of the expenses of the OUR&D any car counts are ever assessed against the D&RGW?

A. No, the Denver & Rio Grande pays no part of that freight or zone expense.

Mr. Collins: That is all.

Exam. Mullen: Do you want to offer the exhibit?

Mr. Collins: Yes. I offer exhibit 14 in evidence.

Exam. Mullen: Any objection to the receipt of that exhibit in evidence?

(No response.)

It will be received in evidence.

(Defendant's Exhibit 14 Witness Edens is received into evidence.)

Exam. Mullen: We will adjourn until 9:30 tomorrow morning.

(Whereup, at 5:08 o'clock p.m. the hearing was recessed to reconvene April 4, 1950 at 9:30 a.m.)

[fols. 889-890] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

TRANSCRIPT OF TESTIMONY—Boise, Idaho, Tuesday, April 4, 1950

Met, pursuant to adjournment, at 9:30 o'clock a.m.

Before Frank E. Mullen, Examiner

Frank E. Mullen, Examiner.

Proceedings

[fol. 891] Exam. Mullen: We are ready to proceed, gentlemen.

R. E. EDENS resumed the stand and testified further as follows:

Direct examination (continued):

By Mr. Collins:

Q. We have a typographical correction in Mr. Edens' testimony, Mr. Examiner.

Mr. Edens, on page 18, in the first line of the paragraph under the heading there, beginning with "Ogden Freight Terminal," will you state what the correction is; the paragraph beginning "1949," what is the correction?

A. I just want to add the word "in July, 1949."

Q. In other words, the number of trains shown there is for the month, instead of for the year?

A. Yes, sir.

Q. Is that all?

A. That is all.

Cross-examination.

By Mr. Quirk:

Q. Mr. Edens, have you ever worked in any terminal other than Ogden that you know of?

A. I have worked for about 45 years in various terminals.

Q. Where are some of those terminals at which you worked, located?

A. In Texas.

Q. That is a big state; what point in Texas, you were not all over, were you?

[fol. 892] A. Well, I worked for the MK&T Railroad in Texas; in Dallas, Fort Worth with ACO.

Q. Did you ever work at Pocatello?

A. Yes.

Q. The Union Pacific has made some substantial changes in that terminal in recent years, has it not?

A. I understand they have added the pumpyard there.

Q. In fact, they relocated a good part of the tracks?

A. I can't answer that.

Q. Now, Mr. Lynch testified it is a very modern up-to-date yard, in classification of terminals generally. You heard that? If the Union Pacific, at the new yard in Pocatello would block all their business at one place by their trains, so that all that would be necessary for your company would be to deliver the cars to the Rio Grande, wouldn't that remove and correct many of the difficulties that you have beeen describing?

Mr. Collins: I object to the question. This gentlemen has not been qualified as a transportation man, but as a terminal operating superintendent.

Mr. Quirk: I submit, Mr. Examiner, that a man who has testified about the way cars are handled through a terminal ought to be able to answer that, because it is relevant.

Mr. Collins: He has only testified how he handles them through the yard after he gets them. He takes them as [fol. 893] they come. You may ask Mr. Hanson, who is going to follow Mr. Edens, you can ask him that.

Exam. Mullen: Let's have the question read, please.

Mr. Quirk: How is that?

Exam. Mullen: Have the question read.

(Question read.)

Exam. Mullen: I think the witness is competent to answer that question, Mr. Collins:

Mr. Collins: All right.

The Witness: Certainly, if the Union Pacific would make it possible for me to operate or handle the Ogden Yard without requiring any switching, it would be helpful.

By Mr. Quirk:

Q. Now, if the perishable business that moves off of the Union Pacific from the Northwest should be iced at Pocatello, so that there would be no necessity for icing it at Ogden, wouldn't that make possible the direct movement of perishable freight from U. P. trains arriving in the U. P. Yard as shown on exhibit 14, your exhibit 14, to the interchange shown in zone Z of that exhibit, and thus avoid the difficulties that you have described?

A. No. Perishable traffic must be serviced at certain periods. There is a certain time involved there.

Q. But not at all times?

A. That would have to be developed as it stands today, Mr. Quirk. Ogden is the regular icing point for all perish-[fol. 894] able traffic requiring icing moving through there.

Q. Who performs the icing when it is necessary?

A. The P.F.E.

Q. That icing isn't performed where it isn't necessary, is it?

Mr. Collins: Mr. Examiner, Mr. Quirk should have asked Mr. Plummer about these questions yesterday. Mr. Edens has nothing to do with the icing services as such, where it shall be performed at all.

Exam. Mullen: I understand he is in charge of this Yard, where the icing is performed.

Mr. Collins: Yes, but he is not in charge of the icing, and does not have the authority to say where it will be performed.

Exam. Mullen: I think he can answer the question. If he knows, he can answer.

The Witness: What was the question?

(Question read.)

The Witness: It is necessary on all perishable traffic moving through Ogden to require icing service; yes, sir.

By Mr. Quirk:

Q. You mean by that, to inquire whether the perishable freight needs icing at that point, you don't ice it if it isn't necessary, do you?

A. That isn't a part of my responsibility.

Q. But you testified about the switch movement made necessary as incident to icing, and it stands to reason doesn't it that if the cars don't need icing you wouldn't have this [fol. 895] extra switch movement.

Mr. Collins: Now, Mr. Examiner, that shows the real ground of my objection. He wants to keep arguing with this witness about where icing is necessary, and this witness has nothing to do with it. He can't take the icing out of the Ogden Yard.

Exam. Mullen: Let's see what the witness has to say about it.

Mr. Quirk: You shouldn't put the witness on.

Mr. Collins: I didn't put the witness on in regard to icing.

Exam. Mullen: Please address you remarks to the Examiner. Can you answer that question, Mr. Edens?

The Witness: The question is what?

(Question read.)

The Witness: They require icing. They require icehouse service.

By M Quirk:

Q. Now, you seem to know when they require and when they don't require icing; a moment ago you said you didn't.

Exam. Mullen: Please don't argue with the witness, Mr. Quirk.

Mr. Quirk: I think I have the right to call attention to the fact that he said he didn't know.

The Witness: I don't think I said I didn't know.

By Mr. Quirk:

Q. All right.

On page 5 of your prepared statement you said that there [fol. 896] is no physical connection between the Union Pacific and the Southern Pacific at Ogden with the Denver and Rio Grande.

Mr. Collins: What part of page 5 is that, Mr. Quirk?

Mr. Quirk: Page 5.

Mr. Collins: The whole page?

Mr. Quirk: Well——

Exam. Mullen: Have you located it, Mr. Edens?

The Witness: No.

Mr. Quirk: The first paragraph.

By Mr. Quirk:

Q. You haven't answered the question, have you?

A. What is the question?

Q. You did say that, didn't you?

A. Say what?

Q. That there is no physical and direct connection between the Union Pacific and the Denver and Rio Grande?

A. That part of my testimony, Mr. Quirk, means the Union Pacific does not have a direct connection with these tracks, and I will hereafter explain the movements necessary by the OUR&D handling traffic originating on the Union Pacific on interchange to the D&RGW at Ogden.

Q. What do you mean then, that the Union Pacific does not have a direct connection with the track, the Denver and Rio Grande tracks you meant, didn't you?

A. That is right.

Q. All right. Now, does the Union Pacific have any direct [fol. 897] physical connection with the tracks of the Southern Pacific?

A. Yes.

Q. You mean by the use of your Union Depot Terminal?

A. Yes.

Q. In other words, the Depot Company at Ogden acts as agent for the Union Pacific and the Southern Pacific in the interchanging of cars, is that right?

A. That is right.

Q. So therefore when the Rio Grande delivers cars to the Depot Company the legal effect, according to your testimony, is a delivery to the Southern Pacific, that is where the cars are going, or to the Union Pacific if that is where the cars are going——

Mr. Collins: I object to his asking the legal effect.

Exam. Mullen: You are not testing the legal effect.

Mr. Quirk: Well, I will omit the legal then.

By Mr. Quirk:

Q. What is the answer without the legal then?

A. The D&RGW will deliver traffic to an interchange track to the southern Pacific or to the Union Pacific, and from that track that traffic or those cars are handled by the Depot Company.

Q. Yes, so that the delivery to the Depot Company on that track is a delivery to the Union Pacific or the Southern Pacific as the case may be, isn't that true?

A. That is right.

[fol. 898] Q. All right then, what did you mean—I can't locate the statement at the moment—by the statement you made in your direct testimony that the Rio Grande does not bear any of the expense of the Depot Company?

A. They do not bear any expense of the Depot Company with relation to the yard zone; the Denver and Rio Grande are attendant at the Depot Company in the pasture yard zone only.

Q. Is there any reason why the Rio Grande, as a delivery carrier delivering cars to the Southern Pacific, should assume any of the cost of the Souther Pacific of receiving that car?

A. I might explain, Mr. Quirk, that the Depot Company is set up to handle traffic as between the Southern Pacific and the Union Pacific, and any cost of the operation of Ogden Terminal in the handling of freight is apportioned to those two lines on a per-car count basis.

Q. Yes, I understand that. The Southern Pacific and the Union Pacific, if they saw fit to set up this depot company as an agent to do what otherwise would be done by them directly, that is the reason it is there, isn't it?

A. Yes.

Q. Then there isn't any reason is there why the Rio Grande which isn't part owner of the Depot Company should have to assume any of the cost to the Union Pacific or the Southern Pacific of receiving cars from the Rio Grande?

A. Well, it could be in various places. I could refer you [fol. 89c] to the Union Pacific at Salt Lake.

Mr. Collins: Excuse me, Mr. Edens. I object to this line of questioning of Mr. Edens. If Mr. Quirk wants to go into the contract between the Ogden Terminal Company and the two proprietary lines, he may do so. It is in the Commission's files. It has been cited, and has recently been before the Commission. Now, this witness doesn't make these contracts at all. They are made between the two companies and the apportionment of the expense is settled between them, and I suppose the contract undoubtedly will show that the two proprietary companies, the Southern Pacific and the Union Pacific, have control of this terminal, because each of them own 50 percent of it. It is not Mr. Eden's business to deal with those things.

Mr. Quirk: Mr. Examiner, I hope before this case is over that you might admonish Mr. Collins to resist the temptation that he has to make a speech every time he objects to something. There is a way to object without making a speech.

Exam. Mullen: Mr. Collins has the right to state the grounds of his objection.

Mr. Quirk: All right.

Exam. Mullen: On the objection, however, the witness testified to these things as his testimony, and Mr. Quirk is merely cross-examining him on what he said in his direct testimony. I think the cross examination is proper.

Go ahead, Mr. Quirk.

[fol. 90] Mr. Quirk: Can you find that question of mine?

(Question read.)

By Mr. Quirk:

Q. Refer us to it.

A. Any interchange between the Union Pacific and the Denver and Rio Grande at Salt Lake is made by each line to their respective yard. At Ogden I must make the delivery

to the Denver and Rio Grande on the interchange track which is in their freight yard, and I must receive from the Denver and Rio Grande on an interchange track that is a part of their yard.

Q. When you receive—when the Depot Company receives traffic from the Rio Grande or delivers traffic from the Rio Grande that is handled by the Union Pacific or the Southern Pacific, the Depot Company is acting for the Southern Pacific and the Union Pacific; you have already said that?

A. That is right.

Q. All right.

Mr. Collins: Wait a minute. Let's hear that read.

(Question read.)

Mr. Quirk: The witness has answered the question. I don't know what Mr. Collins wants to say now.

Exam. Mullen: Suppose we hear from Mr. Collins.

Mr. Collins: I want to say this, Mr. Examiner: the testimony of Mr. Edens will show if it isn't distorted too much in questioning quite clearly that an interchange is made between the SP and the D&RG by the terminal company, [fol. 901] and the car counts are allocated against the S.P. for that switching. That the switching between the Union Pacific and the D&RG is performed by the Ogden Terminal and car counts there are made against the Union Pacific so that when——

Exam. Mullen: Just a minute, Mr. Collins. All that is in your testimony. It is already in your testimony.

Mr. Quirk: You are testifying.

Mr. Collins: I am telling what the testimony is.

Exam. Mullen: What is your point, Mr. Collins?

Mr. Collins: He has an erroneous statement, through this complicated question, of Mr. Edens, and Mr. Edens didn't intend to misstate the situation in the contract.

Exam. Mullen: Let Mr. Edens explain how his statement made now is different than what he made yesterday. It didn't strike me as being any different. Is there any difference now, Mr. Edens?

The Witness: No——

Exam. Mullen: That is what I thought. Go ahead, Mr. Quirk.

By Mr. Quirk:

Q. Now, you mentioned Salt Lake. You don't think, do you, when the Denver and Rio Grande delivers carload traffic to the Union Pacific at Salt Lake the Denver and Rio Grande pays the expense on the part of the Union Pacific of receiving that traffic, do you?

A. No, but they pay the entire expense from the time that cut of cars leaves their yard until it is delivered to the [fol. 902] Union Pacific in their train yard at Salt Lake.

Q. You mean the Denver and Rio Grande does?

A. Yes.

Q. Isn't it the common practice in railroad interchange work for the delivering line to assume the responsibility and the cost incident to effecting delivery to whoever he delivers it to?

A. I had no testimony relative to costs, Mr. Quirk.

Q. Oh, yes you did.

A. Not in this page 5. I was simply saying that we——

Q. Page 20 of your prepared statement, you refer to the cost of the Depot Company, so you have referred to cost. At page 4 you also say that the Rio Grande does not bear in any manner any part of the expense of operating the freight yard zone which it is necessary to use in the interchange of business with the Rio Grande, so you have referred to costs, haven't you?

A. That is true.

Q. Then on page 22 of your narrative statement, at the bottom, you used these cost figures to raise the impression there is something very unusual about the Rio Grande not participating in a cost that belongs to the line that receives the traffic.

Mr. Collins: I object to that. That is not a question.

Exam. Mulien: It is proper cross examination. The objection is overruled.

Mr. Collins: I would like to know what he could answer.

[fol. 903] Exam. Mullen: We will let the witness decide that.

Mr. Collins: Mr. Edens, can you think of an answer to that statement?

The Witness: I don't know what he is after?

By Mr. Quirk:

Q. Now, Mr. Edens, if the Union Pacific would block the Denver and Rio Grande traffic and the so-called potential business that you have referred to from the Northwest at the New Pocatello yard, so that the business in the train as it arrives at Ogden could be delivered to the Rio Grande, the difficulties that you have described would either be corrected or lessened substantially, would they not?

A. Not necessarily.

Q. You mean even if the cars were all together, blocked off for you?

A. I would still have to receive that train in the Ogden yard, and I would still have to get it to a point in which I could effect a delivery to the D&RGW. The Union Pacific would not make a delivery themselves.

Q. Now, in dealing with the potential traffic that was sketched by Witness Earley at the Salt Lake Hearing, did you cooperate and go over this matter with Mr. Lynch before you made your assumptions?

Mr. Collins: What assumptions, if you please?

Mr. Quirk: He can answer that. He knows whether he did or not.

[fol. 904] Mr. Collins: I think it is only fair Mr. Examiner to know what assumptions Mr. Quirk has in mind.

Exam. Mullen: The question is whether he talked it over with Mr. Lynch. You can answer that, Mr. Edens.

The Witness: I talked it over, not the assumption. I talked over the facts that Mr. Earley had stated that their potential was a certain amount of traffic.

By Mr. Quirk:

Q. Well, at page 19 of your prepared statement you say that Mr. Earley testified for the Rio Grande that the traffic potential is what the Rio Grande seeks, and that it amounted to 157,000-plus carloads annually.

Now, don't you know that what Mr. Earley testified to was that there was some traffic that would be available to move via this route if the joint rates were established and there was other traffic that would move via this route in any event? Did you examine his testimony?

A. No, sir, I didn't.

Q. Don't you know that all he was dealing with was that there was a certain traffic——

Mr. Collins: I object. He said he doesn't know. He has taken this potential.

Exam. Mullen: Wait until the question is finished, Mr. Collins. Finish your question, Mr. Quirk.

By Mr. Quirk:

Q. Where did you get the figure 157,726 carloads?

A. From Mr. Earley's testimony.

[fol. 905] Q. Now, you assumed in making your calculations here that that maximum which Mr. Earley testified would be merely available for solicitation, and routing by the D&RG, would all move through Ogden instead of the way it now moves if this joint rate involved here was established. That is your assumption, isn't it?

A. I didn't assume anything.

Q. Yes, you did, though.

A. No, I didn't.

Q. What did you assume?

A. I accepted the facts as to the number of cars, the potential business.

Q. Yes, that is exactly what I said.

A. That moves through Ogden.

Q. In other words, you assumed that because Mr. Earley figured on a natural maximum potential that it would all move through Ogden, didn't you?

A. I didn't assume anything. I accepted Mr. Earley's testimony, about the potential traffic which they could see that would move through the Ogden gateway.

Q. Well, now as a practical railroad man, keeping in mind what Mr. Lynch has already described as the service of the Union Pacific, do you think that there is any likelihood whatsoever of the Rio Grande being able to persuade shippers to route all of that traffic through Ogden?

[fol. 906] A. I can't answer that. I don't know a thing about it.

Mr. Collins: I object to that question.

By Mr. Quirk:

Q. In other words, you want to make the figures look as good as you can make them?

A. I only accepted the figures Mr. Earley had given.

Q. Why didn't you accept his testimony? His testimony was very clear?

Exam. Mullen: Just a minute, gentlemen. All the witness did was to just use this as a maximum additional use as he anticipates; isn't that right, Mr. Edens?

The Witness: That is right.

Mr. Quirk: There is no doubt about that, Mr. Examiner, he used the maximum, but he introduced the question relying on Mr. Earley's figures. I am simply saying why did he rely on his testimony which described this thing. O. K.

By Mr. Quirk:

Q. Now, turn to page 8 of your prepared statement, Mr. Edens. At that page you stated that the Rio Grande controls an interlocker and when its crews want to cross the Depot Company tracks they unlock the control box and set the signals at stop against all Depot Company switching and UP freight trains from and to the north, and all Southern Pacific freight and passenger trains arriving and departing through Ogden. When the Depot Company, UP and Southern Pacific trains, or engines are in the interlocking limits, can the Rio Grande crews take this crossing away from them, or the Depot Company?

[fol. 907] A. Yes, they can set the signals, even though I am on the crossing.

Q. How can they do it?

A. By semi-automatic interlocking system.

Q. Do you still insist they can take the crossing away?

A. Yes.

Mr. Collins: I am not sure Mr. Edens whether you understood exactly. The train that would be on the crossing could go on past, couldn't it? And the next train would have to stop, isn't that correct?

The Witness: I could best explain that, Mr. Collins by this statement: We have six tracks in which the Denver and

Rio Grande crosses at this location. All of those tracks are protected by the signal indication.

Mr. Collins: Yes.

The Witness: Those signals are normally set for OUR&D.

Mr. Collins: Yes.

The Witness: I may be using any one of those six tracks, and the Denver and Rio Grande crew that operates those signals can unlock the control box and set all signals of all six tracks at stop, or red, and all of the movements in that yard over that cross except the one track which is being used at that moment, are then tied up.

Mr. Collins: But if you have a train on the track, at the crossing, you can move it on off, and then you have to cease [fol. 908] moving until the trains cross the D&RB tracks.

The Witness: That is right. But I couldn't start any other movement then.

Mr. Collins: Yes.

Mr. Quirk: Thank you very much.

By Mr. Quirk:

Q. Will you turn to page 10 of your prepared statement? Beginning at the top there you say these movements of trains to the East Yard and return are extra movements that must be followed by the movement I have already described to effect interchange of cars of such trains to the Rio Grande, and you make some other statements about that situation.

Now, is it a fact that if you had to move trains to the East Yard and switch out cars for the Southern Pacific and then return the cars to the main yard and rehandle the cost will be higher if you could avoid the last charge due to switching and make delivery at any one of the other three main yards, is that true?

A. Sure.

Q. This isn't a local matter with respect to the Rio Grande, is it?

A. No, it was just simply to direct that——

Q. All right.

Mr. Collins: Let him go ahead and explain what it is.

Mr. Quirk: I have not interfered with him.

Mr. Collins: Go ahead.

[fol. 909] A. (continuing) Direct attention to the fact that if it was necessary for me to handle trains into the East Yard, that normally is handled in the yard proper, that it would pyramid costs.

By Mr. Quirk:

Q. On page 18 of your prepared statement, beginning with the first line of the first full paragraph you say that in July, 1949, 2,859 trains, or an average of 76 trains daily were handled through the Ogden Depot facilities, and that you handled a total of 1,955,219 cars through those facilities in 1949. Now, during 1945, you referred to as the all-time peak. Will you state how many trains, engines, were handled through Ogden in that year?

A. I don't have that with me, Mr. Quirk.

Q. Well, you can get it, can't you?

A. Yes.

Mr. Quirk: I wish you would furnish that, Mr. Collins.

Mr. Collins: Will you state it again? I wasn't paying very close attention. You want the number of cars for July, 1945?

Mr. Quirk: We want the same information for 1945, the peak year, which the gentleman, Mr. Edens has given, for 1949.

Mr. Collins: We will give you that.

Exam. Mullen: Can that be supplied at this session of the hearing?

Mr. Collins: As soon as Mr. Edens can get it. I don't know how long it would take.

[fol. 910] Mr. Quirk: I imagine you can get that by telephone, can't you?

The Witness: I may have it with me.

Mr. Quirk: I see.

Mr. Collins: We will get is as soon as we can.

By Mr. Quirk:

Q. Turn to page 11 of your prepared statement. You stated, commencing at the bottom of page 10, and running over page 11, that the average time trains were held in the

ice house yard, in September, 1949, was 4 hours and 38 minutes per train on the Southern Pacific trains, Southern Pacific trains and cars to the Union Pacific, and that on the Rio Grande perishable traffic from these trains the average was 6 hours and 9 minutes from the time of arrival until delivery to the Rio Grande was accomplished.

You also testified that the Rio Grande business was assembled on track 6 or 9 in the ice house yards which was the same yard in which the Southern Pacific and the Union Pacific business is assembled. Will you explain, if you can, the difference in the time that I have already described without repeating it?

A. What do you mean, Mr. Quirk? Why a difference in the time?

Q. Yes.

A. As I have stated in this testimony, Mr. Quirk, during the month of September, 1949, there were received 220 fruit trains from the Southern Pacific. The average time these [fol. 911] trains were held in the ice house yard was 4 hours 38 minutes per train. Those trains normally carry approximately a train east for the Union Pacific. They are interchanged as from the Southern Pacific to the Union Pacific the moment it stops on the receiving track. After that train is inspected, or serviced by the PFE people in the ice house, it is switched and the east traffic is switched direct into a track where a train is assembled, caboosed, and moved east. After that it is necessary then that I take a yard engine and effect a delivery from this yard to the Denver and Rio Grande interchange, which costs and calls for considerably additional time.

Q. On the bottom of page 10 you stated that in September, 1949, you received 220 fruit trains from the Southern Pacific. How many cars would the average be for each train?

A. The average, Mr. Quirk, would be better than 90 cars, pretty close to 100 cars to a train.

Q. Do the car and the trains you receive from the Southern Pacific come to you blocked?

A. No.

Mr. Collins: May we have the question read, and the answer.

(Question and answer read.)

By Mr. Quirk:

Q. Mr. Edens, will you turn to page 20 of your statement. On that page you stated that there is no space available to expand the facilities of the Rio Grande interchange yard at Ogden. Do you recall that?

[fol. 912] A. Where are you reading from, Mr. Quirk?

Exam. Mullen: At the top of page 20.

By Mr. Quirk:

Q. At the very top.

A. There is no space available for expansion by constructing additional tracks adjacent to the existing OUR&D tracks and there is no space available to expand in the vicinity of the D&RGW interchange yard.

Q. You think you really know that, do you? Have you examined that subject specially?

A. Yes.

Q. Now, you heard Mr. Lynch's testimony about the amounts expended by the Union Pacific in recent years for additions and betterments at Pocatello and other places. Do you want to leave the impression with this Commission that the terminal facilities now in existence at Ogden have reached the saturation point?

A. I certainly want to leave the impression with this Commission and with you that they have definitely reached the saturation point in that particular location.

Q. Well, you say you had a great deal of experience in terminal facilities and in terminal operation. Don't you know numerous instances where in order to keep up with the times and keep up with the growth of the country and increase in traffic, potential and otherwise, that these terminal facilities have to be relocated?

A. I didn't testify to anything like that.

[fol. 913] Q. Don't you know that is true?

A. It is entirely possible that you have got to move out. I don't know what they would do.

Q. Didn't you ever hear of the Roper Yard of the Rio Grande near Salt Lake?

A. Yes. I have heard of the East Yard at Ogden, too.

Q. Yes, those are examples of relocating to meet the demands of the times.

Mr. Collins: I object there, Mr. Examiner. The East Yark Mr. Edens testified, was not a relocation, it was an addition two miles away from the main yard. He stated the reason why they had to build that.

Exam Mullen: I think the witness is competent to answer that. Go ahead.

The Witness: The East Yard in Ogden was constructed in 1942 as an expansion and it was necessary that we move to that location which is approximately two miles from the present main yard in which we operate, and operations there are rather expensive.

By Mr. Quirk:

Q. All right. You have said you have reached the saturation point. Now, has the owner of the Depot Company or yourself given consideration to expanding the facilities to meet current and prospective needs?

A. As they are required, yes.

Q. You are giving consideration to that?

[fol. 914] A. There is no program.

Q. There is no program?

A. No, sir.

Q. At the moment?

A. No, sir.

Q. In other words, you will wait until the need is right on top of you, I suppose?

Mr. Collins: I beg your pardon. I don't think that is an appropriate question.

Mr. Quirk: He said there wasn't any program.

Mr. Collins: Wouldn't that be enough?

Mr. Quirk: It wouldn't be for me.

Mr. Collins: Mr. Edens, do you have anything to do with the policy of expansion or settlement?

The Witness: No, sir.

By Mr. Quirk:

Q. You are superintendent over there, aren't you? Have you recommended anything?

A. Yes.

Q. You are the top man over there, aren't you?

A. Yes.

Q. It would be your duty to keep your principals advised?

A. Yes.

Q. You have not made any recommendation?

A. None.

Q. In the last sentence in the first full paragraph of [fol. 917] page 19, you went on to say that you had already shown, since the maximum number of cars the Rio Grande was able to receive from us on any day in its Ogden freight yards in February, 1949, was 369 cars, the zone yards would not be able to handle the traffic potential the Rio Grande seeks.

On that day which is February 24, that you received the maximum, didn't the Denver and Rio Grande deliver to the Depot Company 193 carloads, or cars?

A. I don't have that record.

Q. Well, your 369 figure is in one direction?

A. That is cars that I delivered to the Denver and Rio Grande.

Q. Yes, you didn't deal with the cars you received.

A. No.

Mr. Quirk: That is all.

Mr. Collins: That is all.

(Witness excused.)

A. D. Hanson was sworn and testified as follows:

Exam. Mullen: We will have a ten-minute recess.

(Recess taken.)

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Collins: I believe I offered and there was received in evidence, subject to Mr. Quirk's objection, this exhibit 14, the map.

[fol. 916] Exam. Mullen: 14 was received without objection.

Mr. Collins: Oh, was it? All right. I want to make the announcement yesterday we didn't have sufficient number of copies for distribution. We now have them on the table

in the back of the room, and anyone who wants one may get it there.

Exam. Mullen: You may proceed.

Direct examination

By Mr. Collins:

Q. Mr. Hanson, you have prepared some testimony and exhibits, have you not, for presentation in this case?

A. Yes, sir.

Q. And are the statements and the exhibits submitted, true and correct to the best of your knowledge and belief?

A. Yes, sir.

Q. Will you proceed with your statement?

A. My name is A. D. Hanson. I am General Superintendent Transportation, Union Pacific Railroad, 1416 Dodge Street, Omaha, Nebraska. I entered the employ of the Union Pacific Railroad in May 1917 and practically all of my service has been in the Operating and Transportation Departments in various capacities, having been appointed Assistant to General Manager, Omaha, Nebraska, August, 1942, and General Superintendent, headquarters at Salt Lake City, July 1, 1946, with supervision over the Utah and Idaho Divisions between Salt Lake City, Utah and Butte, Montana and Huntington, Oregon, and which comprise the territory served by the Union Pacific Railroad in [fol. 917] the State of Utah north of Salt Lake City and in the States of Idaho, Montana and Eastern Oregon. I served in that capacity until appointment to my present position on December 15, 1947.

In connection with and as part of my testimony I have prepared——

Exam. Mullen: 15?

Mr. Collins: 15.

The Witness: —Exhibit 15, consisting of 15 pages, to which I will refer later.

Freight Train Schedules.

R. o Grande Exhibit No. 5, submitted by Mr. Bradford, covers condensed eastbound and westbound freight schedules between Chicago, St. Louis and Kansas City on the east,

and Los Angeles and San Francisco on the west via D&RGW and its connections at Denver, Pueblo, Ogden and Salt Lake City. These schedules are comparable to those via Union Pacific routing to and from Missouri River connections and Denver, Ogden, Salt Lake City and California points, and which, for example, provide for 7th morning delivery of traffic at Chicago eastbound from California and 7th morning delivery of traffic westbound to these California destinations from Chicago.

However, I desire to clear up one point mentioned by Mr. Bradford on pages 202, 214 and 215 of the transcript in which he refers to 16-hour run-off time on perishable blocks eastbound. The run-off schedule eastbound is not in effect [fol. 918] at this time, nor has it been in effect since reverting to the present schedules following the war period. In other words, perishable traffic billed on Monday in California and concentrated by the Southern Pacific at Roseville is due to depart Roseville at 11:59 p.m., Tuesday, and arrive at Chicago at 12:30 a.m., Monday, for the 7th morning delivery from date of billing. These perishable blocks are all due to arrive Ogden via the Southern Pacific at 5:40 p.m. MT the second day, or in this case, on Thursday.

It is true the Southern Pacific as they get a trainload of perishables assembled at Roseville will depart ahead of the 11:59 p.m. due time, and when blocks arrive Ogden ahead of the 5:40 p.m. due time and delivered to the Union Pacific or the Rio Grande. They are ahead of time and the intermediate lines have this additional time to apply on their portion of the schedule, although with the number of perishable blocks moving, particularly during peak seasons, the intermediate lines will likewise deliver to their connections a number of blocks ahead of time and which is necessary in order to get the last block of the day into Chicago and other terminating points on time.

Freight train schedules between the Pacific Northwest and Chicago, St. Louis, Kansas City and other Eastern, Southern and Southwestern markets, in both directions via the Union Pacific Railroad through Pocatello, Idaho and Granger, Wyoming, and its Missouri River and Denver [fol. 919] connections also provide for a 7th morning delivery Chicago from the Pacific Northwest, including such points as Spokane, Yakima, Seattle, Tacoma, Portland and

surrounding territory and from Rieth, Oregon which is the perishable concentration point for that area. The existing schedules also provide for 7th morning delivery westbound from Chicago to these Pacific Northwest destinations.

Page 1 of Exhibit 15, Columns 1 and 2, covers these schedules. These schedules enable shippers in the Pacific Northwest and Idaho to compete with shippers in California into all of these markets but this would not be the case if the traffic moved via D&RGW between Ogden and Denver or Pueblo. Perishable traffic in the Nampa territory, which includes Western Idaho and Eastern Oregon, is concentrated at Nampa and due to leave there 3:30 a.m. following the day billed and into Pocatello that afternoon. Perishable traffic from the Twin Falls and Idaho Falls territories is concentrated at Pocatello and which, together with the perishables from the Nampa territory, are due to leave Pocatello at 7:30 p.m. If this traffic is moved to Ogden and thence over the Rio Grande from Ogden to Denver or Pueblo instead of via the Union Pacific through Granger and the shorted route, the perishable blocks would leave Pocatello some time during the evening or night and be delivered to the Rio Grande at Ogden the following forenoon, or some 12 hours after the departure of the Rio [fol. 920] Grande's last perishable block at 9:40 p.m. and as shown on Rio Grande Exhibit No. 5. The traffic would then necessarily take the schedule of that night and as a result arrive Denver, Kansas City, St. Louis, Chicago and other Eastern markets one day later than if moved via Union Pacific from Pocatello through Granger to Denver, Kansas City, or Council Bluffs.

The same situation would prevail westbound and any traffic from Eastern Points to Idaho, Montana and the Pacific Northwest would be one day longer enroute if moved via Rio Grande from Denver to Ogden than if moved via Union Pacific from Council Bluffs or Kansas City direct through Granger, Wyoming.

I have indicated in Columns 3 and 4, Page 1 of Exhibit 15 approximate schedules that would be effective if traffic moved via Rio Grande to and from Idaho and the Pacific Northwest.

It will result also in the reduction in trains handling coal eastbound and empties westbound as follows:

	No. Trains East	No. Trains West	Total Carloads Coal (Average 54.2 tons/car)
Wyoming Division:			
Green River-Rawlins	133	84	8,000
Rawlins-Laramie	110	70	6,628
[fol. 1040]			
Laramie-Cheyenne	92	58	5,519
Nebraska Division:			
Cheyenne-Sidney	82	62	4,949
Sidney-North Platte	66	50	4,002
North Platte-Grand Island	32	24	1,949
Grand Island-Council Bluffs	17	12	1,003
North Platte-Hastings	15	11	910
Kansas Division:			
Hastings-Marysville	10	7	594
Marysville-Kansas City	5	4	332

The foregoing is more fully set forth in Exhibit 15, introduced by Mr. A. D. Hanson and with respect to which he testified, his testimony with respect to this exhibit showing also the further reduction in employment of 60 employees annually of the Union Pacific Railroad Company, with annual wages of $180,802.00.

At all times except in case of emergency such as a strike of the miners or a threatened strike or a slow-up in production, all of the freight trains of the Union Pacific Railroad Company operated between Green River, Wyoming and Kansas City, Kansas are operated by steam locomotives fueled with coal produced, to a large extent, by the mines [fol. 1041] of the Union Pacific Coal Company operated in the State of Wyoming at the points hereinbefore mentioned.

Mr. Collins: If we can avoid a quarrel, we can say a reduction in the number of trains previously mentioned.

Exam. Mullen: The trains previously mentioned, that will be all right.

Mr. Collins: Then cut out those A, B, C's.

The Witness: The reduction in the operation of the trains will consequently reduce the amount of coal used by the Railroad Company and will in turn greatly affect the operations of The Union Pacific Coal Company, as well as employment available to miners in that area. Based on the aforesaid reduction in trains operated per day, I have prepared an estimate, in exhibit form, showing the

loss of employment to employees of the Union Pacific Coal Company which would result from the aforesaid reduction in train operation by the Union Pacific Railroad Company.

By reference to sheet 1 of my exhibit—have we given that a number yet?

Exam. Mullen: No, it will be number 18.

Mr. Collins: 18, all right.

The Witness: —it will be observed:

(1) that the reduction in trains operated by the Union Pacific Railroad Company as aforesaid will result in a reduction in coal consumed annually of 433,985 tons, and [fol. 1042] (2) a reduction annually of 268 employees of the Union Pacific Coal Company, or 64,968 employee days, whose annual wages amount to $1,084,962.50.

The formula on which the aforesaid figures are compiled is fully set forth in my exhibit 18.

In considering the reduction in consumption of coal by the Union Pacific Railroad Company in the amount of 433,985 tons annually, it is necessary to anticipate where and how that loss would be reflected in mine operation of the Union Pacific Coal Company.

Economics of mine operation would not permit a general reduction of production spreading the loss of 433,985 tons over the six operating districts of Rock Springs, Reliance, Stansbury, Winton, Superior and Hanna. On the contrary, it would be necessary to at least temporarily shut down and possible permanently abandon one mining district producing the approximate tonnage which would be lost. Stansbury mine in the Rock Springs district is the mine producing nearest to the tonnage which would be lost. It would therefore be necessary to close the Stansbury mine.

There is shown on sheet 2 of my exhibit 18, under the heading:

"Statement showing loss of mining personnel and others associated with production of coal at Stansbury, Wyoming, together with annual income of wage earnings affected [fol. 1043] in the event it becomes necessary to close the Stansbury mine," an actual inventory of the mining personnel and of other personnel associated with the pro-

duction of coal at Stansbury mine, Wyoming, together with the annual income of the wage earnings affected. This statement includes the 268 miners with an annual income of $1,084,962.50, shown on sheet 1 of my exhibit, and, in addition thereto, supervisory forces, clerical staff, mercantile store and power plant employees directly connected with the production of coal at the Stansbury mine, and also medical and hospital staff, primary and high school staff, post office, recreation hall, law enforcement, bus drivers and retail coal truck drivers, who will be indirectly affected as a result of the closing of the Stansbury mine.

It will be observed from the statement that there will be a loss of 322 wage earnings in the Stansbury community and a loss of their annual income, including, as above indicated, the loss of income of the 268 miners, totalling $1,341,219.50. This includes also the sum of $86,797.00 which would be paid by the Company into the United Mine Workers of America Welfare Fund at the rate of 20 cents per ton of coal mined.

Since this testimony was prepared, there has been a new contract consummated, which raises the welfare fund to 30 cents per ton, and increases the miners' wages 70 cents per day, which is not included in this exhibit.

From sheet 2 of my exhibit 18 it will be observed that [fol. 1044] the closing of the Stansbury mine will displace 322 wage earners who will no longer be required in the community. The majority of those wage earners are heads of families. Assuming an average family of 3⅓ persons, the displacement of the 322 wage earners will result in a displacement of 1,073 persons. The Government of the United States is quite concerned with relocating the displaced persons of Europe and spend millions annually for their welfare, and it is reasonable to assume that the State of Wyoming would be concerned about the displacement of 1,073 persons in one community in its State.

Stansbury is an unincorporated village in the State of Wyoming where the Stansbury mine of the Union Pacific Coal Company is located. In the village of Stansbury there are 110 houses, a boarding house, stores, schools, post office and recreation hall. White Mountain Addition to Stansbury has 130 residences. The Stansbury mine was opened in 1943 and all of the facilities above enumerated were

constructed to accommodate the employees engaged in the operation of the Stansbury mine. All of the facilities have been constructed within the past six years.

This loss of employment in the Stansbury community could very possibly eliminate the entire communities of Stansbury, Wyoming and White Mountain Addition thereto. When I speak of the communities I mean more than the bricks, mortar and machinery which stand as monuments—[fol. 1045] I mean the people who make a community—the children, mothers, fathers, citizens and taxpayers who are the body and soul of every community.

The elimination of the communities of Stansbury and White Mountain Addition thereto would bring about a loss of tax income as reflected on sheet 2 of my Exhibit 18, under the heading:

"Loss of tax income in the event the village of Stansbury, Wyoming and White Mountain residence addition thereto were abandoned."

The statement referred to speaks for itself, but it will be observed that the total of tax income is $113,489.62. That figure does not include federal income tax, corporate or from the individual wage earners.

The amount of tax payable by the Union Pacific Coal Company shown on sheet 2 of my exhibit 18 is part of the general ad valorem taxes paid by the Union Pacific Coal Company in Sweetwater and Carbon Counties, Wyoming, in the amount of $386,000 annually. Of the latter amount, $94,000.00 is contributed to the State of Wyoming for distribution and support of school operation in all of Wyoming's 23 counties.

In addition to the loss of tax income resulting from the discontinuance of use by the Union Pacific Railroad Company of 433,985 tons of coal annually produced by the Union Pacific Railroad Company and the consequent closing of the Stansbury mine as aforesaid, there would necessarily [fol. 1046] result a tremendous loss in general business revenue. This general business loss, totalling $2,654,135.38, is reflected on sheet 3 of my exhibit 18, under the heading:

"Loss in general business revenue resulting from discontinuance of use by the Union Pacific Railroad Company

of 433,985 tons of coal annually and the closing of the Stansbury mine."

It includes the loss of revenue from the purchase of coal by the Union Pacific Railroad Company in the amount of $1,814,057.30, the purchase of commodities by mine employees, real estate rentals, utilities, water and power and transportation of miners and mining supplies and commodities.

Mining communities once active and then closed as a result of an economic condition such as the diverting from the Union Pacific Railroad Company of the traffic originating and terminating in the States of Idaho, Montana, Oregon and Washington of 157,000 carloads of commodities such as are shipped from and destined to those points, creates what is generally known in the west as "ghost towns." The transition from active to "ghost town" status brings about a tremendous loss in property value. This loss applied to the village of Stansbury and White Mountain Addition thereto represents a loss in undepreciated value of property in the amount of $2,910,006.14, as reflected on sheet 3 of my exhibit 18, to the remaining mining districts operated by the Union Pacific Coal Com-
[fol. 1047] pany substantially increasing their operating costs, or charge the entire amount off to profit and loss. Although the total undepreciated value of this property, as shown on sheet 3 of my exhibit 18, is $2,910,006.14, the replacement value of this property is $4,089,304.57.

Although I have selected the Stansbury mining district and housing facilities of White Mountain Addition thereto for the purpose of analyzing the economic effect of the reduction in production of 433,985 tons of coal annually, which is the consequence of the discontinuance by the Union Pacific Railroad Company of the operation of the number of trains previously mentioned, the same or greater loss of payroll earnings, tax income, loss of general business revenue and property value would obtain if the loss in production were assigned to any of the other and/or all of the mining districts operated by the Company.

A summation of the tremendous losses and resulting economic effect on the operations of The Union Pacific Coal Company and the effect on the communities in which the Union Pacific Coal Company operates its mines is set

forth on sheet 4 of my exhibit 18, under the heading:——

Mr. Quirk: Now Mr. Examiner, I want to suggest whether the heading is read or not that it costs money to buy that. The exhibit is self-explanatory. I don't think [fol. 1048] the Government or the parties ought to be subject to unnecessary costs.

Exam. Mullen: I agree, that heading is unduly long, and may be copied in the record.

Mr. Collins: May he refer to the page?

Exam. Mullen: Sheet 4, all right, that is enough.

The Witness: It will be observed from this summary that the total loss of earnings to employees of the Union Pacific Coal Company and persons associated with the production of coal amounts to $1,341,219.50 annually (which includes the loss to the United Mine Workers of America Welfare Fund of $86,797,) the loss of tax income amounts to $113,489.62 annually, and the loss of general business revenue amounts to $2,654,135.38 annually, or a total annual loss of $4,108,844.50. In addition thereto, the loss of property—undepreciated or book value—would amount to $2,610,006.14.

Exam. Mullen: Isn't that repetition? It is all in the exhibit. I don't think you need to summarize it.

Mr. Collins: Why not copy from there on? I think the summarization is helpful to the reader of the material in the record.

Exam. Mullen: All right, let that be copied.

That part on page 10 is argumentative.

Mr. Collins: I disagree with you, Mr. Examiner. He has lived in this country, he knows the effect of the matter he is describing on the community, he knows the relative [fol. 1049] importance of these things, and I think the Commission itself ought to know them. I think it ought to be let in. If the Commission thinks differently from the way I do about it, they can ignore it.

Exam. Mullen: This matter on page 10.

Mr. Collins: Page 10, yes.

Exam. Mullen: I believe it is argumentative. It will be stricken.

Is that all on direct, Mr. Collins?

Mr. Collins: Yes, sir, that is all.

Cross-examination.

By Mr. Quirk:

Q. Mr. Bayless, how long have you been with this company?

A. Twenty years.

Q. Has your coal production increased or decreased in recent years?

A. It increased during the war years.

Q. So did everything else.

A. Yes.

Q. How does it compare now in Stansbury and the other mines with the war years?

A. Comparing with the war years it is reduced approximately 50 percent. It remains now about as it was before the war.

Q. You sell 95 percent of your coal to the Union Pacific Railroad?

[fol. 1050] A. Yes, sir.

Q. Have you ever discussed with Mr. Stoddard, the idea he might keep this town going, if he would quit buying diesels?

A. No, I haven't felt privileged to discuss that too much.

Q. You are President of the company. Now, the use of diesels instead of coal-burning locomotive cars certainly has affected the production of the coal by the Union Pacific Coal Company, hasn't it?

A. The territory now allotted for coal use will consume ordinarily approximately the same amount of coal that was produced before the war and maintain the Union Pacific properties.

Q. Now, how many employees do you have now compared with the war period?

A. We have approximtaely 2400 employees now, and we got up to 3200 employees during the war years.

Q. Are you familiar with an announcement recently made by Mr. Stoddard that the Union Pacific was going to keep running because of the uncertainty of the coal production, he was going to keep buying oil burning locomotives?

A. I am rather familiar with statements that are made that affects the coal company, but I don't think he made the

statement that he was going to continue to buy oil burning locomotives.

Q. I didn't say he said coal-burning locomotives.

A. Oil burners.

Q. Is the Union Pacific buying diesel locomotives right along?

[fol. 1051] A. I understand it they are, yes, sir.

Q. And every time the Union Pacific railroad buys a diesel locomotive, it certainly doesn't help your company, does it?

A. It doesn't necessarily hurt my company. The Union Pacific Railroad, for a number of years, have used fuel oil burning locomotives on certain territory, and while the operating department of the railroad can explain that much better than I can, many of the diesel locomotives have been assigned to take the place of oil-burning locomotives.

Q. This story that you have told about what will happen to everybody and everything in Stansbury, Wyoming is based entirely on what Mr. Hanson told you as to the traffic that may move via the Rio Grande Railroad through Ogden, away from the Union Pacific, if this complaint is sustained by the Interstate Commerce Commission, is it not?

A. It is based on the testimony as given by Mr. Hanson, and on the statement that the number of trains that would be reduced.

Q. You made this statement before Mr. Hanson testified, of course, didn't you?

Mr. Collins: Will you read that question?

Exam. Mullen: We have a request here to read the question.

(Question read.)

The Witness: The same information that was available to Mr. Hanson was made available to me.

[fol. 1052] By Mr. Quirk:

Q. Yes. So that if Mr. Hanson has exaggerated the possible effects of the result of this complaint, if successful, and he should be proven to be in error, then everything you have said here is in error, isn't it?

A. My testimony here is based on the loss of a number of trains, or the reduction of a number of trains on the Union

Pacific Railroad which will affect the Union Pacific Coal Company.

Q. And that in turn is based upon a notion that the Union Pacific Railroad may lose 157,000 carloads of traffic?

A. That is right.

Q. So if that should turn out to be wrong, then everything you said is wrong, isn't it?

A. I wouldn't say that. I would say if there was more or less, if opening of the Ogden Gateway resulted in more or less loss traffic to the Union Pacific, that the figures would somewhat fluctuate.

Q. You have not dealt with it on the theory it might be less. You used the maximum here, haven't you?

A. I don't understand this is the maximum. It is the figure that was given to consider what effect it would have on the Union Pacific Coal Company.

Mr. Quirk: That is all.

Mr. Collins: That is all.

(Witness excused.)

Mr. Collins: I offer exhibit 18, Mr. Examiner.

[fol. 1053] Exam. Mullen: Any objection?

Mr. Quirk: I think I will object to the exhibit on the ground that it is irrelevant and immaterial. It is rather far-fetched.

Exam. Mullen: The objection will be overruled. The exhibit will be received in evidence.

(The document marked Exhibit No. 18, Witness Bayless, was received in evidence.)

Mr. Collins: Mr. Examiner, I had intended having witnesses rushing one after the other until whatever hour you intended to sit, but the thing got crossed up somewhat, and we are now faced with a situation where we don't have a witness, and won't have another until in the morning.

Exam. Mullen: Are there any other persons here who desire to put on a witness, any other defendants?

Mr. Collins: The Northwestern Railroad is here, but they say they are not ready until in the morning.

Exam. Mullen: Are we going too fast for you?

Mr. Collins: No. We just got a little mixed up in our

preparation and in getting a witness from out of town into town.

Exam. Mullen: We will adjourn until tomorrow morning at 9:30.

(Whereupon, at 4:32 o'clock, p. m., a recess was taken to reconvene at Wednesday, April 5, 1950, 9:30 a. m.)

[fols. 1054-1055] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

Transcript of Testimony—Wednesday, April 5, 1950

Met pursuant to adjournment, at 9:30 o'clock a. m.

Before Frank E. Mullen, Examiner

[fol. 1056] Proceedings

Exam. Mullen: Come to order, please, gentlemen. We are ready to proceed. Mr. Collins.

Mr. Collins: Mr. Examiner, I understand Mr. Quirk is ready to cross examine Mr. Lynch. Mr. Lynch is here and is ready.

Examiner Mullen: Mr. Lynch.

PERRY J. LYNCH resumed the witness stand and testified further as follows:

Cross-examination.

By Mr. Quirk:

Q. Mr. Lynch, on page 3 of your prepared statement you refer to the history, evaluation of the Union Pacific, and subsidiary lines, as reported in valuation report in Volume

44 of the Commission valuation reports, and that this valuation report discloses that the Union Pacific put more than 14 million dollars into the original construction and equipment of the Oregon Short Line Railway Company.

Now, I assume you know that during the period from 1906 through 1931 that the Oregon Short Line paid to the Union Pacific in dividends the aggregate sum of $252,246,000, in round figures? Do you know that?

A. I don't personally know whether those figures are correct, no.

Q. They don't sound unfamiliar to you, do they?

A. No, not entirely.

[fol. 1057] Q. You have been with the company how long?

A. Over 39 years.

Q. Irrespective, therefore, of the amount that you spent in the original, what you characterize as the original construction of the Oregon Short Line, or the amount you may have since spent in additions and betterments, that has proven to be a very good investment so far as the Union Pacific is concerned, hasn't it?

A. Well, all I can say, Mr. Quirk, is that there has been that amount of money invested in the construction of the lines that we are talking about in this proceeding, and the details of the inter-company financial settlement I am not qualified to talk about. I don't know about them.

Q. Well, there are a lot of other interesting things that bear on the development of these properties in that same valuation report, are there not?

A. Yes sir.

Q. At page 12 of your narrative, the first full paragraph, where you are dealing with the statistics in your Exhibit 12, you say with reference to page 9 of that exhibit, which deals with a comparison of the physical characteristics of the Union Pacific for the year 1948, and for the Denver and Rio Grande Western for the year 1940, and you say that you used the year 1940 in this comparison as far as the Rio Grande is concerned because you did not have the statistics at the time you prepared the exhibits.

[fol. 1058] Didn't Mr. Collins inform you that at his request the Denver and Rio Grande prepared a condensed profile as of November 1, 1949, and that we sent it to him, and that would have enabled you to compare year with year?

Mr. Collins: Mr. Quirk, I have Mr. Backlund here, the engineer who worked on this feature of this matter, and I think if you will look at the footnote at the bottom of page 9 you will see what is the basis for the figures on that page, but if you want to inquire about this, I woud like you to permit me to put Mr. Backlund on the stand.

Mr. Quirk: That isn't my point. The witness went out of his way to say he couldn't make a comparison year with year because he didn't have anything later than 1940 for the Denver and Rio Grande. I am merely calling his attention and your attention to the fact that you did have it.

Mr. Collins: The engineer said he didn't have from that profile that was furnished and that was put in evidence.

Mr. Quirk: All right.

Mr. Collins: I will be glad to put Mr. Backlund on the stand and let him explain why.

Mr. Quirk: No, it isn't necessary.

Mr. Collins: Before we leave that, I call your attention to the fact that bot- sets of statistics are for 1940, Mr. Quirk.

[fol. 1059] The Witness: I want to clear that up in regard to my direct, that the report in the case of the Union Pacific and the Rio Grande is on the basis of 1940, and not a comparison of 1948 versus 1940.

By Mr. Quirk:

Q. Well, perhaps we were confused. I wonder why, then, you say you didn't have the Rio Grande figures for a later period?

A. I didn't have them, and I had no conversation with Mr. Collins about the availability of the Rio Grande later statement.

Q. All right. Thank you very much.

Now, will you turn to page 25. After discussing some of the testimony of Mr. McCarthy, you say that he confirmed the policy and stated at page 35 of the transcript that they want to continue increasing their volume of traffic; they take from the originating and terminating connecting lines and others "because, generally speaking, there is more money in it."

Then you say, "At pages 32 and 33 of the record, Mr. McCarthy made it clear that the only purpose of the Rio

Grande in filing the complaint in this case was 'to improve the financial condition of our railroad.' "

Now, Mr. Lynch, I wish you would look at those pages and tell me where you find anything like that. Read the top of page 33 there, Mr. Collins' question.

Mr. Collins: You might begin at the bottom of page 32.

[fol. 1060] Mr. Quirk: Yes.

The Witness: At the bottom of page 32, the question is: "Question: That is from the standpoint of what I will say the treasury of the Rio Grande and the stockholders that would be the purpose?"

"Answer: Yes, we hope to improve our condition if we can get these through rates.

"Question: Insofar as the corporate management and stockholders of the Rio Grande are concerned, that would really be the only immediate purpose to them, would it not?

"Answer: Yes, that they would want to improve the financial condition of our railroad.

"Question: Yes; that, of course, is apart from what you anticipate or what you have said would be some additional transportation conveniences that you would expect the public to derive."

By Mr. Quirk:

Q. All right. Now, on page 43 of the transcript—I don't think it is necessary to read it—but you will see Mr. McCarthy is still being examined, and he says, "that is true with respect to that," and in answering the position of the Rio Grande, and the convenience to our shippers.

Now, in view of what Mr. McCarthy actually said, don't you think your statement that I have quoted at page 25 of your prepared statement, that Mr. McCarthy made it clear that the only purpose of the Rio Grande is to improve its financial condition, is unfair?

[fol. 1061] Mr. Collins: Mr. Examiner, I object to that line of cross examination. The record will stand for itself. Mr. Lynch is not required to interpret it for Mr. Quirk's benefit.

Mr. Quirk: He has interpreted it for his own benefit here.

Exam. Mullen: I don't think the witness has to testify or

characterize what his own statement is. He has brought out the facts.

Mr. Quirk: All right.

Mr. Examiner, while we are on this subject, if I may digress a moment from cross examination, one of counsel for the complainant here, I want to make it clear, that this complaint is not based upon the financial needs of the Denver and Rio Grande Western Railroad; it is based on the provisions of the Interstate Commerce Act, such rights as we have under that act, and the pleadings in the case, which do not raise any question of aid from the Union Pacific financially.

If we get the joint rates, and any traffic moves, there will naturally be some benefits from it.

Mr. Collins: I would like to state in response to that, that Mr. Quirk is not in position to repudiate Mr. McCarthy's testimony which is in the record.

Exam. Mullen: Mr. Quirk is not attempting to do so.

Mr. Quirk: I am in position to state what our position is in the case.

[fol. 1062] Exam. Mullen: That is correct.

By Mr. Quirk:

Q. Mr. Lynch, page 13 of your prepared statement, you include at the bottom of that page, after discussing the traffic situation on the Union Pacific at the present time, you say, you refer to the fact that in the face of the lower railroad traffic volume——

A. Pardon me. What page number is that?

Q. 13, down at the bottom.

Now, in the face of a lower railroad traffic volume, we are confronted with the threat of losing, according to forecasts by Mr. Earley of the Denver and Rio Grande, a potential of 101,476 loads of eastbound traffic, and 56,286 loads of westbound traffic, or a total of four trains per day eastbound and westbound between Pocatello and Council Bluffs.

Tell me, Mr. Lynch, why did you use the figures that Mr. Earley put in the record merely referring to his estimate of the traffic that would be susceptible to routing over the Rio Grande and not traffic that they could reasonably expect to get?

A. Well, I heard a great deal of discussion about that all day Monday and all day yesterday, and I will say for your information that I proceeded since the start of this case on the basis that that was what the Rio Grande expected to obtain in the event the Rio Grande was successful in this case, and I even disagree with the testimony of some wit- [fol. 1063] nesses yesterday who said that was the maximum. I don't even understand that is the maximum you expect to obtain, because in Mr. Earley's statement at the Salt Lake meeting, he very definitely said he didn't think that exhausted the possibilities.

Now, in the formation of a case of this kind, we have got to naturally start somewhere, and I certainly, in my small way, wouldn't know what figure to place; if they don't want to talk about 157,000, if you could get that, I am sure you wouldn't settle for 150,000. You would obtain the maximum.

Q. Well now, do you think anybody here is naïve enough to believe that the Union Pacific hadn't worked on that itself?

Mr. Collins: I object to the form of that question.

By Mr. Quirk:

Q. Did the Union Pacific work on that subject itself in the preparation for the defense of this case?

A. Did we work on this?

Q. Did you make an independent check of what traffic you might possibly lose?

A. I am not in position to make that, naturally.

Q. Well, you have freely referred to these figures, however.

Mr. Collins: Mr. Examiner, I would like to make a statement about this.

Exam. Mullen: I don't believe it is necessary, Mr. Collins. We have a witness here under cross examination.

Mr. Quirk: I don't think this interruption——

Exam. Mullen: Go ahead, Mr. Quirk:

[fol. 1064] By Mr. Quirk:

Q. I say you didn't hesitate to use these figures, however, I just referred to.

A. No, I state emphatically we did use those figures, and we based our case on it all the way through.

Q. Could it be, Mr. Lynch, that you used those figures for tactical reasons to arouse the interest of your employees in this case?

A. We used it for the reason that I mentioned there a while ago, and I can't enlarge any more on that statement. If you will stipulate what you think the Rio Grande might get in the event they are successful in this case, we might start all over again and work some new figures. I don't know whether that meets with approval of counsel or not, but that is my view of it.

Q. Now, do you know that Northwest, or parts of the Northwest are served by the Great Northern, the Northern Pacific, the Milwaukee Railroad, the Southern Pacific and the Union Pacific?

A. Yes sir.

Q. Do you have any idea what share of the potential traffic in that area is moved by the Union Pacific?

A. No, I do not.

Q. You do not. But you have been with this railroad a long time, and while you are—Mr. Collins is very eager to remind me you are not a traffic man, but I find operating men are very capable men. You know very well, however, that the Union Pacific doesn't get one hundred per cent of [fol. 1065] the potential, don't you?

A. I do.

Q. What makes you think that the mere opening of this gateway at Ogden with competitive rates would enable, as against your service——

Mr. Collins: I object to it. Mr. Lynch says he thought they would get it.

Mr. Quirk: He used the figures.

Exam. Mullen: It is cross examination, Mr. Collins. I see no logical objection to the question. Go ahead, Mr. Quirk.

By Mr. Quirk:

Q. To enable the Rio Grande to get all of the traffic which Mr. Earley estimated was potentially available?

A. Mr. Quirk, I endeavored to give you a concise answer to what I thought about that, and why we used the figure, and I can't enlarge on that statement.

Q. Do you really think as a practical operating man that there is any likelihood whatsoever of the Rio Grande getting 156,000 carloads a year eastbound and westbound through Ogden?

A. I stay with my original statement. I told you before I am basing a lot of this on what Mr. Earley and witnesses at Salt Lake mentioned, and Mr. Earley said, "The Union Pacific traffic susceptible to Rio Grande routing which is termed traffic potential represents a conservative estimate of business available to our solicitation."

Then he went on further to say that he had only taken [fol. 1086] what originates and terminates on the Union Pacific and that there was other traffic out there that he thought was susceptible.

Mr. Collins: Now look at the last page of that, Mr. Lynch, and read that part. This is quoted out of the record.

Mr. Quirk: What page of the record?

Mr. Collins: You ought to be familiar with it.

Mr. Quirk: When you refer to the record, I think you should tell us what it is. That is what I have done.

Mr. Collins: Read that part.

The Witness: "Again, I wish to emphasize the point that the foregoing traffic potential represents to a considerable degree less traffic than what I believe would actually be available to our solicitation for the reason our study includes only the amount of traffic loaded and unloaded on the Union Pacific in the four Northwestern states."

By Mr. Quirk:

Q. What did Mr. Earley say at page 174 of the transcript? Look at the top and read it.

A. "I also wish to point out with additional emphasis that this estimate of the traffic possibilities for the Rio Grande route does not attempt to show the number of cars

which we think will actually move through Ogden by the route of the Rio Grande in connection with the Union Pacific in the event of the establishment of competitive through rates via that junction."

Q. I won't take the time to read the other statements [fol. 1067] made by Mr. Earley——

Mr. Quirk: There is quite a statement made by Mr. Earley prior to this statement that qualifies that.

By Mr. Quirk:

Q. Well, anyway, actually as a practical man, familiar with the situation on your railroad, don't you really think it is rather absurd for you to use a figure that represents merely what might possibly be available?

Mr. Collins: I objected to the question. It is an unfair question. Mr. Lynch doesn't deal with traffic.

Exam. Mullen: The witness can answer, I believe, if he knows.

The Witness: I do not think it is an absurd statement, and I am going to repeat again my original statement on that, and if you have some ideas of what this might be, rather than what Mr. Earley testified to with great emphasis, the testimony, the answer I just read, he didn't say it would be any less. He didn't make any inference. You can draw from that that it might be more.

Mr. Quirk: We have some very definite ideas what it will be. We will put our vice president on for rebuttal, and we will show it can't possibly exceed 20,000 carloads in both directions, and never exceed 15,000.

Mr. Collins: I move that be stricken.

Mr. Quirk: He asked me for it.

Exam. Mullen: That may remain in the record as a state- [fol. 1068] ment of what counsel intends to prove.

Mr. Collins: Counsel doesn't solicit traffic, Mr. Examiner.

Exam. Mullen: It is a statement of counsel, not a question.

Mr. Quirk: Not only that, but the witness stated that.

Exam. Mullen: And it is not evidence either.

Mr. Quirk: That is right.

Mr. Collins: I object to his arguing with Mr. Lynch what this figure would be. They offered the figure, and we used it.

Exam. Mullen: Go ahead, Mr. Quirk: We don't need any more interruptions.

Mr. Quirk: I am going to object to his constant interruptions.

By Mr. Quirk:

Q. You know, I suppose, even if Mr. Collins does not think you do, you probably know that you do have a line of joint rates on your Los Angeles, California, line to Salt Lake and Provo with the Rio Grande east and west?

A. Yes——

Mr. Collins: He hasn't testified about any joint rates, and we have traffic people here who will testify about it. That is beyond his direct testimony.

Exam. Mullen: If the witness knows, he can answer. It is not an improper question. Go ahead, Mr. Lynch. There is a question on the record. Has it been answered?

Mr. Quirk: Yes, he said, "yes."

By Mr. Quirk:

Q. Now, Mr. Lynch, does the Rio Grande, because it has competitive rates through Provo and Salt Lake, get all the [fol. 1069] traffic from California?

Mr. Collins: Do you know that?

The Witness: From California?

By Mr. Quirk:

Q. To and from California.

A. No, I don't think it does.

Q. You know it gets a very small part of it compared with what you get, don't you?

A. I think that is a fair statement.

Q. Now, you had something to say about Ogden, and the facilities at Ogden, operated by the Depot Terminal Company, which is partly owned by the Union Pacific. Did you hear the testimony of Mr. Edens yesterday in which he said that the terminal facilities at Ogden were cursed with old age or something?

Mr. Collins: He didn't say that. I object to that.

Exam. Mullen: He is merely asking the recollection of the witness.

Mr. Collins: He is twisting everything he asks.

Mr. Quirk: You have a right to do that. I submit, Mr. Examiner, you have a right when cross examining somebody to do just that.

Exam. Mullen: Go ahead, Mr. Quirk.

By Mr. Quirk:

Q. Well, you heard the question. You heard Mr. Edens say the terminals at Ogden had reached a saturation point?

A. Yes.

[fol. 1070] Q. Did you hear him say that in the fact of the fact that the terminal facilities at Ogden had reached the saturation point that he, as a manager out there, had never seen fit to make any recommendations about expanding it, relocating it, doing anything about it to improve it? Do you agree with that?

A. I don't understand he testified to that effect. At least I didn't understand it.

Q. He did testify he had not made any recommendations. Assuming I am right about that, is it the policy of the Union Pacific to allow terminal facilities to grow stale and do nothing about it?

A. No sir.

Q. It is not?

A. Emphatically not.

Q. Will it be your policy if the traffic situation justifies it, to make such changes as are necessary there?

A. Well, I don't know of any reason why we should with an adequate plant now, why we should consider expending a tremendous sum of money at Ogden, to help out a situation you mentioned. The Commission, in a report as late as 1949, has admonished the railroads to conserve their income, cut the corners in every way they could. I don't understand the necessity or reason why we should duplicate all or any part of the plant at Ogden to take care of a situation such as that, when we have a direct route that is entirely adequate.

[fol. 1071] Q. You took care of much more than that during the war years there, didn't you?

A. After a fashion, yes.

Q. You took care of them anyway?

A. After a fashion.

Q. What do you mean by "after a fashion"?

A. It wasn't a very satisfactory situation for anyone.

Q. You would like to have that kind of business, though, wouldn't you?

A. I certainly would.

Q. You wouldn't care for war traffic?

A. Not war stimulated traffic; I don't think you want to see it either.

Q. I don't want to see a war; I would like to see more traffic. So you think the services there are adequate now, your terminal facilities at Ogden are now adequate?

A. Is that a statement or a question?

Q. I asked you, are they adequate? Did you say that? I understood you to say that.

A. I think the facilities are inadequate right now.

Q. You do?

A. Yes sir.

Q. But now then you are not doing anything to make them adequate?

A. That is not altogether correct.

Q. Well, what are you doing?

[fol. 1072] A. We are making track changes and other alterations there, and in times past have endeavored to acquire property to make the terminal more adequate, and we were successful. For that reason, we went out to Riverdale Yard and put in quite a plant out there.

Q. Don't you know the Denver and Rio Grande are also improving and expanding their yards at Ogden at the present time?

A. I heard Mr. Bradford make that statement at Salt Lake, that they were spending some money out there.

Q. You described the interchange yard facilities at Pocatello and how you had expanded them in recent years, and that is one of the best classification yards on your system. Despite that fact, isn't it a fact that you handle, through the Ogden terminals, more than twice as much traffic as you do through Pocatello?

A. No so far as the Union Pacific is concerned, no.

Q. Well, you are a part owner of the Terminal Depot Company. Maybe I should have put it that way. Doesn't the Terminal Depot Company handle twice as much traffic at Pocatello as the Union Pacific handles?

A. I don't know exactly, Mr. Quirk. I couldn't say it was twice, but it is substantial. I will agree with you on that.

Q. All right.

A. But I will also want to say, and reiterate what I said in my direct testimony, that a substantial part of the ton-[fol. 1073] nage, the traffic that does more through Ogden, on the face of it, bypasses the terminal by our wye tracks. There are many trains per month that are not received into or dispatched from the Ogden Terminal property.

Q. Will you turn to page 9 of your prepared statement? At this point, and in previous testimony in this prepared statement, you have been dealing with the unused transportation facilities, unused capacity of the Union Pacific at this time.

First of all, most railroads in the United States have a large unused capacity, now, don't they?

A. I wouldn't know, Mr. Quirk.

Q. You wouldn't know? Even I know that. Most anybody—tell me why, at the bottom of page 9, you used October, 1944 in showing you handled through the then existing facilities at Pocatello 2,147 cars per day, and that in January, 1950, you handled only 1367 cars. Why did you compare October, 1944, which was at the very peak of traffic in this country, with January, 1950, when there was a coal strike and the incidental restrictive effects of a coal strike?

A. Because 1944, October, was when we had the hump yard, the retarder yard, and it was one of the most difficult months we ever operated.

Q. That is your only reason for doing that?

A. It is just a comparison of the capacity of the yard when we didn't have the improved facility.

[fol. 1074] Q. Mr. Lynch, isn't it a fact, regardless of what kind of a yard you had at Pocatello in 1944, if you compared the traffic handled through Pocatello or any other yard in 1944 with what you handled in that yard or any other yard in January, 1950, there would be a great gap in the number of cars handled?

A. I think I will go along with that.

Q. Part of your testimony, Mr. Lynch, you indicated how superior the statistical operating figures reveal with respect to the Union Pacific as compared with the Denver and Rio Grande; and then at page 26, when you were trying to demonstrate that the Union Pacific doesn't intend to be a "big brother" financially to the Rio Grande, you make comparisons which show how much better the Denver and Rio Grande operations are than the Union Pacific.

How do you suppose the Rio Grande made such a good showing if they are, as you imply, inefficiently and uneconomically situated and operated?

Mr. Collins: I object to that. Those terms are not in Mr. Lynch's testimony.

Mr. Quirk: Let's don't quibble about such things. That is the impression he left.

Mr. Collins: Mr. Examiner, Mr. Quirk quibbled about everything that was in my testimony.

Exam. Mullen: Just a minute. You need not go into all of [fol. 1075] that. The witness hasn't answered the question, but I don't think he needs to answer if he doesn't wish to.

By Mr. Quirk:

Q. Well, at that point you were referring to page 11 of your Exhibit 12, which is headed "comparative statistics of the Union Pacific." In the face of what you did say about the Rio Grande, and your own service, you do admit the Union Pacific gives the shippers of the country and the public excellent freight train and passenger train service between the territories operated by it, and the particular territory involved in the Northwest; you admit that, don't you?

A. Yes.

Q. Well, what is the Union Pacific staff going to be doing if the Ogden gateway is opened, sit around and allow the business to leave the rails?

A. Oh, I think that is an unnecessary question, Mr. Quirk. I think you know we wouldn't.

Q. You would be very vigilant, wouldn't you?

Mr. Collins: What was the question again, please?

Mr. Quirk: He has already answered it.

Mr. Collins: I would like to have that question read.

Exam. Mullen: The question will be read.

Mr. Collins: I would like the record to show the tenor of this examination.

Exam. Mullen: We will have the question read.

[fol. 1076] (Question read.)

Exam. Mullen: Do you wish a ruling on the objection?

Mr. Collins: Yes, I move to strike the question.

Exam. Mullen: The objection is overruled. Proceed, Mr. Quirk.

By Mr. Quirk:

Q. Now, as has been shown here, and it is generally known, in January and February, 1949, the Union Pacific was faced with a severe blizzard, blocking your lines for many days in the vicinity of Rawlins. Now, if this blizzard had been in the vicinity of Soda Springs, thus blocking the line between McCammon and Granger, would you have been forced to hold the traffic there because of Mr. Eden's idea and your own apparently up to a certain point, that you couldn't get through Ogden?

Mr. Collins: I object. I don't think Mr. Lynch needs to answer any such supposition.

Exam. Mullen: No, he doesn't need to.

Mr. Quirk: All right.

By Mr. Quirk:

Q. The fact is, however, a great deal of the traffic was blocked because of the blizzard, did move through Ogden, didn't it, and the Rio Grande?

A. Part of it, yes sir.

Q. Part of it. Wasn't there more than four thousand carloads of it, and 44 passenger trains?

A. I think those are the right figures.

[fol. 1077] Exam. Mullen: I think we had testimony on that yesterday.

Mr. Quirk: Yes.

The Witness: But I would like to clear up a point here on that Mr. Examiner, on Mr. Quirk's question about a blockade of our line between McCammon and Granger. We have an alternate route, and it would not involve the handling of the traffic through the Ogden terminal that we talked about yesterday and talked about this morning.

Mr. Collins: Would you go a little farther with that and explain. How would it move?

Exam. Mullen: You may answer it.

The Witness: We would move it by the outside wye tracks. The traffic would not move through the Ogden terminal facilities. That is one of the advantages and one of the reasons why in my testimony I mentioned the installation of a new tunnel up there, so we would have a much better through route which could always be used as an alternate route in the event of traffic interruption in the Idaho territory.

By Mr. Quirk:

Q. On page 22 of your prepared statement——.

A. I mentioned Riverdale Yard in answer to your question, and to have it conform with the division of the yard as Mr. Edens put it, it should be the east yard.

Q. On page 22 of your narrative, you are dealing with the tax situation which, I think, is reflected on page 12 of your Exhibit 12, and you pointed out, or another witness of [fol. 1078] the Union Pacific pointed out, if the Rio Grande had succeeded in this case, it wouldn't pay any taxes in Idaho and the other North-e-stern states.

Mr. Collins: I object to that. The record doesn't show that.

Exam. Mullen: Mr. Quirk hasn't finished the question yet.

Mr. Quirk: Yes, I have.

Exam. Mullen: Please have the question read.

(Question read.)

Exam. Mullen: There is no question yet. What is the question?

By Mr. Quirk:

Q. Well, the question is, doesn't the Union Pacific participate in traffic between points on its line and points in practically all the states of the United States, especially in the east?

A. Yes.

Q. The Union Pacific doesn't pay taxes in Pennsylvania, does it?

A. No, not that I am aware of. It may, on the other hand, it may have some property there; I don't know.

Q. It doesn't have any rail property?

A. No rail property, no sir.

Q. It doesn't pay taxes in any of these states in the east, east of Iowa?

A. Yes, we have property in these other states we pay taxes on.

Q. You have no railroad property though, have you?

[fol. 1079] A. What was the last statement?

Q. Let that rest. I will correct it.

You do not operate any railroad as a common carrier or otherwise in any of these eastern states, do you--the Union Pacific I mean?

Mr. Collins: Mr. Examiner, the record shows that very clearly.

Exam. Mullen: Let the witness answer.

By Mr. Quirk:

Q. You can say they do not; that is obvious, isn't it?

A. That is right.

Q. You wouldn't want to be deprived of participating in the heavy traffic that moves east and west from these eastern points merely because you don't have rails there, would you?

A. No, I wouldn't want to see it changed, certainly not. But I don't understand from the page that you are talking about that I said anything about that.

Q. Well, perhaps you didn't.

A. The D&RG taxes up there, I merely mentioned, and they are a matter of record, what the Rio Grande paid in the States of Colorado and Utah, and what the Union Pacific

paid in those states, as well as the four or five northwestern states.

Q. Well now, to clear this up, where you state that if the 156,000 carloads of traffic eastbound and westbound, which Mr. Earley described, should all move through Ogden, it [fol. 1080] would mean the discontinuance of four freight trains each day each way. That is all based on Mr. Earley's estimates, is it not?

A. Just a moment.

Mr. Collins: Page 18 is the discussion of the Ogden terminal.

Mr. Quirk: Page 13.

By Mr. Quirk:

Q. All I am asking Mr. Lynch—perhaps my question is not too clear—all I am asking is this——

A. I think I understand it.

Q. I think it would be simpler if I would restate it. What you said about the trains is based on Mr. Earley's estimates, isn't it?

A. But you changed the figures there from what we were talking about before, and I wanted to see to what extent. It is a lesser number. I am all clear on it now. Go ahead.

Q. What is the answer? Read the question. It is a very simple question.

Exam. Mullen: The answer is "yes."

Mr. Quirk: All right.

By Mr. Quirk:

Q. If it should turn out that the Denver and Rio Grande would only get ten per cent of that potential instead of all of it, as you have assumed, then your calculations about trains and employees and all the other things would be entirely erroneous, wouldn't it?

A. It would be entirely erroneous at all. It would be just——

[fol. 1081] Q. It would be an exaggeration.

A. We would have to approach the thing on an entirely new basis, and I again repeat, and go back to what I originally said in answer to that question, that we based our

whole cost on what the D&RGW have apparently thought was going to be the answer to this thing; otherwise, I don't know why Mr. Earley mentioned it.

Mr. Quirk: All right. That is all.

Exam. Mullen: Any redirect, Mr. Collins?

Mr. Collins: I want to ask Mr. Lynch a few questions.

Redirect examination.

By Mr. Collins:

Q. Mr. Lynch, in connection with Mr. Quirk's discussion with you about the antiquation of the terminal, and finally the saturation point, I would like to ask you if there is any land available that could be had within reasonable terms of business management adjacent to the tracks that are already there, so that you could lay parallel tracks along side those that are already in the yard proper?

A. No sir, there is not, that that is the very reason why we moved out of the yard a mile and a half or two miles and established the so-called east yard, at a heavy expense initially, and a continuing heavy expense to handle cars to and from that yard.

We certainly wouldn't have gone to that trouble and have the continuing burden we have if there was available ad- [fol. 1082] jacent to the present terminal.

Q. Mr. Quirk asked you, with respect to the yard at Pocatello—will you state why that yard was expanded, and what purpose it was intended to serve with respect to the making up and breaking up trains, and actual physical handling of traffic through there?

A. We made that expenditure and that installation because the facilities at Pocatello were not adequate for our purpose. We wanted to improve our service, and improve the handling of traffic east, west, north and south from Pocatello. That location is the center of a hub. We wanted to improve our service.

Q. Did you have in mind in constructing and revamping those facilities the more expeditious breaking up and making up of trains for through movement?

A. We had in mind more particularly the east-west movement, which constitutes a substantial part of the traffic handled through Pocatello.

Q. Did you have in mind, or did you make the expenditure at the Pocatello yard because of handling traffic north and south through Ogden?

A. No, we did not. The north and south traffic through Ogden is virtually non-existent; it is so small it just doesn't enter into the picture.

Q. The Ogden terminal has no retarder operation; it is [fol. 1083] not a retarder operated yard, is it?

A. No, it is not. It is a so-called flat switching yard.

Q. Would it be possible to convert the present flat switching yard at Ogden terminal in its present location into a modern retarder operated yard such as you have at Pocatello or North Platte?

A. No sir, it would not.

Mr. Collins: That is all.

Recross-examination.

By Mr. Quirk:

Q. Now, Mr. Lynch, I did forget to ask you this question: On northbound coal traffic originating on the Denver and Rio Grande, and going up to points up in this territory on the Union Pacific, don't you interchange with the Rio Grande at Salt Lake City?

A. At Salt Lake City and Provo.

Q. And Provo. And you interchange some southbound traffic at Salt Lake City, too, do you not?

A. Coal traffic, or are you talking about any traffic?

Q. Southbound traffic of any kind.

A. Yes, that is right.

Q. Isn't there any reason why it all cannot be changed at Salt Lake City?

A. I don't know if I follow you, Mr. Quirk.

Q. Is there any physical reason why the Union Pacific, and the Rio Grande, couldn't interchange all of the traffic [fol. 1084] moving between those two railroads to and from this territory up here at Salt Lake City?

Mr. Collins: I object to that, Mr. Examiner. The question here is whether the Ogden gateway should be opened, and not the Salt Lake gateway.

Mr. Quirk: Wait a minute——

Exam. Mullen: I think the witness may answer if he knows.

The Witness: I just haven't approached it on that basis. I thought all the time this was the Ogden gateway case.

By Mr. Quirk:

Q. You are taking your counsel's advice?

A. No, I beg your pardon, that is my own idea.

Q. Just answer my question.

A. I would say no.

Q. You say it couldn't be done?

A. No, I think the facilities for that interchange are just about as inadequate as anything I know of.

Q. You haven't studied the Salt Lake City situation as to the interchange, have you?

A. What makes you think that?

Q. I don't know; have you?

A. You made the statement.

Q. I am asking you now——

Mr. Collins: I object.

Exam. Mullen: I think the witness is getting along very well.

[fol. 1085] Mr. Collins: I object to this proceeding descending into any such wrangling as this, because the D&RG said nothing about interchanging at Salt Lake City when they put in their case. He springs a brand new question on Mr. Lynch to see if there isn't some way to find maybe we could deliver this traffic at some other place.

Exam. Mullen: I agree with you, Mr. Collins, it is a new subject.

Mr. Quirk: Mr. Lynch has already——

Exam. Mullen: I would like to have that question developed, if possible.

Mr. Quirk: Mr. Lynch has already said they do interchange at Salt Lake City. Now, I am finished with the witness.

Exam. Mullen: Have you anything, Mr. Collins?

Mr. Collins: I have finished with the witness for this hearing anyway.

Exam. Mullen: That is all. Thank you, Mr. Lynch.

(Witness excused.)

Mr. Quirk: In view of Mr. Collins' remark, Mr. Examiner, I would like to say this: He probably hasn't read the complaint for some time——

Exam. Mullen: I don't think those characterizations are necessary, Mr. Quirk.

Mr. Quirk: I agree with you. I would like to say the complaint seeks joint competitive rates via Odgen and Salt [fol. 1086] Lake, too, in connection with the traffic moving over the Rio Grande through Ogden, and it is not necessarily tied up to Ogden, as Ogden.

Mr. Collins: This is going into the record, is that right?

Exam. Mullen: On the record you may make any statement you please with respect to that, Mr. Collins.

Mr. Collins: I want to suggest, Mr. Examiner, if the D&RG intended to effect interchange at Salt Lake City, or at any particuar point other than Ogden, then they should have disclosed that in their main case. We were quite entitled to be led to the conclusion by Mr. Bradford's testimony that Ogden was the place for interchange, because he said they were spending two hundred thousand dollars to fix up their yard to expand the trackage at their Ogden yard, and this Salt Lake interchange is a brand new approach.

Mr. Quirk: The only purpose of my remarks was to make it clear this is not an interchange case; it is a rate case.

Exam. Mullen: So we understand.

Mr. Quirk: That is all.

Exam. Mullen: Do you have another witness?

Mr. Gault: Mr. Norton.

T. L. Norton was sworn and testified as follows:

Direct examination.

By Mr. Gault:

Q. Will you please state for the record your name and [fol. 1087] occupation?

A. My name is T. L. Norton. I am traffic manager of sales.

Q. Of what company?

A. Chicago and Northwestern Railroad Company.

Q. How long have you been employed by that company?

A. Twenty-nine years and some months.

Q. In the traffic department?

A. Yes.

Q. All in the traffic department?

A. All in the traffic department.

Q. You might state for the record in what capacity you have been employed in that work.

A. Well, in many clerical positions, and as local agent, city freight agent, and general perishable agent, and assistant traffic manager, and presently traffic manager.

Q. Does this area involved in this case come within your jurisdiction from a traffic point of view?

A. It does.

Q. In a supervisory way, is that the situation?

A. That is correct.

Q. Have you ever been in this particular field yourself locally?

A. No, I have never worked here locally.

Q. You have never worked here, but it is under your jurisdiction?

A. Yes.

Q. You have a prepared statement you desire to put of [fol. 1088] record, have you not?

A. I have.

Q. Will you proceed with your statement?

A. The establishment of through rates and routes via Ogden for traffic originating or terminating on the Union Pacific Railroad in the States of Idaho, Montana, Oregon and Washington undoubtedly would result in a serious loss of traffic and revenue to the C&NW system.

Q. Just a minute. What does the C&NW System consist of?

A. The Chicago and Northwestern Railway Company, the Chicago, St. Paul, Minneapolis and Omaha Railway Company.

Q. They are separate corporations, but the two properties are under the same control and so recognized by the Interstate Commerce Commission?

A. That is right.

Q. Control and management?

A. That is right.

Q. All right, proceed, if you will, please.

A. Total value of this business to the C&NW System is approximately $4,020,322. This estimate is based on 1948 traffic as determined from reports of C&NW system traffic representatives located at Salt Lake City, Utah, Portland, Oregon and Seattle and Spokane, Washington, and from reports of cars interchanged between the Union Pacific and North Western at Omaha, Nebraska, and Council Bluffs, Iowa.

[fol. 1089] Q. Just a minute, Mr. Norton. In connection with that figure, $4,020,322, that means a year, does it not, annually?

A. That is correct.

Q. All right, proceed, please.

A. Study and analysis of these reports indicated a potential loss of a large portion of the 23,799 loaded cars as shown in the exhibit originating in the territory involved in this proceeding, and a potential loss of a large portion of the 11,566 cars as shown in the exhibit to the territory involved.

On the basis of the traffic office reports and the interchange records at Council Bluffs, it was found that the 23,799 east-bound cars could be readily sub-divided into four principal groups: lumber, potatoes, other products of agriculture, and miscellaneous. The average revenue per car for each group was determined by using the actual revenues for a number of these cars.

C&NW settlement abstracts for cars terminating in C&NW territory and foreign line abstracts for cars moving overhead were used in this spot check of actual revenues from this traffic. The estimated revenue value to the C&NW System on this eastbound traffic thus determined is $2,632,402.

The revenue per car of $105.90 for lumber is an average of settlements received on actual cars selected at random from the abstracts. There was found a considerable difference in the revenue for these cars of lumber, varying up as high as $141.99. This sampling process used produced an aver-

[fol. 1090] age revenue per car which appears reasonable.

The average revenue per car of potatoes was found to be $106.44. Revenue per car varied up to a high of $124.20.

The revenue per car of the group "products of agriculture other than potatoes" average $110.00. This group included onions, celery, dried beans, lettuce, deciduous fruits, etc.

The average revenue per car in the miscellaneous group was comparatively high. Typical commodities in this group are machinery, canned goods, sugar, seeds, livestock, miscellaneous, iron and steel, etc.

The 11,566 westbound loaded cars terminating on the U. P. in the involved territory consists of a large variety of commodities, most of which would be classified under the general heading of Manufactures and Miscellaneous, and cannot be subdivided readily into a small number of principal groups such as was done with the eastbound traffic.

To obtain the average revenue per car for this westbound traffic, actual revenues for a number of cars were secured from the abstracts for cars terminating in the territory. The revenue value to the C&NW System on the westbound traffic moving to the involved territory thus determined is $1,387,920.

To arrive at the average revenue per car, we used automobiles which were a substantial part of the westbound traffic, paper products, beer, forwarder cars, canned meat, pipe fittings, candy, tractors, machinery, wire fencing, [fol. 1091] engines, cheese, etc. The average revenue per car of $120 for westbound traffic as thus determined appears reasonable.

Thus, the total estimated potential value of this traffic to the C&NW System could approximate $4,020,322.

Exhibit No. 19 shows this revenue value in some detail.

(Defendant's Exhibit No. 19, Witness Norton, marked for identification.)

It is believed that the $4,020,322 is a reasonable estimate of the C&NW System revenue which is jeopardized by establishing competitive through rates via the Ogden gateway. Loss of any substantial volume of this traffic manifestly would be a serious threat to our company's revenues and net earnings.

Q. It would be a serious blow, would it not?

A. It would indeed be a serious blow.

Q. By the way, Mr. Norton, what is the average haul of the Chicago North Western Railway in the year 1948?

A. It was 193.8 miles.

Q. That is a rather low average haul, isn't it?

A. It certainly is.

Mr. Gault: We offer in evidence Exhibit No. 19.

Exam. Mullen: Any objection?

Mr. Quirk: No.

Exam. Mullen: It will be received in evidence.

(Defendant's Exhibit No. 19, Witness Norton, received in evidence.)

[fol. 1092] Mr. Gault: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. Mr. Norton, am I correct in understanding that while the interchange figures, eastbound and westbound, which you have shown represent the traffic to and from what you call the territory involved, and it includes traffic to and from points on the Union Pacific and beyond the Union Pacific?

A. These are the Union Pacific—on the Union Pacific.

Q. Only?

A. On the Union Pacific. That is my understanding.

Q. Well, are they from and to points that are served exclusively by the Union Pacific? Some points are on the Union Pacific, which are competitive points with other railroads?

A. I wouldn't say they are exclusively on the Union Pacific; that I do not know.

Q. What railroads do you connect with at Omaha from whom you could get traffic coming from the west, besides the Union Pacific?

A. Well, we connect mainly and principally with the Union Pacific, and, of course, that is——

Q. Not going east, you don't?

A. I beg your pardon. I perhaps misunderstood your question.

Q. I misspoke myself. Go ahead.

A. You say connecting with Union Pacific at Omaha?

Q. That is right.

A. Our connection there, of course, the principal con-
[fol. 1093] nection is the Union Pacific, and that is, of course, why we are so concerned with that particular case. Now, we also connect with the CB&Q, the Rock Island, the Missouri Pacific, but the CB&Q and the Rock Island are competitive routes.

Q. But if these competitive rates should be established, and a shipper were so inclined, he could route the shipment Union Pacific through Ogden, and Burlington at Denver, and the North Western at Omaha, couldn't he?

A. He could, but he wouldn't likely do that.

Q. Well, but it could be done?

A. I admit it could be, but the portion that we would get out of that after it got on one of those competitive lines would be practically nil.

Q. He could also route it Union Pacific, Rio Grande, back to the Union Pacific at Denver?

A. That can probably be done, and set up as a route, but I again suspect what we would get from it would be just about nothing.

Q. You know what you would get from the Los Angeles line of the Union Pacific, to and from the Los Angeles line that moves via the Denver and Rio Grande through Provo or Salt Lake City?

A. Do I know how much?

Q. Yes.

A. No, I cannot answer that.

Q. You don't know whether the volume is substantial or
[fol. 1094] whether it isn't?

A. Well, I don't think it could be called substantial as compared to the total volume of traffic.

Q. Perhaps not, but don't you know there is—that traffic is routed that way?

A. Yes, that is correct.

Q. What other western connection—what connection do you have with western railroads that handle traffic to and from the west? That is, that would be competitive with the Union Pacific.

A. Well, of course, we have connections with the NP and the Great Northern, and, of course, connections with the Chicago, Milwaukee, St. Paul and Pacific as well. But

that is, of course, in the territory in the Pacific Northwest where there perhaps is not much competitive traffic involved.

Q. There is a lot of competition in the Pacific Northwest, though?

A. I don't just quite see what your question is.

Q. What I mean is, the mere establishment of competitive rates through Ogden wouldn't prevent your solicitors in cooperation with the solicitors of some of these western railroads like the Great Northern, Milwaukee, and the Northern Pacific, in particular the Great Northern and Northern Pacific, to and from competitive points of the Union Pacific, from routing it through the Twin Cities and [fol. 1095] you getting the haul from there to the East?

A. I suspect we are getting the share of the business that they can originate at a competitive point right now. I don't see how that is going to change the picture at all. If you go into a competitive point in this Northwest area, and the Union Pacific gets it, that is what we are talking about. That is where the potential loss comes from.

Q. What I mean is, all the loss that you claim wouldn't necessarily follow, because of the availability of these other routes, isn't that true?

A. Well, I don't see how I can agree with that.

Q. Well, if as you admit, some of this traffic eastbound and westbound to points served by the Union Pacific in the territory involved, which are competitive with other points with other railroads, you could possibly get that, you wouldn't lose it completely?

A. Well, I think, to be specific about it, you might take Yakima, Washington. Whatever we are getting there in connection with the Union Pacific competition, we will continue on that basis, and I don't see that we can do much better if this was opened up. I don't see how it is going to improve our situation, or lessen our serious loss if this particular proposal is approved.

Mr. Quirk: That is all I have.

Mr. Gault: That is all.

[fol. 1096] Exam. Mullen: You are excused.

(Witness excused.)

Mr. Gault: I call Mr. John A. Wood.

JOHN A. WOOD was sworn and testified as follows:

Direct examination.

By Mr. Gault:

Q. Will you please state your name and occupation for the record, Mr. Wood?

A. J. A. Wood, assistant controller, Chicago North Western Railroad Company.

Q. How long have you been employed by that company?

A. Approximately 26 years.

Q. In what department?

A. The entire 26 years has been spent in the accounting department.

Q. But you are a graduate engineer, are you not?

A. Yes sir, I am.

Q. You are familiar with the accounting and also the engineering as far as the railroad business is concerned, is that correct?

A. Yes sir.

Q. You have a prepared statement, have you not?

A. Yes sir.

Q. Will you proceed with that?

Mr. Quirk: Why can't we have a recess for a few minutes?

Exam. Mullen: We will recess for ten minutes.

[fol. 1097] (Short recess taken.)

Exam. Mullen: Come to order, please.

By Mr. Gault:

Q. Mr. Wood, you have an exhibit which I understand will be marked Exhibit 20.

Exam. Mullen: Exhibit 20, yes.

(Defendant's Exhibit No. 20, Witness Wood, marked for identification.)

By Mr. Gault:

Q. That consists of a single sheet?

A. Yes sir.

Q. That is a part of your testimony, is it not, and it will be explained in your statement?

A. That is right.

Q. And referred to possibly orally, is that right?

A. Yes sir.

Q. All right, proceed, if you will, please, with your statement.

A. This exhibit shows the estimated decrease in number of Chicago and North Western employees if all of the traffic here involved moved via the D. & R.G.W. Railroad Company and other carriers.

The establishment of competitive through rates via Ogden for traffic originating or terminating on the Union Pacific Railroad in the States of Idaho, Montana, Oregon and Washington which now moves via Union Pacific to Omaha and east thereof, would produce, according to Rio Grande Witness Earley, a traffic potential of 157,762 loaded cars an- [fol. 1098] nually subject to competitive solicitation.

Of this total, 101,476 loaded cars originate in the territory (eastbound) and 56,286 terminate in the territory (westbound). The loss of all of this traffic to the Union Pacific could result in an annual loss to the Chicago and North Western Railway Company of approximately 21,000 loaded cars eastbound out of Council Bluffs and approximately 10,290 loaded cars westbound into Council Bluffs. This loss to the North Western was determined from study and analysis of interchange reports, C. & N. W. traffic representatives' reports, and other company records.

In 1948, eastbound through trains from Council Bluffs averaged 53 loaded cars per train and westbound through trains into Council Bluffs averaged 41 loaded cars per train. Hence, 396 trains are operated each year to move the eastbound traffic now in jeopardy, and almost as many trains are operated to move the westbound traffic when due consideration is given to the necessary westbound empty car movement.

Therefore, the loss to the Union Pacific of the 157,762 loaded cars could result in the elimination of one train daily each way between Council Bluffs and Chicago.

Q. That is on the Chicago and North Western?

A. That is right.

Q. Go ahead.

A. The discontinuance of a train per day would result [fol. 1099] in an estimated decrease of 57 transportation

service employees, 11 maintenance of way employees, and 32 maintenance of equipment employees, a total of 100. Total annual wages for these employees amounts to $422,795.

Q. The detail for that is in Exhibit 20?

A. That is right.

Q. Now, Mr. Wood, what is the entire mileage of the Chicago and North Western System?

A. The entire operative road mileage of the Chicago and North Western System is 9,693 miles; divided Chicago and North Western Railway, 8,076; Chicago, St. Paul, Minneapolis and Omaha Railway, 1,617.

Q. And the two properties have been recognized by the Commission and are under common management and control?

A. Yes sir.

Q. Operated as one property, is that correct?

A. That is correct.

Q. Now, when was what is now the Chicago and North Western Railway started from Chicago?

A. In 1848.

Q. That was the Chicago and Galena Union?

A. That is correct.

Q. That line gradually was projected to the west and elsewhere, was it not?

A. Yes sir.

[fol. 1100] Q. When did that property enter Council Bluffs?

A. Early in 1867.

Q. Just after the Civil War?

A. Yes sir.

Q. That was the first line that came into Council Bluffs from the East?

A. It was the first line from the East.

Q. Now, does the Chicago and North Western Railway and also the Omaha Railway have considerable branch line mileage?

A. Yes sir, a substantial part of the mileage is classified as branch lines.

Q. And we have several applications now pending before the Commission in connection with the abandonment of branch lines, have we not?

A. Yes sir, we have quite a number of them.

Q. Now, any loss of traffic to this main line would be a severe blow to the whole property, would it not?

A. Very definitely.

Q. Now, in what states does the Chicago and North Western Railway System operate?

A. In Illinois, Wisconsin, Michigan, Iowa, Minnesota, Nebraska, South Dakota, North Dakota, and Wyoming.

Q. North Dakota is about 15 miles, is that correct?

A. It is a very short mileage.

Q. Now, have you some statistics showing the results [fol. 1101] of operation for 1949 which have just become available. Have you those?

A. I have made a condensation, a condensed income statement for 1949.

Q. Will you please make that of record?

A. The revenue in 1949—this is the Chicago and North Western Railway Company.

Q. That is right.

Mr. Quirk: Total revenue?

The Witness: I will have the total revenue.

Mr. Quirk: I am asking for information. You said "revenue."

The Witness: I am going to read in the total revenue, yes sir.

By Mr. Gault:

Q. All right, proceed.

A. The freight revenue was $132,936,697; all other revenue, $40,204,061; for a total revenue of $173,140,758.

Operating expenses, $156,929,211, or a net revenue from railway operating of $16,211,547; and the net rents together amounted to $13,428,928, so that our net railway operating income for the year 1949 was $2,782,619.

Other income amounted to $4,442,217, or a total income available for fixed charges of $7,224,836.

Fixed charges and contingent interest amounted to $6,091,152, so that the net income for the year was only $1,133,684.

Q. That is very slim for a large property, is it not?

A. Yes sir, very definitely.

[fol. 1102] Q. Is there anything further you care to add?

A. No, I believe that covers the situation.

Mr. Gault: Cross examine, please.

Cross-examination.

By Mr. Quirk:

Q. Mr. Wood, for your estimate, your testimony in connection with your estimates, revealed on Exhibit 20, are based entirely on the potential estimates made by Witness Earley in this proceeding?

A. They are based on Mr. Earley's estimate of potential traffic.

Q. They are also based upon the assumption that if the joint rates are established through Ogden, that the North Western will not receive any of the traffic that moves that way either from the Burlington at Denver, or from the Union Pacific at Denver?

A. To this amount only: If there is other traffic received, which is improbable, according to other testimony, it would still result in a decrease of a train per day.

Q. Well, if some of this traffic is moved via the Rio Grande to Ogden-Salt Lake, delivered to the Union Pacific or the Burlington at Denver, it could be given to you at Omaha, couldn't it, or Council Bluffs?

A. It might be given to us, but it would be quite improbable.

Q. It could be routed that way, couldn't it?

A. It could be, but that would be improbable.

Q. Don't you know you actually receive now the traffic from the Union Pacific at Omaha, which originates on the

[fol. 1103] Union Pacific in California, delivered to the Rio Grande at Salt Lake City, Provo, and then back to the Union Pacific at Denver?

A. I am not familiar with that traffic, Mr. Quirk. That is largely a traffic matter.

Q. Well, you expressed an opinion it would be smaller. You just don't know, then, do you?

A. This other traffic you are talking about had to do with California traffic, which is not involved in this, as I understand it. I am basing my opinion largely on the opinions of our traffic men, who are experts in this matter.

Q. I understand, but all I am trying to get from you is that you have two assumptions here; one is that if these joint rates are established, 156,000 carloads of freight, eastbound and westbound, now moving via the Union Pacific east of Granger, we will say, or Ogden, will be given to the Rio Grande at Ogden, and then you will never get them at all, none of them.

The first assumption is that they will move that way; the second assumption is none of them will come to you at Omaha.

A. Not necessarily. Because this is not dependent entirely on the amount of traffic. From the opinions of our traffic department, it is improbable we will get very much of that traffic, and it will be a decrease of a train per day in each direction.

Q. Even though it is not dependent, as you said, on the amount of traffic?

[fol. 1104] A. What wasn't dependent on the amount of traffic?

Q. You said the number of trains per day wouldn't entirely depend on the amount of traffic.

A. No, I think you misunderstood that.

Mr. Quirk: Let's have the reporter read it back.

(Answer read)

Mr. Quirk: All right. That settles it.

Mr. Gault: Is that all?

Mr. Quirk: Yes.

Mr. Gault: We offer in evidence Exhibit 20.

By Mr. Quirk:

Q. I should have asked this of another witness, but I suppose you know this, Mr. Wood: The North Western has soliciting agents in places like Seattle, Portland and Denver and throughout the Northwest and the West, do they not?

A. They are at a good many of the points in the west.

Q. They ware shown in the official railway guides?

A. That is correct.

Mr. Gault: All our competitors have solicitors, too, do they not?

The Witness: Undoubtedly.

Exam. Mullen: Exhibit 20 is received in evidence.

(Defendant's Exhibit No. 20, Witness Wood, received in evidence.)

(Witness excused.)

Mr. Gault: One thing, Mr. Examiner: I expected some [fol. 1105] of our timetable maps that I thought might be of some help to the Commission and the people here in connection with this testimony, and if they come before the adjournment, or the close of the hearing, I should like to offer them.

Exam. Mullen: I assume there is no objection to that?

Mr. Quirk: No, we can take judicial notice of those. I have no objection.

Exam. Mullen: All right.

Mr. Gault: If they get here before we go, I will offer them.

G. T. Wickstrom was sworn and testified as follows:

Mr. Collins: Mr. Examiner, may I have just a moment here? We seem to have an error to correct.

Exam. Mullen: Yes.

Direct examination.

By Mr. Collins:

Q. Mr. Wickstrom, you have prepared your testimony for presentation, have you not?

A. Yes sir.

Q. And you have also prepared a one-page exhibit?

A. Yes sir.

Mr. Collins: That would be numbered Exhibit 21.

Exam. Mullen: Exhibit 21.

(Defendant's Exhibit No. 21, Witness Wickstrom, marked for identification.)

By Mr. Collins:

Q. And the statements and information set forth in your [fol. 1106] testimony and exhibit are true and correct to the best of your knowledge and belief?

A. That is correct.

Q. Will you proceed with your statement?

A. My name is G. T. Wickstrom. I am General Purchasing Agent of the Union Pacific Railroad Company with offices at Omaha, Nebraska. I have been employed by the Union Pacific Railroad Company in various capacities for the past 35 years and in the Purchasing Department since 1932. I have been General Purchasing Agent since February, 1944.

As General Purchasing Agent, I have the responsibility of making purchases of materials and supplies used in the operation of the Railroad.

Exhibit 15 introduced in this hearing by Mr. A. D. Hanson, General Superintendent of Transportation of the Union Pacific Railroad Company, indicates that if the D&RGW secures the routing on the amount of traffic therein shown, which, as I understand it, is based on a forecast given by Mr. T. K. Earley, Assistant Freight Traffic Manager of the D&RGW, in this testimany heretofore given in this case, it will result in a reduction in the operation by the Union Pacific Railroad Company of:

Three trains per day eastbound and three trains per day westbound between Pocatello, Idaho, and Council Bluffs, Iowa, and one train per day eastbound and one train per [fol. 1107] day westbound between Pocatello, Idaho, and Kansas City, Kansas.

Based upon this reduction in business, it is estimated that our purchases will be reduced by $6,889,328 annually, as shown in Exhibit 21 attached to this statement. Exhibit referred to indicates the estimated reduction in purchases by major commodities and by States served by the Union Pacific Railroad Company.

The basis of my Exhibit 21 was total purchases for the year 1949, amounted to $90,032,432, which total was reduced by amount of purchases of materials and supplies relating directly to passenger train service, namely, all materials

and supplies for passenger cars and dining car and hotel supplies.

Total purchases were further reduced by eliminating purchases of diesel fuel and lubricants; also, diesel engine repair parts. This resulted in a total basic purchase of $55,779,282 for the year 1949 and this total was subdivided into the classifications shown on my exhibit. The formula used in calculating the reductions of purchases in each classification shown was as follows, with the exception of the item of coal and the figure used for coal was as prepared by Mr. I. N. Bayless, President of the Union Pacific Coal Company, and as shown on his statement and exhibit:

Total of freight train car miles operated by Union Pacific Railroad Company during the year 1949 was 1,663,571,249.

Using the basic purchase figures mentioned above, the [fol. 1108] cost per freight train car mile was calculated, from which the cost per train mile of 75 cars per train was calculated and this was applied to the number of trains lost per day, as indicated on page one of this statement.

The mileage used was: Pocatello to Council Bluffs—1061.1 miles, less 133.9 miles Ogden to Pocatello or net of 927.2 miles. Pocatello to Kansas City—1175.7 miles less 133.9 miles Ogden to Pocatello or net of 1041.8 miles.

The reduction in purchases calculated by this formula was further reduced by 14.44 per cent, which is the percentage of gross passenger revenue for the year 1949 to the total gross freight and passenger revenue for that year. This reduction of 14.44 per cent was made inasmuch as the ratio of maintenance of tracks, buildings and facilities, as related to passenger train service would continue.

By Mr. Collins:

Q. Mr. Wickstrom, I understand your estimated reduction in purchases has as its basis the forecast of traffic potential given by Mr. Earley?

A. That is right.

Q. If Mr. Earley's forecast should prove to be erroneous, then your forecast would also be as erroneous as Mr. Earley's forecast, would it not?

A. It would be a matter of degree, in direct ratio to what the loss might actually be.

Mr. Collins: That is all.

Mr. Quirk: No cross examination.

[fol. 1109] Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Mr. Collins: I offer Exhibit No. 21.

Exam. Mullen: If there is no objection, it will be received in evidence.

(Defendant's Exhibit No. 21, Witness Wickstrom, received in evidence.)

W. T. Burns was sworn and tetsified as follows:

Direct examination.

Q. Mr. Burns, you have your testimony prepared in written form for presentation in this case, have you not?

A. Yes sir.

Q. You also have an exhibit?

A. Yes sir.

Q. Of four pages?

A. Yes sir.

Exam. Mullen: That will be numbered Exhibit No. 22.

(Defendant's Exhibit No. 22, Witness Burns, market for identification.)

By Mr. Collins:

Q. And the statements set forth in your statement and exhibit are true and correct to the best of your knowledge and belief?

A. Yes sir.

Q. Will you proceed with your statement?

[fol. 1110] A. My name is W. T. Burns. I am Vice President in Charge of Traffic for the Union Pacific Railroad Company, with headquarters in Omaha, Nebraska. I have been employed by the Union Pacific since 1922 in various departments, and in the Traffic Department continuously since March 16th, 1926. I have successively held positions of Traveling Freight Agent, Freight Traffic Agent, General Agent Freight Department, Assistant Freight Traffic

Manager, Traffic Manager, Freight Traffic Manager and General Freight Traffic Manager until April 1st, 1949, when I was elected to the position of Vice President.

Exam. Mullen: Just a minute. What is that, Mr. Quirk?

Mr. Quirk: That paragraph is just plain argument, Mr. Examiner.

Mr. Collins: I think this witness is entitled to state how the Union Pacific Railroad regarded this complaint.

Exam. Mullen: I think that is a rather broad statement, Mr. Collins. What we are after here is the fact. It occurs to me that Mr. Quirk is correct. It is straight argument, it seems to me.

Mr. Quirk: Not only that, but it is based on emotion rather than facts, feelings.

Exam. Mullen: What is the purpose of this witness' testimony, Mr. Collins?

Mr. Collins: What is the purpose of his testimony?

Exam. Mullen: Yes.

[fol. 1111] Mr. Collins: You mean all of it?

Exam. Mullen: This early part of it, dealing with publicity and so on.

Mr. Collins: It relates, Mr. Examiner, to the same proposition that I outlined to you in the Salt Lake City hearing. I undertook to discuss with Judge McCarthy, and showed him a yellow packet of information and the statements that were offered to the press, given to the press the day the complaint was filed.

I explained to you there, and I intend to press it here, that——

Exam. Mullen: I think I understand your position, Mr. Collins, but what are the facts you desire to have established by this witness' testimony with respect to publicity and so on, prior to the filing of this complaint?

Mr. Collins: In this order, Mr. Examiner, the Commission can't function in the compulsion of through routes and joint rates unless there is an actual bona fide public interest shown.

Mr. Quirk: Now, wait a minute.

Mr. Collins: Wait a minute. I want to finish my statement.

Exam. Mullen: Let Mr. Collins finish. I have asked for it.

Mr. Collins: Our position is there was no such actual bona fide public interest, and I think we will be able to prove that before we get through. The Rio Grande realizing that situation, set about in this program of publicity and [fol. 1112] urging the witnesses to come in and support them so as to try to show in this record public interest which didn't exist except as incited and generated by the Rio Grande Railroad.

Now, our means of showing it, providing it, part of our means of proving it, is to show how they spread all of this propaganda through the newspapers, and travelled around the country issuing statements and all of that in an effort to try to create that public interest without which the Commission can't function, or can't compel through routes and joint rates.

Now, all of that first part of Mr. Burns' testimony down through page 5 is for that purpose, and I submit to you I am entitled to prove it, and that that is an entirely valid means of proving it.

Exam. Mullen: It seems to me the Commission will have to be governed by the actual testimony of record as to whether or not there is a public interest, but I don't see that this type of testimony would be of any value to the Commission in determining that fact.

Mr. Quirk: Mr. Examiner——

Mr. Collins: May I respond to your question?

Exam. Mullen: You may, Mr. Collins.

Mr. Collins: Then Mr. Quirk can have the floor. We take this means of showing to the Commission that there was [fol. 1113] not a bona fide actual need or public interest, and that what the Commission will have in the record before it is an incited, agitated and stimulated thing called public interest, which has no reality to it.

It is not a natural and bona fide growth of public interest in the sense that the statute uses the term "public interest." And I submit to you that is a valid position for us to take, and the Commission ought to know of the activities of the Rio Grande Railroad applied to stimulate a public interest where it didn't exist, and should take that into consideration in appraising the credibility and the

character of the testimony which the Rio Grande has dragged in through the witnesses it has had to support it in this case.

Exam. Mullen: It seems to me, Mr. Collins, those facts should be established by questioning the witnesses who actually appear here. I don't think that can be established by this indirect means. Witnesses are called here by the Rio Grande or by yourself on the question of public interest. It seems to me that the matter which may have influence should be drawn out on this record by cross examination of those witnesses, and not by this indirect method.

I suppose the parties may stipulate there was an interest on both sides to interest the public in this complaint, and that is the only fact, it seems to me, the Commission should take into consideration.

[fol. 1114] Mr. Collins: Of course, Mr. Burns, if permitted to testify, will explain, and as Mr. Quirk said in the Salt Lake City hearing, did undertake to neutralize the efforts which the D&RG launched the day they filed this complain- in order to try to stimulate public interest, where we say none existed.

Now, Mr. Burns is quite willing and ready to explain his efforts, which was to try to educate the people to the Union Pacific's side of the case, and maybe they would realize the Rio Grande was wrong.

Exam. Mullen: Isn't the sole fact we are concerned with here the fact that there has been wide publicity given to this complaint by both sides?

Mr. Collins: Yes.

Exam. Mullen: I think we will agree to that.

Mr. Collins: You will have to be a little more meticulous in stating it, Mr. Examiner, if I agree to it.

Exam. Mullen: Just let me finish. Now, the effect of that publicity, it seems to me, as far as this record is concerned, would be demonstrated by testimony of the witnesses, direct testimony and cross examination. Now, these various quotations contained in this statement as to announcements in the newspapers, magazine articles, it seems to me, is immaterial.

Mr. Collins: You make no distinction, Mr. Examiner, in the statement you have made, between an actual bona fide

public interest and public need, and one which has been [fol. 1115] cooked up by incitation, agitation, and stimulation——

Mr. Quirk: I object.

Exam. Mullen: My distinction is whatever public interest there is must be demonstrated on this record by actual testimony of record, that is all, by witnesses both on direct and cross examination. If you think witnesses called here have an influence, you have a perfect right to cross examine those particular witnesses, but this kind of evidence, it seems to me, is irrelevant and immaterial and is not competent.

Mr. Collins: Is not what?

Exam. Mullen: Not competent testimony.

Mr. Collins: Included in the part, Mr. Examiner, you are referring to—do you have in mind all of it down to the bottom of page 5?

Mr. Quirk: I have gone that far.

Exam. Mullen: Yes.

Mr. Collins: There are quotations there from a transcript, quotations beginning on page 4, from a certified transcript of an appearance by two officers of the Rio Grande Railroad before the Montana Commission, pleading with the Commissioners there for them to come into the case, and setting forth and describing the very picture, I think, that I have indicated to you.

Now, I have that certified transcript here, and I can't follow the Examiner's reasoning in feeling that there can be [fol. 1116] no relevancy of testimony to show that up to the time of the complaint there had been no demands on the railroads, or at least we will show on the Union Pacific Railroad, and no actual development of a bona fide public need, as contrasted with one which was stimulated by agitation. You may prefer to call it "education," after the D&RG had made up its mind to file this complaint.

I think there is a distinction, and it is important I must get it before the Commission and in this record in some fashion.

Exam. Mullen: On the matter you referred to, you referred to two officers of the Rio Grande, one of whom is Mr. Bradford. I think Mr. Bradford was a witness.

Mr. Collins: Yes.

Exam. Mullen: In this case.

Mr. Collins: Yes.

Exam. Mullen: Do you want to recall him for cross examination?

Mr. Collins: No. I want this in in this way.

Mr. Quirk: Have you finished?

Mr. Collins: No, I am trying to respond to the Examiner, and then you and he can have it.

Exam. Mullen: My ruling is, this matter down to and including page 5 is incompetent. Therefore, I rule it out.

Mr. Collins: Now, Mr. Examiner——.

Mr. Quirk: Just a moment.

[fol. 1117] Exam. Mullen: Mr. Collins still has the floor, Mr Quirk.

Mr. Quirk: I thought he had finished.

Mr. Collins: The ruling is in your favor.

Mr. Quirk: I am not going to talk about the ruling.

Exam. Mullen: Let's proceed, gentlemen.

Mr. Collins: Now, Mr. Examiner, I wish to make an offer of proof for the record of that part of Mr. Burns' testimony, beginning with the second paragraph on the first page, and down through page 5, so that I can pursue the matter with the Commission, and have them pass on the matter, as to whether I am right or wrong about this, with all due respect to your ruling, sir.

Exam. Mullen: All right, that may be done. I think the best way to get that would be to offer this as an exhibit, without putting this physically in the transcript, pages 1 to 5, inclusive.

Mr. Collins: As an exhibit?

Exam. Mullen: As an exhibit.

Mr. Collins: All right, but I have to make the formal offer.

Exam. Mullen: That may be done.

Mr. Collins: Mr. Examiner, I make an offer of proof, in exhibit form, of that part of the statement of Mr. W. T. Burns, beginning at the second paragraph on page 1 of his statement, and extending down through page 5.

May we go off the record, Mr. Examiner?

[fol. 1118] Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

This matter referred to by Mr. Collins will be marked Exhibit No. 23, and is received as an offer of proof.

Mr. Collins: What did you say?

Exam. Mullen: It is received as an offer of proof; the first five pages of this statement will be marked as Exhibit No. 23.

(Defendant's Exhibt No. 23 Witness Burns, marked for identification.)

Mr. Quirk: Mr. Examiner, while you ruled this testimony out, and this is a mere proffer, I want the record to show we object on the ground it is incompetent, irrelevant and immaterial. In view of your ruling, I presume I ought to remain silent, but Mr. Collins has talked for some time about what has been done by the Union Pacific, and what has been done by the Complainant, and I think that in fairness it ought to be shown on this record that the Union Pacific had been very happy in attempting to persuade shippers that would otherwise have been on our side, and have succeeded in some instances, where we have had to subpoena them.

Mr. Collins: This has been let in evidence to show that.

Mr. Quirk: What is that?

Mr. Collins: This admits that.

[fol. 1119] Mr. Quirk: The point I am making here, I realize the Commission is not interested in this, but he made the statement, he left the impression with the public this is a one sided affair, and when anyone seeks relief under the Interstate Commerce Act, they haven't any right to get the public support if they need it. We concede the same right to them. However, they have in some instances, the case of Heidel, testified, the Pueblo man, we had to subpoena that man, and it showed he was clearly on our side.

Mr. Collins: That is argument.

Exam. Mullen: It seems to me it is argument on both sides.

Mr. Quirk: Of course it is. The only reason I am doing it, I think we are entitled to show what has happened. We had the Western Pine Association man coming here, and somehow or other they changed their mind.

Exam. Mullen: Let's proceed from that point.

Mr. Collins: Mr. Examiner, we will strike out the first sentence at the top of page 6.

By Mr. Collins:

Q. I will ask Mr. Burns this question: Mr. Burns, do you recall the date on which the complaint in this case was filed?

A. August 1, 1949.

Q. Will you proceed with your statement beginning after the sentence we have just stricken, and indicate the steps you took?

[fol. 1120] A. One of the first steps we took was to conduct an exhaustive review of correspondence files involving rates between the territories named in the complaint. This review was conducted in the offices of our regional Traffic Managers at Denver, Salt Lake City and Portland and in the general offices at Omaha.

It covered the period January 1, 1940 to July 31, 1949, or for nine years and seven months prior to the filing of complaint on August 1, 1949. This review disclosed that during that length of time, Union Pacific had received but two requests from shippers and/or receivers for rates or routing via the Ogden Gateway.

The first, in 1943, was a request from a shipper at Pittsburgh, Pa., who had a shipment of chinaware destined Portland, Oregon, in which he wanted to include a small portion destined Grand Junction, Colorado, for partial unloading enroute at that point. This shipper acknowledged that he could handle the traffic in the manner desired by routing via D&RGW-Ogden-Southern Pacific, but claimed the service via that route was too slow and for that reason wanted to route via Union Pacific from Ogden.

The second request was in 1944 and likewise involved stopping to partly unload at Grand Junction on a shipment of canned goods from Milton, Oregon, to Denver, Colorado. After explanation of our position in the matter, the requests were dropped.

[fol. 1121] In both instances, transit was desired, which, in effect, gives carload rates on less carload consignments. It is true Union Pacific offers transit privileges, just the same as other railroads, and our reason is the same, too. We do it to attract business to our line; not to force it away from us.

Union Pacific maintains 62 traffic agencies at various points throughout the country, in which a total of 241 representatives are actively engaged daily in contacting shippers and receivers on solicitation, service, rates and related matters. These representatives will average eight such contacts per day; five days per week; fifty weeks per year, so that is not unreasonable to assume a total of 425,000 personal contacts with shippers and receivers each year.

Inasmuch as Union Pacific is the originating or terminating road in the affected territory, and as such is primarily concerned in the publication of rates and routing to and from that territory, it is strikingly significant that through all the avenues of approach open to shippers and receivers and during a period of over nine years, the only requests we have received for rates and routing such as sought in this complaint are the two transit cases mentioned above.

Since the complaint was phrased in only general terms and specific issues would not be made known to us until the initial hearing, we felt it desirable in advance of that hearing to undertake to define the issues with which we might be [fol. 1122] confronted.

We felt a canvass of interested shippers and receivers would give a broad cross section viewpoint of what public interest, if any, there was in this complaint. Accordingly, our traffic representatives engaged in a survey through personal interviews, the results of which were reported to us at headquarters. These reports were tabulated with the following result:

Mr. Quirk: I object to it on the ground it is incompetent, irrelevant and immaterial.

Exam. Mullen: Who made this canvass, Mr. Burns?

The Witness: The representatives in the various agencies throughout the United States for the Union Pacific.

Exam. Mullen: How was it made?

The Witness: By personal contact.

Mr. Quirk: Mr. Examiner, this evidence is not only all that I have already characterized it, but it seems to be based upon the assumption of a plebiscite.

Mr. Collins: I call the Examiner's attention to the ruling you made when Mr. Hogue referred to hundreds of contacts and hundreds of shippers who had indicated a desire for

these routes and rates, and I objected unless he became more specific, and you overruled me.

Exam. Mullen: I want to get a few facts here first.

For what period was this canvass made?

[fol. 1123] The Witness: The canvass was made from the first of August until about the middle of December or a week prior to the opening of the case in Salt Lake City.

Exam. Mullen: Who directed the canvass to be made?

The Witness: The General Freight Traffic Manager.

Exam. Mullen: Is that under your supervision?

The Witness: Under my instructions, yes, sir.

Exam. Mullen: Is it your testimony the table is a summarization of the results of those canvasses?

The Witness: To the best of my knowledge, yes sir.

By Mr. Collins:

Q. Didn't you receive written reports from these agents of yours?

A. I stated that in the testimony here, Mr. Collins.

Mr. Collins: That is right, yes.

Exam. Mullen: It will be received, then, as this witness' testimony as a result of that. The objection is overruled. That may be copied in the record at this point.

(The table referred to is as follows:)

[fol. 1124]

Opposed to the complaint	812
Opposed to the complaint but neutral for policy reasons	28
Strictly neutral	194
Not interested	73
No comment	56
Opposed to all routing restrictions but neutral for policy reasons	7
In favor of the complaint because of possible future use for transit reasons	12
In favor of the complaint for general reasons	8
In favor of the complaint because opposed to all routing restrictions	3
In favor of the complaint for claim retaliation purposes	1
Total	1194

By Mr. Collins:

Q. Go ahead with the next paragraph.

A. In summarizing this survey, it was confined to actual shippers and receivers of traffic moving between the areas involved in the complaint. Where multiple contacts were made with different branches or officers of the same firm, it

was counted only once and based on the opinion of the responsible officer. It should be pointed out that the survey was seeking facts concerning the public interest in this complaint; that we were not looking for compliments. The interviews were made during the period from about August 6th to approximately December 1, 1949 and the program was [fol. 1125] discontinued before the initial hearing opened in Salt Lake City December 12, 1949.

At pages 69 and 70, Mr. Hogue related his experiences with "hundreds of shippers." I should like to point out that during the first ten years of the last twenty years, my service with the Union Pacific has been in Chicago and other eastern cities. For the last ten years, I have divided my time between the east and the west, covering practically the entire United States.

During the entire twenty years, I, too, have been calling on shippers and receivers and in that time have made thousands of such contacts. I have never had any requests made of me for publication of rates and routing such as the D&RGW seeks in this proceeding.

The "one firm of national prominence" to which Mr. Hogue referred at page 70 and many of the "hundreds of shippers" mentioned at page 69 have not made an appearance in this case. Mr. Farley made similar references; at pages 142 and 143 concerning a large dealer in hardware and building supplies headquartering in Salt Lake City; at page 114 concerning a sugar manufacturer with plants in Northern Utah and Idaho who also operates at West Jordon, Utah; at page 145 concerning a shipper of unfinished furniture at Pendleton, Oregon; and at page 146 concerning a shipper of canned goods located at Tremonton, Utah. None of these firms have made an appearance in this proceeding.

At pages 71 through 74, Mr. Hogue refers to pages 4 and 5 of his Exhibit No. 1, which contains a list of 56 carload [fol. 1126] shipments on which combination rates were applied by reason of routing via the D&RGW. His exhibit identified this traffic by car number, shipping date, commodity, origin and destination. He also mentioned at pages 73 and 74 two other cars, viz., CRI&P 64136 and RDG 24221, as additional shipments in the same category. I have had an exhibit prepared, which I offer now for identification as

Exhibit No. 22, which takes these same shipments, seriatum, and shows the identify of shipper and consignee.

A careful comparison of these names with those of witnesses or intervenors in behalf of complainant will show that none of those concerned with the traffic in question have advanced any testimony in support of the complaint. We know that at lease one of these shippers were solicited by the D&RGW to support them in this proceeding, but they declined to do so.

Mr. Quirk: I object to the Exhibit 22 and the statement made by the witness in connection with the exhibit; in fact, the first full paragraph on page 9 of this prepared statement is argument and I object to that. So far as this question of what shippers testified, or what shippers did not testify in the case, that is a matter which Mr. Collins can raise, just like lawyers usually do in their briefs.

It isn't necessary for this witness to take the witness stand to tell us at this stage of the proceeding who testified and who didn't.

[fol. 1127] Exam. Mullen: Can't those remarks be stricken from this statement? After all, the record shows who testified and who didn't testify.

Mr. Collins: Yes, but the record doesn't show the names of the shippers who shipped these cars that Mr. Hogue mentioned in the record.

Exam. Mullen: You are supplying that information now, as I understand it, through the exhibit.

Mr. Collins: Well, if the exhibit is all right, he certainly may discuss it sufficiently to state what it shows and what he has done to prepare it.

Exam. Mullen: Well, the first paragraph on sheet 9, to which Mr. Quirk objected, may remain in the record, and the objection is overruled.

My comment was, throughout the testimony, we might just as well eliminate these comments about who testified and who didn't testify. The record will show who testified.

Mr. Collins: Well, I know——

Exam. Mullen: The witness may proceed.

The Witness: At pages 61 and 62, Mr. Hogue explains Page 2 of his Exhibit No. 1 and comments concerning the changing character of traffic handled by the Rio Grande.

At Page 63 he said "Contributing to the decline in local traffic was the growing scarcity of Colorado non-ferrous ores, which closed Colorado smelters one by one." A simi-
[fol. 1128] lar comment is made by Mr. Earley at Pages 83 and 84.

It is correct that, based on ratio to total traffic, the traffic originated on the Rio Grande constitutes a smaller percentage of their total traffic now than it did previously. Such a relative result is inevitable because of their admitted success in developing their participation in overhead or "bridge" traffic.

Traffic originating on the D&RGW did not decline, but rather it has increased, as will be readily disclosed by reference to Page 2 of Exhibit No. 1; that is Mr. Hogue's exhibit. The column covering total tonnage originating on D&RGW shows that in 1924 this amounted to 8,059,581 tons, while in 1948 it amounted to 8,804,334 tons. This is an increase of 744,753 tons, or 9.24 per cent.

A similar situation is true with respect to traffic terminating on the Rio Grande. Combining the totals of the columns covering local traffic and interline received traffic discloses that in 1924 they terminated 5,822,748 tons and in 1948, 7,129,603 tons, an increase of 1,306,855 tons, or 22.44 per cent.

At pages 63 and 64, Mr. Hogue related certain statistics concerning decline in locally originated coal, coke and forest products traffic, but in this instance he compares results for 1946 with those of 1924. The year 1946 was selected, as he put it, because the absorption of the D&SL in 1947 "dis-
[fol. 1129] torted the 1948 figures for comparative purposes on these particular commodities.

Statement No. 49100, issued by the Bureau of Transport Economics and Statistics of the Interstate Commerce Commission is the source of 1948 figures shown in the following comparison; all figures expressed in tons.

	1924	1946	1948
Coal	4,379,249	3,262,976	3,829,036
Coke	278,043	87,272	122,955
Forest Products	86,608	56,707	85,631

In each instance, it will be noted the 1948 figures exceed those which Mr. Hogue used for 1946 and on which is less

favorable comparisons were drawn. The exclusion of 1948 figures because of absorption of the D&SL reflects an incorrect result. The complaint as filed by the D&RGW includes the former line of the D&SL and any business originated on the former line of the D&SL contributes revenue to the treasury of the D&RGW.

Mr. Hogue states at Page 64 that:

"with the decline experienced in the originated commodities named, plus a heavy tonnage loss of untold volume to other forms of transportation in the states served by the Rio Grande"

they, the D&RGW

"are forced to turn our thoughts and efforts to main line through freight traffic. In no other way could we have survived and continued to render rail transportation service to [fol. 1130] those people of Colorado, Utah and New Mexico who are reached only by the Rio Grande."

The Rio Grande is not the only railroad faced with competition from other forms of transportation in their local territory. A similar situation exists along with the lines of any railroad in the country today, and the Union Pacific's so-called local territory in Idaho, Montana, Oregon and Washington is no exception.

In Idaho, for example, there were 64,151 trucks and 32,607 trailers registered in 1949. This included 42,800 farm trucks, and 3,701 commercial trucks. The trailers were divided 32,062 private and 545 commercial. In addition, there were 467 trucks and 384 trailers designated as common carriers.

As has been testified by other witnesses, Union Pacific has an extensive branch-line territory to serve in Idaho, Montana, Oregon and Washington. Much of that territory is reached only by the Union Pacific and the people who live there are likewise dependent upon the Union Pacific for rail transportation service just as those in Colorado, Utah and New Mexico reached only by the Rio Grande are stated to be dependent upon that railroad.

At pages 62 and 63, Mr. Hogue explains page 3 of his Exhibit No. 1 and shows an unequal interchange of traffic

as between the Union Pacific and D&RGW at their several [fol. 1131] junction points. At Page 109, Mr. Earley states:

"The preponderance of traffic delivered to the Union Pacific both at Colorado and Utah junctions (as contrasted with the traffic received from that line) supports the proposition that the Rio Grande is entitled to better treatment from the Union Pacific in the interchange of traffic."

Examination of page 3 of Exhibit No. 1 discloses the condition specifically complained of during 1948 prevailed throughout the other 24 years covered by the exhibit insofar as the Union Pacific is concerned. With respect to the other railroads included on Page 3 of Exhibit No. 1 a similar disparity is shown via eastern junctions for the entire 25 years insofar as the AT&SF is concerned; and for the other lines except as shown below:

CB&Q, 1942 through 1946, 5 years.
CRI&P, 1942 through 1946, 5 years.
MP, 1943 through 1945, 3 years.
C&S, 1931 and 1942 through 1945, 5 years.

Attention is directed to the fact that with the exception of the year 1931 with the C&S, it was only during the war years that deliveries of any of the D&RGW's connections at eastern junctions exceeded receipts from the D&RGW at the same junctions.

At western junctions, D&RGW's deliveries to Western Pacific there exceeded receipts from the Western Pacific in each of the 25 years, except 1940; while on the contrary, [fol. 1132] Southern Pacific's deliveries to D&RGW were in excess of receipts from that line for all years except 1924 through 1926 and 1943 through 1945, a total of 6 of the 25 years shown.

Based on these same figures, Union Pacific during 1924 received 14.09 per cent of the total traffic which D&RGW delivered to connections at eastern junctions, but only 13.37 per cent for 1948. Union Pacific deliveries to D&RGW in 1924 constituted 11.14 per cent of their total receipts at eastern junctions, while in 1948 this percentage had declined to 9.62 per cent.

At western junctions, Union Pacific receipts from D&RGW in 1924 amounted to 45.01 per cent of their total deliveries, but only 40.11 per cent in 1948. Union Pacific deliveries

to D&RGW at western junctions constituted 18.91 per cent of their total receipts in 1924 while in 1948 this figure had risen to 27.94 per cent.

It is an accepted fact in railroad circles that it is not always possible to balance interchanges between railroads, which is necessarily so because of the wide variation in traffic flow between any given territories. I do want to state for the record that of the 1,693,355 tons which the D&RGW delivered to the Union Pacific at Utah junctions during 1948, 1,266,786 tons consisted of coal traffic to destinations on which the rate was not otherwise applicable.

By that I mean the only through rate applicable was by [fol. 1133] way of the Union Pacific.

Likewise, in the 633,524 tons which the D&RGW delivered to the Union Pacific at Denver in 1948, there was included 121,977 tons of Union Pacific company material which originated at a competitive point on the D&RGW and on which Union Pacific specified D&RGW routing and paid the commercial freight charges properly applicable.

At page 66, Mr. Hogue refers to certain war-time service orders as indicative of the Rio Grande's capacity to handle traffic to and from the complaint territory via the Ogden Gateway. Specifically, he named I. C. C. Service Orders Nos. 94 and 98. These covered coal traffic destined points in Oregon and Washington and instructed that when originating on or moving via D&RGW, thence WP; or D&RGW, thence SP, traffic be rerouted via Union Pacific from Salt Lake City or Ogden.

Of the 16,434 cars diverted to the Union Pacific under these two Service Orders, practically all originated on D&RGW. Mr. Hogue also named Agent Kirk's Orders Nos. 117 and 242. These were identical orders, effective at different times, under which all carload freight originating east of the eastern boundaries of Montana, Wyoming and New Mexico and destined to Washington or Oregon points north of Roseburg, Oakridge or Bend, and were instructed rerouted via UP, CMStP&P, GN, NP or MStP&SSM for movement to destination or proper connection.

[fol. 1134] There were 2,066 cars diverted by D&RGW to Union Pacific under these two orders. Mr. Hogue also named Agent Kirk's Order No. 246, involving 586 cars. This order directed that any traffic originating at or recon-

signed at points Provo, Utah to Ogden, Utah; destined Washington or Oregon points north of Roseburg, Oakridge or Bend, and routed via SP or WP, be diverted to Union Pacific through Huntington, Oregon. This order was later amended to apply only on traffic routed via SP.

Mr. Kirk will testify in greater detail about these service orders, but I want to call attention to the fact that on the entire 19,086 cars involved, the traffic had originally been routed beyond the D&RGW via some railroad other than the Union Pacific. It was diverted to the Union Pacific because we could handle it and the lines via which originally routed could not.

The issuance of the service orders does not demonstrate capacity on the part of the D&RGW insofar as handling traffic to the complaint territory is concerned, but it does confirm that Union Pacific was prepared and equipped to perform in the emergency.

In the direct testimony of Mr. A. D. Hanson, General Superintendent Transportation for the Union Pacific, he testified that a loss by the Union Pacific of 157,762 carloads of revenue freight, such as referred to in Witness Earley's testimony, would represent a decrease of 15 per cent under the total of freight revenue ton miles handled by the Union Pacific in 1949.

[fol. 1135] During 1949, Union Pacific freight revenue ton miles amounted to 25,918,651,000, so the 15 per cent decrease equals a loss of 3,897,797,650 revenue ton miles. Our average revenue per ton mile during 1949 was 1.283 cents, and multiplying the loss of revenue ton miles by the average revenue per ton mile discloses a potential revenue loss to the Union Pacific of $40,008,743.85 per year, based on 1949 averages.

It may be countered by the D&RGW that they have not claimed they will be successful in securing for their line all of the 157,762 cars claimed as their traffic potential. Complainant's witness Earley, however, mentioned several times during his testimony, and re-emphasized the point at page 173, that the traffic potential cited represents to a considerable degree less traffic than he believed would actually be available for their solicitation.

In these circumstances, it is only the exercise of sound managerial judgment to accept complainant's statements at

face value and to set forth, based upon the D&RGW's own statements, the maximum loss with which the Union Pacific is confronted. By these standards, Union Pacific's freight revenue is in jeopardy to the extent of over $40,000,000 each and every year.

By Mr. Collins:

Q. Now, Mr. Burns, to the extent that Mr. Earley's realization of his estimated traffic potential failed, or that his estimate is in error, then your estimated loss would be in error in somewhat the same degree, would it not?

[fol. 1136] A. To the same extent, Mr. Collins.

Mr. Collins: That is all.

Exam. Mullen: We will recess until two o'clock.

(Whereupon, at 12:25 o'clock p. m., the hearing was recessed, to reconvene at 2:00 o'clock p. m., the same day.)

[fol. 1137] Afternoon Session, 2:00 P. M.

Exam. Mullen: We are ready to proceed.

Mr. Gault: Mr. Examiner.

Exam. Mullen: Mr. Gault.

Mr. Gault: If the Examiner please, the map I referred to this morning has been received. I have one here for the reporter and one for the Examiner, and it is self-explanatory and I should like to offer it in evidence.

Exam. Mullen: It will be received in evidence as exhibit No. 24.

(The document referred to, marked Exhibit No. 24, was received in evidence.)

Mr. Gault: Thank you.

W. B. Burns resumed the stand and testified further as follows:

Exam. Mullen: I think Mr. Burns is ready for cross-examination.

Cross-examination.

By Mr. Quirk:

Q. Mr. Burns, you recognize, I take it, a distinction between actual traffic handled and potential traffic?

A. Yes, sir.

Q. What is your conception of the distinction?

A. Actual traffic would be traffic that you handled, potential would be what is there available for you to handle.

[fol. 1138] Q. There is a large potential traffic in the territory which you serve in the Northwest, is there not?

A. Potential traffic?

Q. Large potential traffic?

A. For whom?

Q. Well, for any railroad that can induce the shipper to use that railroad?

A. That is right.

Q. Now, the Union Pacific is competitive with what railroads in Oregon?

A. We have the Pacific Northwest and the Great Northern, the Northern Pacific, and the Milwaukee, the Soo Line, SI.

Q. And in Washington?

A. Well, that would take all of them, both Oregon and Washington.

Q. The same. Yes, and do you have any competition in Idaho?

A. Yes, sir.

Q. With what railroads, and in what part of Idaho?

A. That was the first question you asked me: did we have any competition in Idaho, and the answer to that is yes.

Q. What railroads, I said.

A. No railroads, but we have truck competition in Idaho.

Q. I see. You don't have any rail competition?

A. That is right.

Q. Now, what part of the potential traffic moves from

this part of the country, Idaho—well, leave out Idaho. By [fol. 1139] rail, from Washington and Oregon, to the East, would you say the Union Pacific gets what amount?

A. I couldn't answer that question, because I don't know the figures as far as the other railroads are concerned.

Q. You do know, Mr. Burns, you don't get all of it, do you, where it is competitive?

A. That is right.

Q. And you don't have even a rough idea as to what share of the competitive potential traffic the Union Pacific gets?

A. No, sir.

Q. Do you try to get as much of it as you can?

A. Yes, sir.

Q. Now, let's skip this part of the country for a moment, and go down into your Los Angeles Line. You have good competition down in California, don't you?

A. Yes, sir.

Q. With the Southern Pacific?

A. Yes, sir.

Q. And the Santa Fe?

A. Yes, sir.

Q. And the Union Pacific maintains a competitive line of rates eastbound and westbound through Provo and Salt Lake City with the Rio Grande to and from those points?

A. Yes, sir.

Q. Well now, does the Rio Grande get more of that traffic than the Union Pacific does, the potential down there—po-[fol. 1140] tential to your line, we'll say, for the first?

A. Potential to our line?

Q. Yes.

A. I couldn't answer that question. That isn't involved in this proceeding, is it?

Q. Yes, it is involved in this way, Mr. Burns: we are talking for the moment about what potential means, and how much a carrier might expect to get of it.

A. Are we talking about potential insofar as it pertains to Idaho and the Pacific Northwest, isn't that right?

Q. I asked the question.

A. I answered it.

Q. But you said you didn't think it was relevant. That is for the Examiner to decide. There is no objection. I ask

that you tell me, if you know, what part of the traffic is potential to the Union Pacific on the so-called Los Angeles Line, to and from which points the rates apply via the Rio Grande the Union Pacific gets.

Mr. Collins: I object to it, Mr. Examiner. I don't think it is relevant.

Exam. Mullen: The witness may answer if he knows.

The Witness: I did answer it, and I said I didn't know.

By Mr. Quirk:

Q. Oh, well, I didn't hear that. Sorry.

Now, you testified, Mr. Burns, and I have known you a long time myself. You are a man of large experience in [fol. 1141] transportation matters, especially in what is designated as traffic matters, are you not?

A. Yes, sir.

Q. I think maybe you are too modest to answer that.

A. The answer is yes.

Q. Don't you know, Mr. Burns, that the estimates made by Mr. Earley merely pointed out as best he could ascertain them, and you know more about that than he does no doubt, your company, that might be available and susceptible for routing via the Ogden and the Rio Grande Line if the shippers east and west could be induced to use that line—you know that?

Mr. Collins: Mr. Examiner, I think all this time is wasted because I asked Mr. Burns on direct if the full potential that Mr. Earley had set up were not realized, realized, whether the damage to the Union Pacific would not be as much less than the realization of the potential, and he said that is right.

Mr. Quirk: And you took over my function. That isn't the point.

Exam. Mullen. This questioning is proper in my opinion.

Mr. Quirk: Now, there is another question all messed up.

Exam. Mullen: Read it please.

By Mr. Quirk:

Q. You know what Mr. Earley did was merely to state potential possibility, don't you?

A. No, sir, I take it it was a statement of fact.

Q. In other words, you take that to mean that if these [fol. 1142] joint rates are established the Rio Grande will be able to cause the shipping public to use it in connection with 157,000 carloads that he mentioned?

A. That is what Mr. Earley said.

Q. He didn't say anything of the kind. You answer my question instead of talking about what Mr. Earley said.

Mr. Collins: Mr. Examiner, may I——

Exam. Mullen: No. The question is all right.

Go ahead, Mr. Burns.

The Witness: What is the question?

Exam. Mullen: Go ahead, Mr. Quirk.

Mr. Quirk: The witness wants the question read back.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

By Mr. Quirk:

Q. Does the Union Pacific have a competent group of traffic agents whose business it is to induce the movement of traffic over your line?

A. Yes, sir.

Q. How many do you have in this Northwestern territory? Roughly.

A. Well, I couldn't answer that. I don't have the figures available or broken down. I can give you the total. I did give that in my testimony this morning.

Q. Well, if the Rio Grande should be successful in getting all of this traffic, what would you do with the Granger Route? [fol. 1143] A. I think Mr. Lynch answered that, and Mr. Hanson, as to what would happen to that route.

Q. Do you think that your soliciting staff, or your traffic representatives, are as competent as the soliciting staff and traffic representatives of the Rio Grande?

A. Yes, sir.

Q. Do you believe as a practical business man, and experienced in this work, that there is any likelihood that the Rio Grande can induce the movement of the potential, the 157,000 cars, via the Rio Grande route?

A. The statement was made that was the potential, and it was a conservative figure, and I accept that as a statement of facts.

Q. That isn't the answer to my question.

A. That is the only answer I know to it.

Mr. Quirk: I submit, Mr. Examiner, I am entitled to an answer.

Exam. Mullen: I think so. The answer is not responsive to the question. Do you recall the question, Mr. Burns?

The Witness: No, have him read the question.

Exam. Mullen: We will have the question read.

(Question read.)

The Witness: Yes, sir.

By Mr. Quirk:

Q. Why would they be able to persuade shippers to do that? The route must be in the public interest then, isn't [fol. 1144] it? You said awhile ago it wasn't. Can you answer that?

A. I can answer it in this way: Any additional route would get business.

Q. Well, a moment ago you said this route would get all the business. We will let it go at that. You think this route would get all the business and I have the right to draw my own inferences from that.

Now, in the event that this should happen, the thing that you say will probably happen, would you cancel the joint rate that now exists through Granger?

Mr. Collins: Mr. Examiner, there is no use to speculate about what will be done in the future. That question is irrelevant.

Exam. Mullen: I think it is irrelevant. The objection is sustained.

By Mr. Quirk:

Q. Now, on page 8 of your prepared statement, you have put down the result of your census. I take it when you send agents around to call upon potential shippers or actual shippers, they try to interest that shipper in the virtues of the services of the Union Pacific, don't they?

A. Yes, sir.

Q. They don't go around soliciting for the Rio Grande?

A. No, sir.

Q. Therefore, when this census was taken by your various agents, I imagine they would attempt to persuade the [fol. 1145] shipper to be opposed to this complaint by extolling the virtues of the Union Pacific, which has many. That is natural, isn't it?

A. I presume so.

Q. Do you know—you have this all done up here—do you know in fact how many of these shippers that you have listed as being opposed to the complaint were opposed to it because of your persuasiveness, or the persuasiveness of your agents?

A. We have records of these interviews in Omaha that would answer that question.

Q. You didn't bring them here?

A. No, sir.

Mr. Collins: I doubt, Mr. Burns, that they would answer his question as to whether they actually tried to——

Exam. Mullen: Just a moment, Mr. Collins. That is not necessary.

Mr. Quirk: Mr. Collins just can't resist the temptation to comment.

Mr. Collins: I don't like the thing to be distorted.

By Mr. Quirk:

Q. Don't you think it is rather strange you wouldn't know that when you have the total result here, that you wouldn't have those figures here?

A. The figures on the interviews?

Q. Yes. These that were opposed to the complaint, you probably persuaded them to be opposed to, didn't you, if you could?

[fol. 1146] A. No, sir. I think that the question was put up on the basis of the facts in the case, and the answers were given on that basis.

Q. You mean your agents went around like nice little fellows and put the question up in strict neutrality. You don't want the Commission to believe that, do you?

A. I didn't use the words "strict neutrality," did I?

Q. I did. Do you think they went around there with any kind of neutrality?

A. Yes, I suppose they did.

Q. Well, if you are losing business, maybe that is the reason you are losing it.

A. We are not losing any business in Idaho except to trucks.

Q. I didn't confine this to Idaho. This statement on page 8 of your narrative isn't confined to Idaho, is it?

A. It is confined to the complaint, the territory under the complaint.

Q. That includes, Washington, Oregon, Idaho, and some other states?

A. Yes, sir.

Q. You have solicitors in the east, don't you?

A. Yes, sir.

Q. Don't you actively solicit westbound business as well as eastbound business between the eastern points and this territory?

A. Yes, sir.

[fol. 1147] Q. You actively solicit that, don't you?

A. Yes, sir.

Q. Just in the course of these neutral solicitors that you had, can you say—you have some good records on this—how many shippers that when first confronted with this matter were actually supporting or going to support the Rio Grande and you succeeded one way or another of persuading them not to?

A. No, sir.

Q. I think we ought to have the files on that, as long as Mr. Collins seems to think it is so important in this case.

Exam. Mullen: I don't see any necessity for that.

Mr. Quirk: Well, you allow this to go in, Mr. Examiner, and it is not very informative the way it is.

By Mr. Quirk:

Q. Well now, don't you know you have persuaded certain shippers that were committed to the Rio Grande and somehow or other you got them over on the other side?

A. No, sir.

Q. You don't?

A. No, sir.

Q. What happened to Mr. Heidel?

A. Mr. Heidel testified as I remember.

Q. Yes, he testified to facts which showed it was to the interest of his company to have this route, but we had to subpoena him after he told he would come voluntarily.

A. I know nothing about that, Mr. Quirk.

[fol. 1148] Q. Maybe your agent in Philadelphia does. Didn't you get a report from him on that?

A. I have no report from him.

Q. Don't you think when your agents were out, and they succeeded in persuading somebody that was already committed to the Rio Grande in this case, to get on the other side, that is something an agent naturally would brag about to his boss?

A. Not necessarily. And if they did persuade him, and they got the story from him, they knew what was the right side of this complaint.

Mr. Collins: Mr. Examiner, I object to any further inquiry into this so-called campaign, because you ruled out evidence about the campaign.

Mr. Quirk: Well, you brought it back in with this statement.

Mr. Collins: No, I didn't.

Exam. Mullen: How much more examination do you have on this point, Mr. Quirk?

Mr. Quirk: I don't have very much.

Exam. Mullen: Let Mr. Quirk continue, and we will see what will happen.

Mr. Quirk: I do think, Mr. Examiner, it is a bit unusual for any party in the case just to list a lot of unnamed people, so many for and so many on the other side, without knowing just how this vote was taken.

Mr. Collins: That is exactly, Mr. Examiner, what I [fol. 1149] thought when I challenged Mr. Hogue at Salt Lake City and you told me he would be permitted to make a statement of his experience and survey without mentioning names.

Exam. Mullen: That is correct. There is no use getting into an argument on that, Mr. Quirk.

Mr. Quirk: Mr. Examiner, it isn't entirely correct. Mr.

Hogue didn't have anything like this. He didn't have a number of names for and against. He told them his every day experience and his personal experience.

Exam. Mullen: As I recall the testimony, that is correct.

Mr. Quirk: This witness doesn't even know.

Exam. Mullen: He has listed the numbers of persons who were interviewed by his representatives, and I allowed it in for that purpose only.

Mr. Quirk: And there are names.

Exam. Mullen: Named where?

Mr. Quirk: They are not named here in this.

Exam. Mullen: I thought you said they were named.

Mr. Quirk: No, I said they were not named.

Exam. Mullen: We will take that into consideration when we are considering what weight to give to this testimony.

By Mr. Quirk:

Q. Have you given any thought to the fact, Mr. Burns, that if the joint rates here sought should be established that you would still have the opportunity to induce the shipper who wanted to use the Rio Grande for any reason, going [fol. 1150] East, to route it back to your line at Denver?

A. Yes, sir.

Q. And you know that that could be done, don't you?

A. No, sir.

Q. You are doing it. You know traffic is moving from the Los Angeles line that way, don't you, through the Rio Grande?

A. To some extent; yes, sir.

Q. Well, do you know to what extent?

A. No, sir.

Q. Well, the rate and the routes are there, and they are used, aren't they?

A. That is right.

Q. You mean you really don't know whether it is a large or small extent?

A. No, sir.

Q. Now, in this effort to get support in dealing with these various shippers——

Mr. Collins: Mr. Examiner, I object again. Because that was settled by your ruling awhile ago, any question about getting support.

Exam. Mullen: I have not heard the question yet.

Mr. Quirk: Strike that.

By Mr. Quirk:

Q. In this census that you have here, you have a comparatively few that you say were in favor of the complaint. Now, isn't it a fact that there are many shippers depending [fol. 1151] on who you might call on that would be uninformed about such a matter, and they therefore would be naturally neutral, isn't that true?

A. If they are uninformed about it, how could they take a position?

Q. Well, you caused them to take a position, didn't you, in many instances?

A. No, sir, after putting up the story they take their own position.

Q. Now, let me put it this way to you: Isn't it a fact that generally speaking the shippers, at least the shippers who are large enough to have traffic managers, naturally favor as many routes as they can possibly get?

Mr. Collins: Many groups?

By Mr. Quirk:

Q. Routes, and competitive rates.

A. Well, I wouldn't say that was a fact. I don't know.

Q. Well, you have noticed these cases that arise don't you, when bills are introduced in Congress. Don't the shippers from the state bodies generally support lifting the restrictions if any, on the power of the Commission to deal with this matter?

A. I wouldn't know that any one shipper would use, because of available routes and rates, every one of those routes.

Q. Apparently this census represents the views or the votes of 1194 shippers, were they?

[fol. 1152] A. I think it says shippers and receivers, doesn't it?

Q. Shippers and receivers. I embraced them both in the term shippers. How long did you work on that?

Exam. Mullen: The date is given here.

The Witness: I think it was given in there.

By Mr. Quirk:

Q. Well, was it three months?

A. It says from August 6, to approximately December 1, 1949.

Q. And you also testified that your soliciting staff made 425,000 personal contacts with shippers and receivers each year?

A. That is right.

Q. And therefore that would be at the rate of about 35,000 contacts per month?

A. Approximately, yes.

Q. Notwithstanding that great activity, you saw fit for some reason to call on 1194?

A. That is a cross section, yes, sir.

Q. You mean one of these Gallup things, sampling?

A. It might be.

Mr. Quirk: That is all I have.

Mr. Collins: Are you finished?

Mr. Quirk: Yes.

Redirect examination.

By Mr. Collins:

Q. Mr. Burns, do you know whether representatives of other railroads, traffic solicitors of other railroads, do solicit [fol. 1153] traffic in Idaho?

A. Yes, sir.

Q. I mean other than the Union Pacific?

A. Yes, sir.

Q. Do you have in mind now any solicitors of particular roads?

A. Well, it would be the Northwestern, the Illinois Central, the Wabash, the CGW, the Burlington, the Rock Island, the Missouri Pacific, and the Santa Fe, for example.

Q. Yes, all right.

That is all.

Mr. Quirk: One more question.

Recross Examination.

By Mr. Quirk:

Q. Do you know whether the Rio Grande solicitors solicit any freight in Idaho?

A. No, sir, I don't. I am not acquainted with any of them in Idaho.

Q. Now, getting back to this matter of what the shippers might ask you to do, you realize, I suppose, that the average informed shipper with a traffic organization knows that the joint rates do not apply via the Ogden Gateway, and that the request for you to establish such a rate would be utterly futile. May that not account for the fact that you had very few requests for the joint rates via that route?

A. You mean that the shipper with a traffic department wouldn't ask us to establish a joint rate in connection with the D&RGW in Idaho via Ogden because it would be futile?

[fol. 1154] Q. Yes.

A. No, sir.

Q. Isn't it the traditional position of the Union Pacific to refuse to do that?

A. He has avenues of how to approach that question, if he wanted to.

Q. But the informed shipper is pretty well informed. He knows what your position is.

A. He still has an opportunity to approach that question through proper avenues.

Q. That is true, but when an informed shipper knows what the answer will be, he is not likely to ask for it, is he?

A. He has other means of getting the answer to that, if he wants it.

Q. You mean a complaint to the Commission?

A. Yes, sir.

Q. That is the means we have adopted here. You don't seem to like it.

A. You said shippers; you didn't say railroads.

Q. The railroads have rights to, we discovered that. Now, there is one more question. You have indicated from time

to time that the Union Pacific pays taxes up in Idaho and Washington and the Rio Grande does not, and that we are not here seeking to build an extension of the Rio Grande [fol. 1455] Railroad into Idaho. What would be your position if we did file an application to extend our line into Idaho? Would you support it?

Mr. Collins: Do you know the answer to that?

The Witness: I am afraid I am not in position to answer that question.

By Mr. Quirk:

Q. You certainly wouldn't support it, would you?

A. I said I was not in a position to answer the question.

Mr. Quirk: All right. That is all.

Mr. Collins: That is all.

(Witness excused.)

A. J. STILLING was sworn and testified as follows:

Exam. Mullen: A little quiet, please. We are ready to proceed. Mr. Collins.

Direct examination.

By Mr. Collins:

Q. Mr. Stilling, you have prepared your testimony in writing, and that includes your qualifications and so forth for presentation in this case?

A. I have.

Q. And you have also prepared an exhibit of some 15 pages?

A. I have.

Mr. Collins: May we have the number on that?

Exam. Mullen. The exhibit number will be 25.

(The document referred to was marked Exhibit No. 25, Witness Stilling, for identification.)

[fol. 1156] By Mr. Collins:

Q. And are the statements in your testimony and the data in your exhibits true and correct to the best of your knowledge and belief?

A. They are.

Q. Will you proceed with your statement?

A. My name is A. J. Stilling and I live in Omaha, Nebraska. I am Assistant Freight Traffic Manager of the Union Pacific Railroad Company and my business address is 1416 Dodge Street.

My experience in freight traffic work consists of 33 years continuous employment in the headquarters office of the Freight Traffic Department of the Union Pacific Railroad Company at Omaha. I have held clerical positions in the tariff, rate and service bureaus and for several years served as Chief Rate Clerk. For a period of six years I was Chief Clerk and Rate Assistant to the traffic officer in charge of transcontinental rates.

In July, 1941, I was appointed to the position of Assistant to the Freight Traffic Manager and in 1943 to my present position of Assistant Freight Traffic Manager. In July, 1941, I was placed in direct charge of our Interstate Commerce Bureau and since then it has been my duty to make necessary traffic department preparations for formal and informal proceedings before the Interstate Commerce Commission and state regulatory bodies.

Although approximately two hundred rail lines are named [fol. 1157] defendants in this case, complainant's evidence shows that the complaint is directed principally against the Union Pacific Railroad Company.

History of Union Pacific Railroad

The map on page 3 of Exhibit 25, shows, in red, the rail lines that comprise the present Union Pacific Railroad. The following brief remarks relating to the history of the Union Pacific were taken from official records on file at Omaha, Nebraska. This includes annual reports to the stockholders and the final valuation report in 44 (Val.) ICC 1.

The original Union Pacific consisted of the line from Council Bluffs, Iowa, through Granger, Wyoming, to Ogden, Utah.

At this point, I would like to call attention to Mr. Stanger's comment appearing on page 349 of the transcript, in which he stated that if the through rates applied via Ogden and the Rio Grande, and if the Union Pacific failed to furnish him cars, then as retaliation he could take the freight away from the Union Pacific and ship it over the Rio Grande. From what I have already shown, it is clear that Mr. Stranger's threat to penalize the Union Pacific and route the car via the Rio Grande would mean an additional day's delay in the arrival of his car at Chicago or other distinations.

Service.

[fol. 921] An effort has been made by the Rio Grande to show that if the Ogden Gateway is opened, service better than presently being provided will be afforded shippers located on the Union Pacific in Idaho and surrounding territory. We appreciate that the people located in the areas of Idaho, Montana and Oregon which are served exclusively by the Union Pacific Railroad are entirely dependent upon us for all rail service and equipment and for this reason it has always been and is now the policy of the Union Pacific to treat this territory, as well as all other so-called non-competitive territory, the same as competitive territory in the way of service, equipment, facilities, and so forth.

In fact, our records show such territories served exclusively by the Union Pacific Railroad have been and are receiving more service in many respects than is afforded in some competitive territories. The fact we have provided freight train schedules to and from Idaho and Pacific Northwest territory that are competitive with schedules to and from California substantiates this and disproves the accusation that the Union Pacific Railroad is neglecting or discriminating against the shippers of Idaho on the assumption that if it doesn't move their freight today it will move over its line tomorrow.

To further refute such accusations, refer to page 2 of Exhibit 15 which is statement of gross tons handled in freight trains, various branches, for the year 1949. The [fol. 922] territory in Idaho from Pocatello north to Idaho Falls, including branch line territories out of Idaho Falls,

and from Pocatello west to Huntington, Oregon, including branch line territories, cover the area in which practically all of the perishable traffic in Idaho is produced. In this area there are 29 branch lines involving 1317 miles and main line territory involving 375 miles. A great portion of the perishable traffic is shipped from branch line stations. It will be noted from Page 2 of Exhibit 15 that branch line freight trains on the Idaho Division during the year 1949 averaged but 662 tons per train, as compared with 1087 tons per train on Nebraska Division branches, 1054 tons per train on Kansas Division branches, 817 tons per train on Oregon Division branches and 902 tons per train on all branch lines on the Union Pacific Railroad. Freight train miles operated on Idaho Division branches during the year 1949 amounted to 28.2 percent of total branch line freight train miles operated on the entire Union Pacific Railroad, but gross ton miles, Idaho Division Branches, amounted to only 20.7 percent of the total gross ton miles on all branch lines.

Shippers of perishable traffic, as well as grain, stock, and other commodities, to and from the branch line territory in Idaho are afforded a tremendous amount of freight train service. Some glaring examples will be noted in the average tons per train handled on some of the branch lines. [fol. 923] For example:

Hill City Branch, 283 tons.
Mackay Branch, 311 tons.
East Belt Branch, 417 tons.
West Belt Branch, 487 tons.
Teton Valley Branch, 263 tons.

Taking the East Belt Branch, for example, and which serves a territory between Idaho Falls and Ashton, a total of 435 trains were operated eastbound and westbound during the year 1949, handling an average of only 417 tons per train, which means each train handled an average of approximately nine cars.

Daily except Sunday service is provided on most of the branches serving Idaho and in most instances the entire year. This is another indication of the manner in which we have taken care of non-competitive territory and this has

been done for the reason we appreciate there is no other railroad service in this territory. However, the service afforded on many of these branch lines is not warranted on the basis of tonnage handled, nor is such comparable service provided on many of our branch lines in Nebraska and Kansas in competitive territory.

The gathering of traffic in originating territory, coupled with the distribution of empty equipment for the loading of such traffic, and particularly on branch lines, is expensive. [fol. 924] This will be covered more in detail by another witness. However, if the Ogden Gateway is opened the Union Pacific must still assume the gathering expense and if we are to get only the short road haul from Pocatello to Ogden as against our present haul from Pocatello to Missouri River connections at Council Bluffs and Kansas City, or to connections at Denver for the Southwest territory, curtailment in service must necessarily follow to offset the loss in revenue. Daily service now being provided in many instances is not justified, excepting for the long haul presently enjoyed from concentration points, and service would have to be reduced to tri-weekly or twice a week on a number of the branch lines if the long haul is lost.

All of the loss in revenue could not, of course, be offset in the States of Idaho, Oregon, Washington and Montana, with result that shippers and receivers of freight would be affected in other territories.

For example: During the stock shipping season in Montana, Idaho and Eastern Oregon, we operate a number of stock schedules into Pocatello and from that point we have in the past operated four stock schedules daily into Ogden and Salt Lake City. These schedules have been arranged each year after meeting with representatives of stock growers and wool growers associations and are set up to provide them with the best possible service into Ogden and [fol. 925] Salt Lake City for connection with our fast live stock special train to Los Angeles and which operates from Ogden to Los Angeles on a 29-hour schedule. This puts stock loaded in Western Idaho, for example, on Monday morning into Los Angeles Wednesday afternoon and with but one feed enroute. Stock moving into Ogden for feed and then east from that point, and stock moving east from Pocatello, connects with a fast stock schedule from Ogden

to Denver and to North Platte, Nebraska, enabling the livestock to move from Ogden and Pocatello to North Platte for feed, and in many cases connecting with another schedule at North Platte that has put the stock through to Chicago for the next feed, or with only one feed from Ogden to Chicago.

A reduced stock movement east from Pocatello or east from Ogden via Union Pacific Railroad, in the event the Ogden Gateway is opened, would necessarily result in adjustment of schedules and four stock schedules daily from Pocatello to Ogden and Salt Lake City would not be justified for the short haul that we would receive. Such adjustments would necessitate a return to former arrangements of feeding stock at Laramie, Wyoming and Valley, Nebraska, on shipments moving from Ogden and Pocatello to Chicago.

We are presently operating two freight trains each way between Laramie, Wyoming and Denver, Colorado, affording good service to and from Denver in connection with our main line freight trains. Notwithstanding the fact our fast livestock special from Ogden and Salt Lake City to Los [fol. 926] Angeles from Colorado and Nebraska points one full day earlier than by any other route, there is a lot of this stock originating in Nebraska territory off of the Union Pacific Railroad that moves into Denver and thence via Rio Grande to Salt Lake City because of an earlier departure from Denver of their evening stock train. The Union Pacific Railroad could meet this earlier departure but instead have kept our 10:00 p. m. departure from Denver for the reason there is considerable traffic from Denver to points such as Pocatello, Boise, Idaho Falls, Idaho, Butte, Montana, and so forth, that we get switched out and moved from Denver on this 10:00 p. m. train, affording second morning delivery in Idaho. Otherwise, the traffic would arrive destinations one day later, and in the event the Ogden Gateway is opened and such traffic would move from Denver via Rio Grande it would reach Idaho destinations one day later than at present.

This is another example of the Union Pacific Railroad taking care of the traffic destined to Idaho points, rather than delay it another day by advancing our 10:00 p. m. train out of Denver with view to taking away from the Rio Grande some of the stock business which they are presently handling. However, the service which we are now providing

between Denver, Colorado and Laramie, Wyoming for connection with our main line freight trains could not be justified in the event of a reduction in tonnage as result of Rio Grande routing.

Similar service is provided between Denver and North [fol. 927] Platte, Nebraska, connecting with main line trains at latter point and this would also be affected.

Loss of its long haul on traffic from Idaho and the Pacific Northwest with resultant tonnage loss would have serious effect on the Union Pacific Railroad all the way to Council Bluffs and Kansas City and fewer freight trains would be available to shippers and receivers of freight in Wyoming, Nebraska and Kansas. This would be particularly noticeable in connection with movement of stock, grain, coal and perishable products from and to the communities in those States.

Loss in our earnings will certainly result in less service than is presently being afforded to the shippers in Idaho and the surrounding territory. Mr. Hogue, Vice-president of the Rio Grande, in his testimony on page 64 of the transcript commenting regarding reduction in traffic in the territory served exclusively by the Rio Grande, states:

"We were forced to turn our thoughts and efforts to main line through freight traffic. In no other way could we have survived and continued to render rail transportation service to those people of Colorado, Utah and New Mexico who are reached only by the Rio Grande."

If the Rio Grande has been able to continue rail transportation service to communities served exclusively by it only because of the increased through freight traffic they have enjoyed, then it naturally follows that taking away through [fol. 928] freight traffic that the Union Pacific is now handling a distance of 1038 miles from McCammon to Council Bluffs and 1159 miles from McCammon to Kansas City, and giving it a haul of only 111 miles from McCammon to Ogden, will result in less rail transportation service to the people of Idaho, Oregon, Montana and Washington and in other areas served by the Union Pacific Railroad.

Our eastbound perishable schedules from the Pacific Northwest, Idaho and Utah, as well as those from Southern, Central and Northern California, are consistently main-

tained as will be indicated by the fact perishable traffic has been delivered to our connections at Council Bluffs as follows:

March	1949	95.7	percent on time
April	1949	96.9	percent on time
May	1949	99.7	percent on time
June	1949	99.93	percent on time
July	1949	99.0	percent on time
August	1949	99.5	percent on time
September	1949	95.5	percent on time
October	1949	97.3	percent on time
November	1949	100.0	percent on time
December	1949	99.05	percent on time

Delivery of perishable traffic through the Kansas City Gateway has been comparable and our westbound manifest schedules to Ogden, Salt Lake City, Southern California, [fol. 929] Idaho and the Pacific Northwest have been consistently maintained during this period.

Freight Car Miles Per Day

On page 210 of the transcript Mr. Bradford refers to Rio Grande Exhibit No. 7 covering serviceable freight car miles per freight car day. I am unable to reconcile the figures appearing on this Exhibit with the figures submitted by the Rio Grande on Interstate Commerce Commission statistical Form OS-F and appearing as Item 14-01 on these forms, which cover the month and the period and the period for which submitted.

Page 3 of Exhibit 15 shows car miles per serviceable freight car taken from Forms OS-F submitted by the Union Pacific Railroad and the Rio Grande to the Bureau of Transport Economics and Statistics, Interstate Commerce Commission. The exhibit shows the average car miles per serviceable freight car day for the year 1948, as well as by months and by periods for the year 1949.

On page 211 of the transcript Mr. Bradford states, in part:

"The Denver and Rio Grande serviceable freight car miles per freight car day exceeds the average of all other railroads in the Western District."

and further states:

"These figures indicate the effiiciency in the movement of the business."

It will be noted from page 3 of Exhibit 15 average car [fol. 930] miles per serviceable freight car day on the Union Pacific during the year 1948 were 93 percent greater than on the Rio Grande and notwithstanding the comparatively low mileage made on the Union Pacific during the storm period, January and February, 1949 the average car miles per serviceable freight car day on the Union Pacific during the year 1949 were 84 percent greater than on the Rio Grande. In other words, applying Mr. Bradford's efficiency test, the Union Pacific during the years 1948 and 1949 was 93 percent and 84 percent more efficient than the Rio Grande in the movement of the business.

Refrigerator Car Supply and Perishable Loadings

While Mr. Plummer, Vice-president of Pacific Fruit Express Company, has testified as to the functions of the Pacific Fruit Express Company, its car ownership, facilities, and so forth, inasmuch as the movement of equipment, both loaded and empty, on the lines of the Union Pacific Railroad is a responsibility of the General Superintendent Transportation, I consider it extremely important that these features be covered in considerable detail, particularly in view of the fact that a few of the perishable shippers in Idaho appearing in support of the Rio Grande's petition for the opening of the Ogden Gateway referred to car shortages and testified to the effect that if the Ogden Gateway is opened such action would be of benefit to them in obtaining equipment.

Interstate Commerce Commission Service Order No. 95, [fol. 931] effective November 9, 1942, covers the appointment of an Agent of the Interstate Commerce Commission vested with authority to control the movement of Refrigerator cars and authority to supervise, coordinate and direct the distribution of all refrigerator cars according to the needs of the various loading areas, and with due regard to economy in their use and mileage. The agent was authorized, as and when necessary, to direct the distribution of all refrigerator cars, regardless of ownership, in a common

pool, taking the control out of the hands of the owners. This control of refrigerator cars continued under the jurisdiction of the Interstate Commerce Commission until June 30, 1949.

Mr. Plummer has testified to the effect that for 12 years prior to 1942 there was no shortage of any consequence of refrigerator cars on the Union Pacific Railroad. During the war years there were, of course, periods of shortages of refrigerator cars on the Union Pacific Railroad. During the war years there were, of course, periods of shortages of refrigerator cars in Idaho, as well as in other territories served by the Union Pacific Railroad, and there were shortages in other territories and on other railroads throughout the entire United States, over which neither the refrigerator car lines, whether railroad controlled or non-railroad controlled, nor the railroads had any control.

While the authority of the Agent of the Interstate Commerce Commission, more commonly known as the Refrig- [fol. 932] erator Car Pool Manager, did not expire until June 30, 1949, conditions throughout the country were such he exercised little authority over the handling of refrigerator cars during the year 1948 and up to the expiration of his authority on June 30, 1949, leaving the matter pretty much up to refrigerator car owners.

Pages 4, 5 and 6 of Exhibit 15 show the record of refrigerator car placements, reported shortages, and number of cars of perishables billed in Idaho territory during so-called periods of car shortages subsequent to November 22, 1947 and up to present date.

For the past several years it has been our plan when conditions indicate there are prospects or possibilities of refrigerator car shortages in the Idaho territory to notify shippers several days in advance, requesting them to place orders for their requirements two days in advance of the date they desire to load. For example, on Monday they would place orders for the number of cars they desired for loading on Wednesday, and on Tuesday place orders for the number of cars they desired for loading on Thursday, and so forth. This is done to enable the Pacific Express Company and the Union Pacific Railroad to better figure in advance the proper distribution of the available equipment as between the several districts and as between sta-

tions and shippers in those districts. This plan of handling has resulted in a tendency on the part of at least some [fol. 933] of the shippers to immediately inflate their orders for cars, anticipating that the greater number of cars ordered the better possibility of obtaining the number of cars they actually require.

It will be noted from pages 4, 5 and 6 of Exhibit 15 that there were reported shortages on three days during the month of February, 1948, although on two of these three days there were fewer cars billed than placed, and on one day a greater number of cars billed than the combined total of placements and reported shortages. On February 9 and 10, 1948, a total of 440 refrigerator cars were placed with no shortages reported and a total of only 336 cars of perishables billed on those two days, or a total of 104 more refrigerator cars placed than billed. Notwithstanding this situation, on February 11, 1948, we placed 147 additional refrigerator cars, reported shortages of 31, but only 135 cars billed.

During March, 1948, there were reported shortages on twelve days, although on seven of these days the number of cars billed was less than the number of cars placed.

Exam. Mullen: May I interrupt there, Mr. Hanson. How were these shortages reported?

The Witness: By the agents at the respective stations.

Exam. Mullen: The railroad agent?

The Witness: Yes, sir.

Exam. Mullen: From what records do they report shortages? Do they have a record of the number of cars asked for?

[fol. 934] The Witness: They have a record of the number of cars asked for, the number of cars placed, and the cars short.

Exam. Mullen: Then your records show the number of cars short?

The Witness: Through our office. Through the PFE Office. Yes, sir.

By Mr. Collins:

Q. They also have a record of the number of cars billed and the number of empties, not loaded or not billed?

A. That is correct.

During the months of September and October, 1948, shortages were reported on two days each month, but the record of placements and of cars billed speaks for itself.

A thorough analysis of pages 4, 5 and 6 of Exhibit 15 will show there were few, if any, days on which a shortage actually existed and that the reported shortages shown are due, at least to a considerable degree, to shippers inflating their car orders.

The period of January 13, 1949, to February 26, 1949, inclusive, covers the January and February storm period. There was not a shortage of refrigerator cars on the Union Pacific Railroad during this period, but we were unable to get all of the cars into Idaho that were needed due to storm conditions that prevailed the greater part of these two months, and also to the snow blockade that existed during a portion of the month of February.

Although there were shortages reported on the 39 working [fol. 935] days of this period, the fact is that on 21 of these 39 days a less number of cars of perishables was billed than was actually placed. On some days the difference was considerable and while we fully appreciate a shortage of equipment in Idaho actually existed during part of that time, the record clearly shows that the shipper's orders were inflated and the shortages were not as serious as would appear.

Pages 4, 5 and 6 of Exhibit 15 shows that the Pacific Fruit Express Company and the Union Pacific Railroad during the period November 22, 1947, to present date, exclusive of the January and February, 1949, storm period, have taken care of the shippers of Idaho with refrigerator cars in almost a 100 percent manner. This covers a period of almost two and one-half years, since the time of virtual relinquishment of control by the Refrigerator Car Pool Manager.

As heretofore stated, storm and snow conditions during January and February, 1949, prevented our getting sufficient refrigerator cars into Idaho to take care of all orders. We had hundreds of cars available between Cheyenne, Wyoming, and Council Bluffs-Kansas City which could not be moved through to Idaho. However, during this period the Union Pacific Railroad backhauled out of Southern California a total of approximately 1100 empty refrigerator cars

through Salt Lake City and into Pocatello for distribution among Idaho shippers. This involved a movement of empty [fol. 936] cars some 900 miles from Southern California to Pocatello at a cost of approximately $100,000. If the Union Pacific took the position of not furnishing shippers of Idaho refrigerator cars when needed on the theory that if the traffic didn't move today it would move over the Union Pacific Railroad tomorrow, as suggested by Mr. Stanger on page 347 of the transcript, we certainly would not have incurred an additional expense of $100,000 in backhauling empty refrigerator cars from Southern California into Idaho. This action alone disproves Mr. Stanger's accusation.

During the February, 1949, snow blockade on the Union Pacific Railroad it would not have been possible for the Rio Grande to handle any empty refrigerator cars from Denver to Ogden for movement into Idaho, unless it had handled empty refrigerator cars instead of loads, because the Rio Grande was unable to handle all of the westbound loaded traffic we had to offer them at Denver. In fact, more than double the number of loads were rerouted south from Denver via the Colorado and Southern and Santa Fe Railroads than were rerouted via the Rio Grande west from Denver.

The number of empty refrigerator cars backhauled by the Union Pacific Railroad from Southern California into Idaho during the storm period exceeded the number of rerouted loads that the Rio Grande could handle for the Union Pacific Railroad for movement west from Denver.

[fol. 937] Mr. Bradford, in his testimony on page 209 of the transcript, stated that the capacity of the Rio Grande's motive power, and power which it could obtain from its connections was reached in the peak of the storm. This in itself shows that the Rio Grande could not have been of any assistance in the movement of empty refrigerator cars during the February 1949, shortage in Idaho.

Furthermore, I have telegrams in my files from the Rio Grande during January and February, 1949, urging the need for refrigerator cars on that railroad and showing that shortages on placements on the Rio Grande existed at times during this period.

In this connection, and to indicate the variety of conditions that affect refrigerator car supply, some severe storm

conditions and unprecedented cold weather prevailed during January of 1950 in the Northern part of the United States, extending from Minnesota to the Pacific Northwest. A meeting of refrigerator car lines advisory committee was held in New York City on January 31, 1950, attended by representatives of twelve refrigerator car lines and railroads, as well as representatives of the Interstate Commerce Commission, Association of American Railroads, and U. S. Department of Agriculture. The following excerpts of the minutes of that meeting are pertinent:

"Severe weather conditions and heavy seed potato orders [fol. 938] have caused large shortages to be reported in the Red River Valley of Minnesota and North Dakota. Below zero temperatures have been experienced almost every day since the first of the year making it impossible to load potatoes most of the time. It has also prevented railroads from conditioning and moving cars into territory currently."

Mr. Quirk: May I interrupt, Mr. Examiner. It seems to me these quotations could be copies without being read. We are little ahead of him anyway on those.

Exam. Mullen: Is that agreeable?

Mr. Collins: Yes, sir.

Exam. Mullen: That may be done.

Mr. Collins: Excuse me, Mr. Hanson. What you suggested applied through to the middle of page 25?

Mr. Quirk: It isn't necessary to read those quotations; they can be copied in the record.

Mr. Collins: All right.

The Witness: "Mr. Mattson, in reporting for the Northern Pacific Railroad, said they have had considerable difficulty since the first of the year in keeping Red River Valley and Yakima supplied with cars. The main difficulty has been the severe cold weather seriously interfering with their operations rather than the shortage of cars. If and when weather moderates in the Northwest, he thought the car supply and general overall picture would show a marked improvement."

[fol. 939] "Market conditions have not been conducive to the prompt release of cars and reports indicate a considerable number of perishables are diverted and reconsigned in

order to hold cars under load as long as possible without causing too much demurrage and storage expense. All of these conditions in addition to the severe operating conditions in the West have caused the tight car situation now being experienced in all the heavy producing areas. Car Lines have been giving assistance whenever possible to other than their contract lines. All car lines present promised their full cooperation to the fullest extent of their ability in an effort to see that relief is afforded in areas where shortages are threatened."

The coal strike situation in January and February 1950 also affected refrigerator car supply in some territories on some railroads. "The Packer," a weekly paper published for produce dealers and shippers at Kansas City, Missouri, issue of February 18, 1950, contained an article entitled:

"Car Shortage Threat in Coal Crisis."

The article, datelined at Kansas City, February 17, stated in part as follows:

"A check on conditions in various shipping districts by members of the Packer's field staff indicates that the situation for the most part has not yet reached the state of resulting in serious refrigerator car shortages, except in [fol. 940] areas served by certain northern railroads, notably the Pacific Northwest and the Red River Valley, and there is some question as to the actual causes of the car shortages, except in areas served by certain northern railroads, notably the Pacific Northwest and the Red River Valley, and there is some question as to the actual causes of the car shortages in those districts, which have been short of cars for some weeks."

The article also included news item datelined Grand Forks, North Dakota, February 17, reading in part as follows:

"The car situation in the Red River Valley remains acute although there has been some slight relief during the past week. * * * During January when temperatures were low, loadings ran about 20 cars a day."

The article also included news item dated at Los Angeles, February 17, reading in part as follows:

"* * * Refrigerator car lines were having no difficulty in supplying shipper requirements, even in the face of a rather sharp increase in lettuce movement over the past several days."

The article also included a news item datelined Seattle, Washington, February 17, reading in part as follows:

"Northwest apple shippers say that failure of the railroads to place cars for loading at shippers' orders over recent weeks has caused losses of sales of 2,000 or more cars of Washington applies on the best markets of the entire season."

[fol. 941] "Complaints come particularly from Wenatchee and the up-river districts. This entire area is served exclusively by the Great Northern Railroad and its associated refrigerated car service."

"Also there have been reported equally bitter and pronounced complaints of lack of refrigerator cars along the Northern Pacific Railroad which with its associated refrigerator car service serves Yakima and neighboring apple shipping points in the Yakima Valley area."

"On the other hand it is not claimed that the Union Pacific Railroad has had any reefer car shortage as it serves the apple deal. It comes across northeast Oregon from Boise in southern Idaho and has terminus at Yakima."

"Also there has been no shortage at any recent time of refrigerator cars in the big potato deal of eastern and southern Idaho, or the big onion deal of southwestern Idaho and eastern Oregon. There is fast service and no shortage in Utah. It is reliably reported, and the fact is evident from the service and from the looks of hold yards and sidings that this carrier and also the Southern Pacific, which two are jointly served by the Pacific Fruit Express, have protected each deal they were responsible for with a smooth

flow and even quite a reserve of reefer cars in good condi-
[fol. 942] tion and at the usual points on a stand-by basis."

These reports show there can be refrigerator car shortages in any area and on any railroad as a result of adverse operating conditions due to emergencies of one kind or another, over which the railroads have no control. Such conditions, in my opinion, do not justify shippers served by the railroad temporarily affected, simply as a measure of retaliation, supporting a petition of a railroad far removed from the originating territory to participate in the haul of the traffic as a bridge line.

At no time subsequent to February 26, 1949 has there been a refrigerator car shortage in the territory served by the Union Pacific Railroad, and the above comment appearing in "The Packer" with respect to the situation on the Union Pacific Railroad is an indication of how the Union Pacific Railroad normally takes care of its shippers and how it performs when the Pacific Fruit Express Company and the Union Pacific Railroad have control of its equipment and when serious emergencies, such as the blizzard of 1949, are not involved.

Mr. L. E. Stephens in his testimony on page 337 of the transcript, referred to car shortage, principally for potatoes, and stated that two or three years ago the car supply was such that he received less than one car per day for a period of 60 days. The fact is that at only one time in all the past years did any car shortage period on the Union
[fol. 943] Pacific last 60 days. Check of records shows a refrigerator car shortage prevailed in the Idaho territory from November 14, 1945 to February 5, 1946. This is a period of 84 days and excluding Sundays and holidays, a period of 69 working days. A check of our records also shows Mr. Stephens was furnished and loaded a total of 157 refrigerator cars on these 697 working days, or an average of 2.27 cars per day. The number of cars furnished ranged as follows:

None on 10 days
1 car on 19 days
2 cars on 11 days
3 cars on 13 days
4 cars on 9 days

5 cars on 4 days
6 cars on 2 days
9 cars on 1 day

The period of lowest placement was the 15-working day period December 13 to 1, 1945, inclusive, during which time Mr. Stephens was furnished a total of 14 cars.

During the 11-working day period November 1 to 13, 1945, inclusive, immediately preceding the period of shortage in question, Mr. Stephens loaded a total of 26 cars, or a daily average of 2.36 cars.

During the 9-working day period February 6 to 15, 1945, inclusive, immediately following the period of shortage, Mr. [fol. 944] Stephens loaded a total of 22 cars, or a daily average of 2.44 cars.

It will be observed from this record Mr. Stephens loaded only an average of one, or two tenths of one car per day more during the period when no shortage existed immediately preceding and following the period in question than he loaded during the period of shortage.

In this connection, records also show during this period of shortage, 28 of the 157 cars furnished Mr. Stephens were on hand two days each before billed; that is, cars were placed, for example, on Monday morning but were not billed until Tuesday evening. Three of the cars furnished during this period of shortage were on hand three days each before billed by Mr. Stephens.

Check of records during another period of shortage, November 14, 1946 to December 31, 1946, or a total of 39 working days, shows Mr. Stephens was furnished 97 refrigerator cars, or an average of two and one-half cars daily.

Records show during the storm period when shortage existed in Idaho from January 13 to February 26, 1949, a total of 39 working days, Mr. Stephens was furnished and loaded 63 refrigerator cars or an average of 1.62 cars daily.

Mr. Jack Adams stated on page 671 of the transcript:

"The opening of the Ogden Gateway would eliminate considerable discrimination, especially in times of car short- [fol. 945] ages, from the fact it would be used as a competitive weapon."

While Mr. Adams has not cited any specific case of discrimination, it is a fact that during a period of refrigerator car shortage in Idaho the latter part of September, 1947, some charges of discrimination as between Idaho and Colorado were made and Idaho-Oregon Shippers Association also handled with Interstate Commerce Commission relative to refrigerator car supply in Idaho. Investigation at that time developed that during the 1947 season up to September 20, Colorado has loaded 5138 cars of potatoes as against Idaho's loading of 5931 cars. In other words, during the 1947 period up to September 20, Idaho loaded approximately 1900 cars less than the previous year, although only light spotted shortages existed during this period. The reason for this decrease was due to the fact that the potato crop north of Pocatello was set back by early frost which in turn brought on a later movement, where as the Colorado crop started as usual and gained headway before shortage took place. These figures refer only to potato loading. In this connection, Refrigerator Car Pool Manager, Mr. C. W. Taylor, under date of October 2, 1947, telegraphed Idaho-Oregon Shippers' Association as follows:

"Your wire reference movement perishable from Idaho.

"For period August 18 to September 27, 1947, total refrigerator car loadings from Idaho amounted to 9690 cars compared with 8514 cars same period 1946 and 8896 cars [fol. 946] same period 1945. Last week apple shipments were 226 cars compared with 176 same week last year. Onions 267 compared with 163 cars last year. Potatoes 979 cars compared with 937 cars last year. Lettuce 18 cars compared with 125 last year. Total 1536 cars compared with 1433 last year, or 7 percent increase.

"Increase in fruit and vegetable shipments for the nation last week was 1.9 percent.

"Other sections of the U. S. also having difficulty moving heavy volume of fruits and vegetables and with limited car ownership necessary for fast movement of both loads and empties which the carriers are providing as evidenced by high loading past three weeks.

"Your territory has received and will continue to receive equitable proportion of available cars."

In this connection, during a period of refrigerator car

shortage, allocation of the available equipment is made by Pacific Fruit Express and Union Pacific Railroad personnel between the loading districts, the stations in those districts, and the shippers at the station, based on past loadings, ability to load, together with any subsequent changed condition and conditions that might prevail at the time, resulting in a most equitable distribution. While conditions sometimes prevail so that the apportionment cannot be made to the exact percentage or cars every day, but such instances were corrected by adjustments from day to day and week to week. [fol. 947] Our records show that Messrs. Stephens, Adams, Stanger and all other shippers shared proportionately and equitably in the available supply of cars during periods of shortages and without any discrimination whatsoever.

On page 208 of the transcript Mr. Bradford in referring to the Rio Grande contract with the American Refrigerator Transit Company has stated:

"We have at our command a total of approximately 11,500 refrigerator cars."

"We supplied to our Western connections, other than Union Pacific, a total of 11,320 ART cars for return loading during past five years."

"We would be in position to contribute to alleviation of any car shortage in territory north of Ogden."

As of January 1950, the ART owns only 11,457 refrigerator cars. The Rio Grande contract with the ART Company provides, in part, that the Car Line shall furnish the railroad suitable refrigerator cars in such numbers and at such times as to enable the railroad to accept and carry with reasonable dispatch all of the fruit, potatoes and other vegetables shippers may actually tender to the railroad at stations on its line of railway for transportation in carloads, and that the railroad shall give the Car Line not less than 30 days written notice of the cars it will require from time to time under this contract.

[fol. 948] Mr. Collins: Mr. Hanson, I think the record should show at this point that Exhibit 11, which was introduced yesterday, has a slight addition to the provisions which Mr. Hanson described.

Exam. Muller: Has a slight what?

Mr. Collins: Some additional language, a slight addition.

The Witness: The ART Company as of January 1, 1950

has contracts to furnish refrigerator cars to the following railroads:

Name of Railroad	Total Refrigerator Cars Loaded Year 1949
*Ann Arbor RR.	495

Total	107,916

*(Indicates Class I railroad)

This shows that the ART Company has contracts with 33 railroads or transportation lines, including the Denver & Rio Grande Western, of which 12 are Class I railroads.

These 12 Class I railroads during the year 1949, and as reported on Form CS-54-1B, issued by the Car Service Division, Association of American Railroads, Washington, [fol. 950] D. C., January 12, 1950, loaded a total of 107,916 refrigerator cars, and as shown above, the Rio Grande loaded 19,340 or 17.9 per cent of the total refrigerator car loadings on these 12 Class I railroads.

The ART Company has just as much obligation to take care of their other 32 contract lines as they do the Rio Grande, and with only 17.9 percent of the refrigerator car loading on the Rio Grande and 82.1 percent on the other 11 Class I railroads having contracts with the ART Company, it would appear the Rio Grande does not have command of the ART refrigerator car ownership.

Regarding Mr. Bradford's reference to 11,320 ART cars having been delivered its western connections during the past five years for return loading, these deliveries would, of course, be to the Western Pacific and Southern Pacific Railroads at Salt Lake City and Ogden. Mr. Plummer, in his testimony explains the assistance given by refrigerator car lines to other refrigerator car lines during periods when perishable loading in the territory served by one particular car line is light and perishable loading in other territories served by other car lines is heavy. The Pacific Fruit Express Company as well as the Union Pacific Railroad, handles directly with the ART Company as well as with a number of other refrigerator car lines, for use of such equipment during periods of peak perishable loading in our territory.

[fol. 951] The ART Company has always fully cooperated with the Pacific Fruit Express Company and the Union Pacific Railroad in this matter and it is something over which the Rio Grande has no control nor is it involved in such transactions. During the period of refrigerator car pool, from November 1942 to June 30, 1949, refrigerator cars of the different ownerships were controlled by the Refrigerator Car Pool Manager under authority of the Interstate Commerce Commission and during this period,

particularly until early 1948, distribution into and out of the different perishable loading territories throughout the nation was handled as a pool regardless of ownership, resulting in many ART refrigerators released in western territory being put in PFE service and PFE refrigerators released in eastern, southern and southwestern territory, including territories served by ART Company, being put in ART service, as well as in service of other lines, in order to get the greatest utilization possible out of refrigerator cars during the war emergency period.

The Rio Grande handles a certain volume of perishable traffic eastbound from Ogden and Salt Lake City originating, for example, in California and which is delivered to the Rio Grande by the Southern Pacific and Western Pacific, and, of course, the Rio Grande has an obligation to equalize in the interchange of refrigerator cars. The delivery of 11,320 empty ART cars by the Rio Grande to the Western Pacific and Southern Pacific during the [fol. 952] last five years were cars placed in PFE service by the ART company, over which the Rio Grande had no control, but did have an obligation to move these empties west into Ogden and Salt Lake City for delivery to the Southern Pacific and Western Pacific on an equalization basis inasmuch as they received the loaded haul eastbound. In this connection, the Rio Grande as of December 31, 1949 is short in delivery of refrigerator cars westbound to the Pacific Fruit Express Company contract lines at Ogden and Salt Lake City a total of 8099 cars under the equalization agreement which the Rio Grande has with the Pacific Fruit Express Company.

In other words, as of December 31, 1949, Rio Grande has an obligation to deliver 8099 refrigerator cars in PFE service to its western connections at Ogden and Salt Lake City.

The ART Company, as well as other refrigerator car line companies, are anxious to get their cars into PFE service when not required on the railroads with whom they have contracts, and the reason for this is obvious.

Page 7 of Exhibit 15 shows average daily mileage made by refrigerator cars by months during they ears 1948 and 1949 on the Denver & Rio Grande Western Railroad and the Union Pacific Railroad. This page also shows the percent

of empty refrigerator car miles to total refrigerator car miles on both railroads.

It will be observed from page 7 that refrigerator car miles per day on the Union Pacific Railroad greatly exceed [fol. 953] the daily mileage per car on the Rio Grande. The average of the figures shown by months during the year 1948 will indicate daily average miles per car on Union Pacific Railroad was 137.8 as compared to 61.2 on the Rio Grande. The daily average mileage on the Union Pacific Railroad druing 1948 was 125 percent greater than that on the Rio Grande. During the year 1949 average on the Union Pacific Railroad 132.1 as against 71 on the Rio Grande or 86 percent greater. The decreased mileage per day on the Union Pacific Railroad during the January and February 1949 storm period affected the average mileage for the year as compared to 1948 and the ten months subsequent to February 1949.

It is easy to understand from these figures why the ART Company and other private refrigerator car lines desire to get their cars into PFE service on the Union Pacific Railroad as such car line companies are paid a mileage rate of three cents, both loaded and empty, and their daily earnings while cars are in PFE service on the Union Pacific Railroad greatly exceed the earnings while the cars are in service on the Rio Grande.

Regarding Mr. Bradford's reference to the Rio Grande's "command" of a total of approximately 11,500 ART refrigerator cars, I call attention to the fact during the heavy perishable loading in Colorado, in territory served exclusively by the Rio Grande, during August 1948 when the peach harvest reached its peak, and at a time when the [fol. 954] Refrigerator Car Pool Manager exercised no control over refrigerator cars, the Rio Grande was unable to obtain a sufficient number of ART refrigerator cars, or cars of miscellaneous foreign ownership, to handle the peach harvest.

After several telephone calls from Superintendent Transportation of the Rio Grande, as well as exchange of several telegrams between that officer and myself with respect to the refrigerator car situation in that territory, the Union Pacific Railroad delivered to the Rio Grande at Denver several

hundred PFE refrigerator cars to assist them in the handling of the crop and to assist the growers in getting their peach crop moved.

The delivery of these PFE refrigerator cars to the Rio Grande was made without any strings attached thereto and without any request on the part of the Union Pacific to use these cars for return loads routing via the Union Pacific. The following telegram dated Denver, Colorado, August 30, 1948, was received by me from Mr. L. H. Hale, Superintendent Transportation, Denver & Rio Grande Western Railroad:

"Your timely assistance has saved serious shortage for peach loading and is deeply appreciated. Believe if you will give us 50 cars per day balance of this week can protect perishable loading without delay. Will advise last of week what situation is at that time as North Fork peach crop will be ready to move starting about September 5th."

[fol. 955] The Rio Grande is not in a position to contribute to the alleviation of any car shortage that might exist in the territory north of Ogden as indicated by Mr. Bradford in his testimony on page 208 of the transcript. On the other hand, the Pacific Fruit Express Company and the Union Pacific Railroad have in the past contributed to the alleviation of car shortage in the territory served exclusively by the Rio Grande.

During a period of refrigerator car shortage on the Rio Grande in January, 1949, that railroad refused to accept same ART and miscellaneous foreign ownership refrigerator cars from the Union Pacific at Denver account not being cleaned when offered the Rio Grande, stating they knew of no reason why the originating line should stand the entire expense of cleaning cars any more than other roads getting the haul. After an exchange of telegrams between my office and the Rio Grande, the ART Company and the refrigerator Car Pool Manager, the Rio Grande cancelled its instructions and accepted such cars from the Union Pacific at Denver.

This action on the part of the Rio Grande demanding clean cars was a radical departure of established handling and of its obligation, but it does indicate the attitude assumed at the time. The Pacific Fruit Express Company

and the Union Pacific Railroad in periods of car shortages have worked forces overtime cleaning and conditioning refrigerator cars for the shippers of Idaho and operated [fol. 956] additional trains to get such cars to loading stations as quickly as possible, but the action on the part of the Rio Grande at a time when shippers served exclusively by that railroad were short of refrigerator cars does not indicate the same interest it has displayed toward the shippers located in Idaho in its efforts to open the Ogden Gateway.

With respect to the handling of loaded perishable traffic, Mr. Bradford in his testimony on pages 209 and 210 of the transcript refers to the ice capacity of the Rio Grande, stating there appears to be no shortage of ice in that territory. Mr. Bradford did not state, however, the Rio Grande was in a position to handle the icing of perishables, and in this connection I call attention to the fact during the peak loading season on the Rio Grande for a number of years past, perishable traffic routed from the Rio Grande at Denver to the Union Pacific Railroad has been delivered by the Rio Grande to the Union Pacific Railroad without reicing, due to Rio Grande's inability to handle without excessive delay, and this service has been performed by the Pacific Fruit Express Company at Denver prior to departure of perishables via the Union Pacific Railroad.

The Union Pacific Railroad and the Pacific Fruit Express Company have taken on this additional handling in order to expedite the movement of the Colorado peach crop to market and which has been of considerable benefit, not only [fol. 957] to the Rio Grande, but to the shippers.

Freight Car Equipment Situation:

In addition to refrigerator car assistance given the Rio Grande by the Union Pacific Railroad, the Rio Grande has been and is dependent upon the Union Pacific for considerable assistance in the way of other equipment, such as box cars, coal cars, stock cars and flat cars. I have in my office files many, many telegrams over a period of several years from the Rio Grande requesting such assistance, which has been given them when consistent.

For several years we obtained from the Chicago and

North Western Railway a number of ore cars for use in taking care of the steel plants in the Utah area. These cars were moved empty from the Great Lakes region to Council Bluffs on the C&NW and thence to Utah via Union Pacific, and returned empty to the C&NW at Council Bluffs each spring. C&NW ore cars were obtained as follows:

397 received from C&NW Council Bluffs January 20 through 27, 1947, and returned to the C&NW during the period April 15 to May 8, 1947.

500 received during period November 28 to December 11, 1947, and returned March 20 to April 6, 1948.

351 received between November 14 and 27, 1948 and returned between March 17 and 28, 1949.

The Union Pacific paid the C&NW Railway 5 cents per [fol. 958] mile per car for their handling between the Great Lakes region and Council Bluffs in each direction and this mileage payment amounted to $86,840.

The Union Pacific paid to the C&NW Railway $1.50 per day per car while these cars were on our line, or a total per diem payout of $185,808.

The Union Pacific handled repairs to equipment after being in service in the amount of $8,156.

In addition, the Union Pacific incurred expense of moving these 1,248 C&NW ore cars from Council Bluffs to Salt Lake City and return, and also expense of equipping cars with new type retainer in order to make them entirely satisfactory for mountain handling.

The out-of-pocket expense of the Union Pacific to the C&NW Railway Company for the use of these cars amounted to $280,805, in addition to the expense incurred by the Union Pacific in moving these cars to and from the C&NW and repairs incidental to use in ore service.

These ore cars were obtained at a time when there was a shortage of open top equipment throughout the nation and at a time when coal loading was heavy on the Union Pacific, as well as on the Rio Grande and Utah Railroads in Utah, and during the beet harvest on the Union Pacific and Rio Grande. These ore cars, of which we had 397 during the 1947 period, 500 during the 1947-1948 period and 351 in the [fol. 959] 1948-1949 period enabled us to release a like number of coal cars for utilization at coal mines and we were

able to keep all industries going without a shutdown, although the open top situation was very acute during these periods. However, the Union Pacific spared no expense in obtaining this equipment to ease the coal car situation to the extent possible, and enabled us to also take care of the beet harvest in Idaho and Utah to the satisfaction of the sugar companies and in a territory exclusively served by the Union Pacific Railroad.

This action does not indicate any necessity for shippers located on the Union Pacific Railroad to have routes via the Rio Grande as a "competitive weapon" in order to obtain equipment for the handling of their products.

During the month of February, 1948, when ore stock piles at Geneva and Iron ton, Utah were brought up to capacity through the use of these ore cars and with Colorado Fuel and Iron Company stock pile at Minnequa, (Pueblo) Colorado down to less than a two-weeks supply, we suggested to the Rio Grande that they use the ore cars for the handling of ore from the mines at Iron Mountain, Utah, located on the Union Pacific Railroad, to Minnequa, (Pueblo) Colorado, routing Rio Grande from Provo, Utah, which would enable the Colorado Fuel and Iron Company to replenish their stock piles. The Rio Grande wanted to handle the ore in coal cars only and was unwilling to use the ore cars on its line. Mr. W. R. McPherson, then Superintendent Trans- [fol. 960] portation, under date of February 15, 1948, advised me that as they handled this business as fills on manifest trains it was not consistent to accept it in ore cars because those cars would restrict the speed of its trains.

I suggested to Mr. McPherson that he give the subject further consideration and also advised him we could deliver the loaded ore cars in solid trains, eliminating the necessity of the Rio Grande handling small lots as fills on regular trains. Mr. McPherson advised me under date of February 21, 1948, the Rio Grande was still of the opinion it would be inconsistent for them to attempt to handle these ore cars between Provo and Pueblo.

These ore cars were not suitable for coal loading and the Rio Grande would have had to return them empty from Minnequa to Provo. The Colorado Fuel and Iron Company was quite disappointed in this action on the part of the Rio

Grande as they had made arrangements after our handling with them to use these cars in order to build up their storage supply. During the same period we received telegrams from the Rio Grande, as well as the Open Top Section of the Car Service Division of the Association of American Railroads at Washington, D. C., urging us to assist the Rio Grande with coal cars.

The refusal of the Rio Grande to use the C&NW ore cars, at no greater per diem expense to them than coal cars, and would have kept that many additional coal cars in coal [fol. 961] service, indicates they were not as interested in taking care of the needs of the Colorado Fuel and Iron Company's steel plant, which is served by them, as was the Union Pacific Railroad in taking care of industries located on its lines.

The Rio Grande has endeavored to show in this case that if the Ogden Gateway is opened, shippers in Idaho served by the Union Pacific Railroad will receive more empty car equipment.

During early January, 1949, the Rio Grande asked us for assistance in the way of box cars through Denver for coal loading in the Moffat district. This was at a time when we encountered interruptions in Eastern Wyoming and Western Nebraska due to blizzard conditions and when we had surplus box car equipment at the West end of our railroad which we offered to the Rio Grande at Salt Lake City or Provo.

However, under date of January 10, 1949, Mr. L. H. Hale, Superintendent Transportation of the Rio Grande, advised me by telegram to the effect they did not need any box cars in the Salt Lake City territory and could not haul them empty 700 miles to protect the Moffat territory.

This is a further indication of the Rio Grande being unwilling to incur empty car mileage to take care of industries exclusively served by that line.

The Union Pacific Railroad hauls empty box cars, as well as empty refrigerator cars or any other equipment, from as far as the Missouri River and Los Angeles territory into [fol. 962] Idaho and the Pacific Northwest—empty movements of as much as 2000 miles—to take care of the shippers served by the Union Pacific Railroad.

Mr. W. S. Young, Manager, Farmers Grain Cooperative,

Ogden, Utah, wrote Mr. A. E. Stoddard, President, Union Pacific Railroad, under date of August 2, 1949, regarding box car situation for grain loading, stating in part as follows:

"We are advised by our friends on the Denver And Rio Grande Western Railroad that if the Ogden Gateway could be opened they would be most happy to furnish equipment for any movement eastbound which we could route over their lines."

This position taken by the Rio Grande further shows they are not interested in whether or not the shipper's business is moved or in supplying empty cars unless they get loaded routing. The Union Pacific Railroad did not advise the Rio Grande's Colorado peach growers in August, 1948, that we would furnish the refrigerator cars to move their crop only if the traffic was routed over our line from Denver. Five days after Mr. Young wrote the letter to Mr. Stoddard, or on August 7, 1949, the Rio Grande wired me asking for box cars from the Union Pacific for coal loading in the Moffat district.

To handle the beet crop each year in Nebraska, Colorado, Wyoming, Utah, Idaho and Eastern Oregon it is necessary for the Union Pacific Railroad to place approximately 3000 coal cars in this service, of which about 1500 are needed [fol. 963] in the Utah, Idaho and Eastern Oregon territory. In the past, we have used, to a small extent, Rio Grande equipment returning east empty from the Pacific Northwest to load beets at stations west of Nyssa, Oregon and Nampa, Idaho factories, and when released from the load moved them on east empty for return to the Rio Grande. This handling is permitted under Car Service Rules and avoids some cross haul of empty equipment.

However, shortly after the start of our beet loading the latter part of September and early October, 1949, the Open Top Section of the Car Service Division, Association of American Railroads, Washington, D. C., issued instructions due to Rio Grande coal car shortage to keep Rio Grande open top cars out of sugar beet traffic. These instructions were complied with and Rio Grande coal cars returned to that line empty, notwithstanding the fact this meant a cross haul of empty coal car equipment on the Union Pacific Rail-

road and also meant moving Rio Grande coal car equipment to that line empty and backhauling Union Pacific coal cars to beet loading stations. Some of the beets from Union Pacific loading points moved to a beet factory located on the Rio Grande. The assignment of cars to move loads to that factory was completely filled with Union Pacific cars and the Rio Grande did not furnish any cars for this assignment even though the industry was located on its lines.

In this connection, I have received letters the past couple of years from all of the sugar companies served by the Union Pacific Railroad in Nebraska, Colorado, Wyoming, [fol. 964] Utah, Idaho and Eastern Oregon, expressing appreciation for the manner in which they were taken care of with equipment and the excellent service rendered in the handling of the beet harvest.

During this same period, notwithstanding the heavy load the Union Pacific Railroad was carrying in taking care of coal and ore mines, steel mills, and the sugar beet harvest, the Rio Grande continually called on us for assistance to keep their Utah mines operating. An indication of the manner in which we assisted the Rio Grande is given in the following telegram from Mr. L. H. Hale, Superintendent Transportation of the Rio Grande, dated at Denver, November 10, 1949, addressed to me:

"Appreciate this help. As a result will be able to work Sunnyside today. Hope you will continue to give us all assistance you can as loading very heavy and our supply of empties extremely tight. All coal mines Utah want to work tomorrow if we can protect them."

On February 28, 1950, Mr. L. H. Hale of the Rio Grande sent me the following telegram from Denver:

"Have order for 100 flat cars to protect SP rail loading via our line to Ogden starting March 3. If you have any surplus flats or are moving empty flats, to SP, Ogden will accept 75 from you Denver to apply on this order. Cars, of course, can be used for lumber loading when SP releases. Advise prospects. N-375-A."

[fol. 965] The Rio Grande had an ownership of only 239 flat cars as of February 1, 1950, which means 41 percent of

their ownership would be required to protect this order, and although the Union Pacific Railroad would not in any way participate in the haul of the loaded traffic and, based on past experience together with some facts presented in this testimony, the Rio Grande would expect the loaded eastbound haul if these cars were utilized for lumber loading when released, the Union Pacific Railroad was called upon by the Rio Grande to assist in furnishing this equipment.

On September 18, 1949, Mr. Hale wired me from Denver as follows:

"Account coal mines Utah idle due to labor trouble are you agreeable to waiving per diem on your open top cars on our line for coal loading to avoid moving these cars home to you empty, then returning when mines resume work. Appreciate prompt reply. M-32."

On March 1, 1950, I received the following telegram from Mr. Hale on the Rio Grande:

"Account coal mines idle will you accept your cars released from Iron Mountain ore at Denver instead of Provo? N-382."

The last telegram refers to cars loaded with ore at Iron Mountain, near Cedar City, Utah, and moved by the Union Pacific 245 miles to Provo, Utah, where they were interchanged to the Rio Grande for movement and delivery to [fol. 966] Colorado Fuel and Iron Company at Minnequa, (Pueblo) Colorado. Although the Rio Grande had a haul of the loads of about 580 miles, while the Union Pacific's loaded haul was only 245 miles, nevertheless, instead of the Rio Grande hauling the empty cars from Pueblo back to Provo, where it had received the loads, they wanted to haul them a distance of only 119 miles to Denver for delivery to the Union Pacific Railroad and then expect that railroad to haul the empty cars all the way back to Iron Mountain, Utah, for ore reloading to Minnequa, Colorado.

Mr. Quirk: Mr. Examiner, we have been quite patient here. We were wondering at what point we ought to raise a question and object to so much argument here, and criticism. Is the Union Pacific Company a complainant in this case?

Mr. Collins: What did you say?

Mr. Quirk: Has the Union Pacific Company become a complainant in this case?

Exam. Mullen: That question is not proper. Are you referring to the paragraph on page 49?

Mr. Quirk: There is a great deal of argument here.

Exam. Mullen: There is considerable argument.

Mr. Quirk: "To shirk his responsibility," and similar statements. When statements are prepared in this fashion it is rather hard to get at them by objection.

Mr. Collins: Mr. Examiner, I had shared, when I looked at this testimony, before Mr. Hanson prepared it for final [fol. 967] reading, I had some such misgiving myself. As I understand it he does regard it, as among railroad men, he does regard this as an actual refusal to accept a comparable responsibility. Maybe the word "shirk" isn't a good one.

Exam. Mullen: The point, as I understand it, that is pure argument, if there is objection to it I will have to sustain it.

Mr. Quirk: There is so much more argument in there. That is not all the argument.

Exam. Mulen: This particular part is purely argumentative. That should be stricken.

Mr. Quirk: There is another ground of objection too, Mr. Examiner. To avoid making an objection to each paragraph, each line, each page, the issues in this case involve an attempt to obtain joint rates at the Ogden, Utah Gateway. Now, there is some testimony in the case that shows as an incident to sending cars up into the Idaho Area it would be some help. As a result, this joint rate, if established, the car supply, in the Northwest Territory, wherever there was a shortage, and all railroads suffer shortages at times——

Now if this witness, there is his testimony, is making a sort of a major issue of this question, as though the Union Pacific were complaining against the Denver and Rio Grande, because the Denver and Rio Grande isn't as nice to the Union Pacific as the Union Pacific claims it has been [fol. 968] to the Denver and Rio Grande. I say that is irrelevant and immaterial. They have gone too far with it with this witness. I make that objection.

Exam. Mullen: Do you want to answer, Mr. Collins?

Mr. Collins: Yes, I want to answer.

Exam. Mullen: You may do so.

Mr. Collins: This record will show, if it doesn't show already, that one of the inducements that the Rio Grande used in the hope of stimulating an interest and obtaining help from shippers in Idaho in this complaint, or in prosecuting this complaint, was the holding out of a promise of additional equipment, and prodding the Union Pacific into better service. Everything Mr. Hanson has in this document, with respect to those two subjects, is directly responsive to the claims that the D&RGW have made to the shippers and the claims that the shippers made, or the charges the shippers made against the Union Pacific Railroad in the record at Salt Lake City. It is perfectly proper, and we can make the explanation as big as the facts permit, and there is a big explanation. It all comes from the relationship, the dealings rather, and Mr. Hanson's own experience in dealing with the Rio Grande, with respect to cars, and the attitude the Rio Grande takes.

Mr. Quirk: Wel now, the Rio Grande has merely taken the position that if we have traffic that moves freely to and from the closed door territory involved, there is bound to be [fol. 969] some cars up there that don't get there—, and there will be as an incident to the main issue he— an improvement in the car shortage in the North West Territory if there was a car shortage. Now, some of the witness-, I admit, some of the witnesses that were put on the stand—some on their own behalf and some we obtained—made particular complaints about car shortages that they suffered on the Union Pacific.

Mr. Collins: We have a right to meet that.

Exam. Mullen: It is my understanding that was the purpose of the testimony put in by the Rio Grande at Salt Lake City.

Mr. Collins: It certainly is.

Exam. Mullen: And the answer put in through the testimony of this witness I think is proper. However, there is a certain amount of argument in this, and it would be well if that could be avoided as much as possible.

Now, the particular paragraph mentioned is to my mind argumentative and should not ever been included in the statement.

Mr. Collins: I suggest we cut it out.

Exam. Mullen: That will be stricken out. All the way through I have been looking a little bit ahead. There is here and there a matter that is argumentative.

Mr. Collins: I think we will have to meet them when we overtake them in the testimony, Mr. Examiner.

Exam. Mullen: Yes.

Mr. Quirk: I would like to make my objection in a more [fol. 970] formal line. I object to the statements made by the witness thus far orally that contain argument as incompetent and improper, and I object to the testimony in which he has dealt at great length on specific instances in which the Union Pacific has helped out the Denver and Rio Grande with respect to certain particular car situations, and his views as to per diem and other things, as being incompetent, irrelevant and immaterial to the issues in this case.

Exam. Mullen: No response is necessary to that. The objection will be noted, and in reading the record the points that are argumentative in this statement will be ignored.

Mr. Collins: You mean in reading his testimony? The Commission's use of the record, is that what you mean?

Exam. Mullen: That is what I mean. In reading the record, those statements which are argumentative will be ignored.

Mr. Collins: Very good.

Exam. Mullen: All right, proceed.

The Witness: The Rio Grande is not in a position to contribute to the alleviation of any equipment shortage that might exist in territory served by the Union Pacific Railroad in the event the Ogden Gateway is opened.

Mr. Quirk: Mr. Examiner, I object to that. That is just a plain conclusion.

Mr. Collins: Which is that, the first sentence in that paragraph?

[fol. 971] Mr. Quirk: Yes. That is argument and a conclusion. The witness doesn't know the situation. He doesn't know that there might be cars up there now more than before. We made movements up there.

Exam. Mullen: Off the record, gentlemen.

(Discussion held off the record.)

Exam. Mullen: On the record.

I believe the rest of that statement is argumentative, and there is a good deal of repetition in it.

Mr. Collins: How far down do you mean?

Exam. Mullen: The last part of that statement which ends on page 51. I suggest that be omitted, and you start on page 51.

Mr. Collins: Why not put it in the category that you just mentioned? Let the reader of the record in Washington, when they start to write the report, ignore any part of it that he considers argumentative. I would like to have that settled.

Mr. Quirk: I suggest that you stand by your ruling, Mr. Examiner. I think your ruling is correct.

Exam. Mullen: I think so, too; we will strike the balance of that.

Mr. Quirk: Mr. Collins won't have to write a brief at all.

Exam. Mullen: All right. It seems to me it is argumentative, and I notice there is some repetition in it. That will be stricken.

[fol. 972] Blizzard of 1949 and Detouring and Rerouting of Passenger and Freight Traffic:

Reference has been made by both Mr. Hogue and Mr. Bradford to the Rio Grande's handling of detoured and rerouted Union Pacific traffic during the February, 1949, storm and I consider it important to cover this handling somewhat in detail. The unusual severity of the storm and the area it covered are matters of common public knowledge. Insofar as Union Pacific Railroad is concerned severe blizzard conditions started in Western Nebraska and Eastern Wyoming on January 1, 1949, later extending to other areas, with storm continuing at intervals for approximately seven weeks, the greatest severity centering in Wyoming, Northern Utah and Southeastern Idaho the early part of February, 1949. It will be recalled the President of the United States detailed Army Corps of Engineers to take charge of the situation throughout Nebraska, South Dakota and Wyoming in connection with clearing of highways and affording relief to isolated communities.

As a result of blizzard conditions several freight trains became stalled in snow in the territory between Rawlins,

Wyoming and Wamsutter, Wyoming the morning of February 6, 1949, and the Union Pacific Railroad was blocked in this territory from that time until early morning of February 18th when one of the two main tracks was cleared and the second track cleared on the following day.

[fol. 973] Interruptions in service were also encountered during this period in two or three other localities in Utah and Idaho. During the peak of the storm in Wyoming territory winds reached a velocity of 80 MPH and temperatures dropped to as low as 51 degrees below zero with snow drifts reaching height of as much as 30 feet. During this period the Union Pacific Railroad in fighting the storm had in service 48 rotary, wedge and spreader plows, 124 flame throwers, 180 bulldozers, carry-alls and other equipment, in addition to hundreds of locomotives and some 14,000 employees.

On February 9, 1949, we placed embargo on freight traffic for movement through the storm area in Wyoming and asked authority from Interstate Commerce Commission to reroute freight traffic which was covered under King's Orders 50 and 51.

On February 9, we also started the detouring of passenger trains and during the period February 9 to 20, inclusive, the Rio Grande handled 21 westbound passenger trains on detour basis from Denver to Salt Lake City and 23 eastbound passenger trains from Salt Lake City to Denver.

The 21 westbound passenger trains were delivered to and departed Denver on Rio Grande as follows:

	February 9	2
	February 10	3
	February 11	1
	February 12	1
[fol. 974]	February 13	1
	February 14	1
	February 15	1
	February 16	1
	February 17	2
	February 18	3
	February 19	2
	February 20	3

The eastbound passenger trains were delivered to and departed Salt Lake City on the Rio Grande as follows:

February	9	3
	10	9
	14	2
	16	1
	17	1
	18	3
	19	2
	20	2

The Union Pacific Railroad owns 45 powerful oil burning passenger locomotives which are normally used in the territory east of Ogden handling other than streamline passenger trains. The Rio Grande cannot use oil burning locomotives as they have no facilities for fueling. They could not at that time use our coal burning locomotives due to the fact at least some of their coaling stations were frozen up and coal in cars frozen to extent could not be dumped. In [fol. 975] order for the Rio Grande to handle these 44 Union Pacific passenger trains on detour basis it was necessary for us to furnish Diesel locomotives with each and every train. The Union Pacific furnished 3 and 4 Diesel locomotives with each detoured passenger train, or a total of 144 single units, or 44 complete locomotives, most of which were 6000 horsepower.

The Union Pacific also furnished on each of the 44 passenger trains detoured two full train crews and two full engine crews, or a total of 10 Union Pacific train and engine employees on each train so that it was not necessary for the Rio Grande to use any of their train or engine crews, other than a conductor and engineer pilot.

During this period we detoured via the Santa Fe between Denver, Colorado and Barstow, California a total of 13 passenger trains that we would have detoured over the Rio Grande had that line been able to handle, but to avoid further delay these passenger trains were detoured via the Santa Fe at greater expense, due to th distance involved.

One freight train consisting of 41 cars of locomotive fuel oil was handled on detour basis over the Rio Grande from Denver to Salt Lake City.

During the period February 9 to 19, 1949, inclusive, the Union Pacific rerouted a total of 5538 westbound loads of freight traffic, as follows :

[fol. 976] 1,092 via D&RGW Denver to Salt Lake City.

549 via AT&SF from Denver to Barstow-San Bernardino.

1,818 via C&S to Dalhart, CRI&P to Tucumcari, SP to destination or for return to UP at Colton.

816 via CB&Q from Sidney, Nebraska to Laurel, Montana and thence NP and GN to Butte and Spokane.

317 via CMStP&P from Council Bluffs, Iowa to Marengo, Washington.

263 via CRI&P from Topeka, Kansas to Tucumcari for delivery to SP.

107 via CRI&P from Kansas City to Tucumcari for delivery to SP.

56 via AT&SF from Kansas City to Barstow for return to UP.

520 via SP from Ogden for return to us at Portland, Oregon.

It will be noted from the above only approximately 21 percent of the westbound freight traffic which we rerouted was handled over the Rio Grande and this was due to the fact that line could not handle any additional traffic during this period. We offered them all of the traffic they could handle and kept several hundred loads in our Denver yard at all times for the Rio Grande to take as and when they could handle. We rerouted 2367 westbound loads from Denver over the C&S and Santa Fe in order to get the traffic to destination as quickly as possible, although this resulted in the Union Pacific having considerably less haul than would have obtained if the Rio Grande had been able to [fol. 977] handle this traffic from Denver to Salt Lake City and returned to us at that point.

During this same period we rerouted 2557 eastbound loads of freight traffic as follows:

649 via D&RGW from Ogden to Denver.

721 via D&RGW from Salt Lake City to Denver.

523 via CMStP&P at Marengo, Washington to eastern destinations and lines.

253 via GN,

312 via NP and

31 via CMStP&P from Spokane, Washington to eastern destinations and other carriers. Some of this traffic came back to us from CB&Q at Sidney, Nebraska.

68 via SP from Colton to Tucumcari for delivery to CRI&P.

Our records show a total of 304 cars of mail and express were rerouted over the Rio Grande during this period, although some additional cars may have been rerouted by Railway Mail Service and Railway Express Agency prior to the traffic reaching the Union Pacific and we would have no records of these diversions. The same is also true of eastbound freight traffic as the Southern Pacific was rerouting the traffic to the Rio Grande before it reached Ogden and under those conditions there would be no interchange between the Southern Pacific and Union Pacific.

The Union Pacific Railroad paid to the Rio Grande for [fol. 978] detour of passenger and freight trains a total of $91,372.83 for detour service. Additional expense of $40,923.85 was incurred account necessary to furnish two fulls train and engine crews with each passenger train detoured, resulting in our paying one crew while deadheading and paying the other crew while on duty. These payments cover only the detoured service. The rerouted freight traffic was handled on a division of the freight revenue.

In handling the detour of passenger trains and rerouting of freight traffic we backhauled a number of our passenger trains from Green River, Wyoming, Pocatello and Montpelier, Idaho to Salt Lake City for eastbound movement, and from Laramie and Cheyenne to Denver for westbound movement. A considerable amount of freight traffic was backhauled from Laramie and Cheyenne to Denver and Sidney for rerouting westbound, and from Montpelier and Pocatello, Idaho to Salt Lake City for rerouting eastbound, and some traffic that was rerouted through Marengo and Spokane, Washington was backhauled from as far east as Nampa, Idaho, or approximately 500 miles. This handling resulted in considerable additional expense to the Union Pacific in our efforts to get the traffic moved through to destination as quickly as possible.

While the Union Pacific main lines between Rawlins and Wamsutter, Wyoming were cleared February 18 and 19, we detoured several passenger trains over the Rio Grande [fol. 979] between Salt Lake City and Denver on these two dates and on February 20th, and which are included in the total of 44 passenger trains detoured. This was done for the reason the snow cuts between Rawlins and Wamsutter were of considerable height and necessary for work trains to scale these drifts back. There was also considerable damage to rail in this territory which made it necessary to relay several miles of rail and repair signals for two or three days after this territory was opened and we did not want to take passenger-carrying trains through that territory until conditions were entirely safe.

During the period of the snow blockade, in addition to furnishing locomotives to handle detoured passenger trains, the Union Pacific Railroad leased the Rio Grande on a rental basis the following Diesel and steam locomotives:

2 Diesel switchers	5 days each
4 sets of Diesel freight locomotives with 4 units each, or a total of 16 single units	4 to 13 days each
19 single Diesel passenger locomotive units	4 and 5 days each
4 3900 class steam locomotives	8, 9 and 11 days each.

The Rio Grande paid the Union Pacific Railroad a total of $30,402.00 for rental of these locomotives.

The Rio Grande advised me on February 13 their coal chute situation at that time was such they could then use [fol. 980] coal burning locomotives. We could have furnished the Rio Grande additional locomotives if they could have used oil burning locomotives of our larger coal burning freight locomotives.

I am showing below Union Pacific road locomotives on the Rio Grande by dates during the period February 11 to 24, 1949, inclusive, and these figures do not include the Diesel Passenger locomotives that were on the detoured passenger trains, but only the locomotives that were leased to the Rio Grande for the handling of rerouted freight traffic:

Date	Number of Diesel Units	Steam Locomotives
February 11	15	
12	23	
13	23	1
14	23	3
15	20	4
16	16	4
17	16	4
18	16	4
19	12	4
20	8	4
21	8	4
22	8	3
23	8	1
24	8	

Mr. McCarthy on page 25 of the transcript, states 70 [fol. 981] per cent of freight traffic on the Rio Grande is handled by Diesel power. Mr. Bradford on page 207 of the transcript states the Rio Grande has an ownership of 215 steam and 67 Diesel locomotives. Of these 67 Diesel locomotives two are passenger locomotives, 40 are switch locomotives and 25 are freight locomotives. It will be noted from the above tabulation Union Pacific Diesel and steam locomotives on the Rio Grande at one time amounted to as much as nine or ten complete locomotives, or about 40 percent of the Rio Grande's entire freight Diesel ownership.

Movement of freight traffic by the Union Pacific was resumed through the storm area on February 18, at which time we cancelled the embargo covering freight traffic and requested Interstate Commerce Commission to cancel King's orders 50 and 51.

I am showing below the number of freight trains operated and cars handled by dates, eastbound and westbound out of Green River and eastbound out of Ogden:

Date	Green River Eastbound		Green River Westbound		Ogden Eastbound	
	Trains	Cars	Trains	Cars	Trains	Cars
2-18-49	4	299	3	145	4	124
2-19-49	21	1295	8	522	4	41
2-20-49	18	1191	18	854	5	284
2-21-49	21	1700	18	1293	9	634
[fol. 982]						
2-22-49	21	1564	21	1535	7	423
2-23-49	24	1759	15	1045	6	338
2-24-49					5	268
2-25-49					6	343
2-26-49					6	315

By February 22, 1949 traffic conditions were entirely normal on the entire Union Pacific system. It will be noted, however, movement of traffic east from Ogden was exceptionally light during the period February 18 to 26, inclusive. There were only 4 to 6 freight trains operated daily, excepting 7 on one day and 9 on another, while as many as 15 to 21 freight trains were operated west from Green River. We were in a position to handle considerable volume of traffic east from Ogden starting February 18, but due to the Southern Pacific rerouting traffic under King's Order 50 during the storm period, and also due to embargo we had placed, considerable traffic that would normally route Union Pacific east from Ogden was being routed via Rio Grande and due to these conditions the Rio Grande had considerable backlog of traffic at Ogden for movement east during the period February 17 to 26, inclusive. Records at the Ogden terminal show the Southern Pacific reclaimed on the Rio Grande for per diem because [fol. 983] the Rio Grande was unable to accept loads and empties by midnight on the following dates:

February 1949	Loads	Empties	Total
17th	144	7	151
18th	370	20	390
19th	589	47	636
20th	528	33	561
21st	535	32	567
22nd	460	105	565
23rd	417	113	530
24th	429	15	444
25th	187	29	216
26th	120	23	143

77 of the cars arriving Ogden on the 18th were delayed 4 days before accepted by the Rio Grande.

54 of the cars arriving on the 18th were delayed 3 days.

75 of the cars arriving on the 19th were delayed 4 days.

13 of the cars arriving on the 19th were delayed 5 days.

63 of the cars arriving on the 20th were delayed 3 days.

7 of the cars arriving on the 21st were delayed 5 days.

27 of the cars arriving on the 22nd were delayed 4 days.

Notwithstanding this situation and the fact considerable of this traffic would normally route Union Pacific, and the further fact the Rio Grande during this period had a number of Union Pacific locomotives handling freight

[fol. 984] traffic, the Rio Grande was unwilling to reroute or divert any of this considerable backlog of traffic being delayed at Ogden to the Union Pacific after our line was cleared on February 18 and with extremely light traffic moving east from Ogden on our line. In this connection, I call attention to Mr. Bradford's comments appearing on page 228 of the transcript, as follows:

"* * * I am satisfied if Union Pacific were unfortunate enough to be snowed in again they would not wait quite as long to let such an amount of business back up. An even flow of business is important to keep it moving and the even flow is what tests capacity of the railroad and not dumping stuff on it at very short notice as had to be done at that time."

Exam. Mullen: Just a moment, that really appears purely argumentative.

Mr. Collins: How far do you mean, Mr. Examiner? I thought you made a ruling, Mr. Examiner, in reading the record the part the Examiner, in writing the report, or the record here would be made, with the understanding whoever is reading this, may be there would be something argumentative, the argument would be ignored.

Exam. Mullen: This is pure argument, nothing else. I don't think that ought to be in the record. It runs down to the first four lines on page 63.

Mr. Collins: The first four lines on page 63?

Exam. Mullen: Yes.

[fol. 985] Mr. Collins: All right. Cut that out.

Mr. Quirk: In addition to that, the subject matter is irrelevant and immaterial.

Exam. Mullen: It is out. It is time to recess at this time. We will recess until 2 o'clock.

(Whereupon, at 12:23 o'clock, p. m., a recess was taken, to reconvene at 2:00 o'clock, p.m. of the same day.)

[fol. 986] Afternoon Session, 2:00 p. m.

A. D. Hanson resumed the stand and testified further as follows:

Direct examination (continued):

Exam. Mullen: Are you ready to proceed, Mr. Collins?

By Mr. Collins:

Q. Go ahead, Mr. Hanson.

A. It was to be expected there would be delays to detoured passenger trains and rerouted freight traffic on the Rio Grande in their handling this additional amount of business, whether it be referred to as congestion, lack of motive power, or man-power.

However, I call attention, in particular, to nine symbolled Idaho perishable trains that we moved from Montpelier and Pocatello to Ogden and Salt Lake City for rerouting over the Rio Grande during the period February 11 to 19, 1949, inclusive. Eight of these trains were delivered to the Rio Grande at Salt Lake City and one at Ogden, the deliveries at Salt Lake City being made at the request of the Rio Grande in order to avoid their having to run power and crews to Ogden for the traffic. These nine Idaho perishable blocks, from the time accepted by the Rio Grande until time returned to the Union Pacific at Denver, consumed 37 hours 05 minutes to 63 hours, or an average of 49 hours per train. However, these same nine Idaho perishable blocks, from the time of arrival and ready for the Rio Grande at Salt Lake City or Ogden until returned [fol. 987] to the Union Pacific at Denver, actually consumed from 51 hours 30 minutes to 123 hours 10 minutes, or an average of 73 hours per train. Most of these blocks were delayed at Salt Lake City waiting for the Rio Grande to take them which they could not do any sooner for one reason or another.

For example, Idaho perishable train PNF-90 arrived Salt Lake City 4:05 p.m., February 14, but the Rio Grande could not accept the train until 7:05 a.m., February 16, or 39 hours later. The traffic in this train was returned to

the Union Pacific at Denver at 1:05 p.m., and 4:20 p.m. February 18, and some of it on February 19.

At this time I call attention to statement made by Mr. W. B. Long on page 673 of the transcript and which reads as follows:

"There was a period, I believe, of 26 days when no freight, with exception of one day and a half, moved through Wyoming by Union Pacific. Potatoes blocked in snow in Wyoming. Had Ogden Gateway been open perishables could have moved via Ogden."

There was a period of 11 days, February 7 to 17, inclusive, when no trains were operated through the storm area in Wyoming and not 26 days as stated by Mr. Long.

Other than at terminals, there were three Idaho perishable trains, consisting of 148 cars, held and delayed at intermediate stations in the Wyoming storm area. However, work trains, trucks and tractors, with supplies and [fol. 988] PFE personnel, were operated with snowplow equipment to these stations and the perishables given heater service. We even arranged to have heater charcoal dropped from airplanes into one of the storm isolated communities to enable us to continue the servicing and protection of delayed perishable traffic during the storm period.

Also call attention to the fact we moved nine Idaho perishable trains to Salt Lake City and Ogden, and rerouted this traffic over the Rio Grande during this period. Additional trains would have been moved from Idaho to Salt Lake City during this period had the Rio Grande been able to handle them, but as heretofore indicated that line had a backlog of traffic at Ogden which they did not clear up until February 27.

During the snow blockade on the Union Pacific we exempted perishable shippers of Utah and Idaho and Eastern Oregon in the territory exclusively served by the Union Pacific from the provisions of the embargo, and I have heretofore explained our handling of empty refrigerator cars from Southern California into Idaho, and as a result Idaho loaded from 73 cars to 156 cars of perishables each working day during the period February 9 to 18, inclusive; a total of 918 cars, or an average of 102 cars per day.

Notwithstanding storm conditions, during the month of

January, 1949, a total of 5074 cars of perishables were loaded in Idaho as against 4455 during January, 1948, and [fol. 989] 5133 during January, 1950. A total of 4110 cars of perishables were loaded in Idaho in February, 1949, as against 3360 in February, 1948, and 4308 in February 1950.

The Union Pacific spared no expense in its efforts to get traffic moving to destination as quickly as possible during and following the storm period and I would estimate our losses in connection with storm expense, detour and rerouting of traffic, loss of traffic that would otherwise move over the Union Pacific, during the months of January and February, 1949, as approximately thirteen million dollars.

The January and February storms not only affected the Union Pacific Railroad, but covered an extensive area in a number of the Western states, resulting in blockades on other railroads. For example, during the months of January and February, 1949, the Union Pacific Railroad handled over various sections of its lines on a detour basis 61 passenger trains, 26 freight trains, 2 work trains with snow plow equipment, and 4 light power units, for eight different railroads, namely; C&NW, CRI&P, CB&Q, C&S, NP, SP, GN and SP&S.

In this connection, railroads have agreements with each other covering the detour of passenger and freight trains in emergencies such as existed during the blizzard of February, 1949, and the Union Pacific Railroad has in effect with 23 railroads, including the Rio Grande, standard form of detour agreement last executed as of December 1, 1947, [fol. 990] The standard form of detour agreement provides manner of handling, cost of detour service and so forth. As a matter of information, the Union Pacific Railroad during the years 1948 and 1949 handled several hundred detour moves of passenger and freight trains for other railroads, such as AT&SF, CB&Q, CMStP&P, C&NW, CHI&P, C&S, GN, MP, NP, SP and SP&S.

In addition to delay to eastpound traffic at Ogden during and following the snow blockade waiting to be handled out of there by the Rio Grande, similar delays were incurred at Denver with westbound traffic due to Rio Grande's inability to handle more promptly. I am showing below the handling accorded some 200 of the 1092 loads which

were rerouted westbound from Denver via the Rio Grande, showing time of arrival at Denver on the Union Pacific, elapsed time before the Rio Grande could accept cars on its interchange tracks, time pulled by the Rio Grande and the total elapsed time in hours and minutes that cars were delayed in Denver interchange. As previously mentioned, we kept a considerable number of west loads in our yards at Denver for rerouting to connecting lines as fast as they could handle and kept the Rio Grande interchange at Denver filled with traffic to be available to them as and when they could handle:

[fol. 991]

Arrived Denver	Placed on D&RGW Interchange	Elapsed Time	Pulled by D&RGW	Elapsed Time	Total Elapsed Time
4:20 P 2-12	6:05A 2-13	13'45"	11:40A 2-13	5'35"	19'20"
6:50 P 2-12	7:30A 2-13	12'40"	11:30A 2-14	28'00"	40'40"

[fol. 992] The above record of handling, covering some typical examples, is self-explanatory, and reflects delays incident to Rio Grande's inability to promptly move the traffic westbound out of Denver.

Road and Tehminal Capacities:

Similar conditions have existed at times other than during the storm period. For example, on October 17, 1948, Rio Grande interchange tracks at Denver had been blocked for some 48 hours and we were holding back empty refrigerator cars for delivery to that line. In handling with Mr. L. H. Hale, Superintendent Transportation, Rio Grande, he advised me by telegram under date of October 18, 1948, that this was due to combination of bad weather and deer hunting season, resulting in delays on transfer over week end.

Another example is indicated in the following telegram

addressed to me by Mr. Hale dated at Denver, September 1, 1949:

"Due to yard conditions Denver account heavy movement of peach crop will be unable to accept any empties at Denver for 48 hours, except will take delivery of refrigerators from Union Pacific over Northwestern terminal and refrigerators from CB&Q at North Yard. Cannot accept any over Denver interchanges. Appreciate your holding up all other empties until we can get perishable cleaned up."

These instances were at times when the Rio Grande was handling only their normal flow of traffic, but if such action [fol. 993] is necessary on their part during such times it is an indication of what can happen if they are called upon to handle an increased volume of traffic such as would be involved by the opening of the Ogden Gateway.

Notwithstanding the delays to traffic encountered when the Rio Grande was called upon to handle an increased volume of traffic during the storm period and at other times, Mr. Bradford in his testimony has endeavored to establish a potential unused road and yard capacity on the Rio Grande.

On page 206 of the transcript, by use of a certain formula, he has stated the potential capacity of the Rio Grande from a gross ton miles standpoint would be approximately 18 billion. He states in 1943 during the peak war period the Rio Grande handled 12,500,000,000 gross ton miles and in 1948, 10,800,000,000 gross ton miles.

Using the 157,762 loads referred to by Mr. Earley on pages 166 and 167 of the transcript as traffic potential for the Rio Grande in the event the Ogden Gateway is opened, together with approximately 50,000 empties, that would move over the Rio Grande in connection with their handling this amount of traffic, and on the basis of this traffic moving between Ogden and Denver and/or Pueblo it would amount to more than six billion gross ton miles, which together with actual gross ton miles handled by the Rio Grande in 1948 would exceed the all-time peak war year handling of [fol. 994] the Rio Grande by some 4,300,000,000 gross ton miles, or 34 percent.

The number of loads referred to by Mr. Earley as traffic

potential for the Rio Grande, together with the number of empties that would be involved, would be a daily average of approximately 560 cars that would be interchanged at Ogden. Mr. Bradford on page 197 of the transcript states during the year 1948 a maximum of 1,018 car moves per day were made in their Ogden yard and during the war years this handling reached a figure over 1200. These car moves reflect a double car count and on the basis of handling an average of 560 additional cars through the Rio Grande yard at Ogden, or approximately 1120 car moves, it will be seen this would be practically double the Rio Grande's handling through that yard during the war years. The same situation holds true with respect to the other yards on the Rio Grande referred to by Mr. Bradford in his testimony.

In this connection, on page 7 of the Rio Grande Exhibit No. 1 submitted by Mr. Hogue, a record is given of the loads and empties interchanged between the Rio Grande and Union Pacific at Ogden during the years 1944 to 1948, inclusive. These figures reflect an average of only 67 cars interchanged per day during the year 1945 and an average of only 22 cars interchanged per day during the year 1948. The interchange of loads and empties during 1949 between the Union Pacific and Rio Grande at Ogden averaged only [fol. 995] 19 per day. Against using Mr. Earley's figures of 157,762 loads as the annual traffic potential for the Rio Grande, together with approximately 50,000 empties that would be involved, would mean a daily average interchange between the Union Pacific and Rio Grande at Ogden of 560 cars or approximately thirty times greater than the daily average interchange during the year 1949.

Referring to Mr. Bradford's statement on page 206 of the transcript to the effect gross ton miles per train hour increased from 41,940 in 1943 to 58,085 in 1948, or 38.4 per cent increase. On page 27 of the transcript, Mr. McCarthy states the Rio Grande has shown proportionately greater gains in recent years than either Class I or Western District carriers as a group in the number of gross ton miles it has produced per train hour operated. The Rio Grande shows an increase of 8,101 gross ton miles per train hour in 1949 over 1943, and the Union Pacific Railroad shows an

increase of 16,145, or practically 100 per cent greater increase than accomplished on the Rio Grande.

By using the same formula as used by Mr. Bradford in his endeavor to establish a potential gross ton miles capacity on the Rio Grande as referred to on page 206 of the transcript, the Union Pacific Railroad in 1943 handled 85,209,091,000 gross ton miles.

In 1943 we operated 2,031,685 train hours. If the same number of train hours had been operated in 1948 our gross [fol. 996] ton miles capacity would have been 118,010,423,000 or 38.5 percent over what we handled from a gross ton miles standpoint in 1943. In August, 1949, and which is the same month referred to by Mr. Bradford, our gross ton miles per train hour were 65,020 so if we operated same train hours in 1949 as we did in 1943 we would have a potential capacity of approximately 132,000,000,000 gross ton miles. Actually, in 1949, we had a gross ton mile figure of 71,497,835,000 which would indicate we have a potential unused capacity at the present time of approximately 85 percent in addition to our present business.

On the basis of Mr. Bradford's figures to the effect the Rio Grande has a potential capacity of an additional 7,200,000,000 gross ton miles, it will be noted from the above the Union Pacific Railroad has a potential capacity of an additional 60,600,000,000 gross ton miles or more than eight times greater than that shown by Mr. Bradford for the Rio Grande.

Mr. Quirk: That is argument. Most of this is argument; he is attempting to test the capacity of the Rio Grande.

Exam. Mullen: We ought to strike out the argumentative matter.

Mr. Collins: Strike out which?

Exam. Mullen: The argumentative matter.

Off the record. Let's get this straightened out off the record.

(Discussion held off the record.)

[fol. 997] Exam. Mullen: On the record.

Mr. Quirk: May I ask the witness a question for information? In January, 1950, was that the coal strike?

The Witness: January, 1950, was a curtailed production month.

Mr. Quirk: There was a coal strike, was there not?

The Witness: In Union Pacific territory?

Mr. Quirk: Yes.

The Witness: No, sir, it was on a curtailed basis during January, 1950.

Exam. Mullen: Off the record for a minute.

(Discussion held off the record.)

Exam. Mullen: On the record.

The Witness: Referring to Mr. Bradford's comments on page 209 of the transcript that "the capacity of the power that was available and the power that we could rent from our connections was reached at the peak of this storm."

Union Pacific had 400 locomotives out of service and idle as of January 1, 1950 account not sufficient traffic to keep these locomotives in service. In addition, the diversion of traffic away from the Union Pacific Railroad to the Rio Grande through the opening of the Ogden Gateway would result in a longer, slower, and circuitous routing which entails expensive, unnecessary, and wasteful transportation practices.

Loss of Employment to Union Pacific Railroad Em- [fol. 998] ployees Which Would Result from Opening the Ogden Gateway:

On pages 8 to 13, inclusive of my exhibit 15, I show the loss of employment to Union Pacific Railroad employees which would result from opening the Ogden Gateway and the Denver and Rio Grande Western Railroad Company securing routing on 101,476 loads eastbound and 56,286 loads westbound of the traffic presently moving via the Union Pacific from and to Missouri River points of the traffic originating and terminating in the States of Idaho, Montana, Oregon and Washington. Mr. Earley in his testimony heretofore given in this case, under the topic: "Estimated Annual Traffic Potential for Rio Grande," referred in Section L of his Exhibit 3 and states:

"In Section L is submitted the results of a comprehensive study made to determine the potential amount of traffic for the Rio Grande each year in the event of the establishment of competitive through rates with the Union

Pacific via Ogden. This study covers only the states of Idaho, Montana, Oregon and Washington and was undertaken to give us some definite idea as to the traffic to and from those states included in our petition."

He further stated that from the study it had been determined there exists for the Rio Grande an annual traffic potential of 157,762 carloads of traffic originated and terminated by the Union Pacific in Idaho, Montana, Oregon [fol. 999] and Washington, and that of this traffic potential, 101,476 cars represent traffic originated by the Union Pacific and 56,286 cars represent traffic terminated by the Union Pacific in those states. He said that:

"This Union Pacific traffic, susceptible to Rio Grande routing, which is termed traffic potentials, represents a conservative estimate of business available to our solicitation."

Further on in his testimony he gave a breakdown between various classifications of the 157,762 cars, and stated again he wished to emphasize the point that:

"the foregoing traffic potential represents to a considerable degree less traffic than what I believe would be actually available to our solicitation for the reason that our study included only the amount of traffic loaded and unloaded on the Union Pacific in the four northwestern states."

My showing of loss of employment is therefore based on the testimony given by Mr. Earley.

On page 8 I have shown that during the year 1948 through freight trains handled by the Union Pacific between Pocatello, Idaho and Council Bluffs, Iowa averaged, per train 64 loads 10 empties eastbound and 40 loads 37 empties westbound; and that during the year 1949 eastbound trains averaged 63 loads per train and westbound trains averaged 37 loads per train.

I also explain on page 8 that not all of the equipment [fol. 1000] involved in the 56,286 loads westbound would be available for eastbound loading when released and that a small percentage of this equipment will return east empty via routes handling the loaded traffic westbound. I explained too, that between 45,000 and 55,000 cars must be

handled westbound empty in addition to equipment released in the States of Idaho, Montana, Oregon and Washington to take care of the 101,476 loads eastbound originating in those states.

I further explain that the 101,476 loads eastbound represent 1,585 trains, or 4.3 trains per day and that the westbound movement, based on the average number of loads, would amount to 1,407 trains per annum, or 3.9 trains per day. For the purpose of my exhibit I conservatively estimated that this loss of traffic potential to the Union Pacific would result in a loss of

(a) four trains per day eastbound and four trains per day westbound between Pocatello, Idaho, and North Platte, Nebraska.

(b) three trains per day eastbound and three trains per day westbound between North Platte, Nebraska, and Council Bluffs, Iowa, and

(c) one train per day eastbound and one train per day westbound between North Platte, Nebraska and Kansas City, Kansas.

Based on that loss of train movements, which is a conservative estimate of the loss if the Union Pacific were to lose the number of cars described by witness Earley as [fol. 1001] the D&RGW's traffic potential, I have shown on pages 9 to 13, inclusive, the direct loss of employment to employees on the Union Pacific Railroad broken down between the railroad divisions of Idaho, Wyoming, Nebraska and Kansas, and broken down further with respect to the various classes of employees and their locations or home terminal.

Summarizing briefly, those pages show the number of employees whose employment with the Company would be discontinued, the annual loss of employee days and the annual wage loss by railroad divisions as follows:

Railroad Division	Number of Employees	Employee Days (Annually)	Annual Wages
Idaho Division	210	66,179	$ 952,064
Wyoming Division	478	149,499	1,909,296
Nebraska Division	490	148,553	1,971,927
Kansas Division	62	18,684	251,174
TOTAL	1,240	382,915	$5,084,461

The territories embraced in the several divisions referred to are explained at the end of the tabulation on page 13.

The movement of freight trains in the territory between Green River, Wyoming on the west and Kansas City, Kansas and Council Bluffs, Iowa, on the east is operated by steam locomotives fueled by coal produced largely by mines of the Union Pacific Coal Company in the State of Wyoming

Pages 14 and 15 show the loss of employment to employees of the Union Pacific Railroad employed in the movement of fuel coal produced in Wyoming by the Union Pacific [fol. 1002] Coal Company which would no longer be needed to fuel the trains which would be discontinued upon the loss of the traffic indicated by Mr. Earley. Pages 14 and 15 show that there would be a daily reduction in the use of coal by the United Pacific Railroad Company of 1189 tons and an annual reduction in the use of coal of 433,985 tons in the event of the discontinuance of

(a) four trains per day in each direction between Pocatello, Idaho and North Platte, Nebraska,

(b three trains per day in each direction between North Platte and Council Bluffs, Iowa and

(c) one train per day in each direction between North Platte, Nebraska and Kansas City, Kansas.

This reduction in use of coal would likewise affect employment of employees on the Union Pacific Railroad which are required presently to move the coal from the mines to the points on the railroad where it is used. The consequences of the reduction in the movement of coal trains would be the further reduction in employment of employees of the Union Pacific Railroad totalling 60 employees annually, or 8,229 employees days annually, with an annual wage loss of $120,892.00.

Page 14 shows the formula on which the reduction in the use of 433,985 tons of coal annually is based. It shows also the loss in train movements in handling of coal between the mines and points where it is used.

[fol. 1003]. As heretofore indicated, the above figures reflect the direct loss of employment to employees of the Union Pacific Railroad Company as a result of the loss of trains heretofore mentioned.

Mr. Quirk: Just a moment, Mr. Examiner.

Exam. Mullen: What is it, Mr. Quirk.

Mr. Quirk: I want to ask the witness one short question, at the bottom of page 79, he says: as heretofore indicated, the above figures reflect the direct loss of employment to employees of the Union Pacific Railroad Company as a result of, and then he enumerates,

You mean there, of course, based on the potential traffic as estimated by Mr. Earley, do you not?

The Witness: That is correct.

Mr. Quirk: I just wanted to get that clear.

The Witness: This does not reflect the entire loss of employment on the Union Pacific in the event the company should lose the amount of traffic which the D&RGW has described as its traffic potential.

For example, it does not include any reduction in the force employed by the Union Pacific in its General Headquarters Building at Omaha, Nebraska, where there are presently employed some 2400 employees. Based on past experience, reduction in employment on the Union Pacific follows percentagewise quite closely reduction in Gross Ton Miles and Revenue Freight Ton Miles handled and Operat-

[fol. 1004] ing revenues.

For example, during the year 1930 Gross Ton Miles decreased 7.1 percent, Revenue Freight Ton miles decreased 10.9 percent, Operating revenue decreased 12.6 percent and Forces decreased 11.5 percent under the year 1929.

During the year 1931 Gross Ton Miles decreased 19.2 percent, Revenue Freight Ton Miles decreased 26.8 percent, Operating Revenue decreased 28.8 percent and Forces decreased 25.4 percent under the year 1929.

Exam. Mullen: I don't think you need to copy the next four paragraphs. It is the same type of information.

The Witness: Yes, sir.

It will be noted from these records of past performance further reductions in personnel throughout the system are inevitable, and on the basis of our keeping pace with Gross Ton Miles and Revenue Freight Ton Miles and Operating Revenue fluctuations, a loss of 157,762 revenue loads referred to in Mr. Earley's testimony represents a reduction of approximately 15 percent in Revenue Freight Ton Miles and a reduction of approximately 11 percent in Gross Ton

Miles under the year 1949, and on the basis of a reduction of approximately 11 percent in Gross Ton Miles a corresponding reduction in personnel would mean loss of employment to a total of approximately 5300 employees instead of some 1300 employees as indicated on pages 8 to 15 inclusive.

[fol. 1005] In this connection, the reply of the Rio Grande, dated March 13, 1950, to petition of the Railway Labor Organizations representing employees of the Union Pacific Railroad, states that the number of employees of a particular railroad in a particular period does not necessarily increase or decrease in any fixed proportion to the increase or decrease of revenue tons of freight handled by such a railroad in particular periods. The Rio Grande's reply states that in the year 1946 the Union Pacific handled 48,002,636 tons of revenue freight with 53,130 employees and in 1948 handled 52,156,787 tons of revenue freight with 49,804 employees.

The tons of revenue freight handled is not always the controlling factor on each and every railroad with respect to employment. For example, it requires just as many locomotives and just as many employees to handled a train of 100 empty refrigerator cars as it does to handle a train of 100 loaded refrigerator cars. However, the tons of revenue freight handled is a controlling factor on the Rio Grande to a much greater extent than it is on the Union Pacific. This is further substantiated by the fact, for example, that during the year 1948 of the total freight car miles on the Rio Grande only 25.9 percent were empty car miles, while on the Union Pacific 33.6 percent were empty car miles.

Again referring to the comparison given between the years of 1946 and 1948 in the Rio Grande's reply of March 13, 1950, these figures show tons of revenue freight handled [fol. 1006] in 1948 increased 8.7 percent over that handled in 1946. However, gross ton miles increased only 4.5 percent in 1948 over 1946 while forces decreased 6.3 percent under 1946.

The conditions obtaining during the year 1948 were entirely different from those in 1946. World War II came to an end in August, 1945, and the year 1946, to a large extent, was a period of reorganization and readjustment insofar as

American Railroads are concerned. It was not possible to obtain to any extent new equipment and locomotives or materials for road and yard improvements during the war years and very little was accomplished in that direction during the year 1946. The Union Pacific Company, for example, did not own any diesel freight locomotives prior to 1947, but during the years 1947 and 1948 we received from builders 262 diesel freight locomotive units, of which 230 were freight units and 23 were heavy duty road-switcher units.

This ownership of new diesel freight locomotives enabled us to take out of service and retire a considerable number of the small, worn out, steam locomotives and transfer the more modern, heavy, steam locomotives, which were released in territories to which the diesels were assigned, to other territories where the smaller locomotives had been assigned.

As a result average gross tons per freight train increased in 1948, 14.4 percent and gross tons per freight train hour [fol. 1007] increased 18.1 percent over 1946. These increases enabled us to handle a greater volume of loaded freight traffic and empty freight car equipment with less force in 1948 than in 1946. The situation on the Rio Grande during 1948 as against 1946 is also comparable, the Rio Grande handling a greater volume with less force in 1948 than in 1946, and this, no doubt, was also due to the acquiring of diesel freight locomotives, enabling that line to increase overage tons per freight train and gross ton miles per train hours.

I have shown decreases in Gross Ton Miles, Revenue Freight Ton Miles, Operating Revenues, and Forces during the year 1947, 1948, and 1949, as compared to the peak year of 1945, and, as stated, reduction in employment on the Union Pacific follows percentagewise quite closely the reduction in Gross Ton Miles and Revenue Freight Ton Miles handled and Operating Revenues.

Mr. Gibson: Mr. Examiner, the next paragraphs are argumentative.

Mr. Collins: They are what? I didn't hear you.

Mr. Gibson: On page 85, starting from the second——

Mr. Collins: It isn't argument at all, Mr. Examiner; it is a statement of fact.

Exam. Mullen: Just a minute, gentlemen, let me read it

first. I think that first paragraph is argumentative and ought to be stricken.

Mr. Collins: I don't see what could be argumentative about [fol. 1008] it.

Exam. Mullen: This witness is commenting on the consistency or inconsistency of the Rio Grande's reply to the petition.

Mr. Collins: Do you mean the paragraph beginning at the middle of the page?

Exam. Mullen: The Rio Grande's reply to petition of railway labor organizations——

Mr. Collins: I thought you were speaking of the one at the top.

Exam. Mullen: No, the one at the middle.

Mr. Collins: All right, strike it out.

Mr. Gibson: I think the next paragraph follows the same point.

Exam. Mullen: The next paragraph will be taken out. The next is argumentative, and that should come out.

Mr. Collins: I will agree to that.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

By Mr. Collins:

Q. Mr. Hanson, Mr. Quirk asked Mr. Edens some questions with respect to the feasibility, as I understood it, of blocking trains at Pocatello to go through Ogden, by-passing the Ogden yard. Did you hear those questions?

A. Yes, sir.

Q. If there were any change in train composition or arrangement, including blocking trains, would that be one of [fol. 1009] your duties?

A. Yes, sir.

Q. What comment have you to make with respect to the suggestion in Mr. Quirk's question, concerning the blocking of these trains?

A. With the yard at Pocatello, we would naturally block trains, but it would not be a solid D&RG train. We would block the D&RG traffic, we would block Ogden setouts, we

would block stock for the Ogden stockyards, we would block traffic going through to Salt Lake City, we would block any traffic for the Bamberger.

In other words, there would probably be 6 or 8 classifications in a train coming out of Pocatello. In addition, the train would pick up any traffic available between McCammon and Ogden moving this way.

Q. You mean toward Ogden?

A. Moving towards Ogden, which would not, of course, be cut into the proper blocks by the road crew. It would still be necessary for that train to go into the yard, as Mr. Edens described, and it would still be necessary for the Depot Company to take the D&RG block out of that train, and interchange it in the manner that was explained.

Q. Now, Mr. Quirk also spoke of icing, the possibility as I understood it, of icing at Pocatello, so as to avoid icing at Ogden. Will you state what the situation is with respect [fol. 1010] to that possibility, and what the present situation is.

A. The perishable tariffs provide that perishables shall be iced or otherwise serviced at regular icing points. Pocatello is a regular icing station. Ogden is a regular icing station. The perishable traffic is so billed, to ice at regular icing stations. The tariff also provides that it is the responsibility of the delivering carrier to ice the perishable prior to delivery to a connecting carrier.

Q. Do I understand from what you have said that a shipment of perishables loaded at Nampa would be iced under this tariff provision at Pocatello?

A. That is correct.

Q. And iced again at Ogden?

A. Yes, sir.

Q. Would it be feasible to perform the icing service at Pocatello and then by-pass Ogden without icing again.

A. No, sir, not without the hazard of considerable claims involved. There would be too much elapsed time from the icing at Pocatello until the delivery of the traffic to the Rio Grande or the next icing point on the Rio Grande.

Q. Would it be permissible under your present tariff provisions?

A. No, sir.

Q. Now, Mr. Law made some comment yesterday with respect to the switching service at Soda Springs. Did you hear his comments?

A. Yes, sir.

[fol. 1011] Q. As I understood him, he said the service had been better in the Fall of 1949 than in previous years, as I understood him, because of the fact they had a regular switching engine to serve Soda Springs. Will you state what the facts are about that?

A. Well, Soda Springs is an intermediate station between a terminal at Montpelier and Pocatello. It is not what you would call a switching engine. We have for a number of years, as far back as 1945, that I personally recall, what is called or referred to as a Bancroft-Soda Springs Local.

Q. What was the last word?

A. Bancroft-Soda Springs Local. That is handled by a road train and engine crew, and is put on each year during the heavy grain and stock-loading period. The crew ties up at Bancroft and leaves there in the morning, goes to Soda Springs, loads all the stock, and handles the elevators, or any other station switching that is necessary. That service has been on for a number of years past, the service was there in 1945, 1946, '47, and '48, the same, and as good as in 1949.

Mr. Collins: All right. That is all.

Mr. Quirk: We would like to defer cross examination of this witness. We may not have many questions. We just don't know. I think with a little time we will shorten it up anyway, and may decide to rebut it.

Exam. Mullen: Will Mr. Hanson be available?

[fol. 1012] Mr. Collins: Yes, will you?

The Witness: Yes, sir.

Exam. Mullen: All right.

Mr. Collins: All right.

(Witness excused.)

Mr. Collins: I offer exhibit 15 in evidence.

Mr. Quirk: Is this subject to objection?

Exam. Mullen: Yes, it will be received subject to objection or a motion to strike if necessary later.

(The document marked Exhibit 15, Witness Hanson, was received in evidence.)

Mr. Collins: Mr. Examiner, two or three of the other defendant railroads want to put in brief testimony, so I will cease in the presentation of the Union Pacific's testimony so they can present theirs and get away because of pressing engagements.

Exam. Mullen: Any objection?

Mr. Quirk: No.

Exam. Mullen: You may proceed.

Mr. Davis: Mr. Clarahan.

L. E. CLARAHAN was sworn and testified as follows:

Mr. Davis: We have fifty copies of these brief statements, and if anyone wants to get them I will be glad to take your name after the witness is finished, and furnish them to you. [fol. 1013] Exam. Mullen: You may proceed, Mr. Davis.

Direct examination.

By Mr. Davis:

Q. Will you please state your name, your address, and official connections?

A. My name is L. E. Clarahan. My address is St. Louis, and I am Vice-President in Charge of Traffic of the Wabash Railroad.

Q. Mr. Clarahan, will you state how long you have held that position, and briefly outline your previous railroad experience?

A. I have been vice-president since March, 1943, slightly over 7 years. I started working for the Wabash Railroad in the freight house in Columbia, Missouri, in 1912. With the exception of 22 months in the United States Navy, during the World War, I have been with them continuously since that time. In that period I have been Chief Clerk, in several division freight and passenger offices, Chief Clerk to some of the traffic executives.

Mr. Gibson: We will waive his qualifications.

By Mr. Davis:

Q. Mr. Clarahan, have you prepared a statement which you desire to give at this time in this case?

A. I have.

Q. Will you proceed please, and present that?

A. As a defendant in this case we registered our appearance at the initial hearing in Salt Lake City and were present at that hearing.

Because the Union Pacific is a very important connection [fol. 1014] of the Wabash we were particularly concerned with the testimony of Witness Earley and his exhibit #3 setting forth the traffic potential for the D&RGW as 157,762 cars divided 101,476 eastbound and 56,286 westbound. We feel that any diversion of traffic such as is contemplated which adversely affects the service and traffic of the Union Pacific likewise adversely affects the service and traffic of the Wabash.

Witness Earley's testimony did not indicate the extent to which traffic of the Wabash might be involved. Accordingly, folowing the Salt Lake hearing we conferred with representatives of the Union Pacific who advised that based on actual traffic handled from the complaint territory in 1948 the Wabash participated to the extent of 9.07 percent. It is reasonable, therefore, to assume we are jeopardized to the extent of 9.07 percent of the D&RGW's claimed eastbound traffic potential of 101,476 cars, or 9,204 cars.

The Union Pacific representatives did not have available similar information covering westbound traffic. For the years 1948 and 1949, however, Wabash deliveries westbound averaged 55 percent of the Union Pacific deliveries to the Wabash east-bound. Application of this per cent to the east-bound figure of 9,204 produces 5,062 cars for a total possible loss of 14,266 cars.

Wabash Railroad average gross revenue per car for 1949 was $119.07. Applied to the above cars it produces a pos- [fol. 1015] sible loss eastbound of $1,095,920.28, and westbound of $602,732.34; for a total potential loss to the Wabash of $1,698,652.62 per annum. I feel the use of our average gross revenue presents a conservative figure because our interchange with the Union Pacific is all at the Missouri

River giving us the opportunity for our longest possible haul.

The traffic received by the Wabash from the Union Pacific constitutes a very important nucleus of the consist of regularly schedules and extra freight trains the Wabash handles eastbound from the Missouri River, thereby enabling the Wabash economically to operate frequent trains attracting traffic from the many other connections at these gateways. Naturally, the diversion of the volume indicated in Witness Earley's testimony would disrupt long-established service practices and the Wabash would additionally suffer a loss on traffic from other connections. Of even greater significance the public would be inconvenienced if not actually harmed by such deterioration in long-established service channels.

Another witness will testify concerning the effect such loss of traffic will have on our train service and upon employment on the Wabash.

By Mr. Davis:

Q. Do you have anything further to add to that statement, Mr. Clarahan, on direct?

A. I do not.

Mr. Davis: Mr. Quirk.

[fol. 1016] Cross-examination.

By Mr. Quirk:

Q. You have been in the railroad business for a long time, haven't you?

A. About 38 years.

Q. Do you always get all of the potentially available traffic in a competitive area?

A. By no means.

Q. What makes you think that because Mr. Earley in a painstaking effort indicated how much traffic could possibly move this way, would be available to solicitors? That represents what actually will move. You take those figures as though they were an actually proven fact, as to the Rio Grande getting all this traffic.

A. Well, Mr. Earley made a very comprehensive survey. He comes up with the testimony that there are in this area some 157-odd-thousand cars available for D&RG solicitation. He sets up that as the potential traffic gain, and I simply set up a potential traffic loss against it. I have no idea to what extent the D&RGW will be able to influence all or any part of this business, but to whatever extent they are optimistic about their chances, I am pessimistic about the effect on the Wabash Railroad.

Q. He didn't say anything about the optimistic. He worked that up because he felt under this classification the Commission was entitled to have some estimate of what is involved.

[fol. 1017] Mr. Davis: I think the record speaks for itself, Mr. Mullen, and I don't think we should try to attempt to qualify the inferences left by the statements of the witness Earley.

By Mr. Quirk.

Q. Mr. Clarahan, do you think as a long experienced traffic man, and now Vice-president of a trunkline, that there is any possibility of the Rio Grande getting all of this traffic, if the joint rates are established?

A. No, they simply set up a potential gain, and I set up a potential loss based upon what they think is there for them.

Q. Mr. Clarahan, Mr. Earley did not set up a potential gain; he set up what he estimated to be traffic that could move this way, because the Union Pacific has a lot of traffic that can't move this way. That is what he set up. Are you familiar with what he did?

A. It is still a gain, if he gets it.

Q. Well, now, let's assume for a moment he does get it. Don't you connect with the Burlington at Kansas City?

A. Yes.

Q. The Missouri-Pacific?

A. That is right.

Q. Don't you interchange a lot of traffic with them?

A. That is right.

Q. Don't you interchange traffic with them now that moves through the Colorado Gateway?

A. Not very much with the Burlington. Some with the [fol. 1018] Missouri Pacific, yes.

Q. Well, with those various lines?

A. Yes.

Q. Santa Fe?

A. That is right.

Q. So that you wouldn't lose this necessarily even if it were routed?

A. Not necessarily, but here is the situation on that: Today that traffic comes to us with whom there is no conflicting interest whatever. It stops where we begin. We compete with everyone of those other railroads for further haul.

Mr. Quirk: That is all.

Mr. Davis: That is all, Mr. Clarahan.

(Witness excused.)

Mr. Davis: I would like to call Mr. Ritter.

E. L. Ritter was sworn and testified as follows:

Direct examination.

By Mr. Davis:

Q. Will you state your name, and address, and official connection, please?

A. My name is E. L. Ritter. I live in St. Louis, Missouri. I am auditor of joint facilities and contracts for the Wabash Railroad.

Q. Would you please state for how long you have held that position, and your previous railroad experience, very briefly?

[fol. 1019] A. I have held that position for the past three years, and in that position I handle all contracts, contract records, settlements under contracts. I also handle the cost-accounting for the railroad. I have been with the Wabash Railroad for the past thirty years, and in that time, the first four years——

Exam. Mullen: I think that sufficiently qualifies the witness.

Mr. Quirk: Yes.

By Mr. Davis:

Q. Have you prepared a statement, Mr. Ritter, that you desire to present now in this case?

A. I have.

Q. Will you proceed to present that?

A. At the prior hearing in this case at Salt Lake City on December 12, 1949, Witness T. K. Earley, testifying in behalf of complainant, stated that 157,762 cars of carload traffic originated and terminated by the Union Pacific in Idaho, Montana, Oregon, and Washington would be susceptible of solicitation by complainant. Based on that traffic potential it has been estimated that, of the carload traffic interchanged by the Wabash Railroad Company with the Union Pacific in the year 1948, 9,204 carloads received from the Union Pacific and 5,062 carloads delivered to the Union Pacific represents the potential loss of traffic to the Wabash. Using this potential loss of traffic, we are able to compute the potential reduction in train service and the potential loss of employment on the Wabash.

[fol. 1020] Carload traffic received from the Union Pacific moves generally Eastward on the Wabash via Moberly, Missouri to St. Louis, Missouri, and to Decatur, Illinois, and points east thereof. Wabash Railroad operating performance for years 1947, 1948, and 1949 shows that train hours operated varies in approximately the same ratio as gross ton miles hauled, after allowing for improvements occasioned by diesels put in service in 1949. Yard engine hours for this same period varies approximately 80 percent with gross ton miles hauled.

Based on our experience, it is estimated that there would be a potential reduction in Wabash trains run Eastward of approximately 418 a year. To haul Eastward loaded cars, empties must be moved Westward in considerable quantities, and motive power and crews must be equalized, making it necessary to run trains Westward to an extent comparable with Eastward train movements. The reduction of Eastward trains would correspondingly reduce Westward trains,

making a potential total train reduction of approximately 836 a year.

In terms of employment this estimated train reduction represents a combined total of 836 crew trips on 4 operating districts between Kansas City, Missouri and St. Louis, Missouri, and Decatur, Illinois. Based on 312 trips per year this potential reduction in train operation would be equivalent to a yearly loss of employment to approximately 3 crews of 5 men each. The elimination of Terminal handling of trains, cars, and engines by the yard and mechani- [fol. 1021] cal department forces, by reason of this potential traffic loss, would indicate a potential reduction in labor forces of 10 Car Department employees, 8 roundhouse employees, and 2 yard crews 5 men each.

By Mr. Davis:

Q. Mr. Ritter, have you made a computation of the total number of man days which would be lost by the employees being displaced about which you have just testified, and have you also made some computation of the amount of wages lost for these same employees?

A. I have.

Q. I wonder if you would state that, please.

A. There is a potential loss of man days of 11,872.

Q. Is that per annum?

A. Per annum, with a potential per annum wage loss of $181,314.

Q. Per annum?

A. Per annum.

Q. Do you have anything further you wish to state on direct?

A. No, I have not.

Mr. Davis: Mr. Quirk.

Cross-examination.

By Mr. Quirk:

Q. Mr. Ritter, your statement, calculations, are based entirely on the assumption that the potential estimate by witness Earley of the potential traffic that would be susceptible to routing via the Rio Grande will move via the Rio

Grande, that you will get none of it through the other gateway to Kansas City, and so on, is that not true?

[fol. 1022] A. That is based on the potential maximum losses of the business, susceptible to solicitation.

Q. If it should turn out that is an erroneous asumption, then your calculations will likewise be erroneous, will they not?

A. They will vary, of course, to the extent that that loss is not realized.

Mr. Quirk: All right.

Mr. Davis: That is all, Mr. Ritter.

(Witness excused.)

Mr. Davis: I wonder, Mr. Examiner, if these gentlemen might be excused at this time with permission of Mr. Quirk.

Mr. Quirk: Oh, yes.

Exam. Mullen: Yes.

We will have a recess of 10 minutes.

(Recess taken.)

Exam. Mullen: We are ready to proceed.

Ernest F. McGuire was sworn and testified as follows:

Exam. Mullen: Let's be in order, gentlemen. Mr. Tornius.

Direct examination.

By Mr. Tornius:

Q. Mr. McGuire, you have prepared your testimony in written form, have you?

A. Yes, I have.

Mr. Tornius: Before you commence with your statement, may we have these exhibits which have been dis-[fol. 1023] tributed, Mr. Examiner, identified as exhibits 16 and 17?

Exam. Mullen: Which will be 16, the map?

Mr. Tornius: The blueprint may will be 17, the map on top which is not a blueprint map will be 16.

By Mr. Tornius:

Q. You may proceed, Mr. McGuire.

A. My name is Ernest F. McGuire. I am Commerce Agent of the Great Northern Railway Company and my residence is at St. Paul, Minnesota. My railroad experience extends over a period of 28 years, of which 25 years have been in the freight traffic departments of the Soo Line and Great Northern Railways. My assignments have been the formulation and preparation of tariffs and the handling of rate and division matters.

I have been with the Great Northern Railway the past twelve years and have occupied my present position since January 1, 1946, in connection with which my primary duties are the preparation and presentation of testimony in proceedings before the Interstate Commerce Commission and the various state regulatory bodies.

The Great Northern Railway is one of four northern transcontinental lines directly serving the Pacific Northwest and participating in the routes covered by the complaint. The three other major northern trans-continental lines are the Northern Pacific Railway, the Chicago, Milwaukee, St. Paul and Pacific Railroad and the joint line of the Canadian Pacific and its subsidiary, the Minneapolis, St. Paul and Sault Sainte Marie Railroad, known as the Soo Line.

[fol. 1024] The Canadian Pacific and the Soo Line also have a line to the Pacific Northwest via Spokane, Washington and the Spokane International, and a portion of the Pacific Northwest is reached by the joint line of the Canadian National and Duluth, Winnepeg and Pacific. All of these lines reach the gateways on the east at the Twin Cities (Minneapolis and St. Paul, Minnesota), the Head of the Lakes (Duluth, Minnesota and Superior, Wisconsin), or both.

Exhibit No. 16 is a map of the Great Northern System. There has been clocked out on the map those junction points between the Great Northern and the other northern transcontinental routes referred to which are west of the Montana-Dakota state line.

The Great Northern, like the other northern trans-continental lines but unlike the Union Pacific, which operates

over a central trans-continental route, does not connect directly with the Denver and Rio Grande Western. Under Mr. Quirk's statement at the initial hearing, the Great Northern and all defendants, other than the Union Pacific, are affected by the relief sought in this proceeding to the extent only that they participate in joint rates with the Union Pacific applicable via Ogden betwen the territories described in the complaint. As I shall explain in more detail later, this means that the Great Northern's direct involvement is principally with respect to trans-continental traffic to and from stations on its line in the Pacific Northwest which might be interchanged at its Spokane, Wash-[fol. 1025] ington junction with the Union Pacific and which might move over the rails of that carrier and its connections east of Spokane at competitive joint rates.

Mr. Quirk: Mr. Examiner, I am not quarreling with this witness' statement of his understanding of what is involved in the case, but I want to state on the record that the issues are shaped by the complaint.

Mr. Tornius: And by your statement at the initial hearing, Mr. Quirk. The record will show what that statement was.

Mr. Quirk: I will stand by that.

Mr. Tornius: That is satisfactory.

Mr. Quirk: I don't want to be bound by what this witness said I said at some other time.

Mr. Tornius: There is no intention that you should be.

The Witness: Contrary to Mr. Earley's testimony at the initial hearing, there is, so far as the Great Northern at least is concerned, no "pattern of agreement" between it and other northern trans-continental lines for a reciprocity of routing short-hauling either the Great Northern or its northern trans-continental connections. This is borne out in the discussion which follows. The routes involved are those provided in Agent Kipp's I. C. C. No. 1516 which operate with the rates in Agent Kipp's I. C. C. Nos. 1521, 1527, 1522, 1502 and 1531, these being the trans-continental tariffs on general commodities, fruit, classes and grain respectively.

[fol. 1026] Dealing first with the Chicago, Milwaukee, St. Paul and Pacific Railroad, which connects directly with the

Great Northern at the western junctions of Everett, Seattle, Tacoma, Chehalis, Bellingham, Newport and Spokane, Washington, and at Butte, Great Falls, Lewistown and Judith Gap, Montana, the universal practice, with but two minor exceptions later referred to, has been for the Great Northern to retain its long hauls and not to participate in joint rates on classes and commodities with the Milwaukee via any of said junctions. (See Route 4 and Note 230, Agent Kipp's I. C. C. No. 1516, which confines routing to and from Great Northern points in the Pacific Northwest to movement via junctions east of Snowden, Montana.)

The Milwaukee follows a similar practice of retaining its long hauls and similarly declines to participate in joint rates with the Great Northern via said junctions on traffic originated or terminated by the Milwaukee.

In this connection, I refer to routes Nos. 3 and 3-A in Agent L. E. Kip's ICC No. 1516, North Coast Territorial Directory 40-J of the Trans-Continental Freight Bureau, which confines movement to C. M. St. P&P Railroad through Mobridge, South Dakota. To or from local points on the C. M. St. P. & P. Railroad in Minnesota, North and South Dakota on the one hand, and Great Northern Railway local points in the Pacific Northwest on the other hand, routes are applicable only via Minnesota or Dakota junctions. In the case of rates between points both of which are served by [fol. 1027] the Great Northern; Trans-Continental North Coast Territorial Directory 40-J, Agent L. E. Kipp's ICC 1516, contains a restriction which limits the application only to the single line routes of the Great Northern.

The situation with respect tot he Northern Pacific Railway is the same as described for the CMStP&P Railroad. The Great Northern has connections with the Northern Pacific at Portland, Oregon; Chehalis, Tacoma, Seattle, Everett, Sedro Woolley, Adrian, Bellingham, Centralia, Lowell, Napavine, Vancouver and Spokane, Washington; Sand Point, Idaho; Helena, Butte, Billings, Laurel and Sidney, Montana. Here again the universal practice, with but one minor exception later referred to, has been for the Great Northern to retain the long hauls and not to participate in joint rates on classes and commodities via any of these junctions. The Northern Pacific follows a similar

practice and similarly declines to participate with the Great Northern in competitive joint rates via said junctions on traffic it originates or terminates in the Pacific Northwest and I refer specifically to route No. 6 of Agent Kipp's ICC No. 1516, North Coast Territorial Directory 40-J, also circle reference (25) of the same publication which restricts movement to the Northern Pacific on traffic between Northern Pacific stations.

On traffic from or to points in the Pacific Northwest on the Spokane, Portland and Seattle Railway, Oregon Elec- [fol. 1028] tric Railway and Oregon Trunk Railway, participated in by the Great Northern Railway, competitive joint rates are confined to routes according the Great Northern its long hauls in the same manner as on traffic to or from Great Northern stations in the Pacific Northwest. (See Route Nos. 99-B, 99-D of Agent Kipp's ICC No. 1516.)

The Spokane International—Canadian Pacific—Soo Line route is treated the same as the routes of the CMStP&P Railroad and the Northern Pacific Railway. Again, to or from local points on the Soo Line in Minnesota, North and South Dakota the Great Northern retains its long haul and additionally limits rates to or from common points to Great Northern direct movement. This is also true with respect to the Canadian National—DW&P route. (See route 4 and Note 230, Agent Kipp's ICC No. 1516.)

In treating with the three routes just covered there are, as I have indicated, two minor exceptions. One is with respect to eastbound fruits and vegetables, also lumber, from stations south and east of Spokane, Washington, on the lines extending to Coeur D'Alene, Idaho, Colfax, Washington, and Moscow, Idaho. The other is on eastbound lumber from stations on the line north of Spokane to Nelson, B. C. In both instances routes are available via Spokane, but on fruits and vegetables are confined to points on the CMStP&P, Northern Pacific and Soo Line, also CB&P Railroad west of the Twin Cities or Missouri River [fol. 1029] and do not embrace the extensive territory in the east, southeast and southwest where the great bulk of these commodities are marketed. The lumber routes from points on the line north of Spokane are similarly confined to stations on the CMStP&P Railroad. Both of these situations came about through the acquisition by the Great

Northern of other lines of railroad, in connection with which the Spokane routes were already established at the time of acquisition.

Origins on the short lines south of Spokane are on the former Spokane and Eastern Railway and Power Company and the Inland Empire Railroad Company, acquired by the Great Northern in 1927. The short line north of Spokane, from which lumber rates apply via Spokane, was the former Spokane Falls and Northern Railway, acquired by the Great Northern in 1908, and the original routing has been continued. It is important to point out that the routing via Spokane to and from the properties acquired from the Spokane and Eastern Railway and Power Company and the Inland Empire Railroad Company was general at the time of acquisition but that cancellation of routes on all traffic except to the extent indicated, was proposed and was found justified in I&S Docket 2999, reported at 142 ICC 230.

At this point I should like to point out that the Great Northern connects at Portland, Chemult and Klamath [fol. 1030] Falls, Oregon, with the Southern Pacific Railway and with the Union Pacific at Portland, Oregon, Seattle, Tacoma, Chehalis, Centralia and Vancouver, Washington, but that joint rates on classes and commodities moving trans-continentally are generally not applicable via these junctions, the Great Northern retaining its long haul.

In 1931, in consummation of a plan through which the Great Northern sought to establish joint rates over a route between California and the Northwest not controlled by the Southern Pacific, a 200-mile-line of railroad between the Great Northern's terminus at Klamath Falls, Oregon and the Western Pacific at Keddie, California was completed—the Great Northern extending south to Bieber, California and the Western Pacific north to that point.

The Bieber route was opened to traffic November 2, 1931. Through it the Great Northern has obtained competitive joint rates over a route on trans-continental traffic to and from California which affords it its long hauls in many cases as far east as the Twin Cities.

Conversely, it was necessary at that time for the Great Northern to afford the Western Pacific and its connections, including the D&RGW some trans-continental routes to and

from Great Northern Pacific Coast territory, but these latter routes at competitive joint rates are confined to Oregon and Western Washington. The scope of the territory af- [fol. 1031] fording the Western Pacific its long hauls to or from the Pacific Northwest is illustrated by circle reference (77) of Supplement No. 71 to Agent Kipp's ICC No. 1516. The right of the Great Northern to retain its long hauls on the bulk of this traffic from Central and Eastern Washington and Idaho was upheld by the Commission in I&S Docket 4126, Trans-continental Traffic Routed via Bieber, California, reported at 213 ICC 487.

The Great Northern's extension to the Pacific Coast was completed in 1893. At that time our western terminus was Seattle, Washington and we were confronted with the serious problem of attempting to obtain some share in the traffic to and from Portland, then the largest city in the Pacific Northwest and an important North Pacific Coast port for the handling of traffic to and from foreign countries and to and from California.

Portland was reputed to be the wealthiest city in the United States in proportion to its population and at the turn of the century was the seat of twenty national and other banks as compared with only six national and other banks at Seattle. (P. F. Collier's University Encyclopedia, published in 1902.) Portland was not reached by the Great Northern, as Exhibit No. 17, a map of our system at that time, indicates, but was served by the Oregon Railway and Navigation Company, which had a junction with the Great Northern at Spokane, Washington. In order that the Great [fol. 1032] Northern might obtain a share in the Portland traffic, the Great Northern and Oregon Railway and Navigation Company established joint rates to and from points on the Oregon Railway and Navigation Company, including Portland, August 1, 1894. At about that time the Great Northern also established joint rates to and from points on its line in the Pacific Northwest via Spokane and the Oregon Railway and Navigation Company, which did not then reach Seattle. This, of course, was different from a reciprocal arrangement whereby both carriers reach a common terminal, for that was not then the situation.

By the tariff publication referred to, shippers on each separate railroad, the Great Northern and the Oregon

Railway and Navigation Company, were able to reach a territory not otherwise available. These joint rates have been carried forward through the years, although in the intervening period the Oregon Railway and Navigation Company has become a part of the Union Pacific System and now reaches Seattle and although since that time the Great Northern has acquired trackage rights over the Northern Pacific south of Tacoma, which enabled it to reach Portland in 1909, and since then and in 1910 through the Spokane, Portland and Seattle Railway, which is wholly owned by the Northern Pacific and the Great Northern Railways, the Great Northern reached Portland via the SP&S route.

Even now, however, the Union Pacific does not have a full [fol. 1033] line of competitive joint rates to and from Great Northern points on trans-continental traffic via Spokane. In fact, that gateway is not now open at joint through rates on wool, livestock, ores, concentrates or smelter products (contained in Agent Kipp's ICC Nos. 1476, 1462 and GN Ry, ICC No. A-7897.) Eastbound fruits and vegetables rates via Spokane are limited to destinations reached by the Union Pacific cannot move via the Union Pacific to markets off that line in the East, Southeast and Southwest.

Tariffs filed to become effective September 15, 1932, closing the Spokane gateway to this traffic, to the extent just indicated, were protested by various shipping interests but permitted to become effective. Eastbound lumber rates via the Union Pacific are confined to a limited destination area on and west of the Missouri River from Council Bluffs, Iowa to Kansas City, Missouri, thence Kansas City Southern Railway to the Gulf of Mexico. The Great Northern territory from and to which these Spokane routes with the Union Pacific apply is confined to the main line for the most part. (See Route 4-B and circle reference (92) of Agent Kipp's ICC No. 1516, also routes in Agent Kipp's ICC Nos. 1474 and 1439).

The Great Northern's policy through the years, as this brief statement indicates, has been to preserve its long hauls to the fullest extent feasible with practical railroad operation. As a carrier which operates for long distances [fol. 1034] between the Pacific Coast and eastern gateways

at the Twin Cities and Head of the Lakes and which has built main and branch lines and supplies railroad equipment to handle traffic on its own line, it is, of course, opposed to the opening of any new routes which will short-haul it and are not clearly shown to be necessary and desirable in the public interest.

Mr. Quirk: I move to strike the rest of that paragraph, Mr. Examiner.

Exam. Mullen: Just a moment, let me read it.

Mr. Quirk: It is pure argument.

Mr. Tornius: I submit, Mr. Examiner, that is a factual statement rather than argument.

Exam. Mullen: I think the next sentence is all right; it is not argumentative.

Mr. Quirk: Which?

Exam. Mullen: "We are convinced that our limited routing with the Union Pacific does not constitute undue preference or prejudice."

Mr. Quirk: I thought the Commission was going to decide that. He is concluding that now.

Exam. Mullen: As I read it, he is stating the kind of order that the Commission should enter in the event they find it is correct. That sentence may stay in; it will not be stricken.

Mr. Quirk: all right.

[fol. 1035] The Witness: We are convinced that our limited routing with the Union Pacific does not constitute undue preference or prejudice. Should the Commission nevertheless conclude that undue prejudice to any carrier results from any joint rates and routes participated in by the Great Northern with the Union Pacific, it is respectfully asked that any order for removal thereof be framed in the alternative so that consideration may be given to a cancellation of existing joint rates and routes with the Union Pacific rather than the extension of joint rates and routes which short-haul our company.

Exam. Mullen: Just a moment, that is objected to, isn't it?

Mr. Quirk: I object to all that follows.

Exam. Mullen: That sentence will be argumentative.

Mr. Tornius: Which sentence is that now, Mr. Examiner.

Exam. Mullen: The one he is starting to read: "In view of the numerous——"

Mr. Tornius: I have no objection to the elimination of the next sentence, and then I assume he may conclude his statement. That last part of his statement is certainly a statement of fact, rather than argument.

Exam. Mullen: Let me read it, please.

The next sentence is eliminated, the one beginning: "In view of the numerous junctions;" that is out.

I find the last sentence argumentative also. That will be stricken.

[fol. 1036] By Mr. Tornius:

Q. Does that complete your statement, Mr. McGuire?

A. Yes, it does.

Q. Are these exhibits, 16 and 17, true and correct to the best of your knowledge?

A. Yes, they are.

Q. Were they prepared personally by you, or under your supervision?

A. They were prepared under my supervision.

Mr. Tornius: You may cross examine, Mr. Quirk.

Mr. Quirk: No questions. I have no questions.

Mr. Tornius: At this time I will offer the exhibits, 16 and 17 in evidence.

Exam. Mullen: Any objection?

Mr. Gibson: No objection.

Exam. Mullen: They will be received in evidence.

(The above-referred documents, marked Exhibits Nos. 16 and 17, witness McGuire, were received in evidence.)

Mr. Tornius: That is all, Mr. McGuire.

Exam. Mullen: That is all, Mr. McGuire; thank you.

(Witness excused.)

I. N. BAYLESS was sworn and testified as follows:

Exam. Mullen: Let's be in order, please. Mr. Collins.

[fol. 1037] Direct examination.

By Mr. Collins:

Q. Mr. Bayless, you have prepared your testimony in written form for presentation in this case, have you not?

A. Yes, sir.

Q. Are the statements therein, and the exhibit you have prepared true and correct to the best of your knowledge and belief?

A. Yes, sir.

Q. Will you proceed to read your statement?

A. My name is I. N. Bayless. I am President of The Union Pacific Coal Company, with offices in Omaha, Nebraska. I have been employed by the Union Pacific Coal Company during the past 20 years, first as Assistant General Manager, then General Manager, and, for the past 6 years, President. In my position as President of the Company I have responsibility for the management and operation of the Coal Company.

The Union Pacific Coal Company is a wholly-owned subsidiary of the Union Pacific Railroad Company. The Coal Company owns and operates mines in the six operating mining districts in the State of Wyoming, namely: Rock Springs, Reliance, Stansbury, Winton, Superior and Hanna, and during the year 1949 mined in excess of 3,400,000 tons of coal, over 95 percent of which was sold to the Union Pacific Railroad Company for use in the operation of its railroad. [fol. 1038] Following its preparation by Mr. A. D. Hanson, General Superintendent Transportation of the Union Pacific Railroad Company, I was furnished with a copy of the statement, introduced in this hearing as Union Pacific Railroad Company's Exhibit 15 and with respect to which Mr. Hanson testified, showing the loss of employment to employees of the Union Pacific Railroad Company which would result from the opening of the Ogden Gateway and the Denver and Rio Grande Western Railroad Company

securing routing on 101,476 loads eastbound and 56,286 loads westbound of the traffic now moved via the lines of the Union Pacific Railroad Company originating and terminating in the States of Idaho, Montana, Oregon and Washington.

Mr. Quirk: Well, even Mr. Hanson qualified that statement, by saying "if the traffic moved." Now this witness is saying that would result, without any qualifications.

Mr. Collins: Let's take it the way—let the record show that Mr. Bayless means the same thing that Mr. Hanson meant.

Mr. Quirk: It don't read that way, you know.

Mr. Collins: It will now.

The Witness: Exhibit 15 introduced in this hearing by Mr. Hanson reflects that if the D&RGW secures the routing on the amount of traffic therein shown, which, as I understand it, is based on a forecast given by Mr. T. K. Earley, Assistant Freight Traffic Manager of the D&RGW, in his testimony heretofore given in this case, it will result [fol. 1039] in a reduction in the operation by the Union Pacific Railroad Company of——

Exam. Mullen: That is the fourth time. We don't need that.

Mr. Collins: Mr. Examiner, this is a rather peculiar situation.

Exam. Mullen: Suppose we copy that in the record.

Mr. Collins: It is all right to copy it in the record, but it will have to be specified in this testimony.

Mr. Quirk: Every witness that goes on doesn't have to go into that.

Exam. Mullen: It will be copied into the record without reading.

The Witness: (a) four trains per day in each direction between Green River, Wyoming and North Platte, Nebraska,

(b) three trains per day in each direction between North Platte, Nebraska and Council Bluffs, Iowa, and

(c) one train per day in each direction between North Platte, Nebraska and Kansas City, Kansas.

That company was incorporated under an Act of Congress, approved July 1, 1862, amended July 2, 1864. It was completed in 1869 and on May 10, 1869, made connection with the Central Pacific Railroad at Promontory Point, Utah, to form the first through rail line to the Pacific Coast. The line from Ogden to Promontory Point was subsequently partially leased and partially sold to the Central Pacific Railroad (now Southern Pacific Company).

The line starting at St. Joseph, Missouri, running in a northwesterly direction through Hiawatha and Marysville, Kansas, to Hastings and Grand Island, Nebraska, was formerly known as the St. Joseph and Grand Island Railway. About five percent of its capital stock is in the hands of the public and the remainder is owned by the Union Pacific [fol. 1158] Railroad.

That part of the Union Pacific extending in a northwesterly direction from Granger, Wyoming, to Huntington, Oregon, and directly north from Salt Lake City through Ogden, Utah, and Pocatello, Idaho, to Butte, Montana (Oregon Short Line Railroad Company), was formerly known as the Oregon Short Line and Utah Northern Railway Company and still earlier as the Oregon Short Line Railway Company. It was incorporated April 14, 1881, in Wyoming Territory, and by Act of Congress April 2, 1882, was made a railway corporation of Utah, Idaho and Wyoming. The line from Granger, Wyoming, to Huntington, Oregon, was completed April 14, 1881. It was built by the Union Pacific Construction Department, was financed by the Union Pacific Railroad and was at all times intended to be a subsidiary of the Union Pacific Railroad Company.

The line west of Huntington, Oregon, to Portland, Oregon (Oregon, Washington Railroad & Navigation Company), was formerly known as the Oregon Railroad and Navigation Company and earlier as the Oregon Railway and Navigation Company. The company was incorporated in Oregon on June 13, 1879, but it was not until November 25, 1884, that the Oregon Railway & Navigation Company completed construction of the line from Portland to Huntington, Oregon, establishing the through route by railroad from Council Bluffs, Iowa, to Portland, Oregon.

In January, 1889, the track and equipment of the Oregon

[fol. 1159] Railway & Navigation Company was leased to the Oregon Short Line Railway Company. In October, 1893, both the Oregon Short Line and the Oregon Railway & Navigation Company went into receivership. On August 17, 1896, the Oregon Short Line obtained control of the OR&N and on January 9, 1897, the Oregon Short Line was sold at foreclosure to the Union Pacific Railroad.

The line extending south from Salt Lake City, Utah, to Los Angeles, California (Los Angeles & Salt Lake Railroad Company), was originally called the Utah Central Railroad and later the San Pedro, Los Angeles and Salt Lake Railroad Company. It was not until April, 1929, that the Union Pacific obtained control of that line. In 1936 all of the lines of the St.J.&G.I. Ry., O.S.L. RR., O.W.R.&N. RR. and L. A. & S. L. R. R. were changed to the Union Pacific Railroad Company as a result of leasing arrangements approved by the Commission in Finance Docket 9722, 207 ICC 543.

Existing Through Routes With the Rio Grande and Its Primary Objective in This Proceeding

The map which is page 3 of exhibit 25 contains an irregular black line beginning in the Pacific Northwest at Vancouver, B. C., running south just east of Seattle and Portland and then in a southeasterly direction to a point just west of Ogden and Salt Lake City. At Lynndyl, Utah, the black line crosses the Union Pacific, and it extends then in a southwesterly direction to a point east and south of San Diego, California. The Rio Grande now participates in [fol. 1160] through routes and joint rates on equal terms with all other carriers applying to transcontinental traffic moving between all points west of that irregular black line, on the one hand, and all points in the United States east of the vertical black line beginning just west of El Paso, Texas, and ending at the Canadian border, on the other hand. The traffic moving between those two territories and available to the Rio Grande to solicit for movement via the entire length of its railroad at rates equal to those applying via all other lines runs into many hundreds of thousands of carloads annually.

The Interstate Commerce Act gives all shippers the right to specify the lines over which their shipments shall move so

the Ogden gateway and route via the Rio Grande is actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington. However, most of that traffic originates or terminates at points on the Union Pacific, and it ordinarily moves via the Union Pacific through Wyoming because the joint through rates to and from that territory are restricted so that they will not apply when traffic is interchanged with the Rio Grande at junction points in Utah.

The primary objective of the complainant (Rio Grande) is to persuade the Interstate Commerce Commission that it should order the Union Pacific to short haul itself by joining in through one-factor rates and routing arrangements under which the Rio Grande could obtain a haul over the [fol. 1161] entire length of its line from Ogden, Utah, to Denver or Pueblo, Colorado, on eastbound traffic from points on the Union Pacific or its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington to destinations anywhere in the United States east of the vertical black line on the map which is page 3 of Exhibit 25 and a haul over the entire length of its line from Denver or Pueblo, Colorado, to Ogden, Utah, on westbound traffic originating at points anywhere in the United States east of the vertical black line consigned to points on the Union Pacific or its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington.

Transcontinental Carload Movement via Union Pacific to or from Idaho, Montana, Oregon and Washington During Year 1948

The statement on page 4 of Exhibit 25 has been prepared for the purpose of giving the Commission some information regarding the volume and the character of the carload traffic moving into and out of Idaho, Montana, Oregon and Washington, which the Rio Grande seeks to divert through Ogden for a maximum haul over its line. The 1948 movement has been selected for this showing because it is the last full year available at the time my exhibit and testimony were prepared. The eastbound movement totalled 116,278 carloads, of which 50,349 carloads or 43.3 percent consisted

of products of agriculture, 37,800 carloads or 32.5 percent [fol. 1162] consisted of forest products. The total westbound movement was 55,631 carloads, of which 34,848 carloads or 62.6 percent consisted of articles classified as "Manufactures and Miscellaneous." The total movement in both directions was 171,909 carloads.

Most of these carloads either originated or terminated on the Union Pacific Railroad and 46.5 percent were loaded or unloaded at points on branch lines.

Although some of our many branch lines do contribute substantially to the total, that contributed by many others is very small and as stated by Witness Hanson they are now receiving more service than is warranted on basis of tonnage handled.

About 50,000 carloads of that total either originated or terminated in Oregon or Washington in the area west of the irregular black line and were available to the Rio Grande for solicitation at equal rates via its long haul route. It is also a fact that many additional thousands of carloads moved into or out of that area via lines other than the Union Pacific, and those carloads likewise were available to the Rio Grande for solicitation at equal rates via its long haul route. The figures on page 5 of Section B of Witness Earley's Exhibit No. 3 confirm my statement in that respect for they show that the Rio Grande received a haul on a very heavy volume of competitive traffic into or from that area. In the year 1948, the Rio Grande's movement amounted to [fol. 1163] 37,628 carloads and that represents an increase of more than 300 percent over the number the Rio Grande handled to and from that area during the year 1944.

The figures shown in column numbers 3 to 8, inclusive, on page 4 represent a territorial breakdown of the total movement shown in column 2. Group 1 covers the northern half of the United States lying east of the vertical black line on the map, Exhibit 25, 83.3 percent of the total movement during the year 1948 either originating or terminating in that group. Group 2 covers the Southwestern states of Oklahoma, Texas, Arkansas and Louisiana. Only 10.6 percent of the total movement either originated or terminated in those states. Group 3 covers the Southeastern states and

only 6.1 percent of the total movement either originated or terminated in those states.

Comparison of Miles via Sought and Existing Routes

A vital consideration in this proceeding is a comparison of the distances via the sought routes through Ogden with the Rio Grande and the distances via the existing routes of the Union Pacific which omit the Rio Grande. There are some exceptions already discussed, but for the present it may be said that traffic to or from points on the Union Pacific and its connections in Idaho, Montana, Oregon and Washington may not be interchanged with the Rio Grande and through one-factor rates applied when from or to points in the [fol. 1164] United States east of the vertical black line on the map, page 3.

All such traffic tendered to or terminating on the Union Pacific and its short line connections ordinarily moves via the Union Pacific to or from, in some cases, Colorado gateways, and, in other cases, Missouri River gateways because the applicable joint rates do not apply via Utah junctions with the Rio Grande. When so handled by the Union Pacific via Colorado or Missouri River gateways, the traffic is always transported via routes that are shorter and in most cases substantially shorter than any route that could be established via the Ogden gateway for the purpose of giving the Rio Grande the maximum haul which it seeks in this proceeding. To illustrate that point, I have prepared a statement of the distances via the Union Pacific routes and via the routes which the Rio Grande wishes to have established via the Ogden gateway. That statement appears on page 5 of Exhibit 25.

McCammon, Idaho, is in the southeastern part of the state at the point where the Union Pacific lines north from Ogden, Utah, and northwest from Granger, Wyoming, converge. All shipments to or from Idaho, Montana, Oregon and Washington points west or north of McCammon moving either via the Union Pacific routes presently in effect or via the routes which the Rio Grande seeks to have established via the Ogden gateway must pass through McCammon. For this reason, McCammon has been used as a rep- [fol. 1165] resentative point in our showing of the differences in distances via the present Union Pacific routes and

those sought by the Rio Grande via Ogden because it is clear that whatever differences exist in the mileages at McCammon would also exist at points north and west thereof.

Denver and Pueblo, Colorado, are the principal eastern terminals of the Rio Grande, and I want to emphasize that between those points and McCammon the proposed routes via Ogden, Utah, with the Rio Grande are longer than via the Union Pacific direct to Denver and through Denver with its connections to Pueblo. These differences are shown on the map, page 3, because the disadvantages in distance via the routes through Ogden with the Rio Grande and the fact that the Rio Grande has no value as a service route on traffic——

Mr. Quirk: Mr. Examiner, it seems to me that is a conclusion that should be omitted from this statement.

Exam. Mullen: I think it is proper. It is the opinion of this witness. He is qualified.

The Witness: —to or from points on the Union Pacific and its connections in Idaho, Montana, Oregon and Washington cannot be fully realized without knowledge of the geographical location of McCammon, Idaho; Ogden, Utah; Pueblo and Denver, Colorado, as well as Cheyenne, Wyoming, and the general geographical location of both the Rio Grande and the Union Pacific Railroads.

[fol. 1166] It should also be noted that traffic moving via existing Union Pacific routes does not reach Denver but passes through Granger and Cheyenne, Wyoming, the latter being 106 miles north of Denver. It is 529 moles via the Union Pacific from McCammon to Cheyenne and 718 miles between McCammon and Denver via the route through Ogden with the Rio Grande. The fact that the Union Pacific from Cheyenne, Wyoming, to Omaha, Nebraska, or to Kansas City, Missouri, is shorter than any line with which the Rio Grande could make connections at Denver, Colorado, to either Omaha or Kansas City further emphasizes the fact that the Rio Grande has no value as a service route on the traffic it seeks in this case. Even between Ogden and Denver the Rio Grande is 607 miles or 78 miles longer than the Union Pacific between McCammon and Cheyenne. Movement of this traffic through Ogden with the Rio Grande means not only handling via a longer route to or from Ogden

than from McCammon but the wholly unnecessary and wasteful transportation of 111 miles between Ogden and McCammon.

Mr. Quirk: Mr. Examiner, I object to these characterizations as being incompetent and irrelevant.

Exam. Mullen: I believe the witness can state his opinion. That is all he is doing.

Mr. Quirk: I merely want the objection on the record.

Exam. Mullen: The objection is noted on the record, and is overruled.

[fol. 1167] The Witness: The distance from McCammon to Denver via the Union Pacific is 623 miles, but via Ogden and the Rio Grande the distance is greater by 95 miles or a total of 718 miles. Even to the Rio Grande's eastern terminal of Pueblo, the distance of 741 miles via the Union Pacific to Denver and the Colorado and Southern Railway beyond is 33 miles shorter, and the distance of 742 miles via the Union Pacific to Denver and the Rio Grande beyond is 32 miles shorter than the distance of 774 miles via the sought route through Ogden via the Rio Grande. It is obvious then that there is no point in the United States where the distance via the sought route through Ogden with the Rio Grande would be shorter than via the more direct route of the Union Pacific, and it is equally obvious that to or from the Missouri River and East where the preponderance of the tonnage sought by the Rio Grande either originates or terminates the distance disadvantage of its proposed route increases because shipments via the Union Pacific do not pass through either Denver or Pueblo but through Cheyenne, Wyoming, 106 miles north of Denver.

The distance via the Union Pacific from Cheyenne to Omaha is 507 miles, and the distance via the CB&Q from Denver, which is the Rio Grande's short single line connection to Omaha, is 538 miles. The Union Pacific distance from Cheyenne to Kansas City, Missouri, is 624 miles, and the distance via the CRI&P Railway from Denver, which is [fol. 1168] the Rio Grande's short single line connection to Kansas City, Missouri, is 636 miles.

Page 5 of Exhibit 25 contains a more elaborate showing of the distance disadvantage of the proposed routes through Ogden with the Rio Grande compared with the distance

via the more direct route of the Union Pacific through Granger, Wyoming. For reasons previously stated, I have used only McCammon, Idaho, as representative of all of the stations west and north thereof. The forty-three points to which distances are shown from McCammon are marked on the map, and they are representative of all of the points in the United States east of the vertical black line on the large map. The figure shown on the map in connection with each point is the distance disadvantage in miles via the route through Ogden with the Rio Grande. The figures shown in Column 1 on page 5 of Exhibit 25 are the distances in miles via the route of the Union Pacific through Granger, Wyoming. Column 1-A makes reference to the routes via which those distances have been calculated. To Denver, Kansas City, and Omaha the distances shown are via the Union Pacific direct. To other points the distances shown are via the approximate short tariff routes. The figures shown in Column 2 are the distances via what would be the approximate short tariff routes through Ogden with the Rio Grande, and they correspond with the figures shown with each point on the map.

As only about 10 percent of the traffic *of the traffic* which the Rio Grande seeks to take away from the Union Pacific [fol. 1169] originates or terminates in the Southwest and the balance, or 90 percent, in the area where the sought routes are approximately 200 miles longer than those presently in effect, it seems obvious that from a standpoint of efficiency and economy the publication of those sought routes through Ogden is not warranted.

The only possible result would be financial gain to the Rio Grande and a disproportionately greater loss to the Union Pacific because we would give up the revenue for a haul of about one thousand miles for one of 111 miles and the Rio Grande would gain the revenue for a haul of about 600 miles.

Mr. Quirk: Mr. Examiner, I want to again object to these conclusions and opinions, because it is incompetent, and I state my grounds. There are many cases in this country where the value of a route is not determined entirely by distance, and that is a well-known fact. For this witness to merely say because there is a difference in distance, in one

route against the other, that that makes the longer route of more value than the shorter route, which is not substantiated by experience, if that was the real issue here——

Exam. Mullen: It is just the opinion of this witness, however. He does show the fact upon which that opinion is based.

Mr. Quirk: He shows one fact, distance.

[fol. 1170] Exam. Mullen: Well, the facts upon which his opinion is based.

Mr. Quirk: All right.

Exam. Mullen: Proceed.

Your objection is noted on the record.

Explanation of Interchange Arrangements Between Transcontinental Lines at Junction Points in Washington, Oregon and California

In Section F of his Exhibit No. 3, complainant's witness, T. K. Earley, shows representative routes through interchange points in Washington, Oregon and California via which the Union Pacific and other defendants permit themselves to be short hauled. His testimony relating to that section begins at page 113 of the transcript covering the first hearing in this proceeding and ends on page 128. As I understand his complaint, it is that the Pacific Coast terminal lines join with each other in what Mr. Earley calls a "smooth and flexible" (transcript, page 122) routing arrangement with each other on certain transcontinental traffic but refuse to let the Rio Grande have its maximum haul as an intermediate carrier on traffic originating or terminating in Utah north of Ogden, Idaho, Montana, Oregon and Washington.

The present routes have been in effect for many years and were for the most part established prior to the time the Union Pacific assumed control of that part of our line west [fol. 1171] of Huntington, Oregon, and south of Salt Lake City. I shall deal in detail with each of the western gateways referred to by Mr. Earley and will show that the entire arrangement redounds to the benefit of the Union Pacific and is of benefit to the public. No such benefit could flow to the Union Pacific or to the public from opening of the Ogden gateway.

Mr. Quirk: Mr. Examiner, this is just not proper for a witness to decide the case here for himself.

Exam. Mullen: Wait a minute. Let me read it.

That sentence appears to me to be purely argumentative. Objection sustained.

Mr. Collins: Which sentence are you talking about?

Exam. Mullen: The last sentence of page 13.

The Witness: Beginning with the word "no."

Exam. Mullen: That is right; that is the last sentence.

Mr. Collins: May I ask him at this point what he means by that sentence, to state it not objectionably?

Mr. Quirk: I think that is improper.

Exam. Mullen: The sentence is objected to as being argumentative. The objection is sustained. Do you desire to ask the witness any questions on direct?

By Mr. Collins:

Q. Do you desire to state, Mr. Stilling, what you mean in that sentence by the use of the words in that sentence?

Mr. Quirk: I object to that question.

[fol. 1172] Mr. Collins: I have a right to ask it.

Mr. Quirk: It calls for the same kind of answer.

Mr. Collins: It does not.

Exam. Mullen: We will wait until the question is answered, then we will see what basis there is for the objection.

Go ahead.

The Witness: I think the same thing will come out later in my testimony, Mr. Collins:

Mr. Collins: All right.

The Witness: Wallula, Washington Gateway—UP R.R.—NP Ry.

The joint rates and routing arrangements with the Northern Pacific via the Wallula, Washington, gateway were established earlier than others in the northwest and will, therefore, be discussed first. The Northern Pacific Railway was the first transcontinental line to reach the North Coast territory, its line to Wallula having been completed in August, 1883. More than two years earlier, April, 1881, to be exact, the line of the Oregon Railroad & Navigation Company, had completed its line from the west into Wallula,

Washington, and continuous service between Portland, Oregon, and Wallula, Washington was inaugurated by that line in November, 1882. In the fall of 1883, the Northern Pacific and OWR&N established joint through service via the Wallula gateway on transcontinental traffic to and from Portland points taking Portland rates. Also to and from Tacoma, Washington, by means of the railroad constructed [fol. 1173] by the Northern Pacific from Portland to Goble, Oregon, 40 miles north of Portland, thence ferry across the Columbia River to Kalama, Washington. That service to Tacoma continued until July, 1887, when the Northern Pacific completed construction of its line over the Cascade Mountains direct to Tacoma.

Exam. Mullen: Just a moment, please.

Off the record.

(Discussion off the record).

Exam. Mullen: On the record.

Mr. Quirk: Mr. Stilling, these 15 pages that the Examiner has referred to: do they describe the reasons why the Union Pacific joins in short hauling itself with other railroads in connection with certain routes and joint rates?

The Witness: It gives the historical background of the interchange with the other northern lines at those junction points, and it gives some information regarding the traffic that moves via those gateways both as to the volume and character of the traffic.

Mr. Quirk: Well, does part of the explanation show that there exists between the railroads involved a reciprocal traffic that does not exist between the Union Pacific and the Rio Grande?

The Witness: No, sir. It is not a reciprocal arrangement.

Mr. Quirk: I mean, is it based on the fact there are reciprocal situations that exist there?

[fol. 1174] The Witness: No, sir, if you leave out that word "reciprocal" we can get along better, Mr. Quirk. There is no reciprocal arrangement. The arrangement is very unbalanced. I am trying to go into the history and show how these interchanges originated.

Mr. Quirk: I see. What is Mr. Collins' attitude on this thing? I of course won't object if it is just copied in the record, but I won't insist on it being read.

Exam. Mullen: I just suggested it in the interest of saving time.

Mr. Collins: May I make a suggestion, Mr. Quirk?

Rather than to have Mr. Stilling read it all, if you can find time to read it over and then if you want to ask Mr. Stilling any question about them later, you certainly can do so.

Mr. Quirk: We still are off the record?

Mr. Collins: No. I am committed.

The Witness: If you want to skip this out of sympathy for me, I would just as soon read it.

Exam. Mullen: Well, all right, go ahead and read it.

Mr. Quirk: All right, I am willing that it be copied.

Exam. Mullen: Copy that into the record then, down to the middle of page 29. It is subject to cross examination and objection in due course.

Mr. Quirk: Yes.

[fol. 1175] The Witness: As stated previously, the OWR&N did not build into Huntington, Oregon, until November, 1884, a year after the joint service had been established via Northern Pacific and OWR&N via Wallula. Furthermore, during the years 1882 to 1889 the two lines, Northern Pacific and OWR&N, were jointly owned and controlled by the Oregon Transcontinental Company. In January, 1889, the track and equipment of the OWR&N was leased to the Oregon Short Line Railroad. The through routes originally established when the Northern Pacific and OWR&N were under common management were continued after the OWR&N was leased to the Oregon Short Line and are in effect today. I feel reasonably sure the Commission will readily recognize the distinction between this routing arrangement between the Northern Pacific and Union Pacific and the opening of the Ogden gateway as sought by the Rio Grande, but it should nevertheless have some information regarding the volume and character of the traffic routed through the Wallula gateway. At my request the accounting department of the Union Pacific made a traffic study of all transcontinental carload shipments interchanged with the Northern Pacific Railway at Wallula, Washington, during the months of April and October, 1948. It was not possible for us to make a more extensive study,

but I believe the two-month period is representative of the entire year, especially since October is normally the heaviest shipping month.

[fol. 1176] During that wo-month period of April and October, 1948, the Union Pacific took a short haul on 52 carloads on which the Northern Pacific received its long haul. Only four of those cars moved westbound. Forty-eight moved eastbound, and thirty-seven of those forty-eight cars contained apples originating at Yakima, Washington. Twenty-nine of those thirty-seven cars were consigned to points in Minnesota, four to Wisconsin, one to Iowa and three to North Dakota. It is axiomatic that many of those cars, moving as they did into Northern Pacific territory were transported via routes that were shorter than via the Union Pacific long haul to the Missouri River and its connections beyond. The remaining eleven cars consisted of steel bars from Albina, Oregon, to Illinois and Nebraska; pears from Yakima to Wisconsin and New York; wrapping paper from Albina, Oregon, to North Dakota; apples from Milton, Oregon, to South Dakota and from Hood River, Oregon, to Wisconsin.

During the same two-month period of April and October, 1948, the Union Pacific received a long haul on forty-two carloads, on which the Northern Pacific took a short haul. The entire movement consisted of lumber and other forest products originating in Washington consigned to points in the territory served by the Union Pacific in Colorado, Nebraska and Kansas. Here again the shipments moved via shorter routes than if they had been retained by the Northern Pacific for its long haul. Obviously this is in the public in-

[fol. 1177] terest.

Spokane, Washington Gateway—UP R.R.—GN Ry.

The joint rates and routes with the Great Northern Railway via Spokane were first established August 1, 1894, shortly after that line completed construction to Spokane. Although that was subsequent to the date the OWR&N made physical connection with the Oregon Short Line at Huntington, Oregon, in November, 1884, and also subsequent to the time the property and equipment of the OWR&N were leased to the Oregon Short Line Railroad, the arrangement

was nevertheless perfected at a time when neither the Oregon Short Line nor the Union Pacific could exercise control of the OWR&N.

A traffic study by our accounting Department shows that during the two-month period of April and October, 1948, the Union Pacific took a short haul on seventy-six carloads on which the Great Northern received its long haul. Twenty of those carloads moved westbound and consisted principally of commodities falling into the classification of "Manufactures and Miscellaneous." Three carloads originated in Minnesota and North Dakota; the balance in eastern and southern territories. Fifty-six or the balance of the seventy-six carloads on which the Union Pacific took the short haul, moved eastbound. Thirty-nine of those cars contained either lumber and forest products or apples and terminated principally in Great Northern territory in North and South Dakota and Minnesota and moved, in the public interest, via [fol. 1178] shorter routes than via the Union Pacific to Missouri River gateways. The balance consisted of miscellaneous shipments of canned goods, furniture, hops and iron and steel articles to various destinations in the Middle West, Eastern and Southern states.

During the same two-month period, the Union Pacific received a long haul on 118 carloads on which the Great Northern received a short haul. Twenty-nine of those carloads moved westbound. These shipments originated in twelve different states in the Middle West, East and South and consisted of commodities classified as Products of Agriculture or Manufactures and Miscellaneous. Eighty-nine carloads moved eastbound and consisted primarily of lumber and other forest products consigned to points in Union Pacific territory in Wyoming, Nebraska, Kansas and Colorado, and they likewise moved via shorter routes than if they had been retained by the Great Northern for its long haul.

Spokane, Washington Gateway—UP R.R.—SI R.R., CP. RY., Soo Line

The joint rates and through routes via Spokane, Washington, with the Spokane International Railroad, Canadian Pacific and Minneapolis, St. Paul and Sault Ste. Marie Railroad (Soo Line) were first established in May, 1907, at a

time when the Southern Pacific Company and the Union Pacific System lines were under common management and control. The agreement made with those lines at that time [fol. 1179] was the result of our request of the SI-CP lines to establish joint rates and through routes between California and points in the western provinces of Canada. Both areas were developing rapidly at that time, and there was an ever-increasing flow of California produce into Canada that we were anxious to encourage and develop. The Canadian Pacific was not willing to establish joint rates and through routes with the Union Pacific and Southern Pacific on this traffic via Spokane unless there was some compensating advantage to that line.

The opening of the Spokane gateway to the Canadian Pacific, Spokane International and Soo Line on transcontinental traffic, therefore, became part of the trade or agreement made with those lines at that time. During the months of April and October, 1948, the Union Pacific took a short haul on 228 carloads on which the SI-CI-Soo Lines received a long haul. Seventeen of those 228 cars moved westbound, eight of which were lumber from Wisconsin. The balance was miscellaneous commodities from various states. 211 of the 228 cars moved eastbound, and 180 of them contained lumber, terminating in Soo Line territory in North and South Dakota, Minnesota, Michigan, Wisconsin and Illinois. Here again the shorter routes and public interest features are apparent. The balance consisted almost entirely of lumber to other states.

During the same two-month period of April and October, [fol. 1180] 1948, the Union Pacific received a long haul on 118 carloads on which the Spokane International took a short haul. Nine of those carloads moved westbound and consisted almost entirely of lumber to the Middlewest and Miscellaneous originating in the Middle West, East and South. The balance, or 109 carloads, moved eastbound and consisted almost entirely of lumber to the Middle west and Southwest and Aluminum sheet to the Middlewest, Southwest, East and Southeast. During the same two-month period the Union Pacific received a haul on 419 carloads moving between California and the western provinces of Canada. 119 of those cars moved Union Pacific long haul between Spokane and Southern California. The balance

of 300 cars moved Union Pacific between Portland, Oregon, and Spokane, Washington, and moved via Southern Pacific south of Portland.

Marengo, Washington, and Plummer, Idaho Gateways
UP R.R.—CMStP&P R.R.

The Chicago, Milwaukee, St. Paul and Pacific Railroad was the last one of the lines to be constructed through to the North Pacific Coast, its through transcontinental line having been opened for freight traffic on August 1, 1909 (131 ICC 619).

As early as 1902 the Milwaukee Railroad and Union Pacific Railroad had entered into an agreement relating to interchange of traffic at Council Bluffs, Iowa, and Kansas City, Missouri, and that agreement was amended after the Milwaukee completed construction to the North Pacific Coast. The amended agreement provided that the Milwaukee was [fol. 1181] to be given access to Portland via Plummer, Idaho, or Marengo, Washington, from all territory north of its main line from Chicago, Illinois, to Omaha, Nebraska.

Also, from eastern territory on traffic handled via car ferry routes across Lake Michigan. Traffic from points on and south of the main line of the Milwaukee Railroad and also traffic moving all-rail from eastern territory was to move Union Pacific from Council Bluffs or Kansas City. The large volume of traffic from California, Oregon and Washington and intermountain states which the Union Pacific delivered to the Milwaukee Railroad was an important consideration in that agreement.

In August, 1922, the Milwaukee Railroad filed formal complaint with the Interstate Commerce Commission seeking an order requiring the Union Pacific to establish joint rates and through routes via Plummer, Idaho, and Marengo, Washington, on traffic originating at points on the Milwaukee's main line from Chicago to Omaha and on branch lines south thereof, also on traffic received from connections when destined Portland, Oregon, and points taking same rates.

The complaint bears the Commission's Docket No. 14167 and is reported in 88 ICC 312. The Commission's findings were in favor of the Milwaukee Railroad, and the routes via

Plummer and Marengo were broadened to cover the addi-
[fol. 1182] tional territory as a result of its order in that proceeding. Both the Plummer and Marengo gateways are shown in the tariff today, but the facilities afforded for the interchange of traffic at Plummer are inferior to those at Marengo and little, if any, traffic moves via Plummer.

No transcontinental traffic was interchanged at that gateway during the months of April and October, 1948. During that two-month period, the Union Pacific received a short haul on 1,093 carloads moving via the Marengo gateway. 300 of those cars moved eastbound, and 222 of those 300 cars moved to destinations in South and North Dakota and Minnesota and consisted almost entirely of lumber and other forest products, a large part of which originated south of Portland on the Southern Pacific Company.

Twenty-two cars, all lumber, terminated in Wisconsin; twenty-six cars, all lumber, terminated in Iowa and nine cars, mostly lumber, terminated in Illinois. The balance, largely lumber, terminated in other states such as Michigan, Ohio, Pennsylvania, New York and New Jersey.

793 cars moved westbound via Marengo during the months of April and October, 1948. 401 of those cars contained miscellaneous freight (ICC Classification 950). They originated at Chicago and were loaded by employees of the Milwaukee Railroad. All were consigned to Portland, Oregon, as final destination with stops for partial unloading at [fol. 1183] Spokane, Seattle, and other points on the Milwaukee Railroad. The tonnage is so loaded by the Milwaukee Railroad that tonnage for each point goes forward in separate cars, thus affording the most expedited service. Although only part of the tonnage actually moves from Marengo to Portland, the Union Pacific shares in the revenue on the total weight, all billing being taken into account at Portland.

Sixty-three similar cars originated in other states, largely New York. There were a few shipments of livestock and grain in the balance of the westbound movement, but the greater part of it consisted of Manufactures and Miscellaneous originating in the East and Middlewest consigned to Portland.

During the same two-month period of April and October,

1948, the Union Pacific received the long haul on thirteen carloads via the Marengo gateway on which the Milwaukee Railroad took a short haul. The Union Pacific also received a long haul on 1,279 carloads interchanged with the Milwaukee Railroad at Council Bluffs, Iowa, or Kansas City, Missouri. That figure covers only cars from or to points on the Union Pacific in Oregon, Washington and California and which originated or terminated on the Milwaukee east of Council Bluffs, Iowa, or Kansas City, Missouri.

Time allotted for preparation of our case did not permit preparation of a statement showing the many hundreds of additional carloads originating or terminating beyond the [fol. 1184] rails of the Milwaukee and Union Pacific which could have moved Milwaukee long haul but on which the Union Pacific received its long haul from either Council Bluffs or Kansas City.

Portland, Oregon Gateway—UP R.R.—SP Co.

Interchange of transcontinental traffic at Portland, Oregon, with the Southern Pacific Company involves long haul movement via the Southern Pacific to and from Portland of traffic originating or terminating at points on the Union Pacific north of Portland and long haul movement via the Union Pacific to and from Portland of traffic originating or terminating at points on the Southern Pacific in Oregon south of Portland. The long haul movement via Union Pacific of traffic originating or terminating at points south of Portland goes back to the time the Southern Pacific was controlled by the Union Pacific, and the arrangement was continued at joint rates and through routes after the Union Pacific was ordered by the courts to divest itself of that control of the Southern Pacific.

Long haul movement via the Southern Pacific of traffic to and from points on the Union Pacific north of Portland began in 1910. Originally, the Northern Pacific Railway was the only line operating between Portland, Oregon, and the Puget Sound ports of Tacoma and Seattle, Washington. Prior to 1910 the OWR&N Company operated a line of railroad between Tacoma and Seattle and in the year 1909 entered into an agreement with the Northern Pacific Rail- [fol. 1185] way which gave the OWR&N equal joint posses-

sion and use in common with the Northern Pacific Railway of the line between Portland and Tacoma for a period of 999 years. Operation under the agreement began in 1910 (96 ICC 116-118), and the OWR&N Company duplicated the joint rates and through routes already in effect via the Northern Pacific to and from points north of Portland. Furthermore, the service of the OWR&N company to and from points north of Portland was also perfected at a time when the Southern Pacific was controlled by the Union Pacific.

During the months of April and October, 1948, the Southern Pacific Company received a long haul on 252 carloads on which the Union Pacific received the short haul either to or from Portland. During the same period, the Union Pacific received a long haul on 389 carloads on which the Southern Pacific Company received a short haul. In both instances most of the eastbound movement consisted of lumber and other forest products while the westbound movement consisted almost entirely of articles classified as Manufactures and Miscellaneous.

Summary of Routing Via Oregon and Washington Gateways.

Interchange of transcontinental traffic at California junction points will be dealt with separately because it presents a different picture, but before passing on to my testimony and explanation of that situation I would like to briefly summarize the interchange arrangements which I have just [fol. 1186] discussed between the North Coast lines at Wallula, Spokane, Marengo and Portland. All such arrangements have been in effect over a long period of years and were for the most part established at a time when railroad construction in that area was at its peak, and some of the lines were under different management and control than at present.

Actual movement of traffic via these routes shows that they are in the public interest, and so far as the carriers are concerned, each shares in the long haul as well as the short haul. The existence of these routes via Oregon and Washington gateways makes it possible to handle traffic via

shorter routes than if the terminal line in the northwest received its long haul.

Consider, for example, the shipments moving via Union Pacific short haul to and from North Coast junctions and which originated or terminated on the Great Northern, Northern Pacific, Milwaukee or Soo Line in the Dakotas or Minnesota. From Chicago, Illinois, to Portland, Oregon, all the traffic interchanged with the Milwaukee Railroad at Marengo moves via a route that is thirty miles shorter than via the route through Council Bluffs.

The distance via the Marengo route is 2,229 miles and via the Council Bluffs route, 2,259 miles. (CMStP&P ICC Nos. B-5894 and B-7594 and UP RR ICC No. 5113). This movement of traffic in the public interest via shorter routes is in [fol. 1187] direct — to the situation that would be created by granting the demands of the Rio Grande in this proceeding which would always involve movement via a longer route and would always mean financial loss to the Union Pacific in a much greater proportion than the gain realized by the Rio Grande.

California Gateways—UP R.R.—AT&SF Ry.—SP Co.

In part of my previous testimony I call attention to the fact that the Rio Grande now participates in joint rates and through routes on equal terms with other carriers applying to transcontinental traffic originating or terminating in the area west of the irregular black line on page 3 of Exhibit 25, beginning south of San Diego, California, and ending at Vancouver, B. C. That, of course, includes practically the entire state of California. On all of the many hundreds of thousands of carloads moving into or from California and the balance of the territory lying west of that irregular black line, the Rio Grande is in position to solicit at equal rates with all other carriers its maximum haul on traffic that it neither originates nor terminates, yet the Rio Grande, through its witness, Mr. T. K. Earley, complains about reciprocal routing arrangements in effect betwen the California Pacific Coast terminal lines via Los Angeles, Colton, San Bernardino and Barstow, California. Territory served by each of the California lines is, in part, subject to routes

via which each of the other lines can obtain a long haul and [fol. 1188] the terminal line receives only a short haul. Like the arrangement on the North Coast, it gives the shipper a choice of routes, including those embracing the Rio Grande, and in many cases the advantage of forwarding shipments over shorter routes than would otherwise be available if each of the transcontinental lines always received its long haul.

All of the routing arrangements via junction points in southern California have been in effect for many years, and those applying in connection with the Union Pacific were established by the Los Angeles and Salt Lake Railroad when it was an independent corporation.

As stated earlier in my testimony, the Union Pacific obtained control of the LA&SL in April, 1921, and all of the joint rates and through routes established by the LA&SL have been continued in effect. Absence of control of the LA&SL by the Union Pacific until 1921, and the additional fact that through routes with the Rio Grande via Utah junctions are in many instances materially shorter than Union Pacific long haul routes, creates a situation directly opposite to that involving traffic to and from Idaho, Montana, Oregon and Washington where no joint rates have been in effect via the Rio Grande's longer route for almost half a century.

There is another important difference between the Rio Grande's participation with the Union Pacific in transcontinental traffic to and from Los Angeles and its nonparticipation in through routes and joint rates to and from [fol. 1189] Portland, Seattle or Spokane, and that is that the total transportation performed to a point like Chicago is substantially greater from the Northwest than from Los Angeles.

From Los Angeles to Chicago via Union Pacific, Provo, Utah, Rio Grande, Denver and the CB&Q it is 2,293 miles. From Portland via Union Pacific, Ogden, thence Rio Grande and CB&Q it is 2,473 miles or 180 miles farther than from Los Angeles via the Provo route.

From Spokane it is 2,483 miles or 190 miles farther than from Los Angeles and from Seattle 2,651 miles or 368 miles farther than from Los Angeles. The reason for this is that Portland and Seattle are approximately six degrees longi-

tude farther west of Greenwich than is Los Angeles, and the Rio Grande lies largely in the southern half of the United States. Through routes via Ogden with that line, on the greater part of the traffic in which it seeks to participate, involves additional and wasteful transportation of 200 miles and more. In contrast, from Los Angeles, California, to Pueblo, Colorado the distance via the Union Pacific, Provo, Utah, and the Rio Grande is 1,332 miles or 181 miles shorter than the distance of 1,513 miles via the Union Pacific long haul to Denver and the Colorado & Southern to Pueblo.

To Denver, Colorado, the distance via Provo with the Rio Grande is 1,276 miles or 119 miles shorter than the distance of 1,395 miles via the Union Pacific all the way from Los [fol. 1190] Angeles to Denver. The Provo route from Los Angeles via Union Pacific and Rio Grande is the shortest to practically the entire United States although at the Missouri River and east thereof the advantage largely disappears because via the Union Pacific long haul all traffic moves through Cheyenne, Wyoming, and our line from Cheyenne to both Kansas City and Council Bluffs is more direct and shorter than any line from Denver to those points. On page 7 of my exhibit 25 is a comparison of the distance via the Provo, Utah, route with the Rio Grande and the distance via routes of the Union Pacific through Wyoming from Los Angeles, California, to the same forty-three points to which distances have already been shown from McCammon, Idaho.

During the two-month period of April and October, 1948, the Union Pacific received a long haul on 1,540 carloads of transcontinental traffic via Southern California junctions on which either the Santa Fe or Southern Pacific took a short haul, and the Union Pacific took a short haul on 985 carloads on which either the Santa Fe or Southern Pacific received the long haul. If we include shipments interchanged with the Pacific Electric Railway, which is a wholly owned subsidiary of the Southern Pacific, the number of shipments on which the Union Pacific received the long haul is increased to 3,033 carloads.

Other Short Haul Routing

[fol. 1191] Witness Earley also testified regarding the fact that certain of the defendants in this proceeding, notably

the CB&Q R. R., CRI&P R. R. and AT&SF Ry., permit themselves to be short hauled via Missouri River junction points instead of demanding their haul to and from Denver, Colorado, on certain traffic moving either eastbound or westbound between points on the Union Pacific or its connections in Idaho, Montana, Oregon or Washington, on the one hand, and points east of the Missouri River, on the other hand. This is an arrangement that has been in effect for approximately thirty-five years and was approved by the Commission in "Lumber Rates from Oregon and Washington to Eastern Points, 31 ICC 191."

That proceeding is frequently referred to as the Colorado Gateway Case. In its report, the Commission called attention to the fact that the Union Pacific afforded the shortest route between the Missouri River and its stations in Oregon and Washington and that is also true of Idaho.

The Commission also commented on the fact that because of its single-line haul to or from the Missouri River the Union Pacific affords the better service. The Union Pacific continues to afford that better service today because of our shorter distance and single-line haul.

The following tabulation shows a comparison of the distance between Omaha or Kansas City, on the one hand, and McCammon, Idaho, on the other, via the Union Pacific [fol. 1192] single-line and via Union Pacific through Denver in connection with either the CB&Q R. R., CRI&P R. R. or AT&SF Ry.:

Via	Miles Between McCammon, Idaho and Omaha	Kansas City
Union Pacific	1036	1153
UP, Denver, CB&Q	1160.3	1286.7
UP, Denver, CRI&P	1204.2	1257.6
UP, Denver, AT&SF		1344

To or from all points on the Union Pacific in Idaho, Montana, Oregon and Washington, the direct route of the Union Pacific from any Missouri River crossing is always one hundred miles and more shorter than via other prairie lines through Denver, thence Union Pacific.

Comparison of Revenue Carload Tonnage Handled by the Rio Grande During the Ten-Year Period from 1939 to 1948, Inclusive, with That Handled by the Union Pacific During the Same Period

Pages 9, 10 and 11 of Exhibit 25 show the total carload revenue tonnage handled by the Rio Grande and also by the Union Pacific during each of the ten years beginning with 1939 and ending with 1948. Also shown on these statements are the number of miles of road operated by each line during each of those years and the tons handled per mile of road operated. The tonnage figures are those reported by each line annually to the Interstate Commerce Commis-
[fol. 1193] sion, and they are reproduced each year by the Commission's Bureau of Transport Economics and statistics, in a statement called "Freight Commodity Statistics, Class I Steam Railways in the United States." The number of miles of road operated by each line are also figures reported to the ICC by each line and they have been taken from the Commission's statement called "Preliminary Abstract of Railway Statistics." These mileage figures do not include switch, industry, siding or passing tracks nor any duplication for double track main lines.

Page 9 shows tons of revenue freight originated by each line. The miles of road operated by the Union Pacific is approximately four times greater than that operated by the Rio Grande so it is to be expected that our total tonnage would be larger than the Rio Grande's. However, when reduced to tons originated per mile of road operated, the Rio Grande is in the lead by a substantial margin in each of the ten years except 1945 and 1946 when the Union Pacific was out in front by a small margin.

On the average for the ten-year period it shows the Rio Grande originated 2,872.8 tons per mile of road operated or 231.4 tons more than the average of 2,641.4 tons per mile of road operated originated by the Union Pacific.

Page 10 shows similar information for revenue tonnage received from connections and which either terminated on the Rio Grande or the Union Pacific or which was delivered
[fol. 1194] to other connecting lines, the Rio Grande or Union Pacific having acted as a bridge carrier. On this type of traffic, the Rio Grande is far in excess of the Union

Pacific in every one of the ten years shown. The averages for the ten-year period show that the Rio Grande handled 3,176 tons per mile of road operated or 1,212 tons more than the 1,964 tons per mile of road operated handled by the Union Pacific.

Page 11 shows similar data covering total tonnage handled by each line during the same ten-year period. Further explanatory statements seem unnecessary, but I do want to point out the figures for the ten-year average because of the marked advantage in favor of the Rio Grande. The average number of cars carried by the Rio Grande per mile of road operated was 169.6 or 25.5 cars more than the 144.1 cars per mile of road operated handled by the Union Pacific. On a tonnage basis the Rio Grande's ten-year average was 6,049 tons per mile of road operated, or 1,444 tons greater than the 4,605 tons per mile of road operated handled by the Union Pacific.

The figures in Table 6 on page 34 of ICC Statement 49100 are of inferest in connection with page 11 of my exhibit because they show that during the year 1948 the Rio Grande and Union Pacific each derived 44 percent of their gross freight revenues from tonnage classified as Manufactures and Miscellaneous.

Page 1, Section B, of Witness Earley's Exhibit No. 3 [fol. 1195] shows tons originated by the Rio Grande during the years 1925, 1930, 1935 and 1940 to 1948, inclusive. He also shows revenue received from that traffic and the ratio of both the tons and the revenue to the Rio Grande's total tons and freight revenue. He testifies (Transcript page 83 and so forth) that freight revenue from that traffic during recent years is a much smaller percentage of total revenue than it was some twenty years ago. It should be noted that although both tons originated and revenue derived therefrom have increased steadily since 1935, the percentage ratio to total tons and revenue is lower. It is obvious that the percentage figure is down because of the sharp and very remarkable increase the Rio Grande has and continue to enjoy in the traffic received from connections. As shown on page 11 of my exhibit, Rio Grande's total tons received from connections in the year 1940 was 3,964,586 tons while in the year 1948 it was 9,628,804 tons.

As shown on page 3 of Witness Hogue's Exhibit No. 1, a very large part of that phenomenal increase was due to receipts from the Southern Pacific and Union Pacific at Utah junctions. In the year 1940 Rio Grande's receipts from the Southern Pacific at Ogden were 707,581 tons while in the year 1948 they were 1,793,239 tons, an increase of over 1,085,000 tons. In the year 1940 Rio Grande's receipts from the Union Pacific at Utah junctions were 94,415 tons, but in 1948 they increased almost a million tons to 1,086,182 tons.

[fol. 1196] Depressed Level of Joint Rates in Which the Rio Grande Seeks to Participate

As previously brought out, the primary objective of the Rio Grande in this proceeding is to have the joint rates applying between Washington, Oregon, Idaho and Montana, on the one hand, and points east of the vertical line running from just west of El Paso to the Canadian border, as shown on the map, page 3 of my exhibit, on the other hand, made applicable with it via Ogden, Utah, so that the Rio Grande may receive a haul for the entire length of its line.

It demands that the Commission order the Union Pacific to establish these joint rates via Ogden regardless of the fact that the routes with the Rio Grande would on the average be about 200 miles longer than those presently in effect on ninety percent and more of the shipments involved.

The Rio Grande also disregards the fact that over a long period of years it has not only originated a greater number of tons per mile of road operated than has the Union Pacific but it has also handled a much greater volume per mile of road operated as an intermediate or bridge carrier than has the Union Pacific.

A third and an important feature which the Rio Grande also ignores and about which I will now testify is the generally depressed level of the joint rates in which it seeks to participate. The rates applying to and from the terri-
[fol. 1197] tory Boise, Idaho, and west are generally referred to as transcontinental rates because they are subject to the jurisdiction of the Trans-continental tariffs. Rates to and from points in Idaho east of Boise are almost invariably lower than those to and from points west thereof,

and that is largely due to Union Pacific's efforts to give Idaho a rate structure that gives due consideration to the difference in distance and, so far as outbound farm products are concerned, gives Idaho a rate structure of material benefit to it in reaching the large consuming area Missouri River and east in competition with local growers and those in other large agricultural districts much nearer those markets.

Exam. Mullen: Just a moment. We will recess now for ten minutes.

(Short recess taken.)

Exam. Mullen: Are you ready to proceed?

The Witness: It has long been conceded by the Commission and others who are well informed about the railroad freight rate structure in the United States that rates applying to transcontinental traffic are different than those applicable east of the Rocky Mountains or locally in the Mountain-Pacific territory. Practically all transcontinental traffic, both carload and less than carload, has always moved at commodity rates, not because of any inequities in the class rate structure but because water competition has [fol. 1198] required special treatment of rates on each individual commodity in a manner not ordinarily present in the making of rail freight rates.

Also, there has been and still is a huge production of agricultural and forest products in the West Coast states which is far removed from the large consuming markets in the eastern part of the United States and must be transported at very low rates to permit sale in competition with local and other production much nearer the market.

Were it not for these competitive conditions, there is nothing that would warrant a rate structure on transcontinental traffic lower than that prevailing in other territories. On the contrary, the more difficult and expensive operating conditions in the intermountain territory would justify a higher rate level on transcontinental traffic. One very important consideration in the maintenance of this depressed transcontinental rate structure is the fact that the traffic can and does for the most part move via the shortest routes to final destination and is long haul traffic for the Pacific Coast terminal lines.

Mr. Quirk: Mr. Examiner, this comes mighty close to being conclusions and argument.

Exam. Mullen: Yes, some of it is, but we will let it go in.

Mr. Collins: Mr. Examiner, may I remind the Examiner and Mr. Quirk, although it is not necessary to remind the [fol. 1199] Examiner, that this gentleman is testifying on thirty years of experience, and is qualified as a rate expert, and as such is entitled to express his views based on his knowledge. He is obliged to draw some conclusions and he is permitted to.

Exam. Mullen: I have already ruled.

Mr. Quirk: I don't object. I want to object formally as to any conclusions as distinguished from factual statements and comments.

Exam. Mullen: That objection will be noted.

The Witness: In American Steel and Wire Company v. Alton Railroad Company, et al., 273 ICC 719, decided March 15, 1949, the Commission pointed to the depressed condition of the west-bound transcontinental rates on iron and steel articles due to water competition. Similar acknowledgements by the Commission relating to transcontinental rates, both eastbound and westbound, on numerous other commodities can be found in many other ICC reports in formal proceedings decided by it.

On the whole, the rate structure in which the Rio Grande seeks to participate is too low to be shared with the Rio Grande when, as already shown, the additional routes that would enable that line to participate involve unnecessary and wasteful transportation of 200 miles and more.

An exhibit of Witness Webb——

Mr. Quirk: Mr. Examiner, can it be understood I objected to all these kind of conclusions and arguments with- [fol. 1200] out repeating my objection each time as being incompetent.

Exam. Mullen: Yes, that is understood.

The Witness: An exhibit of Witness Webb——

Exam. Mullen: Just a moment. Has Witness Webb testified?

The Witness: No, sir.

Mr. Collins: He is going to testify next.

Exam. Mullen: Then we will strike that next sentence out.

Mr. Collins: All right.

Exam. Mullen: All right, go ahead.

The Witness: Before passing on to a more detailed discussion about the low level of the rates on some of the more important individual commodities, I want to say at this point that it is because of the depressed condition of the rate structure, the circuitous nature of the joint routes sought by the Rio Grande, the greater transportation costs over the additional mileage and added interchanges, the possible serious effect upon our revenues and the inherent right of every carrier under the Interstate Commerce Act to the longest haul it can get on all traffic in which it can participate that prompted the Union Pacific to refuse the Rio Grande's request made just before filing the complaint in this case that we voluntarily open the Ogden gateway.

Rates on Potatoes

Column 2, page 4 of my exhibit, shows that during the year 1948 the eastbound movement via the Union Pacific of [fol. 1201] Products of Agriculture from Oregon, Washington and Idaho amounted to 50,349 carloads. Of that total, 28,072 carloads or 55.7 percent consisted of potatoes, 25,870 cars having originated in Idaho and 2,202 carloads in Oregon and Washington. The potato rates from Idaho to the middlewest, east and south have always been on a very low basis for the express purpose of assisting the growers there in marketing their crops in the large consuming areas in competition with production in Maine, New York, Michigan, Wisconsin, Minnesota, the Dakotas, Nebraska and Colorado.

The rates from Idaho have for a long period of years been related to those in effect from the Greeley district in northeastern Colorado. Although the haul from Idaho involves added transportation ranging from 500 to more than 800 miles, the Union Pacific has always insisted that the very low differentials which presently range from 12 to 22 cents per 100 pounds be maintained. One important consideration in maintaining these low rates was the fact that we could and did receive our long haul to Colorado and Missouri River junctions. The Commission itself has recognized the very low level of these rates but has refused to

require a greater spread over Colorado in formal proceedings where the Union Pacific has been called upon to defend them because the Union Pacific has pleaded that the low rates were necessary to enable Idaho to reach the center of population in the eastern half of the United States [fol. 1202] in competition with growers in other areas. See Greeley Commercial Club v. C&S Ry. Co., et al., 53 ICC 66.

In a later proceeding, Chamber of Commerce of Greeley, Colorado v. Union Pacific Railroad, et al., 210 ICC 753, the complainant alleged among other things that rates on potatoes from Idaho Falls were relatively lower than those from Greeley and were preferential of shippers in Idaho and prejudicial to shippers in Colorado.

Exam. Mullen: Now, just a moment. I notice the rest of this is a discussion of that case. I don't think that is necessary to put in this man's testimony. The report in that case will speak for itself.

Mr. Collins: Do you mean he can not point to the Commission's holding as confirming his own expert views?

Exam. Mullen: Yes, that is exactly what I mean.

Mr. Collins: Well, he cites a case on the next page. I don't understand quite, Mr. Examiner, what you think should be done with it.

Exam. Mullen: I think it is sufficient that the witness cite the cases, but not comment on what the Commission has found in those cases. I notice down at the middle of page 39, the sentence beginning "The very narrow spread," that seems to me is testimony of this witness, and I think you should continue from there. He can cite these cases if he desires, but the point is, those decisions speak for themselves.

[fol. 1203] Mr. Collins: Mr. Examiner, I can't see any harm in his indicating what the Commission held, because it ties into his testimony, and it shows the confirmation of the views, or maybe the basis part lies for the views expressed. Would you cut out from the beginning there where he says: A Witness, on page 38?

Exam. Mullen: What page?

Mr. Collins: Page 38.

Exam. Mullen: That is right; cut that out.

Mr. Collins: "A witness for the Union Pacific testified in that proceeding——"

Exam. Mullen: That is right.

Mr. Collins: Cut that out down to where it says on page 39: Another and more recent case——

Exam. Mullen: Yes, he can cite that next case.

Mr. Collins: All right, start reading there on page 39.

The Witness: With the word: Another?

Exam. Mullen: "Another more recent case," and so forth.

The Witness: Another and even more recent case in which the Commission has dealt with the level of the rates on potatoes from Idaho and Greeley is Idaho Public Utilities Commission v. Alton R. R. Company, et al., 251 ICC 93. In dismissing that complaint the Commission called attention to the fact that the assailed rates were upon relatively lower levels than rates in effect generally on similar agricultural products and stated specifically that the [fol. 1204] established differential basis, southern Idaho that are much lower than they would be if made upon the same basis as the rates from Greeley. The very narrow spread in rates Idaho over Colorado remains in effect today, and page 12 of my exhibit has been prepared for the purpose of showing the present rate adjustment. The statements are largely self-explanatory, but I want to make a few brief comments about some of the figures.

Rates from Monte Vista, Colorado, representing a producing area served only by the Rio Grande, and from the Greeley, Colorado, area are generally the same. Salt Lake City, which is representative of Utah shipping points, has rates ranging from 12 to 21 cents higher than Greeley and Monte Vista although the added distance to destination is generally more than 500 miles. The differential Salt Lake City over Greeley was at one time a flat 12 cents to all destinations, but it varies now because of differences in general rate increases and so far as destinations east of Chicago are concerned it also varies because of rate increases made from the Greeley district in 1935 following the sixth supplemental report of the Commission in Western Trunk Line Class Rates Docket 1700, part 2, 204 ICC 595, while related increases were not made from Utah and Idaho. Rates from Idaho Falls are on the Utah basis although the distance to market is approximately eighty miles further

than from Utah, and the Nampa area in the far western [fol. 1205] part of Idaho has rates only three or four cents higher than Idaho Falls, although it involves added transportation of over 200 miles more than from Idaho Falls. The differential Nampa over Greeley for added distances of about 800 miles was at one time a flat 15 cents to all destinations, but it also varies now for the reasons previously explained in connection with the differential from Utah. The rate structure on potatoes from the shipping areas farther west are low because of the low basis the Union Pacific has found it necessary to maintain for the shippers in Idaho.

The rates on potatoes from Idaho and also from shipping points in Oregon and Washington to the territory east of the Rocky Mountains are too low to be applied via the Ogden gateway over routes that involve additional interchange points, other lines among which to divide the revenue, additional circuitous transportation of 200 miles and a short haul for the Union Pacific that supplies the equipment and must absorb the high gathering costs to be testified to by Witness Webb. The opening of the Ogden gateway on this traffic and movement of a substantial part of the tonnage via the Rio Grande can and will in my opinion, lead to a generally higher level of rates not only on potatoes but also on other agricultural products of Idaho, Oregon and Washington which rates I shall show are also on a depressed level.

I make reference to this possibility of increased rates [fol. 1206] knowing very well that it will make it more difficult for the Idaho growers to compete in the middlewest and eastern markets with the ultimate tendency to dry up the traffic to some extent. On the other hand, the Union Pacific cannot possibly maintain its some 3,000 miles of expensive branch lines and its present standards of maintenance and service in Idaho, Oregon and Washington on the meager revenues we could expect to receive for the short haul via the Ogden gateway.

Exam. Mullen: Just a minute. This next sentence, I think, should come out. That is argumentative.

Mr. Collins: All right.

Exam. Mullen: Strike that out.

Mr. Quirk: I suppose that broad objection of mine would apply on the other hand, if that is their conclusion. It is more or less argument.

Mr. Collins: Well, you already have that arranged for.

Exam. Mullen: That is right.

The Witness: Rates on Dry Onions.

The movement on dry onions from Idaho, Oregon and Washington during the year 1948 to destinations east of the Rocky Mountains amounted to 1,774 carloads, 1,245 of which originated in Idaho. The balance originated in Oregon and Washington but practically all from eastern Oregon in the area subject to the same low joint through rates as apply from Nampa and Boise, Idaho.

[fol. 1207] Over a long period of years the rates on dry onions have been closely related to those on potatoes, and my testimony about the low rates on potatoes applies with equal force to rates on dry onions. The several ICC cases I referred to involved onions as well as potatoes, and the Commission's remarks about the low level of the rates related to both commodities.

Page 13 of my exhibit contains a statement of the present rates from and to representative origins and destinations. The rates differ somewhat from those on potatoes, but the comparisons that I have made are the same; and they show that distance considered, rates from Idaho, Oregon and Washington are substantially lower than those from Monte Vista and Greeley, Colorado.

Rates on Lettuce and Other Fresh Green Vegetables

An additional movement of Products of Agriculture from Idaho, Oregon and Washington during the year 1948 was 2,000 carloads of fresh green vegetables. Of these 2,000 carloads, 1,548 contained lettuce forwarded from the Boise Valley, including eastern Oregon points such as Ontario and Nyssa. The rates on lettuce and other fresh vegetables grouped therewith from Idaho and eastern Oregon have, like those on potatoes, been made with relation to the rates from Colorado, and rates on green vegetables from both Colorado and Idaho have for many years been made with relation to those on potatoes. (Lettuce and other vege-

[fol. 1208] tables from Idaho and Oregon, 228 ICC 572-577.

and 253 ICC 143-146.) Therefore, all that has been said about the low level of the rates on potatoes and onions applies with equal force to rates on lettuce and other green vegetables. In the two proceedings just referred to, the Commission stated specifically that rates on lettuce from Idaho and Oregon were considerably less than reasonable maxima. The narrow spread Idaho and eastern Oregon over Colorado also remains in effect today on green vegetables, and the statement on page 14 of my exhibit has been prepared for the purpose of showing the present rate adjustment. That statement is self-explanatory, and further comments and comparisons seem unnecessary.

Rates on Deciduous Fruits

There is a rather heavy production of deciduous fruits in Idaho, Oregon and Washington, a large part of which moves to the large consuming markets in the east and middle-west. Fruits moving in substantial quantities from that area via rail are apples, pears, fresh prunes or plums and some apricots, peaches and cherries. Having had personal contact over a long periods of years with the actual making of transcontinental rates on all commodities, I have personal knowledge of the fact that the railroads have made every effort to hold the rates on these commodities to the very minimum. Apples move in greater quantities than the other fruits mentioned, large orchards being located in the Yakima-Wenatchee, Washington, area served [fol. 1209] by the NP Ry., GN Ry. and UP R.R. A brief history of the rates, reference to the economic ills of the industry and its efforts to survive as well as reference to the many contributions in the way of reduced rates on the part of the rail lines to help save the industry are contained in the Commission's report covering Apples, Transcontinental, Eastbound, 258 ICC 177. Although a slight restoration of part of the many reductions made through the years was allowed in that proceeding, the rates are still materially below a maximum reasonable level.

Fresh prunes, commonly known as Italian plums or prunes, also move eastward in fairly substantial quantities from the Milton-Freewater, Walla Walla District in Oregon and Washington and from the Boise-Payette area in south-

western Idaho. Rates from both areas were under attack in Idaho Public Utilities Commission v. A&R R.R. Co., et al., 246 ICC 183, and related cases.

In discussing those complaints, the Commission noted and commented on the fact the rates were lower than those prescribed or found reasonable by it for application on deciduous fruits. In California Growers & Shippers Protective League v. SP Co., et al, and related cases, 185 ICC 299, decided in June, 1932, the Commission found a rate of $1.73 per 100 pounds to be reasonable for application on all deciduous fruits (except apples) from Oregon, Washington, Idaho and California to transcontinental destina-
[fol. 1210] tions. That rate, plus the general increases authorized by the Commission subsequent to 1932, would now be $2.24, and that figure is materially higher than the present rate on prunes and other deciduous fruits moving from Oregon, Washington and Idaho to points east of the Rocky Mountains. The statement on page 15 of my exhibit shows a comparison of present rates on fresh prunes, pears and other deciduous fruits, except apples, with the prescribed rate of $1.73 which is now $2.24.

Rates on Lumber from Idaho, Oregon and Washington

There are thee major sources of timber supply in the Pacific Northwest and California. West of the Cascade Mountains where fir predominates, east of the Cascades where pine predominates, and the northern California area where there is a large production of redwood tributary to the ocean and heavy production of redwood tributary to the ocean and heavy production of pine inland. Hemlock, spruce and cedar are found in smaller quantities both east and west of the Cascades. (210 ICC 317-319) Lumber and other forest products from the west have always been a major source of tonnage and revenue for the transcontinental lines, but being far removed from the center of population it was necessary from the beginning that it be transported eastward at low rates that would permit sale in competition with local lumber and that produced in other areas, principally the southeast.

[fol. 1211] Prior to 1920 practically all west coast lumber marketed in the eastern part of the United States moved

overland, but thereafter the trend shifted rapidly to the intercoastal steamship lines operating through the Panama Canal. (210 ICC 317-319) That competition brought about some rather sharp reductions in the all-rail rates. The eastbound transcontinental rate structure on lumber in effect today reflects not only the effects of water competition but also the commercial competition that originally made it necessary to carry low rates from the west. Evidence of the depressed level of the lumber rates from the west can be found in the Commission's report covering lumber from the Pacific Coast to eastern points, 210 ICC 317, and in the reports covering many formal cases referred to therein. It is interesting to note from an examination of I.C.C. Freight Commodity Statistics Statement No. 49100 that during the year 1948 both the Rio Grande and Union Pacific derived approximately ten percent of their gross freight revenues from lumber and other forest products which represented approximately nine percent of total tonnage carried for the Rio Grande and ten and one-half percent for the Union Pacific.

The Rio Grande now participates in through routes and joint rates on equal terms with all other carriers on lumber from all of California and the heavy producing territory in Oregon and Washington west of the Cascade Mountains. [fol. 1212] From the interior territory east of the Cascades the rates are generally lower than the depressed rates from the Coast group, and they are too low to be applied via additional circuitous routes through Ogden with the Rio Grande. The rates from the interior origin groups in Oregon, Washington and Idaho, differentially lower than the rates from the Coast group, were fixed many years ago by the Commission in Potlatch Lumber Company, et al, v. Northern Pacific Ry. Co., et al, 14 ICC 41, and have quite generally been observed since that time.

Low Rates on Other Commodities—Eastbound

Other commodities of importance moving from Idaho, Oregon and Washington to points east of the Rocky Mountains are:

Grain and Grain Products
Newsprint and other paper articles

Woodpulp
Furniture
Sugar
Canned Food Products
Smelter Products

Rates on grain and grain products are the result of the Commission's order in Western Grain Rates Case, Docket 17000, Part 7, 205 ICC 301, and Western-Southern Grain Rates Case, Docket 17000, Part 7-A, 259 ICC 629. Both proceedings were general investigations by the Commission as directed by Congress in the Hoch-Smith resolution requiring the Commission to establish the lowest possible lawful rates compatible with the maintenance of adequate [fol. 1213] transportation service.

Our heaviest movement of newsprint paper from the northwest is to Colorado where an extremely low rate has been published because of the competition western manufacturers encounter from those located in the north-central states of Minnesota, Wisconsin and Michigan. Trans-continental eastbound rates on other paper articles are influenced by the same competition.

Rates on woodpulp are extremely low, both for the purpose of meeting intercoastal competition and foreign imports, especially from Sweden.

Rates on furniture are depressed both by water competition and the competition the western manufacturer encounters from those in the middlewest and the east. Over a long period of years the rates on sugar from Idaho, Oregon and Washington have been based on very low differentials over Colorado, and the rates from Colorado itself to middle western markets such as Chicago, St. Louis, and so forth have been held down because of low rates to those markets from the east and south. As a matter of fact, the rates from the west to Chicago and Mississippi River points are so low that we obtained Fourth Section relief from the Commission in order to avoid applying those same routes at intermediate points.

Rates on canned food products, fruit, vegetables, milk and fish are depressed by every conceivable kind of competition such as water (intercoastal and barge), truck and commercial. For many years it was practically impossible

[fol. 1214] to obtain any of the port-to-port business via the overland routes, and the many reductions made in the rates on canned goods were directed toward holding the business to and from the interior.

The low level of the rates on copper, lead, zinc and other non-ferrous smelter products were dealt with by the Commission in another Hoch-Smith proceeding, Docket 17000, Part 12, and related cases, 204 ICC 319. The general question in that case was not whether the rates were too high but whether they were too low. The finding was that the rates were less than maximum but not less than minimum reasonable rates, but no increases were required because of existing conditions in the metal industry in 1934 at the time the case was decided. Those rates are still on a very low basis.

Alleged Violation of Section 1(4)

Complainant, the Rio Grande, alleges, among other things, that the Union Pacific and other defendants are in violation of the provisions of Section 1, paragraph 4, of the Interstate Commerce Act because we refuse to join with the Rio Grande in establishing competitive joint freight rates with it via Ogden, Utah.

At the initial hearing the Rio Grande's Witness Earley stated that the level of the going through competitive freight rates which they are attempting to have made applicable over the Rio Grande is in no way assailed and that if any rates are assailed it is the combination rates that [fol. 1215] apply on shipments moving via Ogden with the Rio Grande.

Counsel for complainant then proceeded to state definitely that the combination rates are alleged to be unreasonable, and I assume complainant believes them to be unreasonable to the extent they exceed the joint rates applying via the route of the Union Pacific through Wyoming.

In Section 1 of Exhibit 3, Witness Earley makes numerous comparisons of the through rates based on combinations over Ogden that are applicable on shipments routed via the Rio Grande, with the one-factor through rates that apply via the route of the Union Pacific through Wyoming. He has also shown the Rio Grande's rates from or to Ogden,

Utah, and elsewhere in his exhibit the factor or rate applying via the Union Pacific to or from Ogden. The Commission should take note of the fact that the combination rates applicable via the route through Ogden are less than the aggregate of the present local rates because those combinations are arrived at by first combining the old basic locals to and from Ogden and then adding a single increase as provided for in Tariffs X-162, X-166 and X-168 series, Agent L. E. Kipp's ICC Nos. A-3706 and A-3728.

I find no allegation in the complaint that any of the local factors to and from Ogden are unreasonable or otherwise unlawful, and although the combination rates are alleged to be unreasonable I have been unable to find in the record any evidence of the type usually offered by [fol. 1216] complainants in formal proceedings before the Commission to support such allegations.

Mr. Quirk: Mr. Examiner——

Exam. Mullen: Yes, I have been reading ahead on it.

Mr. Quirk: I object to that statement. If he couldn't find it, I might be able to find it, you might be able to find it.

Exam. Mullen: That is true.

Off the record a moment.

(Discussion held off the record.)

Exam. Mullen: On the record.

The Witness: In section J of Exhibit 3, Witness Earley shows numerous car mile and ton mile returns both under the present and sought rates via the through routes with the Rio Grande, but his testimony about that section is to the effect that it is intended to prove that the returns under the one-factor joint rates via the longer routes of the Rio Grande would not be unreasonably low. Because of the complete absence of testimony or exhibits relating to the alleged violation of Section 1, it seems unnecessary to deal further with that phase of the complaint.

The situation complained about by the Rio Grande of higher through rates via the route through Ogden than via routes of the Union Pacific through Wyoming is no different than that brought about by the publication of specific routing by any other railroad in any tariff applying [fol. 1217] anywhere in the United States. Practically all tariffs carry such specific routing, and combination rates

apply in all instances where a shipper elects to use different routes than those specified in the tariffs. All tariffs covering a large area contain not only specific routing but many individual lines' exceptions as well. The transcontinental tariffs applying as they do to cross-country shipments are subject to both the specific western gateway routes in the transcontinental territorial directories and also to many pages of specific limitations published by and for individual lines in each of the rate tariffs.

Exam. Mullen: Just a moment, please. All of that is argumentative. I don't see any value in it.

Mr. Collins: How far?

Exam. Mullen: Just the "If the higher combination through rates complained about by the Rio Grande in this proceeding" and so on, that sentence, and the next sentence, and the first paragraph on page 52.

Mr. Collins: All right. Where did you start cutting it out?

Exam. Mullen: I started cutting it out on the middle of page 51, beginning with the sentence: "If the higher combination through rates complained about—" the balance of that page and the first paragraph of page 52.

Mr. Collins: All right.

The Witness: I have previously discussed the depressed level of the rate structure that the Rio Grande seeks to [fol. 1218] have made applicable via the longer routes through Ogden, but I would like to make a few additional remarks about it because what I have said is rather forcibly confirmed by some of the rate statements in Section I of Witness Earley's Exhibit 3. On page 2 of Section I he shows Rio Grande's rates on apples from Ogden to fourteen representative destinations Denver and east. To all destinations except Denver the one factor rates from Boise and Payette are the same as from Ogden despite the much greater distance from Boise and Payette. The rate from Ogden is itself depressed for to Chicago, for example, it is only 21.2 percent of the first class rate of $6.66 per cwt., published in Agent Kipp's Tariff 350-B, ICC A-3202, and that first class rate was prescribed by the Commission in Bintz Co. et al, v. A&S. Ry. Co., et al, 216 ICC 481 and 218 ICC 793.

On pages 3 and 4 of Section I of exhibit 3, witness Earley confirms what I have said about the low level of the rates on prunes, the rates from Nampa, Idaho, and in many cases even Milton, Oregon, being the same as from Ogden.

Pages 5 and 6 of Exhibit 3 show that rates on dried beans and peas from Rexburg and Twin Falls, Idaho, and Armstead, Montana, are the same as from Ogden, and those rates from Idaho are substantially less than prescribed by the Commission in Public Utilities Commission of Idaho v. Oregon Short Line R. R. Co., et al, 181 ICC 731. Rates on lettuce from Wilder and Nampa, Idaho, and Nyssa, Oregon, on page 7 of exhibit 3 are only three cents per 100 [fol. 1219] pounds higher to Chicago, New York and many other destinations than rates from Ogden on page 8, Section I, of Exhibit 3. The rates on sugar on page 9 from Idaho points are the same as from Ogden and other Utah shipping points, and Nyssa, Oregon, is only five cents higher than Ogden.

Pages 13 and 14, Section I, of Exhibit 3 show that rates on potatoes from Malad, Logan and Idaho Falls are the same as from Ogden.

It seems unnecessary to point out more of the almost endless number of situations which prove the low level of the eastbound rates in which the Rio Grande seeks to participate. Beginning on page 33 of Section I of Exhibit 3, Witness Earley makes a comparison of a large number of the single factor westbound rates now applicable via the Union Pacific route through Wyoming with the combination rates applying via the Ogden route with the Rio Grande. I have already testified in a general way about the depressed nature of those rates, and Witness Earley's showing confirms that fact.

Note, for example, that rates on iron and steel articles (page 33, Section I, Exhibit 3) from all points Missouri River and east to Boise are the same as to the ports of Seattle and Portland. In other words, Boise and other inland points feel the effect and obtain the benefit of the water-compelled rates to the ports. Even Ogden (page 34, Section I, Exhibit 3) has the same rates as the ports in [fol. 1220] certain instances. As previously stated in my earlier testimony, the Commission has recently recognized the depressed nature of the westbound transcontinental

rates on iron and steel articles in American Steel and Wire Company v. Alton R.R. Co., et al, 273 ICC 719. Other rate exhibits of Witness Earley covering agricultural implements, canned foods products, alcoholic liquors, tires and tubes, petroleum products, chemicals, roofing and building materials and many others similarly confirm the depressed and consequent blanket nature of the rate structure.

Joint Rates Via Ogden to and From Utah Common Points

My prior testimony deals with the major demands of the Rio Grande which involve publication of single-factor joint rates via Ogden on traffic to or from the territory east of the Rocky mountains. The Rio Grande also demands such joint rates and routing via Ogden on traffic between Utah common points, on the one hand, and stations on the Union Pacific and its connections in Utah north of Ogden and stations in Idaho, Montana, Oregon and Washington, on the other hand. It points to the joint rates we have with the Bamberger Railroad via Ogden and complains of our unwillingness to join in similar joint rates with the Rio Grande. The Bamberger Railroad operates between Ogden and Salt Lake City, Utah. It also serves intermediate points, most of which are also served by both the Rio Grande and Union Pacific.

Our joint rates and through routes with the Bamberger [fol. 1221] have been in effect for many years, and our relations with that line are no different than those between the Bamberger and the Rio Grande.

It is a fact that we have through single-factor rates between stations in Idaho, Montana, Oregon and Washington, on the one hand, and stations in Utah south of Ogden to and including Salt Lake City, on the other hand, which will apply via Ogden with the Bamberger but not with the Rio Grande. It is also a fact that the Rio Grande has through single-factor rates between local stations on its line in Colorado, on the one hand, and stations in Utah, Salt Lake City and north to and including Ogden, on the other hand, which will apply via Salt Lake City with the Bamberger but not with the Union Pacific. See, for example, Rio Grande Tariff 7000-A, ICC No. 699, containing class rates and classification exceptions applying from Grand June-

tion and other stations in Colorado to Ogden and other points in Utah on the Bamberger. See also Rio Grande Tariff 6853-D, ICC No. 824, which also contains joint rates with the Bamberger but not with the Union Pacific.

The effect of granting the Rio Grande's demand for joint rates via Ogden with the Union Pacific would be to accord that line an opportunity to serve territory that we adequately and efficiently serve ourselves while at the same time the Rio Grande refused to be as liberal with the Union Pacific to and from its local territory in Colorado.

[fol. 1222] The Bamberger now handles some business with the Union Pacific that the Rio Grande could handle, and it probably also handles some business with the Rio Grande that the Union Pacific could handle. Publication of a new route via the Union Pacific with the Rio Grande is not necessary so far as the public is concerned, but it would establish a new route that could and probably would deprive the Bamberger of some business it now handles.

Exam. Mullen: Mr. Quirk?

Mr. Quirk: I want to renew my objection and remind you of the objection. That goes to the witness saying it is not necessary as far as the public is concerned.

Exam. Mullen: That is the opinion of this witness, and is stated as his own opinion.

The Witness: The Rio Grande is also seeking joint rates via Ogden between Utah common points south of Salt Lake City, on the one hand, and points on the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon and Washington, on the other hand. This also involves movement to and from many points in Utah that are adequately and efficiently served by the Union Pacific, and the public in that area of Utah could not be more economically or efficiently served with additional joint rates with the Rio Grande via Ogden.

Some joint rates are now in effect with the Rio Grande to or from that area because it has been our policy over a [fol. 1223] long period of years to join with the Rio Grande in through routes and joint rates on specific commodities when and where it was apparent that the Union Pacific alone could not provide service equal to that via the joint through route with the Rio Grande. Paragraph B, page

2, Section 3, of Witness Earley's Exhibit 3, refers to a few tariffs containing such specific joint rates with the Rio Grande. There are other tariffs containing additional joint rates on other commodities.

Transit Privileges

A large majority of the shipper witnesses offering testimony at the initial hearing in support of the Rio Grande's demand for application of joint rates via Ogden, Utah, made it clear that their interest was limited to having the new route available for one or more transit operations at points on the Rio Grande.

Although transit privileges of various kinds are quite well embedded in the freight rate structure of the railroads throughout the United States and in a number of instances they have been said to be a commercial necessity, it seems appropriate and I think important that the Commission consider the reasons why the railroads originally granted these concessions and why after once being established they continued to expand and additional and different privileges were granted.

Exam. Mullen: Off the record.

(Discussion held off the record.)

[fol. 1224] Exam. Mullen: On the record.

The Witness: A transit privilege——

Mr. Quirk: I notice the comment in the third paragraph under transit, on page 57: "A transit privilege is in the nature of an authorized rebate"——.

Exam. Mullen: Let it be copied in.

The Witness: A transit privilege is in the nature of an authorized rebate to the shipper because it results in the application of something less than the local rates that would otherwise be applicable on the two separate shipments to and from the point where the transit privilege is in the nature of an authorized rebate to the shipper because it results in the application of something less than the local rates that would otherwise be applicable on the two separate shipments to and from the point where the transit privilege is taken.

In B. S. Crews v. The Richmond and Danville Railroad Company (1 ICC 401) relating to transit privileges on grain, the Commission said they were the result of a desire of the carriers transporting the wheat to millers at points on their line to control the transportation of the manufactured article and keep it from passing to the hands of competing transportation agencies.

In Duncan & Co. v. NC&StL Ry. (et ICC 477), the Commission states that about 1879 the NC&StL inaugurated the practice of rebilling or reshipping grain at Nashville [fol. 1225] and that it was the first transit privilege permitted in the United States. The report in that proceeding states further that the privilege was established by the NC&StL Railway for the purpose of meeting competition of the boats on the Cumberland River. The present widespread use of transit on grain and grain products has grown from that initial arrangement, and as its value as a weapon in meeting competition became apparent it was applied to other commodities and for many purposes besides milling.

For example, the privilege of stopping cars to complete loading or partly unload was the exception rather than the rule in western territory in the early 1930's. During those depression years the trucks were each year taking an ever-increasing volume of the tonnage available for transportation in much smaller lots than rail carloads but at railroad carload rates or lower.

Effective October 15, 1932, carriers in Western Trunk Line Territory adopted widespread use of the privilege as a means of meeting that competition. Similar privileges became effective about that same time in Mountain-Pacific Territory. The truck competition and competition between the rail lines themselves brought about the publication of numerous out-of-line haul provisions so that important communities intermediate via one line and not another could be served on equal terms by both lines. A number of such out-of-line haul privileges are in effect on the [fol. 1226] Union Pacific in Utah and will be discussed later.

Much more could be said about the many other transit privileges that are in effect, and the underlying reasons

for them could be explained. That, however, seems unnecessary, but it is a fact that regardless of how all of these transit and out-of-line privileges originated and developed, the only possible incentive for a railroad to give a shipper a discount under the charges applicable to the separate movements to and from the point at which the transit privilege is accomplished is an anticipated improvement in net revenues to the railroad making the concession by securing an additional haul or a longer haul than it would otherwise have received. There is an expense attached to a transit arrangement not present in connection with separate movements in and outbound such as keeping records of the inbound and outbound movements, balancing the account and refunding a portion of the charges or splitting the bills. Hence, no railroad traffic officer would grant such an arrangement causing such extra expense if he did not believe that in so doing he would improve his company's revenue.

The carriers have always contended that transit privileges may be granted or withheld by them so long as no unlawful discrimination resulted therefrom. The Commission has quite generally agreed with that view and has, [fol. 1227] for the most part, refused to require the establishment or extension of transit privileges except where necessary to remove discrimination or undue prejudice.

The transit privileges discussed by the shipper witnesses testifying for the Rio Grande in this proceeding are already in effect on the Rio Grande in the tariffs enumerated in Section H of Witness Earley's Exhibit 3, and they can, for the most part, be used in connection with the present rates and charges applying via the routes through Ogden to or from Utah north of Ogden, Idaho, Montana, Oregon and Washington as well as in connection with the joint rates and through routes with the Rio Grande on traffic to and from the area west of the black line running from San Diego, California, to Vancouver, B. C. As early as 1922 in Beaver Sand Company v. Director General (66 ICC 285)——

Exam. Mullen: Mr. Quirk:

Mr. Quirk: I object to that.

Exam. Mullen. That statement is objectionable. Strike that, please, beginning with "Therefore," if you will.

don't understand why you have that in here, Mr. Witness. That is more argument. I think it should have been edited. The balance on sheet 60 and the part in 61 is objectionable. What do you wish to state, Mr. Collins?

Mr. Collins: I want to suggest to you before you make a ruling on this, in the Wool Rates Case, which rates involved [fol. 1228] a long and tedious history, Commissioner Patterson and Examiner Mattingly—I am not saying that they are right, or that you are wrong—let stand what you might call a recital of the history of those rates by Mr. Stilling, this same witness, through the citation and mentioning of what the Commission held, and while he wasn't trying to argue with anybody as to what effect the decision should have here, he pointed to them for the convenience of the Commission, and I should think this mere reference to these decisions, where the Commission has dealt with the spbject of a transit privilege, would be of convenience, and the Commission certainly in pursuance of the ruling you have made, that if they find anything argumentative under the citation of those decisions, they can ignore it. I have understood they have always done that. But the citation of the decision, it seems to me, is entirely appropriate.

Exam. Mullen: It is appropriate in brief, and not in testimony, Mr. Collins. I adhere to my ruling: that is objectionable, and will be stricken.

The Witness: Out-Of-Line Transit Privileges in Effect At Points on the Union Pacific Railroad South of Ogden.

I called attention to the fact that numerous out-of-line haul provisions have been established and that a number of such provisions were in effect at points on the Union Pacific in Utah. I would like to discuss a few of the more [fol. 1229] important ones to the extent that they may be applied in connection with traffic moving via the Union Pacific route through Wyoming to and from points in Utah north of Ogden, Idaho, Montana, Oregon and Washington. The privilege of diversion and reconsignment in transit is probably employed to a much greater extent than any other privilege so it seems appropriate to first discuss the out-of-line haul privileges applying in connection with diversion or reconsignment in transit.

Item 595, UP RR Tariff 6061-K, ICC No. 4965, provides

that fruit, melons and vegetables from points on the Union Pacific and its connections in Washington, Oregon, Idaho and Utah north of Ogden consigned to points south of Ogden, to and including Salt Lake City, may be diverted or reconsigned to points east of Ogden without additional charge for the out-of-line haul service.

Under the provisions of Item 160 of the same tariff, freight other than fruit, vegetables, grain, livestock, coal and coke, originating at Cheyenne, Wyoming, or points east or south thereof consigned to points south of Ogden, may, prior to passing Salt Lake City, be diverted to Ogden or beyond, including Utah north of Ogden, Idaho, Montana, Oregon and Washington.

No additional charges are involved for the out-of-line haul service. Item 165 provides that similar freight from points in Oregon and Washington consigned to points south of McCammon, to and including Sandy, Utah, 13 [fol. 1230] miles south of Salt Lake City, may be diverted without additional charge to points east of Ogden. Many similar privileges covering specific commodities and specific situations are published in other items of the same tariff. Liberal out-of-line haul privileges are also in effect in UP Tariff 6086-I, ICC No. 5146, covering transit stops for partial unloading or to complete loading. Item 635, for example, provides that carload freight for which transit privileges are provided may be taken to points south of Ogden, to and including Payson, Utah, 64 miles south of Salt Lake City, without additional charge for the out-of-line haul service. That rule covers traffic moving between Cheyenne, Wyoming, and points east or south thereof, on the one hand, and all stations north of Salt Lake City, including all of Idaho, except east of McCammon, Montana, Oregon and Washington, on the other hand.

Other liberal out-of-line haul privileges are in effect on this traffic on specific commodities as follows: Grain and Grain Products, Tariffs 7181-A and 7271-C, UP r.r. ICC Nos. 4886 and 5132; various commodities for different purposes such as storing, grinding, mixing, freezing, and so forth, in Tariff 213-Q, Agent L. E. Kipp's ICC No. A-3636; ore and concentrates, Tariff 6000-H, UP R.R. ICC No. 4981; various commodities, Tariff 7114, UP R.R. ICC 565 (LA&SL series); canned goods, Tariff 7180-H UPRR ICC 5050;

beans, peas and lentils, Tariff 7182-B, UPRR ICC 4798; [fol. 1231] dairy products, Tariff 7183, UPRR ICC No. 5158; livestock Tariff 7184-D, UPRR ICC No. 4893; potatoes, onions and other vegetables, Tariff 7185-K UPRR ICC No. 4975.

Other tariffs are in effect on vegetable oils, sugar, iron and steel articles, wool and mohair, lumber and casein. It is a rare occasion when we make additional charges over and above the line haul rate and the regular nominal charge for transit privileges. The Union Pacific has always given very sympathetic consideration to all requests from shippers or receivers of freight in Idaho, Montana, Oregon and Washington for transit privileges of all kinds at our stations in Utah, Ogden and south to and including Payson, Utah, and we will continue to do so.

On page 144 of the transcript covering the prior hearing in this proceeding, Witness Earley called attention to the fact that a sugar manufacturer with plants in northern Utah and Idaho also operated a plant at West Jordan, Utah, a local point on the Rio Grande, and that because of the absence of through rates via the Ogden gateway it was not possible to store in transit at West Jordan and move east on one-factor joint rates. Prior to the abandonment of the Salt Lake & Utah Railroad early in 1946 storage and other transit privileges were in effect at West Jordan on that line on sugar moving from Idaho and Northern Utah to the East via the Union Pacific.

In the disposal by auction of the physical properties of [fol. 1232] the SL&U R.R., the Rio Grande acquired ownership of certain segments of trackage serving the Utah-Idaho Sugar Company plant at West Jordan, and Traffic Manager H. W. Ansell of that company by letter dated August 23, 1946, addressed jointly to the Rio Grande and Union Pacific requested amendment of the tariffs to provide the same transit arrangements at West Jordan in connection with the Rio Grande that had been available under SL&U ownership and operation. The Union Pacific has always been willing to establish that arrangement, but the Rio Grande has been of the opinion that after sugar from Union Pacific points in northern Utah and Idaho reaches West Jordan it should move eastward via the Rio Grande and not be returned to the Union Pacific.

On December 15, 1946, Mr. W. M. Carey, General Freight Traffic Manager of the Rio Grande, addressed Mr. H. W. Ansell, Traffic Manager of the Utah-Idaho Sugar Company, and his letter reads in part as follows:

"In your letter of November 4 you state that the local Union Pacific people in Utah were agreeable to going along with this proposal. That is true; however, the proposal as presented to us would entail the publication of rates out of West Jordan on non-transit tonnage via D&RGW to Salt Lake City, thence UP to Colorado common points and east thereof, to which, of course, we are not agreeable. We feel we are entitled to our long haul on this traffic. Our counter [fol. 1233] proposal that rates be established from these certain Utah and Idaho origins, with transit at West Jordan and subsequent movement via D&RGW east thereof, has similarly been rejected by the Union Pacific.

Rates on Livestock

A number of shippers of livestock testified at the initial hearing beginning December 12, 1948, and urged the Commission to require the application of joint rates on livestock from Utah north of Ogden, Idaho, Montana, Oregon and Washington to Pueblo and Denver, Colorado, and points east thereof in order that they might avail themselves of the feeding or grazing in transit privileges in effect on the Rio Grande and in the Arkansas Valley east of Pueblo.

The rates on edible livestock in the western district, which, generally speaking, comprises the territory lying west of the Illinois-Indiana State line and the Mississippi River, are on the basis prescribed by the Commission in Livestock—Western District Rates, Docket 17000, part 9. That proceeding was one of a large number instituted by the Commission on its own motion pursuant to the Hoch-Smith resolution, 43 Stat. L. 801. That resolution is dated January 30, 1925, and provided in part that because of the then existing depression in agriculture the Commission should effect with the least possible delay such lawful changes in the rates as will promote the freedom of movement by common carriers of the products of agriculture, [fol. 1234] including livestock, at the lowest possible lawful rates compatible with the maintenance of adequate trans-

portation service. The Commission's report was released on June 8, 1931, and rates in compliance with its order became effective January 25, 1932, and with the addition of general increases authorized subsequent thereto are still in effect.

Exam. Mullen: Just a moment, you don't need the rest of that.

Mr. Quirk: Beginning with: The rates prescribed.

Exam. Mullen: Beginning with: The rates prescribed, and down to the quotation.

Mr. Quirk: That comes out?

Exam. Mullen: That comes out.

The Witness: A distance scale of rates was prescribed in that proceeding, and although certain grouping of origins and destinations was authorized the Commission required that the rate between any two points should be determined by the shortest route over which carload traffic could be moved without transfer of lading but that where such short routes would, within the meaning of Section 15(4) of the Interstate Commerce Act, short haul a carrier, they would not be required to maintain through rates via such routes but only over the routes which did not require short hauling a carrier. The rates on livestock between points in Idaho, Montana, Oregon and Washington, on the one hand, and Denver and Pueblo, Colorado, and all other points in western [fol. 1235] territory east thereof, on the other hand, are based on the short-line distances as required by the Commission's order, and those short-line distances embrace the long haul of the Union Pacific through Wyoming and most of Nebraska and Kansas.

In that proceeding, Docket 17000, Part 9, the Rio Grande insisted that because of its high operating costs it could not and should not be expected to maintain as low a level of rates as other lines in Mountain-Pacific territory. The Commission recognized the existence of that situation and because of it approved a basis of arbitraries for application at points on the Rio Grande. (176 ICC 1, 190 ICC 175, 200 ICC 535.) Those arbitraries range upward to 12 cents per 100 pounds and are in effect today not only on Rio Grande local movements covered by its Tariff 6776-E,

ICC 793, but also on joint line movements with the Union Pacific and other lines in Agent J. P. Haynes' ICC No. 1441.

Exam. Mullen: Just a moment. This next paragraph should come out. That is argumentative.

Mr. Collins: All right.

The Witness: How far?

Exam. Mullen: Including the first four lines on page 69.

The Witness: When the prescribed rates are applied via other than the short-line rate-making route for the purpose of giving the origin line the long haul as authorized by the Commission in its report in Docket 17000, part 9, the origin line may, by reason of having obtained its long haul, receive [fol. 1236] sufficient return to pay operating costs and still have a small margin of profit, but those same rates are much too low to be applied via new routes that not only short haul the origin line but involve expensive switching services at additional interchange points and, above all, are circuitous by ninety-five to more than 200 miles.

I have previously given some information regarding the character and volume of the total movement from and to Idaho, Montana, Oregon and Washington via the Union Pacific for the year 1948. The data is carried on page 4 of my exhibit and shows that the eastbound movement of animals and animal products in 1948 was 6,453 carloads, practically all of which terminated in the northern half of the eastern half of the United States. Of the total movement of 6,453 carloads, 5,094 originated on the Union Pacific in Idaho and Montana where we would receive an extremely short haul and very little revenue if movement was via Ogden with the Rio Grande.

Moreover, 61 percent of all traffic originating in Idaho is loaded at branch line stations and involves very high gathering costs such as will be testified to by Witness Webb.

Shipper Testimony About Rates and Routes on Potatoes and Onions.

Several shippers of potatoes or onions, or both, testified in support of the Rio Grande's request for joint rates via the Ogden route because they wanted to consign shipments

[fol. 1237] to points on the Rio Grande with the privilege of reconsigning to Denver or beyond. Grand Junction, Colorado, was mentioned as typical. They also wanted to be able to avoid what they called "pocket markets," and Wichita, Kansas, was mentioned as typical of such pockets.

Grand Junction, Colorado, is the largest local station on the Rio Grande. The 1940 census fixed its population as 12,479, and the Rand-McNally Company Atlas estimates the 1949 population to be 18,000. Omitting those Colorado and Utah Common Points served by the Rio Grande in common with other railroads, there is no other station on that railroad with population of even 10,000 people.

The Colorado Common Points are now adequately and efficiently served by the Union Pacific direct or with its connections at Denver, including the Rio Grande, via shorter routes than via Ogden with the Rio Grande, and from such as Idaho Falls and Pocatello, which are 185 miles and 134 miles, respectively, north of Ogden, the rates on potatoes and onions to Denver and east thereof are the same as in effect from Ogden.

For the purpose of again emphasizing the low level of the rates from Idaho, I call attention to the following relationship of the potato rates to first class:

[fol. 1238]

		From Idaho Falls Potato Rates			
		Via UP		Via Ogden & D&RGW	
		Rate	% of 1st	Rate	% of 1st
Denver, Colo.	409	69	16.9	108	26.4
Kansas City, Mo.	577	82	14.2	121	21.0
Chicago, Ill.	703	114	16.2	142	20.2

The potato rates are taken from Exhibit No. 3 in this proceeding. The first class rate to Denver, Colorado, is published in Union Pacific Tariff 3030-F, ICC No. 4749. The first class rates to Kansas City and Chicago are published in Western Trunk Line Tariff 350-B, Agent L. E. Kipp's ICC No. A-3202.

27.5 percent of first class has quite generally been considered a reasonable basis of rates on potatoes and has frequently been prescribed by the Commission for application in western territory.

In Idaho Public Utilities Commission v. Alton. R. R., 251

ICC 93, the Commission, on page 103 of its report, called attention to the fact that rates on potatoes from Idaho to all points in the United States were substantially less than 27.5 percent of first class.

ICC Freight Commodity Statistics Statement 49100 shows that 147,568 tons of potatoes, other than sweet, originated on the Rio Grande during the year 1948. I shall have to rely on the Rio Grande to tell the Commission how [fol. 1239] many of those tons were loaded at Grand Junction, Colorado, or other points in the vicinity of Grand Junction. However, the production in that area is substantial, and although actual production figures are not yet available, the U. S. Department of Agriculture, Office of Agricultural Economics at Denver, Colorado, on basis of preliminary reports, estimates it to have been forty-five million pounds or about 1200 carloads in the three counties of Mesa, Delta and Montrose. With that much local production and population of only 8,000, it seems doubtful that there is actually a market for Idaho potatoes at Grand Junction.

The so-called pocket market situation at Wichita, Kansas, and other points complained about by a few shipper witnesses does not actually exist. Rates on potatoes and other vegetables from Utah north of Ogden and from Idaho to Wichita, Kansas, are published in Western Trunk Line Tariff 297-B, Agent L. E. Kipp's ICC No. A-3511. They apply via the Union Pacific, Denver, Colorado, AT&SF; Union Pacific, Denver, Colorado, CRI&P; Union Pacific, Kanopolis or Salina, Kansas, MoPac; Union Pacific, Ellsworth, Kansas, StL-SF.

If movement into Wichita is via Denver and the AT&SF Ry., shipments may be diverted to any point on the Santa Fe System lines in Kansas, Oklahoma or Texas and to destinations on many other lines in Texas with which the Santa Fe makes connection. If movement into Wichita is via Denver, Colorado, and the CRI&P Railroad, shipments [fol. 1240] may be diverted to points on that line in Kansas, Oklahoma and Texas and to Little Rock, Arkansas, and Memphis, Tennessee, also to destinations on many other lines in Texas with which the Rock Island makes connection.

If movement into Wichita is via Kanopolis, Kansas and

the Missouri Pacific Railroad, shipments may be diverted to stations on Missouri Pacific System lines in Kansas, Oklahoma and Texas, also to destinations on many other lines serving Texas, Arkansas, Tennessee and Alabama, including such points as Shreveport and New Orleans, Louisiana, Mobile, Alabama, and Memphis, Tennessee.

If movement into Wichita is via Ellsworth, Kansas, and the StL-SF Railway, shipments may be diverted to all stations on that line and to stations on many connecting lines in Oklahoma, Texas, Arkansas, Louisiana, also to St. Louis, Missouri, and via St. Louis to the entire southeast or to Chicago and quite generally to other points in Illinois and to Iowa and other points in Western Trunk Line Territory. Routing via Ogden with the Rio Grande to Denver or Pueblo and its connections beyond would not give the shippers any greater outlet beyond Wichita, Kansas, than they have via routes presently in effect unless some of the prairie lines lines permitted expensive out-of-line hauls via Wichita.

During the year 1948, 5,295 carloads of potatoes moved out of Idaho into Oklahoma and Texas. The movement of [fol. 1241] dry onions amounted to 145 carloads. Many of those carloads undoubtedly did move through Wichita; and, if sufficient time was available to determine the actual Oklahoma or Texas destination of each car, it could be shown that most of them could have tried the Wichita market and then have been diverted to its actual destination at the through-one-factor rate.

Many additional cars terminating in the southeast and in Western Trunk Line Territory could also have tried the Wichita market via the route through Ellsworth with the StL-SF Railway.

The preceding remarks about routing on potatoes and onions to Wichita, Kansas, and points beyond also applies to lettuce and any other vegetable shipped out of Idaho.

Shipper Testimony about Rates on Livestock

Practically all of the livestock shipper witnesses testifying in support of the Rio Grande's request were interested in lower rates on so-called feeder stock that originates north of Ogden in Utah, Idaho, Montana, Oregon and Washington, stopped at points on the Rio Grande or at points in

the Arkansas Valley east of Pueblo to be fattened and then reshipped to market points Denver, Pueblo, Missouri River or still farther east at the balance of the through rate on fat stock from the origin point of the feeders to final destination of the fat stock.

Because of the low level of the rates prescribed by the Commission in the Western Livestock Case, and its ex-
[fol. 1242] pressed view that the the traffic should be retained by the carriers for their long haul, there are a number of instances where a basis of rates higher than prescribed by the Commission has been established in the public interest for the purpose of trying certain markets or making available feeding or grazing in transit privileges on other lines. An example of such an arrangement is Item 80 of UP Tariff 6085-B, ICC No. 4783. Under the provisions of that item, cattle, calves, sheep and goats from points on the Union Pacific and its connections west of Cheyenne to and including Butte, Montana, and Huntington, Oregon, consigned to the Missouri River and east, may be handled via the longer routes through Denver with our connections beyond at an arbitrary of 5.5 cents (general increases make it 8.5 cents) in addition to the through rate applying via the Union Pacific direct to the Missouri River.

That basis of rates applies via Denver with the AT&SF or with the Rio Grande to Pueblo with the Missouri Pacific, and, of course, all of the feeding or grazing in transit privileges published by those lines at points in the Arkansas River Valley may be used.

The CB&Q has a similar basis of rates in effect via Denver on livestock originating at points on its line in Montana and Wyoming. See Item 30 of CB&Q Tariff 15025-H, ICC No. 19767.

Attention is also directed to the rates and routes published in SWFB Tariff 189-E, Agent Marsh's ICC 3567, under which livestock originating in Arizona, New Mexico [fol. 1243] and Western Texas moving to Missouri River markets or east thereof may be handled via the longer routes through Denver, Colorado, and prairie lines through either Kansas or Nebraska at rates higher than those applying via the more direct routes through Texas and Oklahoma in SWFB Tariff 188-E, Agent Marsh's ICC No. 3476

Another example of rates via longer routes based on arbitraries higher than the rates via the direct routes of the Union Pacific is Item 85 in Union Pacific Tariff 6085-B, ICC No. 4783. Under that item, double-deck shipments of sheep or goats originating on the Union Pacific in southern Idaho and in eastern Oregon and destined to the Missouri River and east may be routed via Ogden or Salt Lake City and the D&RGW Railroad to Denver, thence Union Pacific and its connections, at an arbitrary of 13 cents (Ex Parte 162, 166 and 168 increases make it 19 cents to Missouri River and 20 cents to Chicago) in addition to the through rate that applies via the shorter and more direct route of the Union Pacific.

To the best of my knowledge we have never had any requests to make the same basis of rates applicable on cattle. The arbitrary basis via Ogden on sheep, double-deck, was established in 1932 shortly after rates were published in compliance with the Commission's order in the Western Livestock Case. It was based on the difference between the Docket 17000, part 9, scale rates for the average distance [fol. 1244] via the Union Pacific to the several Missouri River markets compared with the average distance to the same markets via the routes through Ogden with the Rio Grande.

Since 1932 the distance via the route through Ogden with The Rio Grande has been shortened by the Dotsero Cutoff and the Moffat Tunnel route. Applying the same formula that we used in 1932 to the present distances from twelve representative origin points Pocatello and north to Butte, Montana, and west to Pendleton, Oregon, would result in average differentials on cattle and sheep, double-deck, of five cents to Denver and Pueblo and fifteen cents to the Missouri River markets. Different and higher arbitraries would apply on other shipments of livestock subject to different rate scales. The Commission is urged not to issue any orders in this proceeding requiring application of the low 17000, Part 9, basis of rates via the longer routes through Ogden with the Rio Grande because the inevitable result will be demands for similar circuitous routing from other areas previously mentioned.

We have no objections to revising the existing arbitraries

via the Ogden route to reflect the present differences in distance via the route of the Union Pacific through Wyoming versus the Rio Grande's route from Ogden to Denver through the Moffat Tunnel nor would we have any objections to the application of that same basis on cattle.

Shipper Testimony About Eastbound Lumber Rates

[fol. 1245] Three witnesses interested in eastbound lumber rates and routes testified for the Rio Grande and expressed a desire for routing via Ogden for the purpose of using one or more transit privileges at points on the Rio Grande. All of the state of California, all of the western half of Oregon served by the Great Northern Railway and Southern Pacific Company, and practically the entire fir lumber producing area in Washington now have joint rates and through routes via the Rio Grande on a parity with all other lines. This makes unlimited quantities of both pine and fir lumber available to transit operators on the Rio Grande.

If the position of those transit operators is to be improved, it will have to be at the expense of the railroads, and especially the Union Pacific, because rates on lumber from eastern Washington and Oregon and from Idaho are on a lower basis than from the Coast group, and transportation of lumber from that interior territory via Ogden with the Rio Grande would be more expensive because of the greater distance. Some of the largest pine mills in Oregon are located at Bend, Oregon, from which point the rates via the routes that included the Rio Grande are on a parity with rates via other lines.

Mr. J. A. Hayley (transcript pages 533-542) testified as manager of the Monarch Lumber Company with a plant at Military Jct., Colorado. The plant was located at Military Jct., Colorado, about two and one-half years ago, [fol. 1246] presumably with full knowledge of the fact that the Rio Grande's Denver switching limits ended about one mile short of their plant. If any change in the existing situation is required, it can and should be accomplished by the publication of a reasonable switching charge by the Rio Grande and not by additional routes which would be

ninety-five miles and more longer than those presently in effect.

Witness Hayley also testified regarding the desire of his company to purchase Douglas fir lumber at Seneca, Oregon, and Grangeville, Idaho. Both points are east of the Cascades, and there is no substantial commercial production of fir lumber available there. As previously stated, the Rio Grande now has access at equal rates to practically all of the fir lumber producing area.

Exam. Mullen: Just a minute. The next paragraph is all argument. As I see it, that should be eliminated.

Mr. Collins: Mr. Examiner, just to review what Mr. Stilling is undertaking to do is to answer testimony submitted by shippers, or witnesses, rather, who testified about lumber, and he is discussing this Mr. Titus, and if he leaves him out, why then his plan is incomplete. That is, if you strike this out entirely, it indicates that he had left him dangle without any response to his testimony.

Mr. Quirk: Mr. Examiner, may I make this comment?

Exam. Mullen: Go ahead.

[fol. 1247] Mr. Quirk: That paragraph, which you suggest should be stricken, is a paragraph which Mr. Collins can characterize in a brief in that manner if he wants to, but I don't see why one witness should get on an argue about the significance of another witness' statement.

Exam. Mullen: That is the reason why I think it should be excluded.

Mr. Collins: What I have said is on the record. I am perfectly willing to strike this out, if what I said is retained.

Exam. Mullen: What you have said is retained, but that paragraph is stricken.

Mr. Collins: All right.

The Witness: Shipper Testimony About Rates On Fruit For Freezing in Transit At Delta, Colorado.

Mr. Donald K. Reed (transcript pages 174 to 188) wants to buy apples, apricots and peaches in Utah north of Ogden and in Idaho for freezing at Skyland Food Corporation Plant at Delta, Colorado, moving the frozen fruit to the territory Colorado and east at the balance of the through rate from point of origin of the unfrozen fruit. His pres-

ent transit operation is under the provisions of Item 301-C of D&RGW Tariff 7283-A, ICC No. 792, which the Rio Grande, for reasons of its own, has limited to apply only on fruit originating in Colorado and Utah.

[fol. 1248] The transit privilege will not apply on shipments originating in Idaho, Oregon or Washington nor in California even though the production of fruit in California far exceeds that in any other state and through one-factor rates apply via Ogden and the Rio Grande. The witness stated at transcript page 183 that he did not want lower rates but only a freezing in transit privilege. Apparently the Rio Grande can satisfy that particular witness by broadening the scope of its transit tariff. Regardless of that I would like to discuss the rates from the territory north of Ogden and the quantities of peaches, apricots and apples readily available to the Skyland Fruit Company.

The witness testified that his plant capacity was fifteen million pounds annually (transcript page 175) but that operation was limited to fifty percent of that capacity because of inability to get sufficient quantities of fruit. (Transcript page 183) The plant is located in Delta County, Colorado, and the adjoining counties are Mesa and Montrose. The Denver Office of the U.S. Department of Agriculture estimates the 1949 production of peaches in those three counties to have been two million bushels or ninety-six million pounds. The production of apples was estimated to be one and one-fourth million bushels or sixty million pounds, and apricots sixty thousand bushels or 2,880,000 pounds. The Salt Lake City office of the U.S. Department [fol. 1249] of Agriculture estimates the production in Utah last year to have been 428,000 bushels or 20,544,000 pounds of apples, 778,000 bushels or 37,344,000 pounds of peaches, and 7,400 tons or 14,800,000 pounds of apricots. It was also stated by the U.S.D.A. that most of that production was in Weber County and south thereof. Ogden is in Weber County, and rates via the Rio Grande from all of the territory Ogden and south are on a parity with the Union Pacific and other lines. The total of these U.S.D.A. estimates in Utah and three counties in Colorado is 231.5 million pounds of apples, peaches and apricots. If Skyland Fruit Company is having difficulty in operating its plant

to capacity, it would appear to be for reasons other than adequate supplies of fruit.

The following remarks about rates on fruit via Ogden from the territory north thereof will have reference not only to the testimony of Witness Reed but also to that of Witness LeRoy Snooks (transcript pages 258-271) who testified regarding the sale of ripe peaches and apricots to the Skyland Fruit Corporation at Delta, Colorado, and that more could be sold if the rates from Brigham, Utah, on the Union Pacific north of Ogden to the territory Denver and east were reduced when via the Ogden route with the Rio Grande. The rates on peaches and certain other deciduous fruits from the western slope (Grand Junction) district in Colorado, also from Utah and Idaho, are depressed by reason of both common carrier and the itinerant truck competition.

[fol. 1250] Present rates from Brigham and Logan, Utah, to Chicago are as follows:

Apples from Logan	$1.81 per 100 pounds.
Apricots and Peaches from Logan	2.00 per 100 pounds.
Apricots and Peaches from Brigham	1.82 per 100 pounds.

Those rates are based on combination over Ogden and include all general increases and will apply via Ogden with the Rio Grande. Factors to and from Ogden are published in Union Pacific Tariff 2048-G, ICC No. 4693, and Rio Grande Tariff 4925-L, ICC No. 746.

In Chamber of Commerce of Grand Junction, Colorado, v. A. & R. R.R., et al, 190 ICC 233, the Commission found $1.63 per 100 pounds to be reasonable on peaches from Grand Junction to Chicago and east. Rates from Utah are generally slightly higher than from Grand Junction. When increased as authorized by the general increases approved by the Commission, the prescribed rate of $1.63 per 100 pounds becomes $2.13 per 100 pounds and is higher than the present rates via the Ogden route. It should be borne in mind that the comparison I make is of a prescribed rate from Grand Junction, Colorado, with present rates via the Ogden route from the more distant points in Utah. Obviously, the present rates cannot be condemned as being unreasonably high.

Witness Reed also expressed a desire to purchase apples from growers in the Boise-Payette district in western Idaho.

[fol. 1251] As shown on pages 1 and 2 in Section L of witness Earley's Exhibit 3, the present rate from both Boise and Payette to Chicago is $1.41, the same as in effect from Ogden despite the much greater distance. The rate on apples from Boise and Payette to Chicago via the longer route through Ogden with the Rio Grande is $1.88. In California Growers & Shippers Protective League v. S.P. Co., et al, 185 ICC 299, the Commission found $1.50 per 100 pounds to be a reasonable basis. The general increases approved since that case was decided would make that rate $2 per 100 pounds. The present rate of $1.88 via the Ogden route with the Rio Grande is twelve cents per 100 pounds lower than the figure found reasonable by the Commission plus the subsequent general increases, and Witness Reed could have the benefit of that rate of $1.88 if the Rio Grande would amend its transit tariff to apply on shipments originating in Idaho.

Shipper Testimony About Eastbound Rates on Grain and Grain Products.

Two witnesses (transcript pages 499-522) representing the Kansas Milling Company at Wichita, Kansas, testified in support of the Rio Grande's request for opening the Ogden gateway but admitted the results they desire could be accomplished by broadening the application of rates via the route of the Union Pacific to Denver and its connections east or south thereof.

[fol. 1252] To my knowledge the Union Pacific has never been requested to establish additional routes via Denver or interior Kansas junctions. Certainly whatever need, if any, there may be for new routes to permit greater freedom in transit operations at Wichita or any other point in Kansas should be accomplished via the routes of the Union Pacific through Denver or interior Kansas junctions and not via the longer routes through Ogden with the Rio Grande, which line is wholly unnecessary in the transportation of grain originated by the Union Pacific in Idaho, Oregon, or Washington for transit at Kansas points and movement

beyond. In its analysis of the testimony of these two witnesses, I urge the Commission to consider also the fact that the grain rates are fixed by it on a low basis, and the carriers should be permitted to confine the application of those rates to the more direct routes and the long haul routes of the origin line whenever possible.

It is important also that the Commission bear in mind that Wichita, Kansas, is not on the main line of any railroad from Colorado junction points to Kansas City or any other Missouri River market. That is also true of the transit point Moundridge, Kansas, which is a local point on the McPherson, Kansas, branch of the Missouri Pacific Railroad.

If the Union Pacific is to be short hauled via Ogden as demanded by the Rio Grande or even via Colorado or Kansas junction points for the purpose of making additional transit privileges available at Wichita or other [fol. 1253] points in Kansas that can only be served via longer routes than presently apply to Missouri River and east, we, and the Commission as well, are immediately confronted with the question of what new and still longer routes must be established on grain from Idaho, Oregon and Washington for the purpose of making additional transit privileges available to transit operators in Oklahoma and even Texas.

Enid, Oklahoma, and Wichita, Kansas, are both very important milling points, and there is very keen competition between them. (Western-Southeastern Grain Case, 259 ICC 629.) There are other mills in both Oklahoma and Texas that compete with those at Enid and Wichita. The grain rates from the northwest to the east must be restricted in some manner if unduly circuitous movement is to be avoided. The direct route of the Union Pacific to Missouri River markets is the logical place for that restriction.

I have previously explained that from McCammon, Idaho, for example, to Kansas City, the distance is 199 miles longer via the route through Ogden with the Rio Grande than via the Union Pacific direct. Via the Union Pacific to Denver and the CRI&P to Kansas City it is 105 miles longer than via the Union Pacific direct; via the AT&SF

from Denver 191 miles longer than via the Union Pacific direct; and via the Rio Grande to Pueblo and the Missouri Pacific to Kansas City 215 miles longer than via the Union Pacific direct.

[fol. 1254] When all of the facts are known and considered, it is doubtful if Wichita is handicapped in any manner whatever in the use of Idaho, Oregon and Washington wheat. First of all, grain transit operators may indulge in unlimited substitution of billing.

Second, there is a complete line of through one-factor rates on grain from northern Utah and from Idaho to Texas in SWFB Tariff 182-F, Agent D. Q. Marsh's ICC No. 3832, which apply via the Union Pacific to Denver and via connecting lines through Wichita for transit privileges. Third, all grain from Idaho, Oregon and Washington given transit at points in Kansas moves to the east and southeast at proportional rates beyond Missouri River crossing and beyond St. Louis and Memphis. The proportional rate from Kansas City to Memphis City to Memphis applies via the CRI&P R.R. or the Missouri Pacific R.R. through Wichita with transit at that point. (See SWFB Tariff 223-H, Marsh's ICC 3827.)

This makes a very large part of the southeast available to the transit operator at Wichita as a market for disposing of Idaho, Oregon and Washington wheat at rates on a parity with all other transit operators. The southeastern states use large quantities of flour manufactured from Idaho wheat, the state of Georgia alone having received 495 carloads during the year. Grain and grain products is another commodity on which the rates from Idaho to Denver and [fol. 1255] east are only a few cents higher than from Ogden—Pocatello and American Falls, Idaho, being only four cents over Ogden to Missouri River and Rexburg, Idaho, only six cents over Ogden.

All three stations are important grain shipping points. Similar rates only slightly higher than rates from Ogden apply from all other points in Idaho.

The testimony of these two witnesses does not justify the application of these low grain rates via the longer and more expensive new routes which they and the Rio Grande seek to have established.

Exam. Mullen: Just a moment, as to that. That looks to me as being argumentative, entirely.

Mr. Collins: I think he is entitled to draw a conclusion as an expert witness. That is his opinion.

Exam. Mullen: Yes, commenting on the testimony already in the record. That is argumentative.

Mr. Collins: Which is that?

Exam. Mullen: Beginning on page 86, under the heading, "Other Shipper Testimony," all of page 87, page 88, 89, inclusive. That is argumentative, and I think should be excluded.

Mr. Collins: Suppose I say I think it ought to stay in, and then you go ahead and rule.

Exam. Mullen: I rule it should be excluded, and it is stricken.

[fol. 1256] The Witness: The Commission's records covering the ex parte 162, 166 and 168 proceedings contain a large volume of factual material relating to the sharp increases in recent years in all phases of the rail lines' operating expenses, and rate increases have been authorized to partially offset them.

Mr. Quirk: Mr. Examiner, I think this is argumentative with the other page.

Exam. Mullen: Let me read it.

Yes, I think that is argument, all of page 90, and page 91, except the last paragraph. That will be eliminated as argumentative, except the last paragraph on page 91.

Mr. Quirk: How would you characterize that?

Exam. Mullen: I don't need to characterize that.

Mr. Quirk: Is that argument?

Exam. Mullen: No, he can read that in. Go ahead.

Mr. Collins: Read beginning with the last paragraph on page 91.

The Witness: I have called attention to the fact that on those heavy moving commodities the present rates from Idaho origins are in some cases identical and in other cases only a few cents higher than those from Ogden, notwithstanding the greater mileage and consequently greater expense to the carriers in the movement from Idaho. This

situation exists because the Union Pacific has consistently and continuously adhered to a policy of according Idaho [fol. 1257] shippers the lowest possible level of rates consonant with the cost of providing the required service. We have always recognized this as necessary in order to permit the broadest possible distribution of the products of Idaho as well as those of Oregon and Washington in the important and distantly removed consuming markets.

The Rio Grande is not attempting in this proceeding to increase any existing rates to provide adequate revenues via the new and longer routes but seeks to share in the traffic at the present rate levels. It will be apparent that any action tending to divide the already low revenue with another carrier or other carriers, over still longer routes involving still further increased costs to the carriers, cannot help but result in a strong deterrent to any future reduction in rates if it does not, in fact, result in increases in rates.

Mr. Collins: Mr. Examiner, I would like to be permitted to call Mr. Stilling back to the stand at some later time after he completes some development of some data that he is having worked up or looked at. It would only be for five minutes or ten minutes or so.

Exam. Mullen: All right, that will be done.

We will adjourn until 9:30 tomorrow morning.

(Witness excused.)

(Whereupon, at 5:10 o'clock, p.m., a recess was taken to reconvene at 9:30 o'clock, a.m., Thursday, April 6, 1950.)

[fols. 1258-1259] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant

vs.

UNION PACIFIC RAILROAD COMPANY, ET AL, Defendants

Transcript of Testimony—Boise, Idaho, Thursday, April 6, 1950.

Met, pursuant to adjournment, at 9:30 o'clock a.m.

Before:

Frank E. Mullen, Examiner.

[fol. 1260] Proceedings

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Collins: I am through with Mr. Stilling on direct.

Exam. Mullen: Mr. Stilling is ready for cross examination.

Mr. Quirk: Well, Mr. Examiner, we are not prepared to cross examine Mr. Stilling at this time. My impression is we will probably not have much cross examination, but we would like to defer the matter until we have time to analyze all the statements and the exhibits he has filed.

Exam. Mullen: Mr. Stilling will be here at this hearing.

Mr. Collins: He will, Mr. Examiner, but counsel is considerably confusing our efforts to run off some kind of a schedule to save time in the matter of getting other witnesses here, and getting them on the stand and off. This is the third witness whose cross examination he has deferred, and it prevents us from following any kind of a set schedule.

Exam. Mullen: Well deferring cross examination might save considerable time, however. Have you another witness ready now?

Mr. Collins: Yes.

Exam. Mullen: We are ready for him now.

Mr. Collins: What I am referring to, though, after I get through with the next two witnesses, we have people in here from considerable distances, and I hate to have them here on the theory they are going to testify and then he will want to put back on the deferred cross examination, [fol. 1261] and interrupt that program.

Exam. Mullen: When will you be ready to cross examine this witness?

Mr. Quirk: I don't know just at this moment.

Exam. Mullen: Will it be this week?

Mr. Quirk: I think so. I doubt very much whether we will have very much cross examination.

Exam. Mullen: All right.

Mr. Quirk: Mr. Collins remembers he didn't cross examine Mr. Earley at all. The testimony is all alike. There is too much to this to do it overnight unless you do nothing but work on it all night.

Exam. Mullen: Have you another witness now?

Mr. Collins: I can't say this, Mr. Examiner, I can't promise Mr. Stilling will be here after this week, he has no reason to be here. He may be, I am not sure.

Mr. Webb.

P. V. Webb was sworn and testified as follows:

Mr. Collins: Mr. Examiner, we have found that on Page 15 of Burns' statement that some arithmetical or typographical errors have crept in, or both, perhaps. On the ninth line in the first full paragraph on Page 15 that figure 3,897,797,650 should be 3,887,797,650.

The figure $40,880,443.85 should be $49,880,443.85.

[fol. 1262] Mr. Quirk: Is that 49 million?

Mr. Collins: Yes, sir.

Mr. Quirk: What is the next digit?

Mr. Collins: $49,880,443.85.

Exam. Mullen: Is that all?

Mr. Collins: Yes, that is all.

Exam. Mullen: All right, sir.

Direct examination.

By Mr. Collins:

Q. You have been sworn, Mr. Webb?

A. Yes, sir.

Q. Have you prepared some written testimony and some exhibits?

A. Yes, sir.

Q. For presentation.

A. Yes, sir. I have three exhibits.

Q. I see you don't have your name written out on the sheet. Will you state your full name?

A. My name is P. V. Webb.

Q. And your position?

A. I am a statistician on the staff of the general auditor of the Union Pacific Railroad Company, at Omaha, Nebraska.

Q. And the address there?

A. Omaha, Nebraska, 1416 Dodge Street.

Q. How long have you been connected with the accounting department of the Union Pacific Railroad?

A. For the Union Pacific Railroad Company, and one of [fol. 1263] its leased lines, the Oregon-Washington Railroad and Navigation Company, I have been employed for approximately thirty years.

Q. Are the statements and the data in your written testimony and the exhibits you have prepared true and correct to the best of your knowledge and belief?

A. Yes, sir.

Q. Will you proceed with your statement, indicating which statement you are talking about first?

Mr. Collins: I wonder, Mr. Examiner, if we hadn't better give those exhibits a number.

Exam. Mullen: The first one will be 26.

Mr. Quirk: Which one is that?

Mr. Collins: The first one will be——

The Witness: A five-page statement.

Exam. Mullen: All right, Exhibit 26.

(Defendant's Exhibit No. 26, Witness Webb, marked for identification.)

Exam. Mullen: 27 will be which one?

The Witness: Showing the gathering costs, Mr. Examiner.

Mr. Collins: That is a two-page statement.

Exam. Mullen: All right, that will be 27.

(Defendant's Exhibit No. 28, Witness Webb, marked for identification.)

Exam. Mullen: The last one will be 28.

(Defendant's Exhibit No. 28, Witness Webb, marked for identification.)

[fol. 1264] The Witness: Exhibit No. 26 shows shipments of various commodities originating on Union Pacific Railroad; total revenue and revenue per car mile earned on basis of routing via UPRR and routing via D&RGW; total cost and cost per mile of handling computed from Bureau of Accounts and Cost Finding, Statement No. 3-49 "Rail Carload Cost Scales by Territories as of January 1, 1949" and the net profit or loss based on such revenues and expenses.

The information shown in columns 1 to 8, inclusive, (except as to the class of car shown in column 1 in which the shipments were assumed to move) was taken from Section J of Mr. T. K. Earley's Exhibit No. 3, submitted at the hearing held in this case at Salt Lake City commencing December 12, 1949. The class of car shown is the class in which the shipments normally move. The information shown in columns 9 and 10, was computed from the Bureau of Accounts and Cost Finding Statement referred to.

The cost scales, as indicated in explanatory remarks accompanying the statement, were compiled by the Bureau of Accounts and Cost Finding, to bring up to date past studies showing various levels of rail carload freight service costs by territories (i.e., Eastern District, Pocahontas Region, Southern Region and Western District). The figures used in compiling the cost scales were based on rail carrier's operations during the year 1947 with an adjustment to reflect wage and price level changes up to January 1, [fol. 1265] 1949.

Exam. Mullen: Just a moment, that is the Bureau of Accounts and Cost Finding of the Commission?

The Witness: Yes, sir.

In preparing the study on which the cost scales were based, it was the intention, also as indicated by the explanatory remarks, to show territorial figures which will reflect the costs for carload freight service under a range of operating conditions, including the territory in which the haul is performed, the type of car (considering the tare weight and per cent of empty return movement), the net weight of load, the length of haul, and the type of train, whether way or through. The scales were constructed on the basis of transporting the freight for 50 miles in way trains and the remaining distance in through trains.

Therefore, when a shipment moved in more than one territory it was assumed that 25 miles in each the origin and destination territory was in a way train and the remaining distance in a through train. The costs are territorial figures and, aside from the factors listed, represent average operating conditions in each territory.

Two levels of costs are shown by the cost scale, i.e., out-of-pocket and fully distributed. The fully distributed costs represent a full prorata proportion of operating expenses, rents and taxes, a 4-per cent return on investment and the [fol. 1266] passenger and less-carload deficits, and are the costs reflected by this exhibit.

In computing the costs shown in this exhibit, the miles shown in columns 4 and 5 were segregated between territories and the miles applicable to the origin and destination territory were segregated as between miles hauled in way trains and miles hauled in through trains.

Any overhead or bridge moves were assumed to be in through trains. The miles thus segregated as to territories and as to way trains and through trains were respectively inflated by 12 per cent to allow for circuity of movement (i.e., the amount by which the actual miles of haul exceeded the short line or rate-making miles). This adjustment is provided for in the explanation accompanying the cost scales.

The adjusted miles were applied to the appropriate line haul unit costs as given in the cost scales to arrive at the line haul cost per hundredweight after first adjusting such unit costs to the actual weight of the shipment shown paren-

thetically in column 1 of the exhibit. Similar adjustment was made with respect to the unit cost shown in the cost scales for terminal expense.

These adjustments were necessary because the costs shown by the cost scales are for shipments of various weights in multiples of 5 tons. The adjustments were made by interpolation and are also provided for in the explana- [fol. 1267] tion accompanying the cost scales. The figures representing the line haul costs per cwt. for the respective hauls in way and through trains for each territory were then added to the appropriate terminal costs per cwt. (i.e., the full terminal cost where the shipment was handled in only one territory or one-half of the terminal cost for the origin and destination territory where the shipment was handled in more than one territory) and the resultant sums representing the cost per cwt. for the movement via the UP and the movement via the D&RGW was applied to the weight of the shipment shown in column 1 to arrive at the costs shown in columns 9 and 10, respectively.

The costs per car mile shown in columns 11 and 12, were determined by dividing the cost per car shown in columns 9 and 10, respectively, by the miles shown in columns 4 and 5.

Columns 13 and 14, and 15 and 16, show the net profit or loss per car and per car mile, respectively, for all lines included in the selected tariff routes. These figures were computed on basis of the revenues and expenses shown in columns 6 to 12, inclusive. It will be noted that in practically every instance the haul via the D&RGW results in a lesser profit or a greater loss than the haul via the UP, also that for a considerable number of movements a profit for the haul via the UP is turned into a loss for the haul via the D&RGW.

In this connection, as has been previously mentioned, the cost scales were compiled from carriers' reports submitted [fol. 1268] for the year 1947, with an adjustment to reflect wage and price level changes up to January 1, 1949. The revenues shown are, as testified to by Mr. Earley in connection with his Exhibit No. 3, computed on basis of rates in effect on September 1, 1949.

Therefore, to the extent of any increase in wage and price levels between January 1 and September 1, 1949, the ex-

penses are not comparable to the revenues and the net profit or loss is over or understated proportionately. Also since the costs for each district represent the average of the costs of all roads in that district, those for the Western District do not reflect actual costs over the UP and D&RGW to the extent that the cost on those roads are greater or less than the average of all roads in that district.

As an indication of what this difference would be, I have calculated for the year 1948 (the latest year for which such information is available) the cost per revenue ton mile of the freight proportion of operating expenses, rents and taxes, for the UPRR, D&RGW and for all roads in the Western District. This calculation shows that such costs for the UP were 6 per cent less than for the average of all roads in the Western District and for the D&RGW were 5 per cent greater than the average of all roads in the Western District.

Attention is also directed to the fact that the costs for the Western District, as included in the cost scales are [fol. 1269] comprehensive of the average number of interchanges and the average cost of such interchanges as of January 1, 1949. Since the movement via the D&RGW as shown by this exhibit would involve at least one, and in some cases two additional interchanges the costs shown are understated proportionately.

We have no recent studies which show the cost of a car interchanged; however, in a report by the Federal Coordinator of Transportation, Section of Transportation, entitled "Freight Traffic Report," Volume 1, it is stated on Page 104:

> "In 1932 there were over 50 million interchanges reported at an aggregate cost of 330 million dollars. The cost per car interchanged was $10.78 * * *".

Using the average cost per yard engine hour in freight service for the Union Pacific for the years 1932 and 1948 as a basis, I have calculated the percentage ratio that the latter is of the former. Applying this percentage ratio of 189.60 to the $10.78 indicates that the approximate cost to interchange a car in 1948 was $20.44.

By Mr. Collins:

Q. Go ahead, Mr. Webb.

A. Exhibit No. 27 shows the approximate gathering cost to Union Pacific Railroad of handling shipments of various commodities destined to Denver, Colorado or points beyond, from point of origin to point at which placed in through line-haul trains, computed from Bureau of Accounts and Cost Finding, Statement No. 3-49, "Rail Carload Cost [fol. 1270] Scales by Territories as of January 1, 1949."

As an indication of what this difference would be, I have shipments covered by my exhibit No. 26 and the data in columns 1 to 4, inclusive, were taken from that exhibit. Columns 4, 5 and 6 indicate the movement and the miles hauled in way trains or in instances where columns 5 and 6 are blank, indicate that the shipment was placed in a through line-haul train at the point of origin. It will be noted that the miles hauled in way trains range from 4 miles for a shipment originating at Pendleton, Oregon to 177 miles for a shipment originating at Ketchum, Idaho.

The amounts shown in column 7 represent the terminal costs at the origin station and, where appropriate, the costs of hauling in way train from the point of origin to the point at which the shipment was placed in a through line-haul train. These costs are based on data shown in Bureau of Accounts and Cost Finding Statement No. 3-49, "Rail Carload Cost Scales by Territories as of January 1, 1949", and were computed in exactly the same manner as costs described in my exhibit No. 26, except that the unit costs for way trains were used for the entire haul and, since the miles shown in column 6 represent the actual road miles, no expansion was made for circuity.

The costs range from $18.99 for a shipment originating at Nampa, Idaho, and placed in a through line-haul train at that point, to $106.12 for a shipment originating at [fol. 1271] Kellogg-Wardner, Idaho and hauled 171 miles in a way train to Ayer, Washington. The simple average of the costs for all movements covered by this exhibit is $45.59.

Attention is directed to the fact that these gathering costs are and would be borne entirely by the Union Pacific in addition to the costs to it of the line-haul through move-

ment to Ogden, while the D&RGW would incur no gathering costs whatever on the traffic it seeks and would bear only the cost of its line-haul.

Q. Mr. Webb, this statement No. 3-49, from the Bureau of Accounts and Cost Finding, is the Bureau of the Interstate Commerce Commission, and that statement is distributed by the Commission, is it not?

A. Yes, sir.

Q. All right. That is what you referred to each of these statements in connection with Exhibits No. 26 and 27; is that correct?

A. Yes, sir.

Q. All right.

A. Exhibit No. 28 shows total railway operating revenues of (a) all Class I railroads in the Western District, (b) CMStP&PRR Co., GN Ry. Co., NP Ry. Co., and UPRR Co., and (c) D&RGW RR Co. for each of the years 1930 to 1949 inclusive, and the percentage ratio that the respective revenues for each of the years 1931 to 1949 inclusive bears to [fol. 1272] the revenue for the year 1930; also comparison of such percentage ratios for the D&RGW RR Co. with corresponding percentage ratios for roads in groups (a) and (b).

The railway operating revenues shown on this exhibit for the years 1930 to 1947 inclusive were taken from Annual Reports on Statistics of Railways in the United States prepared by the Bureau of Transport Economics and Statistics of the Interstate Commerce Commission. Similar data for the years 1948 and 1949 were taken from Statement No. 1649 prepared by the Statistical Bureau-Western Lines, Chicago, Illinois.

Particular attention is directed to the figures shown in the last two columns of this exhibit. It will be noted that the percentage ratio for the D&RGW exceeds corresponding ratio for all Class I railroads in the Western District in each of the 19 years 1931 to 1949 inclusive, and that such excess ranges from .67 per cent in 1931 to 58.05 per cent in 1945. Similarly, as compared with the four transcontinental roads, the CMStP&P, GN, NP, and UP, the D&RGW ratio is greater in all but two years, the excess ranging from .61 per cent in 1931 to 46.32 per cent in 1945.

Attention is also directed to footnote[2] shown at the bottom of this exhibit. The Denver & Salt Lake Ry. Co. was merged into the D&RGW in 1947. The railway operating revenues shown for the D&RGW for the years 1947, 1948, and 1949 are for the consolidated company and are, [fol. 1273] therefore, not comparable with the D&RGW railway operating revenues for the year 1930. If the D&RGW railway operating revenues for the year 1930 were restated to include the railway operating revenue of the D&SL, and the percentage ratios for the years 1947, 1948, and 1949 recalculated, the results would be as follows:

	Column (c)	Column (d) Excess of D&RGW ratio over ratio for	
	DRGW ratio to 1930	All Class I Railroads in Western District	CMStP&P, GN, NP UP
Year 1947	178.31	2.64	9.21[1]
Year 1948	207.93	12.49	3.50
Year 1949	199.39	21.08	7.77

[1] Excess over D&RGW.

Q. Now, Mr. Webb, you heard the correction that was made on Page 15 of Mr. Burns' testimony?

A. Yes, sir.

Q. You have given consideration to those corrected figures and the effect of them upon the financial results of the Union Pacific Railroad as of 1949, have you?

A. Yes, sir.

Q. Will you state just what you have to say in that connection?

A. I calculated the operating expenses, rent and taxes, that would be applicable to the ton-miles given on Page 15 of Mr. Burns' exhibits, as corrected this morning, by first determining the average cost per revenue ton mile, and [fol. 1274] applying that cost to the ton mile shown.

This calculation indicated that it would cost the $41,557,835 to transport the traffic represented by the revenue given by Mr. Burns. That would indicate a reduction in our net railway operating income for 1949 of $8,322,608.85.

In that connection, on Page 26 of Mr. Lynch's prepared testimony, he gave the net railway operating income of the Union Pacific for the year 1949. That figure was $21,707,-

437. Subtracting the $8,322,608.85 from that figure would indicate that had the Union Pacific lost the revenue referred to by Mr. Burns for the year 1949 its net railway operating income would have been $13,384,828.15.

Also, referring to Page 26 of Mr. Lynch's prepared testimony, with respect to the actual net railway operating income for 1949 he says, "This amount was insufficient by $10,269,865 of an amount necessary to pay the interest on funded debt and the dividends that were declared."

Taking into consideration the reduction in net railway operating income, which I have previously given, that insufficiency would have been for the year 1949 $18,592,473.81.

Q. Does that complete your statement?

A. Yes, sir.

Mr. Collins: That is all in direct.

Mr. Quirk: Mr. Examiner, could we have about a ten-minute recess. I think perhaps we can go on with this [fol. 1275] witness. There are a lot of figures here.

Exam. Mullen: All right, we will take a ten-minute recess.

(Short recess taken.)

Exam. Mullen: All right, we are ready to proceed.

Cross-examination.

By Mr. Quirk:

Q. Mr. Webb, the so-called cost data reflected on Exhibit 26 is, I believe, based on the cost formula used by the Bureau of Accounts and Cost Findings of the Interstate Commerce Commission.

A. That is correct, yes, sir.

Q. Is that the one that is quite commonly characterized as the Dr. Ford Edwards formula?

A. I believe it is, yes, sir.

Q. Well, do you think that formula is a sound formula?

A. I believe that for the purpose for which I have used it it is sufficiently accurate.

Q. You think it depends on the purpose you have in mind as to whether it is sound or not?

A. I believe that is a fair statement.

Q. On Page 4 of your prepared statement in connection with Exhibit 26 you say at the bottom, you say "I have calculated for the year 1948 the cost per revenue" and so forth. You don't submit the data on which that calculation is made, do you? It isn't here, is it?

A. That was a simple calculation, Mr. Quirk. The bas-[fol. 1276] ing figures for that calculation was taken from a statement prepared by the Association of American Railroads. It has no number, but the title of the statement is "Revenues, expenses and freight traffic Class I railways of the Western District, calendar year ended December 31, 1948."

Q. All right.

Now, how did you go about selecting these commodities that are shown on Exhibit 26? Did you select the ones with the lowest car mile per car earnings?

A. No, sir. They were selected with the view of obtaining representative shipments.

Q. Now if you had selected canned goods, sugar, for example, from the Earley exhibit 3, you would have found heavier commodities, and heavier per car and per car mile earnings, would you not?

A. I believe that is correct, yes, sir.

Q. You didn't use any westbound traffic at all, did you?

A. No, I didn't.

Q. Page 3 of the narrative in connection with Exhibit 26 you say—it begins over on Page 2 of the narrative—you say "The miles thus segregated as to territories and as to way trains and through trains were respectively inflated by 12 per cent to allow for circuity for movement (i.e., the amount by which the actual miles of haul exceeded the short-line or rate-making miles.)"

[fol. 1277] Now, is the 12 per cent allowance for circuity a constant figure?

A. Yes, sir, as used in the cost scales that figure is constant.

Q. You mean as used in the cost scales of Dr. Ford Edwards?

A. Yes, sir.

Q. You think that is a reliable factor to be used in determining the cost figures generally?

A. In the explanation of the cost scales Dr. Edwards, or rather the Bureau of Accounts and Cost Finding, indicate that it is an average figure.

Q. Have you, in your Exhibit 26, any of the calculations you have made, attempt to reflect the decrease in cost, 1949, as compared with 1947, as a result of increased efficiency and economy in operation?

A. No, sir. I used the cost as shown by the cost scales.

Q. Well, it is almost a matter of common knowledge there has been a great increase in economy and efficiency in railroad operation since 1947.

A. I wouldn't know as to that, Mr. Quirk.

Q. Now, turn to your Exhibit 27. That could be characterized as reflecting what might be called "gathering costs" or assembling costs on the branch lines; is that correct?

A. Yes, sir.

Q. Well the Union Pacific will have to bear these costs no [fol. 1278] matter where the traffic went, wouldn't it?

A. Yes, sir, that is correct.

Q. And in the divisions which railroad work under, is there an allowance made for the extra service performed by originating railroads and terminal railroads, generally speaking?

A. I am not familiar with divisions, Mr. Quirk. I couldn't answer that question.

Q. Don't you think it would have been advisable to have become familiar with it in view of this statement you made here?

A. My statement deals only with costs, and has no relation to divisions.

Q. Yes, but if I am right in assuming that the divisions in effect generally throughout the country do allow the originating line more than the straight mileage or percentage basis to reflect the extra cost he is put to in assembling the traffic, so you didn't concern yourself with that at all, did you?

A. No, sir, my exhibit deals only with costs.

Q. All right. Now in your Exhibit 28, why did you lump for the Union Pacific in the comparison made with the Denver and Rio Grande Western, the Milwaukee Railroad, the Great Northern Railroad, and the Northern Pacific Railroad?

A. I used those four roads with the thought that the operating conditions on those roads would be somewhere near comparable to operating conditions on the Denver and Rio Grande.

Q. In other words, you think that the operating conditions [fol. 1279] on the four railroads that you used are similar to the operating conditions on the Rio Grande?

A. Somewhat similar, yes, sir.

Mr. Quirk: Mr. Gibson has one or two questions.

Exam. Mullen: All right.

Cross-examination.

By Mr. Gibson:

Q. Mr. Webb, referring to your estimate of a revised figure of $18 million plus, by which you estimate the Union Pacific 1949 net railway operating revenue would have been unsufficient to meet fixed charges and dividends. Have you included, as an item of expense, ahead of the net railway operating income, the Federal income taxes in other income?

A. Yes, I have.

Q. That other income includes the considerable revenue collected from your oil operations; isn't that true?

A. Yes, sir, that is correct.

Q. And to that extent the net railway operating revenue has been distorted, hasn't it?

A. I believe you should have said net railway operating income.

Q. That is right.

A. Then your statement is correct, yes, sir.

Q. Now, Mr. Webb, referring to your cost figures covering the operations of the Denver and Rio Grande, does that cover the entire system, including the D&SL?

A. Yes, it does. Perhaps I should qualify that. I as- [fol. 1280] sume that it does. It was a published figure that I used, and I assumed that it includes the D&SL for the year 1948.

Q. And your figures also cover the operation of the narrow guage trackage of the Denver and Rio Grande.

A. I assume those figures are included in the published figures of the Denver and Rio Grande, yes, sir.

Q. Did you know, Mr. Webb, we have established the operating ratio over the narrow guage territory is 161 on an out-of-pocket basis, and 181 on a full cost basis?

A. I did not know that. I have never seen any published figures on your narrow guage operation.

Q. If that were true, your figures would be distorted to that extent, wouldn't they, as comparing it to the Union Pacific which is a standard guage operation?

A. To some extents, yes, sir.

Mr. Gibson: That is all.

Mr. Collins: That is all.

(Witness excused.)

Mr. Collins: Mr. Examiner, I offer in evidence Exhibits 26, 27 and 28.

Exam. Mullen: Any objection?

(No response.)

Exam. Mullen: The exhibits will be received in evidence.

(Defendant's Exhibits 26, 27 and 28, Witness Webb, received in evidence.)

[fol. 1281] W. F. Kirk was sworn and testified as follows:

Direct Examination.

By Mr. Collins:

Q. Mr. Kirk, you have prepared testimony in written form for presentation in this case.

A. I have.

Q. The statements you have made in your prepared statement are true and correct to the best of your knowledge and belief?

A. They are.

Q. Will you proceed with the statement.

A. My name is W. F. Kirk. I am a Railroad Operations Consultant. My address is 325 North Tejon Street, Colorado Springs, Colorado.

I have been employed by the Union Pacific Railroad Company to investigate and testify on behalf of defendants in Docket 30297 with respect to the matters which will be detailed later in my testimony.

My railroad experience began in 1898 with the Santa Fe Railway as Telegraph Messenger Boy at Osage City, Kansas. I have worked as a Section Laborer, Telegraph Operator and Train Dispatcher. In 1901 I was employed by the Missouri Pacific as Telegraph Operator and later as Chief Train Dispatcher, Trainmaster, Division Superintendent, Superintendent and General Superintendent.

In June 1934, I was given a leave of absence from the Missouri Pacific Railroad and became connected with the [fol. 1282] staff of the late Joseph B. Eastman, Federal Co-ordinator of Transportation. I served in that capacity from June 1934——

Exam. Mullen: Just a minute, gentlemen. May I confer with Mr. Quirk and Mr. Collins for a minute.

Mr. Collins: Yes.

(Discussion off the record.)

Exam. Mullen: On the record.

By Mr. Collins:

Q. Go ahead, Mr. Kirk.

A. I served in that capacity from June 1934 until June 1935, as Assistant Western Regional Director, and later as Eastern Regional Director. While serving with the Federal Co-ordinator, my duties were to study terminal operations and consolidations of railroads.

Mr. Collins: Now, Mr. Examiner, at this point, and pursuant to the discussion had at the bench with the Examiner and counsel for the complainant, I am willing that the first eight pages of Mr. Kirk's statement be included in the record in exhibit form as Exhibit No. 29. I understand it will have the same force and effect as if it were copied into the record.

Exam. Mullen: It will be a part of the record.

(Defendant's Exhibit No. 29, Witness Kirk, marked for identification.)

Exam. Mullen. It will not be copied into the record.
Mr. Collins: That is right.

By Mr. Collins:

Q. Now, go ahead at the top of Page 9, Mr. Kirk.

[fol. 1283] Exam. Mullen: Just one moment.
All right, proceed.

By Mr. Collins:

Q. All right, go ahead.

A. Prior to my taking office in Chicago, Illinois, as Associate Director of the Office of Defense Transportation on February 1, 1943, and as Agent of the Interstate Commerce Commission on February 3, 1943, it had been necessary for that Commission, due to interruptions of normal traffic movement and accumulation of cars on the Western Pacific railroad and the Southern Pacific railroad, in order that all coal originating on or moving via the D&RGW railroad and the Utah railway to destinations in the States of Oregon and Washington be diverted to the Union Pacific Railroad.

These diversion orders remained in effect until August 17, 1945. They were ICC Service Orders 94 and 98, mentioned by witness Hogue at page 66 of the transcript. They applied to only one commodity and that was coal originating on or moving over the D&RGW Railroad. The orders changed the routing to the Union Pacific Railroad from the Western Pacific Railroad at Salt Lake City, Utah, and to the Union Pacific Railroad from the Southern Pacific Railroad at Ogden, Utah.

This diversion was necessitated by the discontinuance of coastwise shipping between the Puget Sound area and California, which placed the burden of moving the traffic that [fol. 1284] had formerly moved via coastwise vessels upon the Southern Pacific Railroad and the Western Pacific Railroad, (with their connections at Portland, Oregon, and Bieber, California) and on the Union Pacific Railroad between Portland and Los Angeles.

My greatest concern, upon taking the office just mentioned, was to avoid an accumulation or congestion at terminals, where interchange of traffic was made between the

various railroads. To further relieve the terminal situation at Ogden, Utah, where interchange of traffic is made between the Union Pacific Railroad, Southern Pacific Railroad and the D&RGW Railroad, and at Salt Lake City where interchange is made between the Union Pacific, Western Pacific and the D&RGW, early in 1943 I issued diversion orders that all carload traffic originating east of the States of Montana, Wyoming, Colorado, and New Mexico, and a line drawn through Texas to Mexico, having destination in the States of Oregon and Washington, north of Oakridge and Westfir, Oregon, be routed to the railroads directly serving the Northwest, that is, the Union Pacific, Great Northern, Northern Pacific, and Milwaukee Railroads, and that all traffic originating on the Southern Pacific Railroad north of Westfir and Oakridge, Oregon, having destination east of the Missouri River, be routed via the Union Pacific, Great Northern, Northern Pacific and Milwaukee.

Q. Mr. Kirk, you took office on February 1, 1943, which would appear in Exhibit 29, but that was the date that you [fol. 1285] took the office and under what title?

A. I took office as Associate Director, Office of Defense Transportation, on February 1, 1943.

Q. That gave you the authority?

A. And as agent of the Interstate Commerce Commission on February 3, 1943, and worked under ICC Service Order 99.

Q. That gave you authority to direct traffic movements as between the 24 western railroads?

A. The railroads in the 24 western states.

Q. Oh, excuse me.

A. And the order also gave me authority to divert, if in my opinion it was necessary from an overloaded railroad to one with an under-capacity.

Q. All right. Go ahead, Mr. Kirk.

A. This relieved the Western Pacific and Southern Pacific of considerable traffic moving to and from Oregon and Washington through the Ogden and Salt Lake City interchanges.

As agent of the Interstate Commerce Commission and Western Regional Director, Office of Defense Transportation, it was necessary to be informed as to the daily traffic movement on each railroad and its capacity to move the greatest amount of traffic without congestion. So that I might have an overall picture of the conditions on each railroad, reports of the daily car movement, the volume left on hand to move in each direction, and other pertinent information concerning the operating conditions during the [fol. 1286] past 24 hours ending 11:59 p.m., of each day, were received by telegraph from each railroad. In addition, it was necessary to have daily advice of the offshore movement of vessels having destination in the Pacific war area, to avoid congestion of the port facilities.

It must be understood that to permit more traffic to move from the east into and accumulate at the Salt Lake City and Ogden, Utah, terminals than could be dependably moved out would make it necessary to backhaul the over-capacity traffic load from those terminals to Denver and Pueblo, Colorado, or to Cheyenne, Wyoming, in order to reroute such traffic over other railroads with a capacity to by-pass the Salt Lake and Ogden terminals.

The information furnished by the various railroads as to their daily movement, number of cars on hand awaiting movement, and advice from the Transportation Officers as to their operating conditions, enabled me to divert traffic before it reached the interchange terminals west of the Rocky Mountains.

The preponderance of traffic moving prior to 1943 being eastward, the transcontinental railroads had arranged their facilities to give volume expedition for all eastward traffic.

When the war came on and the volume of traffic turned westward it placed a double burden on those carriers, not only by giving them a full train load in both directions, but tending in general to give the westward traffic a longer uphill movement as compared with what they had been accustomed to.

[fol. 1287] Early in 1943 a forecast had been made of the probable requirements of railroad service to the Pacific Coast ports to meet our Pacific war operations. This forecast indicated that the westward traffic volume would tax

the capacity of the transcontinental railroads. The forecast further indicated that the movement into California would be three loads as against one load to the Pacific Northwest.

The forecast was analyzed as crowding the transcontinental lines serving California to the limit of their capacity and leaving the direct Northwest Pacific lines with less than their capacity load. It was also assumed that there would be the usual temporary and intermittent interruptions and slow downs of service on the different lines of railroads during the period of the war, due to such occurrences as floods, train accidents, shortage of motive power and especially of man power.

Efforts were made to increase the load of the Northwestern Pacific railroads and give relief to the California lines which were hard pressed at times to meet their transportation burdens. This necessitated an intensive survey at all times, and the issuance of a considerable number of diversion orders to avoid any serious congestion and threatened embargoes in the Pacific Coast area.

As it was, traffic was diverted to and from practically every railroad west of the Missouri River, at times when retardation of traffic movement threatened or became apparent.

[fol. 1288] Witness Hogue, at page 66 of the transcript, referred to Kirk's Orders No. 117, 242 and 246 without stating the originating points of the traffic delivered to the Union Pacific under those orders.

Order 117 was effective from January 10, 1944, until April 15, 1945, and Order No. 242, a reissue of Order 117, was effective from May 12, 1945, until September 5, 1945, only permitted westbound traffic originating west of a line drawn from the Canadian border along the east state lines of Montana, Wyoming, Colorado, New Mexico and extending to the Texas-Mexico border, to move via railroads west of that line.

All traffic originating east of that line was to be diverted to the Union Pacific and other northwest lines, so that the traffic which was diverted by the D&RGW to the Union Pacific was not traffic from the east through their connections at Denver or Pueblo. It is my thought that this delivery of less than 4 cars per day was traffic originating

in the military storage depots in the Provo-Ogden, Utah, area.

Early in May, 1945, the military people complained of the poor movement of traffic originating or reconsigned in the Provo-Ogden, Utah, area. An investigation was made to find a remedy. It developed the D&RGW railroad was handling traffic into Salt Lake City for the Western Pacific and into Ogden for the Southern Pacific and the Union Pacific was doing the same.

[fol. 1289] Order 246 was issued effective May 17, 1945, providing for all carload freight traffic originating or reconsigned between Provo, Utah, and Ogden, Utah, including the switching limits of Provo, Salt Lake City and Ogden, having destination in the States of Washington or Oregon north of a line drawn through Roseburg, Oakridge and Bend, Oregon, including those stations, and routed via Southern Pacific or Western Pacific, would be diverted to the Union Pacific for movement to destination or proper connection in Washington and Oregon. This eliminated a considerable interchange of traffic from both the D&RGW and Union Pacific to the Western Pacific and Southern Pacific through the congested terminals at Ogden and Salt Lake City, Utah. In other words, this was simply a switching relief order.

Q. Now, Mr. Kirk, you stated on the bottom of Page 9 and the top of Page 10 of your statement that on taking office as the agent of the Office of Defense Transportation of the ICC your greatest concern was to avoid accumulation or congestion at terminals where interchange of traffic was made between railroads.

Will you state what conditions you found after taking office in February 1, 1943, in the terminals at Ogden, Utah, and at Salt Lake City, and what you did as a result of the conditions you found?

[fol. 1290] Mr. Quirk: Well, were you located at Ogden and Salt Lake City at the time of which you are speaking?

The Witness: No, I was located in Chicago.

Mr. Quirk: I object to any statement like that. I think he is incompetent to make it.

Exam. Mullen: May I have that question read.

(Question read.)

Exam. Mullen: Did that come within the duties of your office, Mr. Kirk?

The Witness: Yes, sir.

Exam. Mullen: How did you get those reports?

The Witness: From the railroads, and from the Office of Defense Transportation employees who reported direct to me and the Interstate Commerce Commission employees located in the territory who reported direct to me.

Exam. Mullen. As to the condition at the terminals mentioned?

The Witness: Yes, sir.

Exam. Mullen: The witness is competent to answer that question.

The Witness: As early as April 18, 1943, I had found that the methods of handling the cars through the Salt Lake City and the Ogden gateways was such that an improvement could be made, so I invited all of the operating officers of the western railroads into my office in Chicago and informed them that in view of the fact that I had the authority [fol. 1291] to reroute traffic from an overloaded railroad to an underloaded railroad that I had considered it my responsibility to avoid congestion which was also required by my authority under the Office of Defense Transportation, to improve the movement of traffic, and that there was too much delay at terminals. There was too much switching at the terminals.

By Mr. Collins:

Q. Well now what did you find out with respect to conditions at Ogden, and Salt Lake City, specifically?

A. On February 4, 1943, the D&RGW had ten trains arriving in Salt Lake City.

Mr. Quirk: From what is the witness reading?

The Witness: A memorandum that I made and presented to the railroad men that were present at the meeting on February 18, 1943.

Mr. Quirk: Is that a Government record you retained when you left the service of the Commission?

The Witness: I wouldn't say it was a Government record.

By Mr. Collins:

Q. Go ahead.

A. D&RGW ten arrivals with a total of 607 cars, and had 204 cars for the Union Pacific in 41 places.

Q. In what?

A. In 41 places in the train. 130 cars for the Union Pacific in 36 places, 162 cars for the Southern Pacific at Ogden in 31 places. The UP with arrivals of a total of 701 cars had 98 cars for the Western Pacific at Salt Lake [fol. 1292] City in 40 places, 62 cars for the D&RG in 27 places, and 499 cars for the UP in 78 places.

Q. For the UP?

A. For the UP, which went through.

Q. Oh.

A. By assembling this traffic——

Q. Mr. Kirk, may I interrupt you there? It is not clear to me what you mean by "in so many different places."

A. Well, it means just this. You had a train of 40 cars, there was one for the UP, and one for the D&RG, one for Salt Lake proper, one for the UP, one for the D&RG, and one for Salt Lake proper.

Q. OK. Go ahead.

A. I asked that the railroads assembly this traffic into solid trains for northern and southern California at their eastern terminals.

Q. Why did you do that?

A. So as to avoid the switching at these intermediate terminals.

Q. Why was it necessary to avoid the switching?

A. Because they were short of men, and they were congested.

Q. What terminal are you talking about now?

A. Both Salt Lake and Ogden.

Q. By "congestion," just what do you mean?

A. I mean they had more business than they could handle.

Q. Yes, sir. Go ahead with any further explanation.

[fol. 1293] A. On May 13, 1943, I again called all of the representatives of the western railroads into my office in Chicago, and informed them I had not found any improvement, and that I had issued an order under the authority

that I had for them to hold, if necessary, and consolidate traffic at the eastern terminals, so that it could move through without switching enroute. The order was to become effective 12:01, May 15th.

Q. May what?

A. May 15, 1943. I was asked if they could have some time to think it over. I told them surely, that we didn't want to do anything radical. They had to run the railroads, and they were still their railroads. I didn't have anything to do with them. They asked for ten days, and I said "Take thirty, but give me between May 20th and May 25th an outgoing consist of all of the trains in those five days to develop whether or not there would be any improvement." I found they were doing what I asked them to do without an order, and I never issued the order.

Q. That is, they were making solid trains where they could?

A. Where they could, even holding traffic. I told them any time they wanted to hold the traffic to make a solid train I would give them an order to hold it for 24 hours if necessary.

Q. Why was that necessary?

A. To avoid congestion at terminals. The switching at intermediate terminals was the greatest thing we had to [fol. 1294] run into. We were short of men. We were short of power.

Q. Was Ogden an exception?

Mr. Quirk: I object to the counsel leading the witness. He is just leading the witness in saying Ogden was the only place there was congestion during the war.

Mr. Collins: I didn't suggest any such thing.

Mr. Quirk: I am objecting to him leading the witness, and he doesn't need to be led by the counsel.

Exam. Mullen: Answer the question as given. Go ahead.

The Witness: I want to say this, that Ogden and Salt Lake gave me the greatest headaches while I was on the job on account of the amount of traffic that was routed through those particular points, and the necessity of using those routes when the lines to the south went out, and vice versa.

By Mr. Collins:

Q. All right. Will you go ahead now, Mr. Kirk, at the middle of Page 14, unless there is something else you feel you could add.

A. Order 246 was issued effective May 17, 1945, providing for all carload freight traffic originating or reconsigned between Provo, Utah, and Ogden, Utah, including the switching limits of Provo, Salt Lake City and Ogden, having destination in the States of Washington or Oregon north of a line drawn through Roseburg, Oakridge and Bend, Oregon, including those stations, and routed via Southern Pacific or Western Pacific, would be diverted to the Union Pacific for movement to destination or proper [fol. 1295] connection in Washington and Oregon. This eliminated a considerable interchange of traffic from both the D&RGW and Union Pacific through the congested terminals at Ogden and Salt Lake City, Utah. In other words, this was simply a switching relief order.

Trains consisting of military personnel and equipment route in connection with D&RGW and Union Pacific during the years 1941 and 1942, mentioned by witness Hogue at page 67 of the transcript, were not routed by the ICC or the ODT. The arrangements as well as schedules were all set up by the railroads through their representative at Chicago, Illinois, who was not empowered, to my knowledge, with any governmental authority. I did not at any time have authority to divert any military personnel movements.

In order to avoid as far as possible disturbance of the routing and the regular routing by shippers of carload traffic as well as the movement over intermediate lines, I requested the shippers to maintain their regular routing schedules that had existed prior to the heavy westward movement. This proved very helpful, as it enabled me to gauge from the daily volume movement out of Chicago, St. Louis, Kansas City, The Twin Cities, Omaha, Council Bluffs, Memphis and New Orleans the volume that would reach the terminals at El Paso, Texas, Amarillo, Texas, Salt Lake City, and Ogden, Utah, and advance advice was given the railroads beyond Ogden, El Paso and Amarillo, [fol. 1296] advance notice of the approximate volume of traffic that would reach them 24 to 48 hours before its ar-

rival at those terminals, thus enabling arrangements to be made to reroute traffic that would or might cause an accumulation or congestion at such terminals.

It was also necessary to provide for a continuous flow of refrigerator cars to the loading points in California, Oregon, Washington, Idaho, and Montana, not only because of the heavy demands for fruits and vegetables to meet the requirements of the people who were making our war materials, but also for our military forces.

During the period of my office, there moved a total of 6,796,984 loads to and from California, Washington and Oregon, and there were diverted 332,746 loads, or, in other words, about 95% of the total number of loads moved on the original shipper's routing.

Of the total diversions, 202,757 cars, or about 60%, were diverted to by-pass and avoid congestion at certain terminals. From the D&RGW, 8,942 cars, or about 2½ per cent of the total diversions, were diverted on account of a tunnel fire which caused an interruption on its Moffat Tunnel line for 71 days in 1943; 8,998 cars, or over 2½ per cent, were diverted from the Western Pacific due to tunnel fires and slides which caused intermittent interruptions for about 60 days in 1944; 1,039 cars, or about .3 per cent of the total, were diverted from the various lines due to high water [fol. 1297] conditions; and 111,018 cars, or a little over 33⅓ per cent of the total diversions, were diverted from the various lines due to their having or being threatened with an over-capacity load.

While the volume of traffic on the D&RGW increased greatly because of the war, as it did in varying degrees on nearly all railroads, the increased volume on the D&RGW was due only to an insignificant extent to diversion orders. Only a negligible amount of traffic to or from the northwestern states of Idaho, Montana, Oregon and Washington was ordered to be diverted to the D&RGW, and my reasons for not diverting that traffic to the D&RGW are apparent.

The Union Pacific and the three northwestern lines not only had capacity to carry the traffic at all times, except in the insignificant instances mentioned; the Union Pacific's route to the Northwest was shorter and direct and by-passed the highly burdened Ogden and Salt Lake City interchange gateways; it could move the traffic faster in addition to

avoiding additional interchanges and delay which always results from interchanges between carriers.

If I had diverted to the D&RGW traffic to or from the northwestern states it would have been delayed some 24 hours because of the D&RGW's slower movement and delay that would have occurred in interchanges at terminals that were by-passed via Union Pacific. In other words, the D&RGW was neither a logical nor comparably efficient [fol. 1298] route for traffic to or from the Northwestern states.

The D&RGW was a participating line for California traffic and I so dealt with it. It handled a heavy load of California traffic and even if I had needed or wanted to divert it to any noticeable quantity of Northwest traffic, it would have been necessary first to divert away from it some of the California traffic because of the capacity volume it was hauling.

Union Pacific dependably and efficiently carried a tremendous load through the Pocatello gateway, including diversions to it of coal originating on or moving via the Rio Grande, carload traffic from southern California destined to the States of Oregon and Washington, diverted due to disabilities of the Southern and Western Pacific, and the traffic originating on the Southern Pacific north of Oak Ridge and Westfir, Oregon, moving both to the west as well as to southern California, besides its own traffic.

In addition, it kept a steady flow of empty cars moving into that territory for return loading. During the entire period, March 1, 1943, to October 31, 1945, the Union Pacific also moved an average of 326 empty cars per day west from Pocatello.

Traffic was not diverted from the Union Pacific in any significant volume during the war period for the reasons:

First, the Union Pacific was always able to take the traffic routed via its lines and some from other lines, except in a few instances and for very short periods, and that [fol. 1299] applied particularly to traffic west of Idaho and Montana.

Second, the Union Pacific line was the shortest, most direct and efficient route to these Northwestern states.

The greatest transportation performance of the transcontinental lines as a group was during the first eight

months of 1945 when our total war requirements in the Pacific War Theater had reached their peak. In those months of 1945, as compared with the entire year of 1940, before we entered the war, freight train miles on those lines had increased 55 per cent, passenger train miles had increased 38 per cent, gross ton miles had increased 91 per cent, gross tons per train mile, 24 per cent.

While train miles per train hour decreased 9 per cent, this decrease was brought about by the increase in gross tons per train mile plus the additional up-hill pull of a preponderance of the westward traffic volume. The above figures are based on the performance of the seven western railroads, i.e., Santa Fe, Southern Pacific, Union Pacific, Western Pacific, Great Northern, Northern Pacific and Milwaukee, which are considered the Transcontinental Lines.

Railroad service available to shippers in the States of Idaho, Montana, Oregon and Washington, served by the Milwaukee, Great Northern, Northern Pacific and Union Pacific which were operating with less than a capacity load during the war period, was uniformly good although, due to some local and brief interruptions, it was necessary [fol. 1300] infrequently to divert some traffic as between these four railroads. However, it was never necessary or logical to reroute any noticeable amount of traffic, either originating or terminating in the above-mentioned states to the D&RGW through the Salt Lake or Ogden gateway.

During the war period those four railroads serving the Northwest handled, as measured in gross ton miles, approximately 75 per cent more traffic than they handled in 1940. Assuming that the gross ton miles moved in 1944 was their extreme capacity, which it was not, the number of gross ton miles had decreased, during 1948, on the Milwaukee, 11 per cent; on the Great Northern, 23 per cent; on the Northern Pacific, 34 per cent; and on the Union Pacific, 25 per cent, which means as of the year 1948, there was to the extent indicated, unused transportation capacity on these railroads.

It is common knowledge that since V-J Day, materials have become more plentiful and that generally all railroads in the United States have made progress in improving their transportation facilities and capacities. These improvements in many instances have created a greater in-

crease in capacity than that made by the decrease in gross ton miles from their peak war year to gross ton miles handled in 1948. With this idle and unused capacity available, there appears no need for any additional transportation capacity or service to or from this Northwest area.

[fol. 1301] The four transcontinental railroads serving the States of Idaho, Montana, Oregon and Washington have maintained through freight schedules with connecting lines to and from the east, south and west for many years. These through schedules afford frequent and dependable service to their patrons in those states.

The Union Pacific Railroad traverses the most productive portion of Idaho. It has, of course, the obligation of providing empty equipment for the commodities produced. Perishable commodities and livestock require equipment that ordinarily does not move into that territory under load, which necessitates long empty hauls of as much as 1,000 to 1,500 miles from Omaha or Kansas City.

Improvements in the operations of the Union Pacific Railroad and the D&RGW Railroad as of 1948 compared with their last pre-war year, 1940, and with their peak war years indicates a greater capacity in 1948 over 1940 than is reflected by the reduction in gross ton miles handled during their peak war years.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record. Let's proceed. This table may be copied in the record, Page 21. Go ahead.

[fol. 1302]

UNION PACIFIC				D&RGW	
Gross Ton Miles (in thousands)					
1940	42,246,489	100%	1940	6,834,669	100%
*1944	89,274,713	193%	1943	12,969,770	190%
1948	76,243,067	168%	1948	10,305,816	160%
Tons per Train Mile					
1940	1992	100%	1940	1865	100%
1944	2472	124%	1943	2227	119%
1948	2777	139%	1948	2306	123%
Train Miles per Train Hour					
1940	22.1	100%	1940	16.5	100%
1944	19.0	86%	1943	13.5	82%
1948	21.2	96%	1948	16.5	100%

* Indicates Peak Year.

		Gross Ton Miles per Train Hour			
1940	43,607	100%	1940	30,633	100%
1944	46,470	107%	1943	29,747	97%
1948	58,085	133%	1948	37,848	123%
		Car Miles per Car-Day			
1940	61.6	100%	1940	29.7	100%
1944	80.9	125%	1943	41.5	140%
1948	80.1	122%	1948	41.5	140%

[fol. 1303] The Witness: The measure of operating efficiency, accepted by most railroad men, is the gross tons per train hour, which includes gross tons per train-mile and the miles traveled per train hour. The above figures show an appreciable increase in efficiency in 1948 over the peak years.

However, the comparison of the Union Pacific and the Rio Grande shows that the Union Pacific hauls more tons per train and at faster train speed than the Rio Grande. In other words, the Union Pacific has surpassed the D&RGW in operating improvements since its peak year and has a greater idle or unused capacity than the D&RGW resulting from both reduced gross ton miles handled in 1948 compared to 1944, and from increase in operating efficiency in 1948 over 1944.

Mr. Quirk: Mr. Examiner, I object as this is incompetent, irrelevant, immaterial; and argumentative, the remainder of this statement.

Exam. Mullen: All of it?

Mr. Quirk: Yes, Page 22 to the end, Page 30. Mr. Examiner, there is nothing he says there that can't be said in a brief by the lawyers.

Exam. Mullen: Just a minute, we will take time out to examine it.

(Balance of statement is examined.)

Exam. Mullen: I find parts of it at least are argumentative, and in my opinion rather remote to this case. If you [fol. 1304] desire, I will designate those portions.

Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Quirk has made objection to certain portions of the testimony of this witness contained in the witness' state-

ment. I have indicated to the counsel the portions which I believe to be incompetent and irrelevant, and to that extent I have sustained Mr. Quirk's objection.

Now, Mr. Collins, do you desire to say anything with respect to that?

Mr. Collins: Well, frankly, Mr. Examiner, I don't believe I got the exact portions that you thought were incompetent.

Exam. Mullen: I will repeat them then off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

On Sheet 22, beginning with the fourth line from the bottom, the sentence begins "My experience and observations"——

Mr. Quirk: Mr. Examiner, that stays in.

Exam. Mullen: I beg your pardon, I left that in.

Mr. Quirk: Wait a minute, that means all the rest goes out.

Exam. Mullen: Just a moment.

Beginning with the line "My experience and observations"—and running over to Page 23, the quotation there of the Coordinator, and the paragraph following the two [fol. 1305] quotations I think is incompetent and irrelevant and should come out. Do you have anything to say about that that, Mr. Collins?

Mr. Collins: Well, Mr. Examiner, as to that, all that Mr. Kirk is saying is that the quoted language from the Coordinator's report has his concurrence as a railroad operations consultant, and he is qualified as such to say whether that expresses a sound and proper series of observations. I can't see why he can't adopt it as his own, as a result of his own experience and own qualifications. I can't see how it can be irrelevant here, either.

Exam. Mullen: My ruling is it is irrelevant. If you wish to note an objection, you may do so.

Mr. Collins: I do wish to note an objection.

Exam. Mullen: The objection is noted.

Beginning on Sheet 24, the ninth line from the bottom, and running over to the sixth line on Page 25, that I think is not relevant to this case.

Mr. Collins: Do you want me to speak with respect to that?

Exam. Mullen: You may comment if you wish to do so.

Mr. Collins: That has to do with the subject of circuity and transit shipments, and indicates what an efficient use of the transportation plan, what drastic steps are required. Now the general subject of transit is certainly a very large feature of this case, from the standpoint of the [fol. 1306] witnesses that testified in support of the D&RG, and I want this expert to express his opinion on it as a matter of sound railroading or was the full transportation, to cite whatever authority he can cite.

Exam. Mullen: The ruling still stands. Your objection is noted.

Mr. Collins: All right.

Exam. Mullen: On sheet 25, the last two paragraphs on that page running over on sheet 26 to the end of the quotation, I believe that is too remote.

Mr. Collins: Well——

Exam. Mullen: We have cost studies of later years. Cost studies of today are more pertinent than those referred to in 1932, and also the comment with respect to a quotation from the Federal Coordinator's report. I think that is too remote, and not material here. Now the balance of the statement I believe is competent and relevant.

Mr. Quirk: I want to go on record as objecting to the statement that you have permitted to remain in, beginning with the second full paragraph on Page 26, and running through, to and including the end, Page 30, as incompetent, immaterial and argumentative.

Exam. Mullen: The objection will be noted.

Proceed, Mr. Kirk.

The Witness: I don't know where I am now.

[fol. 1307] Exam. Mullen: Sheet 26.

Mr. Collins: Just after the quotation on Page 26.

The Witness: I think there is another place in here.

Mr. Collins: Mr. Examiner, you left in something on Page 25.

Exam. Mullen: There was one paragraph. That may be copied in.

Mr. Collins: Pardon me, it was on Page 24 I guess. Page 24, there is a paragraph there under those tables, and that may be copied down to——

Exam. Mullen: No, beginning on Page 23 wasn't it?

Mr. Collins: Yes.

Mr. Quirk: May I make this suggestion, Mr. Examiner. Inasmuch as we all had to read this while we were off the record, it seems to me all of it could be copied which you ruled to be relevant and competent, without being read. I had to read it.

Exam. Mullen: That may be done. It begins on Sheet 23, the last paragraph.

Mr. Collins: I am willing it be copied instead of being read by Mr. Quirk, Mr. Examiner, but I would like to reserve until after the noon hour the permission to make some further suggestion, if I conclude, to do with respect to the parts you have eliminated. What I have in mind is the possibility of making an offer of proof on those.

[fol. 1308] Exam. Mullen: You may do that this afternoon.

Mr. Collins: Yes. I thank you.

Exam. Mullen: Now let's understand on sheet 23, the last paragraph goes in. So do the tables on sheet 24. Then the paragraph on sheet 25 beginning "I refer to the car supply——." Then we start with sheet 26 "The tremendous increase——."

The Witness: Intercarrier train lot movements were prescribed during the war by the Office of Defense Transportation and during the war years 1943-4-5, the movement of cars reached their greatest percentage of moving time as will be noted from the following comparisons of hours per day cars were actually moving in trains and hours per day cars were standing:

	Moving	Standing	Total
1932	2.19 hours	21.81 hours	24.00 hours
1933	2.20 hours	21.80 hours	24.00 hours
1942	3.18 hours	20.82 hours	24.00 hours
1943	3.38 hours	20.62 hours	24.00 hours
1944	3.33 hours	20.67 hours	24.00 hours
1945	3.17 hours	20.83 hours	24.00 hours
1948	2.94 hours	21.06 hours	24.00 hours

During this war period it was necessary to secure the greatest use of the available car supply. These calculations were based on a report made by the Federal Coordinator, who analyzed all freight cars terminated on December 13, [fol. 1309] 1933, determining that the total elapsed hours from the time a car was placed for loading until it was

released to the consignee after unloading were 144 hours, distributed as follows:

Utilized by shippers and consignee in loading and unloading	68 hours
Detained by carriers in origin terminal	11 hours
Detained by carriers at destination terminal	15 hours
Detained by carrier at intermediate terminals	27 hours
In road movement	23 hours
Total	144 hours

The necessity of procuring the maximum use of the available car supply during the war period required some drastic action.

I refer to the car supply for the reason that it is now reaching an over-all point in respect to age where good serviceable cars must move more hours per day and reach destinations in shorter periods of time. As of January 1, 1949, 53.61 per cent of freight carrying cars in the United States were over twenty years of age, and the cost of repairs has reached an all-time high of $255.78 per car owned in 1948. We do not now have the restrictions of requiring heavier loading and use of shorter routes that prevailed during the war and our presently available car supply must [fol. 1310] consume less time per shipment to avoid shortage.

The tremendous increase in the railroad expenses brought about by the increase in the cost of materials and wages directly and by the adoption of the 40-hour week indirectly has added, in rate increases, to the expenses that are borne by the shippers, and the present demands of certain railroad employes, now being mediates, if granted, will tend to further increase expenses of the railroads and then the shippers. This applies especially to terminal costs if the 5-day week comes as a result of the demand of the employees.

To overcome any of this expense both to the railroads and the users of railroad transportation, in my opinion, requires the avoidance of any wasteful practices whether in the form of unnecessary multiplicity of routes or needless circuity and greater number of interchanges between carriers.

My study of this case and the circumstances which it involves, including locations, physical characteristics, ca-

pacity, etc., of the Denver and Rio Grande Western and of the defendant lines, and particularly the Union Pacific, plus my personal knowledge of the wartime functioning ability and capacity of the involved lines leads me to the following conclusions as a Railroad Operations Consultant:

First: While the Commission may require a non-consenting railroad to "short-haul" itself by participating in routes with other lines when the route of the nonconsenting [fol. 1311] line is unreasonably long compared to another practicable route, the situation here is just the reverse. To grant the prayer of the complaint would be to take traffic from established routes which are not only the routes of the originating lines, and especially the Union Pacific, but which routes are also as much as 200 miles shorter in mileage and a full day shorter in transportation time than the routes complainant asks the Commission to establish.

Second: While the circuity of the longer routes sought by complainant compared to present established routes via the originating and terminating, direct and shorter lines may not appear to be excessive percentagewise, the circumstances of the circuity are, as I have said, the reverse of those under which the Commission may permit hauling via reasonably circuitous routes, namely, to avoid "short-hauling" the carrier that originates or has possession of the traffic.

Third: The extent of complainant's proposed "short-hauling" of the originating and terminating and direct and shorter present routes is glaringly demonstrated by reference to the situation that would result to the Union Pacific between McCammon, Idaho, and Council Bluffs, and Kansas City: Union Pacific's haul over its present shorter and direct route from McCammon to Council Bluffs is 1038 miles, and to Kansas City, 1150 miles. If traffic were [flo. 1312] diverted at McCammon via Ogden and D&RGW, the Union Pacific's haul would be 111 miles to Ogden, and the Union Pacific would be short-hauled by 927 miles to Council Bluffs and 1039 miles to Kansas City. Assuming that the traffic were returned to the Union Pacific by the D&RGW at Denver for further eastbound movement, which is at least a hazardous assumption, the shorter, direct route of Union Pacific would still be short-hauled by 365 miles to Council Bluffs and 402 miles to Kansas City.

Fourth: In addition to the short-hauling of the originating carrier with the shorter mileage, the short-hauling would also necessarily require additional time and expense of at least one extra interchange, and if it be traffic subject to refrigeration, one additional icing.

Fifth: With respect to overhead or bridge traffic, the line of the D&RGW between Ogden and Denver is not and could not be needed to provide adequate, and more efficient or more economical transportation, because of the following facts:

1. Transportation capacity and ability of the lines participating in present through routes to the east, south and Southwest are such that they are carrying and can easily carry not only all the traffic the D&RGW wants to divert from them or some of them, but also 50 per cent to 100 per cent more than they are now carrying. Adding the D&RGW as another participating carrier would not increase the "adequacy" of existing transportation for since that line [fol. 1313] would neither originate nor terminate such bridge traffic, it would have to be surrendered to connecting lines beyond the D&RGW and the inadequacy, if any, of those connecting lines would still be present in the through transportation, in addition to the fact that movement via the D&RGW would require a day longer than via Union Pacific.

2. Addition of the D&RGW as participating line in present routes would make for less efficient, and could not possibly provide more efficient transportation of such traffic, because the sought routes via that line would in no instance be shorter, but in all instances of importance would be longer—more than 200 miles in most routes to some of the larger consuming centers such as Chicago and Pittsburgh—than present routes. In addition, efficiency compared to present routes would be reduced because of time and expense consumed by one or more additional interchanges, and possibly one additional icing, which could not be avoided if the D&RGW is injected as a participating line.

3. More economic transportation of such traffic would not result to shippers from adding D&RGW to carriers participating in through routes at present rates for the complainant seeks only to participate in the traffic at the same

rates that apply via present through routes. In other words, the D&RGW proposes no lower rates than those already available to shippers of such bridge traffic via existing [fol. 1314] routes. Certainly the proposal of the complainant could not result in more economic transportation but in fact, because of additional mileage, and time and expense of at least one additional interchange, it would result in less economic transportation from the standpoint of the railroads than that presently provided by existing routes.

Exam. Mullen: Is there any further direct examination?

Mr. Collins: No.

Exam. Mullen: All right, Mr. Quirk.

Cross-examination.

By Mr. Quirk:

Q. Mr. Quirk, didn't you offer your services to the Denver and Rio Grande in connection with this case?

A. Oh, yes.

Q. How is that?

A. Yes, sir. They replied that it would take about 20 days to decide, and in the meantime I got an offer from the Union Pacific and accepted,

Q. In other words, you were willing to act for either side?

A. That is correct.

Q. Well, now, you initiated this matter of employment with Mr. Hogue, didn't you, vice president of the Denver and Rio Grande?

A. And with Mr. Burns.

Q. Well did you initiate that at the same time?

A. Yes.

[fol. 1315] Q. Would you mind reading this letter to Mr. Hogue. That is in your handwriting, isn't it, dated August 4, 1949?

A. "Long time no see. Note by the presses that your railroad is filing application for rates from the southwest through Ogden to UP points, which recalls our conversation in Chicago on my diversion orders from the west of the Cascades."

I would like to state what that order conversation was.

Q. No, you read the letter first. We want the letter in the record.

A. "Wondered if this was the same question. Don't see much for the UP to squawk about, if southwestern lines are with you. When using Pocatello as basing point, Little Rock and Fort Worth, on the other, there is only about 30 miles in their favor which is less than an hour's time.

"I have all my ODT records if they are any value in this case.

"Very truly, W. F. Kirk."

Now I want to explain this conversation that I refer to as to diversions. Mr. Hogue came into my office and asked that I divert the traffic that was now moving from the Union Pacific east from the Southern Pacific west of Westfir and Oak Ridge, via the D&RG at Denver, and I told him there was no reason for it, and that I was not opening gateways just to please some railroad. He asked if I had authority to do it, and I told him I did, but that I wasn't going to do it.

Q. I see.

[fol. 1316] But at the time you wrote this letter in longhand to Mr. Hogue you didn't think the Union Pacific had anything to squawk about. Now you are here squawking for them, aren't you?

A. Yes.

Exam. Mullen: What was the date?

Mr. Quirk: August 4, 1949, about four days after the complaint was filed with the Interstate Commerce Commission.

Exam. Mullen: All right.

By Mr. Quirk:

Q. Mr. Hogue, on August 15——

Mr. Collins: Let the record show the witness is not Mr. Hogue.

Exam. Mullen: I didn't catch that.

Mr. Quirk: I didn't say the witness was Mr. Hogue. You can't resist the interrupting.

Exam. Mullen: Please, gentlemen. All I am asking is that the question be read, or the statement, whatever it was, I didn't hear it.

(Question read.)

Exam. Mullen: That interruption should not have been made, Mr. Collins. It is completely unnecessary.

By Mr. Quirk:

Q. On August 15, 1949,—maybe you can understand it this time—Mr. Hogue wrote you, and there is no use quoting the letter, and he told you, you remember, we had a conference with our Washington attorneys in September 12th at which time we hoped to reach a tentative conslusion [fol. 1317] on the testimony to be introduced. We will of course discuss your letter and the information you have available in order to determine the advisability of arranging for you - testify. You remember that?

A. Yes.

Q. Now then on August 8th, a few days before that, that is your letter, is it not—August 8, 1949?

A. Yes.

Q. Addressed to Mr. Hogue. Now it is a rather long letter, but would you mind reading the last three paragraphs of that letter? I mean to read it aloud.

A. I understand. I want to read it first to see whether I want to read it.

Q. I will read it if you don't.

Exam. Mullen: That is unnecessary, Mr. Quirk, the witness has a right to read it before he reads it out loud.

Mr. Quirk: I apologize.

The Witness: Reading part of the letter that I wrote to Mr. Hogue on August 8, 1949: "This memorandum was made for review by the law firm handling the various claims of the government for reparations. They contemplated using me as a witness. As these claims were so ridiculous to me, and so explained to them, it was decided that any testimony that I might present would not be very useful at this time. The memorandum is quite complete [fol. 1318] and the files are open for the perusal of your-

self or the legal department to determine their usefulness in Docket 30297. Without looking the matter up I recall two of my first orders were on request of Union Pacific to reroute traffic from them destined north and west of Pendleton and Portland, Oregon."

I want to comment on that.

By Mr. Quirk:

Q. You can comment on that after you read the letter.

A. "It was unfortunate that the D&RG was, except during the period of disability, tunnels, and so forth, were in position to handle more traffic than the UP, SP, and WP could take away from the western terminals at Salt Lake and Ogden.

"After reviewing this memo, if you desire to have items listed we will be glad to turn them over to your representative here to send to you at Denver. Of course, except for your own railroad, they could not be presented except by me as I personally prepared all the orders and the records were prepared under my supervision."

Now commenting on that, that was due to a wash-out on the Columbia River. Further commenting as to what they could handle: All railroad were at times in the same position. The Union Pacific was; in Denver and the West.

Q. Now, after you received the letter from Mr. Hogue which I referred to, and you had written this letter prior thereto, then on August 16, 1949, you wrote Mr. Hogue [fol. 1319] again. Would you mind glancing at that letter. You recognize it, I suppose. That is your signature, isn't it?

A. Yes.

Mr. Collins: What was the answer, please?

Mr. Quirk: Just read it, please. He said it was.

By Mr. Quirk:

Q. Will you please read it, it is a short letter.

A. "The Union Pacific people called me by phone at 11:45 a. m. today, and asked if I was available as a witness in ICC Docket 30927, and what my charges for such

services were. I informed them my charges would be the same for service in ICC Docket 29886 in the Lincoln Anti-Trust case, both of which would take preference. Also that I had no other request for my services and was available on the terms and conditions quoted them. They telegraphed their acceptance. I regret very much to advise of this turn of events, and if I can be of any help to you and the D&RGW. Please advise."

Q. In other words, you didn't wait to hear from Hogue after the conference with me, which was scheduled to be held August 15th?

A. Well, I don't know.

Q. You didn't.

Mr. Quirk: Mr. Examiner, inasmuch as I have dealt with these—we have some copies—I think it would be advisable [fol. 1320] to make them available to the other side in sequence. We offer them as an exhibit. I would like to offer these letters—carbons of the letters that have been identified by the witness—three of them—as the next exhibit.

Mr. Collins: I object to it, Mr. Examiner, at least until I have had the courtesy of opposing counsel to see them.

Mr. Quirk: Well, here they are.

Exam. Mullen: Do you want to examine those first?

Mr. Quirk: He has heard them read. They are the same letters.

Mr. Collins: I want to see the ones you showed to Mr. Kirk.

Mr. Quirk: Let me show you the originals.

(Handed to Mr. Collins.)

Mr. Collins: Mr. Examiner, I wonder if you would allow us to recess now and come back at 1:30 instead of 2, and pick up where we are at this point?

Mr. Quirk: I suggest this offer I made, that is merely putting it in for the convenience of the Commission what I referred to through this witness.

Exam. Mullen: Have you had a chance to look at those letters?

Mr. Collins: Yes, but I want to confer with my associates before I make a response to Mr. Quirk. And I think

this method would save about 15 minutes' time. I don't think that would be much of an indulgence toward me.

Exam. Mullen: We will recess until 1:30.

(Whereupon at 12:07 p. m. the hearing recessed until 1:30 p. m.)

[fol. 1321] Afternoon Session 1:30 p. m.

Exam. Mullen: We are ready to proceed, gentlemen. Please come to order.

Mr. Collins: I forget just where we stand.

Mr. Quirk: I offered for the convenience of the Commission and the parties these copies of the letters that have been already referred to, and it is immaterial to me whether you put them in or not. They are in the record, but there have been interruptions, and this would be merely a convenience, that is all.

Exam. Mullen: Have all of those letters been read into the record in their entirety?

Mr. Quirk: The three were read, yes.

Exam. Mullen: There is no necessity then for putting it in as exhibits.

Mr. Quirk: How is that?

Exam. Mullen: There is no necessity then for putting them in as exhibits. If the letters have been read in their entirety.

Mr. Quirk: I don't think the long one was read in its entirety, but counsel have had it over the noon hour. As I say, I won't press it. It seems to me, however, it would be of convenience to the Commission to have it, inasmuch as there are some interruptions in the transcript.

Exam. Mullen: Mr. Collins.

Mr. Collins: Mr. Examiner, the originals, this little group [fol. 1322] of originals and copies that Mr. Quirk used in showing to Mr. Kirk does not contain—rather, it is more full than the three letters that he proposes to put into the record from Mr. Kirk to Mr. Hogue. I wish you would look at them with this suggestion in mind from me, that everything that is in—copies of everything that is in this little batch of papers, which includes the three letters that

Mr. Quirk offered in evidence, should be—everything that is in the original files should be included.

I have no objection if all of those letters are put into the record.

(Handed to Examiner.)

There is a letter referred to there in a letter from Mr. Hogue of the 5th, from Mr. Hogue to Mr. Kirk.

Exam. Mullen: These will be received as an exhibit.

Mr. Quirk: We don't want to give up the originals.

Exam. Mullen: No, copies may be submitted later, let's identify them.

Mr. Quirk: I don't understand what Mr. Collins wants that is not in.

Mr. Collins: I object to these three letters going in from Mr. Kirk to Mr. Hogue, without the correspondence being complete with that memorandum he wrote.

Mr. Quirk: Can we go off the record?

Exam. Mullen: Off the record.

[fol. 1323] (Discussion off the record.)

Exam. Mullen: On the record.

Mr. Quirk: We have no objection to filing complete the matter Mr. Collins suggests. We will be glad to do so.

Exam. Mullen: That complete file may be offered later on in this hearing.

Mr. Quirk: Yes.

W. F. Kirk resumed his testimony as follows:

Redirect examination.

By Mr. Collins:

Q. Mr. Kirk, referring to the letters which Mr. Quirk examined you before the noon recess, and particularly to a letter written by you to Mr. Hogue, dated August 4th, and from there on, the additional correspondence in the file of originals you have before you. At the time you wrote this letter of August 4th, to Mr. Hogue, had you seen a copy of the complaint of the Rio Grande in this case?

A. No, sir.

Q. When did you first see a copy of the complaint?

A. It was evidently the time when I wrote him the letter on August 8th—no, it was not on the 8th, because I make reference—yes, on August 8th, acknowledged it on August 8th.

Q. Yes.

A. From Mr. Hogue. He sent me a copy.

Q. He sent you a copy with his letter to you of August [fol. 1324] 5th, I take it?

A. That is right.

Q. Had you prior to that time known what the issues in the complaint were prior to the receipt of Mr. Hogue's letter of August 5th, did you know what the issues in the complaint were?

A. The only thing I knew was the newspaper accounts.

Q. Now you have a statement of your own, a brief statement you care to make, do you not? If not, I will not ask you further. If you do, I think you should proceed to make it.

A. I would like to make this statement:

Since my return from Turkey, in 1948, I have held myself out as a railroad operations consultant. It has not been necessary to seek any jobs or positions of that kind.

Q. May I interrupt you to inquire if you have been on the payroll of any particular railroad or person other than your pension from the Missouri Pacific, if you call that a payroll?

A. Not since February 1, 1947.

Q. Yes. Go ahead.

A. And my services have been asked for by others. In this particular case, having knowledge of what occurred during the war, I offered my services both to the Denver and Rio Grande and the Union Pacific Railroad, just as any lawyer would do if he were seeking——

Mr. Quirk: Mr. Examiner, I move the statement be stricken.

[fol. 1325] Exam. Mullen: The statement may remain. Go ahead, Mr. Kirk.

By Mr. Collins:

Q. May I ask you this, Mr. Kirk: Are you a member of any organization having any code or by-laws or anything

that would forbid you from calling to the attention of anyone that you were available for employment?

A. No, sir, I have not. The only thing, under the Railroad Retirement Board I can't accept a regular position with any railroad.

Exam. Mullen: Does that complete your statement?

The Witness: Yes.

Mr. Collins: I have no further questions.

Exam. Mullen: Any further questions?

Mr. Collins: That is all for me.

The Witness: I may add this, Mr. Examiner, if you please: I made no study of the issues in this case until after I was employed.

Mr. Quirk: No questions.

Exam. Mullen: That is all, Mr. Kirk. Thank you, sir.

(Witness excused.)

Mr. Collins: Mr. Examiner, Mr. Davis of the Northern Pacific has a very brief statement that he wishes to put into the record. Northern Pacific is one of the defendants. Mr. Davis.

[fol. 1326] L. S. Davis was sworn and testified as follows:

Mr. Collins: If they have not already been offered, I offer Exhibits 26, 27 and 28, of Witness Webb.

Exam. Mullen: Any objection?

Mr. Quirk: None.

Exam. Mullen: They will be received in evidence.

How about Exhibit 29?

We will show Exhibit 29 received in evidence.

(Defendant's Exhibit No. 29, Witness Kirk, received in evidence.)

Exam. Mullen: All right, Mr. Davis.

Direct examination.

The Witness: My name is L. S. Davis and I am employed by the Northern Pacific Railway as Assistant General Freight Agent, Room 200, Smith Tower, Seattle,

Washington. I have been in railroad employ continuously since January, 1918, except for about four years spent in the Army during the last war. For a period of about 16 years my work has been directly connected with freight rates and my present duties include the preparation and presentation of testimony before regulatory bodies.

In Exhibit No. 3, Section F, several gateways involving the Northern Pacific Railway are shown in connection with which that line receives less than its maximum haul. In commenting on this subject, Mr. Earley stated that a "pattern of agreement" exists between Northwest carriers with respect to establishment of rates via short haul gate-
[1327] ways that amounts almost to wide open routing.

This statement is not consistent with existing tariff routes of the Northern Pacific Railway, and certainly it is not the policy of that company to permit wide open routing. The general policy of the Northern Pacific Railway is to secure the maximum haul on traffic over its lines whenever possible, and this policy is reflected in North Coast Territorial Directory No. 40-J, ICC No. 1516, of L. E. Kipp, where it will be found that Route No. 6 is published in a manner which prevents short haul of the Northern Pacific by other Trans-Continental Carriers and their connections.

The Northern Pacific does participate in some joint rates and routes to and from Trans-Continental Territory through Oregon and Washington gateways which results in that line receiving a shorter haul than is the case through its eastern gateways. These so-called short haul gateways are not the result of a pattern of agreement, but they were established for specific purposes.

Mr. Stilling has testified as to the origin of some of these gateways, and I have particular reference to those involving the Southern Pacific and Canadian Pacific. In these cases, the Northern Pacific duplicates the Union Pacific route in order to participate in the same hauls enjoyed by the Union Pacific.

[fol. 1328] In the fourth block on Page 7, routing is shown from Grandview, Washington, to Houston, Texas, via Northern Pacific-Billings, Montana-CB&Q and connections. The correct junction point is Laurel, Montana, instead of Billings, but this does not materially change the example. In this case, routing from origin to destination

is made available over rails of the Northern Pacific and lines in which the Northern Pacific has a financial interest; namely, the CB&Q, C&S, PW&DC and B&RI.

These affiliated lines cannot jointly participate in the movement described through eastern gateways of the Northern Pacific because of Fourth Section complications, and it does not appear unusual that a route permitting a 100 per cent movement over affiliated lines is published in this instance. This route is also of value in meeting service competition of other lines.

On Line 3, Page 9, a route on lumber from Tacoma, Washington, to Omaha, Nebraska is shown via NP-Wallula-UP, as well as the long haul route via the Northern Pacific through Laurel, Montana, thence CB&Q. Both Tacoma, Washington, and Omaha, Nebraska, are served by the Union Pacific so, on the surface, it might appear unusual there should be joint rates and routes provided via the Northern Pacific in connection with the Union Pacific. The background of this route dates to the year 1898, which is prior to the entry of the OWR&N into the Puget Sound area from Portland, Oregon, when the Northern Pacific and OSL established joint lumber rates from the territory north of Portland to points on the OSL and connections [fol. 1329] west of the Missouri River via NP-Silver Bow, Montana—thence OSL and connections. In 1910, the OWR&N operation was extended north of Portland, Oregon, to the Puget Sound area which then gave that line direct access to most of the origin territory, Seattle and south. Subsequent adjustments in lumber rates, which placed the Silver Bow Gateway at a rate disadvantage as compared with the OWR&N direct route, brought about negotiations between the Northern Pacific and OWR&N which resulted in cancellation of rates via Silver Bow from Northern Pacific points west of Wallula, Washington, and publication of a revised basis of rates via NP-Wallula-OWR&N.

Previous to this adjustment, it was found that a considerable volume of lumber originating at local Northern Pacific points was moving on a combination of Northern Pacific and Union Pacific local rates made over such points as Seattle, Tacoma and Chehalis, Washington, which combinations were lower than the joint rates maintained be-

tween points of origin and destinations via the Silver Bow Gateway.

As a result of this condition, the Northern Pacific received a very short haul to these various western Washington junctions. The revised rate structure through Wallula eliminated the advantage of the rate combinations to local Union Pacific territory and gave the Northern Pacific more revenue per car than it formerly obtained on the basis of [fol. 1330] the combination rates previously mentioned.

This adjustment via Wallula also provided a more favorable competitive rate situation for mills situated at local points on the Northern Pacific Railway as related to those located on the OWR&N than previously existed.

The examples of short haul routes of the Northern Pacific Railway shown in Exhibit No. 3, Section F, are in the nature of exceptions rather than the rule when related to the many connections that line has with other carriers and through which competitive joint-Trans-Continental rates are not maintained. To mention a few, the Northern Pacific connects with the Union Pacific at Portland, Oregon, Yakima, Spokane, Washington, and numerous other points in Washington.

There are connections with the Milwaukee Railroad at Seattle, Tacoma, Chehalis, Spokane, Washington and at several points in Montana. Likewise, the Northern Pacific connects with the Great Northern at numerous points in these same states. These junctions with other carriers which are published in the Railway Equipment Register, ICC RE 295, are of such large volume that I will not read them into this record, but merely refer to the foregoing typical examples.

The Northern Pacific originates a heavy tonnage of forest products, fruits and vegetables, grain and other products of the soil as well as manufactured products in the States of Oregon, Washington and Idaho, none of which can move to points on that line or beyond via these many short haul [fol. 1331] junctions at rates competitive with the Northern Pacific.

I will not attempt a further detailed explanation of each of the gateways shown in Exhibit No. 3, Section F, but will, in general, state that their background is of a competitive nature and they are of interest to the public from

the standpoint of marketing products having origin tributary to Northern Pacific rails.

It is also desired to point out that these so-called short haul routes shown in Mr. Earley's Exhibit No. 3, Section F, were the result of voluntary action on the part of the Northern Pacific Railway and not by order of the Commission so it may be said that they represent judgment of the management that such routes were in the best interest of the company at the time they were established.

Mr. Earley commented on the route shown on Page 22 to the effect that the Northern Pacific accepts a haul of 127 miles from Sumas to Seattle yet it does not join the D&RGW in a route wholly within the United States through Ogden. In TCFB Tariff 40-I, ICC No. 1516, of L. E. Kipp, Agent, which contains routing for the tariff shown on Page 22, Route 6-HH is shown opposite Seattle, Washington, on the Northern Pacific Railway, and this route enables the movement described on Page 22 at a competitive rate with other routes via connections of the D&RGW to Can-on City, Denever or Pueblo, Colorado, thence D&RGW-[fol. 1332] Ogden, Utah-SP-Portland, Oregon-NP.

By Mr. Collins:

Q. Does that complete your statement?
A. It does, sir.

Mr. Collins: You may cross-examine.
Mr. Quirk: No questions.
Exam. Mullen: No further questions.

(Witness excused.)

Mr. Collins: The Washington Public Service Commission wishes to present some testimony next, Mr. Examiner.

BARTLETT BURNS was sworn and testified as follows:

Exam. Mullen: You may proceed, Mr. Gallagher.

Direct examination.

By Mr. Gallagher:

Q. You are Mr. Bartlett Burns.
A. Yes.
Q. Have you been sworn?
A. Yes.
Q. Mr. Burns, where is your official residence?
A. Olympia, Washington.
Q. Is that with the Washington Public Service Commission?
A. That is right.
Q. Have you prepared a statement with reference to this hearing?
A. Yes, I have.
Q. Will you go ahead and read that statement, please.
[fol. 1333] A. My name is Bartlett Burns and I am employed by the Washington Public Service Commission at Olympia, Washington. My present title is Assistant Chief of the Tariff Section with duties involving rates and services of all types of transportation companies.

I have been with the commission and predecessor departments for 13 years, being in the Tariff Section continuously except for a brief period in which I assisted in motor truck cost and time studies. Prior to employment with the commission I had six years experience with a large motor common carrier in western Washington.

I am a graduate of the University of Washington and am a registered Class B practitioner. I was in attendance at the previous hearing at Salt Lake City last December and my appearance is entered.

The Public Service Commission is the established department of Washington State government empowered by statute with the duty and responsibility of regulating intrastate rates, charges, services and facilities of various common carriers, including railroads. In addition, it has a

positive mandate under state law to investigate interstate rates and practices and to bring complaints or to otherwise participate in proceedings before the Interstate Commerce Commission on behalf of shippers of the state.

Our commission, consisting of three men, has authorized me to state the position which it takes in this controversy. [fol. 1334] After considering carefully the representations made to them by the Union Pacific and Rio Grande, they concluded that they could serve the interests of the state best by actively supporting the position of the defendant roads. The commissioners are not unmindful of the fact that there may be some shippers who might benefit from transit and reconsignment privileges in the Rio Grande territory which would be opened to them in the event the position of the complainant prevails.

The commissioners have also given thought to the benefits which are theoretically engendered by the existence of competitive through-routes. On the other hand, however, due consideration must be given to the fact that the Union Pacific contributes in several respects to the economic welfare of the state of Washington.

Other witnesses have testified or will testify, as to the nature and extent of such contribution. It is patent that any diversion of revenues from the Union Pacific will impair the ability of that railroad to adequately serve the needs of our state. Taking all aspects into consideration, our commissioners have concluded that the state as a whole would lose more than it would gain if the position of complainant were to prevail.

Apparently the matter of service now being rendered by the Union Pacific, including car supply, has become one of the issues in this proceeding. It can be stated categorically that within, say, the last 12 years there has [fol. 1335] been no formal or informal complaint lodged with the Washington Commission concerning freight services of the Union Pacific, including car supply or car service and including interstate and intrastate commerce; nor have we been aware of any significant dissatisfaction.

This statement is based on my own recollection plus that of four other key personnel, all of whom have been with the commission for more than 12 years and are intimately

acquainted with rate, legal and secretarial details of routine. I also made a complete check of the formal files and an examination of the correspondence files.

It can also be stated categorically that, within the last 12 years, we have not had any requests for assistance to secure the opening of the Ogden gateway nor have we been aware of any desire on the part of shippers for such opening. This statement is based on the same inquiries on my part as previously mentioned. Further, since the filing of complaint in this proceeding, various Washington organizations have gone on record in opposition to the complaint and no person or organization has indicated to the Washington Commission its support of the complaint.

That concludes my testimony.

Q. Mr. Burns, you are testifying down here in behalf of the Washington Public Service Commission, are you not?

A. That is correct.

[fol. 1336] Mr. Gallagher: You may cross-examine.

Cross-examination.

By Mr. Quirk:

Q. Isn't it unusual for the Public Service Commission of Washington - participate in an inter-carrier dispute?

A. Of course inter-carrier disputes are a little unusual too. I don't know whether I could answer that question, whether it is or is not unusual.

Q. You don't know?

A. No, I don't.

Q. Do you know that under Section 116 of the Public Service Laws of the State of Washington that your commission has the power to prescribe joint rates between connecting railroads, whenever it finds it necessary, and so forth? Do you know that?

A. Taking your word for the citation, yes, that is correct.

Q. You were persuaded by the Union Pacific, I take it, and by the consideration given, that you should come here and oppose the opening of the establishment of the joint rates through Ogden?

Mr. Gallagher: Mr. Examiner, I think the statement itself speaks for that.

Mr. Quirk: All right. It does.

By Mr. Quirk:

Q. This is merely a statement of position, isn't it?

A. The first portion is, yes.

Q. All of it is as far as I can see.

[fol. 1337] Mr. Quirk: All right, thank you.

Redirect examination.

By Mr. Gallagher:

Q. Mr. Burns, one more question: Do you know whether or not the question of public interest or the interest of the people of the State of Washington was concerned with reference to your parficipating in this hearing?

A. Yes, it was definitely.

Mr. Gallagher: That is all.

Mr. Quirk: That is all.

Exam. Mullen: That appears to be all.

(Witness excused.)

Mr. Gallagher: I call Mr. J. D. Paul.

J. D. Paul was sworn and testified as follows:

Direct examination.

By Mr. Gallagher:

Q. Your name is Mr. J. D. Paul?

A. Correct.

Q. And you were sworn, were you not?

A. I have been.

Q. You are here as a representative of the Seattle Traffic Association and the Seattle Chamber of Commerce?

A. Yes, sir.

Q. In that capacity have you prepared a statement you would like to read into the record at this time?

A. Yes, I have.

[fol. 1338] Q. Would you like to read your statement.

A. My name is J. D. Paul. I am Secretary-Manager of the Seattle Traffic Association, Seattle, Washington, which position I have held since January 1, 1949. I have been engaged in traffic and transportation work practically all of my business life. I am a practitioner before the Interstate Commerce Commission and the Maritime Commission and have appeared in numerous cases before the Interstate Commerce Commission and other regulatory bodies.

The Seattle Traffic Association is a voluntary non-profit Association composed of approximately 125 of the largest shippers and receivers in Seattle, Washington, and was organized in 1941. Included in its membership are manufacturers of iron and steel articles, industrial chemicals, paints and varnish, airplanes, furniture, machinery, motor trucks, petroleum products, candy and confectionery, bakery goods, paper and pulp, sheet metal; together with flour millers, brewers, wholesale grocers, wholesale hardware houses, fruit and produce distributors, and retailers. In addition the Seattle Traffic Association handles all traffic matters for the Seattle Chamber of Commerce, and to a lesser degree for the Port of Seattle.

Amongst other things the objectives of the Seattle Traffic Association are to protect and promote the interests of the shipping public in Seattle, Washington and the Pacific Northwest generally; to prepare reports and statistics relative to rates, charges and conditions of traffic and [fol. 1339] transportation, both domestic and foreign, and by rail, motor vehicle, water and air; and to do such things as may be deemed best for the interests of the Association, its members, and the general welfare of the commercial, industrial, manufacturing and jobbing interests of the City of Seattle, Washington and the Pacific Northwest area as affected by traffic conditions.

Pursuant to action taken by the Executive Committee of the Seattle Traffic Association at its last regular meeting I appear here today to support the position of the Union Pacific Railroad Company in opposing the application of the Denver and Rio Grande Western Railroad Company for joint rates and through routes with the Union

Pacific to and from points north of Ogden, Utah, including Seattle, Washington. By action of the Board of Trustees of the Seattle Chamber of Commerce I am authorized to speak also for that body which concurs fully in all statements made herein.

No benefits nor advantages would accrue to Seattle or the Seattle area by granting of the joint rates and through routes prayed for, particularly in view of the fact that, except as to lumber, joint rates and through routes via the Denver and Rio Grande Western Railroad Company already are available via Portland, Oregon in connection with the Southern Pacific Company to and from Ogden, Utah as well as via the Bieber Gateway in connection with the Western Pacific Railroad Company to and from Salt [fol. 1340] Lake City, Utah.

Inquiry of a substantial number of our members discloses that as to Eastbound traffic none of them use the Ogden or Bieber Gateways and that while there has been very limited use of these gateways westbound, I have found that in the majority of these cases the cars were stopped for partial unloading at intermediate points.

In most instances members gave as their reasons for not using the Ogden and Bieber gateways the facts that the routes are longer and the time slower than via the Union Pacific direct, with no compensating advantages. In this connection it is also significant that although the Seattle Traffic Association has from time to time been requested by its members to negotiate with carriers for adjustments in freight rates, no member has ever requested that we apply to either the Union Pacific or the D&RGW for the joint through rates and routes sought by the complainant.

On the other hand it is the considered opinion of the Executive Committee of the Seattle Traffic Association and of the Seattle Chamber of Commerce that establishing the joint rates and through routes prayed for would be to our disadvantage. Among the reasons therefor are:

Mr. Quirk: I suggest this is nothing but argument.

Exam. Mullen: No, I don't agree with you on that, Mr. Quirk. He is stating his reasons. I think that is com- [fol. 1341] petent. Go ahead, Mr. Paul.

The Witness: 1. Granting of through routes——

Mr. Quirk: I object to it as incompetent, immaterial and irrelevant.

Exam. Mullen: Objection overruled.

The Witness: 1. Granting of through routes and joint rates would require the Union Pacific to share with the D&RGW revenues on traffic originating or terminating on rails of the Union Pacific.

2. There is no evidence that the joint rates or through routes prayed for would reduce freight charges to or from the Pacific Northwest, increase our markets, or improve rail service.

Mr. Quirk: That is objectionable.

Exam. Mullen: That is objectionable, I will agree with you on that. I think that comment should be eliminated. Are you referring to evidence of record, Mr. Paul?

The Witness: No, I am not, Mr. Examiner.

Exam. Mullen: What do you mean by there is no evidence?

The Witness: None has been adduced to indicate there would be any reduction in freight charges.

Exam. Mullen: You are not referring, then, to any evidence given in this record?

The Witness: No, I am not.

Exam. Mullen: All right, go ahead.

[fol. 1342] The Witness: I don't know all of the record, Mr. Examiner.

Exam. Mullen: All I want to know is, your comment is not directed to evidence of record in this case?

The Witness: That is correct.

Exam. Mullen: All right.

The Witness: 3. The Union Pacific has made heavy capital investments in Seattle, the State of Washington and the Pacific Northwest, and is contributing substantially to our local economy through payrolls, taxes, purchases and other expenditures necessary to provide adequate service and to maintain its properties. In the event the joint rates and through routes sought by complainant in this case are granted and should there be substantial diversion of traffic as a result thereof, the ability of the Union Pacific to continue to provide efficient, dependable transporta-

tion, including road haul and switching, car supply, maintenance of equipment and physical properties, would be impaired and if reductions in expenses necessary to offset the loss in revenues could not be accomplished through the economies mentioned, then it follows that increased rates would be necessary, all to the detriment of Seattle in general and our members in particular.

Mr. Quirk: Don't you think that is argumentative, Mr. Examiner? I object to it.

Exam. Mullen: No, I think it is a statement of this witness.

Mr. Quirk: It is an expression of his opinion, I suppose.

[fol. 1343] Exam. Mullen: Yes, his opinion.

The Witness: 4. The Union Pacific has contributed substantially to the industrial and commercial growth of the City of Seattle, the State of Washington and the Pacific Northwest, and the Seattle Traffic Association and the Seattle Chamber of Commerce are opposed to any action tending to restrict the Union Pacific's ability to contribute further to our future development. Establishing the joint rates and through routes sought would do just that.

Mr. Quirk: I object to that. This witness is certainly not competent to make that dogmatic statement.

Exam. Mullen: Your objection is overruled. It is accepted as a statement of opinion of this witness. Go ahead, sir.

The Witness: 5. In the event the joint rates and through rates and through routes sought are granted by the Interstate Commerce Commission, through traffic moving over the routes proposed would be subject to at least two additional interchanges; whereas, no interchanges are involved when shipments move via the direct route of the Union Pacific, except to or from connections at Denver or at the Missouri River crossings. It has been my experience, gained through supervising the movement of thousands of carloads of transcontinental traffic, that additional interchanges expose ladings to damage in switching from one line to another, and frequently are the cause of delays.

[fol. 1344] Wherefore the Seattle Traffic Association and the Seattle Chamber of Commerce pray that the complaint

of the Denver and Rio Grande Western Railroad Company be denied.

By Mr. Gallagher:

Q. Mr. Paul, in connection with your duties as Secretary-Manager of the Seattle Traffic Association, have you investigated personally the items you have referred to here about a lowering of rates by this joint rate that is referred to?

A. You are referring to item No. 2, on Page 4, are you, Mr. Gallagher?

Q. Yes, that was the one I had in mind.

A. Well I have read the complaint, and I have heard arguments by both complainants and defendants, and nothing has been presented to me that would indicate——

Mr. Quirk: Just a moment, that is objectionable.

Exam. Mullen: Just a moment. Read the question, please.

(Question read.)

Exam. Mullen: That is not responsive to the question.

By Mr. Gallagher:

Q. Mr. Paul, may I ask this question——

The Witness: Mr. Examiner, may I continue, I had not quite finished.

Mr. Quirk: I object to the question, and the answer he has thus far made is incompetent and irrelevant.

Exam. Mullen: Did you understand the question, Mr. Paul?

The Witness: Yes, I did.

[fol. 1345] Exam. Mullen: That has no reference to the evidence offered in this record. As I understood your answer, it was based upon your study of this record and the complaint. That is the reason why I said it was not responsive.

By Mr. Gallagher:

Q. Maybe I can straighten that out. What I wanted to know is whether or not you in your official cap-city here

have made investigations of your own with references to the findings and the statements that are made here as to how it would help or not help the City of Seattle.

A. Yes, I have made inquiries as to whether or not reductions in the freight rates were contemplated if this Ogden gateway were opened. The answers have been in the negative.

Mr. Gallagher: You may inquire.

Cross-examination.

By Mr. Quirk:

Q. Did you make any inquiries of the Union Pacific when you were making them?

A. Yes, I did, Mr. Quirk.

Q. Now you spoke of your item No. 5, of your summation, on Page 5, of your prepared statement, you say that if the joint rates sought should be established, through traffic moving over the route proposed would be subject to at least two additional interchanges, where no interchange is involved in shipments moved direct by the Union Pacific.

That of course depends on where the Union Pacific is taking the shipment, doesn't it? If the shipment is going to Philadelphia from Seattle there would be some inter-[fol. 1346] changes, wouldn't there?

A. That is true.

Q. So much for that.

A. By the same token, if the shipment from Philadelphia to Seattle is turned over to the D&RGW at Denver, for instance, and then is turned back to the Union Pacific again at Ogden, that involves two additional interchanges, does it not?

Q. Well, that would in turn depend upon how many carriers participated in carrying it from Philadelphia, wouldn't it?

A. I can't agree with you on that.

Q. You can't. Are you familiar with the joint rates that exist, and the various routes that exist between Philadelphia and Seattle?

A. To some extent.

Q. To some extent.

I can see why you don't understand that.

Now, how many interchanges would be involved on a shipment from Seattle, via the Union Pacific to Portland, thence via the Southern Pacific down through Stockton and southern California, Santa Rosa, New Mexico, then up to Tucumcari, New Mexico, Rock Island, and whatever line the Rock Island connected with to St. Louis, and/or Kansas City?

Mr. Gallagher: I don't think that is proper cross-examination.

Mr. Quirk: You don't. He just brought up the question. [fol. 1347] Exam. Mullen? I think it is proper. Go ahead.

The Witness: Would you mind, Mr. Quirk, naming the railroads and the junction points.

By Mr. Quirk:

Q. I have named the Union Pacific.

A. That is only one.

Q. Well I have named the Southern Pacific.

A. Two.

Q. I named the Rock Island.

A. Where would the Southern Pacific turn it over to the Rock Island?

Q. They can turn it over various ways. I thought you understood that. I am just a lawyer.

You seem to know about this movement via the Denver and Rio Grande, I thought at least—how many routes could be used that way, traffic originating on the Union Pacific going east via the Southern Pacific through Portland? How many routes are available to the shippers of Seattle?

A. Many of them are available. I don't know how many.

Q. How many?

A. I don't know how many.

Q. I thought you knew about these things.

A. I know about this.

Q. There are various ways that traffic moved after the Southern Pacific got it?

A. That is true. But, Mr. Quirk, my comparison was a movement via the Union Pacific direct with a movement

[fol. 1348] in connection with the D&RGW through the Ogden gateway.

Q. I know that is the story you want to stick to.

A. That is right.

Q. But I am stating it this way, you know the rates apply that way, don't you?

A. That is true.

Q. You seem to be concerned about the railroads joining in new through rates.

A. I'm concerned——

Q. How do you think that route, which is now available, calculates in the matter of distance as compared with what the Rio Grande seeks here?

A. You mean how does the Union Pacific's direct route compare with the Rio Grande's route?

Q. I meant the very thing I'm talking about. The Union Pacific through Portland, Southern Pacific, and around through New Mexico, and back to Kansas City. How do you think that compares with a movement from Seattle to Ogden, thence Rio Grande, thence back to the Union Pacific, or the Burlington or any one of the Prairie lines?

A. Very evidently it is circuitous.

Q. You think it is all right to have that. Would you have it canceled in the interest of the public?

A. I don't think it is used as a matter of fact.

Q. You don't know, do you?

[fol. 1349] A. I don't think it is.

Q. You really don't know?

A. That is my opinion.

Q. Opinion has nothing to do with whether the thing is a fact or not. Do you know as a matter of fact the traffic moves that way or not? All we want——

Exam. Mullen: Well, Mr. Witness, you either know or don't know. What is the answer?

The Witness: I don't know whether traffic moves that way or not.

Exam. Mullen: All right.

By Mr. Quirk:

Q. Now who are on the executive committee of the Seattle Traffic Association?

A. The executive committee of the Seattle Traffic Association is composed of 15 members.

Q. Are there any Union Pacific men on that?

A. There are no transportation people on it whatever.

Q. What type are they, businessmen?

A. They are businessmen, and industrial traffic men.

Q. How is the Chamber of Commerce operated, the Seattle Chamber of Commerce?

A. The Seattle Chamber of Commerce is composed of approximately 4500 members. It is governed by a Board of Trustees of 55, I believe. It may be 50, but it is in that neighborhood.

Q. How many railroads belong to the Seattle Chamber of Commerce?

[fol. 1350] A. I do not know.

Q. Don't you think it is a bit strange you wouldn't know that?

A. I know that some of them do, but as to how many, I do not know.

Q. You seem to know the most about Union Pacific. You know they do, don't you?

A. I do.

Q. Are they on the Board of Trustees, is the Union Pacific on the Board of Trustees of the Seattle Chamber of Commerce?

A. No, I am very sure they are not.

Q. Are there any other railroads on it? Great Northern?

A. I believe Mr. Thomas Balmer, vice president of the Great Northern, is a member of the Board of Trustees of the Chamber of Commerce.

Q. How about the Northern Pacific, are they on the Board of Trustees?

A. No, I believe not.

Q. How about the Milwaukee Railroad?

A. I think not.

Q. Did you say the Union Pacific had a representative on there or not?

A. They do not.

Q. That you seem to be positive about.

A. I know that, Mr. Quirk, because Mr. Arthur Murphy, I believe, was the last officer of the Union Pacific repre-

sented on the Chamber's Board of Trustees, and Mr. Mur-
[fol. 1351] phy is now retired and has been for some time.

Q. Now as a spokesman here for the Seattle Chamber of Commerce, and a man who has shown great concern for public interest, do you think that the Union Pacific should have power and right to determine whether a joint rate should be established or not?

A. I think so, when it affects the Union Pacific, certainly.

Q. Is that the position of the Seattle Chamber of Commerce right along?

A. It is their position in this case.

Mr. Quirk: All right. That is enough.

Redirect examination.

By Mr. Gallagher:

Q. I wanted to ask you, with reference to Mr. Balmer, do you know if he is living in the City of Seattle at this time?

A. Are you referring to his residence?

Q. Either working there or residing there.

A. Yes, his office is in Seattle.

Q. Do you know how the 50 or 55 trustees are made up? Is that an election?

A. They are elected by the membership at large.

Q. It could be any cross-section of the membership?

A. It is.

Q. With reference to your statement to Mr. Quirk, there, as to the right of the Union Pacific to make the determination. Are you referring to a final determination after
[fol. 1352] such a hearing as this?

Mr. Quirk: I suggest that is a leading question from this gentleman. He has answered my question.

Exam. Mullen: I think the witness can answer that.

Mr. Quirk: Sure he can.

The Witness: Would you read the question again, please, Mr. Reporter.

(Question read.)

The Witness: Thd determination in this case of course will be made by the Interstate Commerce Commission.

By Mr. Gallagher:

Q. That will be the final determination in this case.
A. That will be the final determination in this case.
Mr. Quirk: I am very glad to hear that.

(Laughter.)

By Mr. Gallagher:

Q. That is as far as the ICC is concerned.
A. Yes.

Mr. Gallagher: I think that is all.
Mr. Quirk: That is all.

(Witness excused.)

Mr. Gallagher: That is all we had, Mr. Examiner.
Exam. Mullen: Have we another witness available?
Mr. Hobbs: We have about three witnesses, Mr. Examiner, railroad witnesses, that is, they are not being called by the Washington Public Service Commission, but they [fol. 1353] are witnesses from Washington.
I call Mr. Watson.

H. L. Watson was sworn and testified as follows:

Direct examination.

By Mr. Hobbs:

Q. You name is H. L. Watson.
A. That is correct.
Q. And the testimony that you desire to give at this hearing, has that been reduced to writing?
A. Yes.
Q. Will you proceed to read it.
A. My name is H. L. Watson, and I am employed by and am an officer of Pacific Gamble Robinson Company, doing business as Pacific Fruit & Produce Company and Gamble

Robinson Company; general offices of which are located at Seattle, Washington, in which city I reside. I am General Traffic Manager and Assistant Secretary of the company named.

I have direct supervision of all transportation matters involving my company and I have been employed by them for the past 24 years. I am one of the Trustees of Seattle Traffic Association, which organization some time ago passed a resolution favoring the position of the Union Pacific Railroad in this case.

I attended the meeting at which the resolution was passed and voted in favor thereof. I am appearing here in [fol. 1354] behalf of Pacific Gamble Robinson Company, doing business as Pacific Fruit & Produce Company and Gamble Robinson Company, in support of the Union Pacific and the other defendants.

My company is engaged in the wholesale distribution of fresh fruits and vegetables of all kinds, canned goods, sugar, and limited grocery items. We operate extensively throughout the United States and Canada and maintain 118 wholesale distributing branches and 29 fruit and vegetable shipping branches. Through the fruit and vegetable shipping branches located within the principal fruit and vegetable production areas throughout the country, fresh fruits and vegetables of all kinds are purchased and shipped to our wholesale distributing branches. Throughout the Union Pacific territory described in the complaint, there are located many of our wholesale distributing branches and fruit and vegetable shipping branches, and to and from these branches fresh fruits and vegetables are shipped via the Union Pacific route to and from numerous similar branches located at Denver and points east and south thereof.

My company annually ships via the Union Pacific through routes in excess of 5,000 carloads of fresh fruits and vegetables and the limited grocery items handled by it. The transportation service rendered us by the Union Pacific is, and has been, entirely satisfactory, such service including the furnishing of cars, time in transit, protective services, car passing information, tracing and diversions and [fol. 1355] reconsignments.

The through routes available to us via the Union Pacific are entirely satisfactory and meet our needs. Therefore, we do not require, nor have we ever asked, the Union Pacific or the D&RGW to establish any through routes via the latter line. There is no necessity from our standpoint for the establishment of these through routes.

The majority of our shipments involve the transportation of perishable fresh fruits and vegetables in refrigerator cars. The transportation of such shipments via the most direct route and in the shortest possible in-transit time is extremely important to insure arrival at destination in a satisfactory marketable condition, as well as from an inventory and investment standpoint.

The Union Pacific, in conjunction with its subsidiary, Pacific Fruit Express Company, furnishes my company with a very large portion of the refrigerator cars required for the movement of our traffic, the condition of which equipment is maintained at a high degree of efficiency both from a loading and transportation standpoint.

Further the Union Pacific and the Pacific Fruit Express Company handle our perishable shipments in a highly satisfactory manner as regards to protection in transit, the furnishing of prompt advice as to the location of cars while in transit and prompt and efficient execution of all diver- [fol. 1356] sion and reconsignment orders.

It is my opinion, based upon my experience with the handling of perishables by those companies as compared with such handling by other railroads where such combined efforts are not present, that the Pacific Fruit Express Company itself adds greatly to the prompt and efficient handling of perishables. It is our notion that the routes sought in this complaint, because of their circuity compared with the direct routes of the Union Pacific, would involve greatly increased time in transit, and this would be supplemented, too, by the delays incident to the additional interchanges between railroads that would be involved.

By experience, I have found that by using fewer railroad lines on a through movement, and thereby eliminating as many interchange points between carriers as possible, our damage claims are minimized and fewer delays encount-

ered. Passing information is far superior and there are fewer diversion failures.

It is common knowledge that terminal switching incident to interchanges between railroads exposes shipments not only to delay but also to possibilities for damage to lading not encountered via a direct route. It has been my experience that where our traffic is transported by merely bridge lines that such lines are not equipped to promptly handle diversion and reconsignment orders and furnish requested [fol. 1357] passing reports. On the other hand, where our shipments are transported via a through single-line route, we do not lose contact with the shipment while enroute.

There is a considerable carload movement of fresh fruits and vegetables from points east of Denver originating in Texas, Louisiana, Mississippi, Florida, Massachusetts and other southern, southeastern and eastern states to points in the Pacific Northwest. The Denver gateway, with the exception of certain Texas vegetable rate restricted traffic, is used to a very little extent on perishables due to the slower transit running time via this route. Council Bluffs, Kansas City, St. Louis or Chicago direct routes are conceded to provide the fastest service.

There are, and have been for some time, through rates in effect from this east of Denver territory on fresh fruits and vegetables to Portland, Oregon, and Seattle, Washington, and intermediate points via Denver, D&RGW, Ogden, SP and connections, or via D&RGW, Salt Lake, WP-GN.

Our company receives five to six hundred cars of perishables per year from points east of Denver to Portland and Seattle, but the present available D&RGW routing is not used due to scheduled running time being between two to three days longer than the more direct routes.

In the event the routes asked by the D&RGW in its complaint are established, we are fearful of, and would expect [fol. 1358] that, the loss of revenue to the Union Pacific by that line being short-hauled would result in the practicing of economies in operation, such as reduction in train service and less frequent switching, or possibly the seeking of higher rates for the transportation of our shipments.

Any one or all of such contingencies would substantially affect our business adversely. This would be especially true in instances where our plants are located upon Union Pacific trackage as well as our plants located at points served jointly by the Union Pacific and some other carrier, of which there are numerous instances in the territory directly involved.

Under the circumstances and after full consideration of the matter, we see nothing to be gained either by our company or the territory which we serve by the establishment of the through routes sought by the D&RGW, but on the contrary, can visualize where our interests as well as those of the Union Pacific would be most seriously adversely affected thereby. Therefore, we hope the Commission will take no action in this proceeding that will be injurious to the interests of the Union Pacific and my company.

Q. Mr. Watson, your headquarters are located at Seattle; is that true?

A. That is correct.

Q. I think your testimony shows you have many branches throughout Oregon and Washington. Generally speaking, [fol. 1359] are there other routes open for use in Washington besides that of the Union Pacific, east?

A. Yes.

Q. What are they?

A. Well, we have—do you mean by trans-continental lines?

Q. Yes.

A. We have the Great Northern, Northern Pacific, Milwaukee.

Q. I think that is all, unless you care to add something else.

A. I have nothing to add.

Mr. Hobbs: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. Does your company have industrial plants or warehouses which are served by the Union Pacific tracks anyplace?

A. Yes, we have some.

Q. Where are they?

Well, I don't remember all of them. I can probably enumerate them, but they would be quite numerous.

Q. You mean you don't remember the ones——

A. I remember the ones on the Union Pacific, but I don't remember how many. I can enumerate them.

Q. Yes, do that.

A. All right. You want just the ones that are served exclusively by the Union Pacific.

Q. Yes, where you have a switch track at the plant.

[fol. 1360] A. I see.

Aberdeen, Washington; Baker, Oregon; Boise, Idaho; Centralia, Washington; Denver, Colorado; Idaho Falls, Idaho; Kelso, Washington; LaGrande, Oregon; Laramie, Wyoming; Lincoln, Nebraska; Los Angeles, California.

Q. You haven't finished?

A. Oh, no.

Q. Pardon me.

A. I am just about half through.

Omaha, Nebraska; Pendleton, Oregon; Provo, Utah; Pocatello, Idaho; Portland, Oregon; Pullman, Washington; Rock Springs, Wyoming; Seattle, Washington; Spokane, Washington; Sunny Side, Washington; Tacoma, Washington; Twin Falls, Idaho; Walla Walla, Washington.

We also have a shipping branch there on the Union Pacific. Wallace, Idaho, and Yakima, Washington.

Q. Now, at some or all those locations, I assume that your company leased property or tracks from the Union Pacific, does it not?

A. Yes, there are some.

Q. You have side track agreements, I suppose.

A. We have some, yes.

Q. You are pretty well tied up with the Union Pacific, aren't you?

A. I am not directly in charge or have supervision over [fol. 1361] our facilities.

Q. I see.

Now do you know, Mr. Watson, whether there is any—who owns the Pacific Gamble Robinson Company, is that a holding company?

A. It is owned by stockholders.

Q. I see.

Is that a holding company?

A. It is not.

Q. I notice you say Pacific Gamble Robinson Company doing business as——

A. That is right. We retain the trade name of the Pacific Fruit and Produce Company on the West End, and the Robinson Gamble Company on the East End.

Q. Are they both corporations, separate corporations?

A. No, they are not, they are just a trade name.

Q. Oh, I see.

Do you know whether any of your officers are stockholders or bondholders of the Union Pacific?

A. To the best of my knowledge they are not.

Q. That is very unfortunate.

Now, you made it clear that you are satisfied with the Union Pacific services, aren't you, that is what you said?

A. I think the Union Pacific service is satisfactory, yes.

Q. Well, would you oppose a joint rate through Ogden [fol. 1362] and the Rio Grande where shippers have shown that they need transit and they are bottled up down there unless they have it? Would you oppose that? There are some engaged in your type of business. You said you don't need it. Now I'm suggesting if it is shown here some shippers do need it, are you opposed to that?

A. Well, personally I don't think they need it.

Q. Well, that isn't the question. The Commission will determine that. There have been quite a few witnesses you have not heard at all.

A. That is correct.

Q. A great many. Some made it clear they did need it. You are not opposed to those that show they did need it, are you?

A. I could not oppose that, except in general principle.

Q. Now you say you did ship five thousand carloads over the Union Pacific last year.

A. That is correct.

Q. If this joint rate the Rio Grand- seeks here is established through Ogden and Salt Lake, do you deliver all of those five thousand cars to that route?

A. No.

Q. Will you send any of them over that route?

A. No.

Mr. Quirk: Subtract 5,000 from the 156,000.

(Laughter)

By Mr. Quirk:

Q. Turn to Page 4 of your memorandum. "Our com- [fol. 1363] pany receives five to six hundred cars of perishables from points east of the Denver to Portland and Seattle, but the present available D&RG routing is not used due to scheduled running time being between two to three days longer than the more direct routes."

Now, by that do you mean the scheduled running time via the Denver and Rio Grand-, we'll say, from Pueblo or Denver, to Salt Lake, and thence Western Pacific or up over the Great Northern or thence Ogden on the Southern Pacific; is that the route you are talking about?

A. That is correct. As compared with the direct route from Kansas City.

Q. You don't use those routes?

A. No, we do not.

Q. But this route that is being sought here, or rather the joint rate that is being sought here, would be through Ogden, that would be a more direct route, would it not?

A. I don't think there is any difference in the service that is scheduled.

Q. There isn't any now, we don't have the joint rates, but as a practical plan, you can look at the map and see the shipments coming from the east of Denver, going over the Rio Grande, has the shortest route between Denver and Salt Lake, and then up over the Union Pacific, and

Ogden would be a shorter route than the route you now say is too long.

[fol. 1364] A. I think that is correct, yes. That is correct.

Q. By the way, Mr. Watson, do you know this Pacific Seattle Traffic Association voted in this matter? You said you were a trustee, didn't you?

A. I was present at the time the vote was taken.

Q. How did they vote?

A. The matter was——

Q. Was it close?

A. What is it?

Q. Was the vote close?

A. I don't recall.

Q. Oh, I thought you said you were present.

A. I was present, but I don't recall how everybody voted.

Q. Now, how was the vote taken, did they just say aye and no?

A. That is correct. I think there was some——

Q. Sometimes the people that make the biggest noise against, don't they?

A. I won't be acquainted with that.

Q. You have been at meetings—all right.

Mr. Quirk: That is all.

By Mr. Quirk:

Q. Oh yes, I knew I had a question. Weren't you and and your company, at least you as a representative of your company, neutral on this so-called Ogden gateway until very recently?

A. Yes, we were in the beginning, that is correct.

[fol. 1365] Q. When did you change from neutrality—strict neutrality to the kind of position you are in now?

A. I just don't recall, probably within the last month or so.

Q. Who persuaded you to change?

A. Well the persuasion was by ourselves.

Q. You mean you persuaded yourself?

A. That is correct.

Q. Were you called on by the Union Pacific representatives?

A. Well, of course we were called on by both railroads.
Q. Did we call on you too?
A. Yes.
Q. We couldn't persuade you?
A. Evidently not.

(Laughter)

Mr. Hobbs: Is that all you have?
Exam. Mullen: Anything on redirect?
Mr. Hobbs: Yes.

Redirect examination.

By Mr. Hobbs:

Q. Mr. Watson, what other railroads besides the Union Pacific are your facilities located on? I think your testimony shows you have 118 branches. What other railroads are you located on?

A. We have the Northern Pacific, Milwaukee, Oregon Trunk, C&W, CB&Q, BA&P, G&RGW, CAMAS, Prairie, [fol. 1366] CStPM&O,—I'll eliminate Canada, they are not involved—Rock Island. I may be duplicating some of these, because I am going over the list the best I can.

Exam. Mullen: Is that enough for your purpose, Mr. Hobbs?

Mr. Hobbs: I think so.

By Mr. Hobbs:

Q. In answer to a question from Mr. Quirk, Mr. Watson, I understood you to say you would not be opposed to the opening of the gateway for others that might have some use for it.

Did I understand you correctly?

A. Yes, that is correct.

Q. Is that irrespective of the effect the opening might have on the service that you receive at your plants on the Union Pacific?

A. I think I explained in my testimony I was opposed to it in general principle as to the effect it would have in general.

Q. Are we to understand your testimony then that if there is a possibility of your service being affected you are opposing to the opening of the gateway for anybody?

A. Anything that would affect our service.

Mr. Hobbs. That is all.

Recross-examination.

By Mr. Quirk:

Q. During a period until recently, you were in a mood where you didn't know which way to turn; is that right? You were in a neutral mood.

[fol. 1367] A. We were neutral, yes.

Q. You didn't reach and find these great principles until within the last month.

A. That is probably correct.

Mr. Quirk: All right.

(Witness excused.)

Mr. Hobbs: We will call Mr. Graham.

Alfred P. Graham was sworn and testified as follows:

Direct examination.

By Mr. Hobbs:

Q. Your name is Alfred P. Graham.

A. That is right.

Q. Has the testimony which you care to offer in this proceeding been reduced to writing, Mr. Graham?

A. It has.

Q. Will you proceed to read it, please.

A. My name is Alfred P. Graham. I reside at 1935-47th S.W., Seattle, Washington. I am the Traffic Manager for the Boeing Airplane Company with headquarters at Seattle, Washington. I have been employed by the Boeing Airplane Company for nine years; approximately four years as Assistant Traffic Manager and five years in my

present position. I have been admitted to practice before this Commission.

As a member of the executive committee of the Public Carriers Division, Seattle Chamber of Commerce, I voted [fol. 1368] in favor of a resolution passed by and and which subsequently was approved by the Chamber of Commerce, recording its opposition to the application of the Denver and Rio Grande Western Railroad in this proceeding.

I am also a member of the executive committee of the Seattle Traffic Association and voted in favor of a resolution passed by it, recording its opposition to the complaint of the Denver and Rio Grande Western Railroad.

The Boeing Airplane Company is a manufacturer of airplanes and airplane parts at Seattle, Washington; Renton, Washington; and Connell, Kansas. We have a regular carload movement of airplane parts and component materials between our plants at Seattle and Renton on the one hand and Connell, Kansas, on the other hand, and between our plants at Seattle and Renton and Transcontinental Group J and east thereof.

In 1949, the Union Pacific handled for our Seattle and Renton plants, 394 carloads inbound and 102 carloads outbound or a total of 496 carloads. Of the inbound quantity, 44 carloads were received from the territory Missouri River and east and 225 carloads from our Connell, Kansas, plant. Of the outbound quantity, 45 carloads were forwarded to the territory Missouri River and east and 24 carloads to our Connell, Kansas, plant. The Union Pacific also handled 41 carloads inbound and 3 carloads outbound for our Connell, Kansas, plant other than from or to our Seattle or Renton plants.

[fol. 1369] The principal plant of our company is located in Seattle. It is located on joint trackage of the Union Pacific Railroad, Great Northern Railway, Northern Pacific Railway and Chicago, Milwaukee, St. Paul and Pacific Railroad, but under an agreement between the lines, it is switched exclusively by the Union Pacific. Our Renton plant is served by the Pacific Coast Railway Company and the Northern Pacific Railway Company. All of these lines are defendants in this proceeding.

The Union Pacific's service in regard to road haul, switching, car supply, tracing and in all other related respects has been excellent. The Union Pacific has also prepared and supplied special equipped excess height cars for the movement of large airplane components, such as wings, fuselages, etc., which are too large to load in standard cars. We have found the Union Pacific particularly mindful and willing to assist in the special transportation problems of our company prior to, during and since the war. It has been particularly important that special equipment assigned to service between our plants move on an expeditious over-the-road schedule, coordinated with our production schedules.

We have never asked nor do we have need for joint through rates on transcontinental traffic via the Denver and Rio Grande Western in connection with the Union Pacific. The existing routes and services of the Union Pacific are entirely adequate and sufficient for our purposes. We have routed some of our cars to Seattle via [fol. 1370] the Denver and Rio Grande Western in connection with other carriers. Transit time has been two days or more longer than when routed via the Union Pacific.

The exigencies of our production require the fastest transit time possible. If the route proposed, which would short haul the Union Pacific, were established, it is only reasonable to assume that such a situation would result in a loss of revenue to the Union Pacific. It would naturally follow that such a loss would have to be offset by an increase in rates or by savings from a curtailment of service. Either of these results would be to the definite detriment and disadvantage of my company.

Mr. Quirk: I think this is argument, Mr. Examiner.

Exam. Mullen: That is argument. I suggest the last two sentences be stricken.

The Witness: The Boeing Airplane Company desires to go on record in opposition to the establishment of the requested through routes and respectfully requests the Commission to take no action that would possibly impair the ability of the Union Pacific to render the service it has in the past, which is vital to our operations.

By Mr. Hobbs:

Q. Mr. Graham, you state here you are a member of the executive committee of the Seattle Traffic Association. Were you present at the time the resolution was passed by that organization recording its opposition to the complaint?

[fol. 1371] A. I was.

Q. You were?

A. Yes.

Q. Do you recall, or can you tell us how that vote stood?

A. It was unanimous.

Mr. Hobbs: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. It was one voice that guided it, I suppose.

A. No, there was quite a bit of speaking on the subject, and it was unanimous vote in favor of the Union Pacific's position.

Q. Are you opposed to the establishment of the joint rates sought here, even though it is shown in this case that some shippers, that others need it?

A. I am.

Q. You just don't want anybody to have it; is that it?

A. My testimony speaks for itself, Mr. Quirk.

Q. Now on this route, you say you have routed some of the cars to Seattle, via the Denver and Rio Grande, in connection with other carriers.

Where did those cars come from?

A. It was the Swallow Airplane Company, at Wichita, Kansas, routed via the Missouri Pacific, D&RGW, Western Pacific, Great Northern. Service, I think, the minimum we had was about ten days, which would be about three to four days longer than the Union Pacific direct route.

[fol. 1372] Q. Assuming the service via the Ogden and Union Pacific proceeded over the D&RG, would be much shorter than that, you are still opposed to that being established.

A. I am. I believe it would make service on the Union Pacific suffer, as well as revenue depletion.

Q. If the Commission should requ-re the establishment of the joint rate sought through Ogden in connection with the Union Pacific, would you use that route in handling of your traffic?

A. As far as I know, I would continue to use the Union Pacific long haul route.

Mr. Quirk: That is all. Thank you.

Exam. Mullen: That is all.

(Witness excused.)

Exam. Mullen: We will take a ten-minute recess.

(Short recess taken.)

Exam. Mullen: Come to order, please.

FRED H. TOLAN was sworn and testified as follows:

Direct examination.

By Mr. Hobbs:

Q. You have been sworn, Mr. Tolan.

A. I have.

Q. Has the testimony which you desire to give in this proceeding been reduced to writing, Mr. Tolan?

A. It has.

Q. Will you proceed to read it.

[fol. 1373] A. My name is Fred H. Tolan. I am a traffic consultant and industrial traffic manager for many northwest industries, primarily in the States of Washington and Oregon. My address is 1103 Smith Tower, Seattle 4, Washington. I have been in freight traffic matters since 1940, excluding a period when I was in the United States Marine Corps during the war.

Who I represent:

I am retained and have been retained for approximately one year by the Whatcom County Traffic & Rates Bureau of Bellingham, Washington, which is an association of approximately 70 of the principal industries in that north-

west area of Washington. I am Traffic Manager and have been for nearly five years, for the Northwest Produce Association, an association of the principal independent distributors of fresh fruit and vegetables in the State of Washington.

I am Traffic Manager of the Northwest Furniture Manufacturers Association and have held that position for nearly three years. That Association is an association of approximately 70 furniture manufacturers and large distributors of furniture and related products in the States of Washington and Oregon. I am Traffic Manager, and have been Traffic Manager for nearly two years, for the Northwest Fish Traffic Committee, which is an association of practically all the important producers of fresh and frozen fish in Washington, Oregon and Alaska.

[fol. 1374] In addition to the above listed industries, I am Traffic Manager for most of the insulation material manufacturing plants and distributors in Washington and Oregon; I represent the largest Christmas-tree shippers; the largest fern and evergreen shippers; the largest chemical and industrial raw material distributors, and a large variety of miscellaneous manufacturing plants throughout Washington and Oregon not covered by the general industry list given above.

I am Traffic Manager for all of the industries mentioned above with the exception of the Whatcom County Traffic & Rates Bu-eau. I am Traffic Counsel for that association only, so a resolution of the Board of Directors from that association has been obtained at a regular meeting in Bellingham authorizing support of the Union Pacific position in this matter and directing me to register that position at this hearing.

Commodities shipped:

My interest and study of shipments has involved thousands of carloads of almost every commodity and covers practically every region and destination in the United States. As my work involves more than consultation on rate matters, but actually requires routing, shipping instructions and all of the elements of industry traffic management, I have had to familiarize myself with all general

transportation problems of the businesses that retain me. My office maintains a staff of six people to assist in the traffic and management ends for the many industries we [fol. 1375] represent. I am familiar with the commodities shipped, the routings used, and the routings needed by the people that I represent.

It is the opinion of everyone I represent that the opening of the Ogden gateway is not necessary nor desirable, and that the effect of opening the gateway can substantially injure Washington and Oregon shippers.

Mr. Quirk: Does the Commission want opinions, rather than facts, Mr. Examiner?

Exam. Mullen: Well, I think this is all right. This testimony is all right.

Mr. Quirk: All right.

Exam. Mullen: I mean I find nothing objectionable *it in*. Proceed.

The Witness: Why we think we can be injured:

Any answer to the question of why we are appearing here today taking the Commission's time and the time of those present to express opposition to opening another route for transcontinental traffic needs explanation. That explanation must be answered by reference to individual shippers. First, I would like to explain why the Whatcom Traffic & Rates Bureau opposes this application.

We know that any reduction in the system revenues of any railroad serving the State of Washington has the effect of raising our Washington State rail rates. We do not have to speculate to reach that conclusion. The Whatcom [fol. 1376] County Traffic & Rates Bureau is already on record before the Washington Public Service Commission and before the Superior Court for Thurston County in the State of Washington opposing a 4 per cent increase in state rail rates based on system-wide revenue needs.

We have argued before our State Commission and have argued before the court that system-wide revenue figures should not affect state rates. The Washington Public Service Commission, as well as the other Public Service Commissions in California, Nevada, Oregon and elsewhere, has denied our position.

Mr. Quirk: I object to this on the grounds it is sheer argument. This is not the time for argument.

Exam. Mullen: That appears to be argument. Just a moment.

Mr. Hobbs: I think if the Examiner please, what Mr. Tolan is trying to show there, there are instances and there have been instances, where on account of low-system revenues the intrastate rates have been affected, and that is what the Whatcom County organization is objecting to.

Exam. Mullen: Did you say intrastate rates?

Mr. Hobbs: It is on account of that the Washington intrastate rates have been raised, that is what they are fighting. In other words, he is stating the fact if the system revenues of the Union Pacific are reduced then they need not look for any rate reductions, but rather they will [fol. 1377] have no argument against the increases.

Exam. Mullen: He might state that as his opinion, but I don't see why he refers to the argument made before the State Commission. He can state as his opinion he thinks that result may follow. Let us look it over here and eliminate the argument.

The Witness: The top of page 4 documents the basis for our opinion.

Mr. Hobbs: We are taking that——

Exam. Mullen: The last three lines on sheet 3 appear to be argument to me.

Mr. Quirk: The top of Page 4, Mr. Examiner——

Exam. Mullen: I have not come to that yet. Just a minute, please.

Mr. Quirk: All right.

Exam. Mullen: The first eight lines of sheet 4 are argument.

Mr. Hobbs: I think, Mr. Examiner, the witness in lieu of the part you have struck, may state in his own language his opinion as to the effect on those rates.

Exam. Mullen: Let's continue with the statement, and let's finish that one first.

Mr. Hobbs: Proceed, then.

Mr. Quirk: I object.

Exam. Mullen: I will sustain Mr. Quirk's objection as to those particular portions.

Mr. Quirk: At the top of page 4, that is not only objec- [fol. 1378] tionable, for practically the same reason, but it is hearsay, a good deal of this is hearsay.

Exam. Mullen: I have sustained the objection to that portion. That comes out.

By Mr. Hobbs:

Q. Proceed, then, Ir. Tolan.

A. We are very concerned that this Ogden gateway, if opened, will seriously impair the revenues of the rail lines serving Washington. The rail state revenues in Washington on Washington intrastate traffic was over $30 million last year. We feel our huge interest in state rail rates in Washington are further endangered by the proposal of the D&RGW here.

Why the Northwest Produce Association opposes the application:

We are large shippers of fresh fruit and produce from Texas and from Florida during many months of the year to points in Washington and Oregon. I have managed traffic for this Association for nearly five years and have yet to see a car of fresh fruit and produce require a stop at a local D&RGW point.

We have no pocket market at Ogden or Salt Lake via the D&RGW to Seattle, Tacoma, Bellingham, Spokane or any other large consuming point in Washington because there is a full line of rates in conjunction with the D&RGW via the Western Pacific and Great Northern to Washington points, and the Union Pacific makes the entire Salt Lake area intermediate by tariff application so that shipments [fol. 1379] can be diverted on to this area from that point.

As produce distributors, we would not use the D&RGW gateway because of greater time in transit requiring added icing cost under Rule 240 or other non-fixed refrigeration charges. We would not use the Ogden gateway if it was put in, because of the additional time which we estimate to be at least 24 hours over the fast service via the Union Pacific from Kansas City. Most of the fruit and vegetables from Texas and Florida channel through Kansas City to the State of Washington because of faster time in transit in connection with the carriers via that gateway.

Never once have we found it necessary to request the opening of the Ogden gateway for perishable shipments. Never once, to my knowledge, and a survey of all ship-

ments made over the past several years has verified, have we paid a combination rate due to a pocket market on perishables.

We do not desire the opening of the Ogden gateway. We feel that to open the gateway will have an adverse effect on our westbound fast routings via the Union Pacific, for it would tend to siphon off other traffic which is used to make up trains which haul the perishables on fast schedules from Kansas City to the Northwest.

We feel that by splitting the business available and short hauling the Union Pacific, it will only result in lesser number of scheduled trains from Kansas City with conse-
[fol. 1380] quent depreciation in service and greater refrigeration costs on many cars, plus greater depreciation in the quality of the fruit or vegetables due to longer time in transit.

Why Northwest Furniture Manufacturers Association opposes the application:

The members of the Northwest Furniture Manufacturers Association ship large quantities of furniture to the Denver area in less than carload lots. The biggest hurdle we have in obtaining reasonable rates on our commodity is the large amount of damage claims which exist on furniture. The more interchange, the greater the damage to furniture, is almost axiomatic for those shipments.

To points in Denver or east of Denver, we hold interchanges to a minimum. The same comment would apply on carload traffic which moves in large volume to transcontinental territory. Beyong the greater damage hazard of an Ogden interchange on transcontinental traffic from points in Washington and Oregon, there would be the additional time in transit which we estimate to be not less than 24 hours.

Exam. Mullen: Now just a moment. That next paragraph is argumentative, and I think should come out.

The Witness: Absolutely the only freight rates on less than carload lots of furniture which we consider equitable in the entire northwest as a group (and about 70 per cent [fol. 1381] of all furniture moves in less than carload lots)——

Mr. Quirk: Isn't that argument, and also irrelevant and immaterial?

Mr. Hobbs: He is stating facts.

Exam. Mullen: He is stating his reasons for his opposition as I see it.

Go ahead, sir.

The Witness: —are the rates to the Union Pacific points in southern Idaho and Utah. We do not want to endanger our ability to retain those rates by favoring diversions of traffic which can make the furniture traffic subject to greater damage and to reducing the ability of the one railroad in the entire Pacific Northwest that has for many years given the furniture industry of the northwest an equitable and fair rate structure. There is absolutely no industry demand from any of the 70 members from any of our many shipping points for routes over the Ogden gateway in connection with the D&RGW and the Union Pacific.

Why the fishing industry opposes the application:

"The biggest problem of moving frozen fish from the Pacific Northwest to the area covered by the complaint east of the Rocky Mountains is car service. There is a very limited number of high quality refrigerator cars of adequate capacity for the demands of the industry. The largest supplier of refrigerator cars in the west is the Pacific Fruit Express Company, which is the joint operation of the Union Pacific with the Southern Pacific. Unless the [fol. 1382] Union Pacific can be assured——

Mr. Quirk: I think that is argument. He is just assuming unless so and so is so and so, that something is going to happen.

Exam. Mullen: Yes, that appears to be argumentative. It is only one sentence. We will leave it in.

Go ahead.

The Witness: —of every bit of traffic and revenue possible in the handling of refrigerator shipments, we just won't have adequate cars. The situation is not such in the northwest now that we can endanger the present situation. We want the Pacific Fruit Express to put in more cars and not less cars. We urge the Interstate Commerce Commission not to endanger our refrigerator car supply

for the future by killing the desire of the railroads to continue their program of new refrigerator equipment.

The record should also show that if the Ogden gateway was opened, it would not be a practical gateway for the handling of fish——

Exam. Mullen: Just a moment, I don't understand that statement "the record should also show"—what do you mean by that?

The Witness: Rephrasing that, we want to bring to the Commission's attention.

Exam. Mullen: What?

[fol. 1383] The Witness: If the Ogden gateway was opened, in lieu of the first phrase.

Exam. Mullen: Oh, all right. In lieu of that first phrase then.

The Witness: We want to bring to the Commission's attention that if the Ogden gateway was opened, it would not be a practical gateway for the handling of fish eastbound from the Pacific Northwest. All frozen fish moves on a cost of ice basis, putting the penalty on the shipper for any slow time in transit. As the Ogden interchange, as distinguished from a through movement directly east, would be at least 24 hours longer, it would mean the industry would have to pay that much penalty in refrigeration cost to use the Ogden gateway.

On the basis of a complete survey of all the shippers on transcontinental routings, I do not know one shipper of fresh or frozen fish who would even consider the Ogden gateway if it were open today.

Why I am speaking in opposition to opening the Ogden gateway for the general list of industries for whom I am Traffic Manager:

I have been closely connected with preparing route, rate and traffic advice information for a huge number of miscellaneous manufacturers and receivers of freight, primarily in the states of Washington and Oregon for the past several years.

[fol. 1384] Exam. Mullen: Just a moment. I don't think that testimony has any bearing in this case. It is all negative, "I do not know." I think that ought to come out.

Mr. Quirk: The whole think is negative.

By Mr. Hobbs:

Q. Well, aren't you in position, Mr. Tolan, to know whether or not they did have to pay the combination rate?

A. We are, yes. We survey practically all shipments for all clients.

Q. Do you mean rather then, as you state "I do not know" that your investigation has developed that no shipper has paid the combination rates?

A. Yes.

Exam. Mullen: This witness ought to testify of his own knowledge. This to me is plainly negative, "I do not know of one single shipper—" I don't know what weight I can give that kind of testimony. I think it is purely negative, and should be stricken out.

The Witness: In my survey of the shipments made by the clients that I represent I have never once had it brought to my attention, nor have never once discovered a single case where a combination rate into the Northwest was paid over Ogden or Salt Lake, due to the absence of the transcontinental route sought in this proceeding.

I have never once requested an Ogden gateway. On the basis of my experience with over 300 industries in the Pacific Northwest, I can state that as far as they are con-
[fol. 1385] cerned, there isn't the slightest public demand from them for opening of this gateway.

While the Denver & Rio Grande Railway solicited our support for their position in this matter, after the most careful survey, I could not escape the conclusion that for the people I represent, the most serious injury to them could occur if the Union Pacific position is not sustained. For that reason, we want to register our opposition to the relief sought in this action.

By Mr. Hobbs:

Q. Do you have anything further, Mr. Tolan, you care to comment upon?

A. No, sir.

Mr. Hobbs: You may cross-examine.

Cross-examination.

By Mr. Quirk:

Q. Mr. Tolan, are you a member of the bar of Washington?

A. I am.

Q. In other words, you act both in the role of a lawyer and also in the role of a traffic manager?

A. That is right, except I do not take general law cases.

Q. You do file complaints with the Interstate Commerce Commission on occasion, don't you?

A. Quite frequently.

Q. Haven't you filed complaints against the Interstate Commerce - in which you sought to persuade that Com- [fol. 1386] mission to reduce the rail rates of the Union Pacific and others?

A. Yes.

Q. Well do you show the same concern about the effect on your clients' business when you seek a reduction in rates by complaint as you ahve shown here?

A. No, I think Mr. Quirk, your answer on that must be to understand the issues here as contrasted with the issues there, in those cases——

Q. Now you are not answering my question.

A. It can't be answered yes or no.

Q. Well, when you——

Mr. Hobbs: I think the witness is attempting to answer the question, if you give him a chance.

Exam. Mullen: Just a minute now. Mr. Quirk, are you rephrasing your question?

Mr. Quirk: No.

Exam. Mullen: All right, read the question.

Mr. Quirk: Let him answer it in his own way then. I interrupted him.

Exam. Mullen: Proceed, Mr. Tolan.

The Witness: In this proceeding, I can see no possible benefit to any client that I represent. In the cases which you refer to there is a very definite interest, and a very definite benefit to the people of the State of Washington [fol. 1387] that I represent. They are clearly distinguishable on that ground.

By Mr. Quirk:

Q. In other words, you think it always a benefit to the people you represent when you get a rate reduced.

A. If it engineers more traffic, and enables them to get more business. In this case they get nothing.

Q. How many complaints have you filed against railroads in the last five years seeking reduced rates in acting in your role as a lawyer, I imagine, or in any role?

A. Oh, I would say 25, but not all of them have been for reduced rates.

Q. Have you filed some for increased rates?

A. In I&S cases, yes.

Q. Were you directed by any of the clients you pretend to represent to come here and deal with this matter in the way you are?

A. Yes. I have the resolution here in case you would like to see it.

Q. Have you ever been retained by the Union Pacific as an attorney?

A. No, sir.

Q. The Northwest Produce Association is composed of what?

A. The principal fruit and vegetable distributors in Seattle, Tacoma and Spokane.

Q. Are they receivers of freight?

A. Almost entirely.

[fol. 1388] Q. And do you exercise control over routing, yourself, when you are acting in role of traffic manager, and not as lawyer?

A. Yes, we route not all involved in this case, but we provide routing for between 20 and 30 thousand carloads of freight a year.

Q. You do?

A. Yes.

Q. Does it all move over the Union Pacific now?

A. No, most of that in fact is not involved in this proceeding. It is movement between points in the West.

Q. Do any of the people you represent here have shippers involved in this proceeding?

A. Oh, yes.

Q. How much in the way of carloads?

A. I have not computed that number. It is substantial, though.

Q. I thought you had made a very careful survey of this set-up.

A. I have, but not from a per car count. I didn't feel that was necessary.

Q. You don't think it is important to determine how much traffic is involved?

A. I think as long as substantial traffic is involved the exact amount of the substantial quantity is irrelevant.

Q. What would you call "substantial"?

A. Anything about one hundred cars.

Q. You use one hundred as a base?

[fol. 1389] A. That is right.

Q. If this joint rate should be established by the Commission in spite of your opposition, would any of the people that you act as traffic manager for route shipments via the Ogden and the Denver and Rio Grande?

A. As a general policy, no. Infrequent cars, possibly.

Q. If we assume that this record shows already that there are shippers and receivers that need joint rates, for transit reasons or others, would your group be opposed to them getting it even if they need it?

A. In the method proposed here, yes, because, Mr. Quirk, there is adequate machinery now for anyone who has an injury to get it through formal complaint. For example, if a lumber shipper wanted it.

Q. What do you think this proceeding is?

A. This is a blank check.

Q. Don't you know this is formal complaint?

A. An individual formal complaint for the specific problem involved.

Q. In other words, you think the only people that have a right to complain is the shipper?

A. I didn't say that, you said that.

Q. This is a formal complaint anyway, you know that.

A. That is right.

Mr. Quirk: That is all.

[fol. 1390] Mr. Hobbs: That is all. Thank you.

(Witness excused.)

Mr. Hobbs: Mr. Carkin of the Oregon Commission, has a statement to make.

JOHN H. CARKIN was sworn and testified as follows:

Exam. Mullen: All right, you may proceed.

Direct examination.

The Witness: My name is John H. Carkin. I am Director of Transportation for the Public Utility Commissioner of Oregon. I am a graduate of the University of North Dakota in Arts and Law, and practiced for 21 years in general practice. I have been with the state for the last 20 years. I am not a rate man nor a traffic man, but I have been in some of the transcontinental cases. I appear here in making a statement for the Commissioner George H. Flagg, Public Utility Commissioner of Oregon.

The position of the Public Utilities Commissioner of Oregon in this proceeding is set forth in his Petition for Leave to Intervene which was presented at the Salt Lake hearing last December. Under the laws of the State of Oregon, it is the duty of the Commissioner to investigate interstate as well as intrastate rates and practices of common carriers by railroad, and if warranted he is authorized to file complaints with, and/or appear in proceedings before the Interstate Commerce Commission on behalf of [fol. 1391] the State, its shippers and receivers of freight.

After fully considering the issues involved in this case, the Commissioner concluded that the interests of the State as a whole required his intervention on behalf of the defendants in this proceeding.

Defendant Union Pacific Railroad Company has property and other investments in the State of Oregon, and for the purpose of serving shippers and receivers of freight located therein has provided much rolling stock and other equipment for the transportation of the many products produced in the State of Oregon which are marketed in the large consuming centers of the east and middle west.

Its railroad lines serving Oregon constitute, in most instances, the shortest, fastest and most economical route to those consuming markets. Present through routes open to shippers in Oregon, so far as the Commissioner has knowledge, are adequate and sufficient for the purposes of shippers located therein. The routes proposed in this complaint are more circuitous and longer than those of the

Union Pacific between Oregon and the consuming markets referred to, and time in transit for transportation over those through routes would be longer.

The D&RGW can add nothing to the economy of the State of Oregon, but on the other hand through the diversion of traffic from the Union Pacific with the consequent loss of revenue thereon, the ability of the Union Pacific to continue to furnish adequate transportation service to [fol. 1392] shippers in the State of Oregon and to continue the investment of large sums in the State in the betterment of those properties would be jeopardized.

A check of the Commissioner's files discloses no formal or informal complaint against the service rendered by the Union Pacific either with respect to the furnishing of cars or the transportation of shipments handled by it. While it is likely that, during periods of general car shortage, shippers and receivers of freight located in Oregon may have been inconvenienced to the same extent as were such shippers and receivers generally, the record of the Union Pacific in the matter of the furnishing of cars in Oregon, so far as the Commissioner has knowledge, is not open to censure.

The Commissioner has never been asked by any shipper or groups of Pacific Northwest shippers to seek the establishment of the through routes requested by complainant, and since the filing of the complaint herein, neither shippers nor groups of shippers have requested that he support the complainant in this case, and no showing has been made to him that if complainants are given what they seek herein, it would result in either lower rates or better service to shippers in the Pacific Northwest.

Exam. Mullen: Any cross-examination?

Mr. Quirk: Is the witness ready for cross?

Mr. Hobbs: Mr. Carkin is not appearing here as my witness, he is appearing for the Oregon Commission.

[fol. 1393] Cross-examination.

By Mr. Quirk:

Q. Mr. Carkin, you say that no shippers nor group of shippers have requested that the Commissioner of Oregon, for whom you say you speak, has requested that he support

the complainant in this case. Now, hasn't your Commissioner received letters from Mr. Benning of the Amalgamated Sugar Group, and a Mr. Miller, of Milton, Oregon, who represents the cooperative group, and a Mr. Titus, who represents a lumber group within the last month or within the last few weeks, I don't know the date?

A. What was the first man, did you say?

Q. Mr. Titus—who did I mention first, Benning, of the Amalgamated?

A. No, I know nothing of that.

Q. You don't recollect it?

A. No.

Q. Have you received anything from Mr. Miller of Milton, Oregon?

A. We sent a man over there to see what his difficulty was, and he seemed to have some peeve with the Union Pacific, but he had no complaint as to the issues in this case. We were endeavoring—the Commissioner was endeavoring to find out whether there were any people that would be hurt or would be helped.

Q. He testified here just the other day in support of this complaint.

[fol. 1394] A. I don't know anything about that.

Q. Then at least you had that shipper that asked you to act, didn't you?

A. We went over, and he didn't ask us to act at all.

Q. How about Mr. Titus?

A. Mr. Titus wrote us a letter, and I discussed the thing with him, and the letter, as I recall, was to the effect that he was surprised that we were in on behalf of the Union Pacific, but there was nothing further said.

Q. Isn't it a bit unusual for a regulatory authority such as your Commissioner, to take sides in inter-railroad disputes?

A. I don't know as to that. We consider the Union Pacific in a sense a northern railroad, very important to the economy of our shippers, and I think the Commissioner's viewpoint is we should get in on behalf of the Union Pacific.

Q. Are you familiar with Section 113 and 118 of the Oregon Public Utility Law, as to joint rates?

A. Well, I know there is such a provision.

Q. Isn't it the policy of your law on intrastate traffic that joint rates and routes should exist between railroads?

A. I wouldn't say that. I don't know as to that.

Q. Are you familiar with the law?

A. Am I what?

Q. Are you familiar with your law?

A. No, I am not with the detail of it, no, sir.

[fol. 1395] Mr. Quirk: That is all.

Mr. Hobbs: Mr. Carkin, before the Commissioner intervened in the proceeding at Salt Lake last December, and of course before your testimony now, was the Commissioner approached by representatives of the D&RGW?

The Witness: Numerous times, yes, sir.

Mr. Hobbs: Thank you. That is all.

(Witness excused.)

Mr. Hobbs: Mr. Clay.

FRANK S. CLAY was sworn and testified as follows:

Direct examination.

By Mr. Hobbs:

Q. Have you been sworn, Mr. Clay?

A. I have.

Q. Do you have a written statement which you care to read into the record at this time?

A. Yes, I have.

Q. Will you please proceed with it?

A. My name is Frank S. Clay and I reside in Portland, Oregon, and am now and have been for the past nine years, Secretary-Manager of the Portland Freight Traffic Association, Suite 401-02 Spalding Building, Portland 4, Oregon. I have lived in Portland over 40 years and have been engaged in traffic work for the past 30 years.

Portland Freight Traffic Association is a voluntary organization with its offices and place of business at [fol. 1396] Portland, Oregon. It has been actively and continuously in existence for the past 53 years, and its

membership consists principally of persons, firms, and corporations engaged in various lines of business in Portland, Oregon, and the surrounding metropolitan area including Vancouver, Washington.

Most of the members are manufacturers, jobbers, and wholesale distributors of various commodities. Also affiliated with and members of the Association are such public and semi-public bodies as the Portland Chamber of Commerce, Port of Portland, Commission of Public Docks (an autonomous agency of tht City of Portland, Oregon), Portland Clearing House Association of Banks, Port of Vancouver, Washington (a municipal corporation operating the port district in that city), Vancouver Chamber of Commerce, Port of Longview, Washington, and other agencies.

The individual members and the public agencies referred to utilize to a considerable extent the facilities of transportation offered by common carriers by railroad that serve this area. The Association was formed and is maintained to defend, to sponsor, and to develop the interests of its members and broadly of the community at large, in the rates and services of various agencies of transportation, including common carriers by railroad and matters relating to traffic and transportation and in questions or [fol. 1397] controversies in connection therewith.

The complaint in this case seeks to compel the establishment of joint through rates via the D&RGW Railway through the Ogden and Denver gateways on eastbound and westbound Trans-Continental traffic originating at or destined to points in the States of Oregon, Washington, Idaho and Montana, and in Utah north of Ogden served by the Union Pacific Railroad.

The members of the Portland Freight Traffic Association constitute a cross-section of business firms located in this area and in the conduct of their business, they annually ship hundreds of carloads of freight, both eastbound and westbound to and from Trans-Continental territory and to a large extent, utilize the route of the Union Pacific through Omaha and Kansas City gateways.

The service of the Union Pacific has been excellent. I have discussed this case with many members of the Traffic

Association and have found in all instances, our members are not interested in an additional or alternative route in connection with the D&RGW Railway at Ogden or Denver. They regard this route as simply a longer, more circuitous route with no offsetting advantages which, if made available to them, they would not utilize because of the much faster and better service which obviously is offered the shipping public over the direct through route of the Union Pacific via its own rails to and from the Missouri [fol. 1398] River.

Exam. Mullen: Just a moment. I regard the next three paragraphs as purely argumentative.

Mr. Quirk: I concur with you, Mr. Examiner.

Mr. Hobbs: Mr. Examiner, so far as the matter contained in the first paragraph that you referred to, it seems to me it merely states the facts so far as the development in the Portland area, by the Union Pacific Railroad Company. It forms among other things the basis of the opposition of Mr. Clay's association.

Exam. Mullen: Well, that paragraph coupled with the next two, it seems to me is all one argument. I think it should be stricken. That statement should come out.

Mr. Hobbs: We object to it, if the Examiner please.

Exam. Mullen: Do you object to the ruling?

Mr. Hobbs: I beg your pardon?

Exam. Mullen: You object to the ruling you say?

Mr. Hobbs: Yes, sir.

Exam. Mullen: Exception will be noted.

The Witness: The members of my Association are appreciative of the efforts of the Union Pacific in furnishing them with satisfactory transportation service and are desirous of having that service continued to be available to them. However, from experiences in their own businesses, they realize that if the income of the Union Pacific is materially affected through the diversion of traffic now [fol. 1399] handled by them to the D&RGW, that economies must necessarily be made by the Union Pacific to offset such losses.

Any such economies that would result in restricting the present service enjoyed by our members in the way of fewer trains operated, less frequent switching of their plants, etc., would adversely affect their businesses.

Exam. Mullen: Just a moment, that next paragraph it seems to me is argumentative, and should come out.

Mr. Hobbs: If the Examiner please, it seems to me to be coupled in with the paragraph just previous.

Exam. Mullen: I will let that stay in. The paragraph I'm referring to starts off "Another aspect of the situation"——

Mr. Hobbs: Yes, in the previous paragraph it is expressed that the economies would result in fewer trains, and other economies, and in this one it is the same thing only it is a matter of increases in freight rates.

Exam. Mullen: Not the way it is put here, as I read it.

Mr. Hobbs: I am certain that is what the witness meant by that, isn't that true?

The Witness: That is right.

Exam. Mullen: I am reading the statement as I see it, that is argumentative and should come out.

By Mr. Hobbs:

Q. Can you reframe what you had in mind in that paragraph, Mr. Clay?

[fol. 1400] A. Yes, I think I can.

Our position is this: The rail carriers, the transcontinental rail carriers and other carriers have been before the Commission in the Ex Parte cases 162 up to 168, are badly needing revenues. The Union Pacific Railroad Company is one of the principal railroads serving the Pacific Northwest, and particularly Portland and the surrounding territory. It is perfectly obvious to us——

Exam. Mullen: Just a moment, that is argument. What is the point you are trying to make?

The Witness: The point is, if they lose substantial quantities of traffic.

Exam. Mullen: They may have to raise their rates; is that it?

The Witness: We think they will have to raise their rates, yes, sir.

Exam. Mullen: That is your point.

The Witness: Yes.

Exam. Mullen: All right. You can go on from there "In the course of my duties"——

The Witness: In the course of my duties as Secretary-Manager of the Traffic Association, I am in constant and daily touch with our members in the consideration of their shipping and traffic problems. If any of them had any desire for routes or service via the Ogden and Denver gateways in connection with the D&RGW, such desire would be known to the Association. However, I have never had a [fol. 1401] request from any of the members or a desire expressed by them for the establishment of through rates and routes in connection with the D&RGW on Trans-Continental traffic.

Since the Union Pacific has pioneered and developed the territory, and is now serving our members satisfactorily and adequately,——

Mr. Quirk: That is argument.

Exam. Mullen: That is pure argument. Strike that out.

Mr. Collins: Mr. Examiner, may I be heard for a moment?

Exam. Mullen: Yes, Mr. Collins, what is it?

Mr. Collins: By adequate and satisfactory transportation service, that is one of the bases in Section 15 of the Act, which involves the exercise of the power given it in Paragraph 3 of that section. Now what more pertinent evidence could you have, and what more pertinent evidence could the Commission desire to act upon than a statement by this gentleman's traffic manager for so many people, traffic advisor, than the quality of the service that he receives, which he stated, it may be in the words of the statute, but it doesn't seem to me the way this is going on it gives the witness any room to express himself in any kind of words.

Exam. Mullen: He has already expressed himself. I am referring merely to the last paragraph.

Mr. Collins: I thought you were going to strike it out. [fol. 1402] Exam. Mullen: Why, yes, that is straight argument as I see it.

Mr. Collins: The fact that the Union Pacific is serving them satisfactorily is argument?

Exam. Mullen: He stated he received satisfactory service, but the way the last sentence is stated is pure argument and in my opinion should be stricken. At least that is my ruling. Strike that out.

The Witness: Mr. Examiner, do we take the whole last paragraph out or parts of it?

Exam. Mullen: I'm referring to the last paragraph of sheet 4. You read all the rest.

By Mr. Hobbs:

Q. Do you have anything further to add, Mr. Clay? I have some further questions for you, but do you have anything to add?

A. Only this, Mr. Hobbs: That it is the position of our association, summed up in a nutshell, we do not now need, and have not needed, and our members have no desire for the establishment of the Ogden-Denver gateway.

Q. The Union Pacific Railroad is not the only railroad serving the City of Portland, is it, Mr. Clay?

A. No, we have Great Northern, Northern Pacific, SP and S; Southern Pacific.

Q. Now, in connection—directly in connection with this case, your association was approached, was it not, by the [fol. 1403] Union Pacific Railroad representatives?

A. Yes, we were contacted by the Union Pacific in connection with the case, to ascertain our position.

Q. What form did that contact take, Mr. Clay?

A. Well, you mean how——

Q. Was it some personal contact with you?

A. We were called upon by the officials of the Union Pacific to state our position in the case, and the case was explained to us, and we came to our conclusions in connection with that.

Q. Were you also approached by representatives of the D&RGW?

A. We were by the local representative of the Denver and Rio Grande.

Q. Now just to what extent did the D&RG spend their effort in attempting to get you to come in on their side of the case?

A. Well the local representative of the D&RGW in Portland asked us to—in a sense it was put to us in this way—this asked us if we couldn't support the D&RGW, if we would take a neutral position in the case, and not

take the side of the Union Pacific, and of course we said that such wasn't our desire or conclusions after we had given careful study to it, because we feel, as I testified, that we have no use for the Ogden gateway or the Denver gateway, and we wouldn't use it if it were established.

Q. Did you hear from anyone else in connection with possible intervention on the side of the D&RGW? Did you [fol. 1404] receive any other communications or anything else?

A. Well, there is a group in Portland, a Shippers Industrial Traffic Club in Portland, composed of about 50 members, known as the Portland Industrial Traffic Club, they were approached by the D&RG, to take the position in the case. But they declined to do so. I am also a member of that organization.

Q. I don't think you understand what I meant. Did you receive any communication with anyone connected with the D&RG soliciting your support in this case?

A. Yes, I received a letter from Mr. Hogue, the vice president of the D&RG, and a copy of the complaint.

Q. Do you have that with you?

A. Yes, I have. It is a letter from Mr. Hogue, dated August 10, 1949, and a copy of the complaint, and a map, and explanatory matter in connection with the filing of the complaint.

Q. May I have those? (Handed to Mr. Hobbs.)

Did the local representative of the D&RGW at Portland, did he supply you with any literature in connection with the dates?

Mr. Quirk: Is this relevant to the case?

Mr. Hobbs: If you will just wait a minute.

Exam. Mullen: Go ahead.

The Witness: Yes, the representative of the D&RGW at Portland gave me a copy of the prepared statement by Mr. Bradford which I have here outlin-g the argument supposedly and position of the D&RGW in support of their case.

[fol. 1405] By Mr. Hobbs:

Q. Do you have that?

A. I have that here.

Q. And did he leave any other literature with you?

A. Twenty questions on the Ogden gateway.

Q. Did he say what the purpose of this was when the local representative called on you, the purpose of leaving this literature and this statement of Mr. Bradford's with you, did he say what the reason was?

A. The purpose was to influence our decision to either support the D&RGW in the case, or take a neutral position and not support either side.

Q. Do you know when you received this literature and a statement from the local representative?

Mr. Quirk: I object to this, on the ground it is irrelevant and immaterial. The Denver and Rio Grande doesn't deny it tried to persuade various people, and so did the Union Pacific. Why go back behind that? That is something Mr. Collins tried to bring up at the Salt Lake hearing.

Exam. Mullen. What was the purpose, Mr. Hobbs?

Mr. Hobbs: The purpose that was expressed both at Salt Lake City and here yesterday in connection were much the same matter, Mr. Examiner, is that by this literature that was distributed by the D&RG at or about the time the complaint was filed, we contend was an attempt on the DRG&W to arouse public interest in the case of which none existed prior thereto. We think that is an important [fol. 1406] thing.

Exam. Muller: Is there any dispute as to that fact that the D&RGW endeavored to interest the shippers in this territory in this complaint?

Is that a disputed fact?

Mr. Quirk: It is not.

Mr. Hobbs: Has it been established yet that is the fact? That is what we are attempting to do.

Mr. Quirk: We just conceded that.

Exam. Mullen: The other side conceded that.

Mr. Quirk: It has been established. You have not been here, Mr. Hobbs.

Mr. Hobbs: Oh, yes, I have.

Exam. Mullen: Just a moment. Let's stick to what we have here.

Mr. Quirk: Let me make this statement. It has been

established here also, in some instances when we did persuade——

Exam. Mullen: Mr. Quirk, we are interested solely now in a single question. Cannot the parties agree that the D&RGW did solicit shippers in this territory to support its complaint, can that be agreed upon by the parties here?

Mr. Quirk: And that the Union Pacific——

Exam. Mullen: Wait a minute, that is another question. Just stick to one at the present time.

Mr. Collins: May we have read what you said, Mr. Examiner?

[fol. 1407] Exam. Mullen: Read what I said.

(Statement read.)

Exam. Mullen: I'm asking for a stipulation on that.

Mr. Collins: Yes. I could agree—mind you, I say I could agree to such stipulation as far as it goes. You say in this territory. But we would not have the benefit of the scope and expanse of the territory through which the D&RG exerted these efforts, and we do not have the character of effort that they made in order to stir up the public interest which we say did not exist until they began this campaign, so I don't feel that we could agree to so limited and non-committal a stipulation, Mr. Examiner.

Mr. Quirk: Mr. Examiner, we at least weren't influencial enough to require the Union Pacific to subpoena these witnesses, that otherwise would have been here without their influence.

Exam. Mullen: The parties ought to get together to stipulate those facts. I see no reason for going into a long discussion as to the exact methods, pamphlets, and literature, and so on. I don't see what that will accomplish.

Mr. Quirk: I have already agreed we have tried to get public support, Mr. Examiner. What more can the complainant do?

Mr. Hobbs: Would Mr. Quirk have any objection to put in as an exhibit——

Mr. Quirk: Yes, I do.

[fol. 1408] Exam. Mullen: Just a minute, please. Do you want to put that in as an exhibit?

Mr. Hobbs: That is right, an exhibit, the pamphlet of 20 questions, the statement that was left by this gentleman

by the local representative of the D&RG, Mr. Hogue's letter, and the matter that is referred to in there.

Exam. Mullen: That is offered, then, as a representative type of solicitation you are speaking of?

Mr. Hobbs: Yes, sir.

Exam. Mullen: Will that serve your purpose?

Mr. Hobbs: Immediately it certainly will.

Exam. Mullen: Do you contemplate putting any more in?

Mr. Hobbs: I do not.

Exam. Mullen: All right. Mr. Quirk doesn't object to that.

Mr. Quirk: Wait a minute. I have not seen the letter.

Exam. Mullen: I beg your pardon.

(Letter shown to Mr. Quirk.)

Mr. Hobbs: I'm sorry, Mr. Examiner, so far as I am concerned, we don't have copies enough of any of this literature to hand out.

Exam. Mullen: That won't be necessary. The parties are all aware of what it is.

Mr. Hobbs: You mean, then, if we have this marked as an exhibit.

Exam. Mullen: We will receive it as an exhibit.

[fol. 1409] Mr. Hobbs: And I need file but the one copy.

Exam. Mullen: That is right.

Mr. Hobbs: In order then that there may be no question about it, will you assign an exhibit number at this time?

Exam. Mullen: Are you going to offer it now?

Mr. Hobbs: Yes, I will.

Exam. Mullen: Exhibit 30.

Mr. Hobbs: Exhibit 30 then, Mr. Examiner, will consist of a letter from Mr. F. C. Hogue, vice president of traffic of the Denver and Rio Grande, dated August 10, 1949; a copy of which bears the title of the Rio Grande seeks opening of closed door away. A copy of a statement apparently executed by Mr. R. K. Bradford, vice president of the D&RG, and the pamphlet called "Twenty Questions." There will be no need of putting in the complaint.

Exam. Mullen: All right.

Mr. Hobbs: I offer them in evidence at this time.

Exam. Mullen: They will be received in evidence.

(Defendant's Exhibit No. 30, Witness Clay, marked and received in evidence.)

Exam. Mullen: Any further questions, Mr. Hobbs?

Mr. Hobbs: No.

Cross-examination.

By Mr. Quirk:

Q. Mr. Clay, is the Union Pacific a member of the Portland Chamber of Commerce?

[fol. 1410] A. It is my understanding they are.

Q. Do all the other railroads that serve Portland belong to the Portland Chamber of Commerce?

A. My understanding, the four major lines are members, yes, sir.

Q. Am I correct in assuming the members of your group are only interested in railroads that are in Oregon?

A. No, sir. When you say my group, I assume you mean the Portland Freight Traffic Association.

Q. Yes, that is your group, isn't it?

A. Yes, the members of my group are all shippers, all industrial concerns, and we are interested as we have stated in the betterment of transportation services of every kind affecting our community.

Q. You said you were not interested in the Ogden gateway at all, didn't you?

A. That is right.

Q. Don't some of your shippers ship to local points on the Denver and Rio Grande in Colorado?

A. Yes, sir, they have through rates in connection with the Ogden gateway, to local points on the D&RGW. I confined my statement to transcontinental traffic, Mr. Quirk.

Q. Well, then, they ship from points on the Denver and Rio Grande in Colorado, too, through Ogden, don't they?

A. That is correct.

Q. Don't you know that a large part of the business of the [fol. 1411] Union Pacific is what is called "overhead traffic"?

A. No, sir, I don't know what you mean by that statement.

Q. Bridge traffic, traffic which originates beyond its line and goes beyond its line.

A. Not as far as the Pacific Northwest is concerned. That is the end of the line.

Q. Are you a traffic man?

A. Well, I have been engaged in the work for about thirty years.

Q. Haven't you ever heard the term "bridge traffic" as applied to railroads?

A. Yes, I have heard the term, but it is——

Q. Well, it means then, doesn't it, traffic that originates beyond the Union Pacific, and going to destinations in the east beyond Omaha, we will assume, that is what I mean by "bridge traffic".

A. All right, I will take your statement.

Q. Didn't you know the Union Pacific depends to a very large extent on bridge traffic, for a large part of its total revenue?

Exam. Mullen: The question is do you know?

The Witness: I don't know that myself, Mr. Quirk, no.

By Mr. Quirk:

Q. In other words, you are familiar with this, and you are very much concerned what is going to happen to the railroad, but you don't know that?

A. I only know in a general way that the Union Pacific draws large amounts of traffic from points east of the Missouri River, and how much, or to what extent I don't [fol. 1412] know.

Q. Let me put it this way. I take it your shippers and receivers who belong to your association are interested in maintaining an adequate railroad from all points in the United States, aren't they?

A. No, we are only interested in the railroads that serve the Pacific Northwest.

Q. I see.

Wouldn't your shippers want to ship from Oregon to say Pennsylvania or New York?

A. Of course, shipping that way all the time.

Q. Wouldn't they be interested then in joint rates and

routes being opened between the various railroads that are necessary to use to get between those points?

A. Most assuredly we have to reach the eastern markets. That is where we ship.

Q. You say you are only interested in the railroads serving Oregon, why do you say that?

A. Well——

Q. What would happen if some of these railroads just quit in the east? How would you get there?

A. We wouldn't get there.

Q. Do you think as a traffic man that any of these railroads can live on strictly local traffic, traffic originating and terminating on their line?

[fol. 1413] Mr. Hobbs: If you know.

The Witness: I couldn't answer that question with any knowledge that would be of any benefit to you, Mr. Quirk. I wouldn't know.

By Mr. Quirk:

Q. I am not asking you to benefit me. I thought you were a traffic man representing a great many people out there, and you have been in the business 30 years or more. I should think you, as a traffic man, would know—you expressed opinions about other things—would know something about it. You say you don't?

A. I know, naturally, that the railroads, besides the traffic they originate on their own lines, they get traffic on connecting lines, and all you say in that respect is true. To what extent a railroad could exist on traffic that it just originated and was destined to points on their own line, I don't know. I couldn't answer that.

Q. You are not enough interested in the national transportation system, where railroads are linked together, over routes generally, where the routes are generally open and available, are you, you are just interested in the Union Pacific in Oregon?

A. No, sir, we are interested in the national transportation policy, yes.

Q. Well then if a particular railroad would have difficulty in existing on local traffic alone, wouldn't you think that would be something that might interfere with the

national transportation system. I say that not only about [fol. 1414] the Denver and Rio Grande, but any railroad.

A. Well, if the answer to your question would mean the Union Pacific was to be deprived of their traffic to bolster this other line you are speaking of, I would say no.

Q. That isn't my point. You brought up this question of your great concern for the railroads. I didn't bring it up. You brought it up here.

A. Yes——

Mr. Quirk: All right, that is enough. Thank you.

(Witness excused.)

Mr. Overcash: I call Mr. Gentleman.

GERALD GENTLEMAN was sworn and testified as follows:

Mr. Quirk: I want to just interrupt a minute, Mr. Examiner. Now we have agreed to certain things. I have not heard anything from Mr. Collins yet. They have not given us any of their methods or what they did in connection with persuading people. Would you be interested in having that?

Exam. Mullen: Well, not at this point. Let's take that up at the session tomorrow, at the morning session. Perhaps you and Mr. Collins will get together in the meanwhile and agree to some stipulation as to that.

Mr. Collins: I may inform Mr. Quirk, Mr. Examiner, that Mr. Burns stated yesterday that we did call on people through the territory, from Salt Lake City and north, [fol. 1415] and explained our side of this controversy to them.

Mr. Quirk: That satisfies me.

Direct examination.

By Mr. Overcash:

Q. Mr. Gentleman, have you prepared a statement covering your testimony?

A. I have.

Q. You may proceed with your statement.

A. My name is Gerald Gentleman. I am General Manager of the Platte Valley Public Power and Irrigation District, North Platte, Nebraska. I have resided in North Platte for 25 years. I have been associated with the Platte Valley District from its inception 16 years ago.

Prior to that time I was Manager of the O'Connor Department Store, North Platte. I am a director of the Mutual Building & Loan Association, North Platte, and a member of the North Platte Chamber of Commerce and have served that organization on two occasions as President.

During the time I managed the O'Connor Department Store I became keenly aware of the fact that our business was dependent to a great extent on Union Pacific payrolls. A reduction in employment by Union Pacific was reflected immediately in our sales.

During the time I was associated with O'Connor Department Store approximately one-third of our sales were provided by Union Pacific employees and their families. A [fol. 1416] recent check by present store management indicates about the same proportion today.

North Platte has enjoyed a steady growth. Recently because of the large investment made by Union Pacific in a new retarder yard and freight transfer depot, this growth has been accelerated. It is apparent in the expansion of home building, the opening of new residential sections, and the expansion of the business district.

In our business we are aware of it by reason of an increase in power consumption. North Platte's power consumption has been stimulated by Union Pacific's expanded activities and at present Union Pacific accounts for sixteen per cent of the power consumed in City of North Platte.

I believe it proper to call attention to North Platte's war experiences. We were disturbed because we were not successful in getting a war installation for North Platte. Our fears were never realized because of Union Pacific's prominent place in transporting troops, equipment and munitions for the prosecution of the war.

This rail system had anticipated the load it would have to meet and war- ready with a double track road bed in excellent condition and the equipment to do the job. Every-

one living along this railroad knows how well it discharged its war responsibilities. The operations of the Union Pacific during the war provided activity in North Platte far [fol. 1417] surpassing any war installation we had anticipated having located in our city.

The Platte Valley Public Power and Irrigation District, North Platte, and Loup River Public Power District, Columbus, own the Nebraska Public Power System.

Exam. Mullen: Just a minute, Mr. Witness. Is this a public utility?

The Witness: It is a public corporation.

Exam. Mullen: Is it owned by the state?

The Witness: It is owned by the people of our district.

Exam. Mullen: Well is it——

The Witness: It is organized under the laws of the State of Nebraska.

Exam. Mullen: Is it publicly owned?

The Witness: It is publicly owned.

Mr. Quirk: You mean it is owned by the citizens of Nebraska.

The Witness: That is right.

Mr. Quirk: It is not politically owned, it is owned by public individuals.

The Witness: It is owned by the—it is termed in the laws as a public corporation.

Exam. Mullen: I see.

Mr. Overcash: Mr. Examiner, it is a public corporation created under our state laws to carry on this activity.

Exam. Mullen: Where does the ownership apply, who [fol. 1418] owns it, in other words?

Mr. Overcash: The citizens of the state, I suppose.

Exam. Mullen: As Individuals, not as individuals you mean?

Mr. Overcash: Not as individuals.

Exam. Mullen: All right, I just wanted to get it clear.

The Witness: The Nebraska Public Power System operates a high voltage transmission system serving that part of Nebraska east of North Platte. This district is in the middle of a large expansion of its generating plants and transmission system.

We have invested 16 million dollars in facilities since the war and are in the process of adding another 20 mil-

lion dollars to our investment. The facilities of the District have been built and are planned to serve the needs of its territory, including the railroads that serve the territory. Any changes affecting the traffic or business of the territory will be reflected in our business and a reduction of demand for power would create serious financial difficulties for this district. The Union Pacific serves and follows the Platte Valley and its welfare is of prime importance to all of us.

In conclusion I would like to make one other observation. I am and for some time have been a small stockholder of the Union Pacific. I have had an opportunity to study its operating and financial reports. It enjoys a large volume of traffic. It is efficiently operated. Its financial [fol. 1419] structure is one of best.

I wish to add here, considerable of the income of the Union Pacific is from investments and operations other than as a carrier.

Its plant and equipment have been built up to care for the traffic it has developed and now enjoys. Its welfare is of first importance not only to the territory it serves but to the entire nation. Our country as a whole needs the vital protection which a strong and healthy Union Pacific provides in time of national emergency and the maintenance of such strength can only come from continuance of a volume of traffic that utilizes its splendid facilities.

By Mr. Overcash:

Q. Do you have anything further?
A. No, sir.

Mr. Overcash: You may cross-examine.

Cross-examination

By Mr. Quirk:

Q. Mr. Gentleman, have you been led to believe by anything you have heard or been told that the Union Pacific is contemplating the abandonment of its railroad in Nebraska?
A. No, sir.

Mr. Quirk: That is all.

(Witness excused.)

Mr. Melia: Mr. Detweiler.

CLAUDE H. DETWEILER was sworn and testified as follows:

[fol. 1420] Direct examination.

By Mr. Melia:

Q. Mr. Detweiler, have you reduced your testimony to written form?

A. I have.

Q. Will you proceed to read it?

A. Yes, sir.

My name is Claude H. Detweiler and I reside at Twin Falls, Idaho. I am President and General Manager of Detweiler Brothers, Inc. and also President and General Manager of Magic Valley Processing Company. Detweiler Brothers is engaged in the plumbing, heating and electrical contracting business. It also handles electrical appliances. It started business in 1921.

Magic Valley Processing Company has manufactured potato starch since 1941.

The traffic of Detweiler Brothers consists of electric household appliances and a general line of plumbing and heating equipment. Most of these items are manufactured at various points in the east and southeast. Inbound carload shipments of the Detweiler firm totaled about 60 cars in 1949. There were no outbound shipments.

As to Magic Valley Processing Company, also located at Twin Falls, its carload traffic in 1949 consisted principally of 96 cars of outbound starch and 78 cars of inbound potatoes. The starch shipments moved principally to lower [fol. 1421] New England, the east and southeast.

On all of our eastbound shipments, we have used Union Pacific service to the Missouri River junction points such as Omaha and Kansas City, and I can say without hesitation that it has served us well.

Bearing in mind that we must depend entirely upon the Union Pacific for rail transportation, my purpose in appearing here is to emphasize the point that having a good railroad, we want to support it. The Union Pacific has always been attentive to our needs. For instance, I have in mind that in the spring of 1948, we began to realize that our competition from Europe and Maine was gradually forcing us out of our eastern and southeastern starch markets because of an average 25 cents per hundred freight differential from Maine manufacturing points and the low tariff and low water rate from Holland. In the summer of 1948, the starch manufacturers of Idaho requested me to represent them in approaching the Union Pacific officials to see if some relief could be obtained. We found them receptive and interested, because I think they realized that this was a mutual problem. If we were forced to close our factories, the UP would naturally lose the starch haul.

The UP successfully sponsored a proposal for a rate reduction through the Western Trunk Line Association and the reduced rates became effective February 1, 1949. At that time, all the starch plants' warehouses in Idaho were [fol. 1422] filled due to inability to make sales, but within a matter of 60 days, all warehouse stocks were liquidated. Certainly the Union Pacific could not afford to take the lead in getting this rate reduction for us and other Idaho shippers faced with eastern competition if it is required to give up traffic which it has originated after a relatively short haul, as the Rio Grande intends.

Let me express this one additional thought in connection with the starch matter: With the present condition of the potato market, the starch factories in Idaho are consuming enormous quantities of potatoes which would otherwise add to the surplus already on the Government's hands.

Exam. Mullen: Just a moment. That next paragraph is argumentative and should come out.

The Witness: The inbound and outbound carload traffic of our two companies originates and terminates at many scattered points in the east and southeast, and in all the years we have been in business, I can say that we have found that the various through routes and rates that have been available to us via the UP and its connections have

been entirely sufficient for us to come from and go to all the markets.

It is for these reasons, therefore, that the firms which I represent here do not favor opening of the Ogden gateway.

Mr. Melia: You may cross-examine.

[fol. 1423] Cross-examination.

By Mr. Quirk:

Q. Are there any groups of shippers or receivers of freight in Idaho that would be benefitted by the use of the Ogden gateway and the Rio Grande in respect to transit or other situations? You wouldn't as an individual be opposed to getting what they need?

A. I can only speak for myself, but I would be opposed to it, but for reasons not expressed here today, but which I would like to express to the Examiner.

Mr. Melia: Go ahead.

The Witness: I have been viewing with concern for the past yeaf to year and a half various reports coming out of Washington by column writers regarding meetings being held, and serious discussions entered into by the Department of Defense and other high government officials regarding the status of the railroads in America from a national standpoint and from a national defense standpoint. It was shocking to me as a layman to read——

Mr. Quirk: Mr. Examiner, I think this is not only not responsive to my question, but it has nothing to do with this particular question.

The Witness: It does.

Exam. Mullen: It strikes me that way. Why don't you ask a specific question?

Mr. Quirk: He answered my question.

Exam. Mullen: I thought you had another one.

[fol. 1424] Mr. Quirk: No, I have none.

Exam. Mullen: You go ahead with your questions.

Mr. Quirk: I have no questions, Mr. Examiner.

Exam. Mullen: You mean you are through.

Mr. Quirk: Yes, I am through.

Exam. Mullen: What is your question?

Mr. Quirk: He didn't ask any, he urged him.

Exam. Mullen: Read the answer, please.

(Answer read.)

Exam. Mullen: What is the purpose of that statement, Mr. Detweiler?

The Witness: Mr. Examiner, the purpose is, apparently our railroads——

Exam. Mullen: What do you want to prove? What is the fact you want us to recognize?

The Witness: That our government officials are considering subsidizing, letting the railroads go bankrupt, and nationalizing the railroads today.

Exam. Mullen: What has that got to do with the issue we have here?

The Witness: If you take away from an admittedly strong railroad, and tear them down, you are not going to help our national situation.

Exam. Mullen: True. That is argument now. We want to know facts.

[fol. 1425] The Witness: I said it appears to me as a citizen and taxpayer.

Exam. Mullen: All right. That is argument. We don't want argument, Mr. Detweiler, we want facts here. You are stating your opinion; is that right?

The Witness: That is right.

Exam. Mullen: We don't want the opinion.

The Witness: Very well.

Mr. Quirk: I have no question.

Mr. Melia: Thank you, Mr. Detweiler.

(Witness excused.)

Mr. Melia: Mr. Weitz.

George A. Weitz was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. Mr. Weitz, you have prepared some testimony in written form?

A. Yes, sir.

Q. Will you proceed to read it?
A. I will.

My name is George A. Weitz. I live at Caldwell, Idaho, and am President of George A. Weitz Company with its headquarters at that point. Our operations consist of growing potatoes, onions, lettuce, sweet corn, seed and other farm crops. Our principal shipping points are Caldwell, Shelp and Notus, Idaho. Caldwell and Notus are lo- [fol. 1426] cated on the main line of the Union Pacific just west of Nampa, Idaho, and Shelp is located on the Wilder Branch. I have been in this business for about 26 years.

During 1948, our shipments of the various commodities mentioned above aggregated 553 cars and in 1949, 597 cars. In addition, we also sell f.o.b. cars to cash track buyers who make shipments in their own name.

The vegetables which we grow are sold in a limited way in Wyoming, a still larger volume in Denver, with the principal markets being in the States of Nebraska, Kansas, Oklahoma, Texas and Louisiana, and points east thereof. Because of the perishable nature of these commodities we use the short and direct route of the Union Pacific so as to minimize transit time.

I might say at this point that it has at no time been necessary for us to use the Rio Grande from Ogden, Utah, for shipping our products to markets located beyond the Rio Grande. Neither do we ship to points intermediate between Ogden and Denver-Pueblo on that line for the reason that the products which we grow and ship are also grown at various points in Colorado located on the D&RGW. For instance, potatoes are grown in the Monte Vista District, onions in the Arkansas Valley, and lettuce and green peas in the Alamosa District.

With the variety of routes open to us via the Union Pacific and its connections, we have at no time found any [fol. 1427] difficulty in reaching eastern and southwestern markets with our products and I can say definitely that the Union Pacific throughout the years has done a good job of railroading on our shipments.

When you grow potatoes you not only produce the No. 1's but also the No. 2's which, while entirely edible, do

not command as high a price in the market because of shape or other defects which the buyer recognizes. Our No. 2 potatoes largely find a market at Kansas City, Missouri, and at points in Kansas, Oklahoma, Texas, Louisiana, and points west thereof. I cannot recollect that we have ever had any difficulty in the diversion of our shipments in case of rejection from one market to another within the territory just described which largely takes our No. 2 potatoes, because we can go into the southwest on the basis of through rates.

Our No. 1 potatoes for the most part go to Chicago and St. Louis and markets farther east, also to the larger cities in Texas. However, anything that I sell in Texas is routed via Kansas City and that practice would not be changed by opening any gateway west of Kansas City.

As to our onions, our large onions are marketed almost entirely at St. Louis, Chicago and east, whereas the smaller onions, known as "mediums," are sold in the territory from Denver east to the Missouri River, and in Texas, Louisiana and Oklahoma. In the marketing of medium onions, as in the case of potatoes, we have had no trouble [fol. 1428] with rejected cars because we have markets in Texas, Oklahoma and Louisiana where we can go on through rates via existing routes.

It is for these reasons that our company has never been interested in the route of the Rio Grande, and I cannot see that we will have any need for it in the future. The Union Pacific is our railroad and we depend upon it, and it has been fair to us. Whether or not the Rio Grande wins this case we will still have only one railroad in southern Idaho.

I am appearing here to say that anything that hurts the Union Pacific will eventually hurt our company. The Union Pacific played a prominent part in developing the State of Idaho. It pays heavy taxes—something the Rio Grande would not have to do.

Another fear that I have is for the rather large amount of money I have invested in packing houses and equipment.

Exam. Mullen: Just a minute, please, let me read this.

Mr. Quirk: We have no objection to that.

Mr. Melia: I don't see how you could.

Exam. Mullen: All right, there is no objection to it, read it in the record.

The Witness: It would only be natural, considering the competitive situation in the growing of vegetables between Colorado and Idaho, that firms in Colorado would look longingly to the large volume of tonnage in Idaho available for processing in transit. In my opinion with the [fol. 1429] opening of the Ogden gateway, they would eventually reach into Idaho for a goodly portion of their supplies for processing and repacking in transit. This, of course, would be subject to the Rio Grande setting up regulations which would permit the processing and repackaging in transit.

This, of course, would be subject to the Rio Grande setting up regulations which would permit the processing and repackaging of Idaho products or products of other western states at a point such as Grand Junction. Frankly, if such arrangements were made, and no doubt the Colorado processors would have no difficulty having the Rio Grande establish such privileges, then my investment in Idaho would be seriously jeopardized.

In my opinion, the proposition of the Rio Grande Railroad, if put into effect, will eventually impoverish the Union Pacific Railroad, retard the growth and development of the State of Idaho——

Mr. Quirk: We object to that.

Exam. Mullen: That will go on, that finishes the statement.

The Witnes: —and it could ultimately put me and others out of business for the reasons I have just explained.

I earnestly urge that the Interstate Commerce Commission not open the Ogden gateway as the D&RGW asks.

[fol. 1430] By Mr. Melia:

Q. Mr. Weitz, to what extent are you able to control the routing on your produce?

A. To what extent?

Q. Yes.

A. Well, we control the shipments for sale in transit or at terminal markets, but the buyer in most cases has the privilege or the right to demand or tell us to route a certain way that suits his desires.

Q. To suit his convenience or desires.

A. That is right. We have to follow his instructions. He is the buyer, and we are the seller, and that is the practice we have to follow.

Q. Would that be true on a substantial number of cars?

A. Yes.

Q. Would you sell a car of anything, potatoes or onions, at such a point as Wichita, Kansas, without having a firm sale?

A. No.

Q. If you had a rejected car at a point like Denver, what would you do with it?

A. I would go to a terminal market. I would go to Kansas City. That is the point where I would go with the produce I handle. That has been my practice in the past.

Exam. Mullen: That wasn't the question, as I remember it.

By Mr. Melia:

Q. The question was, if you had a rejected car at Denver, what would you do with it—and he said he would go to [fol. 1431] Kansas City; is that right?

A. Yes.

Exam. Mullen: You mean after it was rejected at Denver; is that the point?

Mr. Melia: Yes, sir.

Exam. Mullen: Is that what you mean, Mr. Witness?

The Witness: I would try to sell the car at Denver, if I couldn't accomplish that, I would go to the next terminal point from Denver. I wouldn't go to any other point for sale.

By Mr. Melia:

Q. You mean such as a point at Wichita?

A. That is right.

Mr. Melia: You may cross-examine.

Mr. Quirk: No questions.

Mr. Melia: No questions, that is all.

(Witness excused.)

Mr. Melia: Mr. Bradshaw.

D. B. Bradshaw was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. Mr. Bradshaw, will you proceed to read the statement you have prepared.

A. My name is D. B. Bradshaw and my home is at Wendell, Idaho. I am a partner with my father and my brother in the R. D. Bradshaw and Sons Company, honey producer-packer whose processing plant is located at Wendell. Our firm is a pioneer in the producing and processing of [fol. 1432] honey in Idaho, having commenced business at Payette, Idaho in 1905. That year my father, R. D. Bradshaw, imported his first carload of honey bees into the state. From this small beginning at Payette, he moved to Wendell in the Twin Falls territory in 1921 where operations were expanded.

At the present time, honey comes into our plant by truck and rail from producers located in Idaho, Wyoming, Montana and eastern Oregon. Rail shipments are received on a processing in transit basis, and the finished packaged product is shipped out to larger consuming centers in the Pacific Northwest, Middle West and Atlantic Coast points.

For the year 1949, our outbound shipments came to 90 cars, about two-thirds of which moved to the eastern points mentioned above. Our inbound rail shipments in the same year totaled 44 cars.

While honey cannot be considered in the category of a perishable product, it is true we must sell in highly competitive markets, and in order to compensate for our long distance from eastern markets, we must have fast and dependable rail service.

In the 45 years that we have been in business in Idaho, we have found that the variety of routes and the service provided by the Union Pacific has been entirely adequate for the purpose of enabling us to sell and distribute our [fol. 1433] products in all markets.

We must rely upon the Union Pacific to handle shipments in and out of our Wendell plant. This is so, of course, because the Union Pacific is the only railroad in southern Idaho. It has given us excellent service and it has also been extremely cooperative in setting up processing in transit privileges on honey which means a low inbound cost on bulk honey into our plant. Because of this cooperation and assistance, our company feels it is morally obligated to help the Union Pacific with their problems, and that includes giving this carrier all the business we can.

I feel that the Union Pacific has done a fine job of assisting our company and the entire honey industry as a whole in the inter-mountain region. I think the people living within this area, in their own interest, should see that its revenues are not channeled to competing lines who have no real interest in Idaho. Unless the Union Pacific can be assured of the maximum haul and revenue on traffic such as ours, then it is my fear that in the future, it will not be able to assist us in our transportation problems as it has in the past.

The Union Pacific paid to our County of Gooding in 1948, $101,417.19 in taxes. This amount represented 20.89 per cent of all the taxes received by the county for the same period. Without this Union Pacific revenue, it is not difficult to realize the additional tax burden that would be placed on the other taxpayers within the county. I spent [fol. 1434] two years on the local school board and I know the value of the Union Pacific tax money in keeping the schools going. If Union Pacific revenues are jeopardized, the tax money received by Gooding County is imperiled.

Exam. Mullen: Just a moment, that is argument.

Mr. Quirk: Yes.

The Witness: I believe I will be pointing out that leads——

Exam. Mullen: I understand. That ought to be stricken

out, the whole paragraph is all argument. Do you have anything further you wish to add, Mr. Bradshaw?

Mr. Melia: You may cross-examine.

Cross-examination.

By Mr. Quirk:

Q. Did you prepare this statement yourself?

A. Yes, I did.

Q. It looks very much like the other one.

Mr. Melia: Is that a question, Mr. Quirk?

Exam. Mullen: The witness has stated he prepared it himself.

Cross-examination.

By Mr. Gibson:

Q. Mr. Bradshaw, referring to Page 2 of your statement, at the bottom of the page, the $101,417 in taxes, are those all property taxes?

A. That is the total tax money received by Gooding County. That is the total taxes received by Gooding [fol. 1435] County from the Union Pacific.

Q. Those are property taxes, are they not, on real estate?

A. Yes, that is the total taxes received by the county.

Redirect examination.

By Mr. Melia:

Q. Mr. Bradshaw, you developed that figure yourself, did you not?

A. Yes, I went to Gooding and checked with the County Treasurer over there.

Mr. Melia: Thank you, Mr. Bradshaw.

(Witness excused.)

Exam. Mullen: Does that complete the witnesses for today?

Mr. Melia: That is all we have, Mr. Examiner.

Exam. Mullen: We will adjourn until 9:30 tomorrow morning.

(Whereupon at 5:05 p. m. the hearing adjourned to reconvene at 9:30 a. m. on Friday, April 7, 1950.)

[fols. 1436-1437] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, ET AL., Defendants.

Transcsript of Testimony, Boise, Idaho,—Friday, April 7, 1950

Met, pursuant to adjournment, at 9:30 o'clock a. m. before:

Frank E. Mullen, Examiner.

ADDITIONAL APPEARANCES:

Henry A. Cockrum, Office of the Solicitor, U. S. Department of Agriculture, Washington, D. C., appearing for the Secretary of Agriculture, Intervener in support of Complainant.

[fol. 1438] Proceedings

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Collins: Mr. Examiner, the other day, at the presentation of Mr. Edens' testimony, Mr. Quirk requested that we supply the same figures for July, 1945, as stated by Mr. Edens.

Mr. Quirk: The year is what we asked for.

Mr. Collins: July, 1949, is what we have in the record, at page 18, showing the number of trains for the month,

and daily, and the number of switch shifts used in handling at the Ogden terminal.

I would like to read this into the record. These are the figures you requested:

During July, 1945, a total of 2966 freight trains, or an average of 96 trains daily, were handled through the Ogden terminal facilities. This handling required 70 switch shifts, with engines and crews, daily.

Mr. Collins: We will have to have one other item to add to it, Mr. Examiner.

Exam. Mullen: All right.

Mr. Quirk: Off the record.

Exam. Mullen: Off the record a minute.

(Discussion off the record.)

Exam. Mullen: On the record.

That will be supplied later?

[fol. 1439] Mr. Collins: Yes, as soon as the man can go down and get it.

Exam. Mullen: All right.

Mr. Booth.

Mr. Booth: I am appearing for the Montana Railroad Commission.

I have two witnesses. First I want to call Mr. Willard Thompson.

In connection with Mr. Thompson's statement, Mr. Examiner, we have an exhibit, if I may have a number assigned to it.

Exam. Mullen: That will be Exhibit 31.

(Interveners' Exhibit No. 31, Witness Thompson, marked for identification.)

Exam. Mullen: Will you be sworn, Mr. Thompson?

WILLARD S. THOMPSON was sworn and testified as follows:

Direct examination.

By Mr. Booth:

Q. Mr. Thompson, have you prepared a written statement showing the evidence that you desire to offer in this case?

A. I have.

Q. Will you proceed with your statement, Mr. Thompson?

A. Yes, sir.

My name is Willard S. Thompson. I reside at Butte, Montana, and am at present, and for approximately 20 years have been, manager of the Chamber of Commerce at [fol. 1440] Butte, Montana. I am appearing here in behalf of and at the request of the Montar Railroad and Public Service Commission, an intervener in this case.

It is my understanding that the D&RGW is seeking in this case to have the gateway through Ogden open to it so that it will be in a position to solicit and move traffic originating in the States of Idaho, Washington, Oregon and Montana on the lines of the Union Pacific and destined for points east of Denver or traffic moving from east of Denver to destination points on the Union Pacific in the states named at the same rates now charged over the Union Pacific.

Mr. Quirk: I object to that. Rates are involved, Mr. Examiner. That is just what is involved: competitive joint through rates.

Mr. Booth: Mr. Examiner, there is no rate—there is no question of a reduction of rates involved in this case.

Exam. Mullen: The statement is that he understands there is no question of rates involved. What does he mean by that? Certainly a through joint rate would be lower than the present rate.

Mr. Booth: Lower than the termination rate, yes.

Exam. Mullen: This witness doesn't understand it, then. He says, "no question of rates involved."

By Mr. Booth:

Q. Mr. Thompson, what did you mean when you said [fol. 1441] there were no rates involved?

A. Well, my understanding is that this is a case involving the desire of the D&RGW to open the gateway in our area. I didn't know this had anything to do with the rates.

Q. By your statement "it had nothing to do with the rates" you mean that the present low rates would not be further reduced or changed? Is that your opinion?

A. Yes.

Mr. Quirk: Is that your understanding of the complaint?

The Witness: That is my understanding.

By Mr. Booth:

Q. You may proceed, Mr. Thompson.

A. I understand further——

Mr. Quirk: I object to that.

Exam. Mullen: The witness is on the stand, and on cross-examination you can bring out the facts.

The Witness: I understand further that there is no question of rates involved in this petition and no direct monetary benefit will accrue to the shipper, regardless of the outcome of this case.

Mr. Quirk: I object to that statement on the ground that it is irrelevant, incompetent and immaterial.

Exam. Mullen: It is a statement of the witness' understanding. Go ahead.

The Witness: The Union Pacific presently owns and operates its own system between Montana, Idaho, Washington and Oregon, points to Denver and east, through Ogden [fol. 1442] and by a cutoff from McCammon, Idaho, to Granger, Wyoming. The D&RGW does not own or operate any rail system north or west of Ogden, Utah, I do not understand that the D&RGW contemplates the building of a road into the territory in the states named, nor do I understand that the D&RGW will render any additional service to the shipper; and, in short, all that it proposes to do is solicit traffic in the territory referred to, for routing over its lines between Ogden and Denver, and partici-

pate in the revenues for moving such traffic. The Union Pacific would have rendered all service in regard to the loading or delivery of the shipment and transportation north or west of Ogden.

The map of the Union Pacific system shows that traffic from the northwest on its system, and particularly from Montana points to Denver, Colorado, or east, can move over the cutoff from McCammon, Idaho, to Granger, Wyoming, and over the cutoff at Borie, Wyoming.

I understand that this route is nearly 100 miles shorter than any route through Ogden over the D&RGW. I further understand that traffic would have to be transferred to the D&RGW through the Ogden terminal. Traffic between points in the area referred to, and Denver, would be considerably delayed by reason of the longer mileage and transfer at Ogden.

It is my view, and as a representative of the Butte Chamber of Commerce I here state, that there can be no [fol. 1443] advantage to the shippers in the State of Montana in the routing via the D&RGW. There are many disadvantages.

In the first place, the Union Pacific is one of the largest taxpayers in the state; the D&RGW pays no taxes, and, if successful here, would not pay any, with the possible exception of taxes on an office for its solicitors.

The Union Pacific has a considerable payroll in Montana. The D&RGW has no payroll in the state.

The Union Pacific serves the citizens of Montana, whereas the D&RGW does not propose to render any service to the citizens of Montana.

As between the two, the State of Montana, through its duly authorized agency, the Board of Railroad Commissioners, and the various chambers of commerce, particularly the Butte Chamber of Commerce, representing citizens and business men served by the Union Pacific, is necessarily interested in and should support the Union Pacific, which serves the community and pays taxes for the support of the state, rather than the D&RGW, which addes nothing to the welfare of the state or its business.

Mr. Quirk: This is just plain argument, Mr. Examiner.

Exam. Mullen: That is true. But this witness is repre-

senting the Butte Chamber of Commerce. We will let him finish his testimony.

[fol. 1444] The Butte Chamber of Commerce, of which I am the manager, adopted a resolution on the 2nd day of November, 1949, in support of the Union Pacific Railroad Company in this case. This resolution, Exhibit No. 31, is offered in evidence.

As a witness for the Board of Railroad Commissioners, and as manager of the Butte Chamber of Commerce, I oppose the application of the D&RGW in this case for the reason that if traffic were diverted from the Union Pacific to the D&RGW we might reasonably anticipate that loss of revenue might result in reduced service, or that increased rates would be requested, to the detriment of the shippers of this state.

The Union Pacific should not be placed in a position, at the shipper's option, of having to move traffic to Ogden, turn it over to another road and divide the revenue when it can move the traffic on its own system, at a lesser total mileage, for the entire distance.

The Union Pacific is the road Montana shippers will continue to look to for service. We propose to keep the Union Pacific in a strong position, so that it may continue to render reasonable and satisfactory service to that part of Montana which it serves.

Mr. Booth: At this time I desire to offer Exhibit 31, which is attached to the prepared statement.

Exam. Mullen: Any objection?

Mr. Quirk: Yes. I object to it as incompetent, irrelevant [fol. 1445] and immaterial.

Exam. Mullen: It will be received solely for the purpose of showing that such a resolution was adopted.

It is received as Exhibit No. 31.

(Interveners' Exhibit No. 31, Witness Thompson, received in evidence.)

Cross-examination.

By Mr. Quirk:

Q. How long have you been with the Butte Chamber of Commerce, Mr. Thompson?

A. About 21 years.

Q. Do you handle traffic matters for the Chamber?

A. Incidentally, yes; we interest ourselves in traffic matters.

Q. But your principal duties relate to other matters?

A. Yes, sir.

Q. You are not very familiar with rates, are you?

A. No, sir.

Q. Now, you stated here that the Union Pacific should not be placed in a position, at the shippers' option, of having to move traffic to Ogden and turn it over to another railroad.

Does your Chamber believe that the right to route, which is now contained in the interstate Commerce Act, should be cancelled?

A. That the right to route should be cancelled?

Q. The right to route is given in that statute—the shipper's right to select routes. You don't believe in that?

[fol. 1446] A. I think the shipper should select his own route.

Q. But you say here that the Union Pacific should be immune from that, apparently. Is that your view?

A. Well, no; I didn't go that far. I don't say that.

Q. Well, look at that last paragraph: "The Union Pacific should not be placed in a position, at the shippers' option, of having to move the traffic to Ogden."

In other words, that is just another way of saying that the Union Pacific ought to be set apart and ought not to be placed in the position where it will permit the shipper to select the route if he wants to.

A. Well, under the present conditions the shipper doesn't do that, of course.

Q. Yes; he has the right to do it now, and many shipments are moved that way; and they have paid as much as $800 in excess of the going rate when they did it. This record shows a good number of shippers shipping through Ogden. You didn't know that?

A. No.

Q. You are really not too familiar with this case, are you?

A. I am not familiar with the rate business.

Q. Did you prepare this statement yourself?

A. Yes, sir.

Q. Well, now, where did you get the idea that the question of rates is not involved?

[fol. 1447] A. Because I understood it to be a case of a petition to open the gateway.

Q. Well, you don't understand it very well.

If the gateway is opened, the Union Pacific is on record here as conceding that; but what is not available are the competitive rates. If anybody shipped through the Ogden gateway now—and the record shows this—he pays a combination rate which is very substantially higher than the joint through rates.

A. I understand that.

Q. So what this case seeks to obtain is competitive joint rates via a route that already exists.

You don't understand that?

A. I understand that the option is up to the shipper, yes.

Q. Now, does the Union Pacific belong to the Butte Chamber of Commerce?

A. Yes, sir.

Q. And all the other railroads?

A. Yes.

Q. What railroads are there?

A. Northern Pacific, Great Northern, Milwaukee.

Q. Now in the third paragraph, Mr. Thompson, you state what you do not understand, and in the fourth paragraph you state what you understand.

Now, where and how did you come by these understandings that you state here? Did the Union Pacific inform [fol. 1448] you concerning them?

A. About this case?

Q. Well, just look at——

A. Yes, I got my information from the Union Pacific.

Q. And the Union Pacific representative asked you to take the position you are taking, I suppose?

A. That is right.

Q. Now, you mentioned that the Union Pacific was a taxpayer in Montana and the Denver and Rio Grande Western was not.

As manager of the Chamber of Commerce, you are no doubt interested in the right of the shippers that belong

to that Chamber to use through routes to and from Montana, to and from places that the Union Pacific does not operate, does not pay taxes; is that correct?

A. Surely.

Q. In other words, you wouldn't want the railroads that serve Montana to cancel out the existing joint rates, via the Pennsylvania and Eastern lines, by reason of the fact that those lines don't pay taxes in Montana, would you?

A. No.

Q. Have you the impression that if there was any diversion of traffic here the Union Pacific might pay less taxes?

A. I think there is that possibility.

Q. Well, don't you know that the taxes they do pay [fol. 1449] there are ad valorem taxes?

A. Perhaps not taxes, but that the position of the Union Pacific would not be as strong as it is now. I will put it that way.

Q. How many shippers, as such, belong to your Chamber?

A. I would say practically all of them.

Q. Could you give me a rough idea of how many in numbers?

A. No, I couldn't, without referring——

Q. Are there 20?

A. Oh, yes.

Q. Now, you say you also speak for the Montana Railroad and Public Service Commission.

Did you know that the original intervention which this Commission filed in this case was in favor of the complainant?

Mr. Booth: I object to the statement made. The petition of intervention which Mr. Quirk is referring to was never filed. The second petition, which is filed, does refer to the fact that it was withdrawn before filing. It is an incorrect statement.

Mr. Quirk: The petition, though, was sent down to Washington; isn't that true?

Mr. Booth: That is correct.

Exam. Mullen: Is it in the docket?

Mr. Booth: No, sir; I don't believe it is.

Exam. Mullen: Does the Commission have an order per-
[fol. 1450] mitting intervention?

Mr. Booth: No, sir. I have a wire from the secretary that it was withdrawn before filing.

Exam. Mullen: Then they have no such petition in this record, Mr. Quirk.

Mr. Quirk: There was a petition tendered, and served on us, and it favored the complaint. Now, whether it was actually filed or not, I don't think that matters for the purpose of my question.

You will find it in the correspondence section of the docket, I'm sure.

By Mr. Quirk:

Q. The point is: Do you know, Mr. Thompson, that later, when the Montana Commission filed another petition, they favored the Union Pacific?

A. I don't know.

Q. You said you are here to speak for them. You really don't know much about it, do you?

Mr. Booth: Mr. Examiner, this witness was put on by the Commission. He is not here speaking for the actions of the Commission in any manner.

Exam. Mullen: He is the witness for the Board of Railroad Commissioners, and he can be cross-examined on the basis of his direct evidence.

Mr. Booth: As to anything he knows, yes.

Exam. Mullen: He can state whether he knows it or not.
[fol. 1451] Mr. Quirk: I will call attention, Mr. Examiner, to the fact that this witness, according to his testimony, is more than just a witness. He says: "I am appearing here in behalf of and at the request of the Montana Railroad and Public Service Commission."

Witnesses really shouldn't be allowed to appear as such, but if he is appearing he certainly ought to know something about this.

Exam. Mullen: You can proceed with your examination.

Mr. Quirk: I have finished. He apparently doesn't know.

Exam. Mullen: Anything on redirect?

Redirect examination.

By Mr. Booth:

Q. Mr. Thompson, according to your understanding of this case, if the Denver & Rio Grande Western is successful there would be no reduction in the present rate from Butte to Denver; is that correct?

A. There is no anticipated reduction in the rate?

Q. Yes.

A. As far as I know.

Mr. Quirk: Do you really know about that at all?

The Witness: Do I know?

Mr. Quirk: Do you know of your own knowledge whether that would be so or not?

The Witness: I do not know whether that would be so or not.

Mr. Booth: That is all.

[fol. 1452] Recross-examination.

By Mr. Quirk:

Q. You have not examined any exhibits in this case, especially Mr. Hogue's Exhibit No. 1?

A. No, sir.

Mr. Quirk: That is all.

Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Mr. Booth: I will call Mr. Burke.

John J. Burke was sworn and testified as follows:

Direct examination.

By Mr. Booth:

Q. Mr. Burke, will you please state your full name?

A. John J. Burke.

Q. Mr. Burke, have you prepared a statement showing the evidence you desire to offer in this case?

A. I have, sir.

Q. You may proceed with your statement.

A. My name is John J. Burke. I am appearing here at the request of and in behalf of the Montana Railroad Commission. I reside at 1062 West Platinum Street, Butte, Silver Bow County, Montana.

I was born in Butte and have resided there continuously, except for the time spent in travel for business or for pleasure. In company with three other men, my father left New York City, went down the Eastern seaboard and [fol. 1453] walked across the Isthmus of Panama, went to San Francisco and from there to Nevada, and came to Butte in the 1880's. He was a prospector miner and died in Butte in 1896.

I attended the elementary schools in Butte and two and one-half years in Butte High School. At the age of 13 I started to work at a temporary job.

Mr. Quirk: Is this relevant, Mr. Examiner?

Exam. Mullen: I was just wondering. What is all this for?

Mr. Booth, what is this for?

Mr. Booth: Purely for the purpose of showing his long residence and acquaintanceship with the problem of Montana, your Honor.

Exam. Mullen: Is that for the purpose of qualifying the witness?

Mr. Booth: Yes.

Exam. Mullen: All right. Go ahead.

The Witness: I left school in January, 1907, to accept steady employment, and until 1916 had a varied office experience, and then became manager of a business. I continued in that capacity until I left for Army service and, after my return in 1919, I entered the banking business and have been engaged therein since that time, for a period of about 31 years. During that time I have been interested in various lines of business in many capacities, and am now president of the the Metals Bank & Trust Company, [fol. 1454] the largest state-chartered banking institution in the State of Montana, with resources of over thirty millions of dollars.

In that position I have had contact with various lines of

business and the financial operations of many individuals, partnerships and corporations. For a great number of years I have been, and am now, chairman of the tax committee of the Butte Chamber of Commerce and, as such, I am familiar with assessed and taxable valuations, tax levies and the budgets of our city, county and school district. In addition, I am a substantial taxpayer of the community.

It is my information that the Denver and Rio Grande Western Railway Company has filed a petition with the Interstate Commerce Commission, known as Docket No. 30297, to open the so-called Ogden gateway, so that it will be in a position to solicit, for movement via Ogden and the Rio Grande, traffic in the states of Montana, Idaho, Washington and Oregon now moving over lines of the Union Pacific Railroad Company and destined for Denver and points east of Denver, or for traffic moving from points east of Denver to destination points on the Union Pacific Railroad at the same rates now charged over the Union Pacific system.

I also understand that there is not a question of rates involved in this petition and that no monetary benefit would accrue to the shipper, regardless of the outcome of [fol. 1455] this particular hearing.

Further, this petition has originated entirely with the D&RGW, and it is one that resolves itself to an issue between that railway and the Union Pacific Railroad Company.

The Union Pacific Railroad Company owns and operates its own system between points in Montana, Oregon, Washington and Idaho to Denver and east through Ogden and also over the so-called Granger Cutoff from McCammon, Idaho.

The distance from any point in Montana through the Granger Cutoff into Denver is, I am told, approximately 100 miles shorter than by way of Salt Lake over D&RGW, so it appears that no saving in mileage or time would be effected for the shipper.

The Union Pacific has a very substantial capital investment, the money coming from many thousands of stockholders and bondholders, whose investments should be protected. In four counties in Montana it operates approximately 150 miles of trackage and the necessary depots, sta-

tions, etc., and any reduction in income would affect, or could affect, this investment.

The D&RGW does not own or operate any rail system north or west of Ogden, Utah. It has no tangible investment in Montana, but it appears that it proposes to use the facilities of the company which has pioneered and developed the territory. Neither the state of Montana nor any political sub-division thereof, nor any shipper would [fol. 1456] gain any benefit by favorable action on this petition.

For the year 1948, the Union Pacific Railroad Company paid the sum of $116,687.78 in taxes in our state, of which nearly $23,000.00 was paid to Silver Bow County, where I reside. Of the amount paid, 52 per cent is for the benefit of schools in the four counties through which the line operates.

For the year 1949, the amount of tax paid is at least as high and, in all probability, much higher. As a result, the schools of these four counties receive a considerable portion of benefit from the Union Pacific tax payment.

The petitioner does not pay any taxes in Montana, and if this petition were granted no taxes would be paid, as the D&RGW could use traffic solicitors only and would not have to make any capital investment in the state, but would have the use of the facilities of the Union Pacific. As a result, no tax benefit would accrue to the state of Montana.

In addition, the Union Pacific Railroad Company payroll, to its employees in the State of Montana during the year 1948, amounted to $875,685.00, so the total amount of money expended by Union Pacific in the State of Montana for taxes and wages amounted to nearly $1 million for that year.

Shipments originating in any of the four states can move either directly east through Ogden or through the Granger Cutoff from McCammon, Idaho, in through trains without the necessity of breaking up or reassembling the cars at [fol. 1457] any point along the line. This, of course, is a decided advantage to shippers and makes for better operating schedules, all of which benefit shippers.

Should traffic be routed through Ogden into Salt Lake and from there over the line of the D&RGW, it would be necessary to move or switch cars containing these ship-

ments at Ogden or Salt Lake to the D&RGW, which, no doubt, would result in a loss of time and efficiency.

As a result, the state of Montana and the counties through which this traffic would move would gain no additional revenue or advantage whatsoever, and the shippers might suffer from delay, in particular.

Exam. Mullen: Just a moment.

That next paragraph, it appears to me, is argumentative. It will be stricken out.

The Witness: As a citizen and taxpayer of the state of Montana, I desire to go on record as opposing the application of the D&RGW in this particular case for the various reasons set forth above and, principally, because no direct or collateral benefits would accrue to the state of Montana or its shippers.

By Mr Booth:

Q. Mr. Burke, what, if any, effect would the possible loss of revenue on the Union Pacific have as to their status in Montana?

[fol. 1458] Mr. Quirk: What is the question? I didn't hear it.

Exam. Mullen: Read the question, please?

(Question read.)

Exam. Mullen: Doesn't that depend on the amount of loss? What loss of revenue do you have in mind, Mr. Booth?

Mr. Quirk: I object to the question because obviously the witness is not competent to answer the question.

Exam. Mullen: What amount of revenue did you have in mind?

Mr. Booth: Whatever loss there may be from this case.

Exam. Mullen: Regardless of the amount, large or small?

Mr. Booth: Well, of course the effect may be different, but the effect will still be there.

Exam. Mullen: Can you answer that question, Mr. Witness?

The Witness: I would say, Mr. Booth, that I think the Union Pacific does pay Montana corporation license taxes in the state of Montana, and that naturally reduces the

amount of tax paid to the state of Montana by the loss of revenue from that.

Exam. Mullen: Your sole objection in this case, then, is based upon your thought that there will be a considerable loss in taxes paid to the state, and the municipal units in Montana, by the Union Pacific? Is that your only objection?

The Witness: Yes, it could result in that loss.

Exam. Mullen: Is that your only objection?

[fol. 1459] The Witness: Yes, sir.

By Mr. Booth:

Q. Mr. Burke, you say that is your only objection. Could that also affect the service?

A. It could, yes.

Mr. Booth: That is all.

Cross-examination.

By Mr. Quirk:

Q. Mr. Burke, you are talking about a subject that reminds me of a man that was partly blind who was looking through a dark shutter for a black cat that wasn't there. You don't know what amount of revenue you have in mind at all, do you? You have no fixed sum in mind, do you?

A. I have never heard it expressed.

Q. I see.

Now, does the Union Pacific have an account in the bank—the Metals Bank & Trust Company of which you are president?

A. No, sir.

Q. Are you a stockholder or a bondholder in the Union Pacific?

A. No, sir.

Q. Does your bank own any of the Union Pacific stock?

A. No, sir.

Q. Did you prepare this statement yourself?

A. Yes, sir; I dictated it myself.

Q. Did you see Mr. Thompson's statement at the time you prepared it?

A. At the time I prepared it?

[fol. 1460] Q. Yes. If you will read it, it is almost alike.

A. I saw Mr. Thompson's statement after I was told roughly what the essence of the statement was.

Q. You have no personal knowledge of most of the things you cover in here, so far as the Union Pacific is concerned, have you?

A. Personal knowledge as far as taxes are concerned, in particular.

Q. That is the only thing you have personal knowledge of, isn't *it*?

A. That is true. I have heard some rate discussion, etc.

Q. I suppose the Union Pacific gave you the information about the payroll?

A. I requested that; yes, sir.

Mr. Quirk: That is all.

Exam. Mullen: That is all, Mr. Burke. Thank you.

(Witness excused.)

Mr. Rouse: I will call Mr. Coughlin.

WILLIAM P. COUGHLIN was sworn and testified as follows:

Direct examination.

Q. Mr. Coughlin, *H*ave you prepared the testimony you wish to give in this hearing in written form?

A. I have.

Q. Will you proceed to read it?

[fol. 1461] A. My name is William P. Coughlin. I am appearing in behalf of the Anaconda Copper Minging Company and the Montana Power Company. I reside at Butte, Montana. I am assistant general traffic manager of the Anaconda Copper Mining Company and assistant traffic manager of the Montana Power Company.

There is no legal or corporate connection between the Anaconda Company and the Montana Power Company.

I started employment in the traffic department of Anaconda in May, 1912, and have been continuously employed in that department since. I took over Montana Power

Company traffic matters shortly after that date, and have handled their traffic continuously since that date.

I have read and studied the complaint or petition of the D&RGW Railway, known as Docket 30397, and believe I understand it.

There is no indication, in the petition, that the through rates presently applicable between points, Denver and East on the one hand, and Ogden and North and West, on the other hand, will in any way be changed from their present level.

Therefore, if the petition is granted, there will be no money or financial benefit to the shippers or receivers, North and West of Ogden. The distance via the D&RGW between Colorado gateway and Ogden, the proposed Western gateway, is approximately 100 miles greater than the distance via the Union Pacific, over which the present rates apply, and there is no interchange between carriers via [fol. 1462] the present route. This added distance, together with some delay in interchanging the cars at both terminals, is such that no better service, or even equal service, can be furnished over the proposed route. Thus the shipper, receiver, the cities and districts, north of Ogden, can coresee no benefit, financial or otherwise, by granting of the petition.

On the other hand, there might be some, and will most likely be, disadvantages, added costs and reduced service.

Let us assume that traffic to and from points north of Ogden is going to cost the people in this region as much under the proposed rates as under the present rate.

By Mr. Rouse:

Q. Mr. Coughlin, in reading that you said "rates" instead of "routes." Did you intend to change your written statement in that respect?

When you read your statement you said, "as much under the proposed rates as under the present rates."

I don't think you intended to change your written statement, did you?

A. No, I did not.

Q. That should be as written in the text?

A. Yes.

If this money is divided between the two carriers, instead of the one as at present, then the gross and net of the present carrier will be reduced by just so much as accrues to added or new carrier. This will place the entire [fol. 1463] rate structure in danger, and we can look for increases in rates; not only those affected by this proposal, but also all rates applicable into the territory affected.

It is not unreasonable to hope that railroad costs might be reduced or that volume of traffic will increase, either or both of which might make for a general decrease in the present level of the rates. This possibility becomes more remote if the total revenue is divided between two carriers.

We wish to make it clear that our objection is not inspired by any antagonism to, or any preference of, either party. Our objection is to the principle involved. There are probably hundreds of parallel, or nearly parallel situations.

If this petition should be granted I think we can look for a flood of similar cases, further dissipating the transportation charges that we might pay. This could result in short hauling the three transcontinental lines, operating from the East through Montana, and further dissipate their revenues, including the freight charges paid by Montana shippers and receivers.

All this will have a tendency to hasten the day that these carriers will have to seek increased rates or delay the day that they might grant a reduction in the present level of rates. This reduction in earnings may be such as to curtail the present efficient service that the Montana carriers are affording the people in Montana, not to say anything [fol. 1464] about reduced employment and tax payments in the state.

If this petition is granted I believe we can look for a petition from every paralleling short line or shoo fly for participation in through routes and rates.

Therefore, we wish to go on record as opposing, for the reasons outlined above, the petition herein under consideration.

Now I have another statement to make.

In my 38 years in Butte I have sat in many rate meetings and conferences. I have been a constant member of

the traffic committee of the Butte Chamber of Commerce. I believe that through these associations and otherwise I have been familiar with every complaint of shippers or receivers in Montana. I have never heard any desire expressed that the through rates and through routes be established by the D&RGW.

Mr. Rouse: That is all.

Exam. Mullen: Cross-examine.

Cross-examination.

By Mr. Quirk:

Q. Mr. Coughlin, in the last sentence of the fourth paragraph of the first page of your prepared statement you say, "Thus the shipper, receiver, the cities and districts, north of Ogden, can foresee no benefit, financial or otherwise, by a granting of the petition."

Did you know there are probably 50 or 60 witnesses in this case, some of them representing a Grange of some 12,000 members, that testified at Salt Lake that they were [fols. 1465-66] in favor of this route, and they are north of Ogden?

A. I wouldn't doubt that; yes. I don't know that, no.

Q. Well, but you can't speak for all these people anyway, can you? You didn't mean to speak for them when you used that statement?

A. No. I am speaking for the Montana Power Company and Anaconda Company.

Q. I wonder why you said none of these shippers you speak for—and you don't know their problems—"can foresee no benefit"? That is a pretty expansive statement, isn't it?

A. It is pretty generally correct, I would say.

Q. That is, you would say your statement, as it stands, is correct?

A. Yes.

Q. Well, now, over on page 2, Mr. Coughlin, you say, "Our objection is to the principle involved."

A. Yes.

Q. Do you mean, by that, that the Anaconda Copper Mining Company is against the idea that the Interstate

Commerce Commission shall not exercise the power that it has in a case where that exercise of that power is justified to require joint rates?

A. No, I don't mean to say that.

Q. What do you mean to say?

A. I mean to say that we are giving you our version of it.

[fol. 1467] Q. Well, you, as a traffic man, and your company are not against the policy of the railroads in the country of establishing joint rates and through routes and interchange facilities, are you?

A. No.

Q. You don't have any idea, do you, Mr. Coughlin, as to the possible loss of revenue should the complainant here be sustained?

A. No.

Q. You say there won't be any reduction in the rates from Montana to Denver. Is that what you mean?

A. Yes. There would be no reduction in rates.

Q. Don't you know that if a shipment moved from Montana to Ogden and on the Rio Grande to Denver that it would pay a substantially higher rate, on any of the commodities that you deal with than if it moved via the Union Pacific to Denver?

A. That is very true. But nobody would pay the combination of locals. When we talk about rates we are talking about the minimum rate existing—the through rate existing.

Q. Well, now, if the complainant succeeds here, however, and joint rates on a competitive basis were established through Ogden and the Rio Grande, there would be a reduction in the rates, would there not?

A. They would have the same rate that is presently in effect now by the short and the through route. I will put it that way.

Q. Then there would be a reduction?

[fol. 1468] A. I would say no, because when we speak of rates we talk about the minimum rates.

Q. Well, of course it is so obvious—I don't want to argue about it, but if the competitive rate was established through Ogden via the Rio Grande, and it was lower than the existing rates, there would be a reduction via that route, wouldn't there?

A. Yes, there would be a reduction via that route.

Q. Don't you know, as a traffic man, Mr. Coughlin, that the situation with respect to the Rio Grande, a railroad that size, is almost unique in this country, to be bottled up the way it is?

A. Well, I don't - that it is unique. I might say this: It is unique in the fact that they can very well go into this case and ask for through rates without endangering their maximum haul because they have no connections between their eastern terminal and their western terminals.

Q. Now, you have plants at various points throughout the United States, don't you—your or your affiliated companies?

A. Yes.

Q. Don-t you find, generally, that joint rates and through routes on a competitive basis prevail on all points and via most railroads.

A. I would say yes—most of the railroads.

Q. Do you think it is all right for the shipper to have [fol. 1469] the choice of selecting routes?

A. The tariff route, yes. I think the shipper has a right to route his freight any route he wants, yes, if he wants to pay the rate.

Q. Now, if this record establishes that many shippers have special situations and other reasons for needing a route via the Rio Grande, you would not object to those shippers getting a rate that would put them on a competitive basis, would you?

A. No if they got a rate on their particular business; but I think the bad that would come out of this would offset the good to a few shippers.

Mr. Quirk: Well, all right. That is all.

Redirect examination.

By Mr. Rouse:

Q. Mr. Coughlin, just one or two questions.

Mr. Quirk asked you if you knew as to what the loss of revenue to the Union Pacific would be, and I think you said you did not.

But you do know, do you not, Mr. Coughlin, that witness Early, for the D&RGW, testified that a conservative estimate of the traffic potential available to their solicitation would be 157,000-some-odd cars?

A. I have heard that statement, but I didn't hear the testimony.

Mr. Quirk: I object to the leading of the witness.
Exam. Mullen: This witness says he has just heard that.

By Mr. Rouse:

Q. Do you know witness Early did testify there was a [fol. 1470] substantial amount of traffic available to their solicitation?

A. Yes.

Q. You know that, to the extent that traffic is diverted to the lines of the D&RGW, the Union Pacific would suffer a loss in revenue?

A. Yes.

Q. On- other question, Mr. Coughlin.

Mr. Quirk is lamenting the fact that D&RGW is a bottled up railroad. Is that of any particular importance to the people in Montana and, in parteiular, to the Anaconda Copper Company?

A. No, I don't think it is.

Q. Is the fact that they are in an unfortunate situation, as described by Mr. Quirk, of no particular concern to you?

A. No.

Mr. Rouse: That is all.
Exam. Mullen: Any recross-examination?
Mr. Quirk: Yes.

Recross-examination.

By Mr. Quirk:

Q. Don't some of your companies, including the Anaconda Company, use the Denver & Rio Grande to a substantial extent?

A. Yes, I think so.

Q. Now, you never have been in this case before, have you——

[fol. 1471] A. No.

Q. ——until today?

A. No.

Q. Apropos of what Mr. Rouse has just suggested to you, do you know that there were any number of witnesses in this case, one of them, Mr. Johnson, of the Koppers Company, who testified that he would buy lumber for his treating plant at Salida, Colorado, over the Union Pacific if he had competitive rates?

That is a big company, and many others said that. So you see, when you are guessing about the loss of revenue, there would be some additional revenue in this case, according to the testimony, that is not here. But you don't know those things, do you?

A. No, I am not familiar with that man's problem.

Q. You know as much about that as you did the question Mr. Rouse suggested to you, don't you?

A. No.

Mr. Rouse: This witness is not here to hear the testimony you are talking about, but he has been made acquainted with the testimony of Witness Early as to——

Exam. Mullen: Just a moment. We don't need to explain that. We have the witness here. Ask questions of the witness.

Mr. Quirk: I have finished.

Examiner Mullen: Any further questions?

(No response.)

[fol. 1472] Exam. Mullen: That appears to be all. Thank you.

(Witness excused.)

Mr. Rouse: I will call Mr. Finch.

H. L. Finch was sworn and testified as follows:

Direct examination.

By Mr. Rouse:

Q. Mr. Finch, have you prepared your testimony in written form?

A. Yes, I have.

Q. Are the statements therein made true and correct, to the best of your knowledge and belief?

A. They are.

Q. You may read your statement, Mr. Finch.

A. My name is H. L. Finch. I am a member of the partnership of H. L. Finch & Sons, the other partners being my three sons, William Carl, Edward and Robert Finch.

Q. Mr. Finch, could I interrupt you to ask where is your place of residence?

A. Soda Springs, Idaho.

I am a member of the Idaho Citizens Grazing Association and am at the present time, and for the past 35 years have been, the president of that organization, which is the largest organization of its kind in the state. I am also a director and a member of the Executive Committee of the Idaho Wool Growers Association.

[fol. 1473] The firm of H. L. Finch & Sons is engaged in the sheep business in the State of Idaho. Our activities embrace:

(a) The operation of a farm at Soda Springs, Idaho, which is devoted largely to the production of purebred sheep for breeding purposes. A substantial part of the male sheep for this purpose are imported from England into Canada and shipped from there either by freight or express to our farm at Soda Springs. All of the sheep produced on our farm at Soda Springs are either sold or used for breeding purposes, and purchasers of this breeding stock are located at all points in the United States.

(b) Our firm also owns approximately 3,000 acres of grazing land and rents approximately the same acreage, or a total of 6,000 acres.

(c) The firm also has Taylor grazing rights for 4,000

head of sheep and rights for about 4,500 head of sheep in the national forests.

(d) Quarters for feeding during the winter season are operated by the firm of H. L. Finch & Sons in leased quarters at Rupert, Idaho. Our sheep are quartered and fed at this location during the months of January, February and March. Feed for the winter operation is received from eastern points or purchased locally in the area.

Soda Springs, Idaho, from which our main operation is conducted, is located on that part of the Union Pacific [fol. 1474] Railroad Company between McCammon, Idaho, and Green River, Wyoming. McCammon is the point where the lines of the Union Pacific Railroad between Ogden, Utah, and Pocatello, Idaho, and between Granger, Wyoming, and Pocatello, Idaho, join.

Our firm also maintains a flock for the production of lambs for market of about 4,000 white-faced ewes which, by cross-breeding with black-faced bucks, produce annually approximately 4,500 lambs.

The lambing operation is conducted at Rupert, and at the end of the winter season the lambs and ewes are moved to the grazing territory operated by our firm which I have heretofore described. Lambs produced by our firm are marketed as prime fat lambs.

Following the marketing of the lambs the ewes are maintained on the range at or near Soda Springs until the next winter season.

We find it necessary to replace our breeding ewes used for the production of lambs for market purposes to the extent of about 10 per cent or 12 per cent each year, and, because such animals are not available in Idaho, it is necessary to purchase them from surrounding states, principally Oregon, Washington, Montana and Wyoming. The reason why it is necessary to purchase replacement ewes rather than to use the ewe lambs which are raised is because the value of Idaho lambs for mutton is high and the cost of maintaining them until they are old enough for breeding [fol. 1475] purposes is prohibitive since we can buy replacement ewes for this purpose from surrounding states more cheaply than we could use the ewe lambs we produce.

At this point I want to state that in our business we do not use transit privileges. Our in and outbound movements are independent of each other and we have never found that the payment of flat rates was in any way a hindrance to the successful operation of our business. Our fat lambs which are grazed on our grazing lands heretofore described are shipped from the station of Soda Springs and those purchased in other areas are shipped from the stations closest to the points where they are raised.

All of the sheep sold by our firm for market purposes are routed via the lines of the Union Pacific, the majority of which are consigned to Omaha or Kansas City or markets east thereof. Our firm annually ships from 20 to 125 carloads per year, depending upon the amount of sheep purchased.

I have been engaged in the sheep business in Idaho either under the present firm name or the previous firm name of Knollin and Finch for 44 years, and I believe that I have been in the sheep business in the eastern part of Idaho as long or longer than any other person in that part of the State.

During all of that period, the service provided by the Union Pacific Railroad has been entirely satisfactory and [fol. 1476] adequate for my needs, including the furnishing of cars, switching and transportation service.

I have never had occasion to use the lines of the D&RGW and I have never requested either the Union Pacific or the D&RGW for the establishment of joint rates via the Ogden gateway. The reason that I have not requested joint rates via the lines of the D&RGW is that the routes open to me via the lines of the Union Pacific are the most direct to markets for my sheep and are entirely adequate for my needs.

It is my fear that if the D&RGW should prevail in this case and secure a substantial diversion of traffic originating in the State of Idaho to the lines of the D&RGW, service on that part of the Union Pacific line east of McCammon which embraces the town of Soda Springs, where the principal part of my business is conducted, would be materially reduced, at least to the extent that trains which presently move over the more direct route of the Union

Pacific east of McCammon were diverted to the D&RGW and thus routed via the Union Pacific line from McCammon to Ogden.

It is my further belief that this diversion would result in a substantial loss in revenue to the Union Pacific, and in addition to the reduction in train service which I might reasonably expect, the Union Pacific might find it necessary to increase rates. Either reduction in train service which I presently enjoy or increase in rates would work to the [fol. 1477] disadvantage of my firm.

Expedition of service is of the utmost importance to me in my business, and any curtailment of service would be detrimental to me as the service presently afforded by the Union Pacific permits me to ship my sheep without delay, and I know that with the service presently afforded the sheep will be expeditiously transported to markets via the lines of the Union Pacific.

The Union Pacific is presently furnishing service so as to enable the lowest possible shrinkage of the lambs shipped by me and any delay in movement after loading or in transit would result in a loss to the business of our firm.

Shortly after this case was commenced, representatives of the D&RGW came to Pocatello, where they had a meeting with the executive committee of the Idaho Wool Growers Association. I was in attendance at that meeting, at which time a representative of the D&RGW made a statement to those present that the practice of feeding Idaho lambs in transit in Colorado and of later re-shipping them as fat lambs to market had been discontinued by the action of the Union Pacific in cancelling through rates with transit privileges which previously existed, and that the present basis of combination rates to and from the feeding territory made the cost of feeding in transit there prohibitive.

The fact is that right after the turn of the century, in the [fol. 1478] early 1900's, there was quite a movement of range sheep commonly known as pairs, transported from Idaho into Colorado and unloaded around the Tennessee Pass country and grazed there during the summer and then sent on to eastern markets and sold in the early fall.

During the early 1900's, however, following the estab-

lishment of the national forests, regulations were issued by the Secretary of the Interior or the Secretary of Agriculture for the purpose of protecting the national forests and making certain restrictions on their use for grazing purposes.

Among the regulations that were issued was one prohibiting the pasturing of sheep and goats on the public lands in the forest reservation. Another regulation provided for the protection of the settler and home-builder against unfair competition in the use of the range lands.

These regulations had the effect of giving preference in the use of the grazing lands in the forest reserves in Colorado to the citizens of that state, and it is my recollection that it was the regulations issued from time to time by the Secretary of the Interior or the Secretary of Agriculure for the protection of the forest reserves which changed the practice of grazing Idaho sheep in Colorado rather than the freight rates.

The Union Pacific is the largest taxpayer in the State of Idaho and maintains a large payroll in the State. It [fol. 1479] provides the transportation facilities necessary to assemble the traffic originated in this territory, performs the switching and furnishes the car supply, all with expedition. I understand that the D&RGW does not contemplate building a railroad into the State, nor does it propose to furnish any of the facilities or render any service in connection with transportation in the State of Idaho.

I am in favor of permitting the Union Pacific to secure the longest haul by its lines of the products originated in this state, and particularly those in which my firm has an interest.

I am, therefore, appearing here as a witness in favor of the Union Pacific Railroad in this case and in opposition to the application of the D&RGW, and earnestly request the Interstate Commerce Commission to deny the petition of the D&RGW in this case.

By Mr. Rouse:

Q. Mr. Finch, is there anything you wish to add to your written text?

A. I think not, Mr. Rouse. I think that covers it pretty well.

Mr. Rouse: That is all I have.

Cross-examination.

By Mr. Quirk:

Q. Mr. Finch, you know Mr. Rich, I suppose, don't you?

A. Very well.

Q. Did you know that he testified here the other day and [fol. 1480] his views are quite the opposite of yours?

A. Yes, sir.

Q. You say, at the bottom of page 3 of your statement, that you "fear that if the Rio Grande should prevail in this case and secure a substantial diversion of traffic," and so forth and so on, that the Union Pacific might be injured. That is roughly what you say.

What inspires that here? By whom was it inspired?

A. By my interest in the case.

Q. Did you think it up yourself?

A. Absolutely.

Q. There have been a lot of statements out here, in the papers of Idaho, that sound very much like that was the line that was followed—that the Union Pacific would suffer.

A. I speak my own mind on these things. I have had considerable experience over there.

Q. Now, at the bottom of page 5 of your statement, Mr. Finch, you are dealing with the question of the forest reserves, and you say that it is your recollection that it was the regulations issued from time to time by the Secretary of the Interior or the Secretary of Agriculture for the protection of the forest reserves which changed the practice of grazing Idaho sheep in Colorado rather than the freight rates."

Now, don't you know that a great deal of grazing went on in Colorado under the plan where the forest permit-ees still purchased sheep from points west of McCammon, and [fol. 1481] did so in large quantities until 1932, when the Union Pacific eliminated the competitive equal rates that then existed and imposed a penalty?

A. No, I don't know that. I don't think that is the case.

Q. This record shows that it is.

You don't know it personally?

A. Well, I was here, and operating here, and had a pretty good idea of what went on, the same as today. If there had been any large movements of sheep over the Rio Grande out of Idaho I would have known about it.

Mr. Quirk: Well, that is all.

Exam. Mullen: Any redirect examination?

Mr. Rouse: That is all, Mr. Finch.

Exam. Mullen: Thank you.

(Witness excused.)

Mr. Rouse: I will call Mr. Siddoway.

J. C. Siddoway was sworn and testified as follows:

Direct examination.

By Mr. Rouse:

Q. Mr. Siddoway, have you prepared the testimony you wish to give here in written form?

A. Yes, sir; I have.

Q. Are the statements in your written prepared statement true and correct, Mr. Siddoway?

[fol. 1482] A. Yes, sir.

Q. You may read your statement.

A. My name is J. C. Siddoway. I live at Teton City, Idaho.

I am there engaged in the agricultural and livestock business, and have been for the past 50 years. I am and have for many years been the president of the Fremont County Wool Growers Association, an association consisting of approximately 25 wool growers who produce approximately 100,000 head of lambs per year.

I am also, and for many years have been, a director of the Idaho State Wool Growers Association, which is an organization representing the wool growers in the State of Idaho. I served one term as a representative and one term as a senator in the state legislature of Idaho.

Right here I have a correction. I say "I own." I operate with my boys. I have seven sons and I operate with them. And in the next few places where it says "I", I would like to have that changed to "we."

We own approximately 25,000 acres of grazing land in Jefferson and Freimont Counties, Idaho, and we own approximately 2,000 acres of irrigated land. We feed approximately 6,000 head of sheep per year. In addition to the sheep, during the year 1949 we fed approximately 250 head of cattle.

The irrigated land is devoted for the most part to the production of potatoes, although part of the acreage is [fol. 1483] used in *in* the production of hay, grain and seed peas.

During the year 1949 we produced approximately 2,000,000 pounds of potatoes and, of that amount, we shipped, either direct or through dealers, from the stations of Newdale, Idaho, located on the East Belt Branch, and Sugar City, Idaho, located on the Yellowstone Branch of the Union Pacific Railroad, approximately 50 carloads of potatoes.

We also shipped, either in our own name or in the name of the dealers to whom they were sold, approximately 40 carloads of lambs, and sold to dealers, for shipment to eastern markets, 7 or 8 carloads of cattle.

During the period I have been engaged in the business above described I have not followed a uniform practice with respect to the shipping of our products. During certain years I have shipped them in my own name; during other years, we have sold them to local dealers who have shipped them. The practice varies from year to year, depending upon which, in our judgment, is the most advantageous to us. The products produced and shipped by us direct or through dealers are customarily consigned to commission firms in Omaha, Chicago or other eastern markets.

During the entire period of our operations in this territory, we have always used the facilities of the Union Pacific and have routed our shipments via its lines to destination, if destination was located on its lines, or to eastern connections at Council Bluffs or Kansas City, where the [fol. 1484] shipments moved to points beyond the lines of

the Union Pacific. The service afforded by the Union Pacific has always been adequate for our requirements. The Union Pacific has been reasonably prompt in furnishing an adequate supply of cars for our needs.

We have never had occasion to ask the Union Pacific or the D&RGW to publish a joint rate via the lines of the D&RGW. We have never had occasion to use the lines of the D&RGW, nor do we anticipate that we ever will require routing via its lines. With the variety of routes open via the lines of the Union Pacific and its connections, we have at no time found any difficulty in reaching markets with our products, and I can definitely state that the services and facilities operated by the Union Pacific are entirely satisfactory.

As I understand it, the D&RGW is seeking, in the application now pending before the Commission, to participate in the movement of shipments originating in the State of Idaho.

Exam. Mullen: Just a minute at this point. This is off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

By Mr. Rouse:

Q. Mr. Siddoway, in that paragraph in your prepared text there are some statements to the effect that you understand that the D&RGW does not intend to build a railroad in the state or furnish a car supply or switching serv-[fol. 1485] ice, and that statement has been made by other witnesses.

Do you concur in the testimony of the other witnesses in that respect?

A. Yes, sir; in that respect, I do.

Q. We will strike, then, from your prepared statement, Mr. Siddoway, that first complete paragraph on page 3, and you may continue to read following that paragraph.

Mr. Gibson: Is that the first paragraph on page 3?

Mr. Rouse: The first complete paragraph on page 3.

Exam. Mullen: Just a minute. The rest of it is repetitious, too: "The Union Pacific is the railroad that serves

the communities in which I operate," and so forth. That is all repetition. Why not ask him about that in a single question?

Mr. Rouse: Well, all right, Mr. Examiner.

By Mr. Rouse:

Q. Mr. Siddoway, some of the other witnesses have testified to the general economic effect on the state and the citizens of the state with respect to the Union Pacific's participation in the building of the state; what effect the curtailment of service would have on the shippers; and what effect, also, would result if the Union Pacific's revenue were decreased so that it would not be in a position to continue to pay taxes and render service to the same extent as it has in the past.

Are you willing to adopt the statements to that general effect by previous witnesses, Mr. Siddoway?

[fol. 1486] A. Yes, sir. Generally, I would be willing to do that.

Q. Well, to save copying this statement into the record, Mr. Siddoway, we will skip the rest on page 3 of your statement.

Mr. Rouse: But I would like, Mr. Examiner, if I may, to ask Mr. Siddoway one further question about taxes.

Exam. Mullen: All right. Go ahead.

By Mr. Rouse:

Q. Mr. Siddoway, as I understand it, you served as a member of the board of directors of a certain school district during a number of years that were lean years, when the revenues in the state were not sufficient to keep the schools in operation without the contribution of a substantial amount of taxes from the Union Pacific; is that correct?

A. That is right.

Q. Do you want to add anything further to that statement about what regard you have for the Union Pacific's tax payments as they have affected your schools?

A. I would like to say here, if I may, that if it hadn't been for the amount of the Union Pacific taxes that they paid in the lean years that you spoke of, in the early 30's,

vouldn't have been able to maintain some of the dis-
s over in our part of the state, especially in Clark
nty and Teton County, where I live.
believe, as near as I have been able to find out, the
n Pacific paid more than half of the taxes in some
1487] of those counties in the years of the early 30's.
hadn't been for the amount they paid, the schools
d have been closed down—if it hadn't been for the
unt the Union Pacific paid.

By Mr. Rouse:

Now, Mr. Siddoway, if there should be diverted to
D&RGW a substantial amount of traffic in the territory
re you operate, and if it were necessary, as a result
at, for the Union Pacific to render less service, would
be of disadvantage to you in your operations?
Yes, sir.
In other words, you require the prompt service that
are presently getting; is that correct?
That is just the way I feel about it.
If the revenues of the Union Pacific were depleted
uch a point where it would be necessary to ask for
ncrease in freight rates, would that be to the disad-
age of your business?
Yes, sir. It would be more expense.
r. Rouse: No-, Mr. Examiner, if I may, I would like
ave Mr. Siddoway read the second complete para-
h on page 4 of his statement.
xam. Mullen: The last two?
r. Rouse: The last two paragraphs.

By Mr. Rouse:

You may proceed, Mr. Siddoway. Read those last
paragraphs.

r. Gibson: Are you going to eliminate the first para-
1488] graph on page 4?
r. Rouse: At the suggestion of the Examiner we have
inated the first paragraph on page 4.
xam. Mullen: He understands the rest of it.
he last two paragraphs of page 4.

By Mr. Rouse:

Q. You may proceed, Mr. Siddoway.

A. I have been in the State of Idaho long enough to know that the building of the main and branch lines of the Union Pacific Railroad made possible the development of this state, and I am therefore now opposed to permitting the D&RGW to participate in the revenues which the Union Pacific receives on the products shipped out of this state via its lines, which were made possible only be the expenditure of vast sums of money by the Union Pacific in building its railroad facilities in the state.

I am, therefore, appearing in this hearing as a witness for the Union Pacific and in opposition to the petition of the D&RGW, which I feel should not be granted by the Interstate Commerce Commission.

Q. Mr. Siddoway, is there anything further you would like to add to your statement?

A. I haven't anything further prepared; but I have in mind that I live out there in a territory which is maintained by a branch line, and if we look at this business right, and if this revenue is partly taken away from the Union Pacific and given to the D&RGW, it will naturally [fol. 1489] throw their things a little out of order, and I think these branch lines may be taken from us.

Therefore, I would like to say that I would oppose taking this revenue from the Union Pacific, which I think it takes to operate any business—a certain amount of good revenue. If it is divided among the two railroads, why, they necessarily will have to cut down expenses and maybe discontinue these branch lines, which would be very detrimental to my business.

Q. In other words, Mr. Siddoway, you appreciate that the revenue that the Union Pacific receives——

Exam. Mullen: Please don't lead the witness.

Mr. Rouse: I didn't hear you, Mr. Examiner.

Exam. Mullen: I said, please don't lead the witness. You can rephrase the question, though.

Mr. Rouse: Yes.

By Mr. Rouse:

Q. The abandonment of branch lines would be of particular disadvantage to you because you are located on a branch line; is that right?

A. That is right. These branch lines were made when roads were poor and it was very hard to get around; and they have been of great benefit to us, and I would like to maintain them.

I don't believe they could be if the revenue, or part of the revenue, were taken from the Union Pacific. I don't think they could maintain all these small branches in operation.

[fol. 1490] Q. Your thought is that the revenue from that operation is not sufficient to justify the operation of the service.

A. That is correct.

Exam. Mullen: You are still leading the witness.

By Mr. Rouse:

Q. You are opposed to the abandonment of the branch lines; is that correct?

A. That is right.

Exam. Mullen: He said that just now.

Mr. Rouse: That is all, Mr. Examiner.

Exam. Mullen: All right. Any cross-examination?

Cross-examination.

By Mr. Gibson:

Q. Mr. Siddoway, did you prepare this statement or was it prepared for you?

A. I prepared it myself. It was written by a stenographer, but I dictated it.

Q. I see.

Several witnesses have testified in this case previously, Mr. Siddoway, to the effect that having markets available in all possible parts of the country is an advantage to a producer of livestock.

As I understand your statement, you disagree with those people?

A. Not exactly; no, sir.

Q. You think it is an advantage to have markets available to you?

[fol. 1491] A. I think it is; yes.

Q. Do you sell speëp on the Ogden market?

A. I have done so.

Q. Now, referring to the taxes that were paid in the counties you mentioned—school taxes, primarily—were those taxes paid on the property of the Union Pacific Railroad—that is, as a school levy? You said you were familiar with taxes.

A. It was paid on the property; yes, sir. As I understand it, the Union Pacific pays about 10 per cent of the property tax in the state of Idaho.

Q. I see.

A. And a lot more than that in some counties. They have paid at least half in Clark County, and have done so in the past year.

Q. You say those taxes were paid in the 30's, when you had some lean years?

A. Yes, sir.

Q. What amount of taxes did they pay in the county with which you are familiar at that time?

A. I don't have the exact amount.

Q. Was there any difference in the amount of taxes paid then and the amount of taxes paid now?

A. Well, no, there wouldn't be any difference in proportion. But the farmers were unable to pay a lot of the taxes at that time. They didn't get any revenue from their crops in the early 30's, as you remember.

[fol. 1492] Q. Pardon me. I am referring to the amount of taxes paid by the Union Pacific Railroad in your county.

At that time did they pay approximately the same amount of taxes they pay at this time?

A. I think, according to their valuation, they paid probably more than they do at this time—according to what they have. But the farmers were unable to pay the taxes in those years.

Q. Well, the increases in taxes paid by the Union Pacific

would be dependent upon their increased valuation, would it not, in your county?

A. Yes, sir.

Q. Was there a decrease in the business of the Union Pacific in the 1930's? Didn't they have lean years, too, at that time?

A. I don't know as to their business.

Q. Well, you are familiar with their traffic moving through this county of which you are speaking?

A. Well, if they didn't have the products to ship, there naturally would be a smaller business.

Q. And at the present time their business has increased? Wouldn't that be a general statement?

A. That could be made as a general statement. If there was more stuff produced in the county there would be more stuff to haul out.

Q. Do you think there is any connection between the taxes they pay and the business moving through your county?

[fol. 1493] A. I didn't get that.

Q. Is there any connection between the volume of taxes paid by the Union Pacific and the volume of traffic they have moving through your county? They pay their taxes on the real estate and the buildings?

A. They pay their taxes on the operations. That is, on what they own in the territory.

Q. If these rates were established through Ogden, Mr. Siddoway, would you use them—the joint rates we are discussing here?

A. Well, I am not able to answer that. I have always tried to operate where I thought it would better my conditions. And from what I know, I don't think it would better my conditions.

Q. If the rates were established and more markets were available to you, you might use these rates; isn't that true?

A. If there were more places to sell, I don't think I would. I have been perfectly satisfied, as far as I have had any dealings.

And, further, I would like to say that I am well satisfied with what is going on. I am not of the opinion that

I would like to stop some thriving operation in order to get a new one—try to get a new one—whether I knew they could do anything or not, rather than having the one that is here already.

Q. Other citizens in Idaho have testified, with respect to these rates, who are similarly situated to you in the [fol. 1494] livestock business, that if they are established they would be of advantage to them.

Now, would you be opposed to those people having the advantage of those rates if it would help them?

A. No, sir. I am not opposed to anything that would help anyone.

Q. Referring to the branch line through your territory, you say that you are interested in that property's continued use.

Do you own trucks in your operation, Mr. Siddoway?

A. Yes, sir.

Q. Do you use them to haul lambs to market?

A. No, sir.

Q. You ship all your lambs by rail?

A. I ship them by rail.

Q. Have the highways in your county improved since the 1930's, for instance?

A. Yes, sir.

Q. You use them more extensively than you did then, at the present time?

A. I might not say I use them more extensively, but I do it much easier.

Mr. Gibson: I think that is all.

Exam. Mullen: Any redirect?

Mr. Rouse: That is all. Thank you.

Exam. Mullen: Witness excused.

(Witness excused.)

[fol. 1495] Exam. Mullen: We will recess for 10 minutes.

(Short recess taken.)

Exam. Mullen: Come to order, gentlemen.

Mr. Melia: I will call Mr. Yoder.

LEWIS YODER was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. The testimony which you will give here has been reduced to writing, Mr. Yoder?

A. It has.

Q. Will you proceed to read it?

A. My name is Lewis Yoder and my home is at Nampa, Idaho, a point on the main line of the Union Pacific just west of Boise, where I operate a packing plant for processing potatoes, onions, lettuce and green peas. Also, I operate a packing plant at Marsing, Idaho, and buy produce fro shipment from such points as Emmett, Wilder and other stations throughout the Nampa territory.

Our shippers will average about 650 cars a year, which are sold to a large extent at points east of Denver, principally Kansas City and east, and some in the southwest. I have been in this business at Nampa since 1914.

Having been a shipper over the Union Pacific for about 35 years, during which time I have been in rather close touch with the railroad situation, including rate matters, here in in Idaho, my reasons for opposing the complaint [fol. 1496] of the Rio Grande asking for opening of the Ogden gateway are as follows:

The service which the Union Pacific gives on our movement of loaded cars has always been very good. Most of the perishable movement is in solid block, usually made up at Nampa for the products of this district, and these solid trains can be depended upon to make the Missouri River points on the third day. If any of the cars in these blocks are routed via the Rio Grande, then it would be necessary to put trains through the Pocatello hump yard, involving one dealy, and again through the interchange to the Rio Grande at Ogden, involving a second delay. Both operations, of course, would require considerable switching, thereby increasing the possibility of damage to the lading.

Our refrigerator car service on the Union Pacific in Idaho is good. On account of having the P. F. E. shops at Nampa, we always have nice cars, clean and in good condi-

tion. Opening of the Ogden gateway would mean the scattering of PFE cars over the Rio Grande route and because of its longer distance for both the loaded movement and the return empty movement, resulting in extra transit time in both directions, it would interfere with and reduce the supply of refrigerator cars available for loading, and this is particularly important during the height of the shipping season. We feel that these P. F. E. cars belong to U. P. shippers, but if they get into the hands of the Rio Grande [fol. 1497] empty, then they might well be taken for loading by shippers on that line and never get back to Idaho.

Years ago, the Union Pacific inaugurated rates on Idaho ptotatoes, vegetables and onions for the purpose of encouraging the growth and development of these industries so that they could compete in distant eastern markets with similar products grown much closer to those markets. The Union Pacific was vitally interested in seeing this volume grow, and it has grown steadily since 1914. It was to the interest of the Union Pacific to give us the lowest per ton mile rates possible in order to encourage the growing of perishables here, but if this tonnage is going to be split up and divided with the Rio Grande at Ogden, then the Union Pacific will have less incentive to work for the continued growth of this area. Railroads, like individuals, work best when working for themselves.

The Rio Grande originates a considerable volume of potatoes, onions and lettuce, all of which is sold in competition with similar products grown in Idaho, viz., onions and potatoes from the Western Slope, potatoes from the San Luis Valley, and lettuce in the summer from Canyon City and the Slope Mountain areas.

Exam. Mullen: That next paragraph should come out. It is purely argumentative. Please eliminate that.

[fol. 1498] The Witness: To require the Union Pacific to inject the Rio Grande into the eastbound haul would add absolutely nothing to the supply of transportation service available in Idaho. I know from experience that the route is not a practicable one, simply for the reason that to points where most of my shipments move, the Rio Grande is quite circuitous and the transit time would of necessity be longer. Our products are highly perishable and we

would use the shortest and fastest route even though the same rates applied over the Rio Grande. Here I might say that if I am involuntarily required to ship over the Rio Grande because of eastern solicitation among my purchasers, then my concern is that, even though the contents of the car were in first class condition at the origin point, if upon arrival over the Rio Grande they were found to be in poor shape, then the purchaser would, I am sure, ask me to take part of the loss, and perhaps it would be good business for me to do it. I prefer that eastern buyers continue to instruct routing over the Union Pacific because I think it gives better service than other lines.

Opening of the Ogden gateway via the Rio Grande would not create any new markets for Idaho products. I might also say that in the past I have had no trouble in making diversions and reconsignments in cases where cars are rejected for any reason.

Mr. Quirk: I think that is argumentative.

[fol. 1499] Exam. Mullen: Let it stay in.

Mr. Quirk: All right.

The Witness: If this gateway is opened, some shippers might demand constant special favors from the Union Pacific as a price of billing cars direct over the Union Pacific. This would be unfair to reasonable, fair-minded shippers who expect nothing from a carrier but fair rates and good railroad service, without special concessions.

By Mr. Melia:

Q. Would you like to elaborate on that last statement, Mr. Yoder? Just what did you have in mind when you wrote that?

A. Well, there are many shippers who like a special advantage over other shippers. In times of a car shortage they want the most cars and the quickest yard service, and in case of a claim they are not fully able to substantiate they like to enforce the collection of it, if it is possible, through short haul.

Q. Do you know from experience that that practice has been indulged in?

A. I know, especially from the records that we have had in eastern terminals, that many receivers use that.

Q. Mr. Yoder, over on page 2 of your statement, paragraph C, you mention the subject of rates—what the Union Pacific has done in the matter of establishing rates to encourage the growing and marketing of fruits and vegetables here. Could you be more specific? How does your rate [fol. 1500] situation in Idaho compare with Colorado, for instance?

A. Our rate per ton mile on practically all of our products is less than the Colorado rate per ton mile. This was started, really, at the beginning of my work in the potato and onion industry, as well as in the beginning of the industry in 1914.

The Union Pacific, in their desire to expand our production, and our market, finally established a rate of 12 cents over Colorado for Idaho Falls territory, and 2 or 3 cents—first 2 and later 3—for the Nampa-Caldwell district.

Q. What is the distance, Idaho Falls over Greely, Colorado, approximately?

It is 500 miles, isn't it?

A. Idaho Falls is around 600 miles.

Q. Over Greely?

A. Over Greely. And then Greely to Fort Worth is 853.

Q. You say the Union Pacific established a rate of 12 cents, Idaho Falls over Greely?

A. They did. However, by the percentage increases that differential has gradually been increased.

Q. Do you feel that the Union Pacific has treated you—I will deal with you individually—fairly in the matter of rates on potatoes and onions?

A. In the matter of potatoes and onions, lettuce, and especially fruits, compared to any other district, and the [fol. 1501] number of miles from market, we have been treated very fairly.

Mr. Melia: Thank you. You may cross-examine.

Cross-examination.

By Mr. Quirk:

Q. Mr. Yoder, what special favors have you demanded of the Union Pacific?

A. I don't think I ever demanded any that I was not entitled to.

Q. You say here that if this gateway is opened some shippers might demand constant special favors from the Union Pacific.

A. That is absolutely correct.

Q. Then you are against competition, I take it?

A. I am not against competition. I am against unfair competition.

Q. Why would shippers demand special favors, if the gateway was opened, that they wouldn't demand now?

A. Some shippers, there isn't any question; but we have shippers who buy from the East. Perhaps some who are residents of this section. If they could divert 10 to 20 to 30 cars weekly over another line, immediately they would begin to work with the Rio Grande and the Union Pacific. If you want the larger percentage of this haul, you perhaps had better give consideration to these claims for loss and damage.

Q. Do you think the shippers in the East are not as nice as they are out here?

A. I think the shippers average about the same as other [fol. 1502] humanity in all sections.

Mr. Quirk: That is all. Wait a minute——

By Mr. Quirk:

Q. Mr. Yoder, referring to page 3 of your statement, the paragraph that you have numbered F, you say that you have had experience with this route that is in question here. Have you used the Union Pacific to Ogden and the Rio Grande from Ogden in shipping your products?

A. I haven't stated there that I have had experience shipping over the Rio Grande. I stated that I have had experience in out-of-line hauls, and we have learned to confine our shipments through as few terminals as possible and as few connections. In shipping to New York we usually bill U. P., Wabash and Erie or Pennsylvania to avoid the large terminals.

Q. That isn't the way I read your statement.

You say, "I know from experience that the route is not a practicable one."

A. That is correct. It would take a car out of its shortest haul and best roadbed, and it would be impracticable.

Q. I see.

If the rates were established, you wouldn't use this route at all, would you?

A. I can't see why I would. There are no markets there that I could sell to because there are competitors.

Q. On page 4 you refer to damage to shipments and the fact that you might have to share in paying that loss. Would you also file a claim against the railroad companies [fol. 1503] involved for the loss?

A. I probably would. If these blocks had to be stopped at Pocatello in order to take out the diverted cars, there would be a terminal there that would use that, and they would be switching them through that hump yard, and then again through this Ogden delivery, and we undoubtedly would have more damage than if it goes straight through; and if there were losses I would have to file a claim.

Q. That isn't the question I asked you. I asked you if you would file a claim with the railroad. You said you would.

A. Yes, I would file a claim if there was loss and damage in the shipment.

Mr. Gibson: I see. Thank you.

Exam. Mullen: That appears to be all. Thank you.

(Witness excused.)

B. M. Tibbetts, Sr. was sworn and testified as follows:

Direct examination.

By Mr. Rouse:

Q. Mr. Tibbetts,——

Exam. Mullen: Just a moment, please. An additional appearance is to be entered.

Mr. Coc-rum, Henry A. Cockrum, attorney, Office of the Solicitor, U. S. Department of Agriculture, Washington, D. C., appearing on behalf of the Secretary of Agriculture [fol. 1504] of the United States.

Exam. Mullen: Do you intend to produce any witnesses?

Mr. Cockrum: We will have a witness, Mr. Mullen.

Exam. Mulen: You will have, you say?

Mr. Cockrum: We will have one witness.

Exam. Mullen: All right.

Mr. Collins: Mr. Examiner, I wonder if Mr. Cockrum is ready now to say whether he is supporting the complainant or not?

Mr. Cockrum: Our position is that of an invervener in support of the complainant.

Exam. Mullen: All right, Mr. Rouse.

By Mr. Rouse:

Q. Mr. Tibbitts, have you reduced to writing the testimony you wish to give in this case?

A. Well, I dictated this statement.

Q. You have a written statement which you wish to read, do you not?

A. Well, I don't think so, other than comment that I might make.

Q. You may proceed to read your statement, Mr. Tibbitts.

A. My name is B. M. Tibbitts, Sr. I live at St. Anthony, Idaho.

I am engaged in business at that point under the firm name of B. M. Tibbitts & Son Company. We are the owners of four ranches in Fremont County and one in Madison County, Idaho, comprising a total area of between [fol. 1505] 500 and 600 acres. We are engaged in the production of agricultural products on the land above described and, to a large extent, in the production of potatoes.

During the past year we produced on this land approximately 2,500,000 pounds of potatoes. In addition to operation of the farms above described, we are also a packer and shipper of potatoes. We have potato warehouses located on the lines of the Union Pacific at Egin and Lorenzo, Idaho, and I ship from those stations as well as various stations on the line of the Union Pacific in the vicinity of St. Anthony.

During the year 1949 we shipped from the stations above

enumerated 909 carloads of potatoes and received at those stations 91 carloads. We also shipped from the above stations approximately 50,000 bushels of grain. All of the above-described shipments were routed via the lines of the Union Pacific and its direct connections and consigned to markets in various locations in the country, east, west and south.

We have never had occasion to ship via the lines of the D&RGW and have never requested either the Union Pacific or the D&RGW for through rates via the lines of the D&RGW for the reason that with the variety of routes open to us via the Union Pacific and its connections we have at no time found any difficulty in reaching markets with the products which we ship.

The routes of the Union Pacific are adequate and satisfactory for our needs. The Union Pacific has furnished [fol. 1506] with reasonable promptness an adequate supply of cars for our purposes.

It is important, in the shipment of potatoes, to ship via the most direct route so as to avoid delay in transit. There would be no advantage to us in routing via the D&RGW because it is a longer route and, if used, would occasion delay in arrival at ultimate destination.

Exam. Mullen: That next paragraph, it seems to me, is repetition of what other witnesses just said.

Mr. Rouse: May I ask the witness another question?

Exam. Mullen: If you make it brief. We don't want repetition.

By Mr. Rouse:

Q. Do you wish to adopt other statements other witnesses have made in this hearing regarding the adequacy of supplies and service rendered by the Union Pacific?

A. I do.

Q. And the economic effect of the Union Pacific in this state?

A. Postively.

Q. You may skip the next paragraph in your prepared statement, Mr. Tobitts, and start at the bottom of the page.

A. At the hearing with respect to this case held in Salt

Lake City during the month of December, 1949, certain parties testified in behalf of the D&RGW, one saying that his firm was a member of the Idaho Potato and Onion Shippers Association and that he was a vice president of that Association; and the said that he represented the St. [fol. 1507] Anthony Chamber of Commerce, and on December 16, 1949, I sent a telegram to Mr. E. B. Collins, counsel for the Union Pacific in this case commenting on this testimony. The telegram which I sent to Mr. Collins reads as follows——

Mr. Quirk: I object to this method of dealing with this subject. These witnesses testified. Their testimony is of record. They were cross-examined. What is this witness intending to do?

Exam. Mullen: I don't think you need to read that telegram; but you can state from your own knowledge the same facts without reading the telegram.

What is it you want to prove?

The Witness: Certain individuals at that hearing represented themselves as representing the different organizations in Idaho, and they were speaking for those organizations; and, upon reading these press reports, I took it upon myself to send this telegram of protest to Mr. Collins because, as a member of these particular organizations to which I refer, I was not contacted or polled, and I knew they were not representing me or my firm.

Mr. Quirk: That is your point, is it—that they were not representing you?

The Witness: Yes, sir.

Mr. Quirk: I think you made that clear.

[fol. 1508] The Witness: They were not representing the organizations because I wasn't polled as a member of the organizations.

Exam. Mullen: Your point is that they were not representing you; is that it?

The Witness: They were not speaking for the organizations, because I later contacted these different organizations and found out that they were not speaking for the organizations.

Mr. Quirk: I object to that as incompetent because these

men were on the witness stand and they were cross-examined.

Mr. Collins attempted to show that they acted through the organization boards, or whatever way they functioned in the organization, and it is not unusual for one or two, in a large group, that do not agree with the others.

The Witness: I think you will find in the record—Mr. Bass I referred to—did not act as a representative of the association but merely as a representative of——

Exam. Mullen: How do you know that, sir?

The Witness: Because I contacted the manager and the vice president.

Exam. Mullen: That is hearsay. What do you know of your own knowledge?

The Witness: He put out a letter to the effect that they didn't.

Exam. Mullen: What do you know of your own personal knowledge?

[fol. 1509] The Witness: All I have is the fact that the president of the organization sent a circular letter to the members saying that Mr. Bass was not speaking for the organization; that he was merely representing his own firm and was not speaking——

Exam. Mullen: Just a minute. That is hearsay. What do you know, of your own personal knowledge, of whether he did or did not represent them? You stated he didn't represent your firm.

The Witness: He didn't represent this organization, the Idaho Potato and Onion Shippers Association.

Exam. Mullen: All right. We will let it go at that.

The Witness: I am again affirming that statements made in my telegram. I am not, as heretofore stated, in favor of the D&RGW in this case. The opening of the Ogden gateway would be of no benefit to me and it could be of serious disadvantage if sufficient business were taken from the Union Pacific so that it would be necessary for it to reduce its service or increase its rates.

I am, therefore, unalterably opposed to the application of the D&RGW in this case and I am appearing here as a witness in support of the defendants, and particularly the Union Pacific.

Mr. Rouse: That is all the direct, Mr. Quirk.
Exam. Mullen: Cross-examine.
Mr. Quirk: No questions.
[Vol. 1510] Mr. Rouse: Thank you, Mr. Tibbitts.
Exam. Mullen: Witness excused.

(Witness excused.)

Mr. Rouse: Mr. Clement.

Ross Clement was sworn and testified as follows:

Direct examination:

Mr. Quirk: Mr. Examiner,——
Exam. Mullen: Let's have a little quiet, please.
Mr. Quirk.——
Mr. Quirk: I would like to make a suggestion.
The witnesses that we have heard this morning are repeating and saying about the same thing. I am willing, for the complainant, to agree, if it is agreeable with counsel for the other side, that they dispense with putting these various witnesses on who have the same story and, if they were put on, the names could be given, if they were put on the witness stand, and that they could be sworn to in groups that they would testify to the same general effect as the witnesses which would be picked out by Mr. Collins.
That is just a suggestion.
Mr. Collins: Mr. Examiner, we have even given some thought to making that proposal ourselves. There is some difficulty about it. For one thing, many of these shippers, who have the privilege and the right to come on the stand [Vol. 1511] and do their own stating, I wouldn't undertake to try to control in that respect if they want to get on the stand.
Another difficulty is that, while perhaps their stories are of the same general tenor, there are some technical features to the operations or shipping interests in one or another witness that prevents anything like an exact duplication.
What I mean is that one thing may be true with respect

to grain and another with respect to lumber, and things of that sort.

Now, we want to get that sort of representative picture before the Commission, and I don't see how it would be practical to adopt Mr. Quirk's suggestion. But we will be glad to think it over and look at our witnesses' statements that we understand they are going to make and perhaps confer with the witnesses with a view to seeing if we can adopt his suggestion.

Exam. Mullen: I have a further suggestion along that line.

If there is no objection, those statements could be received as verified statements when the witnesses are sworn. The witness could be here and could be sworn, and their statements could be received as verified statements after Mr. Quirk has had an opportunity to read them and interpose any objections he desires to make. In that way the statements will get into the record as a verified statement. It would not, of course, be copied into the transcript. You [fol. 1512] might consider that a possibility also.

Mr. Collins: Well, I wish to make this remark, not for the purpose of being retaliatory, but I call to the Examiner's attention that Mr. Quirk took no short cuts in the presentation of the Rio Grande's part of this case. In fact, he refused to accept any special procedure which would have enabled us to shortcut the trial in the making of the record in this case.

I think it is a little unfair for him to have one procedure and for us to have another and different procedure, Mr. Examiner, much as I would have liked, in the beginning, to cooperate to the end of brevity with the Commission, which I tried to do.

Exam. Mullen: Of course verified statements become a part of the record.

Mr. Collins: There seems to be a feeling among some of the witnesses that they should appear and present their testimony, but we will take your suggestion under consideration, Mr. Examiner.

Exam Mullen: All right.

Mr. Quirk: Could I make this one observation?

As you recall, most of the witnesses which we will char-

acterize, for want of a better name, as public witnesses were on our side. There were one or two that weren't.

I call attention also to the fact that we finished part of the [fol. 1513] day here, and Salt Lake in 4 days and a half. We are in the fifth day now, and we didn't take so much time.

Exam. Mullen: All those facts will have to be considered in determining what procedure we will follow from now on.

Mr. Collins: Yes, we will try.

Exam. Mullen: All right.

By Mr. Rouse:

Q. Mr. Clement, do you have a prepared statement of your testimony?

A. Yes.

Q. You may proceed to read it.

A. My name is Ross Clement. I am one of the partners of Clement Brothers, a co-partnership consisting of myself and my brother Gale Clement.

Clement Brothers are engaged in growing, processing and shipping potatoes. Clement Brothers have a warehouse, processing plant and potato cellar located on Union Pacific trackage at Lewisville, Idaho. The potato cellar at Lewisville has a capacity of 100 carloads of potatoes.

In addition to our processing plant and warehouse at Lewisville, we operate, under lease, 180 acres of land in the vicinity of Lewisville on which there is located a potato cellar having a capacity of 50 carloads of potatoes. The land under lease, which is operated by Clement Brothers, is used for agricultural purposes on which we produce hay, grain and potatoes, although the majority of the agricul- [fol. 1514] tural crops produced are potatoes.

During the year 1949 Clement Brothers produced on this leased land approximately 2,000,000 pounds of potatoes. In addition to the potatoes produced on the land which Clement Brothers operate, we purchased potatoes from growers in the territory.

During the year 1949 Clement Brothers processed and shipped—including the 2,000,000 pounds of potatoes grown on our farm—approximately 250 carloads of potatoes, and, generally, we handle between 175 and 250 carloads per year,

although we have, in a given year, shipped as many as 300 carloads.

During the growing season we employ two men in addition to ourselves. During the harvesting season we employ from 10 to 40 men and during the processing and shipping season we employ approximately 20 men.

Our potatoes are shipped from our plant at Lewisville, Idaho, and for the most part consigned to Kansas City and Chicago markets, the preponderance of the shipments being consigned to Kansas City. Occasionally, part of our shipments are sold to track buyers at Lewisville. There is no uniformity in our practice. Some of our potatoes are sold to track buyers and some consigned to produce dealers in the Kansas City and Chicago markets, depending upon which is the most advantageous arrangement to Clement Brothers.

All of the shipments handled out of our plant are shipped [fol. 1515] via the Union Pacific. We have never had occasion, in order to reach suitable markets, to ship via the lines of the D&RGW nor have we ever requested that line or the Union Pacific to establish a joint rate via the lines of the D&RGW, nor do we anticipate that we will ever have occasion to ship via that line because markets via the lines of the Union Pacific and its connections are ample for our purposes.

The service rendered by the Union Pacific, both in the matter of furnishing cars, switching and transit, has been entirely satisfactory for our purposes.

It is our understanding that the D&RGW in this case seeks to have the Ogden gateway opened so that by solicitation it may secure routing on some of the products from the State of Idaho, including the products produced and shipped by us.

Exam. Mullen: Just a minute. The balance of that is repetition of what has already been said.

Mr. Rouse: May the record show that this witness will adopt the statements that the other witnesses have made to the effect that the Union Pacific renders adequate service, that it maintains a substantial payroll in the state, and that it pays substantial taxes?

By Mr. Rouse:

Q. Would you adopt the statements of the other witnesses in that respect, Mr. Clement?

A. Yes, I would.

Q. You may skip your prepared statement, Mr. Clement, [fol. 1516] from where the Examiner interrupted you down to the beginning of the last complete paragraph of page 3.

Q. It is our belief that if the gateway were opened and the D&RGW should, by solicitation, secure routing on any substantial amount of business, the earnings of the Union Pacific would be reduced and we might reasonably anticipate one of two things—either it would be necessary for the Union Pacific to increase its rates or reduce its service, either or both of which would decidedly be to our disadvantage.

Further, we understand that the route of the D&RGW to the points where our potatoes are marketed is substantially longer than the route via the Union Pacific. Expedition in transit is definitely an advantage to us in our business, and we would, therefore, necessarily use the most direct route to avoid delay in transit.

In conclusion, Clement Brothers is definitely opposed to the opening of the gateway as petitioned by the D&RGW in this case, because there would be no resulting benefit to us; but there would, as heretofore stated, be many disadvantages. We are, therefore, appearing here as a witness for the Union Pacific in this case in opposition to the petition of the D&RGW.

By Mr. Rouse:

Q. Mr. Clement, in the last paragraph that you have read, you have referred to the disadvantages heretofore stated. Those disadvantages that you intended to state in [fol. 1517] your written text you adopted from the testimony of the other witnesses; is that correct?

A. Yes.

Mr. Rouse: That is all I have, Mr. Quirk.

Cross-examination.

By Mr. Quirk:

Q. Mr. Clement, referring to your conclusion, is it just a coincidence that the language of your conclusion is almost identical with the language of practically all the witnesses we have heard this morning?

A. That might be a coincidence, but this is my own. These are my own words. My brother and I prepared it—both of us. This is definitely my feeling on this matter.

Mr. Quirk: All right. Thank you.

Exam. Mullen: That is all. Thank you, Mr. Clement.

(Witness excused.)

Mr. Collins: Mr. Examiner, I want to put Mr. Edens on the stand for a couple of minutes to furnish some information Mr. Quirk asked for the other day.

R. E. Edens was recalled and testified further as follows:

Redirect examination.

By Mr. Collins:

Q. Mr. Edens, the other day Mr. Quirk requested that we supply some information in addition to some shown at about the middle of page 18 of your written prepared statement. Do you have with you the information he requested?

[fol. 1518] A. Yes, sir.

Q. Will you go ahead and submit it?

A. The war year 1945 was the all-time peak year for volume traffic handled through the facilities of the OUR&D Company in that year. 2,847,277 cars were handled through these facilities.

July was the peak month of the peak year 1945 for traffic handled. During that month a total of 284,711 cars were handled in 2,966 trains, an average of 96 trains daily and a daily average of 70 switch shifts with crews and engines used.

Of the total 2,966 trains handled in the month of July, 894 were solid trains, which moved through the Ogden terminal without switching, and this fact made it possible for us to get the total volume of traffic through the Ogden terminal. Even then, and with the addition of the East Yard, with its 10 tracks holding 135 cars each, we experienced severe congestion and delays, with inbound trains being held out of the yard from all directions.

Mr. Collins: That is all.

Mr. Gibson: What kind of trains were the 894?

Mr. Collins: Solid—required no switching the yard.

Mr. Gibson: They didn't go through the yard, then?

Exam. Mullen: Mr. Edens is the witness.

Mr. Gibson: I'm sorry. I was asking for information. I [fol. 1519] was not cross examining.

Mr. Collins: They were handled through the facilities.

Exam. Mullen: Now, just a moment. Who is the witness here, Mr. Collins or Mr. Edens?. Why don't you ask Mr. Edens that? He seems to be the best informed man on that.

Mr. Gibson: Yes, sir.

By Mr. Collins:

Q. Explain that. Were the 894 solid trains handled through the Ogden terminal facilities, Mr. Edens?

A. Yes.

Q. They were; but they were not broken up, classified, or reassembled, were they?

A. No, sir.

Mr. Collins: Does that explain it?

Mr. Gibson: Yes.

Exam. Mullen: As I understand it, these trains moved around the yard to the by-pass tracks that were mentioned before.

The Witness: Yes, sir.

Exam. Mullen: They did not move through the yards.

The Witness: That is, the major portion of them. Some of them moved through the yard proper.

Exam. Mullen: But the major portion moved over these by-pass tracks?

The Witness: That is true.

Exam. Mullen: All right.

[fol. 1520] By Mr. Collins:

Q. If you had solid trains, westbound, from the Union Pacific, going to the Southern Pacific, would they by-pass the yard?

A. No, sir.

Q. They would go right through the middle of it, I suppose?

A. Yes.

Mr. Collins: All right. That is all.

Exam. Mullen: Cross examine.

Mr. Quirk: No questions.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Exam. Mullen: Have you another witness?

Mr. Melia: Mr. Naylor.

ROBERT M. NAYLOR was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. Mr. Naylor, have you reduced your testimony to writing?

A. I have.

Q. Will you proceed to read it, please.

A. I will.

This is a statement in writing of Robert M. Naylor, of Emmett, Idaho.

My name is Robert M. Naylor. My residence and place of business is Emmett, Idaho. I am president of the Highland [fol. 1521] Livestock and Land Company, incorporated in the State of Idaho in 1907, which is in the business of breeding, fattening and marketing sheep, incident to which we also carry on extensive farming operations. My experience in the sheep business dates back over a period of 30 years.

Our company operates extensively in western Idaho.

Our lambing operations start in January and we market our lambs five months from date of birth. For the past several years, our primary market for lambs has shifted from eastern markets to Ogden, Utah. For instance, there was a time when our shipments moved direct to Chicago; then, later, our market was Omaha; then, in the late 20's and early 30's, it was Denver; and since then and now the initial movement has been to Ogden, where the packers are active buyers. Highland prime lambs are sold on the Ogden market to the packers who have plants at points reached by the Union Pacific and its eastern connections.

We have shipped about 50 cars annually, or about a million pounds of prime lambs. All of our lambs are now sold in Ogden, because of the shift in our primary market, and the Union Pacific is giving us the benefit of an out-of-line haul to Ogden and back to the main line at Granger without additional charge.

Owing to the fact that the bulk of producers in southwestern Idaho are raisers of prime lambs, instead of feeders and breeding stock, it is necessary for Highland to go [fol. 1522] out of the state for ewe lamb keepers or breeding stock.

Prior to 1940, Highland raised its own replacement ewes in its own outfit, but as we are producing a choice milk fed lamb in demand by the packers, it is too costly for us to produce our replacements even as much as we want to.

Since 1945, the Highland outfit has acquired yearling ewes for replacements from sheepmen in the neighborhood of Billings, Montana. These yearling ewes originate either on the Milwaukee or Northern Pacific and are transferred to the Union Pacific at Butte, from which point they are given special runs to our unloading points in southwestern Idaho.

Our inbound movements of ewes and outbound movements of lambs are at flat rates, no transit being available or involved since the two moves are in opposite directions. This has not proved burdensome from a competitive standpoint to our operations.

Because the lambing season varies in Idaho, two weeks early or late, the initial date of shipment varies from year to year. The records will show that Highland, as early as May of each year, orders cars from the Union Pacific's

Nampa office for the entire season's run, which begins in July.

Throughout the 17 years that I have been with the Highland Company my experience has been that the Union Pacific has handled our lambs to Ogden and other eastern markets in such a capable manner that Highland has never filed a claim against the railroad for a case [fol. 1523] of loss or damage due to bad handling or otherwise; and I might also say that during my previous connection as fieldman for the First National Bank of Idaho, Boise, Idaho, from 1926 to 1932, operating similar business for them, I did not have occasion to seek or claim damages from the Union Pacific.

In summarizing my testimony, there are a few points that I want to particularly emphasize.

First, the production of sheep in southwestern Idaho is predominantely finished animals, fattened and ready for market. The number of feeder stock available for sale as such is so few that they are of no consequence.

Second, we have not found that the payment of combination rates—that is, feeder rates into and fat rates out of the breeding and feeding points—prevents us from competing with sheep producers elsewhere.

Third, without the protection of its long haul, I do not see how the Union Pacific can continue to give the kind of attention and preferred service to livestock which we have been getting in the past and which is so basically essential to the success of our operations.

Any breakdown or curtailment of that service by reason of reduced revenues and forced economies or any increase in transportation costs would be a serious threat to our business.

That is where the Rio Grande's proposal pinches our [fol. 1524] business, and that is why I am appearing here to state a few facts in opposition to the complaint of that railroad.

Mr. Melia: You may cross examine, Mr. Quirk.

Cross-examination.

By Mr. Quirk:

Q. Mr. Naylor, will you turn to the first carryover paragraph on page 2?

A. Yes.

Q. You say, "Since 1945 the Highland outfit has acquired yearling ewes for replacements from sheepmen in the neighborhood of Billings, Montana," and that "These yearling ewes originate either on the Milwaukee or Northern Pacific and are transferred to the Union Pacific at Butte, from which point they are given special runs to our unloading points in southwestern Idaho."

Do those lambs or ewes move on a joing single-factor rate from the neighborhood of Billings to points in southwestern Idaho?

A. I think they are the same as I have stated in my testimony, Mr. Quirk. "Our inbound movements of ewes and outbound movements of lambs are at flat rates,"—if you will continue to read—"no transit being available or involved since the two moves are in opposite directions."

Q. In other words, you don't pay a combination of rates on ewes to Montana, do you? Is that right?

A. Mr. Quirk, I am not a railroad man, nor am I too [fol. 1525] much posted on rates. When I go to Montana to buy replacement sheep for my outfit I am just like when I go down the street to buy a $100 suit of clothes. I am not too interested whether I am in a 25-cent taxi or a 10-cent bus.

Q. Frankly, I am seeking information. I am really not cross examining you.

A. I wish to say why I am not so involved as to that rate feature. When I go to Montana and, through selection and choice—the same as buying that suit of clothes—get the quality and kind of particular breeding stock I need in my business, I have no thought in mind, when I go and get what I want, about the question that you may ask.

Mr. Quirk: That is all.

Mr. Melia: That is all. Thank you, Mr. Naylor.

Exam. Mullen: Thank you, Mr. Naylor.

(Witness excused.)

Exam. Mullen: We will adjourn now for lunch and resume at 1:30.

(Whereupon, at 12:15 p.m., the hearing in the above matter was recessed until 1:30 p.m. the same day.)

[fol. 1526] Afternoon Session, 1:30 p. m.

Exam. Mullen: We are ready to proceed, gentlemen.

A. J. STILLING was recalled and testified further as follows:

Cross-examination:

Exam. Mullen: A little quiet, please.

Mr. Collins: Mr. Examiner, Mr. Stilling is on the stand for cross examination which, I understand, opposing counsel is ready for.

Exam. Mullen: All right, Mr. Quirk.

Mr. Quirk: Mr. Gibson is going to ask him some questions.

By Mr. Gibson:

Q. Mr. Stilling, will you please refer to page 6 of your written statement?

In that page you refer to a potential of 171,909 carloads. Then further down, Mr. Stilling, you refer to 50,000 carloads of that total originated or terminated at Oregon or Washington, as I understand you, outside of the area that would be considered within this complaint.

Now, is it your understanding that that situation—that the 50,000 should be subtracted from the 171,000?

A. No, Mr. Gibson. The 50,000 carloads originated in the territory around the Pacific coast terminal, that is, around the Portland-Seattle area and on the Southern Pacific south of Portland. It represents carloads that actu-[fol. 1527] ally are involved in this proceeding but originated in an area where the Rio Grande now has joint rates on a competitive basis with all other lines.

Q. Those 50,000 loads, though, are not included in your figure of 171,000?

A. Yes, they are.

Q. They are included?

A. Yes, sir.

Q. Then do I understand you to mean that your potential—I mean actual, not potential——

A. That is right. It was actual movement in the year 1949, Mr. Gibson.

Q. Then it is your statement that from the 171,909 carloads actually moved you should subtract 50,000 from that that are already available for routing over the Rio Grande by a joint through rate?

A. That is right. Approximately 121,909 carloads originated in Idaho, Montana, and in that area of Oregon and Washington lying east of the Pacific coast terminals.

Q. Now, Mr. Stilling, I would like to refer you to a hypothetical movement from Cheyenne to McCammon, first moving via Cheyenne to Ogden, which I understand is approximately 483 miles, my Union Pacific routing, then from Ogden to Springville, Utah, which is approximately 98 miles, for the purpose of partial unloading, then from Springville back to Ogden, Utah, and from Ogden to [fol. 1528] McCammon, which makes a total mileage of approximately 790, considering the two backhauls.

The mileage from Cheyenne to McCammon over your short route is approximately 529 miles, according to our information, the difference between the two being 261 miles.

Is it true that the through rate would apply to the routing I have suggested—Ogden, back to Springville and back to Ogden and on through to McCammon?

A. I think that is correct. We have provided an out-of-line haul privilege there down to Springville. I believe it goes down that far, for partial unloading.

Q. Then I have one more question:

If you will please refer to page 83 of your statement, you refer to shipper testimony concerning eastbound rates on grain and grain products and you say that two witnesses appeared representing the Kansas Milling Company.

Isn't it true that one of those witnesses also appeared for approximately 14 other mills in Kansas? You heard the testimony in Salt Lake City when Mr. Kohlwes appeared there?

A. Yes, I did. You are speaking of the witness Kohlwes?

Q. Yes.

A. I believe he did represent some others. I don't recall the exact number.

Mr. Gibson: That is all.

Mr. Quirk: No questions.

[fol. 1529] Examiner Mullen: Anything on redirect?

Mr. Collins: No.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Exam. Mullen: Do you have another witness?

Mr. Melia: Mr. Parsons.

LYNN R. PARSONS was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. Mr. Parsons, have you reduced your testimony to writing?

A. Yes, sir.

Q. Will you proceed to read it?

A. Thank you.

My name is Lynn R. Parsons. I live at Weiser, Idaho, where I am in the business of packing and shipping potatoes and onions.

During the 1949 season, I operated on my own account. Before that and after being released from the armed services, I operated the Parsons Fruit Company's Weiser warehouse on a joint account basis with my brother, Edward E. Parsons.

For the 1949 season my shipments exceeded 200 cars. Almost all of my shipments of potatoes consisted of No. 1's, which were sold f.o.b. Weiser and billed mainly to Kansas City. A few went to Chicago. I sold quite a few No. 1's to [fol. 1530] cash track buyers who billed the cars to Kansas City. During 1948 I shipped very few No. 2 potatoes.

As to onions, all of these, both the large and the small sizes, were billed to Kansas City and Chicago. During the

time I was associated with my brother in the potato and onion business, and during the brief period that I have been on my own account I have not had any trouble reaching all the markets over the existing routes.

The Union Pacific, of course, is the only railroad for many miles around Weiser. As long as I must ask and depend upon the U. P. for cars, switching and everything that goes into getting my shipments started to market, I can see no need for putting the Rio Grande into the rail route.

In other words, the U. P. provides all the service I need at Weiser and my principal interest is in seeing that it is in a position to continue to give me fast and dependable rail service. To split up the haul and the revenue between the Union Pacific and the Rio Grande, which has no particular interest in my transportation problem, will only leave the Union Pacific less money with which to carry on its operations and this is where the Rio Grande's proposal will eventually hurt me.

While I would not route against the U. P. myself, all of my shipments are sold f.o.b. Weiser and are subject to purchaser's routing. With the opening of the Ogden route, the [fol. 1531] Rio Grande and the eastern railroads would be free to go among the purchaser-consignees and ask them to short haul the U. P., and no doubt in many cases they would do so without realizing how much I have to depend upon the Union Pacific at Weiser in the way of railroad service.

Even though I ship f.o.b. Weiser, I am interested in getting my perishables to market as fast as possible. I know that the Rio Grande route is quite a bit longer than the Union Pacific and if cars go over the Rio Grande, even though they are routed that way by the buyer, the chances are that he will ask me to divide up any loss if the cars reach him in poor condition, and I will have to do it to keep his business.

Another point that I want to mention is the matter of school taxes because I have had some experience with this problem in Washington County, Idaho, as a member of one of the school boards. The U. P. happens to be a heavy taxpayer in that county.

The Rio Grande, on the other hand, would pay no taxes for the support of the state and our schools, but the Union Pacific will have to go on paying taxes even though it loses the long haul on our business.

Mr. Melia: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. The Union Pacific taxes that you refer to are ad valorem taxes, aren't they?

[fol. 1532] A. Yes.

Mr. Quirk: That is all.

Mr. Melia: Thank you.

(Witness excused.)

Mr. Melia: Mr. Peckham, will you take the stand, please?

H. G. Peckham was sworn and testified as follows:

Direct-examination.

By Mr. Melia:

Q. Mr. Peckham, the statement which you hold in your hand was prepared by yourself, personally, was it not?

A. That is right.

Q. And, of course, it was mimeographed by the Union Pacific Railroad?

A. Yes, sir.

Q. But you wrote it personally; is that true?

A. Yes, sir.

Q. Will you proceed to read it, Mr. Peckham?

A. My name is H. G. Peckham. My home, for the past 37 years, has been on my ranch near Wilder, Idaho.

My business is general crop production and livestock feeding. I grow sugar beets, commercial onions, and head lettuce. I have produced twenty-seven crops of potatoes. I fed somewhat more than fifty thousand lambs in one eleven-year period.

ly rail shipments of freight that I have produced have from one hundred to two hundred cars per year. From
l. 1533] these shipments I have paid the U.P. Railroad mpany an average of $1,000 a month freight for the t 32 years. I have classified as a grower-shipper but m essentially a grower.

When I first went to Wilder in 1912, there were seven ldings and the railroad track there. It was the terminus branch line extending miles west from Caldwell, Idaho. ere was a box car for a depot and a portable loading te for the loading of livestock. The side track con-ed of one short spur.

From that date until now we have been engaged at Wilder the development of a modern rural community, and the P. Railroad Company has been cooperative. The com-ny has developed their facilities here so that they are te adequate. Their service is good. We have daily, cept Sunday, train service. When business demands, s service is increased to take care of our requirements. e car supply normally is good. Interruptions by war or ikes account for most of our low spots in car supplies. r railroad rates are the same as main line points on -of-state shipments. The dispatch with which the car shipments are handled is good.

In developing a new state like Idaho, the question of ving for all the necessary improvements is a big ques-n. The U. P. Railroad Company plays a big part in s matter. In 1948 they paid taxes in Idaho amount-to $2,490,261.41. In our County of Canyon they d, in 1948, $141,175.24, or nearly 10 per cent of our l. 1534] total tax load in Canyon County.

The railroad employs a large number of workmen in the te of Idaho. This item is most important in our nomy. Full employment of wage earners, adequate ilities with which to serve Idaho in all communities and moving of freight with dispatch are important.

To open the Ogden gateway would not facilitate the mat-of freight shipment. On the contrary, it might retard movement of our produce because it is more miles over other line than the U. P. to Texas, Oklahoma and the er Southern and Eastern markets. If a single car be erted off of the U. P. at Ogden, it will reduce the

revenue of the U. P. somewhat. If two cars are diverted, it will reduce the revenue more. All revenue that is added to the connecting lines at Ogden will be subtracted from the U. P. It will take away from the citizens of Idaho and will return nothing. It is on this premise that I base my conclusions. Therefore, I am opposed to the proposal, viz., the opening of the so-called "Ogden gateway."

Mr. Melia: You may cross examine.
Mr. Quirk: I have no questions.
Exam. Mullen: Any cross examination?
Mr. Gibson: No questions.
Mr. Quirk: No.
Mr. Melia: Thank you, sir.
[fol. 1535] Exam. Mullen: All right. You are excused. Thank you, sir.

(Witness excused.)

Mr. Melia: Mr. Marshall.

C. J. MARSHALL was sworn and testified as follows:

Direct-examination.

By Mr. Melia:

Q. Mr. Marshall, will you proceed to read your prepared statement?

A. My name is C. J. Marshall, and I am president of the C. J. Marshall Produce Company, which has its main plant at Jerome, with shipping warehouses at Wendell, Shoshone, Dietrich, Twin Falls and Richfield, Idaho. The principal products shipped by our company consist of potatoes, onions and potato starch; also, we operate a warehouse for processing and shipping dried beans and peas at Jerome.

I have been in the produce business in Jerome and vicinity for 13 years. All of our plants are served exclusively by the Union Pacific Railroad. For the past few years our shipments by rail have averaged 533 cars.

Our business of processing and selling the above named products, particularly potatoes, has certain peculiar problems which I would like to explain.

For instance, Idaho is considered as producing the outstanding type of potatoes of any state in the United States. This is proven by the fact that the market price for Idaho [fol. 1536] potatoes, on the whole, exceeds prices for potatoes produced in other areas.

In the packing of our potatoes grown in the Twin Falls area, which is one of the two principal winter producing areas for Idaho potatoes, we pack both U. S. No. 1's and No. 2's. These are packed to grade as specified by the U. S. Department of Agriculture. The market for our No. 1 potatoes, generally speaking, is that portion of the United States east of the Missouri River, with a limited portion going to points in Kansas, Nebraska, Oklahoma, Texas, and Louisiana in the way of mixed carloads—that is, No. 1's mixed with No. 2's. The bulk of the car, however, is No. 2 potatoes.

It may be possible that terminal market buyers who specialize in straight carloads of both No. 1 and No. 2 potatoes, as well as mixed cars, have sales outlets at points in Kansas, Nebraska, Oklahoma and Texas for No. 1's, but these markets are not available to us for volume shipments. Because of this we have adopted the practice of shipping straight cars of No. 1 potatoes to those states only on firm sales through our agent at Kansas City who diverts cars from that point as sold. Otherwise we confine our sales of No. 1's to points east of the Missouri River.

In the case of our No. 2 potatoes, they are sold largely in states such as Kansas, Oklahoma and Texas, and also at middle western markets such as Omaha and Kansas City. [fol. 1537] This method of marketing potatoes has been in effect for many years and, to the best of my knowledge, is quite generally practiced by most shipping firms in Idaho.

As to our onion markets, this is a new venture for us, and I do not feel that I am competent to explain the markets or need for rail routes and distribution of this crop as we have only had a limited experience.

I can say, however, that, after 13 years' experience in marketing and distributing potatoes and the limited experience that I have had in handling onions, the present routes and service which have been available to our company have been adequate and sufficient.

Opening of the Ogden gateway would be of no benefit whatever to our company in the sale of perishable products in Colorado at points on the D&RGW between Ogden and Pueblo-Denver because we have never had a market in that territory for the reason that the same general type of products that we handle are grown along the D&RGW in Colorado.

As I have heretofore explained, all of the plants from which we ship in Idaho are served exclusively by the Union Pacific. We depend entirely upon the Union Pacific for cars, for assembling our shipments and for getting them going to market.

The Rio Grande means nothing to us because even though the Ogden gateway is opened up we will have to con-
[fol. 1538] tinue to rely upon the Union Pacific for all kinds of service and not the Rio Grande.

During the 13 years our company has been in the produce business, I can say that the service rendered to us by the Union Pacific has been entirely satisfactory. The Union Pacific has always stood ready to help us. Anything that works against the Union Pacific will, in the end, hurt us.

If the Union Pacific is going to be required to give up its traffic, some of which is ours, to the Rio Grande Railroad, then necessarily its revenues are going to be greatly reduced. My fear is, then, that either I am eventually going to pay higher transportation costs or the Union Pacific must cut its costs, which only means that it will have to reduce the quantity and quality of service now given to us and other shippers in Idaho and elsewhere.

The Union Pacific is a fine railroad, and I want to keep it that way so that it can continue to render good transportation service in the areas which it serves.

About a year ago the Union Pacific sponsored and successfully concluded a proposal to reduce our rate on potato starch to Chicago to the point where we could compete with eastern manufacturers who theretofore had an advantage in that market.

Without the protection of its long haul to the Missouri River I do not think the Union Pacific could afford to make rates on a reduced level necessary to enable us to compete
[fol. 1539] in the east with more advantageously located eastern manufacturers.

In view of what I have said, I cannot possibly see how the opening of the Ogden gateway can be of any benefit to my company.

It is a fact, though, that, inasmuch as my company does not control the routing on all of its shipments, the Rio Grande and its connections, which are in competition with the Union Pacific and its eastern connections, will, by reason of active solicitation in eastern markets, be able to take a large volume of traffic from the Union Pacific and hurt it financially and otherwise.

I firmly believe that the proposal of the Rio Grande Railroad here, instead of being a help to us, would in the end hurt us in many ways.

Mr. Melia: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. Those are just your feelings?
A. That is my opinion.
Q. Yes. All right.
A. My opinion.

Mr. Quirk: That is all.
Mr. Melia: Thank you, Mr. Marshall.
Exam. Mullen: There is just one question I wanted to ask you in connection with the last statement. Do you sell all [fol. 1540] your products f.o.b. shipping point?
The Witness: No.
Exam. Mullen: What proportion?
The Witness: I would say about 90 per cent.
Exam. Mullen: Sold which way?
The Witness: F.O.B.
Exam. Mullen: You don't control the routing on those?
The Witness: Of the 10 per cent you would.
Exam. Mullen: Beg pardon?
The Witness: I can control the routing on maybe 10 per cent.
Exam. Mullen: Only the 10 per cent?
The Witness: Yes, sir.
Exam. Mullen: All right. Thank you.
Mr. Gibson: I have on- question.

Cross-examination.

By Mr. Gibson:

Q. Mr. Marshall, referring to page 3 of your statement, about in the middle of that paragraph you say, "If the Union Pacific is going to be required to give up its traffic——"

What is your basis for that statement? How do you know they are going to have to give up their traffic?

A. If the Ogden gateway was opened, what else are they opening it up for him to get part of their traffic? For what reason are they doing it, if they don't intend to get the traffic?

Exam. Mullen: Who is asking the question?

[fol. 1541] The Witness: In other words, if I want a warehouse built in Jerome, or certain facilities, I could short haul them, if they didn't come through, couldn't I, in certain ways?

By Mr. Gibson:

Q. Yes, you are the shipper.

A. I beg your pardon?

Q. Yes, you could.

A. I didn't quite understand your question.

Q. Will you please answer my question?

On what do you base your statement that the Union Pacific is going to be required to give up its traffic? And if you don't know any reason, just say so.

A. Where is that, again, please?

Q. On page 3, the middle of the last paragraph.

Mr. Melia: Isn't that explained in the last paragraph of your statement, Mr. Marshall?

Mr. Gibson: I would appreciate it if he would answer my question.

The Witness: I said "if the Union Pacific is going to." I didn't say it was. I said if the Union Pacific was going to.

By Mr. Gibson:

Q. Yes. But you imply that the rates established will result in their giving up traffic. Why? That is what I want to know.

Exam. Mullen: Perhaps the witness means that if the buyers chose to use the D&RGW, then the U. P. would have [fol. 1542] to give up that much of the traffic. Is that what you mean, Mr. Witness?

The Witness: I didn't say it was. I said "if" they were.

Exam. Mullen: I think it is well understood, then.

By Mr. Gibson:

Q. You mean the customers may want this route?

A. Yes. I said "if." That is the reason I was trying to find it.

Mr. Gibson: Thank you.

Redirect examination.

By Mr. Melia:

Q. Did I understand you to say, Mr. Melia, that 90 per cent of your shipments—potato shipments, particularly—are subject to the consignees' routing instructions?

A. Yes, that's right. Absolutely.

Mr. Melia: Thank you.

The Witness: I don't think I said exactly. I said "if." Is that all?

Exam. Mullen: That is all. Thank you.

(Witness excused.)

GEORGE L. CROOKHAM, JR. was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. Mr. Crookham, the statement you have there was prepared by you, was it not?

A. Yes, sir.

Q. But it was mimeographed by the Union Pacific force; [fol. 1543] is that correct?

A. Yes, sir.

Q. Will you proceed to read it, please?

A. My name is George L. Crookham, Jr., and I reside at Caldwell, Idaho, a point on the main line of the Union Pacific just west of Nampa. The Crookham Company, of which I am president, is engaged in the business of growing and marketing hybrid corn seed and other vegetable seeds. I have been in this business for the past 21 years.

Our company is a substantial user of rail service as is shown that our carload shipments in 1949 aggregated 117 cars, of which 102 were forwarded and 15 received. These figures represent only the cars which were billed in our name. To these should be added shipments which were loaded by our company for account of firms making purchases for shipment for their account.

The bulk of our shipments move to the Missouri River and east and south. In the past we have used the Union Pacific exclusively as far as the Missouri River and thence its connections.

Seed is a crop with one turnover a year. Early delivery after the completion of harvest is important. Our customers require their seeds in good time so the carlots may be broken down into small packets and prepared for spring distribution.

During the recent national emergency, our company was [fol. 1544] one of the principal producers of seeds for lend lease purposes. Seeds were considered of such importance that they rated space on the same priority as munitions.

During this period of stress, we were accorded very satisfactory service and treatment by the Union Pacific. In fact, this has always been true.

In the period from 1945 to 1947, I served the City of Caldwell in the capacity of mayor. One of our problems at that time was to develop an industrial area so as to expand employment and payrolls in the Caldwell area. Through the help, counsel and cooperation of the Union Pacific we were able to plan and open up a 23-acre industrial site which, today, serves some 18 accounts with an aggregate of 100,000 square feet of floor space.

During the same period, the matter of finances for running a fast-moving city and for local improvements was particularly pressing. We were emerging from a wartime economy to a peacetime betterment.

In studying the tax structure, we became familiar with the municipal tax load borne by the Union Pacific and on one particular bond issue which involved the construction of a by-pass highway through the city, we were even afforded every cooperation by Union Pacific officials.

Also, at that time, it became necessary to decide upon the location of an underpass within the city. Underpasses, as [fol. 1545] you know, are all right as long as they go by the other man's property, and here again we found the Union Pacific ready and willing to help. It was up to the city administration to determine the site, but it was not until the Union Pacific suggested a compression of the tracks at 10th Avenue that a workable plan was developed. The cost of this compression was to be assumed by the Union Pacific.

Because of the method in which our company produces and contracts the sale of seed, practically 100 per cent of our shipments are subject to consignees' routing instructions. The freight charges on our shipments will run in the neighborhood of $100,000 a year, and, in the past, the Union Pacific has been assured the long haul on our carlot business.

If our customers can be prevailed upon by the Rio Grande and other competitors of the Union Pacific to short haul the Union Pacific through Ogden, then, of course, the Union Pacific's share of the revenue will be greatly reduced.

The customers could be influenced to divert their shipments from the Union Pacific because they will have no immediate knowledge or interest in our transportation problems in Idaho, not knowing that this community depends greatly upon the financial welfare of the Union Pacific and entirely upon it for rail transportation needs.

While Caldwell and Nampa, 9 miles apart, are separate municipalities, they really function more or less as one [fol. 1546] community. The shops of the Pacific Fruit Express at Nampa, and the large railroad payroll are very important factors in the economy of that area.

The Union Pacific and its affiliated company, the Pacific Fruit Express Company, employs about 1400 men in the Caldwell and Nampa area. Of course, anything that is done to impair the earnings of the Union Pacific might well result in a curtailment of employment and transportation service. This naturally would affect the economy of this area generally and affect our company because we are entirely dependent upon the Union Pacific for rail service at Caldwell.

Mr. Melia: You may cross examine, Mr. Quirk.

Cross-examination.

By Mr. Gibson:

Q. Mr. Crookham, referring to your statement at the bottom of page 2, and the fact that your shipments are subject to consignees' routing instructions, is my impression correct, from your statement, that you don't think the consignee should have any right to route his shipment?

A. If he pays the freight he has every right to route his shipment.

Q. You think he does have that right to make that choice?

A. He does have that right.

Q. These taxes that you mentioned on page 2, as to your municipal tax load, those are ad valorem, are they not?

A. That is right.

[fol. 1547] Mr. Gibson: That's all.

Mr. Melia: Thank you, Mr. Crookham.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Mr. Melia: Mr. J. R. Simplot.

J. R. SIMPLOT was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. You may proceed with your prepared statement, Mr. Simplot.

A. My name is J. R. Simplot and I live at Boise, Idaho.

As a resident of the State of Idaho, I would like to make a short statement of the reasons why I am strongly opposed to the opening of the so-called Ogden gateway.

I began using the Union Pacific service in Idaho about 20 years ago in a comparatively small way. However, in the past 8 years I have handled approximately 10,000 carloads per year of products consisting of potatoes, onions, vegetables, canned and frozen products, fertilizer, lumber, livestock and ore.

My shipments originate and terminate regularly at several points on the main line of the Union Pacific in Southern Idaho and Eastern Oregon and also at points on the following branch lines of the Union Pacific in the same territory: [fol. 1548] East Belt Branch, Gay Branch, Aberdeen Branch, Twin Falls Branch, North Side Branch, Ketchum Branch, Homedale Branch, Burns Branch, Declo Branch, Brogan Branch and the McCall Branch.

Thus it will be seen that I am entirely dependent on the Union Pacific for rail service, and particularly branch line service. Hence, it is vital to my several lines of business that these branches be kept in operation. Obviously, the Union Pacific cannot afford to do this unless the traffic and revenues on these branches justify it.

Also, these commodities move to and from practically every state and important city and town in the country, and in no instance, in my experience as a shipper, would it have been of any advantage or serve any purpose or

bettered my position in these various businesses to have had the Ogden gateway opened.

Most of our products, especially agricultural products, must go to distant markets and compete with similar items grown or manufactured closer to those markets, and if it were not for the willingness of the Union Pacific to establish suitable rates, the shippers of Idaho, like myself, simply could not continue in business.

The officers of the Union Pacific have worked long and hard to develop new industry and new activities in this territory, and I think they should continue to be rewarded with the maximum haul and revenue on the business which [fol. 1549] they have developed.

Several of the commodities which I now ship are entirely new to this area and did not previously move at all from or to the State of Idaho. Some of these are fertilizer, barium, onion salt and flakes, dried potatoes, fresh frozen potatoes and sulphuric acid for the manufacture of fertilizer. My shipments of these commodities aggregate quite a substantial figure. In establishing these new lines of business from time to time throughout the years I found the Union Pacific extremely helpful.

From my experience in several lines of business in this territory, I can say that if anyone comes up with a sound venture, the Union Pacific stands ready to cooperate with rates in constructing and establishing rail facilities on the customary basis to serve such industries.

The Union Pacific is the largest industry within our state and, through its large payroll, purchases and taxes, it has contributed much toward the welfare and economy of our state, and people with foresight and vision invested their money to build the main line and branch lines to every producing section of our valley, plus Sun Valley, the finest winter resort in America, in order to develop our greater part of southern Idaho.

The investor and the people are now enjoying, without a doubt, the finest railroad and railroad service of any section [fol. 1550] of this country, and we, the people who have helped build this fine railroad, should do everything in our power to help keep them financially sound so they can help us develop for the future.

I can see, by the opening of the Ogden gateway, a drain on Union Pacific's revenue which could only lead to poor service and higher rates for the future, plus a longer out-of-line haul for the shipper.

Again I want to say that I can see absolutely no advantage in interrupting our splendid relations and penalizing our fine railroad by opening this Ogden gateway.

Mr. Melia: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. Have you ever read that statement before?
A. Just over there while I was sitting down.
Q. I didn't hear you.
A. Yes, sir.
Q. How long ago?
A. Just a little while.
Q. You just like the Union Pacific, don't you?
A. Right.
Q. Do you own any stock in the Union Pacific?
A. I own a little stock.
Q. What would you call "a little"?
A. Not very much.

[fol. 1551] Q. Now, you said the Union Pacific had co-operated in rates and in constructing and establishing rail facilities on the customary basis to serve the industries.

What is the "customary basis"?

A. The customary basis—you generally have to pay for them. At least I have had to pay for all I got.

Q. Have you had any tracks built within the last two years?

A. Yes, sir.

Q. Where were they built?

A. I have had some additions at Caldwell and Pocatello, and also at the Gay Branch.

Mr. Melia: How long is that Gay spur? That might be interesting to the Examiner.

The Witness: Twenty-one miles.

By Mr. Quirk:

Q. You mean the Union Pacific built 21 miles of track for you?

A. Yes, sir.

Q. I can see why you are for them.

Mr. Quirk: Thank you. That is all.

Redirect examination.

By Mr. Melia:

Q. Who paid for that track?

A. I did.

Mr. Quirk: That is all.

Mr. Melia: Thank you, Mr. Simplot.

Examiner Mullen: Witness excused.

(Witness excused.)

[fol. 1552] Mr. Melia: Mr. Compton.

M. A. Compton was sworn and testified as follows:

Direct examination.

By Mr. Melia:

Q. Will you proceed to read your statement, Mr. Compton?

A. M. A. Compton is my name, and I reside at Boise, Idaho. By business connections and activities are as follows:

Owner of Compton Fuel Company; president of the Compton Transfer & Storage Company; and president of Olson Manufactureing Company.

As to the Compton Fuel Company, practically all of the coal which it handles comes from mines on the Denver & Rio Grande Western and the Utah Railway in the so-called Castle Gate district in northwest Utah.

Compton Transfer & Storage Company does a general storage and warehousing business, and among its cus-

tomers, which approximate 200, are many national concerns which use our facilities at Boise for the distribution of their products throughout the Boise trading area, which extends, roughly, from Rupert, Idaho, on the east, to La-Grande, Oregon, on the west.

During 1949 we handled a total of 1,058 cars of inbound business for storage and distribution at our Boise house, of which about 80 per cent originated at points east of the [fol. 1553] Missouri River. The remainder originated in the Northwest and California. All of the cars which originated east of the Missouri River were handled by Union Pacific from those junction points. Also, during that same year the Compton Fuel Company received 255 cars of coal from Utah mines.

While I cannot say that under normal conditions time is of the essence in handling our coal shipments, I do want to emphasize that with respect to the so-called break bulk cars which are consigned to us for distribution, as was explained above, time in transit is a very important factor. It is a matter of common knowledge, I think, that the competitive advantage of break bulk merchandise service resides in the fact that the companies providing this service aim and promise to move the cars with the utmost expedition.

It is true that the Boise trade area is rather sparsely settled, and, as a consequence, retailers and wholesalers in this area must *guage* their inventories to the limited demand. This makes it necessary that wholesalers carrying stocks of merchandise in our warehouse for distribution receive the best possible rail service so that merchandise is available at all times for retail outlets, and, at the same time, wholesalers are relieved from carrying an unnecessarily large inventory for their Boise trade territory. Rapid and dependable transportation service, as given by the Union Pacific, in my opinion, has been most helpful in putting Boise in the position of being the [fol. 1554] important jobbing center that it is today.

I am appearing in this proceeding for two reasons:

First, to call to the attention of the Interstate Commerce Commission the fact that it was the Union Pacific Railroad—and none other, because it is the only railroad

serving southern Idaho—that has been largely responsible for the industrial development of this portion of the state. I use the term "industrial", because I know that those representing the agricultural and livestock industries will speak for themselves. It has been my experience, and I have lived in southern Idaho all my life, that the Union Pacific has always been alive to the interests of southern Idaho and has been extremely sympathetic as to its needs.

Second, in the three lines of business in which I am engaged we rely entirely upon the service of the Union Pacific, which, from my long experience, is equal to or better than the service rendered any place in the country. I realize full well that if the Rio Grande Railroad is successful in its efforts here—namely, its desire to take away from the Union Pacific its long haul on traffic that is now handled for me and other shippers—then, in the long run, I and other shippers will have to pay higher freight charges on whatever traffic remains to the Union Pacific; or, if that alternative is not adopted, then it will of necessity be required to curtail its service in this territory.

[fol. 1555] Exam. Mullen: Just a minute. That is argumentative.

The Witness: Sir?

Exam. Mullen: That is argument. I don't think that is proper testimony.

Mr. Melia: It is a fact, Mr. Examiner. Merely through solicitation, and without the presence of any physical plant here, the Rio Grande can divert business from us.

Exam. Mullen: That is argument, exactly as you have stated it. I don't think it should be in this statement as testimony. That paragraph should be excluded.

The Witness: If the Rio Grande can solicit and divert a sizeable volume of business away from the Union Pacific—and apparently they intend to do so—then it seems to me that the Union Pacific is going to have a lot of surplus and unused railroad facilities which it provided in the past upon the expectation that it would retain its traffic for the long haul; and then, if the Rio Grande has to spend money for additional facilities necessary to handle the business which it takes away from the Union Pacific, to me that is just a plain waste of money.

The shippers of Idaho must have fast, frequent and dependable rail service and adequate physical rail facilities; that is, service and facilities such as only a financially strong railroad can afford to give and provide, and so long as we have only one railroad in the southern part of the state, then [fol. 1566] in our own interests we must see that the traffic and revenues of that railroad are not diverted to competing railroads that cannot possibly render a service to the people and shippers of this state.

It is for these reasons that I want to voice my opposition to the opening of the Ogden gateway.

Mr. Melia: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. As I understand it, Mr. Compton, you think the Union Pacific is entitled to its long haul?

A. I do, sir.

Q. Have you ever protested the fact that at Denver the Union Pacific will split up the traffic with the Burlington and the Rock Island and other railroads going to places like Omaha and Kansas City, where it serves?

A. I understand that under certain conditions of traffic there is an extreme—I know nothing of the mechanical operation of the traffic department.

Q. You know nothing about the mechanical operation of this situation we are involved in here, do you?

A. No. But all I know is that the service I am obtaining from the Union Pacific is satisfactory.

[fol. 1557] Q. Well, you stress the point there is something wrong about anybody, a carrier or other, that would attempt to persuade the Interstate Commerce Commission to require the Union Pacific to participate with another carrier because by doing so it would give up its long haul. So you do think then, that there are circumstances under which you would think it was proper for the Union Pacific to divide traffic with other railroads and give up its long haul?

A. No, I don't think I do. I feel this way: the Union Pacific has made a large capital investment in our state. My grandfather——

Mr. Quirk: Mr. Examiner, that is not responsive.

Exam. Mullen: That is not responsive to the question. Do you understand the question, Mr. Compton?

The Witness: It seems to me——

Exam. Mullen: Just a minute. Let's get it in question and answer form. Please read the question.

Mr. Quirk will repeat the question.

By Mr. Quirk:

Q. Do you concede, in view of what I have already described to you, that there are conditions under which it would be all right in your mind for the Union Pacific to divide traffic with other railroad connections even though it involved giving up its long haul?

A. No, I don't concede that point.

Q. You don't? Well, then, you never have protested to [fol. 1558] the Union Pacific, have you, where they have done that?

A. I know of no case where they have.

Q. Well, they do it at Denver.

Exam. Mullen: The witness doesn't know, he says.

Mr. Melia: There is nothing in the record to that effect, Mr. Quirk, and you know well yourself.

Exam. Mullen: Just a minute, please, there is an Examiner here to whom you can address your questions.

Mr. Melia: I beg your pardon?

Exam. Mullen: This witness has stated he doesn't know. I don't see any sense in pursuing it further.

Mr. Melia: I don't either, Mr. Examiner.

Mr. Quirk: I am through. He doesn't know, so it doesn't matter.

Exam. Mullen: You spoke of handling 1058 cars of inbound business?

The Witness: Yes, sir.

Exam. Mullen: Into your storage warehouse?

The Witness: Yes, sir.

Exam. Mullen: How is that warehouse stock distributed from your warehouse?

The Witness: Well, percentagewise I wouldn't be able to give you the figures, but the major portion of it goes out to local consignees.

Exam. Mullen: By what means of transportation?

[fol. 1559] The Witness: Many of them pick it up at our warehouse with their own trucks. Some we deliver with our own local trucks. Some goes by every truckline in this area.

Exam. Mullen: Does any go out by rail?

The Witness: A very small proportion of it goes out by rail.

Exam. Mullen: I see, all right.

Redirect examination.

By Mr. Melia:

Q. What would be the normal distribution area from your Boise house, Mr. Compton?

A. From Burley and Rupert, on the east, to LaGrande on the West,—Baker and LaGrande.

Q. How far is that?

A. An area of about 200 miles radius from Boise.

Mr. Melia: Thank you.

The Witness: Is that all, sir?

Exam. Mullen: That is all.

The Witness: Thank you.

(Witness excused.)

Exam. Mullen: We will have a ten-minute recess.

(Short recess taken.)

Exam. Mullen: We are ready to proceed, gentlemen. All right, Mr. Cockrum.

Mr. Cockrum: May I present Mr. Pease.

Exam. Mullen: Mr. Pease, please take the stand.

[fol. 1560] J. L. Pease was sworn and testified as follows:

Direct examination.

By Mr. Cockrum:

Q. Mr. Pease, will you please state to the Examiner your name, address and transportation experience?

A. My name is J. L. Pease. My address is Washington, D. C. I'm a transportation specialist in, and Assistant Chief of the Transportation Rates and Services Division, Transportation and Warehousing Branch, Production and Marketing Administration, United States Department of Agriculture. I have been with that division since 1940. Prior to that time I was Traffic Manager for a large vegetable producing and shipping firm with headquarters at Los Angeles, California, and with growing and shipping operations in Arizona, New Mexico, California, Oregon, Washington, Idaho, and Colorado. I held that position for about 15 years, and during the last five years of that time I also acted as Assistant Sales Manager. Prior to that time I had approximately ten years' experience with railroads and private refrigerator car company.

Q. Mr. Pease, what is the interest of the Secretary of Agriculture in the present proceedings?

A. The Secretary of Agriculture, whom I represent here, has an interest in this proceeding because of two statutes. One, Section 201 of the Agriculture Adjustment Act of 1938, and two, various sections of the Agricultural Marketing Act of 1946. These statutes as set forth in [fol. 1561] our petition for leave to intervene in this proceeding require the Secretary to interest himself in this proceedings affecting the rates, rules and regulations of transportation agencies when agriculture is involved, and to develop or assist in developing plans for efficient facilities, for the proper transportation, distribution, and handling of agricultural products.

Q. Do you have an exhibit to present, Mr. Pease?

A. Yes. At the Salt Lake City hearing Dr. Nelson testified in some detail as to the industrial growth and possibilities of the Northwestern states, Idaho, Montana, Oregon, Washington, and Utah. Similar information as to the

growth and size of the agricultural production was not furnished. Therefore, for the information of the Commission I have prepared an exhibit, Number——

Mr. Cockrum: May this exhibit be numbered?

Exam. Mullen: Thirty-two.

(Intervenor's Exhibit No. 32, Witness Pease, marked for identification.)

The Witness: Thirty-two, consisting of 48 pages, and listing by years and by states the annual production of the 45 agricultural commodities of which records are made by the Bureau of Agricultural Economics of the United States Department of Agriculture; and the total production of all species of lumber as reported by the United States Forest [fol. 1562] Service which is also contained within the Department. As far as possible these statistics go back to 1920. However, in the case of some commodities reports were not started until later years.

By Mr. Cockrum:

Q. What is the purpose of this exhibit No. 32, Mr. Pease?

A. The purpose in showing these statistics is to indicate the large volume of production and the need for as nearly unrestricted channels of distribution as possible. The continued inability to use an important gateway such as Ogden at joint competitive rates between two such railroads as the Union Pacific and the Rio Grande is not in our opinion, in the interest of the general agricultural public. All areas of consumption are needed now for the disposal of the production and all means of reaching those areas are important.

Q. Is it then the position of the Department of Agriculture, Mr. Pease, that the opening of the Ogden Gateway will promote the ends of which you have just spoken?

A. We believe it will; to some extent. At least it will not retard it.

Q. The extent to which you believe that it will promote the distribution of agricultural commodities, you believe that is of importance, do you, to the agricultural Northwest?

A. Yes, I believe it is of quite some importance, perhaps

not of as much importance as has been stressed in this hearing at certain times, but it will be at least of some im-
[fol. 1563] portance to agriculture.

Mr. Cockrum: I believe that is all, Mr. Examiner, unless some of the others on the Complainant's side have questions.

Direct examination (Cont'd).

By Mr. Quirk:

Q. Mr. Pease, I understood you to say that you were Traffic Manager for some fruit and vegetable company in Los Angeles, at one time?

A. Vegetables, yes, sir.

Q. Vegetables. What was the name of that company?

A. Sawdey and Hunt, Incorporated.

Q. Was it a fairly large company?

A. We shipped from 9,000 to 12,000 carloads of vegetables a year, mainly lettuce, carrots, some cabbage.

Q. From what territory?

A. The entire western states, as I mentioned, from New Mexico all the way around to and including Idaho and Colorado.

Q. Now how long were you with that company?

A. About 15 years.

Q. While you were with that company, did you ever have occasion as a shipper or buyer to use the Ogden route, Ogden to Salt Lake and the Rio Grande going northwest?

A. There were some occasions when we could have used it, but we were unable to because of the combination rate.

Q. Did you ever make an effort to persuade the Union Pacific to establish a joint rate via the Rio Grande and
[fol. 1564] through the Ogden, Salt Lake routes?

A. Yes, sir, I did. This was longer ago than I like to admit, but it was either in late 1927 or early 1928 that we had a small lettuce deal in Idaho. I asked the local representative of the D&RG at Los Angeles who at that time, I believe, was Mr. J. D. Stack, about opening the Ogden Gateway, and he indicated his railroad would be highly in favor of it.

Mr. Collins: What year was that?

The Witness: It was either the latter part of 1927, or early in 1928, Mr. Collins. I am a little hazy, but the files were left with the company. I was advised by him to take it up with the Union Pacific, of course. I did take it up with the local assistant traffic manager. He suggested I take it up with the then vice president in charge of traffic of the Union Pacific, Mr. Frank G. Robinson. I wrote Mr. Robinson, laid my case before him, received a very polite but firm "no." Then my principals and myself discussed the possibilities of filing a formal complaint, but decided that the expense would not justify it.

Mr. Quirk: That is all.

Mr. Collins: Mr. Examiner, I move this statement with respect to this firm—was that the one you took it up for, with Mr. Robinson?

The Witness: Yes, sir.

Cross-examination.

By Mr. Collins:

Q. What was the name of the firm again?

A. Sawdey and Hunt, Incorporated.

[fol. 1564-A] Q. The year was 1927.

A. 1927 or 1928.

Mr. Collins: I move that be stricken on the ground it is too remote to have any relationship to this situation.

Exam. Mullen: It is quite remote; but we will let it stand in the record.

By Mr. Collins:

Q. Did you say you took it up with the then vice president, Mr. F. G. Robinson?

A. Yes, sir.

Q. Mr. Pease, will you tell me if this exhibit purports to show anything other than an increase, if there be an increase, in the production of the commodities named on the different pages from the years 1920 through to 1949?

A. That is all, Mr. Collins.

Q. Now with respect to the Northwestern states, are you aware of the fact that the population of those states has

increased very greatly since about the beginning of the World War II period and since that time?

A. Yes, sir.

Q. Can you state whether or not the increase in the production of the commodities listed in your exhibit has kept in pace with the increase in the population percentagewise?

Mr. Cockrum: Just a moment, Mr. Examiner, I don't know if the witness is qualified to answer that question.

Mr. Collins: He can say yes or no.

[fol. 1565] Mr. Cockrum: He is comparing an increase in population to an increase in production. Now we don't know what the increase in population was.

Exam. Mullen: Who are "we?"

Mr. Cockrum: I submit, Mr. Examiner, that the witness doesn't know precisely what the increase in population was.

Exam. Mullen: All he was asked to respond to was whether he knew or not.

Mr. Collins: Mr. Examiner, he might know more than his lawyer does.

Exam. Mullen: Just a moment, I have a question for the witness here. What is the answer, Mr. Witness? Do you know that?

The Witness: Not sufficiently in detail to answer, I don't think, Mr. Mullen.

By Mr. Collins:

Q. You don't know, then, but what the population might have increased sufficiently to absorb or more than absorb the increase in production up there, do you?

A. No, I don't know that it has. I doubt it.

Q. I see you have sheep, lambs, and wool. Has there been an increase, let us say, within the last five years, in the production of lambs in that northwest country?

A. No, sir, I believe there has been a decrease.

Q. So at this time there are fewer lambs in that country than there were around 1944, 1945, and along in there?

[fol. 1566] A. I think that is right, yes, sir.

Q. Do you recall what the peak year of sheep population in the country was?

A. No, sir.

Q. Do you recall what the Department of Agriculture is now releasing in its different publications from the, I guess it is Production and Marketing, things like livestock and meat and wool, do they have a separate one for that?

A. Yes.

Q. Do you recall what the total reduction in sheep population, lambs, and so forth, the Department now says has taken place in recent years, annually?

A. I don't recall exactly, Mr. Collins, but I know it is quite a sharp reduction.

Q. It has been a sharp reduction?

A. It has been a sharp reduction, yes, sir, particularly in sheep, lambs, and wool.

Q. Do you have any personal knowledge presently or as of the last three or four years of any actual need on the part of any shipper of any of these agricultural commodities to or from the northwestern states by way of the Rio Grande Railroad?

A. Yes, Mr. Collins. This is purely hearsay, though.

Q. Well, we haven't been allowing that—I say the Examiner has not been allowing it. I am willing for you to state if it he will permit some hearsay.

[fol. 1567] Exam. Mullen: Well, we will let the witness answer it.

The Witness: For the past five years everytime I have come in contact with members of I'll say the Idaho Potato and Onion Association, either here in Idaho or in Chicago or other places, almost the first remark that they have made is "When are we going to get the Ogden Gateway open?"

By Mr. Collins:

Q. Will you give us the names of any of these people?

A. Well, the gentleman I refer to in the main is Mr. M. O. Stradford, Executive Secretary of that association.

Q. The Department of Agriculture as such has not investigated the situation?

A. Except as I may perhaps have investigated it myself.

Q. How would you go about making an investigation

under those circumstances? What kind of an investigation would you make?

A. It would probably have to be on a question and answer basis.

Q. As a matter of fact, didn't the Department of Agriculture circularize considerable part of the population out in Idaho practically inviting them to invite the Department of Agriculture in on the D&RG's side of this case?

A. No, sir, not that I know of.

Q. Didn't you see letters that Mr. Boling or someone of your people there in the Department wrote to people calling their attention to the filing of the complaint in this case?

A. Mr. Boling is my immediate superior, Mr. Collins, and [fol. 1568] I don't recall he ever wrote any such letters. He may have, of course.

Q. Maybe I mis-tated it. Do you know whether or not he wrote any letters out to people in this part of the country where you are now, concerning the filing of the complain- in this case, and referring to the issues in the complaint?

Mr. Cockrum: Mr. Examiner, I would like to object to this line of questioning on the grounds that it is irrelevant and immaterial. The witness has stated the reason for the Department's coming into the case during the course of his direct examination.

Exam. Mullen: He can be cross examined on that statement. Go ahead, Mr. Collins.

By Mr. Collins:

Q. I have seen such letters, Mr. Pease. Whether I properly characterized them or not, I am asking you now, whether you have any personal knowledge of them?

A. I will put it this way, Mr. Collins: after the complaint was filed I had received a copy of it. I personally wrote to Mr. Stradford of the Idaho Association, and Mr. Davis of the Oregon Association. I believe Mr. Taylor, of the Northwest Horticultural Council, telling them the complaint had been filed, suggesting they might perhaps want to sho- some interest in it. There were also numerous other letters written in acknowledgement of letters received from

other parties. I don't recall inviting anyone to get in the case.

Q. Inviting anyone into the case?

[fol. 1569] A. Yes.

Q. Did the Department of Agriculture suggest to these correspondents of the Department to request that the Department of Agriculture get into the case?

A. No, sir, not that I know of.

Q. Do you recall how long this was after—how long this was after the complaint was filed before these letters were written by the Department?

A. I can tell you from my file when I wrote. August 25.

Q. And the complaint was filed——

A. August 1, I believe.

Q. August 1? Had the Department of Agriculture given any consideration, itself, to making an effort to get the Ogden Gateway opened prior to the filing of the complain- in this case?

A. Yes, sir. In response to the request from the gentlemen I have mentioned we had thought some about it.

Q. Did you suggest to those gentlemen—were they shippers?

A. Yes, sir.

Q. Did you suggest to them they had rights under the Interstate Act to file their own complaints?

A. Yes, sir.

Q. And they did not?

A. No, sir.

Q. Now you spoke of, as I understood you, perhaps I didn't correctly understand you, rates from California [fol. 1570] east. Is it your understanding that fruits and vegetables cannot be shipped at through rates from California to the east by through routes including the Denver and Rio Grande Railroad?

A. No, sir, Mr. Collins, I didn't mention California rates. I mentioned we had an operation in California.

Q. Had a what?

A. Had an operation in California, but I didn't say anything about California rates.

Q. In what you said there, you were referring then back to this period when you were in the—27 years ago when you were in California?

A. That is right.

Q. I see. Now, is this a fair statement of the—or a fair understanding of your statement, or of the Department of Agriculture's position in this case, that the Department of Agriculture on what might be called general principles is opposed to any routing restrictions on any agricultural commodities?

A. That is a pretty broad statement, Mr. Collins. But I think it is about right, yes, sir.

Q. Has the Department of Agriculture taken any position with respect to the so-called through routes bills that have been introduced, and I presume are still pending in Congress, in the Senate, and in the House?

Mr. Cockrum: May we have that clarified, Mr. Examiner?

Exam. Mullen: Do you want the question read?

[fol. 1571] By Mr. Collins:

Q. Do you know that there are two or three bills pending in Congress which if enacted, one of which would eliminate the restrictions against the Commission's authority to compel through routes and joint rates as set forth in paragraph 4 of Section 15 of the Act. Do you know whether there are such bills in Congress?

A. Yes, sir, I believe there is at least one, perhaps two, perhaps more.

Q. Yes, the other one is somewhat less drastic.

A. That is right.

Q. Has the Department taken any position, or does it intend to take any position, if you know, with respect to those bills?

A. It has taken no position up to the present time. It is my understanding there will be a position taken at a proper time, perhaps at the time of hearing.

Q. And I take it from what you are saying the Department would support the bill——

Mr. Cockrum: Mr. Examiner, I am going to object.

Exam. Mullen: I sustain that objection.

Mr. Collins: I said if he knows.

Mr. Cockrum: I object.

Exam. Mullen: I sustain the objection.

By Mr. Collins:

Q. Has the Department of Agriculture, insofar as you may know, ever supported a situation in a case of this nature which would retain routing restrictions?

[fol. 1572] A. So far as I know, Mr. Collins, we have never been in a case of this nature before.

Q. You don't know of any case in which the Department of Agriculture has advo-ated retention of routing restrictions then, do you?

A. No, sir.

Mr. Collins: That is all.

Redirect examination.

By Mr. Cockrum:

Mr. Pease, Mr. Collins interrogated you with respect to the decreased production in sheep since the late war. Does your exhibit indicate increased production in other commodities?

A. Yes, sir.

Q. Just to illustrate, does it, on page 33, indicate an increased production of cattle and calves since 1940?

A. Yes, sir, by nearly 400,000,000 pounds.

Q. Mr. Collins asked you a question or two with respect to whether or not there had come to your attention any indications of a need for this particular through route, including these through joint rates. You indicated to him that information respecting that type of evidence had come to your knowledge, I believe. Did this information come to your attention through the course or in the cours*t* of your duties in your present position?

A. Yes, sir.

Q. Did you and your superiors reach the decision to [fol. 1573] intervene in this proceeding on behalf of the complainant?

A. We didn't intervene on behalf of the complainant, we intervened as our interests might appear.

Q. To intervene in this proceeding, and at this hearing to take a position in support of complainant on the ground that in your combined judgment——

Mr. Collins: I object to that.

By Mr. Cockrum:

Q. The best interests of agriculture would be served thereby.

Mr. Collins: I object to that question, Mr. Examiner. It is wholly leading.

Exam. Mullen: It is leading. What is the purpose of the question?

Mr. Cockrum: May I rephrase the question, Mr. Examiner?

Mr. Collins: I suggest he could just inquire why they decided to switch from the neutral position to the complainant's position.

Exam. Mullen: That is not the purpose of his question. Do you want to rephrase your question and withdraw the old one?

By Mr. Cockrum:

Q. Mr. Pease, why does the Department of Agriculture now take the position in support of the complainant in this proceeding?

A. Because after due consideration of all the people on our staff who are interested in such matters we thought it was for the best interests of the agricultural community [fol. 1574] of the Northwest as a whole.

Mr. Cockrum: That is all.

Recross-examination.

By Mr. Collins:

Q. You came to that conclusion, Mr. Pease, you and your staff, without having heard all of the witnesses, and you have not heard them all yet?

A. That is correct.

Q. Then does it matter to the Department of Agriculture what individual shippers have to say about what they desire with respect to these things?

A. To a certain extent, yes. But in a Government bureau like the Department of Agriculture if is our mandate, as we see it, to take the side of any proposition which does the most good for the most people.

Q. And in coming to the conclusion——

A. Instead of people, could I please say producers?

Q. I didn't catch the last.

A. Instead of people, I would like to change that to producers.

Q. Yes. And in coming to the conclusion to switch from what I understood to be a neutral position, insofar as the petition for intervention disclosed, to a definite position for the complainant, did you take into consideration, you and your staff, any other circumstance than what you thought might be good for the majority of the producers in their business?

A. No, sir.

[fol. 1575] Q. You gave no consideration to their transportation needs, or the possible effect if the complainant succeeds in this case, upon the producers' transportation services, did you?

A. Well, we did discuss that, Mr. Collins, to some extent. The concensus was that the small percentage of tonnage which the Union Pacific would lose, if the Ogden Gateway was opened, would not in any substantial way harm the Union Pacific.

Q. Did you speculate or arrive at, in your minds, what that percentage of loss would be?

A. No, sir, not percentage-wise. We didn't work on the 157 car per year basis. It was my opinion that if the Rio Grande got 1,000 cars a year out of this, they would be doing pretty well.

Q. We hope you are right, of course. You actually, then, based—I mean we hope you are right they wouldn't get any more than that—but you actually based your conclusions on the general principle of removal of routing restrictions largely, wasn't that right?

A. That is correct, yes, sir.

Q. And we might say, if this is too drastic for you, you can narrow it down—wide open distribution anywhere at rates equal to the lowest rates that might be had between any two points for the distribution of agricultural products?

A. That is a pretty long question, Mr. Collins. Could I have it read, please?

[fol. 1576] (Question read.)

Mr. Collins: No wonder you find it confusing, I do, too.

By Mr. Collins:

Q. The basis of the Department of Agriculture's decisions to announce a position here in favor of the complainant was that it would be better for the producers to have unrestricted routing privileges in the first place, was it not?

A. Yes, sir.

Q. Did you give any consideration to the rate situation there, from the standpoint of the level of rates that might result from the elimination of routing restrictions?

A. Yes, sir, we did.

Q. Now would you in your position in the Department of Agriculture advocate the elimination of routing restrictions where to do so would not reduce rates over a particular route?

A. Eliminate the routing restrictions, but not reduce rates?

Q. Yes.

A. I think so, yes, sir.

Q. Is your purpose in being here, or is your interest in being here, only for the elimination of the routing restriction via the Ogden-Gateway, and not the rate reduction by that routing?

A. I don't understand that there is any restriction against the Ogden Gateway. No.

Q. You don't understand there is any?

A. They have through routes through the Ogden Gateway. There is no restriction.

[fol. 1577] Q. They can route that way?

A. They can route that way now, I understand.

Q. By way of the D&RGW?

A. Yes, sir.

Q. Was that the understanding of your group when you considered it?

A. No, sir, I guess we are a little tangled up here.

The route is open, but not at through competitive rates, that is the issue.

Q. Yes.

A. Naturally if the route is to remain open for business we feel there should be joint competitive rates. If it involves a reduction, yes.

Q. So that really in the final analysis, it is a rate reduction the Department is interested in getting for the producers, isn't that the fact?

A. If they choose to ship through the Ogden Gateway, via the D&RGW, yes.

Mr. Collins: That is all.

Exam. Mullen: Any further questions?

Mr. Cockrum: No further questions, Mr. Examiner.

Exam. Mullen: All right.

Mr. Cockrum: Mr. Examiner, may I ask Exhibit 32 be received in evidence?

Exam. Mullen: Any objection? It will be received.

[fol. 1578] (Intervenor's Exhibit No 32, Witness Pease, received in evidence.)

(Witness excused.)

Edward Oakes was sworn and testified as follows:

Exam. Mullen: All right, gentlemen, we are ready to proceed.

Direct examination.

By Mr. Melia:

Q. Will you proceed to read your statement, Mr. Oakes?

A. My name is Edward Oakes and my home is Ontario, Oregon. I am a partner of Duncan Brothers & Oakes which owns and operates about 30,000 acres of land in Malheur County which is given over to ranching and cattle grazing. I have been in the cattle business since 1919.

In addition, I am President of the Valley Wholesale & Warehouse Company which operates two warehouses at Ontario. The principal business of these warehouses is the storage of freight for distribution through Southwestern Idaho and Eastern Oregon.

We also store large quantities of hops for growers in [illegible] and Malheur Counties, Oregon. The principal

market for these hops is at the various eastern brewing centers, such as St. Louis, St. Paul, Milwaukee and the eastern seaboard. Other articles which are stored and distributed out of our Ontario warehouses originate at numerous eastern points.

[fol. 1579] At these two warehouses we also mix and blend various types of fertilizer material for sale through eighteen dealers located at various points in Malheur County, Oregon, and Western Idaho. The ingredients of our fertilizers come from such points as Trail, B. C.; Anaconda, Montana; Freeport, Texas; Geneva, Utah, and various points in California.

The cattle ranches belonging to Duncan Brothers & Oakes are operated on the basis of spring and summer grazing. Our method of stocking these ranches is as follows: Stocker cattle are bought and shipped from points in the States of Nebraska, South Dakota, Montana, Wyoming, Colorado and the Missouri River markets. During the grazing season, we feed from 1,600 to 3,000 head. When our herds of stockers exceed 1,600, it is necessary to lease additional grazing land. Stocker cattle for our ranches are bought on the basis of f.o.b. sales point. After grazing is completed, which is from September 15 to October 31, these cattle are sold either to local buyers or shipped to California for further fattening. In all cases, they are reshipped as feeder cattle, and both the inbound movement to our ranches and the outbound movement therefrom are at flat feeder rates.

In our cattle feeding operations, purchases are of necessity made many months before contracts to resell can be negotiated. Obviously then we do not know at the time of making such purchases where these cattle will finally move for further feeding and slaughter. It is our main [fol. 1580] purpose, of course, at all times to secure animals of the type and quality that can make substantial gains in weight while on our ranges. Application of through rates or transit privileges is not a controlling factor in the selection of these animals and do not determine the points where we obtain them. I say this because 25 cents or even 50 cents would not stymie us in purchasing cattle when the matter of quality is involved because if we can get the

type of cattle desired for our ranges the weight that can be added by feeding this type of cattle will greatly exceed the extra freight charges. The movement of cattle into this territory for feeding is regulated by the amount of feed available. In some years, this feed is available more than other years because of a number of conditions. For instance, this present year we have a very large acreage of sugar beets contracted for amounting to something over 60,000 acres in our valley and this will bring an unusually large number of cattle here this fall to eat up this cheap feed. Also, we have very good prospects this year for range cattle feeding due to the fact that we have had good winter snows and a wet spring.

Due primarily to a substantial increase in population in recent years in Oregon (about 53%) and increased meat consumption, we are finding it increasingly difficult to purchase local feeder cattle. Those that are available can be bought in only small lots, even as few as one or two head [fol. 1581] at a time, at local auction yards. This is not satisfactory in our operations because of the rather high cost of making purchases in small numbers and assembling cattle at numerous points for shipment to our ranges.

In buying and moving cattle, transit time is an important factor for the reason that the shorter the time of movement, the less will be the expense for feed and the loss of shrinkage. A day's run by rail means about a 4% shrinkage after the first 24 hours. Inasmuch as the route of the Union Pacific from the Missouri River is much shorter than the Rio Grande and its connections, you can see that I would not route cattle over the latter route.

My interest in this proceeding is because I know from my long residence in Oregon that the Union Pacific Railroad has been an important factor in the development of this country. It is a substantial taxpayer in Malheur County, Oregon, and by reason of this fact, it has contributed heavily to the support of our schools and local government. Anything that would affect the revenues of the Union Pacific, as the opening of the Ogden Gateway would, because it would simply mean that the revenue on the haul would be split between the Union Pacific and the Rio Grande, would I am sure eventually hurt me because

I must depend on the Union Pacific for service. So far as our operations are concerned, I cannot think of a single advantage that would be brought about by putting the Rio [fol. 1582] Grande Railroad into the rail haul. They could not possibly add to our service or convenience or be of any help from a rate standpoint. On the contrary, the Rio Grande's proposal will result in the wasteful use of railroad transportation and facilities and the eventual sapping of the revenue of the Union Pacific. In my opinion it is inconceivable that on the whole any good can come from such a scheme.

Mr. Melia: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. The concern which you seem to show about this situation apparently is based on the notion that if the complainant succeeds here the Union Pacific will lose considerable revenue and your services may be affected, that is right, isn't it?

A. That is right.

Q. Now I have before me four years of the Union Pacific Railroad revenue count. In 1945, the total revenue from transportation was $491,877,000—I won't read the smaller figures—$491,877,000. In 1946, their total revenue was $361,395,000. That is a difference of $130,000,000. Did you find any slowing up of the service, or any poorer service as a result of that falling off in their revenue?

A. Not noticeably.

Q. Well, even according to the most fantastic claims made by anybody in this case, there wouldn't be any greater loss than $40,000,000, so they managed to live through [fol. 1583] without you even noticing it, apparently, falling off of gross revennes, 1946 under 1945 of 130 million. You didn't even notice that, did you?

A. No.

Q. What makes you think then even if they lose the 40 million, as a result of this case, their services would be affected?

A. Well, I would say that the service would be affected

through the increase in population in the Northwest territories, and the Northwest countries, through any decrease in revenue.

Q. But you didn't seem to notice any shock, because the Union Pacific had 130 million dollars less revenue in 1946 than they had in 1945, did you?

A. Not personally, no I didn't.

Q. You weren't even conscious of it, were you?

A. Not very much.

Q. You still carry on this fear?

A. Oh, not too much.

Q. Hasn't it been more or less inspired? I mean you received a liberal education in the last few months, haven't you, about what could happen?

A. No, I don't think so.

Q. You don't think you were educated?

A. No, I was not.

Mr. Quirk: All right. That is all.

Redirect examination.

By Mr. Melia:

Q. Mr. Oakes, do the expenses of operating at least two [fol. 1584] types of business, do they fluctuate up and down in some direct proportion to what your revenue might be? Do you reduce expenses when your revenues fall off in your business?

A. Absolutely.

Q. In other words, you can't spend more than you take?

A. That is right.

Q. If business is good, you have more employees, you spend more money?

A. That is right.

Q. When revenues fall off, you curtail expenses, do you not?

A. That is right.

Mr. Melia: That is all.

Recross-examination.

By Mr. Quirk:

Q. You said a while ago you didn't notice this shock between the difference in the gross revenue of the Union Pacific in 1945 and 1946 of 130 million dollars, didn't you?

A. That is right.

Mr. Quirk: All right.

The Witness: But then——

Exam. Mullen: Is that all?

Mr. Melia: That is all I have. Thank you.

Exam. Mullen: Thank you, Mr. Oakes.

(Witness excused.)

Exam. Mullen: Do you have any more witnesses?

[fol. 1585] Mr. Melia: That is all we have, Mr. Examiner, for today.

Exam. Mullen: We will take a recess for 20 minutes.

(Short recess taken.)

Exam. Mullen: The hearing will be in order. We are ready to proceed.

Mr. Quirk: Mr. Examiner, during the 20-minute recess we have considered the points that we had marked down to quiz Mr. Hanson about, and we have concluded not to cross examine him at all, but we will meet what we think is wrong with his statement by rebuttal.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

The hearing will go over to Monday, 9:30 a.m.

(Whereupon, at 4:15 o'clock p.m., the hearing was recessed until 9:30 o'clock a.m., Monday, April 10, 1950.)

[fols. 1586-1587a] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

Transcript of Testimony—Boise, Idaho, Monday, April 10, 1950

Met, pursuant to adjournment, at 9:30 o'clock a.m.

Before Frank E. Mullen, Examiner

[fol. 1588] Proceedings

Exam. Mullen: All right, gentlemen, we are ready to proceed. Are you ready, Mr. Collins?

HARRY W. MORRISON was sworn and testified as follows:

Exam. Mullen: We have a number of witnesses here who have prepared statements. Copies of these have been furnished to you, I think, Mr. Quirk, or this particular one?

Mr. Quirk: Yes, I have this.

Exam. Mullen: I suggest, then, you read that over. Mr. Morrison has been sworn, if you desire to cross examine on it. Then this might be received as a verified statement without having the testimony actually copied into the record.

Mr. Melia: Mr. Examiner, I would prefer, with respect to this particular testimony, that it be read into the record. It is short, and I would prefer it.

Exam. Mullen: All right.

Mr. Melia: Mr. Morrison, will you proceed to read your statement, please?

The Witness: Gentlemen, my name is Harry W. Mor-

rison. I am President of Morrison-Knudsen Company, Inc., a firm of contractors and engineers. We organized our business in 1912, here in Boise, Idaho. For the past several years, we have been completing in excess of $100,000,000 of construction a year in the United States and foreign countries. We maintain branch offices [fol. 1589] in the United States and other countries, but our executive headquarters and main shops are located in Boise, Idaho, where, for the years 1948 and 1949, we have averaged 600 carloads of incoming and outgoing freight per year on the Union Pacific lines.

I have been eager to offer my testimony in this hearing because throughout the 44 years I have lived in Idaho, I have witnessed at first hand the remarkable development which has taken place in this state and have noted the indispensable contribution which the Union Pacific Railroad Company has made to that development.

Out of a relatively few widely scattered and unconnected small railroad lines serving limited and isolated areas of our state, the Union Pacific has created an extensive and unified railroad system which has given to the people of Idaho the highest standard of railroad service in the world. This was not a mere consolidation operation. I estimate that in my own time, the Union Pacific has invested more than $125,000,000 of cash in the State of Idaho in the construction of branch lines and other improvements in order to better serve Idaho's needs. Since 1905, which was my first year in Idaho, the Twin Falls, Northside, Declo, Oakley, Homedale, Burns, Brogan and McCall branch lines have been constructed. Thanks to the forward-looking management of the Union Pacific Railroad, Idaho now has quick and economical access to markets for all of her [fol. 1590] products. It is important to note that it was the Union Pacific, not a connecting railroad, which constructed these additional facilities.

As a citizen of Idaho interested in seeing the progress and development of our state continue, I wish to register a strong objection to the proposal that the Union Pacific now be relegated to the role of messenger boy for connecting railroad lines.

Mr. Quirk: This is argument, and very objectionable argument.

Exam. Mullen: That is argument, and I notice the rest of it is argument. We cannot include that in the record.

Mr. Melia: What do you mean by the rest of it, Mr. Examiner?

Exam. Mullen: The balance of the statement. I have read it through.

You may question the witness if you desire, but this statement is argument and nothing else as I read it.

Direct examination.

By Mr. Melia:

Q. Mr. Morrison, have you and do you do work for the Union Pacific Railroad?

A. Yes, sir, we do a very substantial amount of business and construction work for the Union Pacific.

Q. Do you perform work for other railroads?

A. Yes, sir, many of the principal railroads of the United States.

[fol. 1591] Q. Could you identify a few of the western lines?

A. The Northern Pacific, the Great Northern, the Milwaukee, the Burlington, the Denver and Rio Grande Western, the Southern Pacific, the Santa Fe, the Rock Island, to name a few, that is most of them, I believe.

Q. Have you done work for the Rio Grande in recent years?

A. Not recently.

Mr. Melia: That is all I have. You may cross examine.

Cross examination.

By Mr. Quirk:

Q. Your company, Mr. Morrison, has a current contract with the Union Pacific with respect to the annual ballast requirements of the Union Pacific?

A. Yes, but may I qualify to say that we do not hold a contract for all of the ballast requirements of the Union

Pacific. We have a contract to provide part of the ballast requirements for the Union Pacific.

Q. Did you have a construction contract with respect to the New Aspen Tunnel?

A. Yes, sir.

Q. Has your company had other contracts with respect to large projects in which the Union Pacific is interested?

A. The word large is relative. We have done for many years a great deal of the betterment work, which has been a part of the Union Pacific's progress.

Q. Name some of the projects that you have taken part [fol. 1592] in that you describe as relatively large?

A. There have been some major line changes in Wyoming in recent years, contracts perhaps ranging from $500,000, perhaps as much as $700,000, which our company has handled.

Q. As I understand your position and your testimony, it is that if any of the trackage now moving east of Granger on the Union Pacific is diverted through Ogden, whether it be large or small, you think that might in some way affect the Union Pacific's ability to serve the people out here?

A. Mr. Quirk, I go a great deal farther in my thinking than that, sir.

Q. Can't you answer that?

A. Yes, I can answer it. I can explain my answer, too, if I were permitted to do so.

Exam. Mullen: Answer the question, and then explain your answer.

The Witness: The answer would be yes. My reasons for my opinion is the fact that Idaho is a state that must, if it is to progress and continue to grow, have large acreages of land developed through irrigation. To develop that land requires great concerted efforts, sir, on the part of the people of Idaho and the corporations primarily serving our state.

By Mr. Quirk:

Q. All right. But you think a diversion of traffic through the Ogden gateway would somewhat affect that, no matter whether it was small or large?

[fol. 1593] A. I think every dollar of revenue that is side

tracked from the Union Pacific reduces their willingness, desire, and ability to serve our people.

Q. Are you familiar with the fluctuation in the gross revenues of the Union Pacific in recent years?

A. Very slightly.

Q. Would you be surprised to know that in 1946 the gross revenues of the Union Pacific was $130,000,000 less than it was in 1945?

A. I know they have a rather wide fluctuation. I know we had terrific storms in Wyoming, a winter or so ago.

Q. That has nothing to do with my question.

A. That cut down the volume of business on the Union Pacific.

Q. Now, did you notice any effect on the service of the Union Pacific in 1946, as against 1945, because of that reduction; loss of $130,000,000 in gross revenues?

A. No, I couldn't say that I did.

Q. Well, in 1948, on the other hand, the gross revenues of the Union Pacific was roughly $30,000,000 more than in 1947. In other words, you are apparently not familiar with the fact there is more fluctuation from year to year in the revenues of this railroad than could possibly be involved in this case.

Mr. Melia: I object to that question. That is not a question, that is a statement, Mr. Quirk.

Mr. Quirk: He has been making speeches.

[fol. 1594] Exam. Mullen: You may make whatever assumptions you desire, Mr. Quirk, and then base your question on it.

Mr. Quirk: It is not too important.

By Mr. Quirk:

Q. You spoke of the development of this country. Are you familiar with the fact that between 1906 and 1931 the Oregon Shortline paid to the Union Pacific dividends aggregating $252,246,875?

Mr. Mulliner: I object to the question, because it is improper cross-examination.

Exam Mullen: There has not been any question yet. What is the question?

Mr. Quirk: What did I say?

(Question read.)

Exam. Mullen: That was a question. Do you know that, Mr. Witness?

The Witness: No, sir.

By Mr. Quirk:

Q. Well, if that is true, and we expect to show that it is, this country has been rather good to the Union Pacific, too, hasn't it?

Mr. Mulliner: I object to the question.

Exam. Mullen: The witness may answer it. He has expressed his opinion.

The Witness: The Union Pacific, sir, came first; when I speak of the Union Pacific, I speak of the Union Pacific and its allied lines. I was in Idaho in 1904 and 1905 when the [fol. 1595] Minidoka, Twin Falls branch was started, and I have seen them follow, one after the other, usually during the development of the country.

By Mr. Quirk:

Q. Don't you know, in the development of the history, all shown in the United States Senate Pacific Railway Investigation, the Union Pacific came up this way to seek a terminal?

A. I suppose it did, the same as Mr. Gould did the D. & R. G. to get over to the West Coast.

Mr. Quirk: That is all.

Redirect examination.

By Mr. Melia:

Q. Do you know whether or not the work you have performed for the Union Pacific or any other railroad, for that matter, throughout the many past years, has fluctuated in some degree with respect to the prosperity of those lines?

A. Very definitely, sir.

Q. You do more work for the Union Pacific when their

gross and net revenues are greater than when they are less?

A. Correct. They do more improvement. They restrict and rather manage their improvement programs in proportion to their budget and income, as I understand it.

Q. If the Union Pacific revenue should be impaired by this proposal, do you think it might affect your company in some way?

A. I do. It has, regularly, with the railroads of the West.

Mr. Mulliner: Thank you.

[fol. 1596] Recross-examination.

By Mr. Quirk:

Q. Don't you know, Mr. Morrison, since 1945, despite this great reduction in the gross revenues of the Union Pacific, they have spent more rather than less money than they normally do?

A. Yes, I think that is right.

Q. All right.

A. I think it is because of a forward-looking program they have, trying to serve better the people of Idaho.

Mr. Quirk: I agree with you on that. I won't quarrel at all.

Mr. Melia: Thank you.

(Witness excused.)

George B. Carpenter was sworn and testified as follows:

Direct examination:

By Mr. Melia:

Q. Will you proceed to read your statement, Mr. Carpenter?

A. My name is George B. Carpenter. My headquarters is Ontario, Oregon. My business is the buying and selling of cattle which I have been doing for the past 40 years. My operations extend throughout the western states in-

cluding Mexico and Canada. My yearly shipments will be between 20,000 and 30,000 head.

I represent Moffat & Company, whose headquarters are at San Francisco, California, in purchasing their cattle [fol. 1597] throughout the territories mentioned. This firm happens to be the largest cattle feeding concern in the West. They operate finishing feed yards at Manteca, Stockton, Fresno, Chowchilla, and Bakersfield, California, and at Lovelock and Fallon, Nevada. They also pasture cattle throughout the San Joaquin Valley in California, at Elko, Nevada, in the McCall area in Idaho and in eastern Oregon.

I buy many cattle in the States of Nebraska, Iowa, South Dakota, North Dakota, Montana, Colorado, Texas, Nevada and California. Some of these are bought for account of Moffat & Company and move direct to their California and Nevada feeding yards. Others are bought for Moffat in the states mentioned and shipped to the ranges mentioned above where they are placed on summer feed, and after that feeding is completed in the Fall, they are shipped to Moffat's finishing yards in Nevada and California.

In addition to buying cattle for Moffat, I make many deals for my own account in the states described, and these are moved to feed yards at Ontario, Oregon, and Payette, Idaho.

In buying feeder cattle, both for Moffat and for myself, my purpose is to select the kind and quality of cattle that can take on substantial added weight. Of course, price is a factor. It is for this reason that I have bought cattle all over the western part of the country, including Mexico and Canada. In many cases when these feeder animals are [fol. 1598] bought I do not know definitely where they will eventually move for slaughter. Consequently in many cases, transit billing is worthless. A concrete illustration of this is that during 1949, Moffat shipped around 1,600 head of cattle from Los Banos, California, to Norwood, Idaho, a local point on the McCall branch of the Union Pacific. These cattle were fed during the summer and late fall and returned to California over the same rail route for further feeding as they originally moved. It is not an unusual thing for me in my overall operations to

return cattle after feeding operation is completed over the same line of railroad as was used for the inbound movement. In this situation, of course, we pay flat rates, either feeder or fat.

We have always found, because of the perishable nature of livestock, that it is essential in order to minimize shrinkage that we use the shortest and fastest route in making shipments from Nebraska, and other western states to California, Idaho and eastern Oregon, and have consistently used the Union Pacific or the Union Pacific and Southern Pacific. I know from personal experience that the route of the Rio Grande between Denver and Ogden or Salt Lake is quite a bit longer than the Union Pacific, and for this reason, I cannot afford to use the Rio Grande route even if the same rates applied because the most important factor in the purchasing and shipping of cattle is the shrinkage loss. Any excess shrinkage due to delay in [fol. 1599] transit could well mean more than the total freight charges.

The Rio Grande just does not fit into our picture. While I have indicated I cannot afford to use the Rio Grande Railroad in shipping cattle, I am interested in the outcome of this proceeding simply because I have for many years routed cattle via the Union Pacific. Here I might say that I have used the route of the Rio Grande, and it just has not worked out. Being dependent on the Union Pacific to a very great extent, I am interested in seeing that its long haul and revenues are preserved.

Q. Mr. Carpenter, I understand you buy cattle in Montana among other places?

A. That is right.

Q. Where would they be shipped to for feeding?

A. Oh, we ship those cattle, we would either ship those cattle into eastern Oregon, or we go into California with them.

Q. Now if you ship them into Eastern Oregon, would some of them leter move to California?

A. That is right.

Q. In that event, they would return east over the Union Pacific over the Wells cut-off?

A. In a lot of cases, we ship cattle like say into the Brogan

area. That is the end of the branch line out of Vale, Oregon, on the Shortline, and then we take, after those cattle are grassed out, we route those cattle back over the same lines [fol. 1600] and just pay the feeder rate on into California.

Q. In other words, you have no transit billing?

A. No, there is none at all.

Q. Is it unusual for you to, after feeding and grassing the cattle, to ship them back over the same route as the inbound movement?

A. We do that right along.

Q. Of course, that is done at flat rates?

A. That is right.

Mr. Melia: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. Have you had any trouble using the Union Pacific after 1945 when the revenues went down 130 million dollars?

A. Well, I don't know anything about that. We use the Union Pacific because it kind of fits into where we move our stock.

Q. You wouldn't use the Denver and Rio Grande even if the rates we seek here are established, would you?

A. No, we wouldn't.

Mr. Quirk: All right. Thank you.

Mr. Melia: Thank you, Mr. Carpenter.

(Witness excused.)

Mr. Rouse: I call Mr. M. B. Smith.

M. B. Smith was sworn and testified as follows:

Mr. Rouse: Mr. Examiner, it is agreeable to me to have [fol. 1601] this statement put in as a verified statement and not read, but there is an exhibit referred to in this prepared statement. Perhaps since it would go in as an

exhibit, the accompanying exhibit might be made a part of the verified statement.

Exam. Mullen: Does the statement explain the exhibit?

Mr. Rouse: The statement explains the exhibit.

Exam. Mullen: Just let it go in the record; then, it is short.

Mr. Rouse: The only thing then, the verified statement will have a blank.

Exam. Mullen: You can read that in the record, there is only a page and a half.

Direct examination.

By Mr. Rouse:

Q. Mr. Smith, you may proceed to read the statement.

A. My name is M. B. Smith. I reside at Pocatello, Idaho, mailing address Route 2 North. I am engaged in farming at that location and I am also weed supervisor for Bannock County, Idaho. I am a member of Portneuf Grange 229, an organization composed of approximately 150 producers of agricultural commodities in Bannock County, Idaho, and am a member also of Lakeview Pomona Grange 34, having a membership of approximately 100 producers of agricultural commodities.

During the latter part of November, 1949, Portneuf Grange 229, of which I was at the time chairman of the [fol. 1602] executive committee, had before it for consideration the petition of the Denver & Rio Grande Western Railroad Company before the Interstate Commerce Commission seeking authority to open the Ogden Gateway, which would permit solicitation of business originating on the lines of the Union Pacific Railroad in the States of Oregon, Washington, Montana and Idaho, and to the extent such solicitation resulted in routing via the lines of the D&RGW, to divert such traffic to its lines via the Ogden Gateway. After full discussion of the subject the executive committee of Portneuf Grange 229 adopted a resolution, which has been identified as Exhibit 33,—

Exam. Mullen: Exhibit 33.

The Witness: —in which that grange expressed its opposition to the petition of the D&RGW.

It will be observed from the resolution, Exhibit 33, that not only did Portneuf Grange 229 oppose the petition of the D&RGW, but it also requested the Public Utilities Commission of the State of Idaho to intervene in the case in behalf of the Union Pacific Railroad Company, and it directed that a copy of the resolution be furnished to the Public Utilities Commission of the State of Idaho and to the other parties referred to in the resolution, including the Governor of the State.

Following the adoption of the resolution, Exhibit 33, by Portneuf Grange 229, this resolution was referred to and [fol. 1603] given consideration by Lakeview Pomona Grange 34, a superior grange to Portneuf Grange 229, and at a meeting of the full membership of Lakeview Pomona Grange 34, on motion duly made and seconded, it was resolved that the action of Portneuf Grange 229 be approved by Lakeview Pomona Grange 34. I was at the time of the action of Lakeview Pomona Grange 34, the master of that grange.

By Mr. Rouse:

Q. Mr. Smith, were you also the master of this first grange you have mentioned here, the Lakeview Pomona Grange 34, were you master of that grange at the time it adopted its resolution?

A. No, sir, I was just chairman of the executive committee.

Q. You were chairman of the executive committee at the time that resolution was passed, that is the resolution which we have identified as Exhibit 33?

A. Yes.

Mr. Rouse: That is all.

Cross-examination.

By Mr. Quirk:

Q. Mr. Smith, did you know that the State Grange voted to favor this complaint; you knew that, didn't you?

A. Yes, sir.

Mr. Quirk: That is all.

Exam. Mullen: That is all. Exhibit 33 will be received.

(Defendant's Exhibit No. 33, Witness Smith, received in evidence.)

[fol. 1604] Exam. Mullen: Thank you, Mr. Smith.

(Witness excused.)

VAUGHAN STEWART was sworn and testified as follows:

Mr. Rouse: Mr. Examiner, I am agreed this be attached as a verified statement.

Exam. Mullen: Is there any objection—after you read it, Mr. Quirk, of course.

Mr. Quirk: Beginning at the bottom of page 3, and running on to the end of this verified statement is argument, and is therefore objectionable on that ground, as well as being very repetitious. We have heard this story over and over again.

Exam. Mullen: The argument matter, of course, will be annulled.

Mr. Quirk: I have no questions.

Exam. Mullen: This statement, then, will be received as Verified Statement No. 1.

That is all, Mr. Stewart.

(Witness excused.)

Mr. Rouse: Calling Mr. Zimmerli.

H. H. ZIMMERLI was sworn and testified as follows:

Mr. Rouse: Mr. Examiner, we are agreeable likewise to have the statement of Mr. Zimmerli placed in the record as a verified statement.

[fol. 1605] Mr. Quirk: With the understanding the argument contained in this proposed verified statement will be ignored. We have no questions.

Mr. Rouse: That is a matter the Examiner ruled on last week. You made a ruling on that last week, Mr. Examiner.

Exam. Mullen: Oh, yes, any argumentative matter in these statements will be disregarded.

Mr. Quirk: I am objecting to any argumentative statements on the record.

Exam. Mullen: It is so understood. This will be received as Verified Statement No. 2.

Mr. Rouse: That is all, Mr. Zimmerli, thank you.

(Witness excused.)

Mr. Rouse: Mr. Carlson?

Albert Carlson was sworn and testified as follows:

Mr. Rouse: We are agreeable, Mr. Examiner, this statement likewise be placed in the record as a verified statement.

Cross-examination.

By Mr. Quirk:

Q. Did the Union Pacific render good service to your company the last year?

A. Yes, sir.

Q. They did?

A. Yes, sir.

Q. Did they render good service to your company in 1948?

[fol. 1606] A. I would say so, yes.

Q. Was the service just as good in 1949?

A. I would say so.

Q. Did you know the Union Pacific had $38,000,000 less gross revenue in 1949 than they had in 1948?

A. No, sir, I did not.

Q. You weren't even shocked by that at all, were you?

A. No, I would not be.

Mr. Quirk: That is all.

Exam. Mullen: This will be received then, as Verified Statement No. 3.

(Verified Statements Nos. 1, 2, and 3, received in the record.)

Mr. Rouse: That is all.

(Witnessed excused.)

CLYDE HESS was sworn and testified as follows:

Mr. Rouse: This statement may be similarly treated, Mr. Examiner, and placed in the record as a verified statement.

Cross-examination.

By Mr. Quirk:

Q. Have you gotten the impression that if the Rio Grande gets the joint rates through Ogden, that somehow or other the Union Pacific will suffer, its services will be less satisfactory?

A. Would you state that again, please?

Mr. Quirk: Read it.

[fol. 1607] (Question read.)

The Witness: Well, I would say, as far as I am concerned in this deal, we depend on the U. P. for all our service. I'm interested in being served, and I think it would, if it was opened, I think the Union Pacific would lose a lot of business.

Q. You mean that this route, if it was opened, the shippers would use it to a very large extent and thereby hurt the Union Pacific?

A. I wouldn't say they would.

Q. Would you?

A. No, I would continue with the Union Pacific.

Q. Were your services as good in 1949 as it was in 1948?

A. Yes, sir.

Q. Do you know the Union Pacific had $38,000,000 less gross revenue in 1949 than it had in 1948?

A. Yes, sir.

Q. How was your service in 1946?

A. Our service has been very good, ever since we have been in business, with the U. P.

Q. It was better in 1946 than it was in 1945, wasn't it?

A. I didn't notice any particular difference.

Q. In 1946 the Union Pacific had $130,000,000 less gross revenue than in 1945, but it didn't affect your service?

A. It didn't seem to affect our service.

Mr. Quirk: That is all.

[fol. 1608] Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Exam. Mullen: That statement will be received as Verified Statement No. 4.

(Verified Statement No. 4 received in the record.)

Mr. Rouse: Mr. Thompson.

F. G. THOMPSON was sworn and testified as follows:

Mr. Rouse: Mr. Examiner, this statement may be treated similarly to the others.

Exam. Mullen: This is Verified Statement No. 5.

Cross-examination.

By Mr. Quirk:

Q. Would your position be different, Mr. Thompson, if the Rio Grande was attempting to build a railroad into Idaho?

A. Sir?

Mr. Quirk: Read it, Mr. Reporter.

(Question read.)

The Witness: Well, I don't know. It would depend on the circumstances.

By Mr. Quirk:

Q. Why did you say then you say you understand the Denver Rio Grande Western does not contemplate building a railroad in this state. It pays no taxes. Now you made the statement, and I merely asked you if it had filed an [fol. 1609] application for authority to build a railroad into the state, and pay taxes in the state, I suppose you would be in favor of that?

A. Well, has it?

Q. It has not, no.

A. If it does, I will reserve my opinion, then, sir.
Q. You don't distribute beer in Colorado, do you?
A. No, sir.
Q. Don't the people down there drink beer?
A. I think they do, you bet.
Mr. Quirk: All right.
Exam. Mullen: Received as Verified Statement No. 5.

(Verified Statement No. 5 received in the record.)

(Witness excused.)

Mr. Rouse: Mr. Hyer.

MERLE G. HYER was sworn and testified as follows:

Mr. Rouse: Mr. Examiner, I would like Mr. Hyer to read this statement into the record.

Exam. Mullen: All right, Mr. Hyer, proceed.

The Witness: My name is Merle G. Hyer and my residence is at Lewiston, Utah. I am there engaged in farming, cattle feeding and shipping of livestock and grain. During the year 1948, I shipped approximately 32 carloads of livestock and during the year 1949, 30 carloads of live- [fol. 1610] stock from Lewiston, Utah, and I am a receiver of approximately 6 carloads of livestock per year at Cornish. The livestock received is shipped from points in Idaho and Wyoming and the livestock forwarded is, for the most part, shipped to points in California, either Los Angeles or San Francisco, with an occasional car to Omaha, Nebraska. All shipments made or received by me at Lewiston are routed via the lines of the Union Pacific Railroad.

The Union Pacific has rendered satisfactory service to me and provided an adequate car supply. The routes of the Union Pacific are satisfactory and sufficient for my requirements. I have never routed any shipments via the lines of the D&RGW and have never felt the need for nor asked either the D&RGW or the Union Pacific for the establishment of through routes via the D&RGW, such as the D&RGW is seeking in this case. I do not anticipate any need for such through routes and am satisfied that I would derive no benefits therefrom.

I understand that in this case the D&RGW seeks to have diverted to its lines traffic originating on the lines of the Union Pacific in the States of Oregon, Washington, Montana, Idaho and Utah, that it does not intend to render any service in connection with the movement of such traffic into Ogden, nor is it in a position to render such service.

I am at present a member of the Board of County Commissioners of Cache County, Utah, and as such have an acquaintance with the tax problem in my county. The [fol. 1611] Union Pacific during the year 1948 paid $79,042.50 taxes in Cache County, Utah. The D&RGW paid no taxes.

Exam. Mullen: Just a moment, that next paragraph is argumentative. That will come out.

Mr. Quirk: All right.

The Witness: It is my understanding that the D&RGW would hope to divert traffic such as that shipped from the station of Lewiston via its lines through Ogden. There would necessarily be delay in the movement through the Ogden terminal and the time consumed would delay the time of arrival of the stock at destination.

Exam. Mullen: The next paragraph is argumentative. That should come out.

Mr. Collins: You mean he can't state his position in the case, Mr. Examiner?

Exam. Mullen: He can state his position.

The Witness: I mentioned previously I am a member of the Board of County Commissioners of Cache County, Utah. The Board is unalterably opposed to the petition of the D&RGW in this case and I have been officially authorized to represent it in this statement in support of defendants, and particularly of the Union Pacific. As a shipper and individual citizen, I also oppose granting of the petition of the D&RGW.

Mr. Quirk: Are you finished?

Mr. Rouse: Yes.

[fol. 1612] Cross-examination.

By Mr. Quirk:

Q. If the joint rates which the complainant seeks here were established, I take it you wouldn't use the Ogden Gateway anyway, would you, in connection with the Rio Grande?

A. No, sir.

Q. Well, you have the impression, have you, that you have to use it if we should succeed in this case?

A. No, sir.

Q. There are other Utah citizens that have been here and testified that they needed this route. Are you opposed to them getting it if they need it?

A. No, sir.

Q. This tax that you speak of is an ad valorum tax, isn't it?

A. Yes, sir.

Q. Property taxes do not fluctuate with the revenues of the railroad, do they?

A. I wouldn't know about that.

Mr. Quirk: All right.

Exam. Mullen: Anything further?

Mr. Rouse: No.

Exam. Mullen: That is all. Thank you, Mr. Hyer.

(Witness excused.)

Mr. Olsen.

MARION OLSEN was sworn and testified as follows:

[fol. 1613] Mr. Rouse: It is agreeable with me, Mr. Examiner, that this statement be placed in the record as a verified statement. There is reproduced in the statement a resolution that is described in the statement, but if it is placed in the record as a verified statement I think the resolution will be a part of it. I had intended it to be an exhibit.

Exam. Mullen: It will go along with the verified statement if you wish.

Mr. Rouse: Yes.

Exam. Mullen: That will be Verified Statement No. 6.

(Verified Statement No. 6 received in the record.)

Cross-examination.

By Mr. Quirk:

Q. On page 4 of your verified statement, you say that you had one experience in the area up there at the time the Utah Idaho Central Railroad was abandoned. Have you gotten the impression that the Union Pacific is about to abandon its line in Utah?

A. No, sir.

Q. Why did you refer to the abandonment of the Utah Idaho Central, then?

A. Because of the fact that if the other railroad, namely the U.P., was taken out of there, it would be a crippling blow such as it was when the Utah Idaho Railroad went out, we would be at a great loss there with no rail service. [fol. 1614] Q. You think there is a danger of the Union Pacific abandoning this line, if there is any diversion of traffic whatsoever to Ogden via the Rio Grande?

A. Not under the conditions now, no.

Mr. Quirk: That is all.

Redirect examination.

By Mr. Rouse:

Q. Mr. Olsen, have you been approached recently by representatives of the D&RG in an effort to dissuade you from coming here to testify for the Union Pacific?

A. Yes, sir.

Q. How many times?

A. Twice.

Q. That is within the last month?

A. Yes, sir.

Mr. Rouse: That is all.

Recross-examination.

By Mr. Quirk:

Q. How many times were you approached by the Union Pacific in being persuaded to support them?

A. Once.

Mr. Quirk: We're one up on you.

(Laughter)

The Witness: I was persuaded the first time.

Exam. Mullen: That is all.

(Witness excused.)

Exam. Mullen: This will be received as Verified State-[fol. 1615] ment *Statement* No. 6.

(Verified Statement No. 6 received in the record.)

Guy Gray was sworn and testified as follows:

Mr. Rouse: Mr. Examiner, it is agreeable to me this statement likewise be placed in the record as a verified statement.

Mr. Quirk: No questions.

Exam. Mullen: It will be received as Verified Statement No. 7.

(Verified Statement No. 7 received in the record.)

Mr. Rouse: Thank you, Mr. Gray.

(Witness excused.)

Mr. Hobbs: Mr. Examiner, we have three or four additional witnesses, and they went out to get their statements. If you would declare a recess we will have the statements.

Exam. Mullen: All right, we will take a ten-minute recess.

(Short recess taken.)

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Hobbs: I call Mr. Roedel.

L. J. Roedel was sworn and testified as follows:

Mr. Hobbs: We are agreeable, Mr. Examiner, that Mr. Roedel's statement be received as a verified statement and [fol. 1616] not read into the record.

Exam. Mullen: Any questions?

Mr. Quirk: Yes.

Cross-examination.

By Mr. Quirk:

Q. Mr. Roedel, at the Salt Lake hearing in this proceeding a Mr. Johnson, Manager for the Coppers Company, with a creosote treating plant at Salida, Colorado, testified that they moved lumber off the Union Pacific for treatment at Salida, and then moved it east. Would your company be interested in that kind of customer?

A. He wouldn't be buying any more lumber from us.

Q. Are you familiar with the Coppers Company's needs?

A. Yes, I think I am, to a certain extent.

Q. You know who the Coppers Company is?

A. Yes.

Mr. Quirk: That is all.

Exam. Mullen: This will be received, then, as Verified Statement No. 8.

(Verified Statement No. 8 received in the record.)

(Witness excused.)

Mr. Hobbs: I call Mr. Lanzer.

Fred E. Lanzer was sworn and testified as follows:

Mr. Hobbs: Mr. Examiner, we are willing to have the [fol. 1617] statement of this witness received as a verified statement also.

Exam. Mullen: All right.

Cross-examination.

By Mr. Quirk:

Q. Mr. Lanzer, is the lumber you ship east from producer points used by your company subject to reconsignment and other transit privileges?

A. We ship the lumber from our enterprise mill out of LaGrande on a transit basis.

Q. Well, is it stopped in transit for any kind of treatment or reconsignment or resale at all?

A. For remanufacture, definitely not.

Q. You say on page 2 of your verified statement that if the rates sought by the Rio Grande here should be established the Union Pacific would sustain revenue losses that would necessarily have to be offset by restricting the service. Has your service rendered by the Union Pacific been satisfactory in the last four years?

A. Yes, it has.

Q. In other words, you found it to be satisfactory one year about as well as the other years?

A. Yes.

Q. Did you know that in 1946 the Union Pacific had gross revenues of 130 million dollars less than the year before?

A. I know it from your statement.

Q. They didn't restrict the service on account of the loss [fol. 1618] of the 130 million dollars loss, apparently?

A. Not to my knowledge.

Mr. Quirk: All right.

Exam. Mullen: This will be received as verified statement No. 9.

(Verified Statement No. 9 received in the record.)

(Witness excused.)

Mr. Hobbs: I call Mr. Kiddle, please.

FRED E. KIDDLE was sworn and testified as follows:

Mr. Hobbs: We are willing, Mr. Examiner, that the testimony of this witness be received as a verified statement.

Cross-examination.

By Mr. Quirk:

Q. Mr. Kiddle, on page 2 of your verified statement you say that any reduction in revenue to the Union Pacific might result in restrictions or curtailment of services rendered to you in various ways. Have you been led to believe by the Union Pacific representatives that this case would lead to restrictions in your service?

A. No, not by any officials of the Union Pacific. It is just my general thinking that if there would be any substantial reduction in earnings that ultimately it would catch up where there might be this restriction.

Q. You think that if the loss of revenue might be no more [fol. 1619] than say four million, or $4,000,000, that that would result in restricting your service?

A. I have never attempted to analyze it on that basis.

Q. What basis did you have in mind?

A. I would just think——

Q. Let me finish. What basis did you have in mind to base your fears on?

A. Our operations are on a branch line. From my observation and reading in the newspaper when curtailment and impairment of service does come, it is usually the branch lines that are affected first.

Q. Is there any curtailment in your service in any respect in 1949, as compared with 1948?

A. Not noticeably, anything of a major character, no.

Q. Did you know that the Union Pacific had 38 million dollars less gross revenue in 1949 than it had in 1948?

A. No, I didn't have those figures.

Mr. Quirk: All right. That is all.

Mr. Hobbs: Thank you, Mr. Kiddle.

Exam. Mullen: It will be received as Verified Statement No. 10.

(Verified Statement No. 10 received in the record.)

(Witness excused.)

Mr. Collins: Mr. Examiner, by the adoption of this verified statement method in getting the witness' testimony in the record has speeded up things so we don't have anymore witnesses now, and won't until 3 o'clock, when we will have seven.

[fol. 1620]

Exam. Mullen: Didn't you notify them all to be here? Didn't you notify them all to be here today?

Mr. Rouse: We notified all except those who had previous commitments, Mr. Examiner. We did have about a dozen witnesses who couldn't be here Monday. We notified all the rest of them, and there are about seven who didn't make it early this morning, but will be here today.

Exam. Mullen: How about tomorrow?

Mr. Rouse: Tomorrow we have about 15, and on Wednesday I think about ten more, and that is the list.

Exam. Mullen: Could you get some of those in this afternoon that are supposed to come tomorrow?

Mr. Rouse: I'm fearful we cannot, Mr. Examiner. We have tried to separate this as much as we can, but some of the witnesses we hoped to have here this morning just couldn't make it because of other commitments. That is true as of tomorrow. There are a few witnesses who *are* commitments on Tuesday, and can't be here until Wednesday.

Exam. Mullen: It seems to me we are losing a lot of time here.

Mr. Collins: Well, we have to treat that loss by adopting an accelerated method, Mr. Examiner. We made these plans

[fol. 1621]

previously to have these witnesses, and they made the plans dependent on coming here at a time we planned for them before. Mr. Hobbs had these witnesses from the Northwest area up there around Portland, in order to try to inconvenience them as little as possible, we have tried to plan them out for the two or three days.

Exam. Mullen: When will the witnesses be available this afternoon?

Mr. Rouse: We expect about seven, Mr. Examiner.

Exam. Mullen: What time?

Mr. Collins: About three o'clock.

Mr. Hobbs: Before then.

Mr. Rouse: They will not all be here then.

Mr. Hobbs: We have one witness, Mr. Examiner, from Spokane, who will be in here as I understand it, on the noon train, and who must get out of here again on the train that leaves at 3:50. I don't know when the balance of the local witnesses, if they are local, will be here.

Exam. Mullen: Then we will recess until 2 o'clock.

Do you have anything, Mr. Quirk?

Mr. Quirk: No, we haven't right now. This is quite unexpected.

Exam. Mullen: All right, we will recess until 2 o'clock.

(Whereupon, at 11:11 o'clock a.m., the hearing was recessed until 2 o'clock p.m., the same day.)

[fol. 1622] Afternoon Session, 2 P. M.

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Collins: Mr. Examiner, pursuant to the discussion that Mr. Quirk and I had with you orally before lunch, we turned over to Mr. Quirk copies of the prepared statements of the other witnesses that we expected to have present, testimony for the defendants at this hearing. Now, as I understand the situation, what I am proposing is that—and as I understood Mr. Quirk's being agreeable to his waiving the requirement that the witnesses be brought to the hearing and put under oath, and that the prepared statements may be permitted in evidence with the same force and effect in the form of verified statements and not copied, with the same force and effect as if the witnesses had been brought here and put under oath. Is that correct, Mr. Quirk? I find we have some that are not available at the moment, but will be a little later on. These are not all, in other words, but we will have them a little later on.

Mr. Rouse: Mr. Collins, we have them all here, but Mr. Quirk didn't get them before lunch. Mr. Burchell and I had them.

Mr. Collins: We can offer what we have then, and give him a chance to look at the others.

Mr. Quirk: Mr. Collins has stated correctly the under-

standing we have about what we are about to do in legal [fol. 1623] words, which constitutes a stipulation.

Mr. Collins: That is correct.

Mr. Quirk: He agreed to this reservation, too, since the witnesses will not be present, it will be understood that I object now to anything in these verified statements which is in the nature of an argument or that are obviously irrelevant, without taking up each one and making objection; and I also wish the understanding that many of these witnesses, if they were here, I would ask on cross examination the same general type of questions where it was appropriate as I have asked of the other witnesses.

Mr. Collins: Yes. And if the witnesses were here they would give answers substantially along the lines as those you have elicited from the witnesses already cross examined.

Mr. Quirk: That is all right.

Mr. Collins: That is agreeable to me. I think, Mr. Examiner, the best we can do is for me to read the name and address of these witnesses, as stated at the top of their prepared statement, one by one, and let you give it a number, unless you have some better way to suggest.

Exam. Mullen: Well, except you could prepare a list and furnish it to the reporter, and he can copy that list in.

Mr. Collins: Then you would give each name a number.

Exam. Mullen: That is right.

Mr. Collins: We can do that. We haven't got it done.

Mr. Rouse: We haven't a list, Mr. Examiner.

[fol. 1624] Mr. Collins: We have a partial list.

I'm afraid, Mr. Examiner, the only way we can be sure that everybody knows what number is assigned to each statement would be to read them.

Exam. Mullen: Suppose you do that right now.

Mr. Collins: I don't believe we have ours in the same order Mr. Quirk has.

Exam. Mullen: He will find it, you go ahead.

Mr. Collins: I will call them as I have them here, and he can hunt for them, I suppose.

Mr. Examiner, in connection with some of these statements there are attached resolutions of the sort that you have seen. I take it they will go along with the verified

statement, as a part of the verified statement, is that correct?

Exam. Mullen: As a part of the verified statement, that is correct.

Mr. Collins: The first I will read is E. S. Harper, Idaho Falls, Idaho.

Exam. Mullen: That will be Statement No. 11. We will go on from there.

(Verified Statement No. 11 received in the record.)

Mr. Collins: The next is Frank A. Mason, Dedham, Massachusetts.

Exam. Mullen: That will be No. 12.

[fol. 1625] (Verified Statement No. 12 received in the record.)

Mr. Collins: The next is J. C. Stauffer, Willard, Utah.

Exam. Mullen: It has a resolution attached.

Mr. Collins: Yes.

Exam. Mullen: That will be Verified Statement No. 13.

(Verified Statement No. 13 received in the record.)

Exam. Mullen: All right.

Mr. Collins: Next, Mr. Robert D. Gallafent, Pocatello, Idaho.

Exam. Mullen: Fourteen.

(Verified Statement No. 14 received in the record.)

Mr. Collins: E. E. Pugh, Springston, Idaho.

Exam. Mullen: No. 15.

(Verified Statement No. 15 received in the record.)

Mr. Collins: Clyde Bunting, Boise, Idaho.

Exam. Mullen: No. 16.

(Verified Statement No. 16 received in the record.)

Mr. Collins: Jay Malvin, Boise, Idaho.

Exam. Mullen: No. 17.

(Verified Statement No. 17 received in the record.)

[fol. 1626] Mr. Collins: Fred A. Phillips, Baker, Oregon.

Exam. Mullen: No. 18.

(Verified Statement No. 18 received in the record.)

Mr. Collins: Edward E. Parsons, Payette, Idaho.
Exam. Mullen: No. 19.

(Verified Statement No. 19 received in the record.)

Mr. Collins: Do you have that, Mr. Quirk?
Mr. Quirk: Yes.
Mr. Collins: Marcus A. Pomeroy, Hansen, Idaho.
Exam. Mullen: No. 20.

(Verified Statement No. 20 received in the record.)

Mr. Collins: That is Hansen, Idaho, Mr. Quirk.
Frank H. Adams, Twin Falls, Idaho.
Exam. Mullen: No. 21.

(Verified Statement No. 21 received in the record.)

Mr. Collins: Frank Stubbs, Yakima, Washington.
Exam. Mullen: No. 22.

(Verified Statement No. 22 received in the record.)

Mr. Collins: Frank W. Shields, Yakima, Washington.
Exam. Mullen: No. 23.
[fol. 1627] Mr. Collins: That has a resolution, also.
Exam. Mullen: Just a minute. All right. The resolution goes with that statement.
Mr. Collins: Yes, that will be a part of 23.
Exam. Mullen: That is right.

(Verified Statement No. 23 received in the record.)

Mr. Collins: Reese Lamb, Freewater, Oregon.
Exam. Mullen: No. 24.

(Verified Statement No. 24 received in the record.)

Mr. Collins: George P. Stadelman, the Dalles, Oregon.
Exam. Mullen: No. 25.
Mr. Collins: That has a resolution, also.

(Verified Statement No. 25 received in the record.)

Mr. Collins: Frank E. Freshwater, Yakima, Washington.
Exam. Mullen: No. 26.

(Verified Statement No. 26 received in the record.)

Mr. Collins: E. S. Prentice, Yakima, Washington.
Exam. Mullen: No. 27.

(Verified Statement No. 27 received in the record.)

[fol. 1628] Mr. Collins: Charles C. Gossett, Nampa, Idaho.
Exam. Mullen: No. 28.

(Verified Statement No. 28 received in the record.)

Mr. Collins: Russell O. Vognild, Tacoma, Washington.
Exam. Mullen: No. 29.

(Verified Statement No. 29 received in the record.)

Mr. Collins: Lowden Jones, Walla Walla, Washington.
Exam. Mullen: No. 30.

(Verified Statement No. 30 received in the record.)

Mr. Collins: Harold A. Cohn, Heppner, Oregon.
Exam. Mullen: No. 31.

(Verified Statement No. 31 received in the record.)

Mr. Collins: William H. Steiwer, Fossil, Oregon.
Exam. Mullen: No. 32.

(Verified Statement No. 32 received in the record.)

Mr. Collins: Marion Weatherford, Arlington, Oregon.
Exam. Mullen: No. 33.
Mr. Collins: Also a resolution to go with his testimony as a part of verified statement No. 33—two resolutions, instead of the one, to be included in Verified Statement No. 33.

[fol. 1629] (Verified Statement No. 33 received in the record.)

Mr. Collins: W. B. Savage, Kimberly, Idaho.
Exam. Mullen: No. 34.

(Verified Statement No. 34 received in the record.)

Mr. Collins: Leroy W. Hayes, Caldwell, Idaho.
Exam. Mullen: No. 35.

(Verified Statement No. 35 received in the record.)

Mr. Collins: Charles Baker, Walla Walla, Washington.
Exam. Mullen: No. 36.

(Verified Statement No. 36 received in the record.)

Mr. Collins: Stanley D. Jenkins, Pilot Rock, Oregon.
Exam. Mullen: No. 37.

(Verified Statement No. 37 received in the record.)

Mr. Collins: Denny H. Hogue, Twin Falls, Idaho.
Exam. Mullen: No. 38.

(Verified Statement No. 38 received in the record.)

Mr. Collins: The next one is Dan J. Cavanaugh, Twin Falls, Idaho.
Exam. Mullen: No. 39.

[fol. 1630] (Verified Statement No. 39 received in the record.)

Mr. Collins: Donald Wallace, Tacoma, Washington.
Exam. Mullen: No. 40.

(Verified Statement No. 40 received in the record.)

Mr. Collins: K. H. Klopp, Spokane, Washington.
Exam. Mullen: No. 41.

(Verified Statement No. 41 received in the record.)

Mr. Collins: Verne R. Woods, Ault, Colorado.
Exam. Mullen: No. 42.

(Verified Statement No. 42 received in the record.)

Mr. Collins: E. J. Maynard, Denver, Colorado.
Exam. Mullen: No. 43.

(Verified Statement No. 43 received in the record.)

Mr. Collins: H. W. Farr, Greeley, Colorado.
That also has a resolution attached to go with it.
Exam. Mullen: Statement of H. W. Farr, with extracts of minutes of meeting of Board of Directors of Weld County Lamb Feeders' Association, is received as Verified Statement No. 44.

(Verified Statement No. 44 received in the record.)

[fol. 1631] Mr. Collins: Harold Smillie, Eaton, Colorado.
Exam. Mullen: No. 45.

(Verified Statement No. 45 received in the record.)

Mr. Collins: Walter J. Gooding, Salt Lake City, Utah.
Exam. Mullen: No. 46.

(Verified Statement No. 46 received in the record.)

Mr. Collins: Paul Blood, Morrill, Nebraska.
Exam. Mullen: No. 47.

(Verified Statement No. 47 received in the record.)

Mr. Collins: W. E. Anderson, Topeka, Kansas.
Exam. Mullen: No. 48

(Verified Statement No. 48 received in the record.)

Mr. Collins: Leeland U. Grieve, Savery, Wyoming.
Exam. Mullen: No. 49.

(Verified Statement No. 49 received in the record.)

Mr. Collins: L. G. Harding, Chugwater, Wyoming.
Exam. Mullen: No. 50.

(Verified Statement No. 50 received in the record.)

Mr. Collins: Ralph R. Crow, Saratoga, Wyoming.
[fol. 1632] Exam. Mullen: 51.

(Verified Statement No. 51 received in the record.)

Mr. Collins: Wayne I. Snyder, Morrill, Nebraska.
Exam. Mullen: 52.

(Verified Statement No. 52 received in the record.)

Mr. Collins: N. H. Troelstrup, Julesburg, Colorado.
Exam. Mullen: 53.

(Verified Statement No. 53 received in the record.)

Mr. Collins: Emmett A. Torney, Kellogg, Idaho.
Exam. Mullen: The statement of Emmett A. Torney is Statement No. 54.

(Verified Statement No. 54 received in the record.)

Mr. Collins: Sam W. Ditty, Dillon, Montana.
Exam. Mullen: No. 55.

(Verified Statement No. 55 received in the record.)

Mr. Collins: Leo J. Falk, Boise, Idaho.
Exam. Mullen: No. 56.

(Verified Statement No. 56 received in the record.)

Mr. Collins: That is all I have at the moment, that Mr. [fol. 1633] Quirk has seen, I guess.

Exam. Mullen: Are you ready to proceed? Do you have a statement, Mr. Quirk?

Mr. Quirk: No.

Exam. Mullen: These statements are received under the stipulation.

Mr. Collins: These constitute all that I now understand we have to submit here with the exception of the intervention, petition on behalf of the defendants for a Mr. Staff, also a prepared statement that he wanted to present, but I understand he won't arrive in Boise until the 3:50 train or some such train. It won't take him but a moment in the morning.

Exam. Mullen: All right.

Mr. Quirk: Your ruling, I take it, Mr. Examiner, refers to verified statements numbered 11 to 56, inclusive?

Exam. Mullen: That is correct. Does that complete the Defendant's presentation at this hearing?

Mr. Collins: Yes, it does, with the exception of this one man in the morning who will be on our side.

Exam. Mullen: Yes, so I understand.

Mr. Collins: You mean here at Boise?

Exam. Mullen: At Boise.

Mr. Collins: I think there will be some statements of some witnesses at Cheyenne, I'm not sure yet.

Mr. Gibson: According to the request of Mr. Collins, we [fol. 1634] have had duplicated the entire correspondence between Mr. Kirk and Mr. Hogue, and we have this ready to introduce in the record at this time, Mr. Examiner.

Exam. Mullen: All right.

Mr. Gibson: I might call your attention to the fact that there are two corrections on the last page in pen, and one

on the next to the last page that were discovered after the copies were duplicated.

Mr. Collins: But they are made on all the copies?

Mr. Gibson: Yes, they are made on all copies.

Exam. Mullen: That is offered as an exhibit?

Mr. Gibson: Yes.

Exam. Mullen: It will be marked as Exhibit 34.

(Complainant's Exhibit No. 34, Counsel Gibson, marked for identification.)

Exam. Mullen: Any objection to the receipt of this in evidence?

Mr. Collins: No.

Exam. Mullen: It will be received in evidence.

(Complainant's Exhibit No. 34, Counsel Gibson, received in evidence.)

Exam. Mullen: Does the complainant have anything further to present at this time?

Mr. Quirk: We haven't anything ready at this moment. We will be ready in the morning.

[fol. 1635] Exam. Mullen: We have nothing further this afternoon then, have we?

Mr. Collins: No, we only have this one witness I mentioned for the intervenor.

Exam. Mullen: We will adjourn until 9:30 tomorrow morning.

(Whereupon, at 2:40 o'clock p.m., the hearing was adjourned until 9:30 o'clock a.m., April 11, 1950.)

[fols. 1636-1637] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, ET AL, Defendants

Transcript of Testimony—Boise, Idaho, Tuesday, April 11, 1950

Met, pursuant to adjournment, at 9:30 o'clock a.m.

Before:

Frank E. Mullen, Examiner.

[fol. 1638] Proceedings

Exam. Mullen: We are ready to proceed, gentlemen. Has your witness come, Mr. Collins?

Mr. Collins: Yes.

Exam. Mullen: Will you be sworn, sir?

ROBERT H. STARR was sworn and testified as follows:

Direct examination.

By Mr. Collins:

Q. Mr. Starr, you have a petition to intervene in your own behalf in this case, do you not?

Exam. Mullen: Mr. Starr, I understand you have filed a petition for leave to intervene in this case.

The Witness: I have.

Exam. Mullen: That petition has been distributed. Is there any objection to it?

Mr. Quirk: We have none.

Exam. Mullen: The petition is received, and intervention is allowed.

Mr. Starr, you have been sworn and you have a statement you desire to make?

The Witness: A statement, yes.

Exam. Mullen: You may read it, then.

The Witness: My name is Robert H. Starr. I live one and one-half miles northwest of Cedaredge, Colorado. Cedaredge is in Delta County, approximately 17 miles northeast [fol. 1639] of Delta, Colorado.

I have been growing fruits, such as apples, peaches, pears, apricots and plums for the past 40 years on the Surface Creek Mesa. In the recent past, I have disposed of some of my orchard holdings, but at this time I still have around 150——

Mr. Quirk: Is it 150 or 200?

The Witness: That is a mistake. It should be changed. I wish that should be changed to 150.

—150 acres, devoted exclusively to the growing of the various fruits just mentioned.

I have for several years held the position of Colorado representative for the National Apple Institute, a national organization, and have represented the apple growers in Colorado in that capacity. I am not appearing here for the National Apple Institute, but only as an individual grower.

Delta County orchards alone produce an average of 50,000,000 pounds of apples, 16,000,000 pounds of peaches, 3,000,000 pounds of apricots, and 700,000 pounds of plums annually.

In addition to the fruit produced in Delta County, I know from my own experience that other counties, principally Mesa and Montrose Counties, are large producers of the same fruit.

My desire to be heard in this case arises from the desire to protect my own and other fruit growing interests in Delta [fol. 1640] County and the adjoining producing counties.

In the area of which I speak, approximately 30 per cent of the apples grown are grade "C" apples. Grade "A" and "B" apples are generally marketed through fresh fruit dealers. Our principal market for Grade "C" apples, which we must sell at a considerably lower price, is to frozen or canned fruit processors, who likewise process large quantities of peaches, plums and apricots.

I can safely say that in a normal crop year there is a surplus of grade "C" apples, as well as a certain amount of peaches and apricots, that we have difficulty in marketing through normal channels because they ripen too rapidly to be shipped. Our only outlet for these fruits is to a canner or freezer who has a plant reasonably adjacent to the growing territory.

It is my understanding that if the Ogden Gateway is opened, local processors will then be in position to purchase fruit in northern Idaho and Utah, which fruit generally sells for less than we can produce it in the Western Slope Territory, and our outlets for this large percentage of our total production will be cut off. Under certain marketing conditions, depending upon the demand for our fruits, we must sell our grade "C" apples and overripe fruits to show a profit for the season because of the narrow margin on which we operate. This narrow margin arises because of our high growing and picking costs and our comparatively shorter growing season.

[fol. 1641] If we lose our market for our grade "C" apples and over-ripe fruits, it may result in our operations being conducted at a loss and eventual curtailment of our growing activities.

If Western Slope processors are able to secure the less expensive Utah and Idaho fruits for processing in transit, we will have no alternative except to meet the prices paid for Utah and Idaho fruits or let our fruit rot on the ground, and with our higher producing and picking costs the latter would probably result.

Last year my entire crop of apricots went unmarketed and spoiled on the trees while Utah apricots were shipped in and processed locally.

It is my sincere opinion that in the Western Slope territory there is ample production of these grade "C" apples and overripe peaches and apricots to satisfy the requirements of local processors of frozen and canned fruits.

For these reasons I am opposed to the opening of the Ogden Gateway.

By Mr. Collins:

Q. What do you consider your market for these grade "C" apples, Mr. Starr? Just where are they sold?

A. Well, in a proposition of that kind, you sell them wherever you can sell them, if you can sell them.

Q. I get the impression from your testimony you have to sell them?

[fol. 1642] A. Well, the fresh fruit markets don't want that third grade apple. They want two grades, and so the upshot is that you can sell them to processors when they are peeled; the lack of color don't count.

Q. Well, is it to your interest to sell them to processors as near by your orchards where you raise them?

A. It would help us.

Q. Is that the only protection you are seeking by intervening in this case? You say at the top of page 2 of your statement that you desire to protect your own and other fruit growing interests in Delta County?

A. I am apprehensive as to the shipment of these "C" grade fruits and other fruits in used containers, on account of the danger from insects coming in, in the way of lice, mites, spiders, lygus bugs, San Jose scale, and mosaic, and the different things.

Q. Do you know of your own knowledge that there are these insects and diseases in any of the fruit that might be shipped from Idaho?

A. I do.

Q. Or Utah?

A. I do. They have an infestation of San Jose scale in the Payette Valley.

Q. In what?

A. In the Payette Valley.

[fol. 1643] Q. Now, is it that that you fear do you have that in your valley?

A. No, we don't. We have never had peach mosaic or San Jose scale, or Oriental fruit moth. Now, those are the three things that we are most afraid of, but we have been protected by our mountains and deserts. Fortunately to date we don't know that we have any of those things.

Q. These germs or insects, pests, might come into your

area there in these containers that the apples from outside your state would be shipped into the state?

A. That is true. The containers are shipped out by that local processing plant and they are put out in the orchards in Utah, Idaho, probably would be, put directly in the orchards, and the various insects in the way of lice and so forth would nest in them and be shipped to Delta, in these used containers.

Q. Where is the local processor you have in mind, if any?

A. In Delta.

Q. What is his name?

A. I think they go under the name of the Skyland Fruit Corporation.

Q. Is there anything else you want to say, Mr. Starr?

A. No, not especially. We regard this proposition of shipping Idaho apples into Delta County as you might say is a "carrying coal to Newcastle" operation. Nobody needs them, and if the local processors want to pay any kind of a decent price, they can get all the [fol. 1644] apples they want there.

Q. How near to the Rio Grande Railroad are you located?

A. About 12 miles.

Q. You can't move anything in or out by railroad without using their services, can you?

A. That is right.

Q. Do you have anything further? I don't have any more questions.

A. No, I guess not.

Cross-examination.

By Mr. Quirk:

Q. Mr. Starr, as I understand your position, you think you would be better off if you didn't have any competition from the northern Utah and Idaho fruits, is that right?

A. Yes.

Mr. Quirk: That is all.

Exam. Mullen: That is all, Mr. Starr. Thank you.

(Witness excused.)

Mr. Collins: Mr. Examiner, I want to recall Mr. Hanson very briefly.

Exam. Mullen: Mr. Hanson.

A. D. Hanson was recalled and testified further as follows:

Redirect examination.

By Mr. Collins:

Q. Mr. Hanson, do you have the operating revenues and [fol. 1645] the freight train miles of the Union Pacific for the years 1945, 1946, 1947, 1948 and 1949?

A. Yes, sir.

Q. Will you state what those are for the record, please?

A. The total operating revenues, for the year 19[illegible] $419,877,872; 1946, $361,395,534, a reduction of $130,482,338, or 26.5 per cent under 1945.

Freight train miles, 1945, 36,831,311; in 1946, 30,449,051, a reduction of 6,382,260, or 17.3 per cent.

Operating revenues, 1947, $410,053,705, a reduction of $81,824,167, or 16.6 per cent under 1945.

Freight train miles, 1947, 31,955,561, a reduction of 4,875,750, or 13.2 per cent under 1945.

Operating revenues, 1948, $437,583,132, a reduction of $54,294,740 dollars, or 11 per cent under 1945.

Freight train miles, 27,822,880, a reduction of 9,008,431, or 24.5 per cent under 1945.

Operating revenues, 1949, $398,823,082, a reduction of $93,054,790, or 18.9 per cent under 1945.

Freight train miles, 1949, 26,158,252, a reduction of 10,673,059, or 29 per cent under 1945.

Q. Now, Mr. Hanson, when you have a seasonal reduction in tonnage, how do you deal with it from the standpoint of freight train service? That is, do you have to take off schedules when you have what you know to be a seasonal re- [fol. 1646] duction, having in mind that you might soon have a rise in your volume traffic?

A. To some extent, although if it is of an expected short

duration, regularly assigned local or branch line service is not affected.

Q. And if you have what you anticipate to be a reduction which you do not regard as seasonal, but as a permanent reduction, then what?

A. Then every action possible is taken to meet the reduction in gross revenues on a comparable basis, which is, of course, difficult to reduce expenses generally in close comparison to reduction in freight revenue due to certain overhead and depreciation charges which must be charged out regardless.

Q. That is, you reached, as I understand you, or is it correct, you reach a short of irreducible minimum finally in your efforts to reduce operating expenses?

A. That is correct.

Q. But there is room, is there, above that irreducible minimum in what you have as full service in order to economize?

A. Yes, sir.

Q. I didn't notice very closely, do your figures show any fairly constant ratio as between operating revenues and freight train miles?

A. Yes, sir. The reduction in freight train miles, which reflects freight train service over the railroad as a whole, [fol. 1647] shows a reduction, percentagewise, close to the reduction in operating income. A greater reduction is shown in freight train miles during the years 1948 and 1949 for the reason of the dieselization program, modernization, and more efficient train operation, as compared to the year 1945.

Q. Do you want to make any further comment about the situation there?

A. Other than to say that the figures will bear out a reduction in train service, although it is true in some territories, and particularly in the Idaho territory, the branch line train service, as well as main line train service serving that territory has not been reduced comparable to service on other parts of the railroad.

Q. Do you have an explanation to make for that?

A. None other than what is in my original testimony to the effect that the Union Pacific has and is providing

service in Idaho and the other so-called non-competitive territory for the reason that we appreciate we are the only railroad serving the territory and there is no other railroad transportation.

Mr. Collins: That is all I have.

Recross-examination.

By Mr. Quirk:

Q. Mr. Hanson, what you are saying is this, isn't it: Wouldn't you say the Union Pacific runs a very efficient railroad and makes the adjustment necessary to meet con-
[fol. 1648] ditions as they arise?

A. That is correct.

Q. Do you regard a reduction of $130,000,000 in gross revenues, 1946 under 1945, as seasonal?

A. No sir.

Q. You don't regard any of these fluctuations that you have referred to, comparing 1945 with subsequent years down to and including 1949, as seasonal, do you?

A. No sir. And a comparable reduction was made in transportation expenses.

Q. A reduction in your gross revenues of, say, three or four or five million dollars would be hardly noticeable, would it, in your general operations?

A. It certainly would.

Q. How would it be noticeable in a company as large as yours?

A. For the reason as has been explained by other witnesses, the operating income has not been sufficient to pay our fixed charges and dividends.

Q. Well, that is your answer, is it?

A. Yes sir.

Q. You would still continue to give fairly good service with only a loss of only four or five million dollars, wouldn't you, a year?

A. To the extent of making a comparable reduction in expenses.

Q. Did you discontinue good service in 1946 with the
[fol. 1649] great loss you had in that year, compared with 1945?

A. I wouldn't say we discontinued good service. I will say that we had less service, less freight train service on the railroad than we did in 1945.

Q. The truth of the matter is, you gave much better service to the shippers generally, and to the public, in 1946, than you did in 1945?

A. That is true, because of the war conditions existing in 1945.

Q. Well then, there are factors other than mere change in the gross revenue that affect what you can do?

A. With respect to service?

Q. Yes.

A. There are a lot of things that are involved in service.

Q. Now, if you had a decrease of four million dollars in a given year, that would be less than one per cent of the situation in 1945, wouldn't it?

A. Yes.

Mr. Quirk: That is all.

Further redirect examination.

By Mr. Collins:

Q. Mr. Hanson, if you had a foreseeable loss of ten or twenty million dollars in revenue, through the Idaho and Northwest Territory, would that bestir you to methods of economizing, or would it affect the amount of service, the frequency of it?

[fol. 1650] A. Very definitely.

Q. Would it mean a curtailment——

Mr. Quirk: Mr. Examiner, I object to Mr. Collins putting words in the witness' mouth. I think a witness of this kind ought to be allowed to answer these questions without being led into the answer.

Exam. Mullen: It is leading.

Mr. Collins: Apparently there is a monopoly on leading the witnesses.

Mr. Quirk: The difference is, I am objecting.

By Mr. Collins:

Q. Will you comment on that, Mr. Hanson?

A. I believe it is quite fully covered in my original testimony.

Mr. Collins: All right, that is all.

(Witness excused.)

Mr. Collins: Mr. Examiner, that is all the testimony we will put in at this hearing for the defendant.

Exam. Mullen: Mr. Quirk.

Mr. Quirk: The day before yesterday, you said there would be no more officers or representatives of the Union Pacific put on as witnesses after the Cheyenne hearing.

Mr. Collins: That is right, as far as we know, and I hope I am right in my appraisal of the situation. I did, though, indicate that there will be shipper witnesses there. Maybe we will have two or four, but there will be no recall, as far as I know, of any officer of the Union Pacific or any [fol. 1651] of the witnesses that have testified for it.

Mr. Quirk: All right. I call Mr. Hogue.

F. C. Hogue resumed the witness stand and testified further as follows:

Redirect examination.

By Mr. Quirk:

Q. Mr. Hogue, as vice president of the Denver and Rio Grande Western, is it part of your duties to keep yourself informed about the movement of traffic between all points currently, in the past, and potential traffic that might be available to being routed via the Denver and Rio Grande?

A. It is.

Q. And have you made studies of this question from time to time?

A. I have.

Q. Did you hear the testimony of Mr. Lynch, Mr. Burns, Mr. Hanson, of the Union Pacific, which is based on the assumption that all of the available traffic that might move

out of the Denver and Rio Grande, should the joint rate sought be established via Ogden?

A. I did.

Q. Are you prepared to testify in rebuttal to those assumptions, and the testimony given by these gentlemen in this respect?

A. I am.

Mr. Collins: Mr. Examiner, before he proceeds, I have [fol. 1652] glanced over these two pages here, and I object to the testimony, because it is obvious from the language in the statements that Mr. Hogue is on the stand here apparently to construe or misconstrue or hope that he can change the estimate that Mr. Earley put into the record.

Now, if Mr. Earley wants to change his own testimony that might be one thing, but it certainly is not the proper procedure for Mr. Earley to sit in the room and have Mr. Hogue interpret Mr. Earley's estimate. We will let the record in that respect stand the way it is.

Mr. Quirk: Mr. Examiner, Mr. Hogue's testimony has nothing to do with what Mr. Earley testified to as the potential traffic. Mr. Hogue is merely testifying to the fact as to what his experience has been with respect to getting the potential traffic, and the share the railroad situated as the Rio Grande is might expect to get.

Exam. Mullen: It seems to me the witness is qualified to make that kind of a statement, Mr. Collins, as I understand it. Mr. Earley's testimony is distinctly an estimated potential. Mr. Hogue, as I understand, is going to testify how much he expects to get of that potential. I don't see any real objection to it.

Go ahead, Mr. Hogue.

The Witness: At the prior hearing in this proceeding at Salt Lake City, beginning December 12, 1949, Witness [fol. 1653] Earley submitted Exhibit No. 3, Section L of which deals with an Estimated Annual Traffic Potential for the Denver and Rio Grande Western Railroad Company in the event of the establishment of competitive joint through rates in connection with the Union Pacific via Ogden, Utah. This estimated potential of 157,762 carloads was based on the total carload traffic originating and terminating on the Union Pacific in the States of Idaho,

Montana, Oregon and Washington for the years 1944 to 1948, inclusive.

In concluding his testimony, Mr. Earley stated on page 174 of the transcript:

"I also wish to point out, with additional emphasis, that this estimate of the traffic possibilities for the Rio Grande route does not attempt to show the number of cars which we think will actually move through Ogden via the route of the Rio Grande in connection with the Union Pacific in the event of the establishment of competitive through rates via that junction."

Notwithstanding the fact that this testimony made it clear that the estimate, which was termed "potential," in nowise represented any attempt to measure the amount of traffic which the Rio Grande might secure through achieving its objective in this proceeding——

Mr. Collins: I object to this, Mr. Examiner. If there was ever any pure argument, this is it. He is interpreting a record which has already been made.

[fol. 1654] Exam. Mullen: As I understand it, his testimony is in rebuttal. I think it is permissible. Go ahead, Mr. Hogue.

The Witness: —numerous witnesses for the Union Pacific have elected to use the described potential as being the minimum amount of traffic which the Rio Grande expected to secure.

Mr. Collins: I move that be stricken. He is arguing about a record that has already been made.

Exam. Mullen: As I understand it, this is merely a preliminary statement. Go ahead.

The Witness: Our estimate of the traffic potential was prepared because we believed that, in the light of the issues in this proceeding, it was our duty to put before the Commission such information as was available to us regarding the volume of traffic that has moved between the territories involved.

The developments in this case now indicate the advisability of informing the Commission in an affirmative manner of my considered opinion as to the proportion of the potential traffic the Rio Grande can reasonably expect to

obtain in the event of the establishment of joint competitive through rates via Ogden. My opinion, which follows, is based on past experience and a special study of the matter.

While there is no way to determine precisely what the effect of our solicitation may be, we do know that the Rio Grande's present participation in Transcontinental traffic [fol. 1655] is only about 10 per cent of that potential despite the fact that certain of our connections aid and cooperate with us in obtaining such traffic. Therefore, there is no basis whatsoever for the assumption by officers of the Union Pacific and other witnesses who testified for that company that we could or would obtain all of the estimated potential.

Mr. Collins: I move that be stricken, Mr. Examiner, because it is purely as argumentative as you could ever imagine.

Exam. Mullen: The witness is stating the basis for his opinion. I think it is permissible. Go ahead.

Mr. Collins: He is saying there is no basis for the assumption of the Union Pacific officers, of this potential, when all they did was take the record made by Mr. Earley at its face value, and there is no need for Mr. Hogue to argue about what the record means as made by Mr. Earley. That is his lawyer's business, I understood.

Exam. Mullen: I believe it is very clear in the record as to the basis used by witnesses for the Union Pacific. That is very clear in the record. Go ahead.

Mr. Quirk: Mr. Examiner, could I make this one observation because of the interruption?

Exam. Mullen: Yes.

Mr. Quirk: If Mr. Collins will take the trouble to look at the testimony of Mr. Lynch, Mr. Hanson, and Mr. Burns on this subject, he will find it is all argument and all conclusion, [fol. 1656] and fantastic ones at that.

Mr. Collins: I think counsel's statement is also an argument and a lot of conclusions.

Exam. Mullen: Well, let's go on ahead and get some facts in the record.

The Witness: On the contrary, there is no probability that the Rio Grande will obtain more than 10 per cent of the estimated potential of Witness Earley in the event joint competitive through rates are established via Ogden,

and in my opinion that amount would be less than 10 per cent. Moreover, instead of assistance from the Union Pacific, such as we have from certain connections on other transcontinental traffic, we would, of course, meet with vigorous Union Pacific resistance to Rio Grande routing via Ogden.

Under these circumstances, it is my opinion that the Union Pacific's estimated gross revenue loss of $49,800,743.85, as used by Witness Burns on page 15 of his statement, is excessive by at least 90 per cent. In other words, his estimate is too high by at least 45 million dollars.

Mr. Quirk: You may cross examine.

Recross-examination.

By Mr. Collins:

Q. How did you arrive at the ten per cent, Mr. Hogue?

A. In several ways. As I testified to in this rebuttal statement, that represents approximately ten per cent of [fol. 1657] our participation in other transcontinental traffic, and we have no reason to think we would do better via Ogden, and we think we would not do as well.

Q. How many carriers are in competition with the Rio Grande in the solicitation of transcontinental traffic?

A. Well, you and I might count them up. We will say the Santa Fe.

Q. All right.

A. And the Southern Pacific.

Q. Yes.

A. The Union Pacific.

Q. Yes.

A. Great Northern, Northern Pacific, Milwaukee—that would be six besides ourselves, and supporters of some of those lines.

Q. Yes. If you succeeded in this case, what railroad competition would you have with respect to the traffic which you seek?

A. Union Pacific is number one, according to the testimony in this case; probably the Wabash and the North Western and Missouri River connections that testified for you would presumably support you.

Q. Have you considered what portion of the traffic that you seek, or is involved in what Mr. Earley said, designated as available to the Rio Grande solicitation? Have you considered what portion of that available potential is originated and terminated on the Union Pacific Railroad?

[fol. 1658] A. The 157,000-plus cars that Witness Earley testified to is an average for the five-year period indicated in Section L of his testimony, originated or terminated in the four northwestern states, and as also stated in his testimony.

Q. I am not sure that he shows the percentage of it which originated on or was terminated by the Union Pacific Railroad as such, did he, do you know?

A. It is my distinct recollection the 157,000-plus cars was only traffic that originated or terminated on the Union Pacific in these four northwestern states, because he had no way of measuring the amount of traffic where the Union Pacific was a bridge carrier.

Q. You wouldn't have the number of cars competing with you in the solicitation for this available potential, would you?

A. The number that would cooperate with us?

Q. You wouldn't have the number of carriers competing against you that you have in the competition for transcontinental traffic generally, is that correct?

A. Perhaps, not quite as many, but I would say more vigorous.

Q. You said Union Pacific would be number one?

A. That is correct.

Q. But with this six or seven large carriers competing with you in the solicitation of transcontinental traffic, you would still get approximately ten per cent of the available potential there; is that correct?

[fol. 1659] A. As to transcontinental traffic?

Q. Yes.

A. We presently get around ten per cent, yes sir.

Mr. Collins: That is all, thank you.

Further redirect examination.

By Mr. Quirk:

Q. Mr. Hogue, you have joint rates from California points in connection with the Southern Pacific and the Union Pacific, do you not, and also the Western Pacific?

A. That is correct.

Q. Can you state what your experience has been with traffic to and from California points served by the Union Pacific?

Mr. Collins: I object to that, Mr. Examiner. The witness didn't talk about those things in his direct testimony. It is outside of it entirely.

Exam. Mullen: That has reference to the ten per cent you now obtain on transcontinental traffic, that question?

Mr. Quirk: Mr. Examiner, the witness surely can testify as to his experience with the Union Pacific where he does have joint rates, and that is what I asked him to do.

Exam. Mullen: That has reference to the traffic he already obtains; that is, transcontinental traffic, is that right?

The Witness: That is right.

Exam. Mullen: That may be done.

The Witness: Will you repeat the question?

[fol. 1660] (Question read.)

The Witness: My experience has been that it is more difficult for the Rio Grande Railroad to obtain Southern California competitive traffic than to obtain that to or from any other territory. Therefore, the ten per cent approximate average of what we do obtain, of all transcontinental traffic would be reduced considerably if we only considered Southern California.

In my opinion, we obtain less than five per cent of Southern California's competitive traffic, either eastbound or westbound, because of the competition involved and our direct service route to Los Angeles via Salt Lake City and the Union Pacific.

We naturally encounter vigorous resistance from the Union Pacific to routing our lines to Salt Lake, and Union Pacific to Los Angeles. Naturally, they prefer the long

haul from the Missouri River, and make any effort to secure any future business, that what we might obtain by our line.

Does that answer the question?

Mr. Quirk: Yes sir. I have no further questions.

Mr. Collins: I have nothing further.

Exam. Mullen: That is all.

(Witness excused.)

Mr. Quirk: I call Mr. Earley.

THOMAS K. EARLEY was recalled and testified further as follows:

Further direct examination.

[fol. 1661] By Mr. Quirk:

Q. Mr. Earley, you are Thomas K. Earley and you testified in this proceeding at Salt Lake City?

A. Yes sir.

Q. Have you prepared an exhibit of rate comparisons, Mr. Earley?

A. Yes.

Mr. Quirk: Could we mark that for identification, Mr. Examiner?

Exam. Mullen: Exhibit 35.

(Complainant's Exhibit No. 35, Witness Earley, marked for identification.)

Mr. Collins: Is it the exhibit of five pages?

The Witness: That is right.

Mr. Quirk: It is the statement showing comparison of car mile and tone mile earnings on various commodities.

Exam. Mullen: That will be marked Exhibit 35.

By Mr. Quirk:

Q. Mr. Earley, will you make such comment with respect to that exhibit as you think necessary?

A. The statement is largely self-explanatory. It is a

comparison of the car mile and ton mile earnings on various commodities from or to representative points in transcontinental territory via routes over which through competitive rates are presently applicable via the Rio Grande with car mile and ton mile earnings on the same commodities, from and to representative points west of Ogden, Utah on the Union Pacific.

These commodities selected for comparison, and the [fol. 1662] points of origin and destination are largely those that were used in my previous testimony in connection with the sought rates via Ogden and the Union Pacific.

For comparison purposes, other destinations or points of origin in transcontinental territory about equi-distant, from or to the eastern points of origin or destination, as are the points we used to illustrate the sought rates via Ogden were used.

I think the exhibit largely is self-explanatory, and it is fully authenticated as to tariff authority and distances used.

Exam. Mullen: Mr. Earley, what particular testimony is it offered to rebut?

The Witness: Witness Stilling, in his prepared testimony and exhibit, has attempted to show, as he describes it, the low level of transcontinental rates, and has attempted to show that these rates being what he terms "subnormal" are too low to share with another line, in other words. The revenue accruing to his line under existing transcontinental rates, according to Mr. Stilling, is at such a level that his line should not be required to join in through rates via Ogden with our line, thereby dilute the revenue of the Union Pacific by such participation.

By Mr. Quirk:

Q. What does this exhibit show in that respect, Mr. Earley?

A. This exhibit shows that presently via routes which [fol. 1663] are comparable, other transcontinental lines, including the Rio Grande, participate in these same rates, and this exhibit shows the revenue yield per car mile and ton mile to those routes.

Exam. Mullen: The D&RGW participates in all the routes shown?

The Witness: It participates in all of the routes shown in the second line in each entry.

Exam. Mullen: All right.

By Mr. Quirk:

Q. You have no further comment on that exhibit, I take it?

A. No sir.

Q. All right. Now, have you prepared an exhibit which has been distributed, which has the heading "Revenue ton miles produced by all railroads," in the State of Colorado—wait a minute—and other states, compared with the taxes paid?

A. Yes.

Mr. Quirk: Off the record.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Quirk: The exhibit number will be 36?

Exam. Mullen: Exhibit 36.

Mr. Quirk: We will have to number the pages, gentlemen, so we can identify them.

[fol. 1664] Exam. Mullen: Number them off the record, beginning with Colorado.

(Complainant's Exhibit No. 36, Witness Earley, marked for identification.)

By Mr. Quirk:

Q. Will you make an explanation of this exhibit as you deem necessary, Mr. Earley?

A. Much has been said in the testimony so far introduced in this case about taxes and the effect of railroad revenues upon taxes, particularly upon the taxes paid in the various states. We have prepared and have shown in Exhibit No. 36 for nine of the western states which are directly or more or less indirectly concerned with this proceeding the revenue ton miles produced by all of the railroads in these states, and the total taxes paid to the various states by all of the railroads for certain calendar years.

Those years are 1939, 1940, 1941, and 1946, 1947, and 1948. The war years were omitted because the distortion in ton miles during those years was, of course, abnormal, and should not be used for a comparative purpose such as this. It will be noted that of the nine states dealt with in this exhibit, taking the year 1948 as compared with 1947, that all of the states except Utah received an increase in the taxes paid by the railroads within those states.

On the other hand, all of the states, except Colorado — within all of the states except Colorado, the railroads ex- [fol. 1665] perienced a decrease in the number of revenue ton miles produced.

The purpose of this exhibit is to show graphically that there is no definite pattern or relationship between the payment of taxes by the railroads and the revenues received by those railroads. The revenue does not vary exactly as does the tax payments.

Exam. Mullen: Just a moment. You say revenue. Your figures are based on revenue ton miles, the volume of traffic.

The Witness: Volume of traffic would have been a happier choice there, yes.

By Mr. Quirk:

Q. Have you finished with that exhibit?

A. I have.

Q. Now, you heard the testimony of Mr. Stilling in this proceeding, I take it?

A. Yes sir.

Q. Have you some rebuttal testimony to certain testimony made by him?

A. Yes, I have prepared such testimony.

Q. Will you proceed to rebut the statements made by Mr. Stilling, in your own way?

A. Mr. Stilling, at pages 79 to 83 of his prepared statement, discusses the testimony of Mr. Reed (Tr. p. 174 to 188) and Snooks (Tr. p. 258 to 271) about rates on fruit for freezing in transit at Delta, Colorado.

[fol. 1666] On pages 79 and 80, Mr. Stilling points out that the transit privilege named in Rio Grande ICC No. 792, authorizing the freezing in transit arrangement at Delta under which Reed's plant operates, will not apply on ship-

ments originating in Idaho, Oregon, Washington, or California, and suggests that "Apparently the Rio Grande can satisfy that particular witness (Reed) by broadening the scope of its transit tariff."

The answer is not that simple. Obviously there would be nothing accomplished by including Idaho as an origin state since we do not have joint through rates from Idaho today. Mr. Reed explained why he could not use California fruit in his operation. (Tr. p. 186 and 187.)

Mr. Collins: Now, Mr. Examiner—pardon me, Mr. Earley—this very type stuff has been ruled by the Examiner time and again as argumentative and not admissible when it was in the testimony of the Union Pacific witnesses. He is commenting on other witnesses, and construing and contrasting and what not, just as counsel will when the time comes.

Mr. Quirk: Mr. Examiner, Mr. Stilling was on the witness stand, drawing conclusions that rates were depressed. Mr. Lynch devoted a large part of his time commenting on Mr. Bradford's testimony. So did Mr. Hanson; so did Mr. Edens. It is a most extraordinary thing for Mr. Collins of all people to raise this question.

Exam. Mullen: We need not argue that. As I understand [fol. 1667] it, the direct statement of Mr. Stilling, which the witness is now quoting, and this witness is merely stating why the requirements of that particular shipper could not be satisfied in the way Mr. Stilling testified to.

Mr. Collins: If he is going to rebut it, he ought to rebut it with facts.

Exam. Mullen: As I understand it, this witness is the assistant freight traffic manager. He certainly can testify about the condition.

Mr. Collins: If he uses facts instead of argument, that is all right.

Exam. Mullen: Well, there is a little argument mixed up with it, but we will let it go.

The Witness: Since Witness Reed testified that he would not use California fruit at Delta, obviously, no purpose would be served by amending the transit tariff to apply on California traffic. Since Reed testified that he wants through competitive rates available via his plant at Delta

from Northern Utah and Idaho only, the question of amending the transit tariff to include Oregon and Washington origin territory is academic.

Exam. Mullen: Is that limited solely to the requirements of Reed?

The Witness: That is all I am talking about.

Exam. Mullen: Then it is academic only as to shipper?

The Witness: That is right. We have no requests from [fol. 1668] any other operator, since there is no other operator but Reed in the business.

Exam. Mullen: All right.

The Witness: We are willing to change our transit tariff to include all origin territory from which joint through competitive rates apply upon request.

On pages 80 and 81 of his prepared statement, Mr. Stilling quotes figures of the Department of Agriculture about the quantities of fruit produced in certain localities in Colorado and Utah, and observes that "If Skyland Fruit Company is having difficulty in operating its plant to capacity, it would appear to be for some reason other than adequate supplies of fruit."

In view of Mr. Reed's two statements on pages 183 and 186 that his "inability to get sufficient quantities" and "the total available to a processing plant isn't enough to satisfy our demand," it would seem that Mr. Stilling's argument does not supply the answers. Reed has to go beyond the sources Mr. Stilling quotes; the sources he wants to reach are Northern Utah and Idaho.

Mr. Collins: Excuse me, Mr. Earley.

Exam. Mullen: That is argumentative.

Mr. Quirk: He is answering an argument. All this testimony of Mr. Stilling, Mr. Lynch, Mr. Hanson—Mr. Stilling we are dealing with not—I move it be stricken if this is to be [fol. 1669] stricken. He is answering an argument.

Exam. Mullen: We don't want all argument. If this witness has some facts to support it, I think he should state those facts.

Mr. Quirk: Well, Mr. Examiner, Mr. Stilling gratuitously suggested how this problem could be cured.

Exam. Mullen: Yes, he has answered that.

Mr. Quirk: He has not completely answered the question yet.

Exam. Mullen: But the rest is argumentative; anyhow that argument part will be disregarded. Go ahead, Mr. Earley.

The Witness: Mr. Stilling's testimony on pages 81 to 83 about the level of the rates on fresh fruit from Brigham, Utah, Logan, Utah and the Boise-Payette District in Idaho to Chicago, indicates that he has missed the point of the Reed-Snook testimony.

The outbound commodity from the transit station (Delta) is frozen fruit—not fresh fruit. Therefore, the through rate on frozen fruit from Utah and Idaho origin points to destination must be applied on the transited commodity.

I have prepared and submit Exhibit No. 37 to show this situation——

Exam. Mullen: That will be Exhibit No. 37.

(Complainant's Exhibit No. 37, Witness Earley, marked for identification.)

[fol. 1670] Mr. Quirk: That is headed "Frozen Fruits, carloads."

The Witness: —and direct attention to the rates on frozen fruits shown on Lines 13 to 16, inclusive, which apply to Chicago. The rates shown on Lines 15 and 16 are from Seattle and likewise the rates from Boise and Payette.

It will be noted that the rates on the higher minimum weight from Ogden and from Brigham to Chicago are the same, while the rate on the lowest minimum weight (40,000 pounds) is only two cents per cwt. lower from Ogden than from Brigham.

It is easy to understand from this situation why Mr. Snooks testified that, when fruit was shipped to the Delta plant for freezing, the Delta processor instructed that the fruit be trucked to Ogden and loaded on the Rio Grande since the transit rate would be applicable from that point. In the event the price was unfavorable, the grower would not be able to stand the cost of the trucking and the fruit would be left on the trees or on the ground.

By Mr. Gibbons:

Q. Mr. Earley, referring to your Exhibit No. 35, in response to a question from the Examiner, you stated that the routes in which the Rio Grande participates are the routes shown in the second line in each case. Is that correct, or was it the first line?

A. I want to correct that. The first entry is the route which presently applies via the Rio Grande.

By Mr. Quirk:

Q. You have no further comments, have you?

[fol. 1671] A. No sir.

Mr. Quirk: You may cross examine.

Mr. Collins: No questions.

Mr. Quirk: I offer Exhibits 35, 36 and 37 in evidence.

Exam. Mullen: Any objection? If not, they will be received in evidence.

(Complainant's Exhibits 35, 36 and 37, Witness Earley, received in evidence.)

Mr. Quirk: May we have a recess?

Exam. Mullen: Yes, we will take a ten-minute recess.

(Recess taken.)

Exam. Mullen: We are ready to proceed, gentlemen. Call your witness.

Mr. Quirk: Call Mr. Hadden.

J. M. Hadden was sworn and testified as follows:

Exam. Mullen: Mr. Hadden, have you been a witness before?

The Witness: No.

Exam. Mullen: State your name for the reporter.

The Witness: My name is *S. J.* Hadden.

Direct examination.

By Mr. Quirk:

Q. And your business address?

A. 1531 Stant Street, Denver, Colorado.

Q. With what company are you connected?

A. I am chief clerk to the president, Denver and Rio Grande Western Railroad Company.

[fol. 1672] Q. How long have you been with the Denver and Rio Grande Railroad?

A. Since December 3, 1919.

Q. Will you state some of your other experiences in corporate affairs?

A. I have been for a number of years secretary of the subsidiary companies of the Rio Grande Railroad. That includes Rio Grande Motorway, Inc., Larson Transportation, Rio Grande Land Company.

I am also connected with a number of corporations which are not subsidiaries of the Rio Grande Railroad, as president and director for a number of years of a water company; secretary and director of a loan company; as president and director of a printing and publishing company. I have also had other connections which do not exist at the present time.

Q. Can you state in a brief manner the nature of your duties with the Denver and Rio Grande Western Railroad?

A. My present position, I have general supervision of the clerical work in the president's office, although I spend a great deal of my time on special assignments, research work of various kinds.

Q. Were you with the property that is now the Denver and Rio Grande during the reorganization proceedings in the courts?

A. Yes. In my present position, except that I was chief clerk to the trustees during the reorganization period.

Q. Have you prepared an income statement for the Union [fol. 1673] Pacific during the years 1945 to and including 1948?

A. I have a condensed comparative income account for the Union Pacific Railroad Company for the years 1945, 1946, 1947 and 1948, which was prepared from the annual reports of that company to its stockholders.

Mr. Quirk: May we mark that for identification, Mr. Examiner?

Exam. Mullen: That will be marked as Exhibit 38.

(Complainant's Exhibits No. 38, Witness Hadden, marked for identification.)

By Mr. Quirk:

Q. That exhibit is self-explanatory and doesn't require any comment from you.

Now, have you also prepared a similar exhibit dealing with the income account of the Denver and Rio Grande Western Railroad covering the same years, 1945 to 1948, inclusive?

A. I have such a comparative statement.

Mr. Quirk: Shall we mark that as Exhibit 39?

Exam. Mullen: 39.

(Complainant's Exhibit No. 39, Witness Hadden, marked for identification.)

By Mr. Quirk:

Q. Have you prepared another exhibit which is headed, "Dividends declared by Union Pacific Railroad Company, during the years 1939 to 1948, inclusive," consisting of two sheets?

A. I have such a statement, which is in two parts. The first page is headed "Dividends declared," and the second [fol. 1674] page being headed "Dividends Paid."

We concluded it was best to put it in this form because of the fact, in some years at least, the dividends declared in the year are payable after the first of the year.

Mr. Quirk: Shall we mark that as Exhibit 40?

Exam. Mullen: Exhibit 40.

(Complainant's Exhibit No. 40, Witness Hadden, marked for identification.)

By Mr. Quirk:

Q. Have you any comment to make on Exhibit 40, Mr. Hadden?

A. I might call attention to the fact that the dividends are shown in dollars per share of stock, and there was a stock split effective July 1, 1948, where the number of shares of both common and preferred stock were doubled with no increase in the total par value of the stock; that is, the par value of stocks per share were cut in half. So that by reference to the first page, "Dividends Declared,"

you will note that the ten dollars declared in 1947 compares with really double the amount shown for 1948, being $6.00 on a $50.00 par, or $12.00 on $100 par, compared with $10.00 declared in the year 1947.

Q. Now, have you examined authorities and records available to you in order to determine the aggregate amount of dividends which the Oregon Short Line Railroad Company has paid to stockholders, Union Pacific being the principal one, during a certain period?

[fol. 1675] A. Yes sir.

Q. And what period is that?

A. I took from the records available, which were the Commission's valuation——

Q. Wait a minute, I have not asked you about the record. What period does it cover?

A. It covers the period 1906 through 1931.

Q. What sources have you relied upon—first, what is the aggregate amount of the dividends paid by the Oregon Short Line to the Union Pacific during that period?

A. The aggregate dividends paid by the Oregon Short Line during the period 1906 through 1931, as I was able to ascertain them, were $252,246,875, which was 444.68 per cent of the capital stock outstanding.

Q. You are familiar with the statement or testimony appearing on page 3 of the prepared statement of P. J. Lynch, vice president of the Union Pacific Railroad, in which he states that the valuation report 44, of the Interstate Commerce Commission, discloses the Union Pacific put more than 14 million dollars in the original construction and equipment of the Oregon Short Line Railway Company.

A. I heard that testimony, yes sir.

Q. Now, your reference to the payment of dividends of the Oregon Short Line Railway Company relates more or less to that statement Mr. Lynch made, does it not?

[fol. 1676] A. Well, it relates to the capital stock of the Oregon Short Line outstanding.

Q. What I mean is, Mr. Lynch stated what the original investment was, and you are merely testifying to what the Union Pacific received from the Oregon Short Line during the period 1906 to 1931, inclusive?

A. That is correct, yes sir.

Q. Mr. Hadden, will you explain briefly the sources relied upon by you in determining the dividend of $252,000,000 plus that you have referred to?

A. The Commission's valuation reports, Volume 44, some of the annual reports of the Union Pacific Railroad Company, Poor's and Moody's manuals.

Mr. Quirk: You may cross examine.

Mr. Collins: Mr. Examiner, just for purposes of the record—well, what I was about to say, I guess, is a little premature. I will wait until counsel offers these exhibits.

Cross-examination.

By Mr. Collins:

Q. Mr. Hadden, has the D&RG Railroad paid any dividents in recent years?

A. Yes sir.

Q. For how many years?

A. Since the effective date of the reorganization.

Q. That was what time?

A. And a short period before. The payments were made [fol. 1677] since reorganization, but they also covered a short period before the reorganization was actually consummated.

Q. Do you recall the exact date of the reorganization?

A. The reorganization was effective as of April 10, 1947.

Q. Can you state offhand what dividends the railroad has paid since that time annually?

A. We paid half of a dividend on the preferred stock.

Q. How much was that?

A. The preferred stock is five dollars per share, for the two years prior to the effective date of the reorganization, and the preferred dividends have been paid in full since. The common dividends have been paid at the rate of two dollars per share since the date of reorganization.

Q. Do you have a preferred stock on which you pay?

A. We pay five dollars per share.

Q. Oh, five dollars. Well, you paid these dividends at the rate you mentioned, in 1949, did you?

A. Yes sir.

Q. As well as the previous years you referred to?
A. Yes sir.

Mr. Collins: That is all.

Redirect examination.

By Mr. Quirk:

Q. Mr. Hadden, inasmuch as the gross revenue for the Union Pacific for 1949 has been put in the record by Mr. Hanson, do you have the gross revenue of the Denver and Rio Grande for the year 1949 now?
[fol. 1678] A. I have a copy of the 1949 annual report to stockholders from which I can give it.
Q. Just give the gross revenue at this time.
A. The gross revenue for 1949 was $65,689,065.54.

Exam. Mullen: What figure does that correspond to on Exhibit No. 39 for the year 1948?
The Witness: That would correspond to the figure of $68,501,024.48.
Exam. Mullen: That is gross railway operating revenues, then?
The Witness: That is correct, yes sir.
Mr. Quirk: I offer Exhibits 38, 39 and 40 in evidence.
Exam. Mullen: Any objection?
Mr. Collins: Yes, Mr. Examiner, although the Union Pacific has attempted to furnish for the record some considerable data that is financial in nature, our doing so does not affect my legal view that matter of this sort is irrelevant in this case, so I object to the admission of the Exhibits 38, 39 and 40, on the grounds of irrelevancy, and I will state for the record my particular reasons in doing so is I don't want the record to be left so I can't have full freedom in arguing the print in brief and in oral argument that in view of the fact that it has the sentence, I believe it is of paragraph 4, of Section 15, of the Interstate Commerce Act, in my judgment prohibits the Commission from giving consideration to the financial condition of a railroad [fol. 1679] in the through rates case, and it expressly says no such through *rates* and rates shall be compelled to give financial aid to a carrier participating in the through routes and rates.

Mr. Quirk: Mr. Examiner, it is a matter of indifference to me whether Exhibit 38 is ruled out or not. I thought in a case of this character that the Commission would want to know something about the financial conditions, since the physical operating conditions have been described.

Exhibit 38 is not offered in respect to any claim of financial need. On the contrary, this complainant does not make any claim of financial needs. Moreover, the facts in this case show the route is opened, and that traffic moves through it, and the task for the Commission is to prescribe just, reasonable and undiscriminatory rates.

Now, as to the other, I have had the impression listening to the evidence in this case that the Union Pacific would be properly rude if this joint rate case was entered. They have certainly made their own financial conditions relevant by the kind of testimony they put in, and by the position they have taken. They have talked about what they have done for this country out here.

Mr. Lynch referred to the original investment in the Oregon Short Line, and they have made that relevant. We have not made it relevant, and under our complaint it need not have been put in.

[fol. 1680] Mr. Collins: Mr. Examiner, Mr. Quirk is in no position as I said the other day to deny the position of the president of the railroad, and by meeting the situation they presented I am not taking the position that financial data or the financial condition of railroads is relevant.

Mr. Quirk: Mr. Examiner——

Exam. Mullen: The Examiner will receive the exhibits. They are admitted in evidence.

(Complainant's Exhibits 38, 39 and 40, Witness Hadden, received in evidence.)

Mr. Quirk: Can I comment on that last remark?

Exam. Mullen: No, I don't think it will be necessary.

(Witness excused.)

Mr. Quirk: Mr. Bradford.

R. K. BRADFORD resumed the witness stand and testified further as follows:

Redirect examination.

By Mr. Quirk:

Q. Mr. Bradford, you testified in this proceeding at Salt Lake City?

A. Yes sir.

Q. Did you hear the testimony of Mr. Lynch, Mr. Hanson, and Mr. Edens with respect to certain operating conditions?

A. I did.

Q. Are you prepared to testify in rebuttal to certain of the testimony by each of those gentlemen?

[fol. 1681] A. I am.

Q. Will you proceed to do so?

A. On page 9 of his prepared statement, Mr. Edens said: "Union Pacific's southbound traffic from Idaho, Montana, Oregon and Washington for delivery to D&RGW at Ogden is received in trains from Pocatello normally in the Union Pacific Yard. Since there is no direct track connection between the lines of the Union Pacific and the D&RGW at Ogden, it is necessary that cars interchanged to the D&RGW at Ogden be delivered by the OUR&D Co."

Still later Mr. Edens explained there is no direct track connection between any of the railroads involved at Ogden, except through the Ogden Union Railroad and Depot Co. There is a connection and now an interchange of certain traffic between the Union Pacific and Rio Grande through the use of the facilities of the Depot Co., jointly owned by Southern Pacific and Union Pacific. The only question left, therefore, is whether or not the Depot Co. can handle an increase in this interchange of business between the two companies.

On Page 18 of his prepared statement, Mr. Edens said that in July 1949 he handled 2359 trains of 76 daily through the Depot facilities at Ogden, and that during the entire year of 1949, he handled 1,955,219 cars through the present Depot Co. facilities. In his testimony on April 7th he stated that in July, 1945, which he designated as the peak year,

[fol. 1682] there were handled through Ogden Depot Co. terminals 284,711 cars in 2966 trains, or an average of 96 trains per day and that he handled during the entire year of 1945, 2,847,277 cars.

On Page 18 of his prepared statement, Mr. Lynch said:

"The yard facilities at Ogden present an insurmountable problem."

In his verbal testimony, Mr. Edens stated that the Depot Co. facilities at Ogden were now saturated and could handle no additional business.

The best answer to this question is the fact that during 1945 Mr. Edens testified that during the peak month an average of 20 more trains per day were handled through the yard than during the peak month of 1949.

Mr. Collins: Mr. Examiner, I object to any further reading of these two paragraphs. They are purely argumentative.

Exam. Mullen: The present paragraph is argumentative; I think that can come out, but the witness can state his opinion based on the figures he has read. That paragraph at the top of page 2 should come out as argumentative.

Mr. Quirk: He can state as a fact there were so many more cars handled in 1945 than there were in 1949.

Exam. Mullen: Certainly.

Mr. Collins: The record shows that already.

Exam. Mullen: All right. The next statement, as I understand it, is this witness' opinion based on those figures. He can state his opinion.

[fol. 1683] Mr. Quirk: Wait a minute, we haven't got the figures yet.

By Mr. Quirk:

Q. Will you state the fact, Mr. Bradford, what Mr. Edens' testimony shows with respect to the year 1945 and the year 1949?

A. His testimony showed that he handled 20 more trains per day during the peak month in 1945 than he did during the peak month in 1949, and that for the entire year of 1945 he handled through the Depot Company facilities at

Ogden 892,058 more cars than were handled through the facilities in 1949.

Q. Now proceed with the next paragraph.

A. Based upon Mr. Edens' testimony and my knowledge of this situation at Ogden, it is my opinion that all of the business heretofore testified to as being susceptible to Rio Grande solicitation and routing could be handled through the present Depot Co. yards at Ogden. It may be that some of the methods heretofore used by the Depot Co. should undergo a change, but since the Superintendent of the Depot Co., Mr. Edens, has testified that in 1945 he handled 892,058 cars more through the facilities he has than he did in 1949, the facilities are not now being used to the saturation point.

Exam. Mullen: What do you mean by that statement, "all of the business heretofore testified to as being susceptible to Rio Grande solicitation and routing"? What figure did you have in mind there?

The Witness: I had in mind the figure as has been con- [fol. 1684] stantly used in this case, 157,000-odd loads, and approximately 50,000 empties.

Exam. Mullen: All right.

The Witness: On Page 19 of his written statement, Mr. Edens states the maximum number of cars received by the Rio Grande from the Depot Company during February, 1949, was 369. He later stated this figure covered the movement in one direction only. On many days during the period 1942 up to February, 1949, Rio Grande handled more than 500 cars per day in and out of Ogden Yards.

Mr. Collins: Just a moment, Mr. Examiner. I wonder if you really mean that, Mr. Bradford. Your interests don't go into the Ogden yard, do they? Do you mean you delivered that many in your freight yard there and took that many out of your freight yard?

The Witness: I mean that we delivered and received from the Ogden Union Depot Company, at Ogden, on many days during the period 1942 to 1949, more than 500 cars per day.

Mr. Collins: But I get the inference here, maybe you made deliveries in the Ogden yard. It is a fact that you only deliver on your tracks there at Ogden and pull from your tracks, isn't it?

The Witness: That is correct.

Mr. Collins: All right.

The Witness: And to that extent, on many days we de- [fol. 1685] livered on our tracks and pulled from the other tracks more than five hundred cars.

Mr. Collins: All right.

The Witness: All of which were handled by the Depot Company.

On page 11 of Mr. Edens' prepared statement, speaking of trains arriving in September, 1949 from SP, he stated such trains for UP "were held in the Ice House Yard four hours and thirty-eight minutes per train and D&RGW perishable traffic from these trains averaged six hours and nine minutes from time of arrival until delivery to the D&RGW was accomplished."

October 7, 1936, in a telegram from Mr. W. B. Kirkland, then Superintendent of Transportation of Southern Pacific (co-owners of Ogden Terminal) to me, then Superintendent of Transportation of the D&RGW, he stated in reference to California and Oregon traffic, the delivery time would be four hours. This traffic is due to arrive via Southern Pacific at 4:40 PM Pacific Time (5:40 PM Mountain Time) and due to us at 9:40 PM Mountain Time. Since the average time quoted by Mr. Edens is two hours and nine minutes more than the owner, Southern Pacific, agreed would be consistent, there must be some inefficient methods in use.

Despite the handicap of slow service through the Ogden terminal, D&RGW service and solicitation has resulted in the interchange of business between the Southern Pacific and the Rio Grande at Ogden reaching very substantial [fol. 1686] proportions. We are confident that proper blocking at Pocatello, practical as testified to by Mr. Hanson, with some change in the present methods of handling at Ogden, would result in much improvement in the handling through that point.

On Page 20 of his written statement, Mr. Edens uses a cost figure of $4.63 per car on all cars handled by the Depot Co. in the freight terminal. On Page 22 of the same statement, he outlines the method he thinks he would use for the handling of the interchange of traffic between Union

Pacific and Rio Grande, which handling he thinks would require the movement of each car at least twice, and then quotes the cost of interchanging being $9.26 per car. He then uses a potential figure of 207,762 cars, which is arrived at by taking the so-called potential loads and adding 50,000 empties, multiplies hat figure of 207,762 by $9.26 and reached the following conclusion, and I quote:

"In a new and additional expense to the Union Pacific annually of $1,919,820, which the Union Pacific would have to bear in addition to the amount of expense it already bears in connection with operation of the Ogden terminal."

He said that all of this additional expense would accrue to Union Pacific because the D&RGW would bear no part whatever of this additional burden placed upon the Union Pacific, and further said this would be free interchange service to D&RGW on this traffic.

If the figure used by Mr. Edens of $4.63 per car correctly [fol. 1687] represents the cost of handling a car through the Depot Co. terminals, then it includes as cost the handling of stock cars, interchange of cars to and from Southern Pacific, interchange of cars to and from the Rio Grande, Union Pacific and Southern Pacific, the handling of all cars through the Ice Dock Yard, the Union Pacific, Southern Pacific and East Yard.

At present there is a substantial movement of cars to and from Idaho and the Northwest through the Ogden yard via Union Pacific. Idaho grain now moves into and out of the terminal; Idaho and Northwest livestock now moves into and out of the Ogden terminal.

There is a substantial movement of cars westbound via Union Pacific to Salt Lake for partial unloading or for storage or fabrication in transit, and these cars now move in and out of the Depot terminal enroute to Idaho. The use of the number of the cars susceptible to Rio Grande routing as the number of cars which would move through Ogden terminal without giving due consideration to the fact that many of the cars which might move via Rio Grande are now moving through Depot terminal facilities via Union Pacific will not give a correct answer to this question.

To get such a figure of additional costs, the net change should be considered. Additional cars moving through a yard should decrease the average cost per car as yard forces, clerical, switching, supervision will not fluctuate [fol. 1688] from day to day to the extent that cars will, and the total cost of the yard will be spread over a larger number of cars.

The figure of $1,919,820, used by Mr. Edens' method of figuring to represent additional cost to Union Pacific for the movement of the potential traffic through the Depot Co., is wrong to the extent that car moves are now being made. If this cost is material to the case, then the reduction in cost to the Union Pacific at yards east of Granger should also be considered as a credit. These costs are shown in Mr. Hanson's Exhibit 15, on pages 9, 10, 11, 12 and 13, where he lists loss of employment to Union Pacific employes.

On Page 23, Mr. Edens repeats his statement that the D&RGW already enjoys the benefit of free interchange to and from the Union Pacific and Southern Pacific on a considerable volume of traffic, indicating that he fails to understand that it is the duty of the inbound carrier to make delivery of business to the outbound carrier.

The point of interchange is agreed upon and when the inbound carrier delivers business to that point the expense of such delivery is its; on the outbound move, the outbound carrier goes to the point of interchange and moves the traffic—and at no expense to the delivering carrier. At Ogden the Depot Co. is the agent for the Southern Pacific and Union Pacific and it is the duty of the agent of Union Pacific to make delivery of its traffic to the agreed point of interchange.

[fol. 1689] Mr. Collins: Now, Mr. Examiner, it seems to me that is nothing but argument. We know the legal responsibilities of these carriers.

Mr. Quirk: Mr. Examiner, before you rule, Mr. Hanson dealt with these questions in just that manner.

The Witness: Mr. Edens.

Mr. Quirk: Mr. Edens. For example, here is a sample of it——

Exam. Mullen: I don't think it is necessary to refer to that, Mr. Quirk.

Mr. Quirk: Well, the only point is, where technical men deal with these technical situations, there is about as much argument in Mr. Edens' and Mr. Hanson's testimony as you will generally find. I don't object to much of it, because I realized when you are dealing with this type of question there is a certain amount of argument in the nature of reasoning which is necessary for the Commission or others to understand it.

Exam. Mullen: As I understand it, this testimony is to show what the duty is of the Rio Grande Railroad with respect to this interchange. Is that the purpose?

Mr. Quirk: Yes.

Exam. Mullen: That may be stated. The objection is overruled. Go ahead. As I understand it, he is merely stating the particular portions of the testimony to which his rebuttal is directed.

Mr. Collins: Well, I don't see it in any light except the [fol. 1690] discussion and actual argument about facts that are already in the record, without supplying additional facts.

Mr. Quirk: What do you think this is, may I ask?

Exam. Mullen: We don't need to talk about that, Mr. Quirk. We can read it. Go ahead, Mr. Witness.

The Witness: The Rio Grande has no duty in connection with these loads until they are on the interchange. In the opposite direction, the Rio Grande delivers all business to the designated interchange and at no expense to Ogden Depot Co. or Union Pacific.

As a further clarification, the Union Pacific operates its north yard at Salt Lake and delivers to Rio Grande in its Roper Yard and at no expense to the Rio Grande up to the time of delivery; Rio Grande operates its Roper Yard and at its own expense delivers business to Union Pacific's North Yard. Neither road has up to now accused the other of getting any free interchange.

Mr. Edens, Page 20 of his testimony, states: "Even if it were possible to expand the facilities of the OUR&D Company and the D&RGW to accommodate any substantial increase of traffic to be interchanged between them, such ex-

pansion would not solve but only aggravate the present awkward, cumbersome facilities, because of the crossing necessary by reason of the yards lying at right angle, and by reason of the location of certain Rio Grande facilities."

While this crossing presents a problem, it is far from [fol. 1691] insurmountable. In November, 1942, we made an offer to move certain business to and from Southern Pacific via our line.

Exam. Mullen: Just a minute. What does that statement mean?

The Witness: It means that in November, 1942, when the question of capacity of the Ogden Yard was raised, the Rio Grande Railroad at that time made an offer, or a suggestion, that it would handle certain business now moving—at that time moving through Ogden Depot Yard by its own line between Ogden and Salt Lake, in order to relieve one of the conditions then complained of, and the purpose of that is to show you that the progress that was made from that time on in trying to solve some of the problems that have faced us at Ogden for some time.

Exam. Mullen: That interchange would be made at some point other than the Ogden yard, is that it?

The Witness: On this particular business, the interchange was to be made at Ogden, but because of the layout of the facilities at that point it was suggested that considerable improvement could be made in the movement, if the Rio Grande would consent to handle that business over its line between Salt Lake and Ogden.

Exam. Mullen: Yes, all right.

The Witness: It refers particularly, Mr. Examiner, to troop trains that the Rio Grande was interchanging—that was being interchanged at Ogden.

[fol. 1692] Mr. Collins: Mr. Examiner, it has no relevancy here, because the traffic that the D&RG wants in this case is to be interchanged in a north and south—I mean it is north and south traffic, and is interchanged with the Union Pacific, not the Southern Pacific.

Exam. Mullen: I understand that. I wanted an explanation of this statement. That is the reason I asked the question. Go ahead.

The Witness: In January, 1943, there was a meeting with

SP and UP vice presidents at Ogden, in connection with the problem, at which time it was agreed by both to recommend a plan to remove this crossing. This plan, briefly, provided some consolidation of facilities, and a new entrance via a new track in the vicinity of the crossing.

Additional trackage was also provided about the same time in the way of new leads; additional trackage was also provided in the East Yard. D&RGW granted an easement to the Depot Company for certain track changes they desired to make and some of these changes were made. An additional crossing was installed June 6, 1943.

Certain ground was necessary to permit increasing the ice dock yard facilities and difficulty was encountered. Rio Grande suggested everything but the ice house changes be progressed so that the benefits of the other improvements might be obtained. The proposed balloon track would have enabled Rio Grande to pull their trains into and [fol. 1693] out of Ice Dock Yard, thus relieving the leads of the shuttling of switch engines back and forth over the crossing, and this would have improved the yard performance.

Exam. Mullen: Just a moment. I suggest the next sentence be stricken.

Mr. Quirk: Which one is that?

Exam. Mullen: That is argumentative.

Mr. Quirk: Mr. Examiner——

Exam. Mullen: We can go on from there.

Mr. Quirk: I want you to notice what Mr. Lynch said back here, "the yard facilities at Ogden present an insurmountable problem."

Exam. Mullen: I understand that. This testimony is in answer to that. I am speaking of this particular sentence.

Mr. Quirk: I am making the point Mr. Lynch reached the conclusion, and this witness can answer it only in the manner he is attempting to do it.

Exam. Mullen: I am not ruling out any part of his testimony. I am merely suggesting the next sentence come out, as argumentative.

The Witness: The matter was again discussed with both Union Pacific and Southern Pacific in 1945, but without success. January 30, 1945, Mr. F. C. Paulsen, General Man-

ager, Union Pacific, wrote me, in connection with these [fol. 1694] changes, and stated in part: "The necessary land to complete the trackage arrangement at Ogden can only be secured at a very high cost." .

In July, 1945, we advised both UP and SP we felt D&RGW was in position to deliver the land they desired and at a price they had previously offered. In late 1946, it was definitely indicated to us the proposed plan had ceased to be of interest to the UP or SP. If the business that might move via this route should prove more than the present facilities can handle, which is improbable, then it is apparent that the necessary improvements can be made in the present yard plan.

In regard to the testimony of Mr. Hanson, may we again state that at no time have we in any way questioned the capacity of the Union Pacific Railroad physically to handle the business it now handles, nor have we at any time in this case brought up for discussion the relative efficiency of the Union Pacific—Rio Grande.

However, he makes certain assumptions we feel can be cleared up once and for all: He states, on page 21: "During the February, 1949, blockade on the Union Pacific Railroad, it would not have been possible for the Rio Grande to handle any empty refrigerator cars from Denver to Ogden for movement into Idaho, unless it had handled empty refrigerator cars instead of loads, because Rio Grande was unable to handle all of the westbound loaded traffic we had to offer them at Denver."

[fol. 1695] This was a blizzard period and we agree with Mr. Lynch that it should not be used as a criterion. Mr. Hanson disregards the fact that we might have been handling many empty cars for our own account, to protect our own obligations, and that if we had been obligated to Idaho, and the Northwest, we could have, and would have seen to it that they got their proportion of the cars handled.

We had no such obligation, we have been excluded from such business, except in emergency conditions, and we are not inclined to take from our own customers to help emergency demands of Union Pacific. During this period of storms, our westbound empty movement count on an average was more than a thousand daily.

On Page 30-31 of his written testimony, Mr. Hanson sets out his understanding of the position of the D&RGW under its ART contract. Since his written testimony was prepared, Rio Grande has filed its Exhibit 41, which he stated changed his views considerably, therefore, we need not offer any rebuttal testimony on this point.

On Page 34-35, he states in connection with refrigerator movements, that D&RGW was short 8099 cars under its equalization agreement with P.F.E., the inference being that it was shirking its part of the arrangement. The figures are correct; the inference entirely wrong.

The facts are as follows: as of January 1, 1948, Rio [fol. 1696] Grande had delivered to western connections 733 more refrigerator cars than it had received—this balance in our favor continued until May 1st, when we started to fall behind. We cannot handle refrigerator cars west until they are given to us by our connections, and they are not given us until the P.F.E. Company lines them up.

We have refused no cars—on the contrary, we have been writing and wiring Mr. Klaproth, Assistant General Manager, PFE Company, calling his attention to the fact that the balance was getting entirely out of line, and urging him to route more cars westbound empty over our line.

As late as January, 1950, this gentleman stated he could not give us any cars now for movement; in March, he stated it appeared he could move fifty SFRD cars daily over our line if we would accept. We advised him we would, and he stated they would start shortly. Until April 5, none has been received.

The out of balance equalization is very distasteful to us—we have been running light trains westbound and could have moved many cars at a minimum of expense—we have not been able to get them. The failure of the PFE Company to give us cars which are due us has caused us much concern and will add to our expense later. The Rio Grande has not shirked its responsibility in this regard.

On pages 37-38 of his prepared statement, Mr. Hanson, [fol. 1697] quotes a message from Mr. Hale, Superintendent Transportation of the Rio Grande, thanking him for some timely assistance in furnishing refrigerator cars to protect

peaches, and then points to this as an indication of the way the Union Pacific contributes to the handling of the car supply on Rio Grande.

He states: "The delivery of these PFE refrigerator cars to the Rio Grande was made without any strings attached thereto and without any request on the part of the Union Pacific to use these cars for return loading routing via Union Pacific."

During this past peach season, Rio Grande brought 2595 carloads of peaches into Denver, and of this number, delivered 1120 cars to Union Pacific. The UP delivered during the period about 306 empty cars. Under similar conditions we have delivered ART cars to Southern Pacific and Union Pacific, both PFE contract lines. This fact indiates nothing except that ART Co.—Rio Grande—and PFE Company—UP—can and do help each other when cars are available.

On page 38, Mr. Hanson states: "During a period of refrigerator car shortage on the Rio Grande in January, 1949 * * *". Our records show there was no shortage of refrigerator cars on the Rio Grande in January, 1949.

On page 39 of his prepared statement, in speaking of the ice situation, Mr. Hanson states in part: "I call attention to the fact during the peach loading season on the Rio Grande for a number of years past, perishable traffic routed [fol. 1698] from the Rio Grande at Denver to the Union Pacific Railroad has been delivered without reicing due to Rio Grande's inability to handle without excessive delay."

There is an icing tariff covering the icing of perishable traffic; such traffic is iced under numerous rules, regulations, and requirements. When the Dotsero Cutoff was opened, June 15, 1934, arrangements were made by me with the Union Pacific, Burlington, Rock Island, to accept cars of perishable from Rio Grande uniced, for through movement, because the cars had been iced twelve to fifteen hours before at Grand Junction, and because this handling would expedite the business.

Business to Burlington was delivered at Fox Junction Yard before the cars got to Denver yard. This was done to expedite movement east. Rock Island trains then departed from our Seventh Street Yard, and rather than

delay the cars, it was decided they could safely move to Goodland, Kansas, and be iced incidental to the yard move through there.

Union Pacific elected to handle in their Pullman yard in order that they might keep up with Burlington and Rock Island competition. Much of the business was local business, on which we are in position to set the schedule, so that it was beneficial to all for us to get the business into Denver as early as possible, divide the icing between three points, and keep cars rolling, rather than take it in trains to our Burnham Yard, bring it back and reice in our Denver Yard.

[fol. 1699] The new Denver yard is adequately equipped with a splendid icing facility, and connecting lines have already been notified we will be in position to, and will, take over reicing at our North Yard. Whether some will elect to continue to receive before reicing, we cannot now say. It is entirely possible this might be done with benefit to all. Union Pacific has always cooperated in this handling and not until Mr. Hanson testified have they indicated any distaste for this movement.

On page 43, Mr. Hanson states that the Rio Grande refused to handle ore in C&NW ore cars to CF&I, and that to him indicates we were not as interested in taking care of the needs of the CF&I steel plant as was Union Pacific in taking care of industries located on its lines. These cars were declined because they were not suitable for the service for which they were offered.

This offer was made February 15, 1948, and since the cars were not returned to owners until between March 17 and 28, 1948, it is apparent Union Pacific had other services on its line in which the cars could be kept busy, thus releasing other cars which were more suitable for handling in our trains.

On page 44 of his written statement, Mr. Hanson states, in relation to box cars ordered by Rio Grande from Union Pacific at Denver, and offered by Union Pacific at Salt Lake, the disinclination of our Mr. Hale to haul empties 700 miles, was "a further indication of the Rio Grande [fol. 1700] being unwilling to incur empty car mileage to take care of industries exclusively served by that line."

These cars were for return loading to Union Pacific destinations. The same condition exists to an extent at the Sunnyside mine mentioned by Mr. Hanson on page 47. A large part of that tonnage out of the Sunnyside Mine is destined to the Kaiser Company in Fontana, California, via Provo and Union Pacific. A large percentage of all the coal loaded in Carbon County by Rio Grande, goes to destinations on Union Pacific.

On November 10, 1949, Union Pacific was helpful in furnishing a part of the empties required to protect its return loading, and for this help we were grateful and expressed thanks. The cars furnished were not necessarily Union Pacific—they might well have been D&RGW cars returning from a previous load.

Our Transportation Department is constantly behind Union Pacific, urging them to return such cars promptly so we will not have to close our mines. As an example, and a recent one, we delivered Union Pacific 794 more open top cars March 1st to 26th than we received. March 8th to 13th, we delivered Union Pacific at western junctions 992 open top cars and received back but 210 empties, so for this one week we lost 782 cars; this was at rate of 142 cars daily.

In answer to a telegram begging for these cars to be expedited in their return, Union Pacific advised by wire as follows:

"Will deliver fifty empty coal cars Salt Lake today, [fol. 1701] about same tomorrow. Our people will expedite return of cars recently received under load, but many going to distant points and time required for movement to destination, unloading and return empty."

During the next four days Union Pacific returned to us 158 Rio Grande coal cars and 68 foreign coal cars.

During the height of the fall coal movement in 1949, the coal car situation was difficult, and the situation was as follows: On November 1st, there were 370 more Rio Grande open tops on UP than vice versa; on December 1st, there were 469 more Rio Grande coal cars on UP than UP coal cars on Rio Grande, on January 1st, there were 124 more Rio Grande on UP than UP on Rio Grande.

Unlike our situation, on PFE cars, Union Pacific does not have to await the pleasure of any third person such as PFE Company to keep this equalization in balance, and their failure to keep it balanced often results in loss of time at our mines.

On page 48, in connection with a request from Mr. Hale for flat cars to protect SP rail from Minnequa to Ogden, Mr. Hanson states: "although the Union Pacific Railroad would not in any way participate in the haul of the loaded traffic, and, based on past experience together with some facts presented in this testimony, the Rio Grande would expect the loaded eastbound haul if these cars were utilized for lumber loading when released."

[fol. 1702] Exam. Mullen: Just a minute. Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Collins: I object to that as being purely argumentative, Mr. Examiner.

Exam. Mullen: I will call attention to it. I think the facts which he wishes to bring out there can be stated affirmatively.

The Witness: Let's try this: Southern Pacific rail does move by Denver and Union Pacific. When empties are loaded on Southern Pacific rails, that line, in their handling in the lumber territory, will not earmark them for any line. They consider this was the endeavor to equalize movements throughout the year.

On page 48, he lays great stress on an inquiry from Mr. Hale as to waiving per diem on his coal cars. There was a strike on—the cars were not needed by us. It seemed wasteful to run the cars home, then have the strike settled and run them back—that would have cost both railroads money. Certain of our connections agreed with our suggestion and to save the wasteful transportation of switching cars out, sending them home only to later have them returned, waived per diem. Mr. Hanson did not think enough of our suggestion to waive per diem, so his cars were switched out and sent home. The handling was in my opinion wasteful.

[fol. 1703] A somewhat similar unusual condition brought about the wire N-382 quoted in his written statement on

page 48. There was again a strike on; we were instructed to reduce coal burning locomotive mileage. We asked him if he would take the cars released at Denver to save us locomotive mileage, thinking such a move might also save him coal burning mileage.

When he stated he could not use them at Denver, we moved them back to him at Provo. Many cars are thus shorthauled in empty movement. Rather than such a move causing undue criticism, such moves should result in praise, because of saving transportation waste.

Car Service Division 199 shows that during 1948 the Rio Grande handled 42.8 per cent of the westbound loads to SP—WP, but we handled 45.2 per cent of the eastbound empties, while during the same period Union Pacific handled 57.2 per cent westbound loads and but 54.8 per cent of eastbound empties.

During 1949, we handled 44.2 per cent of the westbound loads and 53 per cent of the eastbound empties, while the Union Pacific moved 55.8 per cent of the westbound loads and but 47 per cent of the eastbound empties. This report is not compiled by Rio Grande or Union Pacific, but is compiled by car service division of A.A.R., Washington.

We have not been handling a greater percentage of the empties than we should by reason of choice—we have and will continue to complain about the out of line routing of [fol. 1704] empties via our line when the percentage exceeds our actual loads westbound, but will not decline to handle cars—we will not shirk, nor will we knowingly delay loading by refusing pointedly to take more than our share of the empties.

On Page 45 of his prepared statement, Mr. Hanson quotes a letter from the Farmers Grain Cooperative at Ogden in regard to Rio Grande furnishing equipment, and I quote: "for any movement eastbound which we could route over their lines." He then makes the further comment: "The Union Pacific did not advice the Rio Grande's Colorado peach growers in August, 1948, that we would furnish the refrigerator cars to move their crop only if the traffic was routed over our line from Denver."

The inference is clear—the fact far from clearly stated. The Union Pacific did not "furnish the refrigerator cars

to move their crop"—only a comparatively small number of cars were hauled empty by Union Pacific. In return, they secured about one third of the peach movement.

Mr. Hanson perhaps does not understand that so far as the Farmers Grain Cooperative at Ogden is concerned, competitive rates do not apply via Rio Grande on any wheat hauled into that elevator by rail from Union Pacific points.

Because of that situation, the Farmers Grain Cooperative has been short of cars in the past and because of this, they have actually trucked wheat to our loading tracks at Ogden to load in cars we have furnished. Only recently a [fol. 1705] switch charge of approximately $15.00 per car was published and now on so-called free wheat—that is, wheat not tied up inbound over Union Pacific, Cooperative can, with this penalty of about fifteen dollars a car, make use of the cars we are able to furnish them.

Undoubtedly, Mr. Young, of the Farmers Grain Cooperative, had this penalty situation in mind when writing Mr. Stoddard—admittedly we would be happy to furnish cars for our routing and it is our hope that we will be enabled to meet the requirements of Mr. Young for this outbound routing.

Starting on Page 51, and continuing for many pages, Mr. Hanson gives his version of the situation during the famous blizzard of 1949. As he states, Rio Grande cannot use oil-burning locomotives. I cannot, however, find any basis for his statement that at least some of our coaling stations were frozen so that we could not use their coal-burning locomotives. We certainly were using every one of our coal-burning locomotives and we also were using Western Pacific coal-burning locomotives——

Exam. Mullen: Just a moment, then. Your statement is none of your coal loading stations were frozen, is that what you mean?

The Witness: That is correct.

Exam. Mullen: All right.

The Witness: —and by his own records we were using Union Pacific coal-burning locomotives.

When the blizzard finally was admitted to have mastered [fol. 1706] the Union Pacific line through Wyoming, and

the detour started, the Rio Grande also faced unusual weather. The actual movement was the second time we had been alerted by Union Pacific to come to their aid. They previously had alerted us in January, then on February 7th.

We had crews called and trains in the depot at Denver ready to move via our line but their request for detour was cancelled. About forty-eight hours later we were asked to help on this situation and this we did. The passenger trains were handled on a detour basis, Union Pacific crews and power, our pilots—they retained all the revenue, which was quite large because they had consolidated trains and the cars were heavily loaded, and in accordance with the detour agreements.

Exam. Mullen: How was your road compensated for that service?

The Witness: Under the detour agreement, between the railroads, at so much per mile, plus certain expenses for crews and labor, and certain supplies that we furnished.

Exam. Mullen: So much per mile of line used?

The Witness: So much per mile of line used.

Exam. Mullen: All right.

The Witness: After the passenger trains were started, the question of freight was raised. We explained to Union Pacific that because of their difficulty hundreds of cars from eastern and western connections which ordinarily would have moved via Union Pacific were already being routed our line, that we still had some capacity and would move [fol. 1707] what we could of theirs, but that our first responsibility was to our own customers and to business routed via our line by the shippers.

We also stated we would need power, and because of the storm situation, the shortage of men and the fact that we had no spare parts for their steam locomotives, we asked for diesel power. In addition to the passenger locomotives furnished on their detoured trains, we were advised they thought they could deliver eight, four-unit freight diesel locomotives. They actually delivered four, which were gratefully received and definitely helpful.

When it became apparent no additional freight diesels would be made available, we took steam locomotives. These

locomotives were not equipped with stack hoods so they could not be used in our tunnel district, but we transferred them to the Southern Colorado territory, and transferred our own locomotives to our Northern Colorado territory.

Two of the Union Pacific steam locomotives, their 3900 series, were delivered to us on the 13th, and two more on the 14th. We were advised by Union Pacific that the two they would be able to deliver on the 13th had been stuck in the snow for some days and they were not sure what condition we would find them in. They were not too good, but they were able to move cars. All of these steam locomotives were returned, upon Union Pacific's request, on the 19th. [fol. 1708] We also rented from Union Pacific at Salt Lake two diesel switching engines which we had for five days, February 16th to 21st. We were daily in touch with Union Pacific by telephone and wire. I frequently was in personal touch with their Salt Lake officers. We knew the Union Pacific situation was desparate. We had been called upon to handle east and west all business heretofore handled by Union Pacific through Salt Lake and Ogden and in addition were told they had some four thousand cars backed up Pocatello and north.

Their Idaho line was also completely snowed in one time for a period of about thirty-six hours, as I recall. The Southern Pacific was snowed in west of Ogden for two or three different periods of twelve to twenty-four hours, and the Western Pacific was at times snowed in. At one time during this storm all railroads, all air lines and all highways were blocked except the Rio Grande which left us the only way in and out of Salt Lake.

On Page 58 of [redacted] prepared statement, Mr. Hanson said: "We could have furnished the Rio Grande additional locomotives if they could have used oil-burning locomotives or our larger coal-burning freight locomotives." We were not prepared to use oil-burning locomotives and we have no record of any larger coal burning freight locomotives being offered by Union Pacific or refused by Rio Grande.

The Union Pacific can, of course, use freight locomotives [fol. 1709] which burn oil, and this statement would indicate that Union Pacific had oil-burning locomotives which they were not using and that they also had larger coal-burning freight locomotives which they were not using.

Union Pacific and Rio Grande had many phone talks regarding the possibility of eight four-unit freight diesels, which at one time Union Pacific officers thought they could supply.

Exam. Mullen: Just a moment. That next sentence is argumentative, and I think it should come out.

The Witness: May I rephrase it?

Exam. Mullen: Haven't you already stated the fact?

The Witness: Yes, but the situation is such a serious one, and apparently has so much bearing in this case, I would like to emphasize the fact it is not until now that any officer of the Union Pacific has indicated to us that it would have been possible had they so elected to put oil-burning locomotives in service on the Union Pacific, and larger coal-burning locomotives in service on the Union Pacific, which would have enabled them to deliver us additional diesels, which we badly needed, and urgently requested them to deliver to us.

Exam. Mullen: You mean you did not have that information at the time you speak of?

The Witness: On the contrary, we were told they had given us all the help they could possibly give us.

Exam. Mullen: All right.

[fol. 1710] On Page 77 of Mr. Hanson's prepared statement, he indicates the trains he figures would be reduced if the entire potential heretofore mentioned is reached by Rio Grande. He has failed to subtract from his loss of employment, etc., the additional service between Pocatello and Ogden which the same business would make necessary. He has also claimed full loss to Nebraska and Kansas divisions for all of this potential loss, apparently with the idea that if the business is ever sent through Ogden, Union Pacific solicitation will be ineffectual in getting any of it back at Denver. To this extent, his tabulations are adding to the erroneous conception of the effects of loss of business to Rio Grande.

On Page 8 of his Exhibit 15, Mr. Hanson states that in computing the loss of trains to Union Pacific rails and the loss of employment, both from the standpoint of positions and money, he based his calculations eastbound "on the average number of loads, namely, 64" and westbound on

"the basis of the average number of loads, namely, 40." It is apparent that the eastbound crews and trains would be controlling factor.

On Page 82 of his written statement, Mr. Hanson makes the following flat statement:

"The tons of revenue freight handled is not always the controlling factor on each and every railroad with respect to employment. For example, it required just as many locomotives and just as many employes to handle a train [fol. 1711] of 100 empty refrigerator cars as it does to handle a train of 100 loaded refrigerator cars."

If the statement on Page 82 is correct, and it is intended to prove there is no relation between tonnage and train service employes, then the computation as to trains which would be lost to Union Pacific and the Union Pacific employes should be based on 100 loaded cars per train rather than 64. Such a basis would materially reduce the claimed loss in trains, and likewise the claimed loss in employment.

Exam. Mullen: Just a moment. The next three sentences appear to me to be argumentative. I think the last part, the statement of the letter to Mr. Stoddard, could be put in, but prior to that I think it should be eliminated.

Mr. Quirk: All right.

The Witness: On February 26th, 1949, after the UP lines were opened, Mr. Stoddard wrote to Mr. McCarthy, President of the Rio Grande, in part as follows:

"I want you to know of my full appreciation of the wonderful cooperation of your railroad in detouring our trains between Denver and Salt Lake during our recent snow blockade in Wyoming. In addition to the fine spirit of helpfulness, the service rendered was excellent. We had a tough situation to combat, but favorable weather during the past week has enabled us to get pretty well cleaned up and we are operating normally."

By Mr. Quirk:

Q. Mr. Bradford, wherever you have testified or referred [fol. 1712] to the 157,000 cars that are potentially available, you have simply done so in rebuttal to Mr. Hanson or the others, Mr. Edens, have you not?

A. That is right.

Q. Now, you have been in the railroad business a long time, haven't you?

A. Yes sir.

Q. You think there is any likelihood that the Rio Grande can obtain all of the potential traffic that has been referred to here?

A. No sir.

Mr. Quirk: That is all.

Mr. Collins: No cross examination.

(Witness excused.)

Exam. Mullen: Are there any further witnesses?

Mr. Quirk: We have none.

Mr. Collins: No sir.

Exam. Mullen: Well, the Examiner now understand the direct testimony of the Union Pacific, insofar as their own officers are concerned, is complete that they will put on a few shipper witnesses at Cheyenne.

Mr. Collins: Yes.

Exam. Mullen: And I further understand at Cheyenne the labor organizations will put in their evidence, and they will also have some evidence from Wyoming and Nebraska interests.

[fol. 1713] Mr. Collins: Yes, and nine or ten chambers of commers who have been permitted to intervene. I don't know whether you noticed the interventions, but they are there.

Exam. Mullen: Yes. I understand the complainant's rebuttal evidence is complete?

Mr. Quirk: Yes. It is too broad a word. We are going to hear some more affirmative evidence by whoever puts in evidence at Cheyenne. We have been willing to offer rebuttal testimony here because the time was available and we didn't feel like standing on ceremony and waiting until the other side of the case is in.

I would assume, of course, we have the right to rebut any testimony that is put in at Cheyenne by the labor unions or whoever else may put it in. We probably won't have much, but isn't that right?

Exam. Mullen: That will be permitted.

When I said rebuttal evidence was complete, I meant insofar as the rebuttal evidence of the defendants are concerned, the railroads.

Mr. Quirk: Yes.

Exam. Mullen: All right.

Mr. Cockrum: Mr. Examiner, I was wondering before this hearing is adjourned if we might have some indication, possibly off the record, with respect to briefs.

Personally, I am not going to Cheyenne, and there [fol. 1714] probably will be others who are not going to Cheyenne.

Exam. Mullen: We will have a discussion off the record, then.

(Discussion off the record.)

Exam. Mullen. On the record.

This hearing is ended at this point, and the next hearing will be at Cheyenne on April 17th, as previously announced by notice from Washington.

(Whereupon, at 12:35 o'clock p.m., the hearing in the above-entitled matter was adjourned, to reconvene at Cheyenne, Wyoming on Monday, April 17, 1950, at 9:30 o'clock a.m.)

[fols. 1715-1716] BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 30297

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, Complainant,

vs.

UNION PACIFIC RAILROAD COMPANY, et al., Defendants

Transcript of Proceedings, Cheyenne, Wyoming, April 17, 1950

Met, pursuant to adjournment, at 9:30 o'clock a. m.
Before Frank E. Mullen, Examiner

APPEARANCES:

(As heretofore noted.)

Additional Appearances:

Alden T. Hill, Woolworth Building, Fort Collins, Colorado, General Committee of Adjustment, Brotherhood of Locomotive Engineers, D&RGW, et al.

George F. Guy, 507 Majestic Building, Cheyenne, Wyoming, appearing for City of Cheyenne, Wyoming.

Norman B. Gray, Attorney General, Capitol Building, Cheyenne, Wyoming, appearing for Public Service Commission of Wyoming.

[fol. 1717] PROCEEDINGS

Exam. Mullen: The Interstate Commerce Commission has set for further hearing at this time and place Docket No. 30297, The Denver and Rio Grande Western Railroad Company versus the Union Pacific Railroad Company, and others.

Are there any additional appearances?

Mr. Overcash: Mr. Examiner, I wish to enter the appearance of Harold A. Palmer, Chairman of the Nebraska State Railway Commission.

Mr. Green: At Salt Lake City, Mr. Examiner, I entered

an appearance for the Union Pacific labor organizations and certain chambers of commerce in the State of Wyoming.

At this time I would like to offer a supplemental petition for the Rock Springs Chamber of Commerce and certain other chambers of commerce in the State of Wyoming that were not covered in the original petition.

Exam. Mullen: That is a petition for leave to intervene?

Mr. Green: Yes.

Exam. Mullen: Is there any objection? If not, this petition will be received and the intervention is allowed.

Are there any other petitions?

Mr. Guy: Mr. George F. Guy, 507 Majestic Building, Cheyenne, Wyoming, City Attorney for the City of Cheyenne, appearing for the City of Cheyenne, a municipal corporation, and I have a petition for leave to intervene on [fol. 1718] behalf of the said city of Cheyenne, which I now request permission to file in this docket.

Exam. Mullen: Is there any objection?

(No response.)

Exam. Mullen: The petition to intervene is received and the intervention is granted.

Are there any other petitions?

Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Are there any other appearances?

Mr. Hill: Alden T. Hill, Fort Collins, Colorado, appearing for the General Grievance Committee of the Brotherhood of Locomotive Engineers and Firemen on the D&RGW, as stated in our petition of intervention heretofore filed.

Exam. Mullen: Are there any other appearances?

Mr. Gray: Norman B. Gray, Attorney General of Wyoming, appearing on behalf of the intervenors, State Board of Equalization and Public Service Commission, State of Wyoming.

Exam. Mullen: Are there any others? That appears to be all.

Mr. Green, you may proceed.

Mr. Green: I call Mr. Caveny.

M. P. CAVENY was sworn and testified as follows:

Direct examination.

[fol. 1719] By Mr. Greene:

Q. Mr. Caveny, will you state your name and place of residence?

A. My name is M. P. Caveny; I reside at 3166 Kansas Avenue, Omaha, Nebraska.

Q. And what is your occupation, Mr. Caveny?

A. Locomotive engineer.

Q. With what company are you connected?

A. Union Pacific Railroad.

Q. How long have you been an engineer with the Union Pacific Railroad?

A. Thirty years.

Q. Do you have any connection with any labor organization of Union Pacific Railroad Company employees?

A. I am the general chairman for the Brotherhood of Locomotive Engineers; that would be the chairman of the Board of Adjustments for the Eastern District, Union Pacific Railroad.

Q. Now, can you tell me briefly what your duties as general chairman of the Brotherhood of Locomotive Engineers is?

A. The general chairman for the Locomotive Engineers represents all locomotive engineers in wages and working conditions in that territory.

Q. And are you the presiding officer as general chairman of that union?

A. Yes sir.

Q. How long have you held that position?

A. For the past five years.

[fol. 1720] Q. Is the Brotherhood of Locomotive Engineers of the Union Pacific a member of any organization of unions of the Union Pacific employees?

A. Yes. On the Union Pacific we have an association of all general chairmen who hold labor contracts with the railroad company.

Q. What is the name of that association?

A. General Chairmen's Association.

Q. How many Brotherhoods are members of the Association?

A. We have 20.

Q. Mr. Caveny, are those Brotherhoods the ones that asked for leave to intervene at Salt Lake City?

A. Yes sir.

Q. What position do you hold with that Association?

A. I am chairman of that association.

Q. Mr. Caveny, I will ask you approximately how many employees of the Union Pacific Railroad Company are represented by the Association of General Chairmen?

A. Approximately 55,000.

Q. Now, are the membership those that are actually engaged in work or are there others who have other capacities that you still represent?

A. Please clarify that, Mr. Greene.

Q. I meant for example, if an employee has been a member but is furloughed because of lack of a job.

[fol. 1721] A. Oh, yes, the general chairmen do represent that group.

Q. How about employees who have been for some reason retired?

A. Yes, they still represent them.

Q. Now, did the Association of General Chairmen during January of this year take some action toward securing the services of a representative to appear and present the employees' case in this proceeding?

A. I can't tell just the exact time, but the Association did take the necessary action to secure the services of Mr. Oliver.

Q. That is Mr. E. L. Oliver?

A. Mr. E. L. Oliver.

Q. Were there any strings attached at the time to Mr. Oliver's employment?

A. Yes, I think Mr. Oliver raised the question as to his services, and I recall that he said that he would accept employment with us, provided it was in line with the constitution of the various groups which we represented.

Q. Was there anything in connection with approval by the Railway Labor Executives Association?

A. Yes, he thought we should get that necessary release from the chief executives.

Q. Now, do you have excerpts from the minutes of the railway labor executives taking action on your group's employment of Mr. Oliver?

A. Yes sir.

[fol. 1722] Mr. Greene: Might it be given an exhibit number, Mr. Examiner?

Exam. Mullen: It will be marked Exhibit No. 41.

(Defendants' Exhibit No. 41, Witness Caveny, marked for identification.)

By Mr. Greene:

Q. If you will refer to what has been marked for identification as Exhibit No. 41, Mr. Caveny, I will ask you to state what that is.

A. This is a copy of the minutes which shows the action taken by the general chairmen of the Association.

Q. In connection with the employment of Mr. Oliver?

A. In connection with the employment of Mr. Oliver.

Q. Has Mr. Oliver been retained by your Association to make the presentation on behalf of the employees?

A. Yes sir.

Q. Does he represent all of the Brotherhood of Union Pacific employees who intervened in this proceeding at Salt Lake City?

A. Yes sir.

Mr. Greene: I offer Exhibit No. 41 for the record.

Exam. Mullen: Is there any objection?

(No response.)

Exam. Mullen: It will be received.

(Defendants' Exhibit No. 41, Witness Caveny, received in evidence.)

Mr. Greene: That is all I have of Mr. Caveny.

[fol. 1723] Exam. Mullen: Any cross examination?

Cross-examination.

By Mr. Quirk:

Q. As I understand it, your position in this case has been influenced and controlled by what the Union Pacific has told

you as to the diversion of the traffic in the event the complainant should prevail here?

A. No sir.

Q. What have you based your fears on?

A. On the information we had subject to the request that was made by the D&RGW Railway Company.

Q. Is that all you based it on?

A. And the evidence that was submitted in their request.

Q. In other words, you were not told by the Union Pacific that if these joint rates that are sought here by the complainant should be established, they proceeded on the assumption that all of the traffic, 157,000 carloads would move through Ogden?

A. I rather think that our position was taken due to the request that was made that a certain amount of shipping interests would be diverted from our work, and if that is true, then our employees would suffer in that loss.

Q. Do your employees suffer with the ups and downs of traffic, from year to year?

A. Seasonal work, that is true.

Q. Well, have you been told that there was testimony in this case by a vice president of the Denver and Rio Grande [fol. 1724] that it would not hope to obtain more than about 15,000 carloads in the event the joint rates sought are established?

A. I think I heard that testimony made, Mr. Quirk.

Q. Were you in Boise?

A. Yes sir.

Mr. Quirk: That is all.

Mr. Greene: I have no further questions.

Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Mr. Overcash: I think we can stipulate for a number of witnesses. I have submitted statements of these witnesses to counsel for the applicants, and I will make stipulation in the record covering their testimony.

It is stipulated that the statements of H. D. Wiese, North Platte, Nebraska——

Exam. Mullen: Off the record a minute.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Overcash: May I make a stipulation?

Exam. Mullen: Go ahead.

Mr. Overcash: It is stipulated that the statements of Joe Hirschfeld, North Platte, Nebraska, H. R. Wiese, North Platte, Nebraska, W. A. Reutlinger, Grand Island, Nebraska, George Martin, Grand Island, Nebraska, may be received in the record as verified statements with the same [fol. 1725] force and effect as though the witnesses were called and sworn and testified as stated in their prepared statements. The parties waive cross examination.

Mr. Quirk: We agree to that, with the understanding and reservations we made at Boise that any argument in the statements will be ignored, and anything that is obviously irrelevant and immaterial will be objected to.

Exam. Mullen: All right, sir. They will be received with that understanding.

Mr. Hirschfeld's statement will be No. 57; the statement of Mr. Wiese will be No. 58; Reutlinger will be 59; and Martin will be No. 60.

Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Overcash: I call Mr. Harry C. King.

HARRY C. KING was sworn and testified as follows:

Direct examination.

By Mr. Overcash:

Q. Will you state your name, address, and occupation?

A. My name is Harry C. King. My address is Room 2100, Capitol Building, Lincoln, Nebraska. I am employed by the Nebraska State Railway Commission in the capacity of rate expert.

Q. And will you briefly state your qualifications?

A. Approximately four years in the traffic department of [fol. 1726] the Burlington Railroad. Almost 19 years, or a little bit over, in the industrial employment, Dempster

Manufacturing Company at Beatrice, Nebraska, servicing the entire western half of the United States, and about 14 years as an employee of the Nebraska State Railway Commission, first as assistant rate expert and for the last seven years as the rate expert for that body.

Q. Have you prepared an exhibit for this hearing?

A. Yes sir, I have.

Mr. Overcash: Mr. Examiner, may I have the number?

Exam. Mullen: 42.

(Defendants' Exhibit No. 42, Witness King, marked for identification.)

By Mr. Overcash:

Q. Do you have a prepared statement, Mr. King?

A. No sir, I do not.

Mr. Overcash: Exhibit 42 is a map of the Union Pacific and other railroad systems, to which is attached the identification of Witness Harry C. King.

The Witness: There is a sheet on it. I might state there is a sheet on the inside of this map where you will be able to place the proper identification.

By Mr. Overcash:

Q. You may proceed.

A. Reference to this map will show the Union Pacific operates through 12 states and according to the reports furnished by the Union Pacific to the Interstate Commerce Commission and the Nebraska State Railway Commission, [fol. 1727] thei are 1355.86 road miles out of a total of 9751.91 miles in the State of Nebraska. This constitutes 13.9 per cent.

With reference to the total miles operated by the Union Pacific, there is a jump up to 17.64 per cent because of the fact the Union Pacific operates 1821.21 miles in Nebraska as against 10,324.33 throughout the entire system.

The Union Pacific passes through the State of Nebraska in a west-east direction, and serves an extremely rich farming section of the state. Products of the farms adjacent to the Union Pacific consist, of course, of grain, hay and live-

stock. I will have more to say about this farming proposition later in my testimony.

Much has been said in this record, so far as I know, with reference to the Salt Lake City hearing—I did not attend the Boise hearing—but at that point a great deal was entered into the record relative to the inability of certain shippers to obtain cars when they needed them. I want to point out for the record some facts established through the rate department of the Nebraska Commission.

First, let me preface these remarks by saying that in 1917 the Nebraska State Legislature provided by statute that the Nebraska State Railway Commission should have jurisdiction relative to the furnishing of cars for loading on the lines of the railroads in Nebraska. These legislative requirements are found in Chapter 74, Sections 515, 516, [fol. 1728] 518 and 519 of the revised statutes of Nebraska of 1943.

When that duty was conferred upon the Nebraska Commission someone of the employees had to be delegated the task of making the investigation. That task was lodged with the Rate Department of the Commission. And I may say that since 1917, or the enactment of this law, that no formal complaint has been filed with the Nebraska Commission relative to the ditsribution of cars, and this statement applies not only to the Union Pacific but to all railroads servicing Nebraska.

It is true that many reports or requests of an informal nature are received by the Nebraska Commission, and in these requests various allegations are made relative to the furnishing of cars. In some cases, there will be a complaint relative to the method of distribution at the several stations. The railroads furnish the cars to a station and under our law it is the duty of the agent to allocate those cars to the proper parties.

Then again, we receive complaints relative to the discrimination practiced between stations. In other words, somebody will be driving along the road and pass through a town and he will find a number of cars setting on the siding at a certain point. Then he comes in and calls the Nebraska Commission and tells us that a certain station is getting preference over the other places.

In Nebraska, these informal complaints are heaviest dur-
[fol. 1729] ing July and December because of the fact that is the period when the wheat harvest is moving in July, and the corn in December. However, these complaints are liable to come at any time of the year. Some of these complaints are fantastic in the extreme. I want to cite just two illustrations actually happening, and with which I am personally familiar, because I made the investigation covering these complaints.

Beatrice, 40 miles south of Lincoln, is on the Union Pacific, the Rock Island and the Burlington. It so happens that the farmers' elevator at Beatrice is located on the Union Pacific only, and this concern jobs a large amount of bran, shorts, tankage, and molasses feeds.

Pickrell, Nebraska, located on the Union——

Mr. Quirk: Mr. Examiner, I don't recall that anybody the complainant put on talked about a shortage of cars in Nebraska. There were a few witnesses that mentioned some troubles here and there in Idaho. I don't see what this is relevant to.

Mr. Overcash: Well, it is a part of the foundation of this witness on the car distribution and the problem in this case.

Exam. Mullen: What is the specific purpose of this testimony?

Mr. Overcash: Well, as I understand, the witness is going to disclose the situation that exists with reference to car distribution in Nebraska, and the effect this case would have, if any, on the problem.

Mr. Quirk: I submit, Mr. Examiner, there is no issue here [fol. 1730] raised by anybody as to car distribution in Nebraska.

Mr. Overcash: But the witness wishes to point out, Mr. Examiner, that the diversion involved in this proceeding would reduce the cars available in our state, and I think this is part of his foundation.

Exam. Mullen: Well, I think sufficient foundation has been laid for that. Don't you want to ask him now some direct questions to bring out the points?

By Mr. Overcash:

Q. Mr. King, in connection with this particular proceeding, have you made a study of what effect this proceeding would have upon the car situation?

A. Yes, I have.

Q. Proceed along that line.

A. The result of my study is to the effect that we have serious car shortages in Nebraska, and certainly any diversion of traffic away from the Union Pacific would have a detrimental effect upon the furnishing of cars for our people in the State of Nebraska.

Q. Does the D&RG's use of cars have any bearing upon the availability in our state?

A. It would in this particular instance.

Q. Just what would that effect be?

A. The effect would be to remove available cars from the particular territory so that the cars could not be used in the State of Nebraska.

[fol. 1731] Q. In connection with the car situation, have you any studies of percentage of ownership that you want to put in the record here?

A. Yes, I would like to mention that. Certain percentage of ownership, of course, is required at any time to take care of the demand for cars. Any railroad will unquestionably estimate the number of cars it requires, to take care of the business upon that particular line.

Anything less than 100 per cent of this ownership during periods of stress will certainly react unfavorably to that particular railroad. I would like to cite as an example what I am trying to say is that during the car shortage of 1949, last year, in my investigation I found that the Burlington had 63 per cent of ownership on its rails.

The Union Pacific had approximately 73 per cent of ownership. The North Western had 110 per cent of ownership, and still with the 110 per cent of ownership, the North Western was absolutely unable to take care of the car demands during this particular period of stress.

Q. Mr. King, have you given study to the economic effects with respect to efficiency of operation that is involved in this proceeding?

A. I have.

Q. Proceed with your testimony on that point.

A. Inability of the Union Pacific in this particular in-
[fol. 1732] stance to furnish cars would cause diversion of traffic to other railroads, and in some instances to other forms of transportation. This diversion of traffic to other railroads would have a detrimental effect upon the people of Nebraska because such diversion would not enable or allow the Union Pacific to furnish the cars required for Nebraska, as an example.

Mr. Quirk: Mr. Examiner, I object to this statement. It is just argument and opinion without being based on any facts that are here.

Exam. Mullen: How about that, Mr. Overcash?

Mr. Overcash: Well, this is a man who spends a lot of time on the car situation, Mr. Examiner, and he should be entitled to express his opinion as to what effect this proceeding would have on that.

Exam. Mullen: Well, it is quite general so far. What specific amount of diversion would bring about the results you say might result?

The Witness: Any amount of diversion, Your Honor, that would cut down the amount of cars the Union Pacific in this particular instance would have, would have a detrimental effect upon the entire system of the Union Pacific, and, of course, Nebraska is largely interested in the Union Pacific.

Exam. Mullen: Could you tell us about what per cent of diversion you have in mind?

The Witness: Well, that would be rather difficult to say, [fol. 1733] for the reason that it would depend entirely upon whether there was a period of stress. If there is a period of stress, any diversion of any consequence at all—five per cent or ten per cent—would have a detrimental effect.

Of course, when the demand for cars is not so heavy, then the diversion would not be so pronounced.

Exam. Mullen: Assuming that this route were opened, how would such a diversion come about?

The Witness: Diversion would come about because of cars being diverted to other roads through the Ogden gateway, and in following these car shortages I find that when

these cars get away from our Nebraska lines, it is most difficult to get them back.

Exam. Mullen: Your assumption is a good many of these cars pass through Nebraska, and go over the route of the D&RGW, to Ogden, and then to points west, is that it?

The Witness: To points west?

Exam. Mullen: Yes, I am speaking of the westbound movement.

The Witness: No, I am not particularly concerned about the westbound movement, particularly. I think your cars would go east or westbound, depending upon the flow of the traffic, and, of course, any diversion from the Union Pacific is going to cut that road's car supply down, so that it cannot take care of the people on its line.

Exam. Mullen: That would depend on the amount of [fol. 1734] diversion, wouldn't it?

The Witness: That is right. It would depend on the amount of diversion, but it is a foregone conclusion that if the Ogden gateway is opened to the D&RG, there would be a substantial diversion.

Exam. Mullen: All I wanted to know was, in your opinion, what would be a substantial diversion that would bring about the results you say would result?

The Witness: I think ten per cent.

Exam. Mullen: All right, sir.

By Mr. Overcash:

Q. Mr. King——

Mr. Quirk: Could I interrupt a minute, to keep this same thought at the same place in the record?

This diversion, some of it might be via the Chicago, Burlington and Quincy, might it not?

The Witness: That is right.

Mr. Quirk: Doesn't that railroad have an east-west line through Nebraska?

The Witness: And paralleling the Union Pacific, yes.

Mr. Quirk: How about the Rock Island?

The Witness: It serves only a small portion of the State of Nebraska.

Mr. Quirk: How about the Missouri Pacific?

The Witness: Likewise.

Mr. Quirk: The Santa Fe?

[fol. 1735] The Witness: They have one mile of road in Nebraska.

Mr. Quirk: That is all.

By Mr. Overcash:

Q. Mr. King, would the problem of efficient use of cars enter into this?

A. It certainly is.

Q. What have you to say on that subject?

A. The efficient use of cars, keeping them moving, would certainly assist very materially in alleviating any car situation that might develop.

Q. Will you refer to your exhibit and give us your analysis on that problem?

A. Referring to Exhibit No. 42, I want to talk about wasteful transportation and delays incidental to transfer.

Q. Will you indicate the identification that is shown on this exhibit?

A. Yes. If a car of apples or potatoes or any of the agricultural commodities grown in Idaho, Oregon or Washington, adjacent to the line of the Union Pacific, shipped via the Union Pacific to Kansas City, as an example, the car would move through the McKinnon and Granger cut-off to the Green River break-up yard, there it would pass on down through Wyoming and Nebraska to the Gibbon cut-off just west of Grand Island on the Union Pacific, and thence to Kansas City.

Using Union Pacific all the way, there would be no transfers, there would be no wasteful transportation, there would [fol. 1736] be no diversion of traffic which would cause an economic condition to exist in Nebraska.

If this same car were routed from the origin in Oregon, we will say Baker, Oregon, in a car of the D&RGW through the Ogden gateway, and thence the Santa Fe to Kansas City or Chicago, there would unquestionably be two transfers resulting in at least 48 hours delay.

Mr. Quirk: I object to this as incompetent and irrelevant or as incompetent.

I think the witness is qualified to state what he thinks might happen.

Mr. Quirk: I don't think he is qualified to state it would be 48 hours.

The Witness: I said there would be at least that much, sir, probably more.

Exam. Mullen: You may proceed. The objection is overruled. Go ahead, sir.

The Witness: All right.

This car would be given to the Santa Fe—it could be given to the Santa Fe at either Denver, Colorado Springs or Pueblo; it could be destined to either Kansas City or Chicago, and far beyond.

Now, if the car originating at Baker is given to the D& RGW and is routed Missouri Pacific, it would probably be given to the Missouri Pacific at Pueblo, and would be destined to Kansas City, there would be the same delay un-

[fol. 1737] questionably.

Then if it is given to the Burlington, it would, as Mr. Quirk suggested a moment ago, be received by the Burlington at Denver, pass through the southern portion of Nebraska, paralleling the Union Pacific, going through the Omaha and Council Bluffs gateway and could go on to Chicago all the way from Denver via the Burlington.

If the Union Pacific were to originate this car on Baker, which it would have to do, and would give the car to the North Western as an example, or the Milwaukee at Omaha, there would be a possible 24 hours delay in order to make that transfer.

The funnny thing about the situation is the Rock Island enters into the picture, and if this car were routed Rock Island, the D&RGW would give the car to the Rock Island at either Colorado Springs or Denver. If the car was given to the Rock Island at Colorado Springs or Denver it would move Rock Island through the Omaha gateway direct to Chicago, or if it was destined to Kansas City or St. Louis, it would move over the line of the Rock Island to Topeka, and there is a jump in there from Topeka to Kansas City, which I am going to cover with this statement, that if the car were given to the Rock Island at Denver, the Rock Island not having rails from Denver to Limon, Colorado, but a lease arrangement with the Union Pacific, the car would actually move from Denver to Limon on the Union Pacific, thence be given to the Rock Island—thence through Limon

and Belleville, Kansas, down to Topeka. From Topeka to [fol. 1738] Kansas City the Rock Island uses the rails of the Union Pacific, and consequently the car would actually move on Union Pacific rails regardless of the fact that it was routed via the Rock Island all the way through.

Exam. Mullen: Does the Rock Island lease those tracks from the Union Pacific?

The Witness: I understand they do, Your Honor. I wouldn't be too sure as to that.

Exam. Mullen: What train crews would operate over those portions of the U.P.?

The Witness: That I couldn't answer. That would be something for the Rock Island or Union Pacific officials would have to answer.

Exam. Mullen: All right.

The Witness: Now then, I think that is unquestionably wasteful transportation when there is a direct route, and this would undoubtedly cause much diversion of traffic to other roads. The reason for that is, of course, they would have their solicitors in the Northwest and the routing would not be in care of the Union Pacific.

By Mr. Overcash:

Q. Does that complete your testimony?

A. Except that I want to say this: I stated earlier in my testimony that the Union Pacific has 1355 miles of road being operated in the State of Nebraska. This goes through the rich farming country of the state and there isn't any ques- [fol. 1739] tion but that it serves a great deal more than 75 per cent of the population of the State of Nebraska.

Now, the Union Pacific is 20 miles in most instances from the Burlington, which parallels it, through the southern portion of Nebraska. I think it is fair to say that the Union Pacific would unquestionably serve at least five miles on either side of its tracks in the State of Nebraska, and that would be the equivalent of 1350 square miles of territory and at least three-fourths of the population of the State of Nebraska, and anything that causes the Union Pacific, because of diversion of traffic or kindred reasons, to be compelled to retrench, undoubtedly has a very detrimental effect upon the economy of the State of Nebraska.

Q. Is that your statement?
A. That is my statement, yes sir.

Cross-examination.

By Mr. Quirk:

Q. Mr. King, are you familiar with Section 12(b) of the Nebraska Statute under which your Commission functions?
A. No sir, I am not.
Q. You are not?
A. I am not.
Q. Don't you know it says "in the event said railway companies fail to establish through joint rates, it shall be [fol. 1740] the duty of the Railway Commission to establish such rates"?
A. We do have joint rates in the state, but we also have single line rates and other rates that are made for a purpose for a particular railroad.
Q. I got the impression from your testimony your Commission is against the joint rates.
A. Oh, no. Under our statute—I am not familiar with the one you quoted, but under Chapter 75 of the revised statutes, I do believe that there we do make joint rates, or approve them, rather, authorize them.
Q. This statute I read says when they don't exist, it is your duty to prescribe them. You are not familiar with that?
A. I am not familiar with that, sir.
Q. You are more familiar with car delays.
Anyway, isn't the position you are taking here as a witness contrary to the philosophy and terms of your own statute?
A. I don't think so, and I will tell you why.
Q. All right. You said you don't think so.

Mr. Overcash: Go ahead. Can't the witness tell why?
Exam. Mullen: No, he doesn't need to.

By Mr. Quirk:

Q. Now, your Commission seems to be more concerned with the welfare of the Union Pacific than other railroads in Nebraska, is it?

A. Definitely not.

Q. If the traffic you have been describing moves through [fol. 1741] Nebraska via the Burlington, for example, and that is a good route, the people in Nebraska and the state would benefit by that, wouldn't they?

A. The answer to that question is very obvious.

Q. Well, it would be except——

A. They would benefit because of that traffic moving over the Burlington, but at the same time there would be detracted from the benefit of the people the benefit that would accrue to the Union Pacific.

Q. Do you think all the traffic that the Union Pacific can possibly handle should go to the Union Pacific and the other railroads should suffer? Is that your position?

A. Well, I will tell you what my position is on that, of course, and that is this: I think that the Union Pacific and the Burlington and the D&RGW are, all of them, and every other railroad in the United States, entitled to all of the transportation they can get.

Q. Do you agree with the statement made by Commissioner Lane in the Missouri-Illinois Case a good many years ago, in Volume 22 of the I.C.C. reports, that the railroads of this country should so unite themselves as to establish one national transportation system?

A. I think they have done that, sir.

Q. Well, to the extent that they don't move traffic freely under equal conditions, they have not done it, have they?

[fol. 1742] A. Well, the answer to that perhaps would be no, but at the same time what is the use of short-hauling one road when it has the opportunity to transport this? The D&RGW would not like to be short-hauled.

Q. Well, now you followed this case, haven't you, this complaint, and the proceeding more or less?

A. Only through the Salt Lake hearing, sir.

Q. It is established in this case that traffic originating in the State of Washington on the Union Pacific moved to Spokane, thence by the Spokane International Railway, thence by the Canadian Pacific through Canada, thence by the SOO line to Chicago and other places.

How do you think that compares with the route, so far as efficiency is concerned, with the route the complainant seeks here?

A. I wouldn't undertake to answer that one.

Q. You state what you think is a wasteful route here. That route now exists.

A. I am not familiar with the reasons as to why it exists.

Q. Would that have anything to do with whether the route was wasteful? I am confining my questions to that point now, because you bore down on that in your testimony.

Q. What was that routing again, please?

A. Well, the Union Pacific takes the short haul, incidentally, instead of the haul that you have been talking about that is so efficient, up to Spokane, and then the traffic moves [fol. 1743] via the Spokane International Railway, and thence the Canadian Pacific, and thence Soo Line; and none of that movement, by the way, is through Nebraska.

Q. Now, I am just asking you because of your statement that you understand these things, how that route on its face compares with a movement of traffic through Ogden to the Burlington at Denver, and thence east through Nebraska?

A. Well, a route of that kind would be probably direct to Chicago from Yakima, Washington, as an example, or even from Spokane, going over the north route.

As to the reasons why that particular route was established, I am not familiar with that.

Q. Well, there would be four railroads involved in that route?

A. That is right.

Q. And only three involved in the route off the Union Pacific, Ogden, Rio Grande, Burlington to Chicago, for example?

A. That is right.

Q. I suppose you know that the Union Pacific also joins in joint rate to Kansas City and other points, St. Louis; it will move a car from Seattle to Portland, deliver it to the Southern Pacific, the Southern Pacific can move that car either through Ogden at the present time, via Denver & Rio Grande, or the Union Pacific, and also through New Mexico, the Rock Island carrier.

[fol. 1744] Mr. Overcash: Are you familiar with that?

The Witness: I have never checked that, but I suppose such a route could be made.

By Mr. Quirk:

Q. There is such a joint rate, and there is such a route. I am asking you, in view of your interest in efficiency and economy in transportation, how do you think that route compares with the one via the Rio Grande which the complainant here seeks?

A. I would say that route would be, in my opinion, out of line.

Q. Well, the Union Pacific does participate in that route?

A. That may be true, but there may be a reason for that, and I am not familiar with the reason, sir; that is what I am trying to say.

Q. Well, you are not familiar with all the reasons for this complaint, are you?

A. I think I am, in a large way.

Q. How do you happen to be so familiar? You have not attended all the hearings, have you?

A. No, but I have attended the hearing at Salt Lake, and there the foundation was laid for the complaint. I heard the D&RGW witnesses testify there. In fact, I have their testimony at home.

Mr. Quirk: That is all I have. Mr. Gibson has one question.

Cross-examination.

By Mr. Gibson:

Q. Mr. King, referring to the westbound route through Nebraska, the fact that the Burlington and the Rock Island [fol. 1745] interchange traffic with the Union Pacific at Omaha, and the fact that on transcontinental traffic through that point the Union Pacific insists upon their long haul through Nebraska, do you think that is proper in view of the fact that the Burlington and the Rock Island could haul that traffic to Denver and give it to the Union Pacific?

A. If the Union Pacific originated the car in the first place, I think that they would be within their rights to do everything they possibly could to keep that traffic on their rails as long as possible. I think they are entitled to the long haul.

Q. Let's say the Rock Island originates the car, or the Burlington originates the car in Iowa, for instance, then

it is still proper for the Union Pacific to insist upon their long haul through Nebraska?

A. That is a question of management.

Q. You are aware that they do that, aren't you?

A. I understand they do, yes, with reference to the tariff.

Q. Then referring to traffic moving eastbound from the Northwest over the U.P. through Denver, you are familiar with thef act, are you not, that the D&RG and the U.P. have a connection at Denver?

A. No, I am not, but you mean a track——

Q. They interchange traffic at Denver?

A. I assumed they did.

[fol. 1746] Q. In other words, the rates are available through that point?

A. In other words, what you are saying is that they can transfer a car there without changing the lading?

Q. That is true.

A. Yes. I assumed they had that. I was not sure of it, though.

Q. Referring to traffic moving from the Northwest over the Union Pacific to Ogden, then over the Rio Grande to Denver, and assuming that the rates here requested had been established, then the traffic could move from Denver to Omaha over the Union Pacific, could it not?

A. I think I see what you are getting at. Taking a car, for instance, originating at Baker?

Q. That is right.

A. As an example.

Q. Moving to Ogden.

A. If the Ogden gateway were opened?

Q. That is right.

A. That it could move Union Pacific to Ogden, thence D&RGW to Denver, thence Union Pacific to Omaha.

Q. That is right. In that case, there would be no harm, as you term it, to the State of Nebraska?

A. Well, I think there would be.

Q. It moves entirely through the State of Nebraska, does it not?

A. Moving a car through the State of Nebraska, in and [fol. 1747] of itself, is not the controlling feature. The thing, as I see it, the controlling factor in this proceeding, is that substantial diversion of traffic from the Union Pacific

so that it is short-hauled will unquestionably have a detrimental effect upon the revenue earned by that road, and when the revenue—our experience has been, when any railroad losses traffic, its revenue is depleted, and we have requests for rate increases.

Q. But if all of this traffic is as you say, diverted from the Union Pacific to the Burlington, for instance, through the State of Nebraska, and moves over the D&RG to Denver, and thence over the Burlington to Nebraska, there would be no effect on your state, would there?

A. I think there would be.

Q. Why?

A. For this reason: That the trains presently operated by the Burlington are capable of handling the additional tonnage. They wouldn't need to put on extra crews, but if the Union Pacific is forced to reduce its employees in the State of Nebraska, it is certainly going to have a detrimental effect upon the economy of the State.

Q. Wouldn't it be true in that case the Burlington might increase its employment?

A. That is possible, sur.

Q. I don't see any connection between your statement, then.

A. I say it is possible, but their present number of trains [fol. 1748] operated through there is probably sufficient.

Q. In other words, all of this traffic that you speak of cloud move through the State of Nebraska over the Union Pacific or other lines through a connection at Denver with the D&RGW, could it not?

A. That is right, but the Rock Island, it would move about two hundred miles is all.

Q. You are speaking, then, of the benefits being transferred from one railroad to another in the State of Nebraska?

A. No, I am saying this: The Rock Island only goes through just the lower, southeast corner of the state, but it still remains, if the traffic is diverted from the Union Pacific, and the Rock Island hauls it, or even the Missouri Pacific, down through Kansas City and up through Omaha, the fact remains the diversion of traffic there is going to cause the Union Pacific to curtail employment, and employ-

ment being curtailed it certainly will have a detrimental effect upon the economy of the state.

It will cause the Union Pacific to run less trains, and in running less trains farmer and ranch men along the line of the Union Pacific will not have the advantage they have at the present time to dispose of their products.

Q. Mr. King, you referred to the Chicago and North Western during a certain period having 110 per cent of their ownership on the line, of cars.

[fol. 1749] A. That is right.

Q. You are familiar with those statistics, are you not, their purpose?

A. Well, I don't think I know what you are getting at there.

Q. Doesn't that indicate that the North Western doesn't own enough cars to handle their business?

A. That could be. I don't know how many cars any of the railroads own.

Q. Have you ever protested that fact? Isn't it true if the North Western is short of cars, then maybe the Union Pacific with its connection at Omaha would have to make up the difference?

A. Well, in taking the matter of car shortages up with the—first, the local car distributor, then the general superintendent of transportation, then the president of the North Western, which I have done personally, and over the telephone, I have not asked them how many cars they had.

I do know, though, they had 110 per cent of ownership during 1949. That is through the peak period of wheat movement.

Q. Do you know what the percentage of ownership on the Rio Grande was during that period?

A. No, I do not.

Q. If I told you it was less than 80 per cent, would you accept that statement?

Mr. Overcash: He said he didn't know.

[fol. 1750] The Witness: I said I didn't know, but I would accept your statement, because I know the Burlington only had 63 per cent of ownership, and the Union Pacific 73 per cent of ownership during that period.

Mr. Quirk: May I ask about two more questions, Mr. Examiner?

Exam. Mullen: Yes, go ahead.

By Mr. Quirk:

Q. Mr. King, isn't it a fact that your Commission has been before the Interstate Commerce Commission in grain cases and in many other cases in which you sought and did your best to obtain joint reasonable and non-discriminatory rates over all the routes that were involved?

A. That is not a fact, so far as I personally am concerned.

Q. I don't say that. Hasn't your Commission?

A. I don't know as to that. I have something else to do beside review the old cases.

Q. But you do know about car delays?

A. I know about car delays.

Q. Don't you know the Union Pacific now maintains joint rates on practically all commodities between points on its Los Angeles line in California, and points east via the Rio Grande, and that some of that traffic moves back to the Union Pacific at Denver?

Mr. Overcash: He asked you if you knew.

The Witness: Personally, no. I heard some testimony to that effect during the Salt Lake hearing.

[fol. 1751] By Mr. Quirk:

Q. Well, you based some of your other information here on what you have read out of this record, haven't you?

A. To a certain extent.

Mr. Quirk: That is all.

By Mr. Quirk:

Q. One more question: You spoke of the interchange. Do you know there is only one hour involved in interchange between the Rio Grande and its connections at Pueblo?

A. No sir, I am not aware of that fact.

Exam. Mullen: Any redirect?

Redirect examination.

By Mr. Overcash:

Q. Mr. King, in comparing its routes through Nebraska, is the matter of significance as to whether the route is an efficient route or a wasteful route?

A. May I have that question again?

(Question read.)

The Witness: Yes, I think so, very definitely.

By Mr. Overcash:

Q. I think in your direct testimony you discussed the various routes on that basis?

A. That is right.

Q. Now, in comparing the route on the Burlington from Denver to Omaha with the through route on the Union Pacific, is it your opinion that the Burlington route would be a less efficient and a wasteful route on business coming from the Northwest?

[fol. 1752] A. If the shipment originated at Denver on the Union Pacific and the Burlington, I don't think there would be a great deal of difference in the efficiency, but if the shipment originated at Baker, Oregon, again, and was transferred at a point of interchange, it certainly would affect the efficiency.

Q. In other words, your statement about permitting all railroads to obtain the maximum amount of business would be subject to qualification that the routing and the operation would be efficient?

A. That is right.

Q. And in this case you do not think that the routing on other lines than the Union Pacific through our state on transcontinental business is upon a comparable efficiency basis.

A. They don't compare with the Union Pacific.

Q. Now, Mr. Quirk asked you about the statu-es of Nebraska. He mentioned on statute. Is it true we have a large number of statutes with reference to the regulation of routes and rates?

A. We have a stack of them about 14 inches high.

Q. Each case is judged upon the circumstances of that particular case?

A. That is right.

Mr. Overcash: That is all.

Exam. Mullen: Is that all?

Mr. Overcash: We offer in evidence Exhibit 42.

Exam. Mullen: It will be received in evidence.

[fol. 1753] (Defendants' Exhibit No. 42, Witness King, received in evidence.)

Exam. Mullen: Thank you, Mr. King.

The Witness: Thank you.

(Witness excused.)

Exam. Mulen: We will take a ten-minute recess.

(Short recess taken.)

Exam. Mullen: Come to order, please.

Have you another witness?

Mr. Overcash: I call Dr. Palmer.

Edward S. Palmer was sworn and testified as follows:

Mr. Overcash: Mr. Examiner, counsel have agreed that the direct statement of this witness may be copied into the record without being read. The exhibit of this witness will be No. 43 and we offer in evidence the prepared statement of the witness at this point, and Exhibit 43.

Exam. Mullen: Can't the whole business be put in as an exhibit?

Mr. Overcash: You mean the statement, too?

Exam. Mullen: Yes.

Mr. Overcash: It can be, if you want it that way. We offer in evidence, then, the statement and the Exhibit No. 43, and the witness is available for cross examination.

Mr. Gibson: As an exhibit, the two?

[fol. 1754] Exam. Mullen: The whole thing. This document, consisting of a statement by the witness, and accompanied by an exhibit will be received in its entirety as Exhibit No. 43.

(Defendants' Exhibit No. 43, Witness Palmer, marked for identification.)

Mr. Overcash: You may cross examine.

Cross-examination.

By Mr. Quirk:

Q. Dr. Palmer, the statements made in your direct testimony as to the adverse affect that the complaint here might have in case it is successful, is based, I take it, on information given you by the Union Pacific as to the diversion of the traffic?

A. The testimony of Witnesses Earley and Hanson, especially as elaborated by Mr. Hanson.

Q. Did you know Mr. Hanson accepted the potential estimate made by Mr. Earley as maximum—or as the minimum that would move?

A. I accepted that merely as the basis of my calculations without any regard to whether it is maximum potential or minimum.

Q. Without any regard, as far as your knowledge is concerned, as to whether it is correct, probable, or rational, is that correct?

A. That is right.

Q. Now, did you know in preparing this testimony that one of the witnesses for the Union Pacific, a Mr. Stilling, testified that of this potential traffic, there were 50,000 car-[fol. 1755] loads that moves from a coastal area, to and from which competitive rates now exist, via the Rio Grande, its eastern connections, Southern Pacific, Western Pacific, and the Great Northern?

A. My statement has no bearing upon the correctness or the incorrectness of any of these estimates, but my statement holds pro rata upon any diversion of traffic.

Q. In other words, you simply have taken what was given to you by the Union Pacific, and have used that?

A. The statement is supplied pro rata for any other diversion however smaller or larger.

Mr. Quirk: That is all.

Mr. Overcash: That is all.

Exam. Mullen: That is all. Thank you, Dr. Palmer.

(Witness excused.)

Exam. Mullen: There is no objection to the receipt of that exhibit in evidence?

Mr. Gibson: No objection.

Exam. Mullen: It will be received.

(Defendant's Exhibit No. 43, Witness Palmer, received in evidence.)

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: Are we ready to proceed?

Mr. Collins: Mr. Examiner, I have statements of four shipper witnesses in behalf of the defendants, and I would [fol. 1756] like to offer them under the same stipulation that I had with Mr. Quirk, counsel for the complainant, at the Boise hearing. That stipulation, of course, is of record.

Exam. Mullen: Yes, that is already of record.

Mr. Collins: The first statement is by B. K. Smoot.

Exam. Mullen: That will be marked Statement No. 61.

Mr. Collins: The next one is by James E. Dyer.

Exam. Mullen: That will be 62.

Mr. Collins: The next one is Emmet J. Smith.

Mr. Quirk: Off the record.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

B. K. Smoot.

Mr. Collins: Salina, Kansas. Is that sufficient, Mr. Quirk?

Mr. Quirk: He is representing the Smoot Elevator.

Mr. Collins: All right, representing the Smoot Elevator Company at Salinas, Kansas.

Mr. Quirk: And certain others.

Exam. Mullen: Yes, and others.

Mr. Collins: Yes, and certain other elevators.

Exam. Mullen: 62.

Mr. Collins: 62, Mr. Dyer of Bronxville, New York, is vice president and director of Sinclair Refining Company, and manager of the Transportation Supply and Distribution [fol. 1757] Department of that company.

Exam. Mullen: All right.

Mr. Collins: Mr. Emmet J. Smith, Chicago, Illinois——

Exam. Mullen: No. 63.

Mr. Collins: ——who is general traffic manager of Edward Hines Lumber Company and traffic manager of the Oregon and Northwestern Railroad Company.

The last one is E. G. McGovern, Minneapolis, Minnesota. He is general traffic manager for Gamble-Skogmo, Inc.

Exam. Mullen: That will be No. 64.

Mr. Quirk: The stipulation made is with the same reservation and same objections I made heretofore with respect to verified statements. That is understood.

Exam. Mullen: It is so understood.

Mr. Quirk: I call particular attention to some arguments on page 4 of the statement of Emmet J. Smith, Verified Statement No. 63. We would like to ask Mr. Smoot a few questions.

Exam. Mullen: Mr. Smoot.

B. K. Smoot was sworn and testified as follows:

Cross-examination.

By Mr. Quirk:

Q. Mr. Smoot, am I correct in understanding that the transit arrangements that exist at all the points on your Verified Statement 61, except Hutchison and Enid, do not contain the restrictions that are in the transit arrangement [fol. 1758] that exists at Wichita and certain other points in Kansas?

A. If I understand your question correct, yes. In other words, you mean the same restrictions prevail at Wichita, likewise prevail at Hutchison?

Q. And Enid?

A. And Enid, yes.

Q. But they don't prevail at all those other points you have named there?

A. That is correct.

Q. So you are in a more favorable position than the mills that have already been represented here and testified at the Salt Lake hearing around the Wichita area in that respect?

A. In that respect, yes.

Mr. Quirk: That is all.

(Witness excused.)

Exam. Mullen: That completes your statements, Mr. Collins?

Mr. Collins: Yes.

Mr. Hill: In behalf of the Brotherhoods on the D&RGW, we have one witness we would like to present out of order here in order that he may get away today.

Exam. Mullen: All right. Call him.

Mr. Hill: Mr. A. J. Chipman.

A. J. CHIPMAN was sworn and testified as follows:

Direct examination.

[fol. 1759] By Mr. Hill:

Q. State your name.

A. A. J. Chipman.

Q. Where do you live, Mr. Chipman?

A. Denver, Colorado.

Q. What is your present position?

A. General chairman of the General Grievance Committee of the Brotherhood of Locomotive Firemen and Enginemen on the Denver and Rio Grande Western Railroad, and some other small lines in that territory.

Q. For how long have you been general chairman of this committee?

A. Since the 9th day of February, 1917.

Q. And prior to that time, did you work as an engineer and fireman on the D&RGW?

A. Yes sir, I did.

Q. What are the duties of the position that you occupy?

A. Making and maintaining working agreements with the carriers that we have contracts with, in engine service in that territory.

Q. Does your position also require the handling of grievances with the D&RGW?

A. Yes sir, it does.

Q. Does your position require you to be familiar with the physical plant of the D&RGW system?

A. Yes sir.

Q. And for how long have you been familiar with that system?

A. With respect to the operation of trains and engines [fol. 1760] practically ever since we went to work for the railroad company, back in 1907.

Q. In whose behalf do you appear here, Mr. Chipman?

A. The engine-service employees on the Denver and Rio Grande Western Railroad.

Q. Is there a national organization of which your brotherhood is a part?

A. Yes sir.

Q. What is it known as?

A. The Brotherhood of Locomotive Firemen and Enginemen.

Q. And of what does it consist?

A. Membership is composed of the men employed in engine service on the various railroads throughout the United States and Canada.

Q. Do you represent the Grande Lodge in this proceeding?

A. No sir.

Q. Does any intervenor in this proceeding have a right to represent the Grande Lodge here in this proceeding?

Mr. Greene: I think I am going to object to that. I think, Mr. Examiner, it might save some time; in the intervention filed by the employees of the D&RGW, they suggested that the petition filed by the Union Pacific employees might be erroneously construed as representing the Grande Lodge. I want to state at this time if any such construction could be placed on that petition, that it was unfortunately phrased, and there was no representation of any kind in this proceed-

[fol. 1761] ing that the brotherhood of Union Pacific employees represent or have the authority to represent in any way any of the Grande Lodges.

Mr. Hill: Then may it be stipulated that the intervention by those you represent are in behalf of employees on the Union Pacific system alone?

Mr. Greene: As represented by the general chairman, who signed the petition.

By Mr. Hill:

Q. Mr. Chipman, are you acquainted with the personnel on the D&RGW system, that is, those who operate the trains?

A. If you mean the engine and trainmen, yes.

Q. Are you acquainted, too, in a general way, with the Union Pacific's system of rails?

A. Very generally.

Q. Do you know where they are located?

A. Yes sir.

Q. Do you know the area they serve?

A. Yes sir.

Q. On the D&RGW Railroad, how is seniority determined for employment by those represented by you?

A. Well, upon entering the service, of course, they are, after qualifying, given a place on the seniority list in the respective class of service in which they are employed.

Q. Is there a geographic division of seniority districts on the D&RGW system?

[fol. 1762] A. Not necessarily.

Q. In other words, is there system-wide seniority, or division seniority?

A. No, it is confined to districts and divisions.

Q. Take the Salt Lake Division; are you familiar with that of the D&RGW?

A. Yes sir.

Q. Of what does it consist?

A. It consists of main line mileage between Ogden and Helper, Utah, and branches. I think there are about 400 some-odd miles of track, comprising the Salt Lake Division.

Q. And in what seniority district is that with respect to your brotherhood?

A. We call it the Salt Lake Division, subdivision No. 5.

Q. What relationship is there, Mr. Chipman, between seniority and the employment on the railroad, on your railroad?

A. Well, the man with the greater seniority, of course, his job opportunities are greater, he can hold a job longer, he has steadier employment, than the junior man.

Q. Will you explain that? Why is that true?

A. It depends on traffic. The men first entering the service, of course, are entitled by virtue of their seniority are entitled to remain in the service as long as there is any traffic to move. The junior man is laid off first, of course, when traffic declines, and there is a falling off in business. [fol. 1763] Q. Are there any rules which govern the amount of mileage that an engineman or fireman may have besides seniority?

A. Well, we have as part of the working agreement a regulation that restricts the mileage earnings of enginemen in all classes of service.

Q. And what is that mileage arrangement at the present time?

A. In freight service, a maximum of 3,500 miles per month; and in passenger service, 4,800 miles per month.

Q. How does that operate, to restrict the amount of mileage that a man may make per month?

A. When the individual has earned the equivalent of that maximum mileage, if the end of the month has not arrived, he doesn't work for the balance of that month.

Q. That would be true regardless of seniority?

A. That is correct, sir.

Q. Is there, Mr. Chipman, any relationship between the jobs of the engineers and firemen on the D&RGW system, and the amount of traffic that is handled by the system?

A. Yes. Again the engineer, generally speaking, is a promoted fireman on that particular railroad, and when traffic declines, and business falls off, he displaces a man junior to him firing the locomotive. That man, of course, displaces someone junior to him on the extra list and somebody eventually is out of a job.

Q. Is it a fact, Mr. Chipman, that enginemen and firemen

[fol. 1764] are not called unless there is some train or traffic movement to occur?

A. That is correct.

Q. Are you, Mr. Chipman, familiar in a general way with the volume of freight traffic that has been handled over the D&RGW system recently and in the past years?

A. Not to state it in terms of the actual volume of traffic, no. All we have is a general idea, of course, and we increase and decrease the number of men employed as business fluctuates.

Q. You would be familiar with it, then, as it affected employment of train crews?

A. Yes, that would be our first knowledge of it.

Q. Is there some division, operating division of the Denver and Rio Grande Western Railroad which would be representative of the railroad with respect to employment at the present time?

A. We think the Salt Lake Division, Subdivision No. 6, would be typical of the employment conditions at the present time, with respect to this particular case.

Q. What is the correct number of the Salt Lake Division?

A. Subdivision No. 6.

Q. Why do you think that the Salt Lake Division would be representative and comparative of other divisions on the Rio Grande system?

A. Because we believe it is a typical division of the Denver and Rio Grande Western Railroad with respect to this [fol. 1765] case. Part of it, of course, the district begins at Ogden and ends at Helper, Utah.

Q. Now, do you have an analysis of the employment of firemen and enginemen on the Salt Lake Division of the Denver and Rio Grande Western Railroad for a period of years?

A. Yes, we have.

Q. Will you read or state into the record the data which you have there and its source and the number of employees on the seniority list, both as to firemen and enginemen for the periods mentioned, along their range of seniority dates, and the number of firemen hired during each of those years, and the number of engineers promoted for the period from 1941 to 1949, inclusive?

Mr. Greene: May I ask, Mr. Examiner, and counsel, and the purpose of this testimony is, what issue it is proposed to meet?

Mr. Hill: The purpose is to show there is at the present time—there are at the present time men who are qualified to work on the Rio Grande system that are not able to hold jobs, and to give a picture of the relation of traffic to employment on the system.

Mr. Greene: Well, is it expected that any injury is going to result to these men irrespective of the outcome of this case?

Mr. Hill: The point is that the men represented by me believe that they have been discriminated against because of the continuance in effect of these artificial rate barriers [fol. 1766] resulted in traffic being routed over the Union Pacific which should have been for many years routed, if competitive situation permitted, over the D&RG, and also to show that the system on which these men are employed have the train personnel to handle additional traffic that have already been trained and have handled traffic over this sy-tem during the past several years.

Mr. Greene: I will pass it for the time being.

All right, sir.

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

By Mr. Hill:

Q. Will you then cover the highlights of this? Show the number, for instance, the number on the seniority list of, let's take, engineers first, from 1941 to 1949, on the Salt Lake Division.

A. Omitting the opening statement of this paragraph?

Q. Yes.

A. For the year 1941, there were 196 engineers on the Salt Lake Division, the seniority dates ranging from the third month, 1903, to the 12th month, 1939—the 19th day of the 12th month of 1939.

Q. I think for the purpose of the evidence, just give the number on the seniority list for the engineers, then the num-

ber of firemen, and the number of promotions and demotions.

A. For the year 1942, 198 engineers' names on the senior- [fol. 1767] ity list, and 392 firemen. 77 firemen were promoted.

For 1943, 263 names appear on the engineers' seniority list, 565 names appear on the firemen's seniority list; 28 men were promoted and 126 hired.

1944, 283 names appear on the engineers' seniority list, 655 on the firemen's seniority list; 10 promoted and 101 hired.

1945, 280 names appear on the engineers' seniority list, 693 on the firemen's seniority list; 18 promoted and 58 hired.

1946, 289 names appear on the engineers' seniority list, 672 on the firemen's seniority list; no promotions and 7 hired.

In 1947, 294 names appear on the engineers' seniority list, 587 on the firemen's seniority list; no promotions, nobody hired.

In 1948, 285 names appear in the engineers' seniority list, 546 on the firemen's list; no promotions, and no firemen hired.

In 1949, 279 names appear on the engineers' seniority list, 491 on the firemen's seniority list; no promotions and 13 hired.

Q. What do you understand the meaning to be of the term "bridge traffic," Mr. Chipman?

A. Our limited knowledge of it is it is through traffic by another name.

Q. And what is through traffic?

A. Traffic that moves over the entire system of railway it might be moving upon; it neither originates nor its destination is on that line.

Q. Is there a distinction or difference between local traffic [fol. 1768] originating on the D&RG and the bridge traffic with respect to the regularity or irregularity of employment of the men represented by you?

Mr. Greene: I think I am going to raise an objection to that, Mr. Examiner. The witness has not been shown qualified here to testify as to the ratio between employment, on the one hand, or traffic, on the other hand.

He said he had only a general idea of traffic conditions, and did have no actual figures apparently to back up his statement.

Exam. Mullen: Well, I think his position is such that he may testify within the range of his knowledge. Go ahead, sir.

The Witness: Local business, as we understand it, of course, has almost ceased to exist. The railroad, and consequently the employees, and the community in which it serves, depend, of course, upon the movement of through traffic.

By Mr. Hill:

Q. Well now, the question, Mr. Chipman, was related as to the characteristic of through traffic as opposed to local traffic with respect to the regularity or irregularity of employment by those represented by you?

A. Well, of course, because of a decrease in local traffic, employment naturally decreases with it, and if you were dependent upon local traffic, there wouldn't be anybody working on the railroad hardly. In fact, the number of crews would be greatly diminished, the number of employees [fol. 1769] working, and everything else.

Q. Maybe the question relates primarily to whether local traffic that does exist is seasonable in characteristic, or is it a year round activity?

A. It is not a year round traffic, no sir.

Q. How does it compare with regularity with bridge or through traffic as to being seasonal?

A. It does not compare very favorably; there is less of it, of course, than the through traffic.

Q. In your opinion, Mr. Chipman, does irregularity of employment among those represented by you have any detrimental effect on the efficiency with which they work?

A. Yes, it does.

Q. And the efficiency of the men themselves?

A. Yes, it does.

Q. How does that arise? Why is that true?

A. Well, primarily because of the irregularity of employment mentioned of at least—well, let's say seven months to

nine months a year of regular employment before they will be attracted to and remain with the job.

Q. Now, when that employment does not exist, what effect does it have on the men you represent?

A. Many of those men on the bottom of the seniority list are furloughed, or laid off. They go elsewhere seeking employment, and when need for their services again arises, [fol. 1770] they are called back. Many of them do not respond. Those who do have to be retrained to a certain extent, broken in again, in order to properly perform their duties.

Q. Does the regularity in traffic situation also result in the promotions and demotions of engineers to firemen?

A. Oh, yes sir, very materially.

Q. Do you have illustrations in the case of these engineers showing this irregularity of service, or more particularly change in occupation from engineer to fireman, so that you could state it into the record?

A. Yes sir, we do have.

Q. Who are these men, and where is their seniority?

A. There are three enginemen on the Salt Lake Division. Their names are F. W. O'Driscoll——

Exam. Mullen: Do we need all that detail in this record?

Mr. Hill: I could supply it as another exhibit to save time.

Exam. Mullen: I was wondering if you wanted that particular detail, the names of the men and so on. Why do you want that in?

Mr. Hill: I see. We probably don't need the names of the men.

Exam. Mullen: I don't think so.

By Mr. Hill:

Q. Will you then state the periods these three men served as firemen and engineers on the Salt Lake Division?

A. Omitting the names?

[fol. 1771] Q. Yes.

Exam. Mullen: Just a moment. Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

By Mr. Hill:

Q. Taking a man with seniority, as engineer, in 1942, as an engineer——

A. Yes.

Q. —how many times between that date and the present time was that man demoted to fireman?

A. Six times, the fireman in the tabulation.

Q. What does that indicate in respect to traffic, if anything?

A. It indicates a decrease in traffic, falling off in business, and, of course, less work.

Q. You mean he was demoted because of the falling off in traffic?

A. Yes sir.

Q. And taking another illustration of another engineer, with the same seniority as such, how many times was he demoted back to firing from October 5, 1942, to this date?

A. Nine times.

Q. And have you another engineer?

A. Yes.

Q. Whose seniority date was October 5, 1942, as engineer on the Salt Lake Division?

A. He was demoted seven times during that period.

Q. Does this situation of demotions and promotions, [fol. 1772] back and forth, between engineer and fireman, have any effect on the number of grievances which have to be handled by you?

A. At times, it does, yes, sir.

Q. How do those arise?

A. Well, seniority lists must be prepared semi-annually where you have large numbers of names on a seniority list. The occasion of possibility of mistakes in improperly placing men on those lists occur, that is one item. Men not having an opportunity or not availing themselves of the opportunity of examining those records, time goes by, and a man may have been improperly placed on the seniority list and doesn't know it until he is to be called back to work, and then, of course, a dispute may arise as to his proper standing on the seniority list.

Q. As of April 1, 1950, how many firemen were displaced

and out of jobs on the Salt Lake Division of the Denver and Rio Grande Western?

A. I think it is 79, if I remember correctly, at the present time.

Exam. Mullen: Do you mean of all the number of firemen you stated here, only 79 are out of work?

The Witness: At the present time. Of course, there are many of those that were dropped. If you notice that tabulation, there were over 100 at one time.

Exam. Mullen: I see.

[fol. 1773]. By Mr. Hill:

Q. That figure which you have given, as of January 1, 1949, there were 279 engineers on the seniority roster, and 491 firemen?

A. Yes.

Q. Your statement is that of that 491 firemen on the seniority list, January 1, 1950, that 79 of them were now out of work?

A. Yes sir.

Q. Would that mean, Mr. Chipman, that 79 men of the engineers were back firing?

A. Ordinarily it would.

Q. Would that be approximately true?

A. Yes.

Q. Do you feel you are qualified, Mr. Chipman, to state as to whether or not the men you represent have the qualifications as firemen and enginemen and are of sufficient number and sufficiently well trained to properly handle any additional traffic which might result from the granting of the relief sought in this case.

A. There is no doubt of that. We feel fully confident that we have the men, we have the know-how, and we have the railroad upon which to handle it.

Q. Do you have any specific illustration, or knowledge, or fact upon which you predicate that opinion? If so, please state what it is.

[fol. 1774] Exam. Mullen: I don't think that is necessary. This man is well qualified to express an opinion. He doesn't have to specify any more than that.

Mr. Hill: I will withdraw the question.

By Mr. Hill:

Q. Are you familiar with the motive equipment and the power with which the D&RG system operates at the present time?

A. Fairly well, yes sir.

Q. And its tracks?

A. Yes sir.

Q. Do you understand the issue involved in this proceeding?

A. I think I do, yes sir.

Q. What, if any, effect does the maintenance, or the failure to establish the joint competitive rates sought here, have on the men represented by you?

A. Because of the diminishing local business, and the dependence of a railroad company on its employees on the movement of through or bridge traffic, they must have it in volume, of course, in order to maintain the same number of employees, or reasonably close to that number that they are employing at the present time, and in order to continue as a going railroad they must have that volume of traffic and all additional traffic they can get reasonably under regulations, of course, and solicitation of shippers, and things relating to it.

Q. Mr. Chipman, how is the group represented by you [fol. 1775] affected by a rate or a joint rate which precludes traffic coming over your road?

Mr. Greene: Mr. Examiner, I think I am going to object to that. That goes into a question of rates, and I submit that the witness shouldn't be qualified to go into that matter, how the joint rates might affect the men.

Exam. Mullen: It seems to me he was simply trying to bring out the same facts in another way, that is all. It has reference to the volume of traffic again, doesn't it?

Mr. Greene: If that is the only purpose of it, I have no objection.

Exam. Mullen: Is that correct?

Mr. Hill: Yes, and the fact that if joint rates are in effect, or not in effect, that precludes the traffic going over this system, it directly affects the jobs that these men have, and they are discriminated against.

Exam. Mullen: By affecting the volume of traffic you mean?

Mr. Hill: Yes.

Exam. Mullen: Do you know anything about that, Mr. Witness?

The Witness: Well, I think we said it adversely affected them. Naturally it adversely affects them, because the less traffic we have, the less jobs we have. Those men being citizens of Colorado and Utah, think the situation that now exists at Ogden should long since have been dissipated, and [fol. 1776] that discriminatory feature of the thing eliminated to permit shippers to decide what railroad they wanted their traffic to be moved over from the Pacific Northwest to all points of destination.

Exam. Mullen: Under joint rates, you mean?

The Witness: Yes sir.

Exam. Mullen: Of course, you understand the route is now open under combination rates?

The Witness: Yes sir, I do.

Exam. Mullen: All right.

By Mr. Hill:

Q. Mr. Chipman, how many employees are there on the D&RGW, taking the averages of last year?

A. About 8386, I believe, the last count.

Q. Basing the average employee as having a family of three, how many are affected through employment conditions on the Rio Grande?

A. About 25,000.

Q. And on a 3½ per family basis, how many does it amount to?

A. 29,351, to be exact.

Mr. Hill: I believe that is all. You may inquire.

Mr. Quirk: Could I ask one question?

Exam. Mullen: Mr. Quirk, go ahead.

Cross-examination.

By Mr. Quirk:

Q. Mr. Chipman, I suppose the employees on the Denver and Rio Grande are like the employees on the other rail-

[fol. 1777] roads, they have to take their chances of the ups and downs of economic conditions?

A. That is true.

Q. You recognize that?

A. Yes sir.

Q. Is it your position when there is a more or less permanent restriction that prevents you from getting jobs in connection with an unknown quantity of traffic per year that you complain against that because it is a permanent restriction?

A. That is right.

Mr. Quirk: That is all.

Cross-examination.

By Mr. Greene:

Q. As I understand it, Mr. Chipman, your position in this matter is the only way you see where you can improve employment on the Rio Grande is to take traffic from the line of another railroad?

A. No sir. That isn't our position.

Q. That is what you propose to do in this case, is it not?

A. We hope that the Commission will see eye to eye with us, and remove the restrictions and dissolve the monopoly that we think exists, and permit us to compete, if you please, with our neighbor, the Union Pacific Railroad.

Q. You expect your railroad to actively solicit all of the traffic they could possibly get in the affected territories?

A. I think that would be the natural thing to expect; we [fol. 1778] sincerely hope they will, and we think they can.

Q. You read Mr. Hogue's testimony at Boise, did you not?

A. Yes.

Q. You wouldn't expect the D&RGW to stop soliciting Union Pacific traffic when they arrived at a diversion of ten per cent of the traffic potential, would you?

A. We have no fixed ideas in the matter. Again, we hope that if what we think is a monopoly is dissolved, that our traffic department should be permitted to solicit any one in that territory and let the shipper decide which way he wanted his traffic routed.

Q. You wouldn't expect the D&RG to stop soliciting when they got the 10 per cent of the traffic potential, would you?

A. Again I have no knowledge of what the ten per cent would mean, and have no knowledge of what its relationship to this case would be.

Q. Now, have you made any comparisons in the reduction of employment of employees on the Union Pacific as compared to the reduction in employment on the D&RG?

A. No, it really would be unnecessary for us to do that.

Q. You mentioned in your direct examination, I believe, that a decrease in employment tends to affect the efficiency of the working man?

A. That is right.

Q. If it were established that the decline in employment [fol. 1779] on the Union Pacific has actually been greater than on the D&RG, would you say that the Union Pacific is in a position from the efficiency of their men to stand a further diversion of traffic?

A. I wouldn't know. I do not know what their loss in employment has been. They employ a larger number of men than we do, and naturally their loss in depressed periods would be greater.

Q. If you would assume just for the purpose of your answer that such has been the case, would you say the Union Pacific is in a position to stand a further diversion of traffic?

A. I think all these railroads have had to stand loss of traffic, or diversion of traffic in periods of time. I don't know what effect it would have on the Union Pacific Railroad.

Q. If the D&RG had suffered a greater loss of employment than the Union Pacific, then you would say it would not be in as good position as the Union Pacific to stand a diversion, wouldn't you?

A. I think up to the cap-city of the railroad, which has greatly improved, to that extent, of course, they could stand a loss as well as any other neighboring railroad.

Q. Now, are you familiar with the petition that was filed on behalf of the D&RG employees? I believe you signed it, did you not?

A. Yes.

Q. Now, it is stated in that petition that it is in the public

[fol. 1780] interest to provide for the security of employment and livelihood for the employees of all common rail carriers. That is generally your position, is it not?

A. Yes, we mean all, not, of course, one or any number as against another number. We think it applies to all common carriers.

Q. Then don't you feel that the Commission in this proceeding should protect the employees of the Union Pacific against the diversion of traffic to another railroad that has not shared in that traffic for years?

A. If there was any volume of traffic to be diverted or hoped to be diverted that would make any material difference to the Union Pacific, I think they would be in the same position we are in.

Q. Now, about how much traffic would your company, the D&RG, have to secure from the Union Pacific to give the maximum employment to D&RG firemen and engineers? Do you have any idea how much that would be?

A. I don't know just what that would mean.

Q. Do you feel that the Commission should give any greater consideration to the investment that the D&RG employees have in their homes, than the employees of the Union Pacific?

A. No, but we do think they should have an equal right to participate. That is all they are seeking here as employees.

Q. Well, actually as employees, you are at this time seeking to handle traffic that the D&RG has not handled for [fol. 1781] years, isn't that right?

A. But we think they should have been permitted to handle it many, many years ago.

Q. You would naturally expect that diversion would injure the employees of the Union Pacific to the extent of the diversion, wouldn't you?

A. To the extent of the diversion, which we don't think is material in a sense.

Q. If it isn't going to be substantial or material, how is it going to affect the employees of the D&RG then?

A. To the extent that the shippers can be persuaded to ship over the Rio Grande if the monopoly is dissolved.

Q. If they don't use the route, there will be no benefit to your employees?

A. That is correct, sir.

Q. Now, you gave some figures as to the number of engineers and firemen on your seniority roster. Now, isn't it a fact that there is a duplication in those figures in that there are some firemen that also have seniority on the engineers' roster?

A. No, those lists were made up from men whose names only appear on their respective list; that is the engineers' names appear on their's and the firemen's on their's. There are two separate lists.

Q. But the figures you gave are not actual employment figures, are they?

A. No, they are not.

[fol. 1782] Q. Do you have any figures as to what the actual employment was covering this same period?

A. No sir, we don't have that.

Q. Do you have any idea how many of these men on your seniority list were actually engaged in other occupations?

A. That would depend, and it would vary, of course, from one year to the next. Possibly, looking at the figure, 1949, with 491 names of firemen, I think during a part of the year 1949 that possibly half of those men were employed in the railroad industry, and the balance in some other occupation.

Q. You mentioned that your company, that is, the employment in your company, suffers with business fluctuations.

A. Yes sir.

Q. And do you find that the fluctuations in employment conformed strictly to fluctuations in business, so that there is a direct ratio between the two?

A. Generally speaking, I think that is true.

Q. Then it is sound, I think to take tonnage figures as an indication of employment figures?

A. I think it is.

Q. There was some mention made of the motive power of the D&RG. Does it have any coal-burning locomotives, do you know?

A. Yes sir, they do.

Q. Do you know what the ratio is compared to diesel?

A. I don't know the exact ratio; I might be able to give [fol. 1783] you the numbers, but I don't have the ratio.

Q. Do you have the numbers?

A. I believe they are in the record.

The Witness: I imagine they are.

Mr. Greene: I wouldn't ask again then.

Exam. Mullen: Aren't they in the record?

Mr. Quirk: They are in the record.

By Mr. Greene:

Q. Do you recall about when the D&RG reached the peak of the traffic after the war?

A. After the war?

Q. Yes.

A. No sir, I couldn't state it to you exactly.

Q. I was wondering if you could give us some ideas of the decline in employment on the D&RG, from that peak, down to the present time.

A. I think it began almost as soon as the war was ended in the Pacific Theater. There was a gradual falling off in business then. Some of it was attributed to the fact they could not handle traffic, of course, through the Ogden gateway, as they had during the war.

Q. Well, could you tell me, percentagewise, about what the reduction in employment has been?

A. No sir.

Q. From the peak down to the present time?

A. No sir, I could not.

Q. Have you made any comparison of the decline in [fol. 1784] tonnage between the UP system and the D&RG?

A. No sir.

Q. You are aware of the difficulty of furloughed train employees in securing employment in other industries, are you not?

A. I think I am, yes sir.

Q. Isn't it a fact where a person has years of seniority with a railroad company, he usually isn't trained in any other type of work, and naturally must take a cut in wages to go into some other form of employment?

A. Not always.

Q. That usually is the case, however, if he has any length of seniority with the railroad company?

A. I think it depends on the territory of the country, where there is no other gainful employment similar or somewhat comparable to the railroad industry.

Q. You would expect, would you not, Mr. Chipman, that if this application is granted, that to the extent there is a diversion of traffic from the Union Pacific to the D&RG, that the Union Pacific employees would suffer in proportion to that diversion?

A. Generally speaking, I don't think they probably would notice any difference. That is my own judgment in the matter.

Q. Regardless of the amount of diversion, you don't think there would be any injury to the Union Pacific employees?

A. If any diversion in volume existed, or occurred, yes, sir, but I don't anticipate any change at all. There might be [fol. 1785] a greater business flow to the Union Pacific as a result of this situation than now exists, as far as I know.

Q. Would you expect any diversion or any injury to result if there was a ten per cent diversion of the traffic potential?

A. Injury?

Q. Yes.

A. Not any more than if it was diverted from some other line, some other carrier, the same thing would exist elsewhere.

Q. I want to ask you, do you find in the D&RG, that when there is a decline in traffic that the reduction in service, that is, the number of employees, affects the entire system, rather than any particular division?

A. It has a general effect on the entire system, I think.

Q. You find the company reduces employees over the entire system rather than in one particular area, don't you?

A. Generally speaking, that is what takes place.

Q. You also find do you not, as traffic declines, the tendency of your company is to lop off the more expensive and less remunerative types of service, such as expensive branch line operations?

A. I couldn't answer that the way you might want me to; no, I would have to say no. It depends on the general condi-

tions of the territory, of course, but the moment the business falls off, the railroad don't discontinue branch service.

Q. Isn't that exactly what happened in the case of your [fol. 1786] railroad. that it has lopped off the expensive branch lines, and is now confining its operations to main line operations?

A. My observation has been this, whenever we had a branch line that has not paid operating expenses, and becomes an out-of-pocket expense to the carrier, they, like any other carrier, try to eliminate that service.

Q. And that is exactly what has happened in the case of your railroad, hasn't it?

A. Not necessarily. We have had some reductions in branch line services, but that, I think, has helped the railroad possibly.

Q. Hasn't your brotherhoods uniformly opposed the abandonment of branch line operations?

A. No sir.

Q. You have never opposed branch line abandonments?

A. We have had one abandonment we opposed.

Q. Do you have any idea of what loss of employment has been on the D&RG by abandonment of branch lines?

A. Engine service employees lost nothing.

Q. I wasn't speaking of that particular abandonment, the railroad as a whole; could you tell us what the loss in employment would be?

A. I could not.

Q. Could you give any indication as to these figures on the seniority roster, how in any way the changes might have been affected by abandonments?

[fol. 1787] A. In that territory where the figures are taken, there has been no abandonment that has affected the employment of men to the extent that some men were laid off and furloughed from the service.

Q. On your railroad, does the local general chairman have the right to determine the men who are added to or taken off your seniority rosters?

A. You mean the local chairman?

Q. Yes.

A. They, in cooperation with someone, designated by the carrier, do that job.

Mr Greene: I think that is all.

Mr. Hill: That is all.

Exam. Mullen: That is all, thank you sir.

(Witness excused.)

Exam. Mullen: Have you another witness?

Mr. Hill: We have other witnesses, but we will wait until the other side has concluded its case. We just intervened here in order to accommodate this witness, as I understood it.

Exam. Mullen: Any way at all you wish to proceed is satisfactory with me. Mr. Greene, you may go ahead.

Mr. Greene: Mr. Oliver.

E. L. Oliver was sworn and testified as follows:

Direct examination.

[fol. 1788] By Mr. Greene:

Q. Would you state your name and place of residence?

A. Name is E. L. Oliver. I live in Washington, D. C. My address there is 1029 Vermont Avenue, Northwest.

Q. Your business occupation, Mr. Oliver?

A. I am a research economist.

Q. Approximately how long have you been engaged in research economy?

A. Well, for about 30 years.

Q. And have you testified in numerous proceedings before the Interstate Commerce Commission involving employment of the labor unions?

A. I have testified in several, yes.

Q. Could you state briefly your experience in economy research?

A. I am a graduate of the University of Minnesota, with about a year's graduate work. I had three different periods of service with the Federal Trade Commission, in both their economic and legal staffs.

I taught for a year at the University of Pennsylvania, in the Wharton School. While there, I began working with local labor unions, assisting them in negotiations. Subsequently, I became associated with the Labor Bureau, Inc.

In 1922, I represented the Brotherhood of Railway Clerks, in national wage hearings before the United States Railroad Labor Boards. In that same year, other national railway labor unions, before that same tribunal.

[fol. 1789] Subsequent to the passage of the Railway Labor Act, I represented various system organizations of the Brotherhood of Railway Clerks, and in 1928 became the director of the research department of the International Union.

From that time on I represented the Brotherhood and all railway labor unions on several different occasions, not only in wage and rules negotiations and arbitrations, but also in the preparation and presentation of economic and statistical material before committees of Congress, before the N.R.A. bodies, the Interstate Commerce Commission, and, of course, in the determination of policy of those railway labor organizations, specifically with respect to the——

Mr. Quirk: Mr. Examiner, we are not inclined to challenge the qualifications of this witness. It seems to me this is unnecessary.

Exam. Mullen: I think they have been sufficiently stated.

Mr. Greene: Very well.

By Mr. Greene:

Q. Mr. Oliver, you have prepared an exhibit showing the proposed traffic diversion on Union Pacific employment?

A. I have, yes sir.

Q. I wanted to ask you first, have you been retained by all of the 18 Brotherhoods of the Union Pacific's system to present their case in this proceeding?

[fol. 1790] A. I have been retained by their general chairman's association. I am not precisely certain how many organizations there are composing that association.

Mr. Greene: May I have the exhibit marked?

Exam. Mullen: It will be No. 44.

(Defendants' Exhibit No. 44, Witness Oliver, marked for identification.)

By Mr. Greene:

Q. If you will refer to Exhibit 44 for identification, I will ask if it was prepared under your supervision?

A. It was, sir.

Q. I notice on the corner of the page, "prepared by Labor Bureau of the Middle West."

Can you state your connection with that organization?

A. I am head of the organization office in Washington. It is a continuing organization of the Labor Bureau to which I referred earlier. We maintain economic research staffs in Chicago and Washington, and have other offices, notably one in Philadelphia.

Q. Then where the exhibit states "prepared by Labor Bureau of Middle West," that was actually under your direction and supervision?

A. That is right, yes.

Q. Will you proceed to explain your Exhibit No. 44?

A. This exhibit is a restatement of the probable effects on employment of the various groups of employees on the Union Pacific Railway if the potential diversion referred to [fol. 1791] earlier in the evidence in this hearing were to be accomplished. The earlier part of the exhibit, the first and second page, is a restatement in terms of the classes of employees involved directly in the proposed diversion.

This is based on testimony which has already been offered by Mr. A. D. Hanson, on page 8 of Exhibit, I believe, 15. It shows the number of employees of each class, the annual wage of the group, the average annual wage of each class of employees.

You will note by occupations the largest effect is shown on page 2 of the direct loss of employment, is in the shop forces, where the estimate is there will be 562 employees released, and in the train and engine service, where the single groups of road enginemen and trainmen are largest.

The average for the whole group, which numbers 1240, the average annual wage is $4,100, and the total wage loss, just over five million dollars. We have summarized those by major occupational groups for easier reference with respect to later data on page 3 of this exhibit.

The train and engine groups have been consolidated here. You will note there are 461 of them. It is calculated they

would be released as a direct and immediate effect if this diversion were to be accomplished. The shop forces, again the largest group, 562, or a total of 1240.

As the footnote indicates, the data used for the preparation of these tables were supplied by the Union Pacific Railroad in the form of the exhibit that was offered through Mr. [fol. 1792] Hanson. However, the employees, and I may say myself, measuring the potential diversion, so-called, against the actual traffic of the railroad, felt this estimate of the immediate and direct effect was wholly inadequate to express the total result if the diversion were to be accomplished.

I have shown on page 4 of the exhibit, one method of measuring the probable effect of such a diversion as has been discussed here. We have shown total employment on the Union Pacific Railroad in comparison with revenue ton miles, and loaded freight car miles.

Those changes for the period 1939 to 1949, inclusive, have been reduced to index numbers, with 1946 equaling 100, in the three columns at the right of the table. It is quite clear, from an examination of those figures, that employment fluctuates, both with ton miles, and with loaded freight car miles, but that the fluctuation is a little closer in terms of loaded freight car miles than revenue ton miles, as perhaps is to be expected, because the amount of load in individual cars would vary, but the employment of most groups would not fluctuate with the amount of the load.

The loaded freight car miles on the 1946 base had changed the net from 1939 to 1946 almost exactly as much as employment on the railroad.

From 1946 to 1947, although loaded freight car miles rose, [fol. 1793] employment dropped. That resulted from the post-war reorganization to some extent.

In any case, the figures here led to the belief that a calculation of the loaded freight car miles to be lost if the prospective diversion were permitted, would give a measure of the total loss of employment.

That is the experience of the employees, and my own, as well as the statistical evidence, that employment does decline with reductions in traffic. We have attempted on page 5 to measure the total employment loss to result from a traffic diversion of the size that has been discussed here.

The calculation there made is based first on the total carloads of freight handled by the Union Pacific Railroad in 1949, which were 1,500,000. If the proposed traffic diversion were to be accomplished, and 157,000 cars to be diverted from the Union Pacific, the result would be, of course, not a complete loss, because a part of those cars would continue, or a part of the mileage would continue to be run over the Union Pacific, making an allowance for the actual net loss to the Union Pacific, based on the various routes these cars might be expected to move on. We arrived at a total figure of the diversion of approximately 118,000,000 miles.

The figure just preceding that of 1,082,000,000 is based of necessity on an average car movement of 1947. That was the latest year for which the figures were available.

[fol. 1794] We have applied the average movement for 1947 to the total number of carloads of freight handled in 1949 to reach that figure of 1,082,000,000. On the basis of those two figures, the diversion anticipated, or the potential traffic diversion, to use the precise language that has been employed here, would amount to 10.9 per cent of the 1949 loaded freight car miles.

The past history on this railroad, and on railroads generally, can fully justify the belief that the employment loss would be not less than the proportionate drop in traffic. Applying that proportionate drop in traffic to the total number of Union Pacific employees in January, 1950, I have arrived at the figures shown here of 5,144, the employment loss to be anticipated if this diversion were to be accomplished.

In many ways, that figure is conservative. There is, for example, the probability that with the reduction in the total haul of traffic originating in the Northwest, the railroad would contemplate and attempt, and perhaps succeed, in eliminating a great deal of that branch line service. I base that on the branch line abandonments that have taken place in the past with which I have had general contact.

That decline in branch line service would bring about a proportionately greater drop in employment than the actual traffic reductions. There is also this factor that appears in the figures on Page 5, that had not yet been introduced as a matter of the direct employment loss.

[fol. 1795] It is this: That while the direct employment loss

relates to that part of the railroad over which the traffic is now moving, and where it is estimated traffic would not move, there would be a slight—I have no way of knowing how great—an increase in employment over that section of the railroad between McKinnon and Ogden, Utah.

However, in the figures on Page 5, full allowance is made for that compensating factor, because this is based on total loaded freight car miles over the entire railroad.

By Mr. Greene:

Q. Just for an interruption, have you read the testimony, I believe, of Mr. Bradford, commenting on the fact that Mr. Hanson's exhibit did not take into account the movement between McKinnon and Ogden?

A. Yes, I have.

Q. Is the factor that he comments upon taken into account in the figures you give on Sheet 5?

A. Yes, it is fully allowed for in the calculations shown on Page 5. I think I have made it clear, but if not, I should make it clear, this is net loss of loaded freight car miles, rather than gross.

That is to say, it deducts that part of the haul which the Union Pacific would retain to the Ogden, Utah point of diversion.

Q. Have you anything further to add as to Exhibit No. 44?

A. I don't think so. I believe that is a complete statement in respect to that.

[fol. 1796] Mr. Greene: I will now offer Exhibit No. 44 for the record.

Exam. Mullen: Any objections?

(No response.)

Exam. Mullen: It will be received in evidence.

(Defendants' Exhibit No. 44, Witness Oliver, received in evidence.)

By Mr. Greene:

Q. Have you also prepared an exhibit that compared the decline in railway employment in the western districts?

A. I have, yes sir.

Mr. Greene: May we have the exhibit masked for identification, Mr. Examiner?

Exam. Mullen: We will mark that 45.

(Defendants' Exhibit No. 45, Witness Oliver, marked for identification.)

By Mr. Greene:

Q. Will you proceed to explain Exhibit No. 45, Mr. Oliver?

A. Yes. This exhibit is designed to compare the loss in employment on the Union Pacific Railroad with other sections in the United States, particularly western areas, as a measure of the possibility of re-employment of any persons who may now be displaced from the Union Pacific Railroad; also as a measure of the relative situation of the employees on these different railroads.

On page 1 of the exhibit, which shows total railway em- [fol. 1797] ployment in the western district and regions, we have given the figures for the 11 years, 1939 to 1949, inclusive. These figures are from the Interstate Commerce Commission's report, and they are the average of mid-month counts of employees as reported by the Commission.

Of course, each of the three regions are included in the total of the Western District. The high point of employment for each of the regions, and for the western district as a whole—perhaps I should change that—for the western district, and for the regions other than the southwestern region, the high point was 1945.

Actually, employment in the southwest was about 400 greater in 1944 than in 1945. The high point in the northwest regions, in the post-war period, rose above the war peak to 153,000, comparing with the 152,000 of the last year of the war.

For the western district as a whole, and for the central western region, the high point of the entire period was 1945. From that last year of the war, the decline in employment is shown at the bottom of the table. In the northwestern region, the employment declined 5.4 per cent.

For the central western region, 18.5 per cent; for the southwest, 20 per cent; and for the western district as a whole, 15.9 per cent.

There has already been presented in the preceding exhibit figures on the decline in employment on the Union [fol. 1798] Pacific Railroad. That declined from the 1945 level, 60,414 to the 1949 level, 48,046, is 20½ per cent, so that the decline on the Union Pacific has been one per cent greater than that for the central western region.

At the same time, employment on the Denver and Rio Grande Railway has dropped from 10,113 to 8,386. That is a decline of 17.1 per cent.

By Mr. Greene:

Q. In what period?

A. From the last year of the war, 1945, to the 1949 average. So the Denver and Rio Grande has dropped 2.4 per cent less than the average in the central west, while the Union Pacific has dropped one per cent more than the average in the central west, and the Union Pacific decline has been 4.4 per cent greater than the decline of employment on the Denver and Rio Grande Western.

From 1941, employment on the Union Pacific has increased as the figures in the preceding exhibit show. The increased figures are 8.4 per cent. On the Denver and Rio Grande, the increase in employment has been 8.6 per cent since the last pre-war period, so that measured from both the last pre-war period and the last year of the war, the employment situation on the Union Pacific is decidedly worse than it is on the Denver and Rio Grande.

That this decline in employment has not been exclusively long-term, but is also measured in the seasonal changes, is reflected on page 2 of this exhibit. You take from that statement corresponding months and you will see that the em- [fol. 1799] ployment decline will vary from one to another part of the year, but that generally every month shows very substantial declines from 1947 to 1949, and from 1948 to 1949.

The last month shown, December, 1949, shows an employment decline in the central western region of 23,000, approximately, below the 1947 figures, and a drop of just under 18,000 below the December, 1948 figures. That generally holds true throughout the year, the greatest decline having been, however, in the summer months, and a somewhat smaller decline earlier in the year.

This decline in railway employment in the central western region has resulted in a large part from a decline in traffic I think it should be noted that it has happened in spite of the fact that in September of 1949, the employees were placed on a basic 40-hour week, so that the number of employees theoretically should have increased with respect to the particular volume of traffic.

Actually, that has not happened.

On Page 3 is shown in terms of traffic the underlying factor in the decline in employment. There has been a drop for each month in 1949 from the corresponding month, both in 1947 and in 1948. You will note the drop for the last months shown, that is for the month of December, 1947, 11,627,000,000; 1948, 10,410,000,000; and 1949 9,461,000,000. There has been a decline of ten per cent in traffic measured by rev- [fol. 1800] enue ton miles from December, 1948, to December, 1949.

Exam. Mullen: That dollar sign should be eliminated?

The Witness: That dollar sign should be eliminated, yes, Mr. Examiner.

Exam. Mullen: We will recess until two o'clock.

(Whereupon, at 12:30 o'clock p. m., the hearing was recessed, to reconvene at 2:00 o'clock p. m., the same day.)

[fol. 1801] Afternoon Session, 2:00 P. M.

Exam. Mullen: We are ready to proceed, gentlemen.

E. L. Oliver resumed the stand and testified further as follows:

Direct examination (cont'd):

The Witness: I think I had indicated that those figures were offered to illustrate the fact that the decline in employment in the Central Western region following on or resulting largely from a decline in traffic probably wouldn't be reversed unless there was a reversal of the very strong downward trend in total traffic.

The succeeding pages of the exhibit, page no. 4, shows the

total employment of the Union Pacific Railroad by months over a three-year period. These figures also are the mid-month count as reported to the Interstate Commerce Commission.

You will note the decline for the corresponding months for the various years, as well as the annual averages which were shown earlier. Taking the last month available—that is, January of 1950—you will see that the decline from January of 1940 has been almost 2,000, and an additional 2,000 below the 1948 figure. In 1947 there was an upward trend in progress. January of that year was the lowest month in the year. For that reason the comparison of 1947-1950 is different from the 1948 or 1949 figure. January of 1949, on the contrary, was the fourth highest of the whole year.

[fol. 1802] The downward trend in employment is quite definite with each year as well as from each year to the corresponding month of the succeeding year. That rests very largely upon the decline in traffic.

We have set forth on page 5 the monthly decline in revenue ton miles carried; and; while here, as for every year—and virtually every railroad—there are fluctuations between the seasons, for the corresponding months of each of these years there has been a very sharp drop in traffic.

There are one or two exceptions—that is to say, where the drop has not been sharp—but, for the most part, it is a definite decline; so that the unemployment on the Union Pacific Railroad rests upon or follows from this decline in traffic, and there is no prospect of any substantial reversal in the employment trend unless that traffic trend is changed.

Because certain of the connecting railroads would be obviously affected to a greater or lesser extent, we have compiled and show on page 6 of this exhibit the total employment for three of the principal connecting carriers receiving traffic from and delivering traffic to the Union Pacific Railroad. The Chicago and North Western Railway, and the Chicago, Milwaukee St. Paul and Pacific, both in the Western Region of the Interstate Commerce Commission classification, show much smaller declines in employment than the Union [fol. 1803] Pacific. Nevertheless, there has been a definite decline in each of them. There has been, in the year 1949, a

substantially lower number of employees than were in their service in 1948. The effect of a diversion of traffic would, therefore, be to increase an unemployment that has already become very considerable on those three lines.

These figures on total employment do not reflect perhaps as accurately as they should the effect of current unemployment on various railway classes.

On page 7 of this exhibit, for that reason we have shown the employment figures by employee groups as classified in the Interstate Commerce Commission reporting division form.

You will note that, while there had been a substantial decline in total employment between January, 1948, and January, 1950, there had been, on the contrary, a slight increase in the group of executives, officials and staff assistants and a relatively smaller decline in the group of professional, clerical and general employees. The decline in forces was heaviest in the transportation train and engine group from January, 1948, to January, 1950—almost a 1300 reduction in force. That is the heaviest of the proportions. The maintenance of equipment, about 900; in maintenance of way and structures, 1400. Maintenance of way and structures was, to January, 1950, heavier than the train and engine group.

[fol. 1804] Those groups, therefore, would suffer more, in the total unemployment figure, than the other groups; and, inasmuch as they are the ones most to be affected by any traffic diversion, that factor should be given some consideration.

It is not possible to trace that over a period of years without a great deal of detailed statistics, but the general fact is shown by that change from January, 1948, December of 1948 to December of 1949, and January of 1950.

That unemployment situation—when the Union Pacific showing a decline of 4300 employees over the period—is reflected in unemployment data from other sources for this same area.

The Railroad Retirement Board, of course, has the administration of the Railroad Unemployment Compensation system. There is available, through the Railroad Retirement Board, some information on the number of compensation claims on file at particular dates. They are kept

on the basis of counties rather than individual cities, for the most part, and cannot be exactly matched up with the figures for any individual railroad. But you will see, on page 8 of this exhibit, that in the county including Omaha——

By Mr. Greene:

Q. May I interrupt? I'm sorry.

A. Yes, sir.

Q. I believe that first item in Nebraska covers the city of Omaha, which, I believe, is in Douglas County.

A. I was about to say that, Mr. Greene.

[fol. 1805] Q. And I believe in the second bracket, where it says "Loraine County," that should be Laramie County, Wyoming, should it not?

A. Yes. There was a typographical error there. That is Laramie County, which includes the city of Cheyenne.

As of January 1, 1950, in these Nebraska counties lying along the Union Pacific railway there were a total of 885 unemployment compensation claims on file with the Railroad Retirement Board.

For the five counties listed in Wyoming the total is 431.

For Kansas, the number is smaller. There is only a small section of the state of Kansas covered, of the Union Pacific line down to Kansas City from the Nebraska connections; however, it is clear that there are now all along the Union Pacific line in these states substantial numbers of unemployed railway workers who are, under the operation of seniority rules, of course, first in line for re-employment on any vacancies that may exist in the railroad from which they originally came.

Q. Before you pass that page, I call your attention to the note at the bottom of the page where you state that it includes only employees with 1948 service.

Does that mean that the seniority dates back as far as 1948 in all instances?

A. Yes, it means that the employee would have had to be in service in 1948 to be entitled to unemployment compen-

[fol. 1806] sation. It may not literally mean seniority in every individual instance, but in almost every instance it would. That is to say, an employee might have quit from one railroad and gone to another in 1949. His seniority

with the new railroad wouldn't be a 1948 seniority, but he would have service that would have entitled him to unemployment compensation.

Q. Could it be there are other former employees of railroad companies who are not employed that are not included in this exhibit?

A. Oh, yes. Any employee who had exhausted his unemployment compensation in early years, or had not had service in 1948 or subsequently, would not be included here. These compensation claims are classified by the Railroad Retirement Board according to the occupation of the employees. They were secured on that basis; and, in order to illustrate the incidence, the direct effect of existing unemployment by these various classes, we have taken four of the major points along the Union Pacific to indicate the diversion at those points.

You will see train service, engine service and switch men are separately classified, but at Omaha 42 of the unemployed are in those three classes; mechanical forces, 36.

At North Platte a larger proportion, a much larger proportion of the unemployed are in the train and engine group, [fol. 1807] with 141 unemployed at North Platte as of January, 1950. There were 80 in the train and engine service groups. Similarly, in Cheyenne and Laramie a very high proportion of the persons filing unemployment compensation claims are in that group, and a correspondingly smaller proportion in the other groups.

That is because, of course, the railroad employment at Omaha is much more diversified than it is at the points along the railroad line.

However, in each of the classes affected by any diversion of traffic from the Union Pacific there is a substantial unemployment at all of the points along the line.

Q. Do you have any other comments on Exhibits No. 45?

A. I think not.

Mr. Greene: I will offer Exhibit No. 45 for the record.

Exam. Mullen: Any objection?

(No response.)

(Interveners' Exhibit No. 45, Witness Oliver, received in evidence.)

Mr. Quirk: Just a moment. I am going to object to Exhibit 45 on the ground that it broadens the issues and is irrelevant and immaterial.

Exam. Mullen: The objection will be overruled and the exhibit will be received.

By Mr. Greene:

Q. Now, have you prepared an exhibit which shows the unemployment situation in industries other than railroad [fol. 1808] in Union Pacific territory?

A. I have; yes.

Mr. Greene: May I ask that the exhibit be given a number, Mr. Examiner?

Exam. Mullen: No. 46.

(Interveners' Exhibit No. 46, Witness Oliver, marked for identification.)

By Mr. Greene:

Q. Will you proceed to explain Exhibit No. 46, Mr. Oliver?

A. Exhibit No. 46 is a statement based on information from various governmental sources, showing unemployment in industries other than the railways along the line of the Union Pacific—particularly in Nebraska and Kansas.

Mr. Quirk: May I interrupt a moment, Mr. Examiner?

Exam. Mullen: Mr. Quirk.

Mr. Quirk: I appreciate that I probably ought to defer objecting until the exhibit is offered, but it seems to me that this exhibit, on its face, just to glance through it, is carrying this question beyond reasonable bounds; and therefore I think, before the witness is permitted to talk about the exhibit for the next half hour or so, that I should be allowed to object now. And I do object now on the ground that it is incompetent, irrelevant and immaterial to the issues in this case.

Exam. Mullen: What is the purpose of introducing it, Mr. [fol. 1809] Greene?

Mr. Greene: The purpose, Mr. Examiner, is simply this: to show the difficulty which these persons would encounter

in attempting to secure employment in the territory in the area in which they are presently residing.

Exam. Mullen: Well, does it attempt to show any correlation between the unemployment on the railroad and the general employment situation in the same territory?

Mr. Greene: Yes. It would be very definitely related to the exhibit which has just been received—Exhibit No. 45—and which covers the same general territory. So there would be a direct relationship between the supply and demand for railroad employment and the supply and demand in other industries.

Exam. Mullen: Is that the purpose of introducing it?

Mr. Greene: That is the primary purpose, I believe.

Mr. Quirk: As the issues in this case have been shaped by both the evidence and the pleadings, it is quite obvious that the task the Commission will have is to fix just and reasonable and non-discriminatory rates. It has established already that the route through Ogden is opened and has been used and, therefore, that makes this evidence and all the evidence on the labor question remote to the issues as they now stand; and, while the Denver and Rio Grande employees came in here and testified, their petition indicates that they didn't come in until the Union Pacific [fol. 1810] employees intervened.

Exam. Mullen: Do you desire to reply to that, Mr. Greene?

Mr. Greene: Yes, Mr. Examiner.

I believe I could call attention to a number of decisions where the Commission has considered the status of these employees, one particularly rejecting tariffs proposing to cancel certain through routes.

Now, under the statute I believe it is incumbent on the Commission to find, before this gateway can be opened, that it must be in the public interest. Now, as I view those decisions of the Commission, the status of these employees not only goes to their relationship to the railroad, but what they may be able to do in the way of employment if they are forced to be furloughed from the railroad. And that is the purpose of the exhibit here—to show what chances they have of employment if they are forced to be furloughed by the diversion of traffic. It goes to the status of the public interest.

Exam. Mullen: As affected by possible diversion due to a complaint of the complainant here?

Mr. Greene: Yes, sir.

Exam. Mullen: It may be received for that purpose.

Your objection will be noted on the record.

The Witness: May I proceed?

Exam. Mullen: Yes.

The Witness: The first page of Exhibit 46 deals with [fol. 1811] changes in the number of unemployed covered by unemployment insurance in the states of Colorado and Wyoming for the months of 1948 and 1949.

It will be noted that there is not only a drop within each year in a very general way, but that from 1948 to 1949 there is a very substantial increase in the number of unemployed covered by insurance, and that that increase down to January, 1950, had been continued.

In Colorado, for example, the number of unemployed covered by insurance increased by 2,000 from January, 1948, to January, 1949 and by 4,000 from January, 1949, to January, 1950—a very sharp increase in the number of unemployed and, correspondingly, a decrease in opportunity for employment in that area. First, it indicates a drop in employment itself and, second, a doubling of the number of people who are competing for such jobs that may become available in that area.

The same thing is true in the state of Wyoming.

Exam. Mullen: Is that no- self-evident from the exhibit itself?

The Witness: Yes. I only wanted to draw attention to one figure so that the rest of the information would be clear.

Exam. Mullen: I see.

The Witness: To show its significance. The information or the situation is generally true in all of the states covered by the Union Pacific.

[fol. 1812] Information is available on a somewhat different basis with respect to Nebraska and Kansas. That is shown beginning on page 3.

These figures show labor supply and demand for all classes of work, and then for non-agricultural work. They are as reported by the state government and are applica-

tions for employment on file with the state employment service.

While unquestionably there are some railroad workers among them, railroad men, for the most part, file their unemployment claims and their requests for jobs with the Railroad Retirement Board authorities.

You will note here a very substantial increase in the labor surplus as measured by the difference between the supply and the demand in each of these communities, and increasing from 1949 to 1950.

Again to illustrate that comparison, without going into each of them in detail, you will note, on page 3, that the labor surplus in the Beatrice-Fairbury area in February of 1949 was 437. In February of 1950 it was 517.

The January figure there has been a smaller surplus this year than last year in that particular area. In most of the areas, however, that was not true.

You will see that very sharp increase from February, 1949, to February, 1950, in each of these sections. I emphasize the month of February because the character of [fol. 1813] the industries makes the seasonal factor very important. For the same month you will see a sharp increase in the labor surplus in each of these principal Nebraska areas. The areas themselves are indicated by the names of towns; but they actually cover counties in the areas set up under the state employment service.

I have shown, for these cities along the Union Pacific, and the counties, for each of them, a change for these particular months; and, on page 9, there is a summary of the situation as of February, 1950, shown as between skilled, semi-skilled and unskilled workers.

You will note, at the bottom of that tabulation, a total line. For example, the skilled workers were 2,367 workers available; there was a demand for only 30. But wider margins relate to the semi-skilled and the unskilled groups.

I think it is perhaps unnecessary to point out that for many of the railway skills there would be no demand outside of the railway industry. However, for some of them—such as shop workers—there might be the possibility of adapting their skills; but those skilled men would be in

competition with the men already displaced and available for replacement as any demand develops.

I think it also should be noted that the set-up of the unemployment situation in the United States operates, in one sense, as a discrimination against railroad men. These unemployed are from industries other than the railroads, [fol. 1813a] and are on the unemployment insurance rolls generally, and it is to the advantage of those unemployment systems to restore to employment the men to whom they would be paying unemployment benefits; and, since, the railroad men are on the Railroad Retirement Board rolls, they do not constitute the same kind of a liability to the state employment systems. I think that is natural. I only point it out, not by way of criticism but to indicate what the unemployed railway worker is up against in seeking employment in outside industries.

The same figures, or figures on the same basis, are available for counties in Kansas; the figures beginning on page 10 relate to certain communities served in that state by the Union Pacific Railroad.

You will note here that the earliest figures available were for July, 1948, and a comparison, therefore, would have to be made between December, 1948, and December of 1949, or July of those two years.

Here there are exceptions. Concordia is itself an exception. But you have, in general, the same picture of increasing labor surplus as between December, 1948, and December, 1949.

As to the second city on page 10, there was a surplus of only 35 in Hays in December of 1948, and a surplus of 312 in December of 1949.

The Kansas City surplus is shown on page 11. It in- [fol. 1814] creased by 2,000. That is almost double, or exactly doubled from December 1948 to December 1949.

In general, that is the picture throughout the area: increasing labor surpluses. In some instances labor shortages have been converted into a labor surplus.

Taking the state of Kansas as a whole, there was a labor surplus, in December of 1948—I should not have said as a whole, but for these communities covered—there was a

labor surplus of 4,255. In December, 1949, that surplus had grown to 6,879, an increase of more than 50 per cent.

As nearly as the railroad unemployment figures can be matched up, there would have been added 182 railroad unemployment compensation claims in this same area.

For the Nebraska district the statewide surplus, shown on page 9,—supply, 13,532; demand, 637, making a surplus of 12,895 along the Union Pacific lines—would be increased by the 885 railroad men on the unemployment compensation rolls of the same month.

It would be under that sort of an employment situation that any added unemployment would be projected—a total of 13,700 unemployed people looking for work in those communities along the railroad in Nebraska.

By Mr. Greene:

Q. Do you have any further comments on Exhibit 46?

A. No. Excepting this general statement, what I be- [fol. 1815] lieve to be a general statement of fact: that the unemployment situation is such that any persons newly displaced in the railroad industry, particularly the Union Pacific Railroad, would find it virtually impossible to secure employment either at their current or present crafts or in any outside employment unless they had individual ways of getting preference. A few individuals might be related to someone, but, outside of such bases of preference, they would run up against very definite difficulties by way of preference given to employees already displaced and possessing rights in the industries that may, in the immediate future, be taking on new employees.

Mr. Greene: I had understood ~~that~~ exhibit No. 46 had been offered and received. Is that correct?

Exam. Mullen: No, you had not offered it yet.

Mr. Greene: I will offer it, then, at this time.

Exam. Mullen: It already has been objected to.

It is received in evidence.

(Intervenors' Exhibit No. 46, Witness Greene, received in evidence.)

Mr. Quirk: Subject to objection.

Exam. Mullen: Subject to objection, of course.

By Mr. Greene:

Q. Did you make a study, Mr. Oliver, at certain points along the lines of the Union Pacific, of the economic condition of workers that would be displaced if any diversion of traffic to the Denver & Rio Grande occurred?

[fol. 1816] A. Yes, I did.

Q. Was one of those points Green River, Wyoming?

A. Yes.

Q. And could you state the other points at which you made particular studies?

A. If I may, I think perhaps it would be well to indicate the whole method at one time,——

Q. All right. Fine.

A. ——rather than particular answers to particular questions.

What was done, Mr. Greene, was to make a study that would determine the conditions of the employees presumably to be affected by any traffic diversion.

Now, those directly affected were the ones first considered. That was because they are the only ones that can be actually isolated, while any traffic diversion of the size discussed here would necessarily result in the release of a great many more than this group; but it is possible to say which particular employees would be let out directly in this group of 1200-odd to which reference has already been made. Even that number, however, is too great and they are too widely scattered to have permitted a study of all of them.

It was decided to concentrate on one particular area—in a central area along the Union Pacific which was chosen. An effort was made to get information from all of the employees to be directly affected in the Wyoming division [fol. 1817] of the Union Pacific Railroad excepting those in the city of Cheyenne. The reason for excepting Cheyenne is that it is a point on two divisions, actually; and, also, there are so many affected here that again the size of the problem would be too great.

However, the underlying assumption that the conditions of the Union Pacific employees are the same along the railroad line, I believe, makes a sample taken from the Wyom-

ing division an accurate representation of the total situation.

What we did, then, was to take the seniority rosters of each class of employees affected along the Wyoming division.

The information we had indicated the number of employees in each class who would be displaced as a result of a traffic diversion of the size under consideration here. It was possible to take from the bottom of each seniority roster, then, a number of employees equal to those to be displaced and to say with some degree of certainty that these employees would be the ones who would lose their jobs if a traffic diversion of this kind became immediately effective; and while, of course, such a traffic diversion might not actually become fully effective for a year or so, the assumption is that the employees who would then be at the bottom of the seniority roster might be either these same persons or persons in almost exactly the same economic situation.

Q. Did you take into consideration any employees that were working purely on a temporary basis?

[fol. 1818] A. No. These were employees who had seniority and who were actually employed at the time the study was made. They were the lowest in the seniority on each of the seniority rosters.

Q. Now can you refer to the exhibit covering Green River, Wyoming?

Might we have that marked, Mr. Examiner?

Exam. Mullen: Yes. Exhibit 47.

We can mark the others as we go along, if you wish.

Mr. Greene: If they have all been sorted. The one at Laramie is Exhibit 48.

Exam. Mullen: That is right.

Mr. Greene: The one at Rawlins, Exhibit 49.

Exam. Mullen: Exhibit 49.

Mr. Greene: The one at Rock Springs, Exhibit 50.

Exam. Mullen: Exhibit 50.

(Interveners' Exhibits Nos. 47, 48, 49 and 50, Witness Oliver, marked for identification.)

By Mr. Greene:

Q. Was all the information contained in these four exhibits obtained on the ground, Mr. Oliver?

A. It was; yes.

Q. By personal contact with the employees in question?

A. By personal contact with the individual employees.

Now, in spite of that kind of personal contact it is not always possible to get 100 per cent replies. Some employees may be away from home. He is on vacation, or [fol. 1819] for other purposes, and some may be working—especially the train men—at a point away from home.

Similarly, not all of the questions are answered by all of the individuals. Sometimes they don't know or sometimes they just overlook an answer. But, for the most part, that is a complete coverage of all of the employees to be affected by a traffic diversion of this size.

It was done in these particular towns by a representative from my office working with local representatives of the labor organizations.

We have shown here, first, on page 1, the class, age——

Mr. Quirk: Page 1 of what?

The Witness: Page 1 of the first of the exhibits, Exhibit No. 47.

—the class, age and years of service of the employees to be displaced in Green River.

The number of the employees are shown, and their average age.

The highest average age, you will note, is for yardmasters; but, after that, the shop mechanics and the maintenance of way mechanics have the highest average age. The train and engine service average age, 26.9, is below those other groups at Green River.

The average years of service varies. Firemen and oilers have less than a year, on the average; truckers and laborers, one year, while the shop mechanics have 8.6 years and [fol. 1820] the yardmasters 15.4 average years of service.

That is to be expected because some of these represent promotional groups. That would bring about a situation in which some of them might displace younger employees if employees with less service were in the same seniority

districts. However, for the most part, with point seniority prevailing, that would not be possible. There would be some secondary effect, however, in the train and engine service groups particularly.

On page 2 is a tabulation showing the dependency status of the employees——

Mr. Quirk: Mr. Examiner, I venture to suggest that these four exhibits, 47 to 50, inclusive, are based on the same pattern. It is quite obvious that they are self-explanatory, and it is not necessary to read down the line on each of them as the witness has done on page 1.

Exam. Mullen: He might explain Exhibit 47. I assume all the others are along the same line.

But even your explanation of Exhibit 47 need not go into great detail because it seems to me that the exhibit is self-explanatory.

The Witness: Page 2, dependency status, deals with the question of whether or not the individual employees are married, their dependents and whether or not their dependents are in school.

[fol. 1821] There is some variation with respect to the proportion that are married among these classes. In general the skilled groups have a higher proportion—I mean the higher skilled and higher-paid groups have a higher proportion of married employees than the others.

You will note that the extreme right hand column, the totals column, shows the total number of dependents and the total number of employees.

The average number of dependents per employee includes all employees and not just those with dependents.

The average number of dependents of employees who are actually married is something more than three, so that the average size of the families is a little better than four among these employees.

You will note that there are a substantial number of children in school, and, of this group, three children are actually in college.

The average number of children in school, per employee having such children, is 2.3.

The home-ownership status is dealt with on page 3 of the exhibit. Here again you will find a variation from one to another class of employees.

In general, although not entirely so, the higher paid groups have a higher proportion of home ownership and a [fol. 1822] higher proportion of their homes are mortgage-free. However, of the lower-paid groups, in some instances there is a high proportion of home ownership.

If you will look at the extreme right hand column you will see that in this group of 112 employees 28 own their own homes, and, of those, 16 are mortgaged. The total value of the homes is $182,750, an average value of $6,500. Against that the total mortgage offset is $51,800, an average of $1,850 per home. The net average value is $4,677.

For those who do not own homes, wherever it was possible we secured information on their renting of homes or apartments; and you will note that, of the 65 employees who were renting homes, there was a total rental paid of $30,268, or an average annual rent of $466.00.

That measures in two ways the loss to the community: in the first place, of course, the decline in the actual value of the homes if these employees are displaced and forced, as they almost certainly would be, to look for work outside of their present home area; and then the loss in value to the individual employee—this factor also, which is dealt with or related to this table—the employee with a mortgage on his home typically is making payments on that mortgage and those payments, together with the costs incidental to them, are the equivalent to him of rent and perhaps a little more.

[fol. 1823] Any employee with a mortgaged home who is forced to move to find employment—and presumably to rent at the point to which he moved—would be confronted with a double load, and almost certainly would find that difficult, if not impossible to meet.

In those instances where similar studies have been made before—and there have been several in the history of railway consolidation studies—ordinarily such a movement leads to abandonment of the homes, a decline in their real estate values, a loss of the mortgaged home.

I see no reason, in the economic statistics of these individual employees, to judge that they would find any other way out of their particular problems——

Mr. Quirk: I object to this argument. It is immaterial, Mr. Examiner.

Exam. Mullen: I believe the witness can state those facts. They have a bearing upon the significance to be given to his exhibits.

Go ahead, sir.

The Witness: I may say, Mr. Examiner, as perhaps I should have, that I have made studies of this exact kind both before and after such displacements, and my statement with respect to the conditions subsequent to displacement is based on knowledge derived from those studies.

Exam. Mullen: Go ahead.

[fol. 1824] The Witness: With respect now to the tax situation, and the savings which these employees have, we of course meet here a more difficult situation.

The employees are more reluctant to discuss their savings and taxes and domestic problems than they are such things as their wages or home ownership.

You will note that the employees—the number of employees reporting—while the total is the same, are fewer on some of the individual items.

Here again a variation between classes or occupations of the employees is reflected in the taxes paid. The average tax per employee, shown in the extreme right hand column, is $21 per year on total value of property owned other than homes——

Exam. Mullen: You don't need to read those, Mr. Witness.

The Witness: I only wanted to indicate this, Mr. Examiner; that there are 7 employees owning property other than homes. That is not on the face of the exhibit but would be deduced from it, and there are 15 employees reporting savings.

The average total savings and property owned are shown in the right hand column for individual groups.

As has been indicated, Exhibit 48, Exhibit 49 and Exhibit 50 deal with the same types of subjects. There are variations from one to another community, and I suggest that, while it is perhaps unnecessary to go into them in [fol. 1825] detail here, a comparison will show uniformity in the matter of the number of children per family and the number of them in school, but will show wider variations in the value of the homes, in the mortgages outstanding on them, in the taxes, in the total savings of the employees

and in the proportion that have savings or have property other than their homes.

It is in general true, however, that fewer than 10 per cent own property other than their homes and that approximately 10 per cent have savings of one kind or another that can be expressed in dollars.

That variation from one point to another is partly explained by the variation in the proportions of classes of employees; but it is a general fact, brought out by the study of each of these cities, that the employees do own homes in a very substantial proportion, but a substantial portion of the homes owned are mortgaged; that there is a relatively small group that have savings of other property and that, in general, the size of the families is a fraction above 4.

By Mr. Greene:

Q. Do you have any other comment about the four exhibits, Mr. Oliver?

A. I think not. I believe they are all covered by the comments that I have made. The detailed figures, however, are there to indicate or to permit a consideration of whether or not they are typical. The agreement among the four is close enough to justify a general statistical conclusion, at [fol. 1826] least, that the sample is accurate and well taken.

Q. Under the seniority rights of these employees indicated in these four exhibits, would they be absorbed in any other parts of the Union Pacific system?

Mr. Quirk: I object to that question. This witness is incompetent to answer that.

Exam. Mullen: I don't think this witness is competent to answer that.

Mr. Greene: Very well, your Honor.

I will offer Exhibits Nos. 47 to 50, inclusive, for the record.

Mr. Quirk: I object to each of these exhibits as being incompetent, irrelevant and immaterial and make the observation that we seem to be getting more and more remote from the issues in this case.

Exam. Mullen: The exhibits will be received and the objection noted on the record.

(Interveners' Exhibits 47, 48, 49 and 50, Witness Oliver, received in evidence.)

Mr. Quirk: Just a minute. Could I ask the witness one or two questions?

Mr. Greene: Very well.

Mr. Quirk: He made the statement, apropos of the exhibits, which is in the nature of straightening out of the record.

When you were discussing the first exhibit, Mr. Oliver, I [fol. 1827] thought you said that the situation depicted as to Green River, Laramie, Rawlins, and Rock springs would be more or less typical of the situation of employees at other towns on the Union Pacific.

You didn't mean to say, did you, that, if the Rio Grande were fortunate enough to get 157,000 cars through Ogden, it would be typical of the towns west of McCammon; did you?

The Witness: No. I thought the statement was understood with reference to the information already in the record, as to the employees to be directly affected.

Mr. Quirk: You answered my question. Thank you.

The Witness: However, it would be impossible to measure the other than the 5,000 because we can't identify them. These can be identified.

By Mr. Greene:

Q. Have you prepared an exhibit showing the loss of wages at the four points involved? That is, the points that are covered by exhibits 47 to 50, inclusive?

A. Yes; excepting, in commenting on the statement, that they are shown as relating to only three points.

Q. Three points?

A. Yes.

Mr. Greene: May I have the exhibit, "Annual Wages of Employees to be Displaced at Green River, Laramie, and Rawlins," marked as an exhibit?

Exam. Mullen: Yes, it will be marked Exhibit 51.

[fol. 1828] (Interveners' Exhibit No. 51, Witness Oliver, marked for identification.)

Mr. Quirk: Mr. Oliver, is this, like your other exhibits, based upon the hypothetical potential diversion of traffic that the Union Pacific officials have used in this case?

The Witness: It is based on the figures presented by the Denver and Rio Grande at the original hearing.

Mr. Quirk: It is based on the same assumptions made by Mr. Lynch, Mr. Hanson and Mr. Burns of the Union Pacific, isn't it, that we would get all the traffic if these joint rates were put in?

The Witness: It is based on the total number of cars that would be diverted if the potential diversion were realized.

Mr. Quirk: But the 157,000 cars is the figure used?

The Witness: That is the figure given. Actually, the figure, as I read it, indicated that that was a conservative estimate. I mean the evidence of the original witness.

Exam. Mullen: It is based on that number?

The Witness: It is based on that figure, yes.

Exam. Mullen: All right.

By Mr. Greene:

Q. Will you refer to what has been marked as Exhibit No. 51 and explain that exhibit?

A. Yes.

We have shown here, by class of employees at each of these three points, the annual wage—the total annual wage [fol. 1829] bill and the average annual wages.

A major addition to the evidence already in is made, by this exhibit, which is in a statement of the loss to the individual communities.

The total wage loss at Green River, in addition to the figures shown under the heading of "Annual Wages," would be $299,263.00.

The loss at Laramie would be $377,232, and at Rawlins $260,383.

Mr. Quirk: Mr. Examiner, I suggest again that this is all clear on the face of the exhibit, and I don't see why it has to be repeated.

Examiner Mullen: The totals weren't given. He is reading the totals.

The Witness: This exhibit varies from the preceding

ones in that it shows only three points. The reason for that is that the employees live at four points but their place of employment in the original tabulation is shown as only three points, and it is possible to classify them only according to those three.

Mr. Greene: I offer Exhibit No. 51 for the record.

Mr. Quirk: I object to that for the same reasons heretofore given—incompetent, irrelevant and immaterial.

Exam. Mullen: It will be received in evidence. The objection will be noted.

[fol. 1830] (Interveners' Exhibit No. 51, Witness Oliver, received in evidence.)

Mr. Greene: Might we have the exhibit "Homes of Employees to be Displaced" marked as Exhibit No. 52.

Exam. Mullen: Exhibit No. 52.

(Interveners' Exhibit No. 52, Witness Oliver, marked for identification.)

By Mr. Greene:

Q. Why was Exhibit No. 52 prepared, Mr. Oliver?

A. It was prepared to supplement the information on the actual value of homes by pictures to indicate the types of homes, and the wide range of their types and the range for different classes of employees at these different points.

An examination of them will show that they vary widely from the most humble to the more comfortable homes of the employees of the different classes.

Q. Is there any way by which we could identify those as the homes that are mortgaged?

A. No.

Q. And does this cover all of the homes at the three points that are owned by employees?

A. No. These are intended only as samples.

Q. Samples?

A. They are typical to show the range, the different classes of homes and the homes of the different classes of employees.

[fol. 1831] It does not include all of the homes, nor was it intended to offer such a coverage.

Mr. Greene: I offer Exhibit No. 52 for the record.

Mr. Quirk: I object to it.

Exam. Mullen: On the same grounds?

Mr. Quirk: On the same grounds.

Exam. Mullen: It will be received in evidence, and the objection will be noted in the record.

(Interveners' Exhibit No. 52, Witness Oliver, received in evidence.)

Mr. Greene: Might we have the exhibit entitled "Effect on Employees of Increased Operating Expenses" marked Exhibit No. 53?

Exam. Mullen: No. 53.

(Interveners' Exhibit No. 53, Witness Oliver, marked for Identification.)

By Mr. Greene:

Q. Mr. Oliver, did you prepare an exhibit which shows the estimated line haul costs and interchange costs of traffic being diverted from the Union Pacific and turned to the D&RGW if the joint through rates proposed are established?

A. I did; yes, sir.

Q. And also comparing the relationship of those costs to wages paid employees of the railroads in the United States?

A. Yes.

[fol. 1832] Q. That is Exhibit No. 53?

A. Yes.

Q. Would you explain the exhibit?

A. The purpose of this exhibit was to see if a calculation of the effect of such a proposed diversion on railway employees generally could be made, it being an allegation that the Denver and Rio Grande would profit by the loss of the Union Pacific employees; so the total overall effect was measured for this purpose.

The first page of the exhibit shows the comparative costs of handling freight over the Union Pacific and other railways. These costs were available—the cost per loaded freight car mile for 1948—for all Class I railways in the United States and for all Class I Railways in the Central

Western Region. They were available for both 1948 and 1949 for the Union Pacific Railway and the Denver & Rio Grande Railway. They would be available for other individual railways also, as the reports are just now coming in to the Commission.

You will note that the Union Pacific average is, in 1948, 2 cents per mile below that of all railways in the region; that the Denver & Rio Grande is 2 cents per mile higher than the average for the whole region, and that in 1949 the difference between the two has widened.

The cost of shipping, per freight car mile, on the Denver & Rio Grande Western, is 4.63 cents higher than on the [fol. 1833] Union Pacific Railroad in 1949. In addition, the diversion of each car having to be handled in interchange at Ogden and at Pueblo or Denver, would add to the cost of those cars an amount which we have judged here of $9.26 for the Ogden interchange, using the figure calculated by the Union Pacific Railway and that at Pueblo or Denver using a figure which the Federal Coordinator of Transportation arrived at in a study in 1932. I have no way of knowing whether that figure is low or high. There are counterbalancing and compensating changes since that time. They may have exactly compensated, or the figure may be slightly low or slightly high. However, each car handled over this line would have to have those two interchanges more than are now given.

Exam. Mullen: Your $6.60 figure, is that what it was in 1932?

The Witness: Yes.

Exam. Mullen: All right.

The Witness: The second page of the exhibit deals with the cost of the haul per carload on the two routes. We have taken the haul from Pocatello to Council Bluffs and to Kansas City.

The present route over the Union Pacific is shown first. That is based on the Union Pacific cost per loaded car mile. Below that is the total cost of handling on the different routes.

[fol. 1834] The first element in that is the Pocatello-to-Ogden item on the Union Pacific, and then the costs over the Denver & Rio Grande Western and its connections,

less the Union Pacific portion, and that is assuming an equal mileage.

The third factor is the 240 excess miles.

Now, these various routes of course have variations in excess miles over the present route; some of them are more and some of them are less, but it seems a fair estimate that it would be in the neighborhood of 240 miles additional haul.

The cost of handling this traffic over the more expensive other lines in the Central West, and of the added mileage, brings the total cost, Pocatello to Council Bluffs, to $334.95, as diverted; Pocatello to Kansas City, $364.56. Those comparing with the present costs shown at the top of the page.

Mr. Quirk: Mr. Examiner, I object to this testimony as being incompetent. The witness is merely drawing conclusions.

Exam. Mullen: What are these figures based on?

The Witness: These figures are based on the miles of the present route, the miles of the proposed routes, the cost per loaded freight car mile as reported to the Interstate Commerce Commission, the cost per interchange at Ogden as calculated by the Union Pacific Railway, the average cost per interchange as calculated by Commissioner Easton. No one of these figures is plucked out of the air.

Exam. Mullen: These are the mathematical results of [fol. 1835] applying those various costs to these various distances?

The Witness: Yes, sir.

Mr. Quirk: And this $9.26 cost, I suppose you got that from witness Edens, who is with that Ogden Union Depot Company?

The Witness: I believe that is the name. It was from the testimony offered in this proceeding.

Mr. Quirk: You didn't read the testimony of Mr. Bradford, did you, about that very thing?

The Witness: Yes, I did.

Mr. Quirk: You were unconvinced about that?

The Witness: Completely.

Mr. Quirk: You just accepted the other, even though it shows in the record that it doesn't represent the part of the railroad the Denver & Rio Grande is interested in?

The Witness: I think your conclusion is inaccurate. Obviously, on the face of that evidence, I think the calculation of the Union Pacific is a specific calculation; the other is a guess. And I would prefer that calculation to the guess.

Mr. Quirk: Don't you know it is shown in here that the Union Depot—the Ogden Union Depot Company—acts for the Southern Pacific and the Union Pacific, and that when it makes deliveries to us the Rio Grande is not interested in that cost, any more than they are interested when we make the delivery to the Depot Company?

Exam. Mullen: Suppose we defer the cross examination? [fol. 1836] Mr. Quirk: All right.

Exam. Mullen: Let the record show, however, that the objection is overruled at this point.

The Witness: The only factor here which is not rigidly mathematical is that 240 excess miles. That, as I said, is a fair representation of the additional length, but it couldn't be precisely calculated unless one were to know what proportion of the traffic would move over each of the various combinations of carriers.

That cost, with the interchange cost added in, is shown on page 3 of the exhibit. The total actual cost over the routes, as the cars would be diverted, is $350.81 to the one destination and $380.42 to the other.

That represents an added cost, per car, of $121.71, Pocatello to Council Bluffs, and $126.94 to Kansas City. Now, we have taken a simple average of those two. There may be a variation one way or the other, depending on the distribution of traffic. If the so-called traffic potential were to be diverted it would cost an added $19,614,549 over the present cost, on the basis of that calculation.

That is primarily of interest to the employees because of the fact that, in every effort to raise wages or to prevent wage reductions, every effort to improve working conditions, the financial condition of the industry as a whole is a controlling factor in the minds of emergency boards or [fol. 1837] arbitration boards.

These total cost figures—an added cost of just under 20 million dollars—would mean, as shown on page 4, the cost of various kinds of improvements in wages and working conditions.

One cent per hour, for non-operating employees, would cost only 16 and a half million dollars.

Exam. Mullen: Just a moment. I don't get the connection between those two figures. Will you explain it again?

The Witness: Between the figures on the bottom of page 3 and the top of page 4?

Exam. Mullen: Yes.

The Witness: It is this: If the railways have a diminished net revenue of 20 million dollars it will mean that it will be the equivalent of the cost of any one of these various improvements in wages or working conditions.

That is to say, when the railway employees ask for improvements in wages or working conditions this 20 million dollars reduction in net would be the equivalent of any one of these other changes of the character that the unions are continually requesting.

By Mr. Greene:

Q. Are the figures for employment shown on page 4 covering the United States as a whole?

A. These are national figures, yes.

Q. So that you are not allocating the 20 million dollars to [fol. 1838] any particular railroad?

A. No. It would be the difference in the national net income of the railways. If this traffic were diverted the railways would have 20 million dollars less net revenue because the cost would have to be paid and the revenue would be no greater; and the net revenue is the thing with which the employees must always cope with in any effort to improve wages or working conditions.

It is the equivalent, roughly, of an added cent per hour for non-operating, or two cents per hour for operating employees; or, alternatively, an added week's vacation for non-operating employees with 25 years or more of service or all operating employees.

It is the equivalent of 2 holidays with pay for non-operating employees or 5 holidays for operating employees, or the equivalent of 10 days of sick leave.

These things are listed because each of these is a live request at the moment on the part of railway workers, and it may be said that in other industries a three-week vacation

with pay for employees of long service is becoming a very common practice, as are holidays with pay. These things the railway workers do not yet have.

Exam. Mullen: You are converting, then, this estimated additional cost into what the equivalent would be in wages, vacations, holidays, and so on?

[fol. 1839] The Witness: That is right.

Exam. Mullen: All right.

The Witness: The bases for these calculations are all in the Interstate Commerce Commission reports, except those taken from the Railroad Retirement Board, which relate to the sick leave situation.

Mr. Quirk: What year did you say?

The Witness: The annual report of the Railroad Retirement Board for 1949; the latest monthly statement of the Interstate Commerce Commission.

Mr. Quirk: You said something about some figure for 1932 in here.

The Witness: That was the report of Commissioner Eastman.

By Mr. Greene:

Q. Do you have any other comment on Exhibit No. 53?

A. I have nothing further.

Mr. Greene: I offer Exhibit 53 for the record.

Mr. Quirk: I object to the exhibit as incompetent, irrelevant and immaterial.

Exam. Mullen: The exhibit will be received and the objection will be noted.

(Interveners' Exhibit No. 53, Witness Oliver, received in evidence.)

By Mr. Greene:

Q. Did you prepare an exhibit reflecting the proposed [fol. 1840] diversion of traffic as it applies to the Chicago and North Western Railroad?

A. Yes, I did.

Mr. Greene: May we have the exhibit entitled "Effect of Proposed Traffic Diversion on the Chicago and North Western Railway" marked as Exhibit 54?

Exam. Mullen: Exhibit No. 54.

(Interveners' Exhibit No. 54, Witness Oliver, marked for identification.)

By Mr. Greene:

Q. Will you refer to Exhibit No. 54 and explain its purpose, Mr. Oliver?

A. I don't believe the record yet indicates that I had been requested by the Chicago and North Western employees, through their committee representing all of the unions of that railroad, to make a study of the effect of this proposed traffic change to their employment.

It was not possible to make as detailed a study as had been made with respect to the Union Pacific because the request was made considerably later. However, for the number of employees to be displaced by the immediate effect we did distribute questionnaires.

The questionnaires were compiled, and on this exhibit is shown, on page 1 and the immediately following pages, the number of employees and the annual wage loss by major as well as by sub-classes.

The total wage bill, estimated by the Chicago and North [fol. 1841] Western—total wage loss—is $422,795.

Mr. Quirk: You are still using the maximum potential as a minimum, are you not, that will move over the Ogden gateway?

The Witness: No, I think not.

Mr. Quirk: What figure are you using to make this tabulation?

The Witness: This doesn't use the maximum as a minimum.

Mr. Quirk: You are using 157,000 carloads, are you not?

The Witness: That is right. It is my understanding that the Chicago and North Western calculated its employment loss on the basis of that proportion of the 150,000 cars which would not be handled over the Chicago and North Western—to be diverted from them.

Mr. Quirk: I suppose you assumed what their own witness did: that none of it would come back to the Chicago and North Western at Omaha or Council Bluffs, to any of

the roads that reach Denver or Cheyenne. You made the assumption that the witness for the Chicago and North Western did?

The Witness: I did not make any assumption. I think it would be impossible for us to do that.

Mr. Quirk: You don't know yourself, do you?

The Witness: It would be impossible. I don't know——

Exam. Mullen: Based on the assumption that 100 employees of that railway would be dismissed?

[fol. 1842] The Witness: Yes. However, the union officials felt there, as they did on the Union Pacific, that that was an understatement, and a few more employees were covered by the questionnaires distributed. That is why the total on page 2 is greater than the 100.

The average age and the years of service, you will note, are a little higher——

Exam. Mullen: I don't think we need any comments on that. It seems to me to be self-explanatory.

The Witness: The figures agree closely with respect to the dependency status and other matters that could be covered.

The employment by years, as shown in the Chicago and North Western—as shown in an earlier exhibit—shows a decline by months, and, as shown on page 4, there is a total decline of 4,000 from the same month of the preceding year to the last month.

There, too, as page 5 shows, that unemployment is concentrated very largely in the skilled workers' group—transportation (train and engine), maintenance of equipment and stores, maintenance of way and structures.

The relationship between the unemployment change and the revenue ton miles carried, shown on page 6 of the exhibit, again is substantially the same relationship as has been noted for the Union Pacific and for the railways generally in the area.

[fol. 1843] The unemployment there has been caused by the reduction in traffic. That is to say, the recent very great increase of unemployment was so caused.

Mr. Greene: I will offer Exhibit No. 54 for the record.

Mr. Quirk: I object to that exhibit because, first, it is based upon a false premise, and is based upon matters that

the witness is not familiar with, and therefore is incompetent.

Exam. Mullen: The exhibit will be received. The objection will be noted.

(Interveners' Exhibit No. 54, Witness Oliver, received in evidence.)

Mr. Greene: May we have the exhibit next in order marked as Exhibit No. 55?

Exam. Mullen: Before we mark it, what is the purpose of this exhibit?

Mr. Greene: It is only to show, Mr. Examiner, the status of letters which were delivered to the Interstate Commerce Commission, and now in their possession, which, I understand, are objectionable but may be filed in the docket.

Exam. Mullen: Well, the correspondence is filed in the docket; that is true.

Mr. Greene: It is filed in the docket.

Exam. Mullen: They are not considered as in evidence in this case, so I don't see the necessity of filing this compilation as an exhibit.

[fol. 1844] Mr. Greene: Very well.

Examiner Mullen: This shows, of course,—and the record may show—that the Commission has received a large number of letters from various persons in the State of Wyoming—from Cheyenne, Wyoming, Green River, Laramie and Rawlins.

The originals of those letters are in the correspondence file of this docket.

Mr. Quirk: I suppose also the record shows that these letters were sent to the Commission by this witness—Mr. Oliver. That is what it says.

Exam. Mullen: Yes.

To whom are these letters addressed, Mr. Greene?

Mr. Greene: To the Interstate Commerce Commission.

Exam. Mullen: Not to you?

Mr. Greene: No, not to me nor to Mr. Oliver. They were merely delivered by Mr. Oliver to the custody of the Commission.

Exam. Mullen: I think Mr. Quirk's point is: How did it happen you received it first and not the Commission?

Mr. Greene: I will have to ask that of Mr. Oliver. They were not delivered to me.

By Mr. Greene:

Q. Can you state that, Mr. Oliver?

A. Yes.

Mr. Quirk: Anyway, you didn't inspire them?

Mr. Greene: No.

Exam. Mullen: We will let it stand at that, then.

[fol. 1845] Mr. Quirk: All right.

By Mr. Greene:

Q. Now, Mr. Oliver, could you state your knowledge and experience with reference to seniority rights, and particularly with reference to the Union Pacific employees in the area between Pocatello and Council Bluffs and Kansas City?

A. The information I have on that is what was given to me by the employee representatives themselves. That is the source of my knowledge of it, and that I have already commented on to the effect that it is very largely a point seniority; that employees have, for the most part, no employment rights away from the present place of employment or where they hold their seniority, if they are now unemployed.

Mr. Greene: Now, faced with this situation, if counsel will bear with me, calling some 20 or 25 witnesses to establish that, under the seniority rights with their particular contracts, they could not displace any employee in another territory—Now, if counsel insists that those witnesses be called, I will produce them; but I believe it would be a saving in time if we could have an understanding to that effect.

Mr. Quirk: I am perfectly willing to stipulate that, with the same objections I have been making that if they were on the stand I would object to the evidence as being irrelevant and immaterial.

[fol. 1846] Exam. Mullen: I will stipulate, however, that if they were called that is what you would attempt to prove by them.

Mr. Greene: That is correct.
Mr. Quirk: Therefore it is not necessary to call them.
Exam. Mullen: That is right.

By Mr. Greene:

Q. Do you have any further comment to make, Mr. Oliver?
A. Not at this time; no, sir.

Mr. Greene: You may cross examine the witness.
Exam. Mullen: We will recess for 10 minutes.

(Short recess taken.)

Exam. Mullen: We are ready to proceed.
Mr. Oliver is ready for cross examination.

Cross-examination.

By Mr. Quirk:

Q. Mr. Oliver, I believe you have already admitted that practically all of your calculations as to the alleged adverse effect that the joint rates here sought would have on the employees of the Union Pacific are based upon the assumption made by witnesses for the Union Pacific that the potential available traffic that might move through the Ogden gateway at the joint rates would all move that way?

A. The quantitative measure is based on that assumption. The qualitative is not. That is to say, if only 10 cars were diverted, or 100 cars, or 1,000 cars, some part of the effect would be felt.

[fol. 1847] Q. When you were considering this matter, in working up these figures, did you notice the fluctuations from year to year of the gross revenues of the Union Pacific?

A. No, I didn't work on gross revenues.

Q. You didn't know, then, that the gross revenues of the Union Pacific, in 1946, for example, were 130 million dollars less than they were in 1945?

A. No, I didn't.

Q. Or that the gross revenues of the Union Pacific in 1949 were 38 million dollars less than they were in 1948?

A. I made no study of gross revenues.

Q. But you do know from your experience that there is a very decided fluctuation in the revenues of railroads from year to year?

A. I would be surprised to find any railroad that didn't have fluctuations.

Q. Now, in these calculations did you give any consideration to the increased movement and the effect of the employees of the Union Pacific, on the line of the Union Pacific, down to Ogden?

A. Yes, that is definitely included in the calculation.

Q. Well, if all this potential traffic moves through the Ogden gateway, that group at least would be very much benefited, wouldn't it?

A. There unquestionably would be some people put to [fol. 348] work who are not now working, but it would be counterbalanced by a greater displacement on the rest.

Q. As an economist of large experience—and I know you have had large experience—do you usually accept the assumptions and the figures given to you, or given to your group or to you by the railroads?

A. Not without examination.

Q. You didn't examine these.

A. Oh, yes; I did.

Q. Will you tell the Commission what your conception of the difference betweeen actual and potential is?

A. Well, the difference in the way the material is used by Mr. Earley, I presume, is what you are talking about. I gathered that Mr. Earley was willing to calculate potential, minimum potential, down to the last car, but he was unwilling to offer a figure at all about actual. That is the difference.

Q. Mr. Earley's testimony shows very clearly, if you will look at page 174 of the transcript, that what he was doing was to try to determine, from the figures available to him, the class of traffic that might be affected by these joint rates as distinguished from the class of traffic that wouldn't be affected by these joint rates.

For instance, there was a witness on the stand this morning—Mr. Dyer, for the Sinclair Refining Company—who said they handled about 10,000 cars a year. Now they are

[fol. 1849] located in this area where the hearing is. That would not be affected.

Exam. Mullen: That was in the verified statement.

Mr. Quirk: Yes, in the verified statement by Witness Dyer.

By Mr. Quirk:

Q. So you assumed that the mere fact that Mr. Earley, at my suggestion as counsel, attempted to show the potential traffic that might be available would be the minimum traffic that he would get at all?

A. No, that is definitely not true.

Q. Well, don't you know, as a man of experience, that no railroad ever gets it—all of the potential traffic?

A. Of course that is true.

Q. Well, Mr. Burns, in this case, questioned by me, admitted that while the Union Pacific is a great railroad that operates very well and does very well financially, in the Northwest it has to meet the competition, at many points, of the Great Northern, the Northern Pacific, the Milwaukee and other railroads; and that the Union Pacific, despite that, did not get all of the traffic that was potentially available: What makes you think the Denver and Rio Grande would get it?

A. I have not indicated that I thought so.

Q. You have used the potential to calculate the adverse effect on the Union Pacific employees. Why did you use it?

A. The only figure that was offered by the Denver & Rio Grande that I found, as to the potential traffic diversion, [fol. 1850] was that the minimum potential would be 157,000 cars.

In examining the testimony I thought that probably was a fair statement; that that was a minimum of the potential. What the maximum of the potential would be, I don't know.

Q. Don't you know that Mr. Earley stated very clearly that the figure that he used was considered as the maximum?

A. No. He said the minimum.

Q. He didn't use the word "minimum."

A. I have it here before me. Perhaps he didn't so testify, and I, of course, in using the word "minimum", may be inaccurately paraphrasing, but he did say——

Q. You are willing to let your testimony stand anyway, and the calculations you have made, upon the assumption that the mere establishment of joint rates over a route that now exists will cause all of this traffic that has been mentioned here—the 157,000 cars—to move by the Denver & Rio Grande despite the fact that witness after witness for the Union—One witness said he would not route a single car out of 5,000 cars a year. You nevertheless went ahead with your proposition?

A. I am not certain that that question, as asked, could be answered in any fashion, but the fact is that the only figures that were available to calculate the potential effect on these employees was the figure given for the potential traffic diversion.

Now, insofar as you fall short of attaining that objective, [fol. 1851] of course, the damage would be less. But any attainment of that objective will inflict injury on these employees. If you accomplish the 157,000 car diversion the damage will be substantially that as reflected in these calculations.

Q. Of course the damage will be less if the movement should be 15,000 cars instead of 157,000 cars?

A. There would be no damage at all if the petition were denied, and for every car that moves there will be an added damage.

Q. You are not familiar with the fact that some large concerns, through their representatives, testified in this case that if the gateway was opened at joint rates they would buy more lumber and other things on the Union Pacific than they now buy on other roads? You are not familiar with that?

A. No, I didn't see that particular statement.

Q. There is a man named Johnson, for one, for the Koppers Company, with a creosoting plant at Salida, Colorado, who certainly testified to that effect. And there are others.

Mr. Greene: I think I am going to object to counsel's comments, Your Honor. I think the record speaks for itself here.

Exam. Mullen: I think that is true. This witness, Mr. Quirk, said he is not familiar with that testimony.

Mr. Quirk: He indicated that he was familiar with some other parts of the testimony, and that has some reflection on [fol. 1852] why he didn't look at the whole record.

By Mr. Quirk:

Q. Mr. Earley said, at page 174 of the transcript:

"I also wish to point out with additioanl emphasis that this estimate as to the traffic possibilities for the Rio Grande route does not attempt to show the number of cars which we think will actually move through Ogden via the route of the Rio Grande in connection with the Union Pacific in the event of the establishment of competitive through rates via that junction."

Now, based on your broad experience, how could you get the impression, from that kind of a statement, that all of this traffic would move via the Rio Grande?

A. I don't have that impression. I didn't get that impression.

Q. Why did you use the 157,000 cars to show to the Commission how different employees in different classes might be adversely affected or actually lose wages?

A. This is the potential effect on the employees, just as your figure, as presented, was supposed to be a minimum——

Q. My figure was not supposed to be a minimum.

A. —to be a conservative estimate of traffic potential.

Q. While you are about it, would you read the testimony of Fred C. Hogue, vice president in charge of traffic for the Denver & Rio Grande, put in the record at Boise about a week ago?

[fol. 1853] A. I am not certain whether I have read that one or not.

Q. Well, are you familiar with——

A. I don't have it here with me, in any case.

Q. Are you familiar with the fact that the line of the Union Pacific that reaches down into Los Angeles, and to California and Nevada points, now has joint rates competitive with the other railroads on practically all commodities between points served by the Union Pacific on that line and points in the territory here involved in connection with the Rio Grande?

A. No, I don't know that.

Q. If I told you that Mr. Hogue testified at Boise that the Rio Grande has never been able to get as much as 5 per cent of that traffic, would that affect your judgment?

A. Well, I haven't indicated any judgment as to the part of this potential——

Q. Well, then, let me put it this way——

A. —which will become actual. Your witness said it was guess work, and I don't want to compete in the matter of guess work.

Q. But you have been willing to take the entire amount that might move and base all these calculations on it to impress the Commission, I suppose, as to the possible effect that it might have on the employees of the Union Pacific?

A. Correct.

[fol. 1854] Q. Despite the fact that you are not willing to guess?

A. The possible effect and the potential effect are almost exactly synonymous. This figure was offered as a traffic potential. Whether or not it would be realized is, as Mr. Earley says, guess work—or how far it would be realized—but, insofar as it is realized, it will injure these employees. And if it is fully realized, then the damage will be substantially as in these exhibits.

Q. If you are going to speculate on that, isn't this a correct assumption: Should the Northern Pacific, the Southern Pacific, the Great Northern and the Milwaukee, which serve many points in the Northwest served by the Union Pacific, by more aggressive solicitation or by better service, or service more satisfactory to the shipper, get all of the traffic from those competitive points to competitive points away from the Union Pacific, that would have an adverse effect on the employees of the Union Pacific, wouldn't it?

A. I am not sure I follow your hypothesis. If competing carriers were able to take away from the Union Pacific all of its business—if that is your hypothesis—then of course it would have an adverse effect on the Union Pacific employees.

Q. Now, Mr. Hogue stated, based on long experience and studies made, that the Rio Grande had never received

more than 10 per cent of the potential available transportation—transcontinental traffic—and then he said that there [fol. 1855] is no probability that the Rio Grande would obtain more than 10 per cent of the estimated potential.

That being the testimony of the man who is anxious to get as much of this traffic as he can, how does that affect, in your opinion, the calculations you have made?

A. Well, it affects it in this fashion: You would attribute that 10 per cent to a desire to get the maximum and ask me to interpret the witness' testimony. Actually the witness is primarily concerned in getting the Interstate Commerce Commission to approve the petition of the railroad. It is to his interest to make that figure as low as possible rather than to make it high. Insofar as his line operates, that 10 per cent is unquestionably lower. I don't know how much bias he had. Perhaps he isn't sympathetic with the Denver & Rio Grande Western Railroad Company, but I would not accept the 10 per cent. I would accept the 157,000 figure as a conservative estimate of potential.

Q. I assume that when you accept that you also assume that, of course, the Union Pacific officials who testified about that subject were not biased at all and had no self-interest?

A. I hope they were doing their best to preserve the traffic of the Union Pacific Railroad. I am certain there was considerable concern about it.

Q. But you did accept those figures, although you testified that in other situations you are not very prone to [fol. 1856] accept figures offered by railroads?

A. I accepted no figure that could be checked otherwise, without checking.

Q. How did you check this potential? How could you check the potential?

A. It couldn't be checked otherwise. That wasn't the Union Pacific figures; that was the Denver & Rio Grande figures.

Q. The Union Pacific put in 171,000 cars as movements actually made in recent years, in certain of the recent years.

Did you see those figures?

A. No, I didn't.

Q. They also said that there were 50,000 cars out of that 171,000 that moved to and from points in the coastal area to and from which joint competitive rates now apply via the Southern Pacific, via the Great Northern and the Western Pacific, through Ogden or Salt Lake, and via the Rio Grande, so that would reduce your potential down to 121,000, would it not, at least?

A. Well, if it should have been reduced to 121,000, Mr. Earley should have reduced it. I only took Mr. Earley's figures.

Q. Why were you so prone to accept Mr. Earley's figures?

A. Because it was a statement of the potential traffic diversion which he said was conservative.

Q. Why don't you accept the figures given by Mr. Hogue? He is the vice president of the company.

[fol. 1857] I think Mr. Hogue's judgment is unquestionably good. It seems to me to be a second thought, after the submission of the figure of 157,000, to reduce it to 15,000. It is quite a drastic change.

Q. Well, not when you understand what the 157,000 is supposed to be.

Now, you gave no consideration to the fact, did you, that if the joint rates should be established the Union Pacific would undoubtedly, in self-interest, attempt to persuade the shippers up there that did route via the Ogden gateway and the Rio Grande to also include the Union Pacific in the route from Denver to Omaha?

Did you give any consideration to that?

A. Yes. That was one of the several routes that seemed to be among the possibilities. However, I judged it would be a minimum because the shipper persuaded to divert from the Union Pacific would have to be persuaded to do that by showing that the Union Pacific wasn't serving him properly, and if he was convinced of that by your solicitors he would be very unlikely to say, "Give it back to the Union Pacific at Denver."

Q. A great many shippers route their traffic that way from California, the record shows. Now the Union Pacific gets it back at Denver.

A. That is possible. But it doesn't represent an original diversion, as would be represented by any traffic diverted

[fol. 1858] if the Commission were to approve this rate rearrangement.

The whole thing is very bad for the railroad industry.

Q. You think it would be better if the existing joint rates, through routes of the railroads of the country were to be linked together and the national transportation system be brought back and you would have to transfer at all junction points?

A. No, I didn't indicate that.

Q. I believe in Exhibit 53 you made some calculations that you call costs.

Don't you know, as a man of experience, that if the Rio Grande should be fortunate enough to get a substantial part of the available traffic, or any reasonable part of it, to that extent their haul, the average haul, would be increased? And isn't it your experience that both ton-mile revenue and cost per ton mile decrease with distance?

A. Yes, I think the second part of your question could be answered affirmatively.

Q. Doesn't the cost per car also—Isn't it determined, to a very large extent, by the load of the lading, the weight of the paying load in the car?

A. If I understand your question correctly, the answer to that also is "yes".

Q. Don't you know that the Rio Grande handles a lot of heavy-loading traffic?

[fol. 1858a] A. I have not examined the Denver & Rio Grande traffic.

Q. You have just taken a brush and painted a broad picture of what you call costs in this Exhibit 53, haven't you?

A. No, I didn't use a brush at all. I don't think the figure is at all accurate. This is as precise a calculation as can be made.

Q. Did you, in using your figures on Exhibit 53, assume that the average weight per carload and the average distance were the same on each railroad?

A. No.

Q. What did you assume?

A. I assumed that the cost per loaded freight car mile of the Denver and Rio Grande Western would apply to

added loaded freight car miles in service over that railroad.

I assumed that the Union Pacific cost per loaded freight car mile would apply to that part of the traffic or that part of the haul which remained on the Union Pacific.

I assumed that the Denver and Rio Grande average is approximately that of those Class I railways in the Central Western Region to which it would deliver freight received from the Union Pacific or from which it would receive freight ultimately to be delivered to the Union Pacific Railroad.

Q. In determining what you call the estimated line haul interchange cost—that is the heading of page 1 of your Exhibit 53—you have got all Class I railways in the United [fol. 1859] States, all Class I railways in the Central Western Region and the Union Pacific and the Rio Grande shown.

A. That is right.

Q. Now, in determining the figures for the Rio Grande, did you recognize that, in getting at the average cost of the Rio Grande, you had to keep in mind that the Rio Grande does now operate quite a mileage of what is called narrow gauge railroad?

A. I didn't go into the detailed character of the operation. I took the average cost per loaded freight car mile as reported to the Interstate Commerce Commission by the Denver & Rio Grande Western Railroad.

Q. That is just an average.

A. That is the average.

Q. You do know enough about narrow *guage* operation, I assume, to admit that it would tend to increase the average cost?

A. I shouldn't like to express an opinion on that. I have never seen any comparative figures.

Mr. Quirk: All right. That is all.

Mr. Hill: May I ask a question?

Exam. Mullen: Yes. Go ahead.

Cross-examination.

By Mr. Hill:

Q. Mr. Oliver, taking first your Exhibit No. 44—Do you have it before you?

A. Yes, I have it.

[fol. 1860] Q. What work did you or your associate, Mr. Zimring, do to gather these figures together here, that are on this exhibit?

A. Well, the first page was based on the figures in Exhibit 15, page 8, which shows the number of employees at each point that Mr. Hanson felt would be directly affected by the proposed diversion.

Those figures were arranged in Exhibit by cities. They were not collected by occupation. The occupational grouping is shown on pages 1 and 2. That is to say, the train and engine men are brought together from all of the points shown in the original exhibit. That is with respect to 1 and 2.

Now, on page 3, the summary, there is a compilation of the sub-classes shown in pages 1 and 2 according to the major classifications shown on page 3.

Now, with respect to page 4 of the exhibit, the first column, "Total Employment," we took the annual reports of the Union Pacific to the Interstate Commerce Commission——

Exam. Mullen: Pardon me. Isn't that explained in the footnote?

The Witness: The source is shown, but I understood the question was as to exactly what did we do.

By Mr. Hill:

Q. That's all right. I was particularly concerned with pages 1, 2 and 3.

Now, Mr. Oliver, those figures, then, are merely a rearrangement of those given by Mr. Hanson to put into this [fol. 1861] type of employment; is that right?

A. The figures on pages 1, 2 and 3 are that; yes.

Q. They are not backed by any independent investigation, or any search or check, on your part, of their authenticity?

A. Yes. I should say that the analysis which we made

of the traffic diversion indicated that these figures were not only authentic as to total, but that they were probably only about 25 per cent of the total.

Q. What I want is for you to show me what you did to verify these figures. What was your research that verified these figures? What did you do?

A. I took the figures reported to the Interstate Commerce Commission on traffic in terms of loaded freight car miles of the Union Pacific.

Q. Do you have a work sheet or anything else that you used to get together these figures? Where is your data that you used to verify these figures?

A. They are on page 4 and page 5—page 4, particularly—of the exhibit.

Q. You used the figures on page 4 to verify the figures on pages 1 and 2? Is that your statement?

A. To verify the total—rather, to check the total.

Q. What else? You used these figures on page 4. What other figures did you use to verify the figures on pages 1 and 2?

A. Only those on page 4.

[fol. 1862] Q. Any others?

A. No.

Q. Well, then, you didn't check any of the figures as to how many of these employees would be affected in any particular category at all, did you?

A. No. That is impossible of checking.

Q. It is possible to get it, but it is not possible to check it; is that it?

A. No, it is impossible to check it.

Q. All right.

Actually, then, this exhibit is purely a recompilation of data furnished by the Union Pacific witness; isn't that it?

A. No. The first three pages are; the last 2 are not.

Q. How do the last 2 pages in any way check the figures on pages 1 and 2?——

A. Well, the figures on page 4——

Q. —and 3?

A. The figures on page 4 show the relationship between traffic and employment. The estimated potential traffic diversion is calculable within a fairly narrow range of ac-

curacy. The figures on page 4 show that, with a reduction in traffic, a reduction in employment follows.

Now, the reduction in traffic is measured on page 5 as nearly as could be measured on the basis of the information available.

[fol. 1863] Q. Now, in your——

A. Excuse me.

Q. I'm sorry. Proceed.

A. The evidence of Mr. Hanson was to the effect that if the traffic potential, or the potential traffic diversion were accomplished, there would be a loss of 1200 employees. By checking with the traffic totals it seemed that that figure was conservative by about 3800.

Q. Well, now, you didn't put any of your own independent judgment into this determination of how many employees would be cut off, because you copied the exact figures the Union Pacific witness gave, of 1240 men.

A. No. You will find, on page 5, a figure which I calculated myself without any information from the Union Pacific, and it differs from the figure that the Union Pacific Railroad put in evidence.

Q. I see. Then you think that the diversion is roughly four and a fraction times greater than the Union Pacific itself thinks the diversion will be?

A. The Union Pacific figure of 1240 was subsequently amplified in the evidence by a calculation based on the anticipated or potential traffic reduction. As I recall it, that resulted in a figure in the neighborhood of 5,000. But it was differently calculated from the figure which is offered on page 5 of this exhibit, and there was no agreement on [fol. 1864] the basis of calculation at all.

Q. Well, what research did you do to verify any of these figures other than get this data that is shown on page 4 of Exhibit 44?

A. Well, if you will look at page 5 you will see the figure of 5,144. That was the ultimate check and verification.

Now, the research to accomplish or to arrive at that figure was done in this fashion: The Association of American Railroads publishes weekly figures on carloads handled, or cars handled by individual American railroads. We took the 52 weeks in 1949 and took the figures for the Union Pacific Railroad for each week and added them together,

and we got the total carloads handled by the Union Pacific Railroad—1,511,658. That gave us, then, the carloads.

Now, there is no information available as to the average length of haul of the cars in 1949. The latest available is 1947. We took the 1947 figure as reported by the Interstate Commerce Commission for the Union Pacific as the average miles per loaded freight car. We multiplied the number of loaded freight cars handled by the average mileage per car and arrived at the figure which, is expressed in round numbers, of 1,082,000,000.

Then the ratio of the potential diversion to the total volume of traffic was calculated, which, you will see, is 10.9 per cent——

[fol. 1865] Exam. Mullen: All of that is shown on page 5, Mr. Hill.

Mr. Hill: I am not stopping the witness. If - - has answered my question, I am ready to rest.

Exam. Mullen: Does that sufficiently answer your question?

Mr. Hill: I think so.

By Mr. Hill:

Q. You got the figures of the total carloads of freight handled in 1949 and you took this 157,762 carloads from, I suppose, the exhibit of the D&RGW?

A. That is right.

Q. And translated that into freight car miles and——

A. Yes.

Q. —and your 10.9 is your percentage of loaded freight car miles diverted against the other, or is if carloads against the other?

A. It is the car mileage—loaded freight car mileage.

Q. Your determination of these figures, then, was just from reports made by the Union Pacific and the Interstate Commerce Commission reports? You made no independent investigation of any kind?

A. I wouldn't say that I made no independent investigation. This was an independent investigation. The fact that I used the Interstate Commerce Commission figures doesn't make it anything other than independent.

Q. In your figure of 10.9 per cent reduction of employees,

you did not take into consideration any effect of Dieseliza-
[fol. 1866] tion by the Union Pacific and the resultant loss of employment on that account?

A. No. Any loss of that kind is not included in this 5,000, excepting insofar as it is already reflected in the figure of 47,194 employees of the Union Pacific in January of 1950.

Q. In your exhibit about unemployment, railroad unemployment compensation claims—Is that Exhibit 46?

A. That is 45, I believe.

Q. 45?

Page 8 of that Exhibit 45. You have here a list of a number of railroad unemployment compensation claims as of January 1, 1950, in certain counties of Nebraska, Kansas, and Wyoming; is that correct?

A. That is right.

Q. What period of time of unemployment do these claims indicate, if anything?

A. There is no way you can judge that.

Q. As I understand it, an employee that is unemployed for a 7 days' waiting period, working on the railroad, can come in and apply for compensation; is that right?

A. Not if he is working on the railroad.

Q. I say if he is unemployed for 7 days. He has a 7-day waiting period, hasn't he?

A. Yes, that is my recollection.

Q. Is that right or not?

[fol. 1867] A. I wouldn't want to try to give precise numbers of days from my recollection, but I believe that is right.

Q. Well, now, in order to mean anything, on the basis of number of claims filed, you would have to know something about how long they had been unemployed or what the claim for compensation was, wouldn't you?

A. I don't see why.

Q. They are temporarily unemployed. Is that what you mean?

A. They are unemployed. That is the whole story.

Q. The figure you have here represents that on a certain day there were that many people who were claiming unemployment compensation; is that it?

A. That is right.

Q. And if a man were out of work 7 days he could come

in and claim compensation the next day?

A. Whenever he has been unemployed the minimum amount, whatever it is. I wouldn't want to state exactly.

Q. I take it, Mr. Oliver, that this unemployment and detrimental effect which you forecast, in your various exhibits, on points along the Union Pacific would work to the advantage of the other points in the overall picture if there was a diversion; is that right?

A. No, not necessarily. The actual fact is that, as traffic declines, employment declines faster. As traffic increases, employment rises more slowly. So that the effect of diversion would be to perhaps increase employment; but, if it is [fol. 1868] increased, to increase it less than the cut on the carrier from which the traffic is diverted. So that, while the Denver & Rio Grande employees might gain some employment by this device, they would gain less than the Union Pacific people would lose.

Q. That is true over the long period?

A. That is true over the long period.

Q. In other words, the same amount of traffic handled over the Union Pacific at the present time, if handled over the Rio Grande in addition to their present traffic, wouldn't produce the same number of jobs?

A. That is my judgment.

Q. And on what do you base that judgment?

A. It is based on about 30 years of study of the relationship of traffic to employment changes.

Now, what ordinarily happens with a traffic reduction is that the word goes out that the forces must be cut. And they are cut drastically, and as drastically as possible, because the labor cost increases as traffic declines. The labor cost per unit rises. Consequently, the cuts are made, if possible, more deeply than the traffic.

On the other hand, when traffic rises there is always some slack, and with increasing traffic the tendency for the substitution of labor-saving devices is very great. With heavy traffic it can be more efficiently handled, and the quantity of employment relative to the traffic declines.

[fol. 1869] That is true throughout the United States for the railroads as a whole, and it is true for individual carriers generally. There are many individual years, partic-

ularly war years, where that will not be true for each individual railroad, but that is the general truth.

Q. Are you acquainted with the D&RGW rail system?

A. I don't know what you mean by being acquainted with the system.

Q. Do you know what physical plant they have and where it is located?

A. No. Do you mean, by "physical plant," where their shops are?

Q. Their trackage, the points in the states where they go through.

A. Only in a general way.

Q. Have you been over it?

A. Oh, yes. When I say that I don't mean I have traveled every branch railroad, but I have traveled the Denver & Rio Grande on several different sections of the road at different times.

Q. The statements you made here just a few minutes ago with respect to jobs not being transferred are general statements.

You couldn't give an opinion, as an economist, about what effect it would be in this particular installation unless you knew both roads pretty well, could you—unless you [fol. 1870] knew the volume of traffic they were handling at the present time compared to their potential; and so on?

A. I don't believe any person can prognosticate precisely the effects of a traffic diversion. You can only say that if the past effects are repeated—which is the essence of scientific prognostication—then the effect will be thus and so; but there is no assurance short of the stars that past effects will be repeated.

Q. I was interested in this picture here of some of these homes that you say people occupy shown in Exhibit 52. I am calling your attention now to page 1 of Exhibit 52.

At the top of the page you say "Home of George Paulos, Machinist. 13½ years service."

Does he have 13½ years' seniority? Is that what you mean by "service"?

A. In general, yes. There may be, in some instances, a break in that service; but that is what the term "service" here implies.

Q. You do mean seniority or you don't mean seniority?

A. It means seniority.

Q. All right.

You want this tribunal to believe that that man, with 13½ years of service, will be out of a job because of this diversion? Is that the effect of this exhibit that you mean to convey?

[fol. 1871] A. That is the fact, yes. If the traffic diversion reaches the proportions of the potential traffic diversion, Mr. Paulos will certainly be out of a job.

Q. I see.

What is his seniority up there. What is his place on the machinists' seniority?

A. I can't tell you that without having the seniority roster here, but he is within such range of the bottom of the list that if a number of machinists, calculated by Mr. Hanson, are released, Mr. Paulos will be out.

Q. And you are positive that is 13½ years' seniority?

A. Yes.

Q. Where did you get the figure on the seniority?

A. That figure is from the seniority roster.

Q. Where is it? Do you have it available?

A. I haven't got it here, but I certainly can check it.

Q. Can you produce it in the morning?

Exam. Mullen: What is the purpose?

Mr. Hill: I don't believe this could be true under any circumstance, and I would like to see how they arrived at this figure.

Exam. Mullen: You dispute the fact that he has 13½ years' service?

Mr. Hill: No. I dispute the fact that any man with that number of years of seniority could be cut off by any con-[fol. 1872] ceivable diversion of traffic in Green River.

Exam. Mullen: Don't you think you have pursued that enough?

Mr. Hill: I would like to have the seniority list.

Exam. Mullen: I don't believe that will be necessary.

Mr. Hill: One difficulty of permitting these exhibit- to go in is that you have to go so far afield to try to prove or disprove them.

That is all.

Exam. Mullen: Anything on redirect?

Mr. Greene: I have just one or two questions.

Redirect examination.

By Mr. Greene:

Q. Mr. Oliver, Mr. Quirk asked you about the revenue increases and gross revenue of the Union Pacific.

A. Yes.

Q. Could you in any way use the gross revenues of the Union Pacific in computing the effect of this unemployment situation?

A. No, it would have no relation whatsoever.

Q. It would reflect, of course, increases in rates and things of that kind, would it?

A. Yes.

Mr. Greene: That is all. Thank you.

Exam. Mullen: Witness excused.

(Witness excused.)

Mr. Greene: May I defer at this time to the city attorney, who has a witness to put on?

[fol. 1873] Exam. Mullen: Yes, sir.

Mr. Guy: Mr. Examiner, I would like to call Mr. Nelson, mayor of Cheyenne, please.

Ben Nelson was sworn and testified as follows:

Direct examination.

By Mr. Guy:

Q. Will you state your name?

A. Ben Nelson.

Q. Where do you live, Mr. Nelson?

A. 3043 Snyder, Cheyenne, Wyoming.

Q. What official position do you hold, if any, in the city of Cheyenne?

A. Mayor of Cheyenne.

Q. When were you first elected mayor?

A. 1947.

Q. Have you since been re-elected mayor?

A. Yes, sir; in '49.

Q. Have you prepared a statement which you desire to introduce in the record in this case?

A. I have.

Mr. Guy: I now ask permission of the Examiner for the witness to read the statement.

Exam. Mullen: Go ahead.

The Witnes: I am the mayor of the city of Cheyenne and am authorized by official action of the Cheyenne city council [fol. 1874] to appear in this proceeding.

I live at Cheyenne, Wyoming, and have lived here since 1934. I am 33 years of age. I am married and have two children. My wife is a native of Cheyenne.

I am an employee of the Union Pacific Railroad on leave of absence. I am a member of the Railroad Trainmen Local No. 288.

I entered the service of the Union Pacific at Cheyenne in August, 1936, as a brakeman and have been in the service of the Union Pacific since that time subject to the leaves of absence hereafter noted.

In 1940 I was granted leave of absence for military duty and was in such service for five years. I became a pilot in the air corps and at the termination of my service had the rank of captain. I am *not* a pilot with the rank of major in the air unit of the Wyoming National Guard at Cheyenne.

I returned to Union Pacific service in 1946.

I was elected mayor of Cheyenne in 1947. I attempted to continue with my duties as a Union Pacific trainman while acting as mayor. I found, however, that my duties as mayor took too much of my time to permit this. After my first term I was therefore granted leave of absence from the Union Pacific.

I was again elected mayor in 1949 and am serving my second term. I am a member of various veterans, fraternal and community organizations.

My employment by the Union Pacific, my experience as [fol. 1875] mayor of Cheyenne, my wide acquaintance in

the city and my other activities in the community have resulted in my having extensive knowledge of governmental, business and living conditions in this community. In particular, I know the relationship which has developed and exists between the city of Cheyenne and the Union Pacific Railroad and the importance of the railroad to this community.

It is a matter of common knowledge that Cheyenne was established as a division point on the railroad when the line of the Union Pacific had been built as far west as this point. It has been an important division point on the railroad ever since.

Trainmen and enginemen operating east over the Nebraska Division, and trainmen west over the Wyoming Division have their headquarters here. The Wyoming Division superintendent with his staff and office force are located here. The Division mechanical officer with his staff and office force are also headquartered here. From time to time a general superintendent with wider jurisdiction has had headquarters here. This is true at the present time. There is also a Division traffic office here. There are large mechanical and general shop facilities in Cheyenne. The maintenance and repair of locomotives has particular importance here because of the heavy grade west of Cheyenne.

On the average, there are approximately 3,000 Union Pa- [fol. 1876] cific employees living at Cheyenne. These employees with their dependents would exceed 10,000 persons who are dependent on the Union Pacific at Cheyenne. The total estimated population of the city at present is about 35,000. A similar situation has existed during all of the time that I have lived in Cheyenne. It is common knowledge that this has been true throughout the history of the city.

Many of the employees of the Union Pacific who live here are long-time residents of Cheyenne. Their families have been born and brought up here. Some members of the second generation are now employed by the railroad. As a result, Union Pacific employees are established here and are valued and loyal citizens.

As a specific illustration of this condition which exists here, I, a Union Pacific employee, am now the mayor of the

city. One of the two other elected officials at the present time is Mr. Edward Gowdy, commissioner of finance, who is a long-time employee of the Union Pacific and citizen of Cheyenne, recently retired from the railroad. Mr. Gowdy's immediate predecessor, Mr. Leo Waters, is a Union Pacific employee. Mr. A. W. Trout, the other city commissioner, is also a former Union Pacific employee.

As a further illustration of the importance of the Union Pacific to Cheyenne, at the present time the Union Pacific pays approximately one-sixth of all taxes paid in Cheyenne, [fol. 1877] in School District No. 1, which is the Cheyenne school district, and in Laramie County, of which Cheyenne is the county seat.

There are few industrial organizations in Cheyenne. The Union Pacific is the biggest. It has been the leading industry and largest employer in Cheyenne throughout Cheyenne's history.

Anything which decreases employment on the Union Pacific is immediately felt throughout the city. Businesses, banks and professional offices are affected. This is true, for examples, when seasonal layoffs occur.

Anything which would result in a permanent decrease of Union Pacific employment in Cheyenne would, in my opinion, have a permanently depressing effect in the community.

The obvious purpose of the Rio Grande in this proceeding is to divert to the Rio Grande traffic originating or terminating in Idaho and the Northwest on the lines of the Union Pacific and now moving across Wyoming. Any substantial diversion of such traffic would result in a decrease of Union Pacific employment in Wyoming and in Cheyenne.

Such a result would be especially hard on Cheyenne because of the high percentage of our population dependent on Union Pacific employment.

Our municipal, school and business facilities have been built up in large measure to meet the requirements of the Union Pacific and its employees.

At the present time there are approximately $1,900,000 of [fol. 1878] school bonds outstanding.

Investments in municipal facilities such as municipal buildings, street improvements, and sewers, are not set up in the form of a property value statement, but there are

approximately $462,000 of city general obligation bonds outstanding. A sewer disposal plant bond issue of approximately $1,100,000 of revenue bonds is pending.

Investment in city water facilities exceeds $6,400,000. There are approximately $210,000 of water bonds outstanding, but an issue of approximately $1,900,000 of water bonds for necessary improvements is under immediate consideration.

Current bank deposits in the two Cheyenne banks total approximately $45,000,000.

Any permanent substantial decrease in the Union Pacific employment at Cheyenne will, in my opinion, have a material adverse effect upon business conditions and property values and upon outstanding public indebtedness in the community.

I hardly need comment upon the effect of displacement of any Union Pacific employees in the community. It would be difficult for Union Pacific employees who may lose their jobs to find other employment there. Workers who have established themselves in a community do not like to move away, especially if it becomes necessary to sell their homes. I know this from my personal point of view. In addition to sentimental reasons there are reasons of financial expense and loss involved in such moves.

[fol. 1879] If loss of traffic on the Union Pacific should result in a decrease of our freight trains per day each way, and decrease in employment of over 280 employees at Cheyenne, as I understand was estimated by previous witnesses in this proceeding, the adverse effect on the Cheyenne community would, in my opinion, be very great. Such number of displaced Union Pacific employees might well affect, with their families, as many as 1,000 residents of Cheyenne. The adverse effect of any such result is obvious.

For the foregoing reasons the city of Cheyenne is opposed to the granting of the relief sought by the Rio Grande in this proceeding.

Mr. Guy: You may cross examine.

Cross examination.

By Mr. Quirk:

Q. Mr. Nelson, Cheyenne is a town with a lot of enterprise, is it not?

A. Yes, sir.

Q. A lot of "push"?

A. Yes, sir.

Q. And it has been growing in recent years, has it not?

A. Yes, sir.

Q. Now, the Union Pacific, I suppose, gives Cheyenne good service, good transportation service?

A. Very good, sir.

[fol. 1880] Q. And have they been giving the citizens of Cheyenne, the shippers and others, good service for the past five years or more?

A. To the best of my knowledge; yes, sir.

Q. Now, you are basing your fears and views on information given you largely by the Union Pacific officials, are you not?

A. No, sir; I am not.

Q. Did they tell you that in 1946 the gross revenues of the Union Pacific were 130 million dollars less than the year before?

A. No, sir; they did not.

Q. You didn't close up here then, did you, in 1946?

A. No, sir; we didn't close.

Q. Don't you know that that is many times more than could possibly be involved here? Or do you know that?

A. The only thing I know, in this particular case, is that any loss of particular freight to another railroad that is already going through on the Union Pacific would be a loss to Cheyenne.

Q. Well, but you have already admitted that you were not conscious of any bad effect on Cheyenne in 1946 compared with 1945.

Now, did you know that in 1949 the Union Pacific had a gross revenue falling off, compared with 1948, of 38 million dollars? You didn't know that?

[fol. 1881] A. No, sir.

Q. If 38 million dollars' loss of revenue or 130 million

dollars didn't affect you, what makes you think the diversion that might possibly happen here could affect Cheyenne in a noticeable degree?

A. The effects on the Union Pacific in losing their money does not necessarily, from my information, affect the city of Cheyenne.

Q. Well, you just got through saying it might, the way I understand you.

A. On this diversion, yes, sir—loss in freight. How they lose their money is definitely not my concern.

Q. Well, but you have admitted that you are not conscious of any decline in service or less service or more satisfactory relations with the Union Pacific in 1946 than in 1945.

You weren't even conscious of that, were you?

A. Any acts of God or anything that may take effect to drop business from the East or the West is something that we have always withstood in Cheyenne.

Q. Well, I don't doubt that. We try to withstand them in other places, too. But what I am getting at, Mr. Nelson, is that you seem to be very much concerned about what might happen here; but when something much greater than that happened—twice at least in the last 15 years—you were not even conscious of it.

[fol. 1882] A. I am conscious of it from the standpoint of the personal effect on me as well as the effect on the business people in the city of Cheyenne.

Mr. Quirk: All right. Thank you.

Mr. Hill: No questions.

Exam. Mullen: Any redirect?

Mr. Guy: No redirect. I think that is all.

Exam. Mullen: That is all, Mr. Nelson. Thank you.

(Witness excused.)

Mr. Greene: Mr. Cahill.

MARTIN CAHILL was sworn and testified as follows:

Direct Examination.

By Mr. Greene:

Q. Would you state your name?

A. Martin Cahill.

Q. And have you prepared a statement that you would like to read into the record in this proceeding?

A. It is a very brief one.

Q. You are appearing here on behalf of what organization?

A. On behalf of all of the workers of the State of Wyoming.

Q. I see. What organization represents them through you?

Exam. Mullen: What organization are you president of, in other words.

The Witness: The Wyoming State Federation of Labor.

By Mr. Greene:

Q. Now, if you will, read your statement.

[fol. 1883] A. I am president of the Wyoming State Federation of Labor. My home and headquarters are at Cheyenne. I have lived in Wyoming since 1907. I have been president of the Wyoming State Federation of Labor since 1934.

The Wyoming State Federation of Labor is chartered by the American Federation of Labor. It represents approximately 6,000 employees in the State of Wyoming, exclusive of members who are employed by the Union Pacific Railroad Company and are represented by specific railroad unions in this proceeding.

I constantly travel around the State of Wyoming and come in contact with laboring people in the state and I know about employment and living conditions in Wyoming, including the southern part of the state through which the Union Pacific Railroad runs.

The Union Pacific Railroad, including its coal mining interests, constitutes the principal industrial organization in the southern tier of Wyoming counties, and it has occupied

that position throughout the history of the state.

Wyoming is a sparsely settled state. It has about 275,000 inhabitants and about 100,000 square miles. Aside from the ranches and farms, in Wyoming there are few important industries. The Union Pacific is one of the important industries, and it is a large employer of skilled labor.

Anything which affects Union Pacific employment and Union Pacific payrolls immediately affects business and [fol. 1884] working conditions in the towns and cities through which the Union Pacific runs.

If this proceeding results in diversion of traffic from the Union Pacific, it would undoubtedly cause decreased employment on the railroad and in the Union Pacific mines.

Union Pacific witnesses have testified in this proceeding that such a diversion of traffic would result in a loss of four trains per day in each direction through Wyoming, and that this would result in loss of employment by 478 railroad employees earning annually wages of nearly $2,000,000 and loss of employment by 260 miners earning over $1,250,000 a year.

Such loss of employment on the railroad and in the Union Pacific mines, and such loss of payroll in the cities and towns involved would seriously affect business along the Union Pacific and would undoubtedly result in unemployment of many of the members of the Wyoming State Federation of Labor that I represent here, as well as professional and business men with homes and families in those cities and towns.

Many of the workers along the Union Pacific, both those on the railroad and in the Union Pacific mines, and other workers, own their own homes and have raised their families in the cities and towns where they live and may be considered permanent residents. Displacement of these employees is a serious thing to them. It not only requires [fol. 1885] them to find new jobs, which are difficult to find in Wyoming, but, if they have to move away, it results in losses in moving and in buying and selling property and in other ways.

These workers should not be subjected to displacement in this way except for a very good cause. These workers have assisted in maintaining the towns and cities and the

businesses along the Union Pacific which are necessary to serve the Union Pacific and its employees.

It is our contention that it is against the public interest to displace them in the process of taking business away from a well-established and well-operated railroad in order to give a part of that company's business to another railroad. Such a process will discourage workers from establishing themselves in communities where they are required by a railroad establishment such as the Union Pacific.

I wish to protest the granting of the petition of the Rio Grande in behalf of the workers whom I represent.

By Mr. Greene:

Q. Have you any other comments you desire to make?

A. Well, I want to say that I have no interest in the Union Pacific. I am not working for them. I have lived and stayed here for 43 years. I know many of the professional and business men all along the U. P.; and I know, when I visited those towns in the last two or three months, when this problem first got into the papers they said, "My God, what are you going to do about the Rio Grande," the [fol. 1886] petitioners?

They are going to leave a lot of ghost towns along the U. P. I know they are going to throw a lot of men out of work, and I know they will have to leave the state to find other locations. I am entirely in sympathy with this problem.

Cross-examination.

By Mr. Quirk:

Q. What you know about this has been told you by the Union Pacific, hasn't it?

A. Just what I stated, Mister.

Q. I mean you have not made any separate, independent investigation, have you?

A. No, sir; except with my daily acquaintance with the business men and professional men along the U. P.

Mr. Quirk: That is all.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Mr. Greene: Mr. Martin.

HOUSTON MARTIN was sworn and testified as follows:

Direct examination.

By Mr. Greene:

Q. Will you state your name?

A. My name is Houston Martin.

Q. Have you prepared a statement which covers the organization you are appearing for here?

A. I have.

[fol. 1887] Q. Would you proceed to read the statement, Mr. Martin?

Mr. Quirk: Mr. Examiner, I glanced at this. It seems to me to be more or less like the other. I am perfectly willing to have it copied into the record without it being read.

Mr. Greene: I am agreeable to that procedure.

The Witness: I am president of District No. 22 of the United Mine Workers of America, which represents the coal miners of Wyoming. I live at Rock Springs, which is also my headquarters. District No. 22 has approximately 4,000 united mine workers in Wyoming. I have lived in Wyoming since 1920. I am familar with employment conditions in the coal mines in Wyoming and with living conditions of coal miners in this state. I have been a member of the legislature of the State of Wyoming.

As I understand this proceeding, the granting of the through rates which the Rio Grande asks would result in the diversion of traffic now moving over the Union Pacific through Wyoming to the lines of the Rio Grande.

I understand there has been testimony that the potential amount of traffic which might be solicited by the Rio Grande from the Union Pacific amounts to over 150,000 cars a year. I understand that Union Pacific witnesses have testified

that this might affect the jobs of over 500 railroad workers earning over $2,000,000 a year and over 250 Union Pacific coal miners, which I consider a very conservative estimate. [fol. 1888] Also, in my judgment, it will reduce the work time of the remaining employees.

Wyoming is a sparsely settled state and there are not many big industries in it. But the Union Pacific and its coal mines have always been a big Wyoming industry, with special importance in southern Wyoming. Anything that affects Union Pacific railroad and mine jobs is of great importance to Wyoming and especially the towns along the Union Pacific and, above all, Rock Springs.

My chief interest is, of course, in the miners but I am interested in rail workers, too, and in all branches of labor.

Anything which affects Union Pacific railroad employees and Union Pacific miners affe-ts other employees in southern Wyoming. I know that many Union Pacific railroad workers and Union Pacific miners and other workers dependent upon Union Pacific employment own their own homes and have raised their families in the cities and towns where they live and want to remain there.

Displacement of workers by loss of jobs is a serious thing because it is difficult for them to find other work, and this is very important in Wyoming because there are fewer other jobs than there are in other areas where there is more industry.

Displacement also may mean moving costs and selling property and buying property and hurts the workers in various other ways. Workers and their families do not like to be pushed out of their homes and away from the [fol. 1889] place where they have established themselves and their families.

It is our contention that it is not good public policy to displace workers except for good reasons. We do not believe that workers who have established themselves in this sparsely settled state of Wyoming to run the railroad and the railroad mines, and to carry on the other work and businesses upon which the railroad and its workers depend, should lose their jobs because of diversion of railroad traffic.

Everybody in Wyoming knows that the Union Pacific

is doing a good job of transportation. We do not see any good reason for taking the traffic away from the Union Pacific and giving it to another railroad.

The Union Pacific has built up its railroad and developed its transportation customers. We do not believe it should now be deprived of the benefits of its work. Our real reason for objecting is, of course, that the result of diverting this traffic is to deprive our workers of their jobs and to displace them from the places where they have established themselves.

In behalf of the workers that I represent and all workers who will be affected, I wish to protest the application of the Rio Grande for the through rates which would have these results.

Exam. Mullen: Do you desire to cross examine?

Mr. Quirk: No.

[fol. 1890] Exam. Mullen: That is all, then. Mr. Martin.

(Witness excused.)

Mr. Greene: Mr. Morgan.

JAMES MORGAN was sworn and testified as follows:

Direct examination.

By Mr. Greene:

Q. Would you state your name, please?

A. My name is James Morgan.

Q. Do you hold a position with the United Mine Workers?

A. I am regional director of District No. 50, United Mine Workers of America.

Q. And you, as such, have prepared a statement for presentation to the Interstate Commerce Commission in this proceeding?

A. I have, sir.

Mr. Quirk: As far as I am concerned, this statement can be copied in the record as though read without the witness actually reading it, if that is agreeable, Mr. Greene.

Exam. Mullen: Is that agreeable, Mr. Greene?

Mr. Greene: That is agreeable to me if it is to the witness. Is that agreeable to you, Mr. Morgan?

The Witness: Yes.

Exam. Mullen: That will be copied in the record and will be considered as if you had read it in the testimony.

The Witness: I am regional director of the United Mine Workers of America, District No. 50, which has about 300 [fol. 1891] members in Wyoming. I live and have my headquarters in Cheyenne. District No. 50 represents trona mine workers in Wyoming and workers in other crafts but not coal mine workers.

I travel about the state in connection with my duties and I know the conditions of mine employment and the living conditions of mine workers as well as the workers I represent and labor generally in the state. I have for many years been familiar with coal mines and coal miners as well as with miners I represent.

It is my understanding that the effect of granting the through rates which the Rio Grande is asking in this proceeding would be to divert the traffic from the Union Pacific lines through Wyoming to the lines of the Rio Grande.

I understand, from testimony of the Union Pacific witnesses, that as many as 260 or more Union Pacific coal miners and over 475 rail workers in Wyoming might lose their jobs as the result. While this does not directly affect the workers whom I represent, my interest is with labor generally and we all know that the Union Pacific is one of the few important industrial organizations in Wyoming and that anything which affects employment on the railroad and in its mines indirectly affects every one else in Wyoming including the workers I represent, particularly in the southern counties.

Displacement of workers is a very bad thing. Many workers in Wyoming have established themselves and their [fol. 1892] families in the towns and cities where they live and they do not like to be uprooted. It is hard for them to find other jobs, particularly where there are few other jobs as there are in Wyoming. It is also expensive to be displaced.

It is the contention of the workers whom I represent that traffic moving over the Union Pacific, which is doing a good

railroad job, should not be diverted to another railroad without good cause. We do not believe that any good cause for such diversion exists here. The Union Pacific has developed the traffic which it is carrying, and it and its workers, and other workers dependent upon their efforts, should be permitted to continue with their jobs in Wyoming.

(Witness excused.)

Exam. Mullen: Off the record.

(Discussion off the record.)

Exam. Mullen: On the record.

Mr. Purvis: Speaking for the Idaho Public Utilities Commission, Mr. Examiner, in its petition of intervention in this proceeding the Idaho commission indicated that during the course of these hearings it would be able to state its position.

Unfortunately, and due to circumstances beyond their control, each of the commissioners were not able to be present during all of the hearings. As a result, the commissioners are not entirely familiar with the testimony of the [fol. 1893] individual witnesses.

Due to these circumstances, the Commission has asked me to request of you permission for the Idaho Commission to state its position on brief. If this permission is granted it will enable each of the Idaho commissioners to make a detailed study and analysis of the testimony of the witnesses on both sides.

We hope counsel for the complainant and for the defendants will acquiesce.

Mr. Quirk: We have no objection.

Exam. Mullen: Any objection from you, Mr. Collins?

Mr. Collins: No, none here.

Exam. Mullen: That may be done, Mr. Purvis.

Mr. Purvis: Thank you, sir.

Exam. Mullen: We will now adjourn until 9 o'clock tomorrow morning.

(Whereupon, at 5:00 p.m., the hearing in the above matter was recessed, to reconvene at 9 o'clock a.m., Tuesday, April 18, 1950.)

[fols. 1894-1895] BEFORE THE INTERSTATE COMMERCE COMMISSION

[Title omitted]

Transcript of Proceedings—Cheyenne, Wyoming, April 18, 1950.

Met, pursuant to adjournment, at 9:00 o'clock a. m.

Before: Frank E. Mullen, Examiner.

APPEARANCES: (As heretofore noted.)

[fol. 1896] PROCEEDINGS

Exam. Mullen: We are ready to proceed, gentlemen.

Mr. Hill: Mr. Examiner.

Exam. Mullen: Mr. Hill.

Mr. Hill: I would like identified or numbered an exhibit which was to be prepared by Mr. Chipman yesterday, and have it stipulated that this exhibit is the exhibit to which the witness, A. J. Chipman, referred to in his testimony yesterday at this hearing.

Exam. Mullen: Is that the one that was to be furnished after the hearing?

Mr. Hill: Yes.

Exam. Mullen: We will give it number 55.

(Complainant's Exhibit No. 55, Counsel Hill, marked for identification.)

Exam. Mullen: Is this offered in evidence?

Mr. Hill: Yes, I would like to offer it in evidence.

Exam. Mullen: Any objection?

Mr. Greene: I have no objection.

Exam. Mullen: It will be received in evidence.

(Complainant's Exhibit No. 55, Counsel Hill, received in evidence.)

Mr. Hill: We are ready to proceed. I understand we are to go ahead with our witnesses.

Exam. Mullen: Proceed.

Mr. Hill: Mr. Warner.

[fol. 1897] E. W. Warner was sworn and testified as follows:

Direct examination.

By Mr. Hill:

Q. State your name.
A. My name is E. W. Warner.

Exam. Mullen: I cannot hear you, sir.
The Witness: E. W. Warner.

By Mr. Hill:

Q. Where do you reside, Mr. Warner?
A. My office is 721 Ernest and Cranmer Building, Denver, Colorado.
Q. What is your present position, Mr. Warner?
A. I'm presently General Chairman of the Brotherhood Railway Carmen of America on the Denver and Rio Grande Western Pacific Railroads.
Q. How long have you held that position?
A. Ten years.
Q. And prior to that time, what was your position?
A. I worked as a carman at the trade on various railroads throughout the country. I believe you interrupted me.
Q. Excuse me.
A. I had not gotten clear through what I represented.

Exam. Mullen: Mr. Warner, would you mind raising your voice? It is very difficult to hear you.
The Witness: All right sir.
I'm also Secretary Treasurer of System Federation No. 10, which represents the seven so-called shop crafts on the [fol. 1898] Rio Grande Railroad.

By Mr. Hill:

Q. How long have you had that position?
A. Six years.
Q. And in connection with your positions, have you become familiar with the D&RG System?
A. I have.

Q. In this proceeding, for whom are you appearing?

A. The seven so-called shop carfts.

Q. Can you name those crafts?

A. The International Association of Machinists; the International Brotherhood of Boiler Makers; Iron Shipbuilders and Helpers of America; International Brotherhood of Blacksmiths; Drop Forgers and Helpers; Sheet Metal Workers International Association; the Brotherhood of Electrical Workers; the Brotherhood of Railway Carmen of America; and the International Brotherhood of Firemen and Oilers on the Rio Grande.

Q. And your representation is restricted to those organizations on the Rio Grande?

A. That is right.

Q. Are you acquainted somewhat with the Union Pacific System, the Defendant in this case?

A. In a general way, yes.

Q. Do you know the locations of its rails and the areas served by it?

A. In a general way, yes.

[fol. 1899] Q. In regard to your crafts, how is seniority handled on the Rio Grande?

A. We generally have so-called point seniority. It varies in some few instances where outlying points are under a point.

Q. To give an example, would that mean that a mechanic working in Denver could transfer to Salt Lake City for the same work?

A. It does not.

Q. In other words, he is restricted in his employment to a point, is that it?

A. That is right.

Q. Are you familiar, generally, with the volume of freight traffic that has been handled by the D&RG system?

A. Yes, sir.

Q. And does that familiarity extend over the period of your holding your present position?

A. Yes, sir.

Mr. Hill: May we have this exhibit identified?

Exam. Mullen: Number 56.

(Complainant Exhibit No. 56 marked for identification.)

By Mr. Hill:

Q. Mr. Warner, will you identify Exhibit No. 56 in this proceeding?

A. This is a statement of the average number of employees on the D&RG Railroad as taken from the monthly report of the company for the various groups, part of which I represent. I want to talk briefly about Group No. 4, which is the so-called Shop Groups. It generally reflects [fol. 1900] the employment situation in 1937 which was 3,212 employees in that group. For the various years to and including 1949, and I want to call your attention that gradually of course that employment situation increased up to the year of 1946, which then saw a considerable decline. I want to call your attention to one thing that occurred in 1947 that irrespective of that is not reflected in the figures here. The Denver and Rio Grande Western Railroad, and the Denver and Salt Lake Railroad merged and/or consolidated their services and facilities at Denver, and the employees that we took over from the Denver and Salt Lake were merged into the various seniority rosters of the Denver and Rio Grande and their total figures are reflected in this 1947 figure. Were it not for the fact that we had taken those employees over, of course, our figure for that year and the following years would have been considerably less than they are.

Q. Can you give the date of that consolidation?

A. It was in April of 1947.

Q. And can you tell approximately how many employees on the D&SL were merged with the other groups in the D&RGW?

A. There were somewhere in the neighborhood, I believe, of 75 employees of all classes.

Q. About how many in your class of Group 4?

A. Approximately 175.

[fol. 1901] Q. And would that additional force, added through the consolidation, be proportionately carried through in 1948 and 1949?

A. That is right. They are reflected in those figures. I might say in addition to that it reflects that at the present time in the group that we represent we must have something

in the neighborhood of a little better than a thousand employees furloughed on the Denver and Rio Grande.

Q. Now you're speaking of your group?

A. Of my group only.

Q. And those furloughed men would be proportionately over the entire system, would they, or not?

A. Yes.

Q. Are you acquainted with the skills of the men represented by you, the crafts represented by you here?

A. Yes, sir.

Q. Can you, in your opinion, state whether or not these men would have the capacity so far as their employment was concerned to handle any additional traffic which might be derived through this diversion, were it effected?

A. I'm sure those we have furloughed and those we have employed could take care of any additional business we might secure from any source.

Q. Have you any examples or illustrations of taking care of additional business which might be commensurate, not necessarily commensurate, but illustrative as to the point. [fol. 1902] Exam. Mullen: You mean as to skill? Technical skills?

Mr. Hill: Yes.

Exam. Mullen: I think that will be admitted.

Mr. Hill: I see. All right.

By Mr. Hill:

Q. Now, were you present here yesterday during the testimony of the witness Oliver?

A. I was.

Q. Calling your attention to his Exhibit 45, page 8, have you any knowledge of any circumstances existing as of January 1, 1950, which might reflect on the integrity of those figures as indicating a general circumstance?

Mr. Greene: I think that could be answered yes or no.

The Witness: I can say yes, in this respect, that it seems to me this exhibit and others probably tend to reflect certain figures that without understanding the background of what occurred at those points doesn't mean anything. For instance, it shows that in the mechanical department, the

group which I represent, there were five employees where claims for compensation were filed with the Compensation Board. That doesn't seem excessive to me for a railroad of this size. I think at that time, with the small railroad we had, there were many, many more than that for a while. In addition to that, Mr. Oliver didn't say, but I'm sure he didn't make a breakdown of the figures of the Retirement Board, it is customary when employees retire under the Railroad Retirement Act they will take their sickness and [fol. 1903] unemployment benefits for a period of time before they are retired, and that might be reflected, I presume it is, in these figures.

By Mr. Hill:

Q. Is there any other circumstance existing in January 1, 1950, which might make these figures erroneous in the picture here?

A. Well, yes. At that time, the country, everyone knows, was in quite distress over the coal mining situation, and unemployment was general throughout the country. The steel organizations were having difficulties with their managements, and I think business in general was in trouble.

Q. Now, Mr. Warner, calling your attention now to Exhibit No. 52 by the Union Pacific employees, presented yesterday by Mr. Oliver, and particularly to the machinist, George Paulson, mentioned at the top of the page, mentioned on the first page of the exhibit, can you give possible explanations of the illustration here of 13½ years of service and being deprived—the inference being he would be deprived of a job by diversion here.

Mr. Greene: I am going to object to that, Mr. Examiner. I think it would be pure speculation and guess by this witness.

Exam. Mullen: Do you know anything about this particular man, Mr. Paulson, Mr. Witness?

The Witness: Not about this particular man, but I think I can point out instances.

Exam. Mullen: That question was directed to that par-
[fol. 1904] ticular person. Mr. Hill, this witness is not informed about that.

Mr. Hill: I might suggest apparently the witness yesterday wasn't either, but then I will reframe my question.

Exam. Mullen: Okay.

By Mr. Hill:

Q. Are there situations where a man with 13½ years' service may be the man first cut off on a seniority roster?

A. Yes, very definitely.

Q. How do those arise?

A. In the first place I want to say something about the word "service." "Service" does not necessarily mean seniority. Mr. Oliver has used the word service, and I presume he does mean seniority all the way through here, but a man could conceivably have 13½ years' service and only have six months' seniority which would place him on the bottom of the seniority roster. In addition to that it is not unusual for an employee to have 13½ years' service and be furloughed, if you understood the situations at that particular point. For instance, *may there* had been a lot of employees hired under him during the 13½ years, but recently they had a force reduction which would lay off practically all the men under him, and they didn't return to work, and as a result he would be on the bottom of the roster, or nearly so.

By Mr. Hill:

Q. Let me ask you this: suppose the Union Pacific would transfer its mechanical department, or part of it, from one [fol. 1905] point on their line to another, what effect does that have on the seniority list and the right to service?

A. Now the employee——

Mr. Greene: Again, I am going to have to object unless the witness is qualified to show what the situation is on the Union Pacific.

Exam. Mullen: What is the purpose of this testimony?

Mr. Hill: The purpose is to show so many factors enter into the question of who is to be cut off and who isn't to be cut off, without going into each case there is no conclusion which can legitimately be drawn from the evidence.

Exam. Mullen: You seek to establish there are various causes which lead to men being let off?

Mr. Hill: Various causes.

Exam. Mullen: Furloughed?

Mr. Hill: Which are not reflected merely in the statement of service.

Exam. Mullen: I think Mr. Greene will concede that, won't you?

Mr. Greene: Yes.

Exam. Mullen: Mr. Greene will concede that. That is conceded.

By Mr. Hill:

Q. Then will you state in your opinion what the effect would be on the present Union Pacific employees' jobs in your craft of the diversion if it were accomplished through this proceeding?

[fol. 1906] A. I seriously doubt if there would be any adverse effect.

Q. Why do you say that?

A. Well, for the simple reason that I'm sure the Rio Grande would aggressively put solicitors in that district that might secure additional business for even the Union Pacific that has been going by other means of transportation; or they might induce industry to locate along either one of the two properties with outlets in the other district that would increase business. Healthy competition is good, I think; for any industry.

Mr. Hill: You may inquire.

Cross-examination.

By Mr. Greene:

Q. Mr. Warner, if a Union Pacific man were furloughed because of the diversion of traffic to the D&RG, and sought employment in one of your crafts with the D&RG, where would he go on your seniority list?

A. As any new employee, on the bottom of the roster.

Q. So that in the case of any U. P. man in the shop crafts who might be displaced, there would be a thousand D&RG furloughed employees who would have priority in those crafts before a U. P. man could get a job on the D&RG?

A. System-wide that is true.

Q. Now calling your attention to Exhibit No. 56——

A. Mr. Greene, I didn't get all of the exhibits of Mr. Oliver's yesterday.

Q. This is your exhibit.

A. I see. Pardon me.

[fol. 1907] Q. Now can you explain why, in 1938, there was a reduction in the shop crafts of almost 900 people?

A. I think so, there was a general retrenchment in 1937 and 1938 which brought about a reduction in maintenance of equipment on all railroads.

Q. As a matter of fact, the reduction only shows in two classes. One is maintenance of way, and the other is maintenance of equipment.

A. That is right. It didn't reflect in the transportation, probably, but they had gotten their equipment up in shape and the forces were reduced.

Q. Isn't it a fact the cause, in 1938, of that reduction, was because the D&RG converted to diesel-operated equipment?

A. No, sir, we didn't get diesels until long after that.

Q. Then would it be your statement this reduction in 1938 is nothing more than a normal fluctuation in the shop crafts on the D&RG?

A. It's not any more unusual on the D&RG than any other railroad in the United States.

Q. I say it is nothing more than the normal fluctuation in the shop crafts between 1937 and 1938?

A. I don't think it is normal. I think the figures bear that out, it is not normal. At least over the last ten years it has not been normal.

Q. Let's put it this way. It happened in the ordinary [fol. 1908] course of business. There wasn't anything unusual that happened at that time that caused this particular reduction?

A. Yes, there was.

Q. What was it?

A. The maintenance of equipment departments had concluded a considerably large building program that was temporarily discontinued until they could get some more started. I think that was the reason for it.

Q. Doesn't that occur regularly on the D&RG?

A. Not regularly, no. It occurs on any railroad, occasionally.

Q. Now when did the conversion to diesel equipment take place on the D&RG?

A. I can't give you the exact dates. Approximately, I think, about 1942 or 1943.

Q. Well, was that reflected by a reduction in the number of men employed in the shop crafts?

A. No, I don't think we had any reductions.

Q. For instance, the elimination of boiler makers, and things of that kind?

A. Sir?

Q. The elimination of boiler makers, boiler apprentices, boiler washers?

A. Not at the outset, because at that time we were in the war period, and we were still using our steam locomotives to the extent that we needed that particular class of employee.

[fol. 1909] Q. Then I take it these thousand employees that you say are now furloughed in the shop craft represent men who had been furloughed because when you quite using the steam equipment, when the drop in traffic came after the war, that you no longer had any use for the boiler men and apprentices that you had when you were using the steam equipment?

A. Some of it of course is due to that fact.

Q. Now, of course you have no information as to the cause of the compensation claims shown on Mr. Oliver's Exhibit 45, page 9.

A. You say I have no knowledge?

Q. You have no actual knowledge?

A. I have never secured these figures from the Retirement Board, no, sir.

Q. Do you have any similar figures for employees of the D&RG?

A. No, sir.

Q. Now, are you familiar with the petition and intervention filed by the employees of the D&RG?

A. Yes, sir.

Q. I assume you signed that petition, did you not?

A. Yes, sir.

Q. Do you recall the statement in that petition that the D&RG employees felt that the shippers should have the right to determine which route that they use?

A. Very definitely.

[fol. 1910] Q. Now, is any of your shop craft shippers?

A. Sir?

Q. Are any of your shop craft men shippers over the D&RG?

A. I wouldn't know that.

Q. I see. Well, has any shipper requested your union to intervene in this proceeding?

A. I don't think that is true of any union appearing here.

Q. All right, then, if you feel that the shippers are the ones that should determine whether this gateway should be opened, I'm wondering what interest your union has in the matter?

A. I would be glad to explain that to you, Mr. Greene. I think we are very much interested in a good old American principle, that free enterprise——

Q. I'm talking about the shippers, Mr. Warner.

A. You asked me what my interest was.

Q. I asked you what your interest was, if you say the shippers are the ones who should have the right to determine if the gateway should be opened.

Mr. Quirk: Mr. Examiner, I suggest since there is a statutory right given the shippers to route traffic no purpose is being served by this sort of questioning.

Exam. Mullen: Well, it is to test, I suppose, the interests of the D&RG Union in this traffic.

The Witness: I believe that is what he asked me, Your Honor.

[fol. 1911] Mr. Greene: That is correct.

The Witness: That is what I was trying to state.

Exam. Mullen: The question is now directed as to interest of shippers, *ro* what extent are you informed on that?

The Witness: I have no information at all from the shippers.

By Mr. Greepe:

Q. You are not speaking for any shipper in this proceeding?

A. I don't purport to speak for any shipper.

Q. Do you find on the D&RG, as traffic fluctuates generally, the employment in the shop craft fluctuates, is that correct?

A. I worked on three railroads, and I find that is true on all of them.

Q. Yes. Then would you expect, Mr. Warner, that if there is an increase in traffic on the D&RG, by diversion from the Union Pacific, that would cause an increase in the D&RG employment in the shop crafts, that that would cause a reduction in employment in the shop crafts on the Union Pacific which is presently handling that traffic?

A. I think that is true of any railroad.

Q. Then I take it that your position here is that you are hoping to assist in correcting the present unemployment situation in the shop crafts of the D&RG at the expense of the shop crafts of the Union Pacific, is that true?

A. That isn't it at all. We hope to break down an artificial rate discrimination that we believe discriminates [fol. 1912] against us to the benefit of another career, and we hope thereby to be able to get solicitors in that territory which will not only increase the business of the Union Pacific, but that of the Rio Grande as well.

Q. Well, the effect of it, however, will be that if you increase employment in the shop crafts on the D&RG, to reduce the employment in the shop crafts on the Union Pacific would it not?

A. I don't think that is true at all.

Q. Why not?

A. I think we will be able to secure enough additional business in there from other sources, as I said at the outset, to offset any diversion of traffic that we may be able to secure.

Q. Well, from what other sources do you expect to procure this traffic?

A. There must be a lot of other methods of transportation in the northwest territory there.

Q. That is available to you now, is it not? The opening of the gateway won't affect that traffic?

A. That is available to the Union Pacific, but if we can induce the shippers to ship over the Union Pacific, via the Rio Grande, I think both roads would benefit.

Q. Do you mean to make the statement then, that if there is a diversion from the Union Pacific, so that employment is increased in the shop crafts on the D&RG that there will be no effect on the shop crafts of the Union Pacific?

[fol. 1913] A. If the forces on the D&RG are increased only because of a diversion, then I assume there would be some loss of employment; but not nearly to the extent that witnesses have indicated.

Q. Yes. Now, you have read Mr. Farl-y's testimony at Salt Lake City, have you not?

A. I have not.

Q. We will assume for purposes that he estimated a traffic potential of 157,000 cars of traffic that is presently handled by the Union Pacific would open to solicitation for diversion to the D&RG, to the extent that there would be any diversion of that traffic then there would be a loss to the Union Pacific employees, wouldn't there?

A. In the first place, I understand, and I have not read the testimony, but I understand the figure of 157,000 represented the very maximum. In the second place, a reduction in traffic on the Union Pacific, as any other road, would probably be met with a reduction in force.

Q. Now; did you hear Mr. Oliver's testimony yesterday?

A. Yes, sir.

Q. Have you seen a copy of his Exhibit No. 53?

A. Mr. Greene, I got a few of those yesterday, but I gathered up some more around here, and they all aren't numbered.

Q. The exhibit I have reference to is where he showed what he called excess cost of transporting traffic via the D&RG as compared to the Union Pacific.

[fol. 1914] Mr. Quirk: I object to that. This man has not testified about costs.

Exam. Mullen: That is true, but I have not heard the question yet.

By Mr. Greene:

Q. I asked whether he was familiar with the exhibit.

A. I am not.

Q. You heard him testify that the cost of transporting this traffic potential, would result in some $19,000,000 excessive cost if transported via the Union Pacific?

A. I believe I heard those figures.

Q. And he also testified that if that cost were available for employee pay, that it would pay all operating employees of railroads in the United States five days' holidays with pay, did you hear that testimony?

A. I heard that.

Q. Now, would you prefer, Mr. Warner, to have that $19,000,000 spent for transportation costs, or would you prefer to have it available for distribution to the employees of the D&RG for holidays with pay?

Mr. Hill: I object to that. It is wholly immaterial and has no bearing on this case at all.

Exam. Mullen: It strikes me as being immaterial as far as this witness is concerned.

The Witness: I might say this, I didn't know he was [fol. 1915] negotiating with the company. If that is an offer, we will consider it.

Mr. Greene: Did you rule he could answer the question, Mr. Examiner?

Exam. Mullen: He may, if he desires.

The Witness: What was the question?

Mr. Greene: I asked whether you would prefer to have that $19,000,000 spent for transportation costs of this traffic via the D&RG, or whether you would prefer to have it available for distribution of pay to operating employees for holidays with pay?

The Witness: Can you assure me that it will be used for that purpose if I would prefer——

By Mr. Greene:

Q. Could you answer my question?

A. I have no idea on the question at all.

Mr. Greene: That is all.

Mr. Hill: That is all.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Mr. Hill: I call Mr. McDonald.

R. H. McDonald was sworn and testified as follows:

Mr. Hill: May I ask that Exhibit 56 be admitted into evidence?

Exam: Mullen: *If there is no objection* it will be received in evidence. It is received in evidence.

(Exhibit No. 56 Witness Warner, received in evidence.)

[fol. 1916] Direct examination.

By Mr. Hill:

Q. State your name, please.

A. R. H. McDonald.

Q. What is your residence, Mr. McDonald?

A. Denver, Colorado.

Q. What is your present position, and how long have you occupied it?

A. I'm Chairman of the General Grievance Committee of the Brotherhood of Railroad Trainmen on the Denver and Rio Grande Western's System. I have held that office for the past eight years.

Q. Do the duties of that position require you to be familar, and are you familiar with the D&RG system?

A. Yes, sir.

Q. And are you acquainted in general with the Union Pacific's system and its location of its rails and areas served?

A. Generally, yes.

Q. Are you acquainted with the services performed on the D&RG system by the employees represented by your committee?

A. Yes, sir.

Mr. Hill: May this exhibit be identified?

Exam. Mullen: Number 57.

(Exhibit No. 57, Witness McDonald, marked for identification.)

By Mr. Hill:

Q. Mr. McDonald, will you identify Exhibit No. 57, which I have just handed you?

[fol. 1917] A. This exhibit shows the brakemen as shown on the seniority list of what is known as the Utah Lines Seniority District List, which covers the territory Grande Junction to Ogden, and branches.

By Mr. Hill:

Q. What does the figure 59, at the bottom of the exhibit represent?

A. That represents men on this seniority district that are furloughed as of April 1, 1950.

Q. Are the brakemen represented by you promoted to conductor on the D&RG system?

A. Yes, sir.

Q. Do you know how many conductors were back serving as brakemen at the time these 59 were cut off?

A. In fact, all men on the Utah Lines that braking now are promoted men, and are eligible for work as conductors.

Q. What does that mean in terms of number of men who might be conductors who are back firing at the time these 59 brakemen were cut off?

A. I didn't get your question, it made reference to firemen?

Exam. Mullen: You said firemen, do you mean brakemen?

Mr. Hill: Excuse me, yes.

By Mr. Hill:

Q. How many conductors would be back braking at the time these 59 brakemen are cut off? If you don't know——

A. On this district there would be approximately 40.

Q. Now were you familiar, Mr. McDonald, with the han-

[fol. 1918] dling of traffic on the D&RGW during the storm in December, 1948, January and February of 1949, which cut off the service on the main line of the Union Pacific through Wyoming?

A. Yes, sir.

Q. Were you also familiar with the traffic handled by the D&RGW during the war years when the Ogden Gateway was partially opened?

A. Yes, sir.

Q. What effect did the partially opening of the Ogden Gateway during the war years have on the employment of brakemen on the D&RGW?

Mr. Collins: Mr. Examiner, I would like to make a correction for the record in that respect. There was no opening of the Ogden Gateway during the war periods. Traffic might have been routed, but it was not an opening in the tariff sense, and this record shows it.

Exam. Mullen: Do you accept that statement?

Mr. Hill: I don't challenge that statement. I don't know.

Mr. Quirk: I do challenge it. That is a matter of argument in this case. The route is there, it is open today, the only thing that is lacking is non-discriminatory rates.

Mr. Collins: There were no changes in tariff publications. The rates were just the same as they are now.

Mr. Hill: I had no idea of challenging that question, or bring it into the question. The point I wanted to make——

[fol. 1919] Exam. Mullen: Then rephrase your question.

Mr. Hill: I will rephrase it, Mr. Examiner.

By Mr. Hill:

Q. Are you familiar with the fact that cars were diverted or operated through the Ogden Gateway during the war years on direction of Kirk, I believe it was, for the railroads?

A. There were cars handled through the Gateway, transferred from the Rio Grande to the Union Pacific, and vice versa during that time, yes.

Q. And what effect did the diversion which did occur, or the transfer through that gateway, have on the number of brakemen employed on the D&RG?

A. To some extent it required——

Exam. Mullen: Just a moment, isn't that covered by Exhibit 56?

Mr. Hill: Not the extent of it.

Exam. Mullen: You have the numbers there?

Mr. Hill: You have the total number, but the point I seek to bring out is not in the exhibit at all.

Exam. Mullen: All right, go ahead.

The Witness: It required the carrier to press in service additional brakemen to handle this business during that period of time, which increased the list of working brakemen on our seniority rosters.

Exam. Mullen: That is because you had an increase in [fol. 1920] traffic, wasn't it?

The Witness: Increased traffic through a source that we had not had advantage of before.

By Mr. Hill:

Q. Will you state, Mr. McDonald, why the people you represent are interested in this proceeding and what their interest is?

A. We are interested in this proceeding primarily in the principle involved, and we might state here it isn't our interest here to try to deprive the Union Pacific employees of work or any such matter, but there is a principle involved here of free enterprise and competition. Now the men that hire out on the Denver and Rio Grande Western Railroad, and that were hired during the emergency periods, feel that they have a right to share in the progress of this western country, and that is they feel they are being discriminated against by a fictitious rate here that discriminates against the Denver and Rio Grande Western Railroad insofar as obtaining the free flow of traffic between the two lines. We also are interested because we think this is bad for the railroad industry, and we think such things as this are the things that are driving traffic off the railroads and causing unemployment not only on our lines, but on other lines. Furthermore, it works to reduce the morale of the men on the Denver and Rio Grande Western for the reason that they feel that there is no future for them to expand, and it is natural that every man wants to progress, and he is look- [fol. 1921] ing forward, if he does a good job, he thinks by giving good service that will contribute to the carrier getting additional business, and when he realizes that the carrier cannot compete for this business, it isn't much of an incen-

tive for that man to go out and try to improve the service and do a better job to which he is assigned. I think we have an interest in this, not only as employees, but as public citizens. We believe in free enterprise, and we feel in this case the Rio Grande Western Railroad is practically the only railroad that is being discriminated against, that there are competitive rates established with other railroads, but not with the Denver and Rio Grande Western through the Ogden Gateway, although they do have through rates, as I understand, established from the Union Pacific Southwestern Lines to the Denver and Rio Grande Western at Salt Lake.

Mr. Hill: You may inquire.

Cross-examination.

By Mr. Greene:

Q. Mr. McDonald, is that right?

A. That is correct.

Q. Are you familiar with this exhibit No. 56 prepared by Mr. Warner?

A. To a certain extent, yes.

Q. Would you say the fluctuation in the number of trainmen employed, as shown in that exhibit, is about a normal fluctuation, considering the economic conditions during those years?

[fol. 1922] A. I believe it is.

Q. You don't recall anything unusual occurring that has caused an unusual displacement of men or unusual employment of men during that period?

A. Well, there was some employment of men there that was directly involved by the emergency condition of having to route certain traffic through the Ogden Gateway, and then there is a reduction there that is also reflected when this business ceased to be routed through that gateway.

Q. Now as I understand it, you are not here with the idea of trying to deprive any Union Pacific employes of their jobs?

A. That is not our purpose here.

Q. But you are willing for the principle that you mentioned, you are willing to see that traffic is diverted from

the Union Pacific to the D&RG, are you not? That is your purpose for being here?

A. We are willing to see that our railroad, which should have the right, is conceded the right to solicit business in competition with any other railroad.

Q. You do agree, do you not, that if you do divert any substantial amount of tonnage from the Union Pacific to the D&RG, so that there is an increase in the employment in your brotherhood, that it will result in a decrease in Union Pacific employees' employment?

[fol. 1923] A. Not necessarily.

Q. Why not, Mr. McDonald?

A. Because we learn competition is something which is essential in all industries, and if there is competition between the Denver and Rio Grande Western Railroad and the Union Pacific Railroad they will move this traffic and maybe some of these trains will be cut down so they can get over the road in less time, and it won't be necessary to make a reduction in the employment of these men.

Q. On the D&RG you find that the number of your employees usually varies with the volume of traffic transported, doesn't it?

A. The employees we represent work only when there is traffic to be moved.

Q. Yes. And that same situation would apply to the Union Pacific, wouldn't it?

A. That is correct.

Q. Then do you believe that the Union Pacific would be charitable enough to employ men in your craft when there is no traffic for them to handle?

A. We feel there will be traffic there for them to handle. We have not heard any testimony here to the contrary. We have heard considerable assumption, but there is no positive testimony here, that I have heard, to that effect.

Q. I take it it is your hope, however, that if the D&RG is [fol. 1924] successful in this case that some of these 59 men that you say were cut off as of April 1 on your Exhibit 57 will be able to go back to work?

A. We hope that they have the opportunity to get back to work through competition with these other railroads which we feel they should have.

Q. Through getting additional traffic, so there will be work for them to do?

A. Yes, additional traffic might come from traffic solicited by the Rio Grande Railroad on other railroads that would be delivered to the Union Pacific, and vice versa.

Q. Was there any particular cause for these 59 men to be laid off as of April 1, or is that just a normal decline in traffic?

A. This year there was a normal decline in traffic, about this time of the year, which caused this reduction, the falling off of the coal business, and stuff like that.

Q. Does that occur generally every year about this time of the year?

A. It occurred last year and this year, although last year, through the misfortune of the Union Pacific, when business was falling off, we did have a diversion of traffic as a result of the Union Pacific being tied up, which employed many of these men over a short period, and it carried on for several months after.

[fol. 1925] Q. I was wondering why on Exhibit No. 57 you show only the 59 cut-off as of the year 1950, and don't show the number cut off in the other ten years that you have on exhibit? Was there any particular reason why you picked out 1950 to show this layoff?

A. No, only that that is the current year, and those figures were available.

Q. Do you have them available for any of the other years?

A. Not at the present time.

Q. How long have you been employed by the D&RGW?

A. Thirty-three years.

Q. During that period of time, how many emergencies have you had such as occurred in the winter of 1948-1949?

A. We have had several emergencies. They didn't always involved the Union Pacific. They involved the Santa Fe on several occasions.

Q. How many have you had that involved the Union Pacific?

A. The one is all that I have any knowledge at the present.

Mr. Greene: That is all.

Redirect examination.

By Mr. Hill:

Q. Mr. McDonald, is there any situation in the Salt Lake division which causes an increased employment of brakemen during the last say three years?

A. I don't know about the last three years, but of course there has been an increase of work over there as a result of [fol. 1926] new industries and things that have been established during that time.

Q. What new industry was established over there of major importance?

A. The Geneva Steel plant.

Q. When did that come into the picture, when was that established? About what year?

A. I think about 1944.

Q. Does that plant require the employment of additional brakemen to take care of its transportation requirements?

A. Yes, the handling of coal from Columbia Junction to Geneva has created additional service for brakemen on that district.

Q. Would you have any idea to what extent it created such a demand?

A. Yes, it is considerable. I would say that it would involve maybe twenty men.

Mr. Hill: That is all.

Mr. Greene: May I ask one or two more questions, Mr. Examiner?

Exam. Mullen: Based on the redirect? You will have to limit it now.

Mr. Greene: Very well, I refrain.

Exam. Mullen: That is all. Thank you.

(Witness excused.)

Mr. Hill: That is all we have. May I have this Exhibit 57 [fol. 1927] admitted into evidence?

Mr. Greene: I have no objection.

Exam. Mullen: It will be received in evidence.

(Exhibit No. 57, Witness McDonald, received in evidence.)

Mr. Gray: Mr. Examiner, I am Norman Gray and I have two witnesses that I would like to call on behalf of the Intervenor, State Board of Equalization and Public Service Commission of the State of Wyoming.

Exam. Mullen: All right, sir.

Mr. Gray: I call Mr. Hudson.

Exam. Mullen: Mr. Hudson.

WALTER W. HUDSON was sworn and testified as follows:

Exam. Mullen: Off the record a moment.

(Discussion off the record.)

Exam. Mullen: On the record. All right, Mr. Gray.

By Mr. Gray:

Q. Will you state your name, please?

A. Walter Hudson.

Q. Where do you reside, Mr. Hudson?

A. At the present time I reside in Cheyenne, Wyoming.

Q. Do you hold any official position with the State of Wyoming?

A. I'm a member of the Board of Equalization of the Public Service Commission.

Q. How long have you held that position, Mr. Hudson?

[fol. 1928] A. Since March 1, 1949.

Q. In your work with the Public Service Commission of the State of Wyoming, do you have some function to perform with relation to railroads in the State of Wyoming?

A. Yes, we have the authority to tax the trackage, and have charge of transportation.

Q. And you have the powers of regulation over those railroads?

A. Yes, we do.

Q. Now, prior to your assuming your present position, Mr. Hudson, where did you reside?

A. I resided in Goshen County. I was a farmer and livestock raiser.

Q. How long did you reside there?

A. Thirty years.

Q. How large is that trade area in Goshen County, Mr. Hudson?

A. Goshen County is a very highly productive farming area, there is a good deal of irregation over there.

Q. About what is the approximate population, do you know?

A. A little over 12,000 people.

Q. Is that served by the Union Pacific?

A. Partly.

Q. While you were residing there, Mr. Hudson, did you have any occasion to represent your county in the state legislature?

A. Yes, I represented Goshen County from 1937 to 1947.

Q. 1947 was your last term?

[fol. 1929] A. From 1945 to 1947 was my last term.

Q. You were Speaker of the House at that time?

A. I was.

Q. From those functions, Mr. Hudson, do you feel that you have acquired some knowledge of the railroad situation in the State of Wyoming, and the economy of the State of Wyoming?

A. Anybody serving that long in the state legislature would require some knowledge of the state government and things that go to make it up.

Q. And has the Public Service Commission of the state of Wyoming Mr. Hudson, given some thought and consideration to the complaint filed herein?

A. It has.

Q. And have you, as a result of that study and thought, prepared a statement to present to the Examiner here?

A. Yes, I have.

Mr. Gray: If the Examiner please, in the interest of saving time, I ask that the statement prepared by Mr. Hudson be made a part of the record as though having been read, and we will afford the opponents an opportunity to cross-examine if they so desire.

Exam. Mullen: Any objection to that procedure?

Mr. Quirk: I have no objection to the statement being put in the record without being read, but I would like to ask the witness one or two questions.

[fol. 1930] Exam. Mullen: Certainly. It will be copied in the record, then.

The Witness: My name is Walter W. Hudson. I am a member of the State Board of Equalization and Public Service Commission of Wyoming, located in the State Library and Supreme Court Building, Cheyenne, Wyoming. I have been a member of that body since March 1, 1949. Prior to assuming that position I was engaged in the business of farming and livestock raising in the Goshen County area of Wyoming. I have also been a member of the Wyoming House of Representatives serving as Speaker of that body in 1945.

The State Board of Equalization has general supervisory authority with respect to assessment of taxable property, taxation, and equalization of taxes throughout the State of Wyoming, and has specific authority to assess for taxation the trackage and other facilities of railroads within the state.

The Public Service Commission of Wyoming is an administrative body created by the State Legislature in April, 1915, with regulatory powers and duty relating to all methods of transportation and other public utilities, including the adequacy and sufficiency of facilities thereof, and with authority to appear before the Interstate Commerce Commission on any matter relating to interstate transportation that involves the state of Wyoming.

The State Board of Equalization consists of three mem-
[fol. 1931] bers including the chairman, and those members are Ex-officio members of the Public Service Commission.

The Wyoming Commission is of the opinion that the result sought by the Complainant in this proceeding, the diversion to its lines of traffic that originate, or terminates on the Union Pacific Railroad in Idaho and the northwestern territory, will deprive the Union Pacific, in serving such areas, the long haul via its established lines. Mr. T. K. Early, a witness for the Complainant, testified at Salt Lake City that the potential traffic in Idaho and the northwest territory amounts to at least 157,762 cars per year. The Commission assumes therefore, the Denver and Rio Grande Western desires to divert a substantial amount of that traffic to its lines. This, in our opinion, will result in

a reduction of a number of trains per day across the state of Wyoming. Any reduction of trains operated and subsequent displacement of employees is a very serious matter to the state of Wyoming.

Wyoming is a sparsely settled state. The estimated population is now about 275,000. The total area is nearly 100,000 square miles. There are few large industries. The population of the southern tier of counties is as follows:

Albany County	18,000
Carbon County	17,000
Laramie County	46,000
Lincoln County	10,564
Sweetwater County	22,500

The Union Pacific with its affiliated interests, particularly [fol. 1932] mining, is one of the few. Anything which adversely affects the economy of the Union Pacific directly and markedly affects the economy of Wyoming, particularly the southern tier of counties. The current assessed valuation records of the Board of Equalization show for the Union Pacific and its subsidiaries a total of $69,292,583.00. The annual taxes paid total $2,264,957.00. The tax valuation in the counties the Union Pacific traverses is 30.06 per cent of the total of all valuations in those counties, and 12.18 per cent of the total tax valuations in the state.

The Commission is aware that a large percentage of the employees of the Union Pacific and its subsidiaries own their own homes within the state and pay taxes on those homes. It can readily be seen that any reduction in the valuation of, or of the taxes paid by, the Union Pacific and its subsidiaries, or displacement of empoloyees, might result in a direct additional tax burden upon other taxable property in the state.

It has been the policy of the Wyoming Commission to respect the rights of pioneering transportation agencies and other utilities so long as they provide safe, efficient, and adequate service. We hope such a principle will prevail in this proceeding.

The Union Pacific is a pioneer in the development of Wyoming. It has kept pace with progress and public need and has expended vast sums of money in constructing and

maintaining a very modern and highly efficient double track [fol. 1933] system to better enable it to serve the territory. As for example I refer to the recently opened second bore of the Aspen Tunnel located near Evanston, Wyoming, which completes a vital link in the double track system. This should be of great importance to our country, particularly in time of war.

We believe the Union Pacific had confidence that the traffic of the areas it has assisted in developing would be retained, otherwise it would not have made such investments. The future development of this railroad undoubtedly depends, in no small measure, upon the retention of such confidence. The development of the coal mining industry in Wyoming is due, in no small measure, to the Union Pacific. Wyoming is now one of the important coal areas of the world. The Union Pacific has developed and used the product of its mines in operating trains in Wyoming and, I presume, elsewhere.

While there have been objections to proposed abandonments of branch lines and closing of stations, as evidence of the satisfactory character of the service performed by the Union Pacific in Wyoming, so far as the records show there has been no complaints to the Commission with respect to service. Since the Commission has jurisdiction over sufficiency of service, the absence of complaints is significant.

The rail lines of the Union Pacific have been developed through Wyoming to meet the requirements of freight and passenger traffic, both interstate and intrastate. Most of [fol. 1934] the traffic is interstate. As an indication of the ability to handle the traffic in peace, or war, records on file with the Public Service Comm-ssion show that the total tonnage carried more than doubled during the war and is now decreasing. Had there been any substantial shortage of equipment or facilities in Wyoming during the war emergency we feel certain such information would have come to the attention of the Commission. From personal observation and information coming to the attention of the Commission I feel justified in stating that the Union Pacific satisfactorily met all reasonable requirements of the emergency war traffic.

It seems clear that the Union Pacific facilities in Wyoming are fully sufficient to handle any and all traffic presently available, and it is obvious that such facilities have been built in contemplation of traffic which it has developed. If such traffic is diverted to other lines the development will have become wasted effort.

The Union Pacific has two branch or subsidiary lines in Wyoming, the Laramie, North Park and Western Railroad, serving southeastern Wyoming and northeastern Colorado, and the Saratoga and Encampment Valley Railroad serving the Platte Valley in Carbon County, Wyoming, which would suffer by loss of rail service. Previous attempts have been made to abandon these lines. Abandonment would result in a serious loss to the areas served even though a limited [fol. 1935] amount of traffic is offered from those areas and the rail transportation facilities operate on a marginal basis at present. Loss of traffic by the Union Pacific may cause a renewal of such attempted abandonments.

Livestock, Petroleum, and Wool production are other main industries in Wyoming which would suffer inconvenience and delay by any reduction of trains as a result of diversion of traffic from the Pacific.

The State Board of Equalization and Public Service Commission of Wyoming realizes that convenience and necessity for all the people must be given full consideration, but in so doing so we trust that the Interstate Commerce Commission will seriously consider the effect upon Wyoming of the diversion of traffic from the Union Pacific and will further seriously consider the effect upon the service now being rendered by that railroad.

Cross-examination.

By Mr. Quirk:

Q. Mr. Hudson, there is no income tax in the state of Wyoming, is there?

A. There is not.

Q. The taxes you deal with are ad valorem taxes, I assume?

A. Ad valorem taxes and sales taxes.

Q. The sales tax doesn't apply to transportation charges, does it?

A. Not directly, no. Some things they buy it does.

Q. Now the statement that you have submitted here, which [fol. 1936] has been copied into the record, the assumptions made in there are based on facts given you by the Union Pacific, I assume, is that correct?

A. All railroads must file with the Public Service Commission yearly, and they are based upon those facts.

Q. Well, but your statement deals very largely with the assumption that if the complainant here should prevail in this proceeding, the interests of Wyoming will be adversely affected. You have based the statements made in that connection in information given you by the Union Pacific representatives, isn't that true?

A. We base the 157,762 cars upon a statement by Mr. T. K. Early, and I believe we state if a substantial amount of it is diverted.

Q. Well, Mr. Early merely gave an estimate of the potential maximum that might be reached. The exhibits in this case show the Union Pacific handled about one million and a half carloads. Of course some of the traffic wouldn't be affected by this case in any way. Now, you also mentioned four trains a day that would be eliminated. You of course got that from the Union Pacific, didn't you?

A. Yes.

Q. You have no personal knowledge——

A. No.

Q. —of these things, in other words?

[fol. 1937] A. No.

Mr. Quirk: That is all.

Exam. Mullen: That is all. Thank you, sir.

(Witness excused.)

Mr. Gray: I think that is all.

I call Mr. Williamson.

C. D. WILLIAMSON was sworn and testified as follows:

Direct examination.

By Mr. Gray:

Q. Will you state your name, please?

A. C. D. Williamson.

Q. Where do you reside, Mr. Williamson?

A. At Hanna, Wyoming.

Q. Where is Hanna, Wyoming?

A. Approximately 125 miles west of Cheyenne on the main line of the Union Pacific.

Q. And how long have you resided there?

A. Just two months less than forty-one years.

Q. What is your business or occupation?

A. I am President of the Wyoming Timber Company, which conducts logging and timbering operations in southern Wyoming. I'm also President of the Hanna State and Savings Bank, and have a few other business interests in that part of the state of lesser importance.

Q. Do you hold any official position with the State of Wyoming?

[fol. 1938] A. Yes, I am Chairman of the Wyoming Commerce and Industry Commission.

Q. How long have you been Chairman of that Commission?

A. Since it was recreated in 1947, March of 1947.

Q. Will you state briefly the function of that Commission?

A. As set forth by the legislative act creating it, it is used for the purpose of fostering industry in the state of Wyoming and developing new industries of all classes.

Q. That is your paramount function, is it not, Mr. Williamson?

A. Yes.

Q. The purpose is to create as much employment as possible in the state of Wyoming?

A. That is correct.

Q. Now, in those functions, Mr. Williamson, do you have occasion to get out over the state of Wyoming?

A. Yes. It becomes necessary for me to travel throughout the entire state of Wyoming, visit all of the communities,

make a study of their resources, and ambitions and their problems in a business way.

Q. Have you been doing that to a more or less extent since you occupied this official position with the state of Wyoming, Mr. Williamson?

A. Yes, I have covered every part of the state in that capacity in recent years.

Q. Have you recently had occasion, more fully and care-[fol. 1939] fully, to cover the state of Wyoming?

A. Yes, not, however, primarily because of my connection with the Wyoming Commerce and Industry Commission.

Q. What has brought that about, Mr. Williamson?

A. Well, to be stated briefly, I have announced my intention to run for the Governorship of this state.

Q. As a result of your contacts in traveling over the state of Wyoming, Mr. Williamson, do you feel that you have acquired familiarity with the economics of the state of Wyoming?

A. I do.

Q. Have you given some thought and study, Mr. Williamson, to the complaint filed here by the D&RGW Railroad?

A. Yes, I have given it considerable study.

Q. And in connection therewith, have you prepared a statement to be offered by you in this proceeding to the Examiner?

A. I have.

Mr. Gray: Mr. Examiner, without objection, I would like to have the statement of Mr. Williamson made a part of the record as though having been read.

Exam. Mullen: Any objection to that as a procedural matter?

Mr. Quirk: We have no objection to that, but I would like to ask the Governor a few questions.

Mr. Gray: You may.

The Witness: Thank you, you are early.

Exam. Mullen: You may copy it into the record.

[fol. 1940] The Witness: I appear here as a witness for the Wyoming Commerce and Industry Commission and in support of the Chambers of Commerce and other civic organizations of the State which have intervened, as well

as the Town of Hanna, the City of Rawlins and myself personally.

Hanna is a coal mining community with a population of approximately 1200. Practically all of the population is engaged in coal mining and railroad employment, the coal being primarily furnished to the Union Pacific Railroad for railroad operation. A few are employed in strip coal mining operations in the vicinity. The Union Pacific Coal Company employs about 350 miners at Hanna so that it can be readily seen that these miners with their families constitute almost the entire population of the town. I understand the payroll of these miners is about $1,125,000.00 annually, and the entire business of the community is dependent upon these coal mines, including the bank of which I am President.

It is my understanding that Denver & Rio Grande witnesses testified at Salt Lake that there will be over 157,000 cars of freight subject to their solicitation if they are successful in their complaint to the Commission in this proceeding.

The Union Pacific witnesses have testified that this number of freight cars, if diverted to the Rio Grande, would result in a decrease of four trains each way per day through Wyoming. They have also testified that this [fol. 1941] would result in the displacement of approximately 475 railroad employees in Wyoming, some of whom are located in the Rawlins-Hanna area. Union Pacific witnesses have also stated that the diversion of such an amount of traffic would result in a reduction of 268 employees of the Union Pacific Coal Company, because of the reduced amount of coal required to operate the remaining trains. This approaches the number of Union Pacific mine employees at Hanna and while I do not have any information to the effect that the Union Pacific is considering the closing of the Hanna mines should this traffic be lost, it appears to me that this might prove to be the case. Certainly it seems to me, as an outsider, that this might receive serious consideration because of the simplified supervision which would be possible if its operations were concentrated in its other producing mines. In any event the effect of such a reduction of coal mine employees is forcefully illustrated by what would be the effect if the mines at

Hanna were closed. Briefly and generally stated that effect would be to wipe out an entire community in this sparsely settled area, create another "ghost town", and force the liquidation of our bank and a number of other local businesses dependent upon the coal mine operations there.

It must not be overlooked that the coal mining industry is of great importance to the State of Wyoming. The State has very large bituminous coal reserves—in fact I [fol. 1942] have been informed by competent authorities that they are some of the greatest in the world. Many of the most important coal mining areas are located on the line of the Union Pacific at Kemmerer, Rock Springs, and Hanna. It is a well known fact that the coal industry has suffered in recent years from various conditions adverse to it. Among such conditions are competitive use of natural gas, oil and, of course, labor conditions. Anything which threatens further reduction of coal production and coal use in the state of Wyoming is of the utmost interest to this state. The state must do everything possible to encourage the use of coal and discourage its reduction in use. The importance of reduction in coal use to such communities at Rock Springs and Hanna is of even greater importance than to the rest of the state. The Union Pacific Railroad has cooperated with the coal mining industry of Wyoming by using coal in its operations to the greatest extent possible—not only from its own mines but from independent producers as well.

The Wyoming Commerce and Industry Commission is devoted to bring new industries into the State of Wyoming. It is recognized that it is equally important to retain industries already existing in the state. Ours is a sparsely settled state, with an estimated population of 275,000 people spread over an area of about 97,000 square miles. Carbon County—a large county—has a population of ap- [fol. 1943] proximately 17,000. There are few large industries in the State and the Union Pacific is possibly the largest. It has been in Wyoming from the earliest days of the State, has been—and is—a growing and sustaining one and is regarded as the largest single factor in the development of the state from its wilderness beginning.

The Union Pacific and the communities along its line in

Wyoming have had a mutual and interdependent development. The communities have grown to sustain the needs of the railroad and its coal mining facilities and they in turn owe their prosperity and growth in large part to the existence of the railroad. This course of mutual growth has extended to all phases of community activity. Businesses have developed in these communities in a very real sense to support the Union Pacific and its employees. Likewise all of the municipal and public utilities services which are required by these communities have grown along with the railroad. Debts have been created in the form of bonds and otherwise; houses and business structures have been built. The values of lands and improvements have increased. Along with this development has necessarily gone the building of a tax structure to support the governments of the State, counties and cities.

There is an obvious and necessary relation between the development of such an important industry as the Union Pacific and the communities along it which have grown up in its support. This is particularly true where, as in the [fol. 1944] community in which I live, the Union Pacific is practically the only industry.

In the work of the Commerce and Industry Commission I have been impressed with the fact that cooperation between communities and industries located therein is a vital element in securing and holding industries in the state. To obtain such cooperation it is necessary that the community should have some assurance of the continuance of the industry. Otherwise the community and its inhabitants will not be encouraged to do the things which are necessary to support the industry. If the communities along a railroad, particularly in sparsely settled areas like the state of Wyoming, are to be deprived of the fruits of their efforts in building up communities and business activities in support of the railroad, they will lack the necessary incentive for such efforts. If the Wyoming communities involved here are to be deprived of the fruits of their efforts in building up communities and business activities in support of the railroad, they will lack the necessary incentive for such efforts. If the Wyoming communities involved here are to be deprived of the benefits of their efforts by the

diversion of traffic from the Union Pacific as proposed in this proceeding, and the resultant decrease in employment and business activity, it would certainly indicate that other communities on other railroads will be discouraged from making similar efforts. This is contrary to public interest. Rawlins is a market center for Carbon County and [fol. 1945] for people living in Hanna. I have business dealings of various kinds in Rawlins. My understanding from testimony of Union Pacific witnesses in this proceeding is that as many as fifty employees of the railroad located at Rawlins earning as much as $260,000.00 a year may be affected by such diversion of traffic. Rawlins is primarily and essentially a Union Pacific railroad community and anything which affects railroad employment there in a substantial way is a serious matter for the city, just as it is in all of the communities along the line of the Union Pacific in Wyoming. The population of Rawlins is approximately 8,500.

One of the matters which is unquestionably involved in a proceeding of this kind is whether the Union Pacific is doing a good transportation job. I am in a position to know the quality of its service, and I know that its freight and passenger services in and through Wyoming are both of the highest quality. Mrs. Williamson and I do considerable cross-country traveling and recently took a trip to the eastern part of the United States during which we could not help comparing the quality of passenger service on the Union Pacific with that on other railroads. While comparisons sometimes may be odious, I can readily say that we found no better passenger service anywhere. From long experience I am familiar with the high quality of Union Pacific livestock service to shippers in Wyoming. [fol. 1946] I wish to protest the granting of the relief sought by the complainant herein for the reasons I have stated including the following:

1. The Union Pacific Railroad is handling the traffic which would be diverted from its lines through Wyoming efficiently and well.

2. Such diversion would displace employees of the Union Pacific and its coal mines who have become rooted in Wyoming communities.

3. Such diversion would adversely affect the coal mining industry, which is of great importance to the State of Wyoming.

4. Such diversion would adversely affect the communities along the line of the Union Pacific and the business interests therein which have been built up in cooperation with, and in support of the railroad and its mining interests, contrary to the public interest.

5. Such diversion would similarly adversely affect the town of Hanna and the City of Rawlins in Carbon County.

Cross-examination.

By Mr. Quirk:

Q. Now you show considerable concern here about the effect that the diversion of traffic from the Union Pacific to the Denver and Rio Grande might have on the coal properties. Isn't it a fact, Mr. Williamson, that the dieselization of the Union Pacific, of the power of the Union Pacific, has had more effect on the coal properties over here than any [fol. 1947] diversion of traffic could possibly have that would occur as a result of this case?

A. I believe not, because the dieselization of the Union Pacific is far from a complete conversion.

Q. I know, but Mr. Stoddard recently announced apropos of the lingering coal strike and its adverse effect, he was going to run the railroad, and he was going to bring about complete dieselization if that was necessary.

A. If Mr. Stoddard made that statement he also made the statement more recently that insofar as possible he was going to operate steam power on all freight traffic moving from Green River to Council Bluffs, and from Green River to Kansas City.

Q. Mr. Williamson, the statements that you make in this statement that has been allowed to be copied into the record, as to the possible adverse effect are based upon this proposition, are they not? First, that there will be, that all of the potentially available traffic move via the Rio Grande, and second, on such other information as the Union Pacific representatives have given you, isn't that true?

A. That is essentially correct, yes. I have used the maximum potential.

Q. Thank you very much.

A. Which witnesses of the Rio Grande have set forth.

Mr. Quirk: That is all.

Mr. Gray: That is all. Thank you, Mr. Williamson.

[fol. 1948] (Witness excused.)

Mr. Gray: That is all I have, Mr. Examiner.

Exam. Mullen: We will take a recess for ten minutes.

(Short recess taken.)

Exam. Mullen: We are ready, Mr. Greene.

Mr. Greene: Mr. Examiner, I have present in the hearing room ten additional witnesses who have prepared statements, and there are two witnesses who are available but who are not present. I understand from Counsel that they are agreeable that the ten who are present can be sworn at once and their statements submitted as verified statements.

Exam. Mullen: All right, sir, will you call them, please?

Mr. Greene: Mr. Hollingsworth, Mr. Pence, Mr. Marble, Mr. Anselmi, Mr. Rogers, Mr. Walther, Mr. Lathrop, Mr. Sorenson, Mr. Hoffman, and Mr. Crippa, will come forward.

Exam. Mullen: We will save time, gentlemen, if we swear you all together.

(The above-mentioned witnesses were sworn.)

Exam. Mullen: I understand you all have prepared statements and they will be submitted as verified statements in the record.

Mr. Greene: Mr. Examiner, attached——

Exam. Mullen: That will be all, thank you.

Mr. Greene: Attached to Mr. Walther's statement is an exhibit which I would like to have given a number.

Mr. Quirk: Just a moment. I don't know what is going [fol. 1949] on here. I do want to ask Mr. Hollingsworth a few questions.

Exam. Mullen: We will now mark the statements with

numbers. If you will call off the names, I will assign a number.

Mr. Greene: Mr. Hollingsworth will be the first one.

Exam. Mullen: That will be Verified Statement No. 65.

(Verified Statement No. 65 received in the record.)

Mr. Greene: Mr. Pence.

Exam. Mullen: No. 66.

(Verified Statement No. 66 received in the record.)

Mr. Greene: Mr. Marble.

Exam. Mullen: No. 67.

(Verified Statement No. 67 received in the record.)

Mr. Greene: Mr. Anselmi.

Exam. Mullen: No. 68.

(Verified Statement No. 68 received in the record.)

Mr. Greene: Mr. Rogers.

Exam. Mullen: No. 69.

(Verified Statement No. 69 received in the record.)

Mr. Greene: Mr. Walther.

Exam. Mullen: No. 70.

[fol. 1950] (Verified Statement No. 70 received in the record.)

Mr. Quirk: There is an exhibit attached to Mr. Walther's statement.

Mr. Greene: I was going to offer that later.

Exam. Mullen: That will go in as one Verified Statement, No. 70. What is the next one?

Mr. Greene: Mr. Sorenson.

Exam. Mullen: Did you skip Mr. Lathrop?

Mr. Greene: Mr. Lathrop would be next, that is correct.

Exam. Mullen: No. 71.

(Verified Statement No. 71 received in the record.)

Mr. Greene: Mr. Sorenson.

Exam. Mullen: 72.

(Verified Statement No. 72 received in the record.)

Mr. Greene: Mr. Hoffman.
Exam. Mullen: No. 73.

(Verified Statement No. 73 received in the record.)

Mr. Greene: Mr. Crippa.
Exam. Mullen: 74.

(Verified Statement No. 74 received in the record.)

[fol. 1951] Mr. Greene: The other two witnesses are not present in the hearing room, but I understand from Counsel the statements may be received under the same stipulation with Mr. Collins at Boise.

Mr. Quirk: Yes; John W. Hay, Jr., of Rock Springs, Wyoming.

Exam. Mullen: That will be No. 75.

Mr. Greene: 76 would be John A. Reed.

Exam. Mullen: Is it so stipulated?

Mr. Quirk: Yes.

Exam. Mullen: All right.

Mr. Quirk: Mr. Examiner, I would like to make this statement. It is substantially similar to the statements I have made in connection with other verified statements which have been filed without the testimony being presented orally. I stipulate with the understanding, one, that I object to all incompetent or irrelevant matter in all of these verified statements; two, I object to all unsupported conclusions; three, I object to all argumentative matter that may be contained therein; four, I request that it be understood in this stipulation that if the witnesses were asked on cross examination questions similar to those asked other witnesses similarly situated, their respective answers would be substantially the same.

Mr. Greene: I have no objection to that.

Exam. Mullen: They will be received, then, under the stipulation.

[fol. 1952] Mr. Greene: That is all I have, Mr. Examiner.

Exam. Mullen: Did you desire to call one of these witnesses?

Mr. Quirk: I want to call Mr. Hollingsworth and ask him one or two questions.

Exam. Mullen: Mr. Hollingsworth.

M. E. Hollingsworth was previously sworn with the group and testified as follows:

Cross-examination.

By Mr. Quirk:

Q. Mr. Hollingsworth, apropos of your statement which is designated here as Verified Statement 65, you say on page 3, that the Milwaukee has no connection with the Denver and Rio Grande, and that unless the Union Pacific can handle the traffic to and from Council Bluffs, the Milwaukee cannot hope to participate in the handling of the traffic.

A. That is right.

Q. Doesn't it connect with the Rock Island there?

A. Council Bluffs, yes.

Q. Doesn't it connect with the Missouri Pacific?

A. At South Omaha. That is right.

Q. That is in the same switching area, isn't it?

A. Practically the same area, yes.

Q. Does the Milwaukee have any other rail connections at Council Bluffs, Omaha, or south Omaha?

A. Not in connection with the railroads just mentioned. [fol. 1953] It does in connection with the D&RG.

Q. I suppose you know that the Burlington runs from Omaha, Council Bluffs, to Denver, and Cheyenne, Wyoming?

A. Yes, sir.

Q. And that the Rock Island also runs to Denver from Omaha?

A. Yes, sir.

Q. And the Missouri Pacific goes to Pueblo from both Omaha and Kansas City?

A. Yes, sir.

Q. If there should be traffic diverted to the Rio Grande at Ogden, and if it should move from Denver or Pueblo by any one of these lines, including the Missouri Pacific, the Milwaukee would still interchange, and was routed via the Milwaukee, they would still interchange?

A. If it was routed that way, I imagine so.

Q. Do you know that there are rates now from the line of the Union Pacific reaching into California and that traffic is routed, and is permissible under the tariffs to route traffic to Salt Lake or Provo, Denver and Rio Grande, and back to the Union Pacific at Denver. The traffic that would move that way under this same system of rates, if established, could also be interchanged with your Milwaukee Railroad at Council Bluffs by the Union Pacific?

A. That is correct.

Mr. Quirk: That is all.

[fol. 1954] Redirect examination.

By Mr. Greene:

Q. You would have to depend on the Burlington or the Rock Island or some railroad operating between Denver and Council Bluffs in order for the Milwaukee to get that traffic, would you not?

A. That is correct.

Q. You couldn't get it in any way direct from the Rio Grande itself?

A. No, sir.

Mr. Greene: That is all.

Mr. Quirk: Wait a minute.

By Mr. Quirk:

Q. You can't get any business at Council Bluffs from the Southern Pacific, can you?

A. Not unless it is routed over the Union Pacific or some other connection.

Q. The Rio Grande is no different in that respect than many railroads, is it?

A. No, I guess not.

Mr. Quirk: All right. Thank you.

(Witness excused.)

Exam. Mullen: Are there any more witnesses to be heard at this hearing?

Mr. Greene: I have none.

Exam. Mullen: I think you had a statement to make, sir?

Mr. Wood: My name is Thomas S. Wood, Rate Expert [fol. 1955] of the Public Utility Commission, State of Colorado. I have had the pleasure of following this proceeding from its inception. I heard all the testimony at Salt Lake City, and I heard all the testimony at Boise and I have heard all the testimony at Cheyenne. Based on the record, as made, the position of the Public Utility Commission is in favor of opening of the Ogden Gateway.

Exam. Mullen: Do you intend to file a brief in this case?

Mr. Wood: We propose to support the complainant on brief.

Exam. Mullen: Does anybody desire to ask Mr. Wood any questions? Thank you, Mr. Wood. That is all.

Mr. Quirk: I would like to ask Mr. Wood a question.

I assume, Mr. Wood, from what you have stated, you consider the record as adequate for your purposes and that is the reason why your Commission has not introduced any evidence, is that correct?

Mr. Wood: That is correct.

Mr. Collins: Mr. Examiner, I wonder if Mr. Wood has given sufficient advance thought to his brief to indicate now to us just what the grounds are that caused the Colorado Commission to support the complainant when you come to write your brief? Would you anticipate that your brief would make that clear?

Mr. Wood: Well, from the information, Mr. Collins, I would say our position is based primarily on transit.

Mr. Collins: That will be made plain in the brief, I suppose.

[fol. 1956] Mr. Wood: We will try to.

Mr. Collins: Yes. Thank you.

Exam. Mullen: Thank you, Mr. Wood.

Exam. Mullen: I suppose the parties want to brief this case?

Mr. Gibson: Yes, sir.

Exam. Mullen: Do the parties want a proposed report in this case?

Mr. Quirk: Yes.

Mr. Collins: I do for the Defendant.

Exam. Mullen: I will allow 60 days for filing of briefs;

that will make briefs due on June 19. Are there any other matters to be considered at this time?

That completes the hearing. Thank you all, gentlemen.

Mr. Collins: Mr. Examiner, is it an invariable rule of the Commission to require concurrent briefs in a situation like this?

Exam. Mullen: Where there is a proposed report, yes.

Mr. Collins: I see. All right.

Exam. Mullen: The same date for all briefs, which will be June 19, 1950.

Mr. Collins: Then each party may answer the other side, I take it.

Exam. Mullen: On exceptions. There are no answering briefs.

[fol. 1957] Mr. Collins: I see.

Exam. Mullen: That is all, gentlemen. Thank you.

(Whereupon, at 10:50 o'clock a.m., the hearing in the above-entitled matter was concluded.)

[fol. 1958] BEFORE THE INTERSTATE COMMERCE COMMISSION

EXCERPT FROM ORAL ARGUMENT OF MR. COLLINS

Proceedings

Chairman Alldredge: Mr. Collins, are you ready to proceed?

Mr. Collins: Yes, sir.

Argument of ELMER B. COLLINS (resumed).

Chairman Alldredge: Before you start, Mr. Collins, may I ask you a question?

I assume there is no dispute about the fact that from a physical standpoint these routes are open; that is, business physically can be interchanged between the Denver & Rio Grande and the Union Pacific.

Mr. Collins: Yes, sir; exactly. As was the case in the Western Pacific case.

Chairman Alldredge: You contend, however, that you have closed this route on the traffic here in question.

Mr. Collins: That is right.

Chairman Alldredge: Now, will you tell this Commission exactly how you closed the routes?

Mr. Collins: We canceled the joint through rate billing. We provided by tariff publication that the joint rates would not apply via Ogden with the D. & R. G. W.

Chairman Alldredge: You provided in the tariff that the joint rates would not apply?

Mr. Collins: A restriction in the route.

Chairman Alldredge: That is the joint rate?

Mr. Collins: Yes, sir.

[fols. 1959-1960] Chairman Alldredge: Do you think that closes this route for this traffic?

Mr. Collins: No, I don't think so, if they want to pay more, if they want a route via the Rio Grande and pay the price.

Commr. Patterson: This traffic can't always move on combination rates, can it not?

Mr. Collins: If these routes are open in the sense that there is in the course of business a transporting of traffic over the route, over the Rio Grande route, then there is an open through route at every place where there is a physical connection between the carriers. And if that is the case then Section 15(3) and (4) might as well not be printed in the next edition of the Interstate Commerce Act.

Chairman Alldredge: I did not mean to lead you into a discussion of that question. I just wanted to know what the facts were and how you closed this route, from your point of view.

Mr. Collins: Just as Mr. Stillings has told you.

Chairman Alldredge: Very well.

[fol. 1961] VERIFIED STATEMENT No. 1

I.C.C. Docket No. 30297

Statement of Vaughan Stewart, Blackfoot, Idaho

My name is Vaughan Stewart and I am Secretary-Manager of the Stewart Produce Company, a corporation of the State of Idaho. My father, Joseph Stewart, is the

President of the Company, but I am in active charge of the business conducted by the company.

The Stewart Produce Company is engaged in producing, buying and selling of potatoes in Bingham County, Idaho, with headquarters at Blackfoot, Idaho. The company owns and operates a warehouse and packing and processing plant located on trackage and served by the Union Pacific Railroad at Blackfoot. The warehouse is used for the storage of potatoes and has a capacity of approximately 20 carloads. The packing plant is used for the processing, packing and shipping of potatoes.

The Stewart Produce Company also owns and operates the following farms: One farm located approximately 12 miles northeast of Blackfoot having an area of 320 acres, and one farm located southwest of Blackfoot containing an area of 160 acres. It also operates under lease a farm 6 miles east of Moreland containing 160 acres, and during the year 1949 operated under lease a farm comprising 320 acres located 4 miles east of Shelley. The latter farm has been sold and the Stewart Produce Company no longer has a lease on this farm, but is now negotiating for and hopes to secure a lease on another farm of approximately the same acreage as the one operated under the lease which has expired and which I have, heretofore, described.

[fol. 1962] Storage cellars are located on the farms owned by the Stewart Produce Company, each with a storage capacity of 3,000,000 pounds of potatoes.

In addition to the above described operations, the Stewart Produce Company has in contemplation, the erection of warehouses at Rockford and Moreland on the Mackay Branch of the Union Pacific Railroad.

During the farming season, the Stewart Produce Company employs regularly 7 employes and during part of the season, 10 or 12 extra employes. During the harvesting season, the company employs as many men as are available in the area, usually ranging between 60 and 70 employes. During the processing and shipping season, the company employs about 30 employes.

The Stewart Produce Company produces on the farms above described, approximately 6,000,000 pounds, or 60,000 bags containing 100 pounds each, of potatoes per year. In

addition to the potatoes produced on the farms, the Stewart Produce Company also purchases from growers in the territory in which it operates, approximately 500 carloads of potatoes per year. All of the potatoes produced on the farms above described or purchased from growers are processed through the Stewart Produce Company's plant at Blackfoot.

During the past season, the Stewart Produce Company shipped in the neighborhood of 600 cars of potatoes. The majority of the potatoes shipped by the Stewart Produce Company are shipped to eastern markets and are routed via the lines of the Union Pacific Railroad Company and its connections either at Omaha or Kansas City.

[fol. 1963] The Stewart Produce Company has never found occasion to route shipments of its potatoes via the lines of the D&RGW for the reason that there are sufficient markets open to it via the direct route of the Union Pacific. Because of this and the further fact that the D&RGW is a substantially longer route and shipments via that line would require interchange at Ogden, Utah, and entail considerable delay in transit, the Stewart Produce Company would not in any event wish to use the route of the D&RGW, as expedition in transit is of importance to our company in the handling of its potatoes. In other words, once a carload is loaded and billed, it is of advantage to have the car transported to destination with as little delay as possible.

The service rendered by the Union Pacific Railroad, both in the matter of furnishing cars, switching and transit of cars, has been entirely adequate and satisfactory to the Stewart Produce Company. There have been periods when there was a car shortage and we were unable to secure all the cars we needed as promptly as needed, yet we realize the responsibility for the shortage was not that of the Union Pacific and the Stewart Produce Company and the shippers in this area have been treated as favorably as shippers generally in this respect.

It is my understanding that the D&RGW in this case seeks by means of solicitation to secure routing on a substantial amount of traffic originating in the States of Idaho, Oregon, Washington and Montana, including traffic originated at Blackfoot. It is my further understanding that that com-

[fol. 1964] pany does not contemplate building a railroad

into the state or performing any service in the state, but merely intends to solicit traffic to be routed away from the Union Pacific and interchanged to the D&RGW at Ogden, Utah.

I am a citizen of the State of Idaho. The Union Pacific is the railroad that serves that state and particularly my company. It has provided the main and branch lines, furnishes the car supply, performs the switching and renders the transportation service in the state. It is the largest taxpayer in the state and maintains a large payroll. The D&RGW does not do any of these things, nor is it in a position to do any of them. In short, it is not in a position nor does it intend in any way to contribute to the economy of the state.

It is my belief that if a substantial amount of traffic presently handled by the Union Pacific were diverted to the D&RGW after the Union Pacific performs the service in gathering the traffic, that either one of two things might reasonably be expected to happen; either the service presently performed by the Union Pacific would not be as good or it would be necessary for it to increase its rates. Any curtailment of service, either on the main or branch lines, would be of distinct disadvantage to my company, as would an increase in rates.

I am in favor of permitting the Union Pacific, after having furnished the transportation facilities and performing the service of gathering the traffic, to transport it the longest possible distance on its railroad rather than diverting it to the D&RGW who seeks to participate in the revenue from [fol. 1965] such traffic. If that were done and the Union Pacific thereby rendered unable to provide the service to the people of Idaho that it presently does, my company would be hurt.

Representatives of the D&RGW called on me asking that I support them in this case, and they were advised that I would not support them but intended to support the Union Pacific, the railroad that furnishes service to our company.

For the reasons above stated, I am appearing here as a witness in support of the Union Pacific Railroad and in opposition to the D&RGW in this case.

[fol. 1966] VERIFIED STATEMENT No. 2

I.C.C. Docket No. 30297

Statement of H. H. Zimmerli, Pocatello, Idaho

My name is H. H. Zimmerli. I live at Pocatello, Idaho. I do business at Pocatello under the firm name of H. H. Zimmerli Company, which is wholly owned by me and is not incorporated. My operations consist of purchasing, processing, loading and shipping throughout the United States of potatoes which are produced principally in the State of Idaho.

The H. H. Zimmerli Company has potato warehouses located on the tracks of the Union Pacific Railroad at Chubbuck, Aberdeen, Buhl and Arco, Idaho. During the year 1949, I originated through my warehouse facilities at the points above mentioned, a total of 362 cars of potatoes, 329 cars of which were shipped to the Missouri River area and east, and 33 cars west, principally in the State of California. In addition to this, I shipped approximately 600 additional cars of potatoes which were grown and produced in Idaho, through local, independent processors and track dealers. All of the shipments were made via the lines of the Union Pacific Railroad and principally interchanged with connecting lines either at Kansas City for points north, south and east; at Denver for points south and southeast; and Council Bluffs, Iowa, for points south, east and north. None of the shipments were routed via the lines of the D&RGW.

With the variety of routes open to us via the Union Pacific and its connections, we have at no time found any difficulty in reaching markets with our products and I can say definitely that the Union Pacific throughout the years has done a good job of railroading on our shipments.

[fol. 1967] I have never in my business had occasion to use the routes of the D&RGW and do not anticipate that I will ever require such routing; nor do I see how the opening of the Ogden Gateway, which would permit routing via the D&RGW at through rates, would be of any advantage to me in my business. The Union Pacific Railroad is the line that serves the people in Idaho and has rendered adequate and expeditious service for the purposes of by business; it has

been prompt in the furnishing of an adequate supply of cars for the movement of my potatoes; it has furnished reasonable switching, and it has moved the potatoes to destination in an expeditious manner. Once potatoes are loaded and billed, it is of particular interest to me as a shipper that they be moved to destination with the least possible delay, and the Union Pacific has the most direct route to consuming points where potatoes handled by me are shipped. It is to my advantage to route via this direct route. If the route of the D&RGW were used via the Ogden Gateway, this would be a circuitous route and unquestionably would result in delay, which would work to the disadvantage of my business.

It is my understanding that the D&RGW does not contemplate the building of a railroad into the State of Idaho; that it does not contemplate furnishing of cars for the shipment of my potatoes; it is not nor will it be in a position to render any service in the way of switching and spotting of cars and, in short, it is not in a position to render any service in connection with shipments from Idaho except the transportation over its lines of any of such shipments which may be routed via its lines and interchanged with it at Ogden. [fol. 1968] The Union Pacific Railroad is the railroad that furnishes the facilities in the State of Idaho and renders service to its shippers. If any substantial amount of business originating on its lines would be diverted to the D&RGW in the event the Ogden Gateway were opened, it is reasonable to assume that the Union Pacific would not be in position to furnish the prompt service which it has in the past, and any curtailment of service or increase in rates which might result from the reduction in revenues would work to my disadvantage as a shipper and to the disadvantage of the citizens of the State.

I am, therefore, appearing here as a witness for the defendants in this case, particularly the Union Pacific, in opposition to the petition of the D&RGW and in support of the Union Pacific and other defendants.

[fol. 1969] VERIFIED STATEMENT No. 3

I. C. C. Docket No. 30297

Statement of Albert Carlson, Collins, Idaho

My name is Albert Carlson and I am Superintendent of the Idaho Potato Starch Company, a corporation of the State of Idaho. The latter owns and operates a plant for the manufacture of starch from potatoes, located on trackage of the Union Pacific Railroad at Collins, Idaho, on the Mackay Branch.

The Idaho Potato Starch Company uses in its manufacturing process, cull or second-grade potatoes which are purchased at a price substantially less than potatoes of first-grade or first quality. We have been engaged in the manufacture of starch at the location above described since the fall of 1941 and produce annually approximately 150 carloads. To process this amount of starch requires about 800 pounds of potatoes for each 100 pounds of starch. The potatoes are secured in the territory where our plant is located and most of them are trucked to the plant by the growers and dealers from whom they are purchased. The price paid for the potatoes used in our processing, varies from 15 cents per 100 pounds upwards, with a general average of 25 cents per 100 pounds.

During the past year, the Union Pacific Railroad sponsored a proposal and established as a result thereof, a reduction on the rate of potato starch to Chicago so as to enable my company to compete with manufacturers in the Chicago area and in the southeastern markets. It is reasonable to assume that if the Union Pacific were to be short-hauled on the traffic originated at my plant, it would not be able to maintain the low rate which it presently assesses on [fol. 1970] the freight from my plant.

While there would never be any intention on the part of our company of depriving the Union Pacific of its longest possible haul on the traffic which we control, the fact is that most of our products are sold f.o.b. at our factory at Collins, Idaho, and the routing is controlled by the purchaser or consignee. I can realize that, in the event the Ogden Gateway is opened, the D&RGW and its Colorado connec-

tions will conduct intensive solicitation among the receivers of our products in the east and which might result in short-hauling the Union Pacific in the routing of some of the traffic. Undoubtedly, this will also be true of other products sold in like manner and shipped out of Idaho and the result might well be a serious decline in the revenues of the Union Pacific. This might make necessary a curtailment of some of the branch line service on which our company necessarily depends, and to the extent frequent and dependable service is a factor in the sale of our manufactured products, might affect the sale of our products. This eventuality would prove a serious threat to the continued successful operation of our business.

There have been times in recent years when a purchaser of our products has requested that the shipment be billed and shipped without delay. In such instances, it is decidedly to our advantage to have the shipments move via the shortest and most direct route since delivery at destination is an important factor in securing such orders.

It is my belief that if the Union Pacific were deprived of a [fol. 1971] substantial volume of its traffic, it would be necessary for it either to curtail service or increase rates, either of which would greatly be to the disadvantage of our company.

I understand that the D&RGW, in this case, seeks to secure the routing on traffic originating in the States of Idaho, Oregon, Washington and Montana. It does not intend to provide railroad facilities in the State of Idaho, nor does it intend to provide any of the service presently rendered by the Union Pacific, such as the trackage facilities, the furnishing of cars, the switching of cars and the transit thereof out of the State of Idaho.

The Union Pacific is the largest taxpayer in the State of Idaho, it maintains a large payroll in the State and it contributes generally to the economy of the State, while the D&RGW does not or cannot in any way contribute to the economy of the State. All it seeks to do is, by solicitation, to divert from the Union Pacific, revenues from traffic originated in Union Pacific territory. I can see no possible advantage to my company in having the Ogden Gateway opened, but, for the reasons above stated, I can see some

very strong disadvantageso For that reason, I am appearing here as a witness for the Union Pacific Railroad in this case and in opposition to the petition of the D&RGW.

[fol. 1972] VERIFIED STATEMENT No. 4

I. C. C. Docket No. 30297

Statement of Clyde Hess, Idaho Falls, Idaho

My name is Clyde Hess. I reside in Idaho Falls, Idaho, where I am engaged in the retail coal business and the feed and grain business, including the operation of a grain elevator located on Union Pacific tracks at Idaho Falls. I am a member of the Idaho Falls Chamber of Commerce. My business at Idaho Falls is located on trackage of the Union Pacific Railroad Company. I am also a distributor of beer.

I am not a producer of grain but purchase grain from local producers and most of this grain is then sold by me to the Globe Mills or other elevators in Ogden, Utah.

During the year 1949, I shipped about 150 carloads of grain and received approximately 25,000 tons of coal from Rock Springs, Wyoming, and Carbon County, Utah. All of the outbound shipments of grain were routed via the Union Pacific Railroad, as well as the coal received from Rock Springs, Wyoming. The coal received from Carbon County, Utah, was routed via the lines of the Utah Railway Company and Union Pacific. During the year 1949, I also received approximately 20 carloads of beer from the Anheuser Busch Company, St. Louis, Missouri, which was routed via the Union Pacific Railroad from Kansas City to Idaho Falls.

I have never had occasion to route any shipments via the lines of the D&RGW nor have I ever requested either the Union Pacific or the D&RGW for the establishment of a joint through rate via the D&RGW through the Ogden Gateway. I can see no advantage to me or my busines in opening the Ogden Gateway as requested by the D&RGW in this [fol. 1973] case.

The service afforded by the Union Pacific Railroad has always been satisfactory and adequate for my needs. I am

in touch almost daily with employes of the Union Pacific. Expeditious service is of importance to me in the shipment of my products and I would have no need or desire to use the longer, more circuitous route via the D&RGW in the shipment of beer received by me from St. Louis.

The Union Pacific Railroad is the railroad that serves the people of Idaho. It maintains a large payroll in the state, is a large taxpayer in the state and contributes generally to the economy of the state. The D&RGW does not propose to build a railroad into the State of Idaho or render any service to the people of the state and, in short, will contribute nothing to the economy of the state.

It is my understanding that the D&RGW seeks through solicitation to divert traffic originating on the lines of the Union Pacific to its lines via the Ogden Gateway and thus participate in the revenue on that traffic. I do not favor such a proposal for the reason that the Union Pacific has expended the money necessary to provide the transportation facilities, furnishes the cars and renders the transportation service. If the D&RGW were able to divert a substantial amount of this traffic to its lines, it is reasonable to assume that the decrease in revenue to the Union Pacific would require it to either reduce its service or increase its rates. Either of these alternatives would be disadvantageous to my business and to the economy of the State of Idaho.

[fol. 1974] I am, therefore, appearing here as a witness in favor of the defendants in this case, particularly the Union Pacific Railroad, and in opposition to the application of the D&RGW.

[fol. 1975] VERIFIED STATEMENT No. 5

I. C. C. Docket No. 30297

Statement of F. G. Thompsen, Pocatello, Idaho

My name is F. G. Thompsen. I reside at Pocatello, Idaho and am engaged in business there under the name of Thompsen Distributing Company. I am a distributor of beer in southeastern Idaho and during the year 1949 received for distribution in my territory 57 carloads of beer and forwarded 27 carloads of empty containers. The beer

of which I am distributor is shipped from St. Louis and Denver, all routed via the lines of the Union Pacific. The Union Pacific has rendered satisfactory and adequate service for my purposes.

I have had no occasion nor do I anticipate that I ever will have occasion to route shipments of beer for distribution in Idaho via the lines of the D. & R. G. W. I have therefore never requested either the Union Pacific or the D. & R. G. W. for the establishment of joint through rates via the lines of the D. & R. G. W.

The Union Pacific is the railroad that serves the State of Idaho and, as I understand it, the D. & R. G. W. does not contemplate building a railroad into the State, it pays no taxes in the State, it has no payroll in the State and does not contemplate establishment of any thereof or of rendering any service in the State. The Union Pacific is a substantial tax-payer and maintains a large payroll in the State. I am opposed to taking away traffic from the Union Pacific and diverting it to the D. & R. G. W. because, in my opinion, such diversion of traffic might render the Union Pacific less able from an income standpoint to render the service it is presently rendering or increase its rates, either of which would be detrimental to my business.

[fol. 1976] I am, therefore, appearing here as a witness for the Union Pacific Railroad in opposition to the petition of the D. & R. G. W. in this case.

[fol. 1977] VERIFIED STATEMENT No. 6

I. C. C. Docket No. 30297

Statement of Marion Olsen, Paradise, Utah

My name is Marion Olsen. I live in Paradise, Utah. I am President of the Cache Valley Turkey Growers Association, an association of approximately 55 growers, all located within Cache and Rich Counties, Utah. The association has a plant on trackage of the Union Pacific at Trenton, Utah.

I am also a member of the board of directors of the Cache County Farm Bureau. I am speaking here as an individual

grower and shipper and in behalf of the Cache Valley Turkey Growers Association, as well as the Cache County Farm Bureau.

The association deals in the production and processing of dressed turkeys and ships the finished product to eastern points, and is a receiver of shipments of feed for all types of livestock which is grown in the Cache Valley.

The Cache Valley Turkey Growers Association shipped from Trenton, Utah to eastern points 59 cars during the 1949 turkey season. The business of the association is increasing and we expect to handle more carload shipments during the year 1950. The association also received at Trenton 25 cars of feed shipped from points in Illinois, Minnesota, Oregon, Utah, North and South Dakota, Iowa and California. All shipments from and to the association at Trenton, Utah are shipped via the lines of the Union Pacific. The service rendered by that company has been most satisfactory and adequate.

In the nature of things, the business of the association requires refrigerator cars and the Union Pacific has been prompt and efficient in arranging for the requisite number [fol. 1978] of refrigerator cars when needed by the association. The association has never routed any of its shipments via the D&RGW nor has it had any occasion to use the services of that line. We have never felt the need or desire for service via the route of the D&RGW, nor have we ever asked either the Union Pacific or D&RGW to establish through routes via that line, which I understand the D&RGW is seeking from the Interstate Commerce Commission in this case. The association does not anticipate the need or desire for service via the route of the D&RGW nor can it see how it would derive any benefit if such route were open to it. In short, the service rendered by the Union Pacific is satisfactory and adequate and it is my view that if the Gateway should be opened and the D&RGW would receive any substantial amount of traffic now routed via the lines of the Union Pacific, that that company would necessarily have to curtail its service or increase its rates, either one of which would have unsatisfactory effects on the association which I represent.

Our association feels that the Union Pacific has provi-

ded the trackage and the expense of developing the business in the territory in the the States of Idaho, Utah, Oregon and Washington, and that such traffic should not be diverted to the lines of the D&RGW after the Union Pacific has spent the money and provided the facilities in assembling the traffic. Our association, therefore, is opposed to the application of the D&RGW and in favor of the Union Pacific in this case. The association has heretofore gone on record in favor of the Union Pacific in this case and opposed to the application of the D&RGW and has heretofore addressed the Public Service Commission of Utah expressing [fol. 1979] our attitude with respect to this application and asking the Utah Public Service Commission to intervene in this case in behalf of the Union Pacific.

The business of the association depends upon prompt receipt of refrigerator cars and prompt shipment after loading so as to reach markets on a given date. The Union Pacific has always provided an adequate supply of cars at the time needed and has transported the carloads of turkeys promptly after loading. The association feels that the D&RGW is not in a position to compete with the service of the Union Pacific, and as heretofore stated we feel that the D&RGW is not entitled to the business originated at Trenton, Utah, for which it could not possibly contribute anything in the way of facilities or assembling of shipments, and therefore I personally and as President of the association am unalterably opposed to the opening of the Ogden Gateway as requested by the D&RGW in this case.

As heretofore stated, I am also a director of the Cache County Farm Bureau. The Cache County Farm Bureau is an organization consisting of between 750 and 760 farm families. It is federated with the Cache County Sugar Beet Growers Association, the Utah-Idaho Canning Crops Association, the Cache Valley Dairy Association and the Cache County Poultry Producers. The Farm Bureau is not directly a shipper. Its members, however, are the growers of the products which are processed and shipped by the above named associations.

I am acquainted with the shipping needs of the various Cache Valley associations who ship the products of the members of the Cache County Farm Bureau of which I am a director.

[fol. 1980] It is my understanding that the D&RGW in its complaint seeks to have diverted to it traffic originating on the lines of the Union Pacific Railroad. I understand further that it does not contemplate building a railroad into the territory and that it is not in a position to render any service, that it merely seeks a division with the Union Pacific of the revenue on the traffic originated in this territory.

We had one experience in this area of a railroad being abandoned, namely, the Utah-Idaho Central, which resulted in considerable disruption of business, the severance of railroad connections and costly relocation of many business enterprises. We do not wish to see railroad service into Cache Valley curtailed but rather to have additional facilities installed.

I believe that action nullifying the opportunity of the Union Pacific to utilize fully its facilities in handling freight originating on its lines would not be conducive to improved service nor expanded facilities. We know that if business is lost, train service will necessarily be curtailed or rates increased. That in my opinion would be detrimental of the best interests of the agricultural economy of Cache County. I am, therefore, as a director of the Cache County Farm Bureau, opposed to the petition of the D&RGW.

The board of directors of the Cache County Farm Bureau, on September 23, 1949, adopted a resolution setting forth its position in this case. That resolution reads as follows:

Resolution

Whereas, the Denver & Rio Grande Western Railroad Company has filed a complaint with the Interstate Com-
[fol. 1981] merce Commission requesting the Interstate Commerce Commission to compel the Union Pacific Railroad Company to establish joint through rates on commodities shipped over the Union Pacific Railroad from points in Idaho, Oregon, Montana, Washington and Northern Utah, by way of Ogden, to common railroad points east thereof, and to establish a basis of division of such through rates with the Denver & Rio Grande Western Railroad Company, and

Whereas, the Union Pacific Railroad Company has deter-

mined to resist the application and the request as so filed with the Interstate Commerce Commission, and

Whereas, the Union Pacific Railroad Company has played a large part in the development of Northern Utah, Idaho, and other territory to the northwest thereof, and have contributed to the growth and development of Cache County and the entire Cache Valley area as it extends into Southern Idaho and have given and continue to give good service to shippers and consignees shipping and receiving merchandise over the Union Pacific Railroad, and

Whereas, a substantial portion of the Cache Valley area is served by the Cache Valley Branch of the Union Pacific Railroad Company and depends upon such branch line for rail transportation of commodities shipped out and received in Cache Valley, and

Whereas, members of Cache County Farm Bureau know that without the revenues received from long hauls, a railroad company cannot ordinarily maintain its branch lines so as to give the service necessary upon such branch lines, and

Whereas, the Union Pacific Railroad Company has in the past and continues at present to contribute substantially to [fol. 1982] the economic welfare of Cache County by way of taxes and payroll for employment of labor in Cache County, and in addition thereto, the Union Pacific Railroad Company has in the past and does now continue to encourage the farm youth, not only of Cache County, but of the entire Inter-mountain area, by awarding Carl Raymond Gray scholarships to Future Farmers and 4-H Club members, enabling and assisting such farm youth to study at the Utah State Agricultural College, and

Whereas, in the opinion of the Cache County Farm Bureau and its members, better service will be rendered to shippers by allowing a railroad company to carry a shipment upon the originating line as far as it can without transfer, and that the unnecessary transfer and switching from one rail line to another would give opportunity for delay and damage to such shipments.

Now, therefore, Be It Resolved that the Cache County Farm Bureau does not favor or approve the application as filed by the Denver & Rio Grande Western Railroad

Company with the Interstate Commerce Commission but is opposed to and disapproves the same.

[fol. 1983] Verified Statement No. 7

I.C.C. Docket No. 30297

Statement of Guy Gray, Dillon, Montana

My name is Guy Gray. My home is Dillion, Beaverhead County, Montana. I have been a resident of Beaverhead County, Montana all my life, 60 years, where I have been engaged in the livestock business for the past 15 years. I annually handle approximately 8,000 head and during the year 1949 shipped from the station of Dillon, 56 carloads destined to points in California, Iowa and Nebraska for the most part, with the preponderence of the shipments moving to points in California for feeding or slaughter. The stock shipped by me to the points mentioned is loaded at stockyards facilities maintained by the Union Pacific Railroad Company, for the most part of the stations of Divide, Dillon, Armstead and Monida, Montana, all located on the lines of the Union Pacific Railroad.

All of the shipments of stock handled from these points are routed via the lines of the Union Pacific. I have never had occasion to use the lines of the D&RGW or to solicit either the Union Pacific or D&RGW for joint through rates via the lines of the D&RGW. The Union Pacific is the railroad that renders service to me and has been reasonably prompt in making delivery of cars.

As I understand the case relating to the Ogden Gateway, it is that the D&RGW hopes to have rates established which will enable it to take the business of the Union Pacific originating in the States of Idaho, Oregon, Washington and Montana, where it will ship it via the lines of the Union Pacific to Ogden thence D&RGW to Denver where it will [fol 1984] have some other line take it, depriving the Union Pacific of its long haul.

As a citizen of Montana, I am interested in the Union Pacific, first, because it renders the service to the citizens of that state, while the D&RGW renders no service. I was

for a period of one term, the county treasurer of Beaverhead County, Montana, and as such realized for the first time the substantial amount of taxes paid by the Union Pacific Railroad. It is the largest single taxpayer in Beaverhead County. I, as a shipper and as a citizen of the State of Montana, am interested in the Union Pacific maintaining a financial position so that it will be enabled to render service to its shippers on its lines in this state.

In the shipping of stock, I am interested in the expeditious movement thereof, and understand that since the Union Pacific is the most direct route to destination point, I would therefore not wish to route any traffic via the D&RGW, the longer and necessarily less expeditious route.

I am appearing here as a witness in favor of the Union Pacific and in opposition to the D&RGW, who I understand has no intention of building a line of railroad into this state or of rendering service to the people of Montana, but merely seeks to secure a division of the revenues of that traffic handled by the Union Pacific. I am unalterably opposed to the petition of the D&RGW in this case.

[fol. 1985] VERIFIED STATEMENT No. 8

I.C.C. Docket No. 30297

Statement of L. J. Roedel, Baker, Oregon

My name is L. J. Roedel and I am Vice President and General Manager of the Oregon Lumber Company with headquarters at Baker, Oregon. I am appearing here in support of the position of the defendants in this case.

During the year 1949, my company shipped approximately 1,000 carloads of lumber from Baker, Oregon, a large percentage of which was consigned to Denver, Colorado, and points east and south thereof and were all routed via the Union Pacific route. Our inbound carload traffic from trans-continental origins consists of materials and supplies and while not of substantial volume, all are handled over the Union Pacific routes. The service of the Union Pacific has been very satisfactory from all transportation standpoints, including car supply and time in transit. The

Union Pacific has always been most sympathetic and helpful in establishing satisfactory rates and practices governing the movement of our traffic. The routes of the Union Pacific are entirely adequate and sufficient for our purposes, permitting our shipments to move freely to all consuming territories.

Prior to this hearing, I was interviewed by representatives of the D&RGW and urged to support it in this proceeding. We have never felt any need, nor do we anticipate any need for the routes and rates proposed by the D&RGW and we have never sought from either the Union Pacific or the D&RGW for their establishment. Such routes would not in any manner benefit my company.

[fol. 1986] My company has no lumber for sale for milling or remanufacturing in transit at any point. From my knowledge of the pine lumber industry in general in the States of Oregon, Washington and Idaho, it is my opinion that there is a shortage of lumber for remanufacture by the plants located in that territory. There is ample capacity within this area to provide drying and planing facilities for all the small sawmill production of the area. It is not economically sound to ship this small mill production any great distance via rail to be planned and finished. All of it can be sold to local manufacturing plants at favorable market prices. Pine lumber is not a structural lumber and therefore is not generally used for railroad ties, poles, bridge timbers, etc., and therefore, is not available for treating purposes. The pine lumber is used generally as finish lumber and as stated heretofore, is manufactured into finished boards, trip, moulding, etc., at the local manufacturing plants in the area.

My company has two operations, one at Baker, Oregon; of which I am the operating head, served by the Union Pacific; the other at Dee, Oregon, served by the Mt. Hood Railroad, whose only connection is with the Union Pacific at Hood River, Oregon. Being thus absolutely dependent upon the Union Pacific for our transportation needs, any order of the Commission which may be entered in this proceeding that would affect the Union Pacific by decreasing its revenues with consequent curtailment of service by it, would vitally affect the continued operations of my

company. For the foregoing reasons, I am emphatically opposed to the complainant in this case.

[fol. 1987] VERIFIED STATEMENT No. 9

I.C.C. Docket No. 30297

Statement of Fred E. Lanzer, La Grande, Oregon

My name is Fred E. Lanzer and I am Assistant General Manager and Sales Manager of the Mt. Emily Lumber Company of La Grande, Oregon, and appear in this proceeding in opposition to the D&RGW.

My company operates two lumber producing plants, one located at Enterprise, Oregon, which furnishes some of the rough lumber consumed at our other plant which is located at La Grande, Oregon. The La Grande plant is a complete lumber manufacturing operation, turning out finished boards, mouldings, knocked down furniture items, etc., and we ship annually in excess of 1,000 carloads, 90% or more of which is shipped to Denver and points east and south of Denver, all via the Union Pacific through routes.

Both of our plants are located on and served exclusively by the Union Pacific Railroad and the service given us by Union Pacific as to car supply, switching service, transit time, rates, etc., is and has been very satisfactory.

Our manufacturing plant at La Grande, Oregon, dries and remanufactures all of the lumber produced at that plant as well as the entire production of the plant at Enterprise, Oregon. We therefore have no rough lumber for sale for milling or otherwise remanufacturing in transit. The establishment of any milling in transit rates on the D&RGW would be of no benefit whatever to my company.

There are already established in this area, remanufacturing plants at Elgin, Oregon, Baker, Oregon and Ontario, [fol. 1988] Oregon, which have ample capacity to handle the production of small mills who are not equipped to prepare their production for the market.

Prior to taking a stand on the D&RG complaint, we were approached by representatives of the D&RGW. Consideration was given to their position. We have never felt any

need for the establishment of the routes proposed by the D&RGW, nor do we anticipate any need therefor. Certainly we would derive no benefit therefrom.

If the proposed routes of the D&RGW are established and substantial loss in revenue thereby sustained by the Union Pacific, such revenue losses would necessarily have to be offset by the restricting of service, reduced maintenance and increased rates. Either one or all of these contingencies would greatly affect and injure our operations. So far as our company is concerned, we trust the Commission will take no action detrimental to the welfare of the Union Pacific and the area they serve.

[fol. 1989] VERIFIED STATEMENT No. 10

I. C. C. Docket No. 30297

Statement of Fred E. Kiddle, Island City, Oregon

My name is Fred E. Kiddle, residing at Island City, Oregon, and I am President of the Pioneer Flouring Mill Company there and of the Union Flouring Mill Company located at Union, Oregon. In addition, my companies operate grain elevators at Alicel, Imbler, Elgin, La Grande and Union, Oregon. I am a member of the Pacific Northwest Grain & Grain Products Association, the North Pacific Miller Association, the Pacific Northwest Grain Dealers Association and the Pacific Northwest Pea Growers Association.

I have been engaged in the flour milling business for the past 31 years. By reason of my long experience in the flour milling business and my constant contacts with other millers throughout Oregon, Washington and northern Idaho represented by the organizations named, I am generally conversant with the industry and particularly its traffic problems.

The transportation problems confronting my companies in the marketing of our flour are typical of those confronting the other mills located in the Pacific Northwest.

During the year 1948, my companies shipped approximately 50 carloads of flour eastbound from their mills, all of

which moved to points Denver and east thereof via the Union Pacific long haul route.

Our experience with Union Pacific service, both with respect to the transportation of our wheat and the transportation of our flour east and westbound, has been satisfactory. We are vitally interested in such features of the [fol. 1990] transportation service as car supply, time in transit, switching at our mills and elevators. The service presently afforded us meets our requirements satisfactorily. The through routes now open to us via the Union Pacific are both adequate and satisfactory, therefore, we have never requested either the Union Pacific or the D&RGW to establish any additional routes, especially those proposed in this proceeding. We have never received any inquiries as to the purchase of grain or flour from points local to the D&RGW and consequently have never used their service.

It is our understanding that if the request of the D&RGW for the establishment of through routes and joint rates via Ogden is granted that traffic now handled via the Union Pacific long haul routes will be subject to diversion to the D&RGW at Ogden. Such routing would, of course, short-haul the Union Pacific on its through traffic, and at least to that extent would reduce the revenue now received by it.

Any reduction in revenue to the Union Pacific which might result in the restriction or curtailment of service now rendered to us, either road-haul, switching, car supply, transit privileges, etc., would definitely adversely affect the operation of our plants. Also, on or about October 17, 1949, the Pacific Northwest Grain & Grain Products Association, on behalf of its members, filed with the Trans-Continental Freight Bureau an application which has since been docketed as TCFB Docket No. 5975, asking the trans-continental carriers to consider and grant to the milling interests of the Pacific Northwest reductions in rates for the transportation of grain and grain products to points in trans-continental territory from points of origin in Oregon, [fol. 1991] Washington and Northern Idaho. With particular reference to the flour milling industry, there are twenty-seven flour mills located in the territory mentioned with a daily capacity of 74,300 hundred-pound bags of flour and, due in large measure to the level of the rail rates, ship-

ments from the Pacific Northwest to points north of the Ohio River decreased from 3,784,647 hundred-pound bags in 1945 to 324, 877 hundred-pound bags during 1949, and to points south of the Ohio River such shipments declined from 418,078 hundred-pound bags in 1945 to 102,768 hundred-pound bags in 1949. My companies, as well as all other millers in the Pacific Northwest, are hopeful of favorable action by the carriers on the Association's request for the rate reductions mentioned in order that we may again be in position to compete in the furnishing of flour for consumption in trans-continental territory. We are fearful that if the financial standing of the Union Pacific is reduced by reason of the diversion of even a portion of the traffic now handled by it via its long haul through routes that action on our request for reduced rates will be seriously and adversely affected, and for that reason also we would be opposed to the proposal of the D&RGW.

[fol. 1992] VERIFIED STATEMENT NO. 11

I. C. C. Docket No. 30297

Statement of E. S. Harper, Idaho Falls, Idaho

My name is E. S. Harper. I am a member of the partnership of E. S. Harper Company, the partners being myself and my two sons, E. M. and H. H. Harper. I am a member of the Chambers of Commerce of Idaho Falls, Idaho, Twin Falls, Idaho, and Payette, Idaho. The firm of which I am a member is engaged in the buying, packing and distributing of potatoes and onions produced in the State of Idaho and Eastern Oregon, through warehouse and packing plants owned by this firm at Idaho Falls, Twin Falls and Payette, Idaho, all located on the lines of the Union Pacific Railroad Company. At present, the plant at Idaho Falls has a capacity of 100 carloads and in the future, we hope to have a packing and processing capacity of 500 carloads.

During the year 1949, our firm purchased and shipped to eastern and western markets approximately 500 carloads of onions and 1,000 carloads of potatoes. The produce

shipped from Payette is largely produced in Malheur County, Oregon. Of the products shipped, the majority of them are shipped to eastern markets commencing at the Missouri River and extending to the eastern seaboard, although our firm does ship a substantial volume into the southwest, including Oklahoma and Texas. Approximately 10% of the volume of the produce shipped is consigned to markets in California, Oregon and Washington.

All of the produce shipped by the E. S. Harper Company is shipped via the lines of the Union Pacific Railroad, on which our warehouses and packing plants are located. [fol. 1993] The E. S. Harper Company has never found occasion to route shipments via the D&RGW nor has it ever requested the Union Pacific or the D&RGW to establish joint rates via that line for the reason that there is available to our company, markets which can be reached via the more direct line of the Union Pacific and its eastern connections. The E. S. Harper Company, like other shippers in the State of Idaho, is dependent for railroad transportation entirely on the Union Pacific Railroad, which owns and operates a main line and many branch lines in the state, the branch lines affording a basis for assembling the products produced in the state and bringing them to main line points from whence they are shipped to market.

As a member of the E. S. Harper Company, I am interested in the Union Pacific because I depend upon it for service. The service of the Union Pacific in the matter of furnishing a supply of cars, switching and transit is entirely satisfactory and adequate for the needs of the E. S. Harper Company. There has never been a time during my 25 years of operations on the Union Pacific Railroad when I have had a problem with respect to the transportation of my products that the Union Pacific has not been willing to sit down with me and work out a solution which has been satisfactory to me.

It is my understanding, the D&RGW in this case seeks, through solicitation, to have diverted to its lines through the Ogden Gateway, a substantial amount of the traffic originated in the northwestern states, namely, Utah, Idaho, Oregon, Washington and Montana, for the sole purpose of [fol. 1994] enhancing its revenues, but without contributing

anything to the economy of the state in which my business is located and operated. As I have heretofore stated, the Union Pacific has provided the transportation facilities in the state. It is the largest taxpayer in the state; it maintains a large payroll in the state. If business which it originates on its lines through its facilities is diverted to the D&RGW if the so-called Ogden Gateway were opened, it is reasonable to assume that it will not be in as strong a position to render service as it would be if it were permitted to continue as at present to transport the freight originated on its lines to Missouri River points. If the revenue is decreased, it is reasonable to assume that either one of two things will happen——either rates will have to be increased or service reduced. Either of these would be a distinct disadvantage to my firm's operation. In addition to this, if the route via the D&RGW were opened, the distance via that route between shipping points to eastern markets is considerably longer. Expedition in transit of the products shipped by the E. S. Harper Company is of particular advantage. In other words, when cars are loaded and shipped, it is to our advantage that they be moved to market with the least possible delay, and it is my belief that if it were diverted to the D&RGW through the Ogden Gateway, considerable delay would be entailed in moving through the Ogden terminal, in addition to the longer route via the D&RGW.

I have been solicited by representatives of the D&RGW on a number of occasions to testify in their behalf in this case and on each occasion, I refused.

[fol. 1995] The development of the State of Idaho has been made possible by the construction, maintenance and operation of the main and branch lines of the Union Pacific Railroad. It is my belief that the interests of the people of Idaho lie in permitting the Union Pacific to enjoy the longest possible haul over its lines of the products shipped out of the territory which it serves, and there is no logical reason, in my opinion, why the D&RGW should be permitted to participate in the revenue on such shipments since it is not in a position to render service to the people of Idaho either in the way of car supply, switching, assembly or transit.

I am, therefore, unalterably opposed to the application of

the D&RGW in this case and am appearing here as a witness for the defendants, particularly the Union Pacific, and in opposition to the petition of the D&RGW.

. . . . . .

[fol. 1996] VERIFIED STATEMENT No. 12

I.C.C. Docket No. 30297

Statement of Frank A. Mason, Dedham, Massachusetts

My name is Frank A. Mason. I reside in Dedham, Massachusetts. I am one of the partners of Hallowell, Jones and Donald of Boston, Massachusetts. We have been one of the largest handlers of domestic wool for more than 50 years and handle substantial weights of wool from growers in the States of Idaho, Oregon, Utah, Colorado and Wyoming. The wools purchased in these states are shipped to Boston on the lines of the Union Pacific Railroad and connections.

We have enjoyed friendly relations with the railroads all over the United States and appreciate their problems. The Union Pacific has rendered satisfactory service for our requirements over the many years on wools originating on their railroad. We fail to see where there would be any benefits on wools originating on the Union Pacific lines in Oregon and Idaho by the establishment of through joint rates between the Union Pacific and D&RGW, which is sought by the complainant in this case. Hallowell, Jones and Donald has never requested either the Union Pacific or the D&RGW to establish joint rates with respect to these wool shipments, since the services and facilities of the Union Pacific are adequate and the route of the Union Pacific is more direct on wools originating on its lines and there is an advantage to us in shipping via direct route and in avoiding delay which would be occasioned if the wools were to move via Ogden, thence Rio Grande and connections, which would involve a circuitous routing plus the necessity of additional interchanges between railroads. [fol. 1997] The Union Pacific has been reasonably prompt in supplying cars for our shipments of wool and has further rendered satisfactory and adequate service on the movement of these wools to the Boston market.

I expressed my views with respect to the Ogden Gateway case in my letters of December 2, 1949 to Mr. H. S. Bennett, Chairman, Public Service Commission of Utah, Salt Lake City, and Mr. W. B. Joy, President, Public Utilities Commission of Idaho, Boise, Idaho, each of which was identical, reading as follows:

"For some time now I have observed with interest the activities of the D&RGW Railroad Company and the Union Pacific Railroad Company throughout the inter-mountain and Pacific Northwest territories respecting the so-called Ogden Gateway case involving complaint filed by the D&RGW Railroad seeking establishment of through rates and routes in connection with their line between Ogden and Denver on traffic originated by the Union Pacific Railroad Company.

"In order to avail myself with a complete understanding of this case, I have purposely avoided corresponding with you heretofore; but after a careful study, it is our considered opinion the Interstate Commerce Commission should finally render a decision favorable to the Union Pacific Railroad and deny this complaint. To that end we respectfully urge your consideration and unqualified support.

"A substantial volume of wool is purchased in and shipped from Utah, Idaho, Oregon, Washington and Montana origins by Hallowell, Jones & Donald. During the shipping season, transit time is a decided factor, and if for any reason we were obliged to route these shipments in connection with the D&RGW Railroad, a delay of at least 24 hours and perhaps as much as 48 hours in transit time would necessarily result, and obviously this would be detrimental to our best interest. Additionally, there is nothing which the D&RGW can offer in the way of additional or more desirable diversion privileges, service, or facilities.

"In view of the foregoing, it is our desire that the Commission intervene in behalf of the Union Pacific Railroad Company in these proceedings, and your favorable consideration will be appreciated.

Very truly yours,

(S.) Frank A. Mason"

[fol. 1998] I am, therefore, appearing in this case as a witness for the defendants, particularly the Union Pacific Railroad, in opposition to the petition of the D&RGW.

. . . . . .

[fol. 1999] VERIFIED STATEMENT No. 13

I. C. C. Docket No. 30297

Statement of J. C. Stauffer, Willard, Utah

My name is J. C. Stauffer, and I reside at Willard, Utah. I am a member of the Box Elder County Farm Bureau and a member of the Utah Cattle and Horse Raisers Association. I own and operate 2,000 acres of land in Box Elder County, Utah, on which I raise hay, grain, vegetables, fruit and livestock. I am appearing here as an individual shipper of livestock and as a representative of the Box Elder County Farm Bureau.

In my livestock operations, I raise an average of 900 head of cattle per year. My summer range is located in Wyoming and the winter range in Utah. Approximately one-half of these 900 head of cattle are shipped from Evanston, Wyoming, and one-half from Brigham, Utah, and consigned to dealers, commission men and packing houses in Kansas, Nebraska and Iowa.

In addition to the livestock which I produce, I purchase approximately 5,000 head of cattle each year. Some of this livestock is purchased in D&RGW territory and are shipped to the west coast, and about half of the cattle purchased in Union Pacific territory is shipped to the west coast and the remainder to eastern points, mainly in Iowa, but some in Kansas and Nebraska.

The service afforded by the Union Pacific Railroad is entirely satisfactory and adequate for my needs, including car supply and transportation to destination. I have never requested either the Union Pacific or the D&RGW for the [fol. 2000] establishment of joint rates via Ogden for the reason that the route of the Union Pacific is the most direct for the shipment of my livestock to eastern points. The service afforded by the D&RGW on the livestock which I purchase and ship from D&RGW territory in no way com-

pares with the service rendered by the Union Pacific Railroad.

The Union Pacific is the railroad that furnishes the transportation facilities and performs the necessary service for the shipment of my livestock in northern Utah and Idaho. The D&RGW does not contemplate building a railroad into this territory nor does it intend to furnish any service in this territory. A few years ago when the Utah Idaho Central Railroad was being abandoned, the D&RGW had an opportunity to purchase that railroad and thereby render service in the territory served by the Utah Idaho Central. However, the D&RGW did not take advantage of that opportunity to acquire a line of railroad in northern Utah and Idaho and render service to shippers in that territory. I do not believe that the D&RGW should now be permitted to participate in the revenue on traffic originated in this territory by the Union Pacific without performing any service in connection therewith.

It is my belief that if the D&RGW should prevail in this case and secure a substantial diversion of traffic originating in the States of Utah, Idaho, Oregon and Washington to the lines of the D&RGW, it would be necessary for the Union Pacific either to curtail its service or increase rates, either of which would work to my disadvantage. A substantial [fol. 2001] portion of the shipments of my livestock originates on the lines of the Union Pacific east of McCammon, Idaho, and Ogden, Utah, and if traffic were diverted to the D&RGW at Ogden, it is reasonable to assume that service on the lines of the Union Pacific east of McCammon, Idaho, and Ogden, Utah, would not be as frequent as that presently rendered, and this reduction in service would be disadvantageous to me.

As heretofore stated, I am a member of the Box Elder County Farm Bureau. The views of that bureau are set forth in a resolution adopted by it on the 4th day of October, 1949, Exhibit —. I have been authorized to testify here in behalf of that bureau, and I am in accord with the views expressed in the resolution.

For the above reasons, I am preparing here as a witness in favor of the defendants in this case, particularly the Union Pacific, and in opposition to the application of the D&RGW.

[fol. 2002] EXHIBIT TO VERIFIED STATEMENT No. 13

I. C. C. Docket No. 30297

Witness: J. C. Stauffer

RESOLUTION

It has been brought to the attention of the Box Elder County Farm Bureau that the Denver & Rio Grande Western Railroad Company has filed a complaint with the Interstate Commerce Commission requesting the Interstate Commerce Commission to compel the Union Pacific Railroad Company to establish joint through rates on commodities shipped over the Union Pacific Railroad from points in Idaho, Oregon, Montana, Washington and northern Utah, by way of Ogden, to common railroad points in Colorado and common points east thereof, and to establish a basis of division of such through rates on long haul rates with the Denver & Rio Grande Western Railroad Company.

The Bureau has also been advised that the Union Pacific Railroad Company has determined to resist the application as filed with the Interstate Commerce Commission.

Inasmuch as the Union Pacific Railroad is the only rail outlet available, the Box Elder County Farm Bureau membership depends to a great extent upon the Union Pacific Railroad for the movement of their produce to market. A substantial portion of Box Elder County is served by the [fol. 2003] Malad Branch of the Union Pacific Railroad and the various members of the Bureau know and realize that the revenues received from branch line operations of a railroad are not ordinarily sufficient of themselves to maintain adequate service, and that without the long haul and the revenues derived therefrom the Union Pacific Railroad Company cannot maintain its branch lines and give the efficient service necessary thereon.

The Union Pacific Railroad Company has played a large part in the development of northern Utah, Idaho, and other territory to the northwest thereof, and is at the present time an important element in the economic structure of Box Elder County because of the fact they pay substantial taxes to Box Elder County, as well as to the State of Utah, and

furnish a considerable amount of employment in Box Elder County.

In addition, it is recognized that the Union Pacific Railroad can give better service where shipments are not transferred from one railroad to the other, causing unnecessary delays as well as difficulties in tracing and diverting shipments.

[fol. 2004] In view of these and other circumstances, it is hereby resolved that the Box Elder County Farm Bureau does not favor or approve the application as filed by the Denver & Rio Grande Railroad Company with the Interstate Commerce Commission but is opposed to the granting of through rates that will deprive the Union Pacific Railroad Company of the benefit of revenues derived from a long haul to which it is entitled.

The Secretary of the Box Elder County Farm Bureau is hereby authorized and directed to furnish four certified copies of this resolution to the proper officials of the Union Pacific Railroad Company.

(Sgd.) A. V. Smoot, Pres. South Box Elder Farm Bureau.

[fol. 2005] VERIFIED STATEMENT No. 14

I.C.C. Docket No. 30297

Statement of Robert D. Gallafent, Pocatello, Idaho

My name is Robert D. Gallafent. I reside at Pocatello, Idaho. I am the owner of the Bannock Motor Company at Pocatello and handle Pontiac and Cadillac automobiles and GMC trucks. I am at the present time a member of the Pocatello Chamber of Commerce and during the year 1949, I was the President of that organization.

During the year 1949, I received 11 carloads of automobiles and trucks from Kansas City, which were shipped via the lines of the Union Pacific Railroad. The service afforded by the Union Pacific has always been satisfactory and adequate for the requirements of my business. I have never had occasion to use the lines of the D&RGW nor do I anticipate that I will ever have occasion to route ship-

ments via that line. I have never requested either the Union Pacific or the D&RGW for the establishment of joint through routes via the Ogden Gateway.

As previously stated, during the year 1949, I was President of the Pocatello Chamber of Commerce. On August 12, 1949, the Board of Directors of the Pocatello Chamber of Commerce adopted a resolution opposing the application of the D&RGW in this case and supporting the position of the Union Pacific Railroad. The resolution recited that the Pocatello Chamber of Commerce had made an extensive study of the effect on the State of Idaho which might result from the opening of the Ogden Gateway and called attention to the fact that the economy of the State of Idaho is largely extractive and the products of the State, which are exported, must be sold in the major markets of [fol. 2006] the country. The resolution also stated that the Union Pacific, with the long haul arrangements which it has enjoyed, has been able to adopt freight rates which makes it possible to market the products of the State of Idaho, and the continuation of these present competitive rates is directly dependent upon the continuation of the present long haul arrangements which are enjoyed by the Union Pacific.

Additionally, the resolution stated that the Union Pacific Railroad has contributed materially to the development of the State of Idaho and that if the State is to grow and prosper, it is necessary that it be served by a strong, aggressive railroad. The resolution further stated that the opening of the Ogden Gateway, with the possible attendant short-hauling of traffic by the Union Pacific would weaken the Union Pacific and might make it necessary to curtail its activities in connection with furthering the development of the State.

As a receiver of freight in Pocatello, Idaho, via the lines of the Union Pacific Railroad and as a representative of the Chamber of Commerce of Pocatello, Idaho, I am opposed to the application of the D&RGW in this case for the reason that anything that would affect the ability of the Union Pacific to serve the people of Idaho, who are dependent upon that railroad for service, is detrimental to the interests of the State. I am opposed also for the reason that anything that would reduce employment on the

Union Pacific resulting from curtailed train service due to the diversion of traffic from the Union Pacific to the D&RGW and the consequent loss of revenue to the Union Pacific, would adversely affect my business, as well as [fol. 2007] business generally in Pocatello and the State of Idaho.

I am, therefore, appearing here as a witness in favor of the defendants in this case, particularly the Union Pacific, and in opposition to the petition of the D&RGW.

[fol. 2008] VERIFIED STATEMENT No. 15

I.C.C. Docket No. 30297

Statement of E. E. Pugh, Springston, Idaho

My name is E. E. Pugh and I am Sales Manager and Treasurer of Russell and Pugh Lumber Company of Springston, Idaho, which company is engaged in the production and manufacture of lumber, principally pine, and appear in this proceeding in support of the defendants.

My company manufactures a substantial portion of the rough lumber produced by it into finished lumber and markets it in the territory east and south of Denver.

During the year 1949, we forwarded 197 carloads to the territory east and south of Denver, all of which moved via the Union Pacific through routes. The service of the Union Pacific in the supplying of cars and the moving thereof has been entirely satisfactory. The routes maintained by the Union Pacific are entirely adequate and sufficient for our purposes.

My company's production consists roughly of 60 per cent pine and 40 per cent red and white fir lumber, most of which we manufacture into finished state and therefore have no rough lumber for sale for manufacturing in transit or otherwise. Indeed, there is a shortage of rough lumber in the territory in which we operate.

My company has no need for the routes and rates sought by the D&RGW in this proceeding and we have never asked either the Union Pacific or the D&RGW to establish the same.

Our plant is located on and served by the Union Pacific and we are entirely dependent upon that company for satisfactory transportation service. Any curtailment of [fol. 2009] that service, either switching or line-haul which would be made necessary by the diversion of traffic to the D&RGW with consequent loss of revenue by the Union Pacific would be detrimental and injurious to our business. It is for these reasons that we oppose the complainant in this case.

[fol. 2010] VERIFIED STATEMENT No. 16

I.C.C. Docket No. 30297

Statement of Clyde Bunting, Boise, Idaho

Clyde Bunting is my name and I reside at Boise, Idaho. My position is that of President of the Bunting Tractor Company, having headquarters in that city. The Bunting Company is in the business of retail sales of agricultural implements, heavy duty tractors and contractors' equipment. Practically all of our rail shipments originate in the east, principally from the Caterpillar Tractor Company at Peoria, and from whatever locations John Deere Company has manufacturing plants. I might say that I have been in this business for approximately 40 years.

Some idea of the volume of our rail shipments might be indicated by the fact that in 1948, we had 111 carload shipments from the east, and in 1949, the number was 102. In all cases I think the Union Pacific had the rail haul on these cars from Missouri River junction points.

Our outbound shipments from Boise and our other plants in this area in 1949 numbered 32, 4 of which moved east and 28 west.

Generally speaking, time is very important to our company in securing delivery of the types of equipment which we handle. This is so because they are what might be termed seasonal articles. In fact, any delay in transit might well result in serious losses to our customers, particularly contractors engaged in construction of highways and other expensive projects. It is for this reason that we would in all cases, rates being equal, use the shortest possible

route so as to minimize the time in transit. As I understand it, the use of the Rio Grande route through Denver [fol. 2011] and Ogden from Peoria, Illinois, for instance, would involve substantial additional mileage over the direct route of the Union Pacific. In addition to this, I understand the Rio Grande route would necessitate one and perhaps two additional terminal interchanges with connecting lines. This, of course, would result in additional transit time. In this situation I think it is obvious that the company which I represent would not derive any benefit from the establishment of this new route by way of better transportation service, and I do not understand that the question of rates is involved.

The important consideration which has moved me to appear here today is that the Union Pacific is the only railroad available to our company and other shippers in southern Idaho. Thus, we must depend upon the Union Pacific entirely for adequate rail service, and this would be true even if the Ogden Gateway were opened because I understand that the Rio Grande does not intend to project its railroad into this state. As a businessman, I can readily realize that the Union Pacific must have adequate revenues to sustain its operations, and if it is deprived of its long haul on the business which it has been receiving in the past, there can only be two alternatives: One is increased rates on the traffic which it continues to handle, or a curtailment of service. Of course, I am opposed to both.

[fol. 2012] VERIFIED STATEMENT No. 17

I.C.C. Docket No. 30297

Statement of Jay Malvin, Boise, Idaho

My name is Jay Malvin and I am appearing in this proceeding as Purchasing Agent of the Idaho Power Company in support of the Union Pacific and in opposition to the complaint of the Denver and Rio Grande Western Railroad Company.

The Idaho Power Company, which has its headquarters

at Boise, Idaho, operates throughout southern Idaho and in eastern Oregon.

Our Company, like the Union Pacific, has spent very large sums of money for new lines, plants and facilities in order to meet the increasing demands of the people and industries in the towns and communities which we reach and also in anticipation of future needs.

As I understand the Rio Grande's proposal here, it does not intend to build a line of railroad beyond Ogden into Idaho and thereby offer to the shipping public any added railroad facilities. Moreover, I do not understand that the Rio Grande offers any lower transportation costs than are now in effect via the Union Pacific, and neither do they claim that they can better the service rendered by the Union Pacific.

Our Company is a rather substantial user of rail transportation of various kinds of freight via the Union Pacific and its connections. We move in a substantial number of carloads each year. A considerable number of these cars come from the east, and notwithstanding the fact that they originate at many scattered points, we have throughout the years found that the routes and service of the Union Pa- [fol. 2013] cific have been entirely adequate and satisfactory. For this reason then, I see no advantage on shipments which might be made over the Rio Grande route, and as far as I know, none of the firms from which we make purchases has indicated any interest in that route. Inasmuch as the Rio Grande cannot offer any better rates or service than the Union Pacific, and in all probability cannot match that service, we obviously would derive no benefit from opening of the Ogden Gateway.

The point I want to emphasize in appearing here is that the Union Pacific, like the Idaho Power Company in its field, is the backbone of the transportation industry in the southern part of Idaho and eastern Oregon. The common territory which the two companies serve is not densely populated and distances are great. Moreover, much of the land is yet unproductive. Throughout the years, the Union Pacific has recognized the need and desirability of expanding the state's economy. In company with other business, it has carried on an intensive campaign to promote and encourage the development of this area. The result is

that today Idaho ranks high among the states in agricultural pursuits, in lumber output, and is expanding industrially. Being the only railroad in the southern part of the state, obviously it is a vital factor in the economy of our area; in fact, it is the only railroad to which shippers can look with confidence in solving transportation problems.

It is my considered belief that if this area is to continue its growth and development, then it must continue to be served by a strong railroad—in other words, one that is able to render service at the lowest possible rates con- [fol. 2014] sistent with adequate and efficient service. I believe the Union Pacific has been doing just that in the past. The proposal here that the Union Pacific deliver southern Idaho traffic to the D&RGW at Ogden and let it have the intermediate haul to eastern markets is, in my judgment, not justified. It seems to me that the Union Pacific should be entitled to the long haul on shipments originating on its own lines. Obviously, if this is denied them, it would have the inevitable effect of substantially reducing their earnings and eventually weaken it in the same manner that any other business enterprise would be weakened if its earnings were impaired. Faced with this situation the Union Pacific would, I believe, have no alternative but to adjust its expenses to its revenues or increase its rates. Plainly, either alternative would have a detrimental effect upon the economy and welfare of the state.

It is for these reasons that I appear in this proceeding in support of the Union Pacific's position.

[fol. 2015] VERIFIED STATEMENT No. 18

I. C. C. Docket No. 30297

Statement of Fred A. Phillips, Baker, Oregon

My name is Fred A. Phillips of Baker, Oregon; I am engaged in business as a dealer in livestock, principally cattle, and am appearing here in support of the Union Pacific Railroad and against the contentions of the D&RGW.

I have been engaged in the livestock business as a producer, buyer and seller, since 1894; was President of the

Northwest Livestock Shippers Traffic League from 1931 to 1949; served as President of the Oregon Cattlemen's Association for four terms commencing in 1923 and was President of the Oregon Wool Growers' Association for two terms commencing in 1928.

During the year 1949, I shipped approximately 4000 head of cattle consisting of 160 carloads, from the vicinity of Baker, Oregon, to points Denver and east thereof and also to California. Of the 160 carloads mentioned, 60 carloads, approximately 40% were shipped east over the Union Pacific routes and the service rendered by that Company as to car supply, transit time, etc., has been very satisfactory. The routes and services of the Union Pacific are entirely adequate and sufficient for my purposes as a shipper and I have never requested either the Union Pacific or the D&RGW to establish the through routes now requested by the D&RGW, nor do I anticipate any need for such routes.

It is extremely important in the shipment of my livestock that they be handled on the fastest possible intransit time with the fewest number of interchanges. As I understand the complaint in this case, it seeks to have diverted from the [fol. 2016] Union Pacific route, traffic that would originate in my territory, to the D&RGW at Ogden, thence via D&RGW and connections beyond. The handling of livestock via that route would result in longer time in transit and additional interchanges than is now necessary via the Union Pacific route. Such additional handling would be detrimental to my interests as a shipper.

Also, the diversion of traffic from the Union Pacific to the D&RGW would result in loss of substantial revenue to the Union Pacific. Such loss in revenue would necessarily be offset by curtailment in the present service and possible increase in rates, or both, either of which would be disadvantageous to me and injurious to my business.

Producers in this area have no difficulty in disposing of their feeder cattle and lambs, and the opening of the Ogden Gateway is not necessary from a marketing standpoint nor would it influence the price paid to the producer for such livestock.

[fol. 2017] VERIFIED STATEMENT No. 19

I. C. C. Docket No. 30297

Statement of Edward E. Parsons, Payette, Idaho

Edward E. Parsons is my name and I live at Payette, Idaho. I am in the business of operating a packing plant under the name of Parsons Fruit Company, handling several kinds of perishable vegetables and fruits commonly grown in western Idaho and eastern Oregon.

I have been in this business for 18 years. My dealings in most instances are confined to sales through some of the nationally known concerns located at Kansas City, St. Louis, Chicago and Denver. I also sell quite a lot to the Idaho representative of one of the largest chain stores in the country. Last year, I shipped 399 cars.

My No. 1 potatoes and large onions generally move to St. Louis, Chicago and east, and occasionally to the southeast, while the No. 2 potatoes and the smaller onions go mainly to Kansas City, Missouri, and the southwest. In the case of the latter shipments, I have been able, when a car is rejected at a point between Denver and Kansas City, to sell or reconsign it to a purchaser in Kansas or the southwest on existing joint rates, and I have suffered no loss on account of not being able to find other markets for such cars.

The reason I am supporting the Union Pacific here is that my plant at Payette is reached by its railroad—in fact, there is no other railroad for many miles. I must depend upon the Union Pacific and they have given me good service in every way. It is the shortest and fastest route to the east, southeast and southwest and I would not have used the Rio [fol. 2018] Grande even if the rates were the same over that line. The through routes and rates now in effect over the Union Pacific allow me to reach all points where our products are in demand, so that opening of the Ogden Gateway is not necessary on that account.

My concern here, however, and this is the main reason for appearing here today, is that the consignee or purchaser controls or designates the routing on many of my shipments. In the past, the Union Pacific has had the long haul to Missouri River junction points, but I am afraid that if the

Rio Grande gets what it wants in this proceeding, it and its connecting lines will solicit eastern consignees to divert their shipments from the Union Pacific, leaving it only the short haul to Ogden, regardless of how much I must depend upon the U. P.

Even if the Rio Grande gets the Ogden route opened up, that will not increase the rail service at Paget's, and I would still have to rely upon the Union Pacific for local service for cars, for switching and for rate adjustments. I cannot see how sandwiching of the Rio Grande into the rate would be of any benefit to me. On the contrary, I believe it would actually hurt me because it can have no more effect than to reduce the earnings of the Union Pacific. Other effect the shippers of Idaho cannot expect. Certainly, continue to spend money to give service and make improvements if it is faced with the imminent threat of diversion of a large portion of its traffic.

[fol. 2019] VERIFIED STATEMENT No. 20

I. Docket No. 30297

Statement of Marcus A. Pomeroy, Hansen, Idaho

Marcus A. Pomeroy is my name and my place of business is Twin Falls, Idaho. That business consists of the growing of potatoes, cattle feeding and general farming; also the shipping of potatoes. I have been affiliated with the potato industry for 19 years in the Twin Falls territory. From 50 to 75 carloads of potatoes are grown on my farm-residence at Hansen, Idaho, each year. I also purchase from growers about 150 cars of potatoes a year. My potatoes go to markets in southern California and to Kansas City and Chicago. No. 1 potatoes shipped east go mostly to Chicago, while No. 2's are sold through firms at Kansas City, from which point they are diverted by buyers to points beyond.

First, let me say that the main reason why I am supporting the Union Pacific here is that it has pioneered the growth and development of not only the Twin Falls district but the entire southern portion of Idaho. I have lived in the Twin Falls area since 1905 and the Union Pacific Railroad is prob-

ably one of the first things I remember in my youth. Later, when I went into the potato business, and ever since, I depended upon it for about everything connected with getting my shipments to market. The U. P. has meant a lot to me throughout the years, and unless the Rio Grande can do a better job of railroading, and I don't see how they can because of their much longer distance, then I don't see any need for opening the Ogden Gateway.

If the Rio Grande had spent its money and worked the [fol. 2020] way the U. P. has to develop the state, perhaps I would look at it differently, but under their deal they would have absolutely nothing in the state that would help me assemble and start my potatoes to market as the U. P. now does.

The Union Pacific have several thousand employes in Idaho and it is a heavy tax-payer. The Rio Grande, though, would not contribute anything along those lines to the state. In the past, the Union Pac : has been considerate of me and given my shipments excellent handling, but if some railroad like the Rio Grande is going to be able, only by solicitation, to take away a lot of the U. P.'s business, then I am afraid it will not have the money necessary to properly maintain its properties in order to give the good service it has in the past. If that happens then the U. P. will have to give me and other shippers only mediocre service.

Prompt and dependable rail service is absolutely necessary to the growing, shipping and marketing of the perishable commodities grown in this state.

For my part, I cannot see that any good can come out of the Rio Grande's proposal to me and others in the same line of business in Idaho. On the other hand, I am convinced that in the end, it will have serious adverse effects upon us all, and consequently I am vigorously opposed to the opening of the Ogden Gateway.

[fol. 2021] VERIFIED STATEMENT No. 21

I. C. C. Docket No. 30297

Statement of Frank H. Adams, Twin Falls, Idaho

My name is Frank H. Adams, and my residence is Twin Falls, Idaho. I am President and General Manager of the Idaho Growers Association, shippers and packers of potatoes, beans and onions for domestic and export markets, with pioneer experience of 45 years in this valley.

The principal markets for the products my firm handles are at points east and south of Denver, Colorado, and we use the New Orleans port mostly for export to South American points.

During my years of experience as a shipper, I have had no difficulty in marketing the products we handle via the existing routes through the Denver or Kansas City Gateways, and at no time have we had need for the Rio Grande, as there are no markets on that line that consume Idaho products we ship. To points beyond the Rio Grande, yes, we have the direct line service of the Union Pacific, and time being the essence in our perishable business, we would not have used the Rio Grande even if the same rates applied, the Union Pacific being more direct and faster to the Denver and Kansas City Gateways.

On an annual basis, our shipments average over 200 carloads, and considering what the Union Pacific has done for the State of Idaho, (and as a pioneer shipper, I know) I do not want to see it deprived of revenue on traffic which it originates here, only to be turned over to a foreign railroad near our state line, which has no taxable interest in Idaho. There is no question but the Union Pacific's revenue would [fol. 2022] drop off if the D&RGW takes business from it, and cause the Union Pacific to start cutting expenses in Idaho and elsewhere.

To summarize, the reasons why I am opposing the Rio Grande complaint follow:

First, I think a high-class railroad such as the Union Pacific should have the benefit of its long haul once it has furnished the cars and borne the expense of assembling the traffic for movement.

It is inconceivable the D&RGW would expect such a windfall to happen without any financial interest in Idaho, which would greatly retard Union Pacific Railroad interest in Idaho by extensive loss in revenue to a parallel line just outside of the state, the answer? Let the D&RGW cross into Idaho with a railroad and compete by paying Idaho taxes and nobody would complain and would help them. On the other hand, if outside railroads near Idaho are allowed to open up Gateway privileges just outside the state, thereby robbing the Union Pacific Railroad of the long haul freight it originates, *we never will have but a one-man railroad state.*

Finally, if Idaho is to be a one railroad state, and apparently the Rio Grande intends it shall continue to be, then I am thankful that we have the Union Pacific, and it logically follows that we should fight to keep it in a healthy position, financially and physically, to be able to continue to give good service, unhampered by outside connecting lines.

We need another competitive railroad in Idaho, but I am against weakening what we already have by opening a Gateway to the D&RGW Railroad so near our state.

[fol. 2023] VERIFIED STATEMENT NO. 22

I. C. C. Docket No. 30297

Statement of Frank Stubbs, Yakima, Washington

My name is Frank Stubbs of Yakima, Washington, and I am President of Stubbs Fruit Company. I am a member of the Yakima Valley Traffic Association and a member of the Board of Directors of the City of Yakima Chamber of Commerce and joined in the resolutions passed by those organizations supporting the position of the Union Pacific Railroad in this case. I am appearing here in support of the defendants on behalf of myself.

My Company is engaged in the storage, packing and marketing of apples, pears, peaches and prunes produced in the Yakima Valley and during the year 1949, shipped approximately 153 carloads of the fruits named, of which 148 carloads moved via the Union Pacific long-haul routes

to points East and South of Denver. My place of business is located on the Union Pacific Railroad, whose service from the standpoint of car supply, transit time, diversion orders and other such service has been highly satisfactory. In so far as my needs are concerned, the routes of the Union Pacific and the service thereover are entirely adequate and sufficient for my purposes.

In the shipment of the perishable fruits which I handle it is important that they move by the most direct route with the fewest possible interchanges between carriers, as expeditiously as possible. The route proposed by the Denver and Rio Grande Western being longer than that of the Union Pacific would result in longer time in transit, and more interchanges, and therefore would not benefit me in any manner.

In addition, as I understand it, the diversion to the routes [fol. 2024] proposed by the Denver and Rio Grande Western would divert from the Union Pacific traffic now handled over its long-haul routes, with consequent loss of revenue. If this is accomplished, it naturally follows that such reduced revenues would necessarily have to be met by decreased operating expenses, which in turn would mean the curtailment of service by the Union Pacific. Anything that would reduce in any manner the service now rendered me by the Union Pacific would be disadvantageous and injurious to my business.

For the reasons outlined above, I am opposed to the proposal of the complainant in this case.

[fol. 2025] VERIFIED STATEMENT No. 23

I. C. C. Docket No. 30297

Statement of Frank W. Shields, Yakima, Washington

My name is Frank Shields and I am the Secretary and Manager of the Yakima Valley Traffic Association of Yakima, Washington. I am testifying here on behalf of that Association and for the Yakima Chamber of Commerce. I live in Yakima, Wash.

On November 16, 1949, after consultation with repre-

sentatives of both the Union Pacific and Denver and Rio Grande Western, at a general meeting of the membership of my Association, a resolution was unanimously adopted favoring the position of the Union Pacific Railroad Company in this proceeding.

There are 90 members of the Association, of which 65 members are engaged principally in the production, warehousing, storage, marketing and selling of apples, pears, peaches, prunes, apricots, plums and cherries produced in the Yakima Valley, Washington.

The Association appears before the Interstate Commerce Commission and the Various State Commissions in all cases affecting the interests of its members and in such proceedings, appearance on behalf of the Association is usually made by me. Such proceedings involve rates, routes, and all other transportation problems with which the fruit industry of the Yakima Valley is concerned. In addition, the Association compiles crop, shipping and sales data for the information and guidance of its members.

The Association as such has been in existence for approximately 33 years and I have occupied my present position with it for about 5 years.

[fol. 2026] During the year 1949, the members of the Association whom I represent shipped in excess of 20,000 carloads of which approximately 5,000 carloads were shipped over the Union Pacific. The majority of these carloads moved to destinations beyond the territory served by the Denver and Rio Grande Western Railroad. Westbound shipments received by the membership consisted of fruit baskets, spray material, fruit wrappers and other supplies, originating for the most part East and South of Denver. The general route of movement has been via the Union Pacific on both outbound and inbound shipments and the service given by the Union Pacific, including car supply, transit time, protective service, diversion, tracing and all other facilities connected with the movement of these shipments has been extremely satisfactory and for the purpose of the Association's membership, is entirely adequate and sufficient.

Neither the Association nor any of its members have asked that any additional routes, including that of the

Denver and Rio Grande Western, be established. And, after full consideration of the application of the Denver and Rio Grande Western, it was concluded that no benefit whatever would be derived from the establishment of such routes.

Since all shipments made by the Association's membership consist of perishable fruits, the time in transit and protective service rendered is of utmost importance. If the route requested by the Denver and Rio Grande Western is established, it will be longer than the present Union Pacific route and that, together with the additional interchanges would, of course, require time in transit and in-
[fol. 2027] crease the opportunity for damage to lading and consequent customer dissatisfaction. Such could not possibly benefit the members of the Association.

Defendant Northern Pacific Railway Company was the original line in the Yakima Valley. At great expense the Union Pacific, years ago, extended its line to Yakima and constructed feeders in connection therewith, and as the territory developed, secure a share of the traffic originating in the Valley. We understand that the purpose of this complaint is to secure to the Denver and Rio Grande Western at Ogden, traffic originated by the Union Pacific, thus depriving the latter company of the long haul now enjoyed by it, with consequent loss of revenue. It is but natural if the Union Pacific is deprived of some share of the revenue it now receives from the handling of this traffic, such loss will have to be compensated by reduction in operating expenses through less frequent train schedules, shorter periods of switching service, less frequent switching, and generally curtailed maintenance. Also, it would seem that the ability of the Union Pacific to reduce rates, provide more and better equipment and generally to improve its service would be vitally affected. Anything tending to curtail the present rail service to the members of the Association would be disadvantageous to them and injurious to their business. For these reasons, we are opposed to the Denver and Rio Grande Western in this proceeding and ask that the Commission take no action which might result in an impairment of the service now rendered to us by the Union Pacific.

[fol. 2028] Resolutions passed by each of those organiza-

tions in behalf of the Union Pacific Railroad Company in this case are submitted as Exhibit —.

[fol. 2029 EXHIBIT TO VERIFIED STATEMENT No. 23

Exhibit —

Witness: Frank Shields

Statement and Resolution

Ogden Gateway Case: ICC Docket 30297

By the Yakima Traffic Association, Yakima, Washington on Behalf of Growers and Shippers of the Yakima Valley Who Annually Ship More Than 20,000 Carloads of Perishable Tree Fruits

Statement

The application of the Denver and Rio Grande Western Railroad Company to open the Ogden Gateway was considered by the members of the Yakima Valley Traffic Association at a meeting of the membership, November 16, 1949.

After a discussion of the many circumstances relating to the application of the Denver and Rio Grande Western Railroad Company, it was the consensus of the members that the opening of the Ogden Gateway was not in the interests of the producers and Shippers of the Yakima Valley or the welfare of the State of Washington.

The more important points on which the members predicate their opposition to the opening of the Ogden Gateway are as follows:

1. The applicant does not own a supply of refrigerator cars which it could contribute to the movement of the perishable traffic in which it seeks to share. The supply of refrigerator cars and also the facilities to provide accessorial services essential to the transportation of perishable farm products would, therefore, continue to be the burden and responsibility of the Union Pacific on freight moved via the Ogden Gateway.

2. The Union Pacific, in expectation of the freight traffic of this area, has made extensive investments in refrigerator cars, ice plants and accessorial facilities to adequately provide the special transportation requirements of the perishable products of the Yakima Valley.

[fol. 2030] 3. The investment which the Union Pacific already has made and must continue to make to adequately serve the transportation needs of this area, require and deserve the undivided revenue of the freight traffic originating to them in this area.

4. The Union Pacific also contributes substantially to the state's economy through tax payments and payroll wages, whereas the Denver and Rio Grande Western Railroad Company makes no such payments.

5. The Denver and Rio Grande Railroad Company is not in position to provide transportation service via the Ogden Gateway to terminal markets that would be comparable to the service now provided by the Union Pacific.

6. The opening of the Ogden Gateway offers no advantages of convenience or necessity to the shippers or receivers of freight of this area. Any division of the freight traffic of the Union Pacific from and to the Yakima Valley could result only in increasing the revenue of the applicant at the expense of the Union Pacific.

Resolution

Thereupon, on motion duly made and seconded, it was moved and carried; that the secretary-manager be directed to prepare a statement of the "reasons why" this association is opposed to the application of the Denver and Rio Grande Western Railroad Company to open the Ogden Gateway; to deliver a copy of the statement and this resolution to the Union Pacific Railroad Company and also to the Washington Public Service Commission; and to request the commission to join with this association in opposing the opening of the Ogden Gateway.

Yakima Valley Traffic Association, by (S.) F. W. Shields, Secretary-Manager.

[fol. 2031] **Statement of the Yakima Chamber of Commerce upon the Application of the Denver & Rio Grande Railway to the Interstate Commerce Commission for the publishing of joint rates via its lines between Ogden and Colorado Junctions on Traffic originating in and Moving to this Territory on the Union Pacific Railway.**

The Transportation Committee of the Yakima Chamber of Commerce opposes the granting of the application for the following reasons:

Granting of the petition would not result in better service since the Union Pacific has excellent facilities and an excellent road-bed paralleling the route of the D&RGW.

Granting of the petition would not lower freight rates, since there is no intent to ask for rate reductions.

Granting of the petition would result in loss of revenue to the Union Pacific, since they would have to split their income with the petitioning railroad. It would impair the ability of the Union Pacific to maintain payrolls, taxes, improvements, and purchases in the Yakima territory, with no resultant increase in expenditures by the D&RGW within the area.

Any impairment of the revenue of the Union Pacific, with no offsetting gain, would eventually reflect in poorer and more costly service to the shippers and receivers of the Yakima Valley.

Upon consideration of this recommendation by the Board of Directors of the Chamber, it was moved that it be adopted, and that the Chamber go on record as opposing the Granting of the petition. The motion was seconded and carried.

(Signed) L. W. Markham, Secretary.

Adopted at the regular Yakima Chamber of Commerce meeting of the Board of Directors, Yakima, September 9, 1949.

[fol. 2032] VERIFIED STATEMENT No. 24

I.C.C. Docket No. 30297

Statement of Reese Lamb, Freewater, Oregon

My name is Reese Lamb and I am General Manager of F. G. Lamb & Company located at Freewater, Oregon. I am appearing here in favor of the position of the Union Pacific Railroad and the other defendants.

Our company is engaged in the business of packing, processing, shipping and storage of fruits and vegetables. The fresh fruits handled are cherries, prunes and apples. The fruits we freeze are strawberries, prunes, sliced apples, peaches, apricots and cherries; and the vegetables we freeze are peas, asparagus, and lima beans. We also can prunes and peas. We have both cooler and zero storage space, and our storage business includes the storage in transit from local points of fresh fruits and frozen foods.

Inbound shipments received at our plant from eastern and southwestern points consist principally of paper boxes from Wisconsin and fruit baskets from Texas. During the year 1948, we handled approximately 14,000,000 pounds of frozen fruits and vegetables. Our outbound shipments during that year, transported via the Union Pacific routes, consisted of 4,142 tons of frozen goods, 3,900 tons of fresh fruits and 515 tons of canned goods, all of which were transported to points Denver and east.

The handling of our shipments via the Union Pacific through routes has been entirely satisfactory, including the furnishing of cars, time in transit, protection during transportation, diversions and tracing, and in so far as our needs [fol. 2033] are concerned, the routes maintained by the Union Pacific are adequate and sufficient for our purposes.

Most of the commodities which we handle are perishable in nature, therefore, transportation via the most direct and shortest routes with a minimum of handling in transit is important. The Union Pacific has provided us with superior service, protective facilities and prompt diversion, reconsignment and tracing. The routes proposed via the D&RGW, we feel result in longer time in transit, more handling through terminals with exposure to further delay

and damage to shipments, not to mention to render more difficult the tracing, reconsignment and diversion, which services on the lines of the Union Pacific are performed by the Pacific Fruit Express Company, whose operations, we understand, do not extend to the lines of the D&RGW.

We are opposed to any action by the Commission in its consideration of this case which would jeopardize or in any way weaken the ability of the Union Pacific to continue the complete, efficient, and entirely satisfactory service which it now provides in the handling of our traffic.

[fol. 2034] VERIFIED STATEMENT No. 25

I.C.C. Docket No. 30297

Statement of George P. Stadelman, The Dalles, Oregon

My name is George P. Stadelman and I am a partner in the Stadelman Fruit Company, whose headquarters are located at The Dalles, Oregon. The business of that company is growing, packing, storage and shipping of fresh tree fruits of all descriptions. We have plants located at The Dalles, Hood River and Milton-Freewater, Oregon, Zillah, Yakima, Wenatchee, Oroville, Chelan and Chelan Falls, Washington, and Payette, Idaho. We are the largest shippers of fresh cherries and Italian prunes in the United States. I am a former Mayor of The Dalles, Oregon. I am a member of The Dalles, Oregon, Chamber of Commerce which passed a resolution in favor of the Union Pacific Railroad Company's position in this case, and having been authorized to appear here and testify for The Dalles Chamber of Commerce, my appearance is in support of the defendants both for myself and for that Chamber.

The fresh fruits shipped by my company are destined to points in California, the Dakotas and Montana, and to points east of the Missouri River, with about 70% of our shipments going to the latter territory. The general movement of this fruit is via the Union Pacific through routes and we annually ship approximately 3,000 carloads via those routes.

Union Pacific service in the handling of our shipments

has been satisfactory. Its routes and services are entirely adequate and sufficient for my purposes as a shipper, and for the purposes generally of shipper members of The Dalles Chamber of Commerce.

[fol. 2035] We have never had any need for or desired the establishment of the through routes via the D&RGW proposed in this proceeding and have asked neither the Union Pacific nor the D&RGW that they be established.

In the movement of our shipments, which consist entirely of perishables, time in transit is of primary importance and the Union Pacific's long haul routes being the shortest, we feel that transit time via its routes could not be improved upon via the longer route of the D&RGW with consequent additional interchanges between railroads. For these reasons alone, we would not route shipments via the D&RGW if the routes requested were established as a result of this proceeding.

In the event the complainant in this case is successful in having the routes requested established, and as a result thereof, the revenue of the Union Pacific Railroad Company should be reduced and train service, switching service, as well as other services now available to us via the Union Pacific, including protection of our perishables in transit, should be reduced or curtailed in any manner, our business would be greatly damaged and injured.

The Union Pacific, with its payrolls and facilities at The Dalles, is an important contributor to the welfare of our city. Certainly, we would be opposed to any action by the Commission in this proceeding which would weaken the Union Pacific's position financially or otherwise, and since the D&RGW will provide no service, have no trackage, station facilities, payrolls, etc., nor pay taxes in the Pacific Northwest territory, we see no reason why the Union Pacific [fol. 2036] should be weakened in order to strengthen the financial position of the complainant in this case.

[fol. 2037] EXHIBIT TO VERIFIED STATEMENT No. 25

I.C.C. Docket No. 30297

Witness: Geo. P. Stadleman

RESOLUTION

Whereas, the Board of Directors of The Dalles Chamber of Commerce, at its regular meeting, October 3, 1949, reviewed and discussed the application of the Denver and Rio Grande Western Railroad, for through rates on traffic to and from the Pacific Northwest, in connection with the Union Pacific Railroad, at Ogden, and,

Whereas, such joint through rates would in no way serve The Dalles by expansion of markets, reduction of freight charges to or from this point, nor improve rail service,

Therefore, it was resolved that the Board of Directors of The Dalles Chamber of Commerce is opposed to the application of the Denver and Rio Grande Western Railroad, for the purposes above cited.

Adopted by the Board of Directors of The Dalles Chamber of Commerce, at its meeting, October 3, 1949.

(Sgd.) C. P. Horn, President. (Sgd.) W. S. Nelson, Secretary.

[fol. 2038] VERIFIED STATEMENT No. 26

I.C.C. Docket No. 30297

Statement of Frank E. Freshwater, Yakima, Washington

My name is Frank E. Freshwater of Yakima, Washington, and I am Vice President of Perha Fruit Corporation, Yakima, Washington. I am a member of the Yakima, Washington, Chamber of Commerce, a Director in the Yakima Valley Traffic Association, Vice President and member of the Executive Board of the Northwest Horticultural Council and of the Oregon-Washington-California Pear Bureau. The Yakima Valley Traffic Association and the Yakima, Washington, Chamber of Commerce passed resolutions favoring the position of the Union Pacific Railroad in this

case, and I am appearing here in support of the Union Pacific Railroad and the other defendants.

The Perham Fruit Corporation is engaged in the business of growing, storing, packing and marketing of apples, pears, cherries, prunes, peaches and apricots, all of said fruits being produced in the Yakima Valley, Washington. Generally speaking, the fruit shipped by my company is destined to points east and south of Denver, and during the year 1949, we shipped a total of 298 carloads, of which 226 carloads were destined to points east and south of Denver and were transported via the Union Pacific through routes. The routes now open to us via the Union Pacific are entirely satisfactory and sufficient for our needs. We have never felt the need or desire for the establishment of the through routes proposed via the D&RGW and have never asked either company that they be established.

Our experience with Union Pacific service as to all our transportation needs has been excellent. Neither my com-[fol. 2039] pany nor others engaged in similar business in this territory has any need to ship fruit to any intermediate points served by the D&RGW for storage in transit. There are sufficient storage and other facilities for the handling locally of all fruit produced in the Yakima Valley and, therefore, storage in transit privileges which would be available at points on the D&RGW, if complainant is successful in this case, would be of no benefit to either the producer or marketer of fruit grown in this territory.

All of the commodities handled by my company are of a perishable nature and, therefore, require prompt and expeditious handling in refrigerator cars. The Union Pacific has provided a sufficient number of cars to fulfill our needs, has set up and provided a system of tracing reconsignment and diversions, maintains "on-line" offices to supply us with shipping information such as rates, routings, etc., together with necessary facilities for the protection of our shipments in transit by furnishing both icing and heater service which, as a whole, assures us of satisfactory transportation service for our commodities. After full consideration of the proposal of the D&RGW, we have concluded that the D&RGW is not in position to add anything by way of car supply or other transportation facilities and service

which would result in any more efficient handling of our shipments or open new markets for our products. On the contrary, the longer routes via the D&RGW, with the consequent additional interchanges would result in longer time in transit and offer opportunity for damage to our shipments. Also, with more carriers involved in the transportation of our products, diversion, reconsignment and tracing would be more difficult.

[fol. 2040] Should the traffic now handled via the Union Pacific long haul routes be diverted to the D&RGW at Ogden, the resultant loss in revenue to the Union Pacific would probably be reflected in operating economies by that company in the way of curtailment of service, both switching and line haul, maintenance of its property and equipment including replenishing and expanding its refrigerator car supply, and protective service facilities, any of which would be detrimental to the fruit industry of the Yakima Valley in general and the business of this company in particular. Under the circumstances, we are opposed to any action by the Commission that might result in these conditions arising.

[fol. 2041]

VERIFIED STATEMENT No. 27

I.C.C. Docket No. 30297

Statement of E. S. Prentice, Yakima, Washington

My name is E. S. Prentice. I am President of the Westbrook Packing & Storage Company, Inc., Westbrook, Washington, served by the Yakima Valley Transportation Company; of the Prentice Packing & Cold Storage Company, Inc., and the Prentice Packing & Storage Company, Inc., these latter two having their places of business in Yakima and served by the trackage of the Union Pacific. My residence is Yakima, which point is also the headquarters of my companies. I am a member of the Yakima Chamber of Commerce and of the Yakima Valley Traffic Association, both organizations having passed resolutions supporting the Union Pacific's position in this case. I was present at the meeting of the Yakima Valley Traffic Association at

which its resolution was adopted and voted in favor of that action. My appearance here is solely on behalf of my companies.

My companies are engaged in the buying, storage, packing and shipping of fresh fruits, consisting of apples, pears, peaches, apricots, prunes, plums and cherries. The traffic we handle is produced locally in the Yakima Valley and is shipped to destinations principally east and south of Denver. We use the through routes of the Union Pacific extensively, having shipped via those routes in 1949, a total of 524 cars, of which 492 moved to the eastern territory described, the remainder to points in California, Montana and the Dakotas. Our received traffic from the eastern territory mentioned is extremely light, in 1949 having totaled seven cars, all transported via Union Pacific.

[fol. 2042] Our experience with the Union Pacific service has been very good and we certainly would not wish anything to transpire as result of this proceeding which would in any way result in any curtailment of same. Its schedules are fast and dependable and its routes are adequate and sufficient for our needs. We have experienced but few instances of car shortages but when those instances have occurred, it has been our experience they have been general rather than local and were remedied without undue delay. We have never felt any need or desire to route shipments via the D&RGW for transit or other purposes, and, therefore, have never asked either the D&RGW or the Union Pacific to establish joint through rates via the route requested in this complaint. The present routes of the Union Pacific protect all our markets and, therefore, preclude any possibility of difficulties through pocket markets.

Our products, being perishable, must move via the shortest routes on fast and dependable schedules with as few interchanges as possible, and we must at all times know the whereabouts of our shipments in transit to properly protect possible diversions, reconsignments, and arrange for whatever changes in protective service in transit may be necessary. The Pacific Fruit Express Company which provides the protective services, including refrigerator car supply, on perishable traffic moving over the rails of the Union Pacific, maintains an office in Yakima. It not only

arranges the necessary supply of refrigerator cars to accommodate our loading requirements, but also handles our diversions, reconsignments, protective service requirements [fol. 2043] at Yakima as well as in transit, and furnishes us with prompt and accurate car movement information. Since the Union Pacific also maintains a traffic agency in Yakima and there is close coordination of efforts between that office and the office of the Pacific Fruit Express Company, we have, in effect, two transportation agencies bearing the responsibility of the satisfactory transportation service over the Union Pacific routes. It is our understanding the Pacific Fruit Express Company does not operate over, nor does it provide any protective services on the lines of the D&RGW, and, therefore, should any of our traffic be routed via that line, it would be lost so far as the ability of the Union Pacific and the Pacific Fruit Express Company to provide us with the prompt, complete service we are now receiving on cars traveling over the routes of the Union Pacific.

If the route sought in this complaint should be granted and by such action revenues of the Union Pacific be reduced to a point where it would be necessary to curtail services, including switching at Yakima as well as on the line of the Yakima Valley Transportation Company which is owned by the Union Pacific, my business would be adversely affected. The additional interchanges required in the event the route sought in this complaint is established will result not only in longer time in transit, but will also subject shipments to damage by reason of terminal switching necessary to make the move between railroads. Even if route requested were established, we would not use it for storage in transit, stopping in transit to partly unload, or for any other purpose, and, therefore, are opposed to the establishment thereof because of the injurious [fol. 2044] effect it might have to our business through reduction of revenues of the Union Pacific.

[fol. 2045] VERIFIED STATEMENT No. 28

I.C.C. Docket No. 30297

Statement of Charles C. Gossett, Nampa, Idaho

My name is Charles C. Gossett and my home is at Nampa, Idaho. I am Manager of the G. K. Livestock Feeding Company located at that point, which company is in the business of feeding cattle. My experience in purchasing and handling livestock throughout the Northwest has extended over a period of 25 years, the past two years of which I have been connected with the G. K. Company in purchasing cattle for our feeding operations at Nampa. We make purchases locally in Idaho, also at various points in the States of Montana, Oregon, Nevada, Eastern Idaho, Colorado and Iowa.

During 1949, we fed and fattened at our Nampa yards in the neighoborhood of 5,000 head of cattle.

In buying cattle in the areas which I have mentioned, our aim is to get the type and quality of cattle that can take on good increased weight. Obviously, we cannot know and do not know where they will ultimately be sold, moved and slaughtered; this for the reason that our markets have been at such points as Portland, Los Angeles, Seattle, Denver and Omaha. To be specific, we have in the past purchased a large number of feeder cattle in Montana which, after feeding and fattening, have finally moved on a backhaul to such points as Denver, Omaha and California. In this situation then we would have no transit billing behind such a movement. Another illustration is where we have bought cattle in Oregon; and after the fattening operation was completed, they were sold and returned over the Union Pacific to the Portland market. Here again there would be no transit billing, and flat rates were paid on the inbound and outbound movement.

[fol. 2046] Many of the cattle which we buy, both feeder and short feeder cattle, are bought on the auction markets. In the process of bidding, it is not the custom at these auction markets to indicate whether or not transit billing is available on one animal or on the lot. However, if after the transaction is completed, it does develop that there is some transit billing available, it has in some instances been

passed on to the purchaser, but the existence or non-existence of transit billing has never been the controlling factor in the transaction.

In conclusion here I want to say that I have been in the livestock business in its various phases in the Snake River Valley in Southwestern Idaho and Eastern Oregon for about 25 years. In this business, of course, I have had occasion to use the rail service of the Union Pacific on many hundreds of carload shipments of livestock. Such service and car supply on my shipments has been reasonably prompt and reliable, and I do not see how the intentions of the Rio Grande Railroad here could in any way improve or change the situation. By that I mean that the Rio Grande does not plan to add any railroad facilities or service in this area; and, consequently, as I see it, there can be no improvement in the transportation situation because I must still look to the Union Pacific to do everything necessary to serve me locally. Certainly, we cannot expect the Union Pacific to continue to spend large sums of money for improvements, for new cars and for maintenance of a network of branch lines in this area if it is required to share with the D&RGW the largest part of the haul on the traffic which it originates and terminates. The Union Pacific has contributed much to the welfare and economy of the State of Idaho, and I hope it will be able to continue to [fol. 2047] do so. Obviously though, if an out-state railroad like the D&RGW, without having any obligation whatever toward Idaho shippers or investment in the state, including freedom from payment of taxes, is to be permitted to tap the traffic and revenue of the Union Pacific, then in the end it will only impoverish the one railroad upon which we must depend for rail service.

[fol. 2048] VERIFIED STATEMENT No. 29

I.C.C. Docket No. 30297

Statement of Russell O. Vognild, Tacoma, Washington

This is Russell O. Vognild speaking, Assistant Western Sales Manager, Hooker Electrochemical Company, Tacoma, Washington, representing my employer and its affiliated

company, Hooker-Detrex, Incorporated, both located on the Tacoma Municipal Belt Line, served by the Union Pacific. Our testimony supports the Union Pacific and its stand in its proceedings involving the D&RGW. Our Tacoma Chamber of Commerce, of which we are active members, added its official support of the Union Pacific position.

Over the Union Pacific during 1948, our two companies Hooker and Hooker-Detrex, shipped 203 carloads and received 200 carloads. The majority of these 403 carloads moved to and from eastern destinations, particularly east of the Missouri River. The Union Pacific service and routes have been adequate and satisfactory both on incoming raw materials and supplies, and in supplying cars and movements of outgoing shipments including liquid chlorine, caustic soda, muriatic acid, hydrogenated oils and tallows, and trichlorethylene.

My employers neither need nor request the routes and rates sought via D&RGW, nor would they benefit thereby in transit at points on the D&RGW, or reconsignments or diversions. Time is of great importance in our company shipments, so we do not favor establishment of a longer route via D&RGW which would, of course, require more time in transit than the present satisfactory Union Pacific service.

[fol. 2049] Understanding the D&RGW complaint seeks to divert Union Pacific traffic to and from Union Pacific points, adversely affecting Union Pacific revenues, we believe this would naturally curtail existing essential train schedules and movements, including switching, any part of which would seriously injure our business. We oppose the D&RGW proposal.

[fol. 2050] VERIFIED STATEMENT No. 30

I. C. C. Docket No. 30297

Statement of F. Lowden Jones, Walla Walla, Washington

My name is F. Lowden Jones. I am Secretary-Treasurer and General Manager of the Walla Walla Canning Company of Walla Walla, Washington. I am a member of the

Walla Walla Chamber of Commerce and was a member of the special committee appointed by that organization to consider the issues involved in this complaint and to submit recommendation to the Chamber for action thereon. This committee unanimously recommended support of the Union Pacific's position and subsequently the Board of Directors of the Chamber of Commerce adopted a resolution supporting the position of the Union Pacific. I am appearing here in support of the Union Pacific on behalf of my company and also on behalf of the Walla Walla Chamber of Commerce.

The business of my company is in the processing and canning of peas, asparagus, spinach and prunes, and during the year 1949, we packed 558,369 cases of these items, of which approximately 70% was shipped by rail. Of our tonnage by rail, approximately 90% moved over the routes of the Union Pacific, with 70% going to points east of the Missouri River, the remainder to destinations in California and the Pacific Northwest.

The service which the Union Pacific has rendered us has been eminently satisfactory. Our cars have moved through with dispatch. Its car tracing and other service is prompt and accurate. Much of our loading is in refrigerator cars and that type of equipment which the Union Pacific has supplied us has been generally adequate and always in good condition.

[fol. 2051] To the best of my knowledge, we have never routed any shipments over the D&RGW. We have never requested the Union Pacific or the D&RGW to establish the routes sought by this complaint and we do not anticipate any need in the future to do so. Should the routes sought be established, they would be of no benefit to us either as to storage in transit at points on the D&RGW, stops to partly unload at such points, or as to opening of additional markets since none would be opened to us. The present routes of the Union Pacific are satisfactory and are adequate for our needs.

Although we make every effort to load our cars in a manner which, with normal handling, should insure their arrival at destination in good condition, it is common knowledge that switching in connection with interchanges as between

carriers through terminal yards frequently results in shifted loads with resultant damage to lading. Since establishment of the route which the D&RGW requests would necessitate additional interchanges more than now are experienced on our shipments via the routes of the Union Pacific, it is obvious that traffic so handled would be exposed to the hazards mentioned.

Many of our cars are pool cars, that is, they contain shipments for two or more customers. On this traffic particularly, time in transit is an extremely important factor and obviously anything that would tend to delay our cars or to expose them to damage through excessive switching and interchanges would be unsatisfactory to us and to our customers.

The Union Pacific has always been helpful to my company in connection with its transportation and rate prob- [fol. 2052] lems. It owns industrial properties in Walla Walla and has been helpful in bringing industries to our city. Through its payrolls and taxes and through its interest in industrial development, it has added to the economic improvement and welfare of the community.

On behalf of my company, as well as the Chamber of Commerce, we register our opposition to any action which the Commission might take in this proceeding which would be injurious to the Union Pacific and which, in turn, would cause it to reduce its expenditures by curtailment of services at Walla Walla or in the expeditious handling of our traffic in transit.

[fol. 2053] EXHIBIT TO VERIFIED STATEMENT No. 30

I. C. C. Docket No. 30297

Resolution

Whereas the Denver & Rio Grande Western Railroad has filed with the Interstate Commerce Commission an application for through rates on traffic to and from the Pacific Northwest in connection with the Union Pacific Railroad at Ogden and Salt Lake City, and

Whereas the granting of such application would require the Union Pacific to share with the D. & R. G. W. revenues

on traffic originating or terminating on lines of the Union Pacific without increasing the volume of such traffic, and

Whereas the Union Pacific has made heavy capital investments in this territory and is contributing substantially to our local economy through payrolls, taxes and purchases.

Now, Therefore, Be It Resolved that the Walla Walla Chamber of Commerce go on record in support of the Union Pacific Railway Company's position in respect to the complaint of the D. & R. G. W.

Recommended for adoption to Board of Directors by Transportation Committee.

Approved by Board, October 4, 1949.

Attest:

(Sgd.) Alfred McVey, Secretary-Manager.

[fol. 2054] VERIFIED STATEMENT No. 31

I. C. C. Docket No. 30297

Statement of Harold A. Cohn, Heppner, Oregon

My name is Harold A. Cohn of Heppner, Oregon. I am a member of the Executive Committee of the Oregon Wool Growers' Association and am engaged in the business of producing, buying and selling of sheep and lambs, and appear in this proceeding in support of the defendants.

The principal destinations to which I ship are points in Illinois and Iowa, with some to California. During the year 1949, I personally fattened and disposed of 3,600 lambs.

I annually ship about 250 carloads of sheep and lambs via the Union Pacific long haul routes and the service given by the Union Pacific as to the furnishing of cars, time in transit, etc., has been very satisfactory. The routes maintained by the Union Pacific are entirely adequate and satisfactory for my purposes as a shipper and I have had no need for, nor do I anticipate a need for, the routes and rates proposed by the D&RGW.

The producers of sheep and lambs in this territory need no additional outlets for their production and would derive no benefit whatever, market or otherwise, from the establishment of the routes proposed.

In the shipment of my sheep and lambs, time in transit and the general handling thereof is important to me, therefore, the use of the longer route proposed by the D&RGW with the consequent increase in the number of interchanges between carriers could not benefit me but, on the other hand, would adversely affect my operations. Also, the longer [fol. 2055] route would require use of the cars, both loaded and empty, for a longer time than is now the case when shipments move via the long haul route of the Union Pacific. These extra car days could very well jeopardize the ability of the Union Pacific to supply me and other shippers with cars for loading in the desired quantity and on the days needed.

The diversion of traffic now handled via the Union Pacific long haul routes to the D&RGW at Ogden, with resultant loss of revenue to the Union Pacific, might well result in curtailment of the service now rendered by the Union Pacific and possibly increase the rates which I am now required to pay. All of this would be disadvantageous to me and injurious to my business as a producer, buyer and shipper of sheep and lambs.

[fol. 2056] VERIFIED STATEMENT No. 32

I. C. C. Docket No. 30297

Statement of William H. Steiwer, Fossil, Oregon

My name is William H. Steiwer. I live in Fossil, Oregon. I am engaged in the production of sheep and cattle near Fossil, Oregon. My range consists of approximately 35,000 acres on which I run between 5,000 and 6,000 head of sheep and 250 to 300 head of cattle. During the year 1949, I marketed about 4,500 lambs. At the present time, I am President of the Oregon Wool Growers' Association. I appear here as an individual in opposition to the D&RGW in this proceeding.

I annually ship via the Union Pacific routes from 4,000 to 5,000 feeder lambs. I have been engaged in this particular business for 25 years, and during that time have patronized the Union Pacific routes exclusively, which routes

have proven satisfactory to me as a shipper from the standpoint of service in transit, car supply, and rates. I have never felt any need for routes and rates via the D&RGW and consequently have requested neither that company nor the Union Pacific for the establishment thereof, even though such routes and rates would be open to me.

The satisfactory movement of my shipments requires the shortest possible time in transit with the fewest possible interchanges between railroads. It is common knowledge that livestock in transit suffers by reason of interchanges which not only delay the movement but also exposes it to the possibility of injury. In view of this, I can see no need for the longer route via the D&RGW.

[fol. 2057] Livestock producers in my territory have no difficulty in disposing of their feeder livestock to purchasers located upon the present available through routes. The establishment of the routes proposed could not affect the market for the available feeder stock by any increase in price or otherwise since purchases are made on the basis of the anticipated ultimate market price of the fat livestock, there being a price generally established for feeders beyond which the purchaser will not go. There is sufficient competition today in the purchase of the available supply of feeder livestock to absorb the production in the area and insure top prices. For these reasons, feeding in transit rates at points on the D&RGW would be of no benefit to me as a producer.

While the diversion to the D&RGW at Ogden of the long haul traffic now handled by the Union Pacific, with the consequent loss of revenue to the Union Pacific, is of great concern to the Union Pacific Railroad, it is but common sense that substantial loss of revenue in any business will result in restricting expenses wherever possible. This is but good business judgment. If, as a result of the loss of revenue to the Union Pacific, its present service, maintenance, etc., was curtailed, it undoubtedly would have an adverse affect upon my operations, resulting possibly in longer time in transit or increased rates, or both. Such would seriously affect my ability to continue as a substantial producer of livestock.

For these reasons, I protest any possible action of the

Commission which would so substantially affect the Union Pacific Railroad.

[fol. 2058] VERIFIED STATEMENT No. 33

I. C. C. Docket No. 30297

Statement of Marion Weatherford, Arlington, Oregon

My name is Marion Weatherford of Arlington, Oregon, and I am a wheat farmer operating a wheat ranch consisting of 9,000 acres and producing 80,000 bushels of wheat annually in the vicinity of Arlington, Oregon.

I am President of the Pacific Northwest Grain and Grain Products Association, an organization of growers, millers and dealers in grain and grain products, drawing membership from the States of Oregon, Washington and Northern Idaho. I am a member and Vice Chairman of the Oregon Wheat Commission, a body created by general law of the State of Oregon, charged with the duty of finding new markets for Oregon wheat. I am now Chairman of the Rate Committee and Past President of the Oregon Wheat League, a commodity group concerned with the problems of the wheat producer. I have appeared as a witness in numerous rate and other related proceedings before the Interstate Commerce Commission and the state regulatory bodies.

The Northwest Grain and Grain Products Association and the Oregon Wheat League have each passed a resolution favoring the position of the Union Pacific Railroad Company in this case and I am here appearing for the defendants, both for myself and for the two organizations mentioned, restricting my testimony on behalf of the Pacific Northwest Grain and Grain Products Association to the movement of grain.

While much of the grain produced in this territory is shipped to Pacific Coast ports for export, nonetheless, [fol. 2059] there is a normal movement of that produced in this territory which is shipped to California, Chicago and points east and south thereof to flour and feed mills. Eastern shipments move via all of the four transcontinental lines serving the Pacific Northwest area, the choice of route

being dependent upon the loading point. With respect to the grain which originates in Oregon destined to Eastern points, transported via Union Pacific long haul routes, insofar as I am aware, the experience of shippers with Union Pacific service as to car supply, transit time and other transportation factors is generally satisfactory. Certainly my own experience with Union Pacific service in this regard has been excellent and the organizations whom I represent have had registered with them no complaint of such service.

The routes and services provided by the Union Pacific from the territories served by it are adequate and sufficient for my purposes as a shipper and for the purposes, generally, of shippers of my organizations. In my business, and as President of the Northwest Grain and Grain Products Association, which is concerned principally with rates and other traffic matters of the grain industry, and as Past President of the Oregon Wheat League, we have never felt any need for the establishment of the joint rates and routes proposed by the D&RGW and neither myself nor those organizations have requested the Union Pacific or the D&RGW that such rates and routes be established.

Grain produced in this territory moves to its markets in bulk and therefore, its satisfactory transportation requires [fol. 2060] high-class equipment with tight walls, sides, floors, and roofs. The Union Pacific has furnished such high-type equipment for the transportation of our grain and we are concerned over the ability of the Union Pacific to continue to do so if any appreciable part of its revenues should be drained away from it through the diversion of traffic to the short haul route which would be established if the D&RGW is successful in its complaint.

We understand that the D&RGW by this complaint seeks an order of the Commission the affect of which would be to divert to it the traffic now handled by the Union Pacific via its long haul through routes. Such diversion necessarily would result in the loss of substantial revenue to the Union Pacific and in order to compensate therefor, it may be expected that operating economies in the way of curtailment of train service, less frequent switching of cars in spotting for loading, curtailment of maintenance of roadway and equipment would be affected. Any such

measures taken by the Union Pacific would adversely affect the movement of grain and grain products from this territory, not alone to Eastern destinations, but to the Coast Ports for export, all of which would be detrimental to the business of the grain industry.

I. C. C. Docket No. 30297

Witness: Marion Weatherford

RESOLUTION

At a meeting of the Executive Committee of the Oregon Wheat Growers League held at Pendleton, Oregon, on September 14, 1949 the following Resolution was adopted:

"Resolved that the Executive Committee of this organization goes on record as opposing the petition filed by the Denver & Rio Grande Western Railroad with the Interstate Commerce Commission, requiring that the Union Pacific Railroad Company publish joint thru rates with the Denver & Rio Grande Western Railroad. We oppose this petition for the following reasons:

1. There are no apparent advantages from the standpoint of freight rates in forcing the Union Pacific Railroad to join with the D&RGW on thru rates.

2. Should the Union Pacific Railroad be forced to share its traffic with the D&RGW its service would be impaired and transit time of shipments would be lengthened.

3. The Union Pacific Railroad has made large investments in the Northwest in building its main line and branch line railroad, and it contributes substantially to the income of the State thru payrolls, taxes and purchases made. These contributions by the Railroad would be impaired if it were forced to share its revenues with another line.

4. We recognize Union Pacific as being one of the "home industries" of the Northwest and oppose its being forced to share its revenue with the D&RGW,

which Company has no investments in the Northwest and is in no position to be of any service to the communities in the Northwest states."

[fol. 2062] I, the undersigned, President of the Oregon Wheat Growers League, do hereby certify that the above resolution is a true copy of the same adopted at the Executive Committee Meeting referred to above.

(S.) Paulen Kaseberg, President.

I.C.C. Docket No. 30297

Witness: Marion Weatherford

RESOLUTION

At a meeting of the Board of Directors of the Pacific Northwest Grain and Grain Products Association held at Portland, Oregon, on November 17th, 1949, the following resolution was adopted.

"Resolved that the Board of Directors of this Association goes on record as favoring the position of the Union Pacific in the matter of the opening of the Ogden Gateway known as I.C.C. Docket No. 30297, Denver and Rio Grande Western Railroad v. Union Pacific et al.

We are favorable to the position of the Union Pacific for the following reasons:

1. There does not appear to be any advantage from the standpoint of freight rates in establishing joint through rates between the Union Pacific and the Denver and Rio Grande Western Railroad.

2. That the service of the Union Pacific is adequate and it does not appear that the transit time of shipments would be improved.

3. The Union Pacific Railroad built into and made great contributions to the development of the Pacific Northwest in the building of its main and branch railroad lines into this territory, and further, it is a sub-

stantial contributor to the economy and income of this territory through payment of payrolls, taxes and purchases made.

[fol. 2064] We the undersigned, President and Acting Secretary respectively, of the Pacific Northwest Grain and Grain Products Association do hereby certify that the above resolution is a true copy of the same adopted at the Board of Directors meeting referred to above.

(Sgd.) Marion F. Weatherford, President.
(Sgd.) F. P. Aughnay, Acting Secretary.

[fol. 2065] VERIFIED STATEMENT No. 34

I.C.C. Docket No. 30297

Statement of W. B. Savage, Kimberly, Idaho

My name is W. B. Savage, and my home is in Kimberly, Idaho, which is on the Twin Falls Branch of the Union Pacific. I operate the W. B. Savage Produce Company, headquarters at Kimberly, with branch houses at Murtaugh and Gooding, Idaho, the business of which is the processing and shipping of potatoes. I also operate the W. B. Savage Ranches, Inc., the business of which is farming, growing of potatoes and feeding cattle. We have 1200 acres of irrigated land, also 900 acres of dry farm land upon which we are drilling wells for irrigation. Prior to 1948, when both businesses were operated as one unit, we were also large onion shippers. I have been in the produce business in the Twin Falls district about 38 years. In the year 1949, we shipped 354 cars of potatoes. In addition, we make substantial sales to track buyers who ship under their own name.

The No. 1 potatoes we ship, which is the large size, are marketed in practically all instances at points east of the Mississippi River. No. 2 potatoes are sold in the area from Denver to Kansas City and Omaha, and in the southwest, which includes the States of Oklahoma, Texas and portions of Louisiana, in addition to eastern markets. In a

few instances, we found it necessary to find another buyer for a car rejected at certain Kansas towns, but we have had no trouble here because the through routes and joint rates let us go to the southwest on the kind of potatoes which are shipped to these Kansas points.

As I said, up until about two years ago, I was a large shipper of Idaho onions. Our large sized onions are, in the [fol. 2066] trade, three inches or larger, and are sold from Chicago to the Atlantic Seaboard. The smaller size onions invariably go to markets in the States of Kansas, Oklahoma, Texas and Missouri River cities. Here again, we had no trouble with an occasional car of rejected onions because we can always reship to towns in the Southwest.

In the case of livestock, I am a pretty heavy feeder. My practice is to sell to local buyers who in practically all instances move the fat cattle they buy from me to Pacific Coast markets. For a good many years, I have also shipped a lot of mules. These have moved via the Union Pacific to Kansas City for sale and diversion to points such as Oklahoma City and Memphis on through rates.

In the 38 years that I have been in this business in Idaho, shipping hundreds of cars, I have always rather considered that once the Union Pacific got my shipments assembled and on the way, my worries are over. In fact, I've depended upon the Union Pacific for cars, switching and for about everything in that way. Its local people have always been around ready to help me, and going back on my long experience, I think the U. P. has done a fine job of railroading.

I cannot see any reason why a shipper such as I am would want to have his cars go east over the Rio Grande, first, because it is an out-of-the-way route and slower, and because I don't think it would help the U. P. and the users of rail transportation in Idaho who must depend on it for service.

The Union Pacific is really a part of Idaho, paying taxes and hiring several thousand employees here, and as long [fol. 2067] as we are going to have only one railroad line in the state, I want to patronize it all I can so that it will have the money with which to pay its taxes, maintain its payroll and continue to give good service. Taking the business away from the U. P. though and giving it to the Rio Grande will prevent the U. P. from doing these things. This

is my personal opinion, and I have given much thought to it.

Opening of the Ogden Gateway, in my opinion, will not increase the railroad service in Idaho. I do not see how shippers will be charged lower rates via the Rio Grande, or be benefitted in any other way.

So long as the Union Pacific continues to give us efficient service, so long as it continues to maintain its heavy investment in Idaho after having developed Idaho both directly and indirectly, so long as it alone continues (alone of the railroads concerned in this case) to help us to pay our tax burden, helps us to educate our children, and provides a livelihood for the thousands of families living in Idaho and connected with its system, I think that Idaho shippers and producers will fail to benefit in any way by the opening of the Ogden Gateway.

[fol. 2068] VERIFIED STATEMENT No. 35

I.C.C. Docket No. 30297

Statement of Leroy W. Hayes, Caldwell, Idaho

My name is Leroy W. Hayes and my home is in Caldwell, Idaho, where I am General Sales Manager of the Simplot Western Idaho Produce, Inc. We operate shipping houses on the main line of the Union Pacific at Mountain Home, Nampa, Feltham and Weiser, Idaho, and at Ontario and Nyssa, Oregon. We also operate shipping houses on branch lines of the Union Pacific at Marsing and Homedale, Idaho, and at Adrian, Vale and Jamieson, Oregon.

During the 1949 crop shipping season, we shipped from the above named houses approximately 2,000 carloads of potatoes, 1,200 carloads of onions and 100 cars of lettuce.

I have been in the perishable shipping and wholesale marketing business since 1926, having served a large distributing organization for 19 years prior to coming with the Simplot organization in 1946. During that time, I worked in the States of Michigan, Illinois, California, Washington and Idaho.

From 60 to 80% of our potatoes are marketed at points Missouri River and east. The balance is marketed in the

States of Nebraska, Kansas, Oklahoma, Texas and the Pacific Coast. Our No. 1 potatoes are sold principally at Chicago and east with a very limited volume moving to Texas and Oklahoma. About half of our No. 2 potatoes are marketed in the States of Minnesota, Illinois, Iowa and Missouri. These sales are generally made on the wire through brokers or direct to buyers or to local cash track buyers representing firms in those states. The other 50% of the No. 2's are marketed either on direct wire sales or [fol. 2069] through brokers located principally at Kansas City and some at Omaha. These potatoes are generally disposed of by brokers or through direct sales at those points or through diversion to Kansas, Oklahoma, Texas and Louisiana.

Approximately 90% of all our potatoes are sold on a firm contract wherever the market. The balance are mostly sold within a few days after shipment and are diverted to buyer's destination. The variety of through rates and routes available to us via the Union Pacific and its eastern connections has enabled us to reach all the desirable markets with our potatoes.

In marketing of about 1,200 carloads of onions during the past shipping season, sales have been made in such States as California, Kansas, Oklahoma, Texas and the markets of Kansas City and Omaha and east and southeast thereof. In marketing onions, we have found that the existing tariff routes are adequate. Here again about 90% of our onions are sold on firm contracts before shipment, while the other 10%, or at least the majority thereof, were mostly sold within a few days after leaving shipping point.

Lettuce is a short-season crop in Idaho and eastern Oregon, and our marketing practices vary widely from year to year. During periods of keen demand, we can sell 100% to local cash track buyers and terminal operators who make shipments to their various houses throughout the Midwest, Southeast and East. When the lettuce market is sluggish we sell on the wire direct to terminal operators or roll to Kansas City or Omaha for sale and diversion en route or from those points. Here again, the present tariff routes are flexible enough to permit us to go to all of the markets we [fol. 2070] desire to reach.

I am appearing here in opposition to the opening of the Ogden Gateway for the following reasons: First, because of the perishable nature of our products and our comparatively long distance from the large consuming markets of the East, we invariably use the shortest and fastest rail routes. As the situation now stands, we do have the direct and short line route of the Union Pacific to those markets. However, it is a fact that although a substantial portion of our products are sold on an F.O.B. origin basis, we must, in order to meet competition, see that the merchandise reaches destination in good condition. With exclusive Union Pacific service to the Missouri River, we have experienced little, if any, difficulty in meeting that requirement. However, on a large portion of our sales, the purchaser-consignee is in a position to instruct the routing; and, consequently, my fear is that these purchasers might well be influenced by eastern solicitation to route a goodly number of their purchases from us through Ogden and over the longer route of the Rio Grande Railroad and its eastern connections. The longer time in transit might result in the shipment reaching destination in a deteriorated condition, and if this does happen, then in order to retain the purchaser's account and good will, we may find it necessary to assume a part of the damage even though the shipment was not routed by us over the longer route.

The Union Pacific has pioneered and played a vital part in the growth and development of southwestern Idaho and eastern Oregon. Of course, it is the only railroad serving this area, and we have had to look to it to establish rates and [fol. 2071] make adjustments from time to time in a manner that enables us to compete in the distant markets of the East. It is my personal view that the time may not be far distant when Idaho may require some further rate revisions in order to enable perishable producers to maintain their competitive position in the eastern markets, and unless the Union Pacific has the protection of its long haul as in the past, it seems to me that there would be serious doubt as to its ability to make whatever further adjustments are necessary.

Whatever comes out of this proceeding, I know that the Union Pacific will have to continue to see that refrigerator

cars are available for us, ice them, set them for loading and then assemble loaded cars from numerous main and branch line points. Obviously, the Rio Grande, without intending to add any physical facilities whatever in this territory, can take no part in that operation. Unless the Union Pacific is to have the financial resources necessary to provide the kind of service it has given in the past, then, of course, only two things can happen, either our rates will go up and not down or the standard of rail service will be reduced.

In conclusion here I want to say that the Union Pacific has long maintained a well-staffed Agricultural Development Department. The staff of this department has worked closely with County Agents, shippers and growers in developing new markets, new crops and increased yields, also in experimental work looking to improved loading and storing methods. It seems to me that out of all this pioneering and development work, and which is still being carried on at considerable expense, the Union Pacific is entitled to its continued long haul and maximum revenues in order [fol. 2072] that it will have the finances with which to continue to provide this territory with adequate and reliable railroad service.

[fol. 2073] VERIFIED STATEMENT No. 36

I. C. C. Docket No. 30297

Statement of Charles Baker, Walla Walla, Washington

My name is Charles Baker. I live in Walla Walla, Washington. I am Secretary-Manager of Pacific Supply Cooperative. This organization is a wholesale farm marketing and supply cooperative serving the States of Oregon, Washington, Idaho, Western Montana and Northern California. We have 135 local farmer cooperatives as members of our organization. They, in turn, serve more than 75,000 farmers in the Pacific Northwest, either by furnishing them with farm supplies essential to production of farm crops or in marketing products grown on the farms. Our organization began doing business in 1934 and has rapidly expanded its facilities during the past 15 years. This growth and development is still continuing.

Among the commodities handled from the supply standpoint are: farm machinery, originating in the East; fertilizers which may originate in the East or in California or Canadian markets, depending upon the type and quality; various types of steel products essential to farmers' needs; building supplies; lube oils, greases; grains, feed concentrates, insecticides, tires, and similar farm supplies generally found necessary in farming operations.

In order to adequately serve the territory on these commodities, we maintain Warehouse distribution points at Pocatello, Idaho; Ontario, Oregon; Walla Walla, Washington; Portland, Oregon; Redmond, Oregon; Klamath Falls, Oregon. In addition to our own Warehouse points, much of our heavy merchandise is shipped in pool cars direct to [fol. 2074] local associations existing throughout the Area.

In addition to supplying our farmers with necessary products for producing crops, we also engage in the marketing of field seeds and potatoes in a substantial manner. We own and operate seed cleaning facilities at Ontario, Oregon; Madras, Oregon; Redmond, Oregon; Klamath Falls, Oregon, and Tulelake, California, where field seeds, including alfalfa, clovers, rye grass and vetch are produced in substantial quantities in the Northwest are processed and made ready for shipment to markets primarily in the Midwest, Eastern Seaboard, and the South. In addition to the facilities which we own and operate ourselves, many of our local associations also have seed cleaning and processing plants, through which field seeds of various types are processed by them and marketed by our association.

During the past year, we handled approximately 1,500 carloads of merchandise. Approximately 50% of this, or 750 carloads, moved over the through routes of the Union Pacific Railroad, primarily for the reason that this is the shortest and most direct route, either to markets to which we are shipping products, or from the factories to our points of distribution. The present through route of Union Pacific Railroad, for our particular needs, is the shortest and most direct route, and since time is an important factor in getting delivery on supplies or in getting products which we are marketing to the customer, we are not interested in the establishment of a less direct route which would lengthen the time needed to receive deliveries of merchandise.

Under modern high costs of merchandise, which in turn [fol. 2075] requires excessive capital, it is our desire and general objective to try to hold inventories at the minimum point. Quick delivery on shipments from Eastern suppliers over the shortest route possible, aids materially in keeping our inventories at reasonably low levels and thus conserves our capital requirements.

In the marketing of our field seeds in the fall of the year, time of delivery is of utmost importance, and occasionally we are badly crowded to get the seed through our processing plant and delivered to the customer in the East in sufficient time for his fall requirements. The use of longer or more circuitous routes would only tend to embarrass us from the standpoint of being unable to make prompt delivery within the minimum time allowed and receiving prompt payment therefore on delivery.

Our experiences with the service performed by the Union Pacific Railroad during the past several years has been generally very satisfactory. Excepting during war-time conditions, cars have been furnished promptly, the service has been uniformly good, and the routes maintained by the Union Pacific Railroad have been adequate to serve our needs.

As I understand the request of the D&RGW before the Interstate Commerce Commission, if granted, would result in short hauling the Union Pacific Railroad on a substantial portion of the tonnage originating on their system in the Northwest or originating from the other points in the East for the Pacific Northwest. We are unable to see any advantages to ourselves as a shipper from the standpoint of improvement in rates or service or the opening of any new [fol. 2076] markets from such proposal, should this request be granted.

On the other hand, it is obvious that if Union Pacific is to be short-hauled on this tonnage, the inevitable result is to deplete their income, reduce their personnel, and undoubtedly put them ultimately in a position where they would be hard-pressed to render the type of service they are presently giving.

For the foregoing reasons, it seems to me, (and I may say my Board of Directors, after having given this matter very

careful consideration, concur) that the request of the Denver & Rio Grande Railroad to open the Ogden Gateway would in all probability do our company material harm by depriving us ultimately of the very fine service which we are presently enjoying from the Union Pacific Railroad. We see no sound reason which would indicate that the proposal would in any way result in any benefits to us or other shippers residing in this area.

(Sgd.) Charles Baker.

[fol. 2077] VERIFIED STATEMENT No. 37

I. C. C. Docket No. 30297

Statement of Stanley D. Jenkins, Pilot Rock, Oregon

My name is Stanley D. Jenkins and I am Manager of the Pilot Rock Lumber Company of Pilot Rock, Oregon, which company has purchased and, effective June 1, 1950, will operate the Pendleton Lumber Company of Pendleton, Oregon. The entire output of both companies is sold to the Kerns Company of Oregon, Ltd., which latter organization is a partnership, the members of which are the stockholders in the lumber companies named and for which I am authorized to speak. The production of the companies consists of finished pine lumber, furniture parts, cut stock, etc.

During the year 1949, the Kearns Company shipped approximately 700 carloads of the items named, nearly all of which was destined to points east and south of Denver and was routed via the Union Pacific through routes. During 1950, we expect to ship about 1,200 carloads. The Union Pacific service has been entirely satisfactory from the standpoint of furnishing of cars and the movement thereof to destination. Its routes and services are adequate and sufficient from our standpoint.

All of the lumber produced by my company is manufactured into finished state. We have no rough lumber for sale for milling or manufacturing in transit and therefore any rates permitting such on the D&RGW would be useless to my company.

Our plants are served exclusively by Union Pacific Railroad and consequently any curtailment of service, line haul

[fol. 2078] or switching, would be injurious to our business. As we understand it, the D&RGW seeks to have diverted to it at Ogden shipments originating or terminating on the Union Pacific which would otherwise move via the Union Pacific giving it its long haul. Such diversion and its consequent loss of revenue to the Union Pacific would be expected to result in curtailment of service or increases in rates, or both, by the Union Pacific, either one of which would vitally affect our operations. In our opinion, our presently strong Union Pacific Railroad should not be weakened in any manner merely for the purpose of benefiting another railroad which does not serve our territory and which is not in a position to render any service whatever to my company.

For the above reasons, we protest any action by the Commission supporting the complaint of the D&RGW.

[fol. 2079] VERIFIED STATEMENT No. 38

I. C. C. Docket No. 30297

Statement of Denny H. Hogue, Twin Falls, Idaho

My name is Denny H. Hogue and I live at Twin Falls, Idaho, where I operate the Long Valley Farms. My principal business is the growing of potatoes and clover seed and the shipping of potatoes and onions principally to the eastern markets. My potatoes are grown in the Twin Falls area and near McCall, Idaho, both of which are on branch lines of the Union Pacific.

My shipments exceed on the average 1,000 cars per year. In the sale of No. 1 potatoes, the principal markets are Chicago and east. However, I do ship a good volume of No. 1's in straight carloads to the larger cities in Texas, such as Waco, Austin, Ft. Worth, Dallas and San Antonio. The market for No. 2's extends throughout the States of Kansas, Oklahoma and Texas, but there is a movement of mixed cars of No. 1's and 2's to points throughout the same area. Seldom, if ever, do we have rejects of mixed cars of No. 1's and 2's because these contain specific quantities of

special packs and sizes and the shipment cannot easily be replaced by the buyer.

All of our potatoes are sold on a firm contract, about 80% of which are sold on a delivered basis and the balance on a F. O. B. basis. At no time have we experienced difficulty in marketing potatoes because of a lack of tariff routes.

In the sale of onions, our principal markets are Chicago and east, and these are sold on a firm contract basis. Here again we have no difficulty marketing our onions with the variety of tariff routes that are now available to us.

[fol. 2080] My purpose in appearing in opposition to the opening of the so-called Ogden Gateway is to make known to the Commission the fact that in the 20 years I have been in the produce shipping business in Idaho, the Union Pacific has afforded me reliable and dependable transportation service. I think the Commission knows that the Union Pacific is the only railroad serving the Twin Falls and McCall areas—in fact, the only railroad for many miles around—and whether or not the Ogden Gateway is opened or not I, like other shippers, will have to call upon the Union Pacific for cars, car icing and everything connected with my transportation problems.

If the Rio Grande, mainly by eastern solicitation, is able to divert a large volume of traffic from the Union Pacific via the Ogden route (and here I want to say that the consignee does control the routing on many of my shipments) then the revenues of the Union Pacific will be substantially reduced. When that happens, the Union Pacific can do only two things, either curtail service or seek an increase in rates. That is the simple reason why I strongly oppose the opening of the Ogden Gateway.

[fol. 2081] VERIFIED STATEMENT No. 39

I. C. C. Docket No. 30297

Statement of Dan J. Cavanaugh, Twin Falls, Idaho

My name is Dan J. Cavanaugh and my home is at Twin Falls, Idaho, which is on the Twin Falls Branch of the Union Pacific. I am in the business of producing, feeding and

marketing sheep and have been since 1934. I run about 5,000 head on the range with lambing quarters near Buhl, Idaho, which is the end of the Twin Falls Branch.

Our sheep are run on public range and the lambs are loaded at Rogerson and Ketchum, Idaho, and are sold at the Ogden stockyards to various buyers who reconsign them to southern California points and to Omaha and points farther east. To Omaha and the other eastern markets the Union Pacific makes no extra charge for the out-of-line movement through the Ogden market and then east over its main line.

Our fat lamb shipments average about 30 cars a year and in addition we have about 5 or 6 cars of old ewes which are also shipped for slaughter purposes.

Up to four or five years ago, the general practice was to ship lambs to Denver to try the market and if not sold there, they were moved on to Omaha or Chicago. However, since that time, Ogden has supplanted the Denver market for first try and in practically all cases, we sell on the Ogden market to buyers who are stationed there.

I am not in the business of producing feeder sheep for sale outside of the State of Idaho. Based on my experience in the sheep business, I can say that to the best of my [fol. 2082] knowledge, there is no surplus of feeder animals in the local Union Pacific Idaho territory, and as a matter of fact, the demand exceeds the supply. Because of this shortage of feeder stock, also a shortage of replacement or breeding stock in the State of Idaho, there is little or no movement of feeders or breeding stock out of Idaho. In fact, I have in the past gone as far as Wyoming and Montana for replacement ewes. Of course, anything moving in from Wyoming and Montana is on flat rates and has no transit value for use on the outbound movement. The absence of transit billing and the application of flat rates has not hampered my operations.

The Union Pacific has helped me a lot in getting my lambs to market. It is most important in the marketing of lambs to have them available on the Ogden market around 3:00 or 4:00 a. m. of the day following loading. To meet this condition, the Union Pacific has put on special service from Rogerson and Ketchum, Idaho, during the lamb shipping season so as to move loaded cars from shipping points to

main line connections for runs in through trains to Ogden for early morning arrival. This allows enough time for feeding and fill before sale, which is most important to us shippers. With this type of train service being furnished by the Union Pacific from Rogerson and Ketchum, which are both branch line points, it seems fair to me that they should be rewarded with the rest of the haul to eastern markets after sale at Ogden. I think that a substantial reduction in the earnings of the Union Pacific will in the long run result in curtailment of the special train service on lamb shipments which we now have and which is most neces- [fol. 2083] sary to us. I appreciate what the Union Pacific has done in the way of furnishing company owned scales, good stockyards and other facilities needed in its livestock territory, and I also appreciate the service which the Union Pacific has given me in the past. But I am anxious that it continue to get the long haul and the maximum revenue on my shipments routed east of Ogden by the buyers, so that it will have the incentive to keep on giving the same good service.

[fol. 2084] VERIFIED STATEMENT NO. 40

I. C. C. Docket No. 30297

Statement of Donald Wallace, Tacoma, Washington

My name is Donald Wallace. I am Traffic Manager of the Tacoma Chamber of Commerce, Tacoma, Washington. I am duly authorized to appear here in support of the defendants and in opposition to the complaint of the Denver & Rio Grande Western Railroad. The action of the Tacoma Chamber of Commerce in adopting a resolution in opposition to the complaint resulted from a recommendation of the Traffic Committee, of which I am Secretary. That committee is an exclusive shippers' committee and the recommendation was made after contacting the principal shipper members.

The Tacoma Chamber of Commerce, with over 1300 company memberships, including commercial, professional and industrial enterprises, embraces practically all of the in-

dustries located in Tacoma. The membership includes forest products industries, such as lumber, plywood, door and furniture factories; flour and feed mills; chemical and metallurgical manufacturers; stockyards; meat packing and other food processing plants; boat builders and many other diversified industries. Other members are engaged in wholesaling and jobbing of groceries, drugs, dry goods, hardware, coal, fuel, etc. Some of these industries are located on exclusive Union Pacific trackage while others are served by the Union Pacific through joint switching rates or other trackage arrangements.

The Traffic Bureau of the Tacoma Chamber of Commerce acts in the capacity of traffic advisor to many of its members, [fol. 2085] and in that capacity also appears, either in behalf of the Chamber of Commerce or in behalf of individual firms in proceedings before the Interstate Commerce Commission and State Commissions. To my knowledge none of our members has asked for the establishment of joint through rates on transcontinental traffic in connection with the Denver & Rio Grande Western Railroad. At the discussion preceding the action of the Traffic Committee of the Chamber of Commerce, it developed that Union Pacific service and routes have been satisfactory and adequate. Union Pacific Railroad has substantial holdings of industrial properties in the Tacoma area and has been and is actively engaged in attracting industries to locate thereon and to likewise develop industrial property owned by the Port of Tacoma and since the construction of its line into Tacoma has located on its property, and property of others, industries which have and are continuing to contribute substantially to the economic welfare of the City of Tacoma and the State of Washington.

As we understand the complaint, the D&RGW seeks to have diverted to it at Ogden, transcontinental traffic which is now handled by the Union Pacific via its routes. Such diversion over the proposed longer routes of the D&RGW will necessarily increase the time in transit of shipments to and from Tacoma and greatly decrease the earnings of the Union Pacific on such diverted traffic. As in business generally, any substantial decrease in revenue to the Union Pacific must necessarily be compensated for through

economies in operation which would be accomplished by [fol. 2086] curtailment of service, less frequent train schedules, less frequent switching movements for the spotting of empty cars and the pulling of loaded cars, reduced maintenance of roadway, power and rolling stock, with the possibility of increased rates. Such action would forestall the possibility of any reduction in rates, and generally would affect substantially and adversely the industries now located in the Tacoma area and preclude the natural and aggressive development of new industries by the Union Pacific in that area. For these reasons, the Tacoma Chamber of Commerce and the industries represented by it is opposed to the position of the D&RGW as set forth in its complaint.

Copy of resolution adopted by the Tacoma Chamber of Commerce with respect to this proceeding has been reproduced and is tendered by the record as Exhibit —.

[fol. 2087] EXHIBIT TO VERIFIED STATEMENT No. 40

I. C. C. Docket No. 30297

Witness: Donald Wallace

Resolution

Whereas, it has come to the attention of the Tacoma Chamber of Commerce that the Denver & Rio Grande Western Railroad Company has filed a complaint with the Interstate Commerce Commission alleging that the failure of the Union Pacific Railroad Company to establish competitive joint rates on freight traffic "via its Colorado and Utah Gateways, between places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington, British Columbia and Colorado common points and points east thereof and between Utah common points on the one hand, the places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia on the other hand" is a violation of the Interstate Commerce Act and deprives the public of freight routings which are necessary and desirable in the public interest.

Whereas, the petition of the Denver and Rio Grande

Western Railroad Company has received the consideration and study of the Chamber of Commerce and that, in its opinion:

1. No economic good for the Pacific Northwest could come from an order by the Interstate Commerce Commission requiring the publication of such competitive joint rates.

2. The Union Pacific would be forced to share traffic which [fol. 2088] it has originated and developed with its competitor.

3. The Denver and Rio Grande Western would construct no additional trackage or other facilities.

4. Much of the traffic concerned has been developed due to the construction of trackage and other facilities by the Union Pacific in the Pacific Northwest.

5. While it is a policy of the Tacoma Chamber of Commerce that wherever possible, there should be competing transportation agencies, such policy does not require one such agency to share business which it has developed with its competitor.

Therefore, Be it resolved that the Tacoma Chamber of Commerce is opposed to the position of the Denver & Rio Grande Western Railroad in the aforementioned complaint.

Dated at Tacoma, Washington, this 12th day of September, 1949.

Tacoma Chamber of Commerce, M. S. Erdahl, President.

[fol. 2089]

VERIFIED STATEMENT No. 41

I.C.C. Docket No. 30297

Statement of K. H. Klopp, Spokane, Washington

My name is K. H. Klopp. I am President and General Manager of the White Pine Sash Company, Spokane, Washington, and a resident of that city. I am a member of the Spokane Chamber of Commerce, Western Pine Association, National Lumber Manufacturers Association, National Wooden Box Association, Inland Empire Wooden Box Association, and a member and Director of the National Wood Work Manufacturers Association. The Spokane Chamber

of Commerce, by majority vote of its Directors, passed a resolution supporting the Union Pacific in this proceeding.

My company is engaged in the manufacture of lumber and millwork from logs, and also from dry rough lumber purchased from sawmills and remanufactured under transit privileges into lumber and millwork. The logs we use come from timber stands in Eastern Washington and Northern Idaho; and the dry rough lumber from sawmills in various points in Oregon, Washington, Montana and Northern California. We also process green pine selects purchased from Chelan, Washington. At our plant we have a complete operation for the manufacture of finished lumber from logs and from rough dry and green lumber, consisting of sawmill, planing mill, millwork plant and dry kilns.

Our shipments over the Union Pacific will approximate 1,800 carloads annually, slightly heavier inbound than outbound. Carloads received consist of logs from Northern Idaho, and dry rough lumber from points on the Union Pacific and its connections in Idaho and Oregon. Carloads shipped consist of finished lumber and millwork to destina-
[fol. 2090] tions Salt Lake City, Utah, Denver Colo., and east and south of the latter point. The Union Pacific's service has been satisfactory from the standpoint of supplying cars for loading and moving my shipments to and from our plant. Its routes and services are entirely adequate and sufficient for my purpose as a shipper, and from my knowledge of the lumber business in the Inland Empire, I should say they are adequate and sufficient for the purpose of moving the traffic to all Eastern destinations.

In the conduct of my business, I have never felt any need, and do not anticipate any need, for the routes and rates in connection with the D&RGW sought in this case. I have never asked either the D&RGW or the Union Pacific for the establishment of such routes nor do I see how I could derive any benefit from them in the form of transit at points on the D&RGW or otherwise.

Generally speaking, time is of importance to my company in the movement of our shipments, and this is especially true of carloads of millwork which are sold on the basis of 2% five days after arrival, 60 days net. Obviously, therefore, and from a financial standpoint, we route our traffic over the fastest and most dependable routes and

accordingly favor the Union Pacific with the major portion of our cars destined to Eastern territory. Its service, including tracing and passing reports, is entirely satisfactory and I can see no need or benefit for a longer route by way of the D&RGW which would, of course, require more time in transit not only because of the greater mileage but also because of the additional interchanges involved.

Establishment of the rates and routes sought by the D&RGW would not open new or additional markets to me [fol. 2091] or others similarly engaged in this territory for there is no surplus lumber of any description in this territory. Actually, there is a shortage. There are enough buyers in the Inland Empire territory representing Eastern and Western interests to purchase all available dry lumber at market prices.

My experience as a transit operator, especially in the remanufacture of rough green fir, has proven it cannot be profitably done unless the distance between the green mill and the transit point involves only a short haul by truck. This is because of the loss through drying and surfacing and by the competitive price offered by Douglas Fir mills on the Coast having dry kilns and surfacing facilities.

As I understand it, the purpose of this complaint is to divert to the D&RGW traffic now handled by the Union Pacific to and from points on its lines and its connecting lines with the result that Union Pacific would lose substantial amounts of its revenues. It has been my experience that in times of reduced traffic and revenue, the service of the railroads, including the Union Pacific, falls off in the form of less frequent train schedules, less frequent movements for spotting empty cars and moving outbound loads, and if operating economies are not sufficient to compensate for the loss of revenue, then increases in rates follow. Should any or all of these conditions arise, they would be decidedly to the detriment of my company. I do not want to see the financial structure of the Union Pacific or any of the Northern transcontinental railroads impaired in any way by short-hauling them.

[fol. 2092] Any thing that would curtail my rail service or tend to cause an increase in our rates would be disadvantageous to me and injurious to my business. For these

reasons, I am opposed to the position of the D&RGW in this case.

I.C.C. Docket No. 30297

Statement of Verne R. Woods, Ault, Colorado

My name is Verne R. Woods. I live at Ault, Colo., where I am engaged in farming and the livestock feeding business. Ault is just north of Greeley, Colorado, on the Cheyenne-Denver main line of the Union Pacific. My farming operations consist of 160 acres devoted to general agricultural purposes, principally potatoes and sugar beets. The feeding operations are carried on by a partnership having the name of Woods & Deffke and involve the feeding of both cattle and lambs, principally lambs. On an annual basis, we feed and ship approximately 11,000 lambs for our own account. Of these, about 5,500 are fed at Ault and 5,000 in Kansas at a point called Kanorado, which is a station on the Rock Island Railroad in northwest Kansas. Our cattle feeding operations are confined to Ault, Colorado. We will feed there about 700 head a year.

Last year in addition to purchasing and shipping sheep for account of the partnership, I purchased about 30,000 lambs for my neighbors and other clients in the northern Colorado district. Of a total of about 41,000 lambs purchased and shipped, about 30,000 came from points in Idaho and Montana on the Union Pacific north of Idaho Falls and the remainder originated at points on Union Pacific in Wyoming.

Our cattle were purchased in western Nebraska, eastern Wyoming, Kansas, Colorado, New Mexico and Texas. [fol. 2094] None of our cattle came from Idaho or Montana.

All of the lambs which we purchased either for clients or ourselves in Idaho, Montana, and Wyoming were routed over the lines of the Union Pacific Railroad to Ault and other destination points in northern Colorado.

My purpose in appearing here is to say, first, that I am opposed to the opening of the Ogden route or anything else

that would give feeders in the Arkansas Valley the same rates from Idaho and Montana to eastern markets that I have through my feed lot at Ault unless I was given the same treatment on rates from Arizona, New Mexico and Texas. I am not a rate expert by any means, but as I understand it the rates from Idaho and Montana through northern Colorado to the eastern markets are based on the direct line mileage of the Union Pacific and that higher rates apply from origins in those states through the Arkansas Valley and thence east because of the greater distance. On cattle which I purchase in Texas and New Mexico, I pay higher rates through northern Colorado than the Arkansas Valley people pay because of the longer distance my shipments must travel, and I have no complaint to make on that score. I am not asking for the same rates from the southwest and I do not feel that Arkansas Valley feeders are entitled to the same rates from Idaho and Montana that I have. In other words, they have the rate advantage where their distances are shorter and I have the advantage where my distances are shorter and I do not feel that I should lose my advantage unless they also give up theirs.

[fol. 2095] I have been in the sheep and cattle business for about 11 years during which time I have used the rail service of the Union Pacific on many hundreds of cars. I can say that it has been very dependable.

[fol. 2096] VERIFIED STATEMENT No. 43

I.C.C. Docket No. 30297

Statement of E. J. Maynard, Denver, Colorado

My name is E. J. Maynard. I live in Denver, Colorado. I am General Livestock Consultant for The Great Western Sugar Company and as that Company is also engaged in the direct feeding of livestock at several of its factories, I am also in charge of supervision of its feeding operations.

The Company is the owner and operator of twenty-one beet sugar factories in the States of Colorado, Nebraska, Wyoming and Montana, thirteen of such plants being lo-

cated in Northeastern Colorado, five in Nebraska, two in Wyoming and one in Montana. The Company has feed-yards at Windsor and Ovid, Colorado, and at Scottsbluff, Nebraska, and is currently feeding cattle in each of such yards. My principal duty for the Company is in agricultural extension work with beet growers in the areas in which sugar beets are grown for factories of the Company, to encourage livestock feeding on beet growing farms, the use of most efficient rations, and the improvement of feeding methods and results.

I have been with the Company a total of fourteen years. Prior to that time, I spent twenty-one years in college and agricultural experiment station work in animal husbandry in New Mexico, Colorado, Iowa and Utah.

Of the factories operated by the Company in the irrigated farming territory in Northern Colorado and Western Nebraska, nine are located on the line of the Union Pacific Railroad, namely, the factories at Eaton, Greeley, Fort Collins, Brighton, Fort Lupton, Ovid and Sterling, Colo- [fol. 2097] rado, Gering and Lyman, Nebraska. In addition to these nine factories, the Union Pacific by connection with The Great Western Railway reaches our factories at Windsor, Loveland and Longmont, Colorado. Also, the Company's factories at Mitchell, Scottsbluff and Bayard, Nebraska, while not on the line of the Union Pacific, are within two to three miles distant of points upon the line of that railroad.

In order that farmers secure profitable acre yields of sugar beets and processors obtain sufficient volume to maintain efficient sugar production costs, beet farmers should feed livestock consistently on their farms. Also, farmers who grow sugar beets in any of these western irrigated farming areas cannot maintain these essential farm feeding operations unless they can fatten livestock for market at production costs that are no greater than those of beet growers in other areas or of feeders in the corn belt.

The total cost to the feeder of livestock in the different feeding areas of the country is composed of separate costs which vary to some extent from area to area. The cost of feed varies from one area to another; likewise, the cost of labor. It is also a fact that the transportation costs of shipping livestock from western range areas to the points

at which such stock is fed and from those points on to market are a definite factor in determining the ultimate cost of feeding operations.

The great volume of western livestock feeding, the fattening of range cattle and sheep for market, is carried on in the irrigated farming areas and the volume of western feeding is greatest in the sugar beet producing areas because of the greater efficiency of livestock fattening rations which [fol. 2098] include the sugar beet by-products—tops, wet or dried pulp and molasses. The great majority of these beet farmers do not raise cattle or sheep on their farms but depend on the supply of feeder cattle and lambs secured from the vast range areas of the west for their feeding operations. The relative proximity of these range areas as well as the comparative numbers of feeder cattle and lambs available from various areas are factors that influence the cost of these feeding operations.

In comparing the feeding operations of beet farmers in Northern Colorado and Western Nebraska with similar feeding operations of farmers in the Arkansas Valley of Southern Colorado and in the irrigated valleys of Western Colorado, each such feeding area has advantage over the others in transportation costs from naturally tributary areas in which feeder livestock are grown. Western Colorado feeder farmers have had and now have an advantage in transportation costs from certain tributary range areas lying west and southwest. Southern Colorado farmers have had and now have an advantage in transportation costs on feeder cattle and lambs from the southwest range areas, including Southern Colorado, New Mexico, Texas, Arizona, and parts of Utah. On the other hand, Northern Colorado and Western Nebraska farmers have had and now have an advantage in transportation costs in the securing of their feeder stock from Wyoming and the northwest range areas.

The statements that I have just made are illustrated by the following examples:

1. The carload rate on cattle and on sheep, shipped doubledeck, in cents per hundred pounds, from Amarillo, Texas, feed in transit at Swink, Colorado, and to market in Chicago, is $1.19 whereas the carload rate

[fol. 2099] from the same point of origin to the same market with feeding in transit privileges at Greeley, Colorado, is $1.30.

2. Using Gallup as a point of origin, the rate to Chicago, feed in transit at Swink, is $1.34, whereas it is $1.48 if the stock is fed in transit at Greeley.

3. Similarly, the feeder at Greeley has an advantage in the transportation cost of feeder livestock bought for example at Ashton, Idaho, feeding in transit at Greeley, for market in Chicago. His cost is $1.53 per hundred pounds. The feeder at Swink would pay $1.61½ per hundred pounds for the same livestock to feed at Swink and market at Chicago.

I would like again to make the point that the final feeding cost of the farmer feeder in any area is determined by a combination of prices and costs which in his case vary with those of feeders of other areas. It is impossible to provide that each item of such cost shall be identical in every area. Some areas have advantages in respect to certain items; other areas have advantages in respect to other items.

There is now a considerably larger supply of feeder cattle and lambs suitable for fattening purposes available from the southwestern range areas than there is from the northwestern range areas. Any change in existing transportation costs on livestock shipped from the northwestern range areas in favor of Southern and Western Colorado farm feeders would affect comparative area feeding cost in that it would reduce the existing advantage to Northern Colorado and Western Nebraska feeders and improve the position of Southern and Western Colorado feeders in respect to transportation costs from the naturally tributary feeder area of the Northern Colorado and Western Nebraska group. I think it is important to recognize that this would be the effect of the proposal under consideration as I understand it.

[fol. 2100] As a matter of fact, there is at the present time a much greater movement of feeder stock into Northern Colorado and Western Nebraska from southwestern range areas at higher transportation costs than would apply to Southern Colorado destinations than the present movement of feeder stock from northwestern range areas

to Southern Colorado feeders. This is due primarily to the relative numbers of feeder cattle and lambs available from the two areas and also to the relative size and crop producing capacity of the two irrigated farming areas under consideration.

As regards the relative availability of feeder lambs from the southwest and northwest range areas, the most recent estimates of stock sheep numbers by the U. S. Department of Agriculture indicate 10,919,000 sheep in Colorado, New Mexico, Texas, Utah and Arizona and only 5,562,000 sheep in Washington, Oregon, Montana, Idaho and Wyoming. Furthermore, the percentage of feeder lambs available is much greater from the southwestern ranges due to the fact that a greater proportion of the northwest lambs go to early slaughter direct from the range. As an example, some 60 to 65% of the lamb crop from Idaho and Washington and 50% of the lamb crop from Oregon goes directly to slaughter by early fall. On the other hand, while 40 to 45% of the Colorado range lambs are ready for the fat market in the fall, some 98% of the New Mexico lambs and nearly all Texas and Arizona lambs are available as feeders.

These factors further favor the Southern Colorado lamb feeders in their ability to secure a more abundant supply of feeder lambs at lower transportation costs than are possible [fol. 2101] for the Northern Colorado and Western Nebraska feeders.

There have been drastic changes in this Western winter lamb feeding situation since the five-year period 1929 to 1933 when Northern Colorado and Western Nebraska feeders fattened a yearly average of 1.5 million lambs and Arkansas Valley feeders fattened an average of 385,000 lambs. During the past five years, for instance, these Northern feeders fattened an average of only 703,000 lambs and the Arkansas Valley feeders 113,000.

In recent years the significant reduction in sheep population has been largely responsible for this reduction in feeding in both areas concerned, but this reduction in sheep numbers and consequent supply of feeder lambs has been noticeably more severe in the northwest range areas.

For instance, during the past eight years sheep numbers in the five northwestern range states, Washington, Oregon,

Idaho, Montana and Wyoming, have been reduced from 11,525,000 head to 5,562,000 head, a reduction of 51.7%, while sheep numbers in the five southwestern range states, Colorado, New Mexico, Texas, Utah and Arizona, have only been reduced from 17,180,000 to 10,919,000, a reduction of 36.4%.

Furthermore, the steadily growing West Coast demand for both feeder and fat stock has in recent years created a natural outlet for the major portion of the lambs and for practically all cattle from the northwest area, further reducing numbers available from this source to Colorado feeders.

A comparison of the Northern Colorado feeding territory with that of the Southern Colorado territory in the [fol. 2102] Arkansas Valley may be measured in terms of the average numbers of cattle and lambs fattened in these two areas during the past ten years. According to U.S.D.A. reports, Northern Colorado feeders have fattened an average of 571,000 lambs and 144,400 cattle during this period while Southern Colorado feeders in the Arkansas Valley have fattened an average of 121,000 lambs and 14,500 cattle or 17.5% of the lambs and 9% of the cattle fattened in Colorado during the period.

The smaller capacity of the Southern Colorado feeding industry and its closer proximity to greater supplies of feeder lambs and cattle are facts to be taken into account in considering whether that area needs lower freight rates on feeder stock from the northwest.

Surveys and studies by the Agricultural Department of The Great Western Sugar Company indicate the need for livestock feeding on many more farms in the Northern Colorado and Western Nebraska territory if soil fertility for profitable crop production is to be maintained.

Annual surveys by the field force of The Great Western Sugar Company give an approximate idea of the amount of livestock presently fed for market in their Northern Colorado and Western Nebraska territory served in whole or part by the Union Pacific Railroad.

During the feeding season of 1948-49, farmers in this area fed 299,310 cattle, 29,116 calves, 505,278 lambs and 61,228 ewes.

As these farmers, in order to secure sufficient feeder

stock for their fattening operations, must secure large numbers of cattle and lambs from southwestern range areas [fol. 2103] and as they must pay higher transportation costs on these animals than are paid by Western Colorado or Southern Colorado feeders, it would appear that they are entitled to an advantage in transportation costs in the very limited supplies presently available from the northwest.

[fol. 2104] VERIFIED STATEMENT No. 44

I. C. C. Docket No. 30297

Statement of H. W. Farr, Greeley, Colorado

H. W. Farr is my name and I reside at Greeley, Colorado, which is on the Denver-Cheyenne main line of the Union Pacific about 50 miles north of Denver.

My appearance here, today, is in two capacities—one as President representing the Weld County Lamb Feeders Association, and in the other capacity, I speak for myself, as a livestock feeder of both sheep and cattle in the Greeley district. I should also mention that I am President of Farr Farms Company, who own and operate six farms and one large feed lot adjacent to the Greeley sugar factory, where we feed about 10,000 head of cattle per year and 6,000 lambs.
